1 Please help protect our communities, our health, and our environment by selecting the No Action

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Health Effects**	
5	**Section 4(f) and Section 6(f)**	
6	**Biology, Plants, and Wildlife**	
7	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

1	Jake Speck Document Created: 5/21/2013 1:58:43 PM by Web Comment Form It's time to build the 202! Let's get out in front of this need. The traffic is getting worse and worse by the day. If we don't continue to develop our freeway systems it will only become worse. Our freeway systems are one of the most important yet under appreciated assets to our community. They allow us to move around the Metro area freely, get to work so we can make a living and support our families, as well as enjoy what the valley has to offer for recreation. Our infrastructure is also one of the most important aspects to attracting potential employers to our community which creates great economic gains for the entire state. After reviewing the EIS documents I think it is abundantly clear that the benefits far outweigh any potential risk of impacts and this freeway should be built!

say.

THE FACILITATOR: Thank you.

MR. NEELY: Thank you.

THE FACILITATOR: Vicky Oliver.

MS. OLIVER: Hi, my name is Vicky Oliver and I'm for the 202 project because I think it will bring employment opportunities to our area, which we definitely need, and also will help the commute for a lot of people coming in the area. And also, it's been proven that freeways cut down pollution and also traffic accidents, and it'll keep some of the traffic off of our city streets.

THE FACILITATOR: Thank you.

Jake Speck.

MR. SPECK: Good afternoon. My name is Jake Speck, I'm here in support of the 202. I think this project is a great benefit to the community for a lot of different reasons: Reducing traffic, revitalizing economy, bringing over 30,000 jobs to the community, as well as a significant investment. I think it will attract potential employers as well, which would be great for growing the economy going forward.

After looking at the EIS, I think the potential impacts are vastly outweighed by the benefits this project brings, and I believe that now is the time to go

1

Dear ADOT,

(1) (2) (3) (4)

I am a PARC member and I am opposed to the South Mountain Freeway on Pecos Road.
I have lived in Ahwatukee since 1992. I think it is wrong for you to try and run a "Truck By Pass" through my backyard. Its going to be bad for my air , my property values, and quality of life.

Steve Speight

1	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
4	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to the Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

Document Created: 7/24/2013 11:33:22 PM by Web Comment Form

Dear Freeway Planners,

First, I must say that I support a loop 202 but I am adamantly opposed to the path that you have proposed. After reading all of your statements and attending a discussion that you held, I am still opposed to you planned route.

I do not believe that the planners have done everytging possible to make the best freeway with the least amount of impact. I was astounded at the supposed environmental impact study. It was very poorly done to say the least. The wildlife will die out and the South Mountain Preserve will suffer for the lack of wildlife and diversity. (1) (2)

The amount of land taken from South Mountain Preserveis deplorable! I know that given the right incentives a route could be done that would not impact the Preseve land. Working with GRIC and local land owners to push further south and west would be in the best interest of all. (2) (3)

I hope you reconsider your position.

Respectfully Yours,
Leslie Spencer-Snider

June 20, 2013

South Mountain Study Team
Arizona Department of Transportation
1655 West Jackson Street, MD 126F
Phoenix, AZ 85007

I am writing to state my strong opposition for the proposed expansion of Loop 202/South Mountain Freeway, in particular the Pecos Road alignment.

1 2 3 4 5 6

As a resident of Ahwatukee/Foothills, I believe the Pecos Road alignment would severely hurt our quality of life and cause damage to our community. Area residents would ultimately be affected by air and noise pollution. The proposed freeway would invite new traffic into the area, including large commercial vehicles that run day and night.

7

The Sierra Club's recent report "50 Best and Worst Transportation Projects in the United States", dated November 2012, lists the Loop 202/South Mountain Freeway as one of the worst projects in the United States based on oil, environmental, health, economic, and land use impacts. The findings and conclusions of this report need to being taken into serious consideration by the South Mountain Study Team.

2

I currently have enough highway access to all the facilities needed for a great quality of life. The South Mountain Freeway would forever change this area in the worst way. The Arizona Department of Transportation surely can produce alternatives to the destructive Pecos Road alignment that are better suited for our health and environment.

8

I advocate the "No Action" alternative as the best option that preserves the environment, quality of life, and health of residents.

Sincerely,

Elayne Spielman
3009 W Silver Fox Way
Phoenix, AZ 85045

South Mountain Study Team
Arizona Department of Transportation
1655 West Jackson Street, MD 126F
Phoenix, AZ 85007

I am writing to state my opposition for the proposed expansion of Loop 202/South Mountain Freeway.

1 2 3 4 5

As a new resident of Arizona, I believe it would be a poor choice to build this freeway through one of the most beautiful areas of Phoenix. Every day I see many bikers and joggers using Pecos Road. If the freeway were built, area residents would ultimately be affected by air and noise pollution. The proposed freeway would invite new traffic into the area, including large commercial vehicles that run day and night. In addition, South Mountain is sacred for the local Native Americans; a freeway would be harmful and disrespectful to their traditional culture.

6

The Sierra Club's recent report "50 Best and Worst Transportation Projects in the United States", dated November 2012, lists the Loop 202/South Mountain Freeway as one of the worst projects in the United States based on oil, environmental, health, economic, and land use impacts. Hopefully, the findings and conclusions of this report are being taken into consideration by the South Mountain Study Team.

7

In the short time I have lived here, I have found that I currently have enough highway access to all the facilities needed for a great quality of life. The South Mountain Freeway would forever change this area in the worst way. The Arizona Department of Transportation surely can produce alternative options that are better suited for our health and environment.

8

I advocate the "No Action" alternative as the best option that preserves the environment, health of residents, and respect for Native American culture.

Sincerely,

John Spielman

Subject: Comments in opposition to South Mountain Freeway

May 29, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

2 The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer.

3 ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

4 5 South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

6 7 The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

8 The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

1 Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Mr. Eric & Cedra Spragett

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. curve. At times it's -- well, every morning and every afternoon it's nearly a parking lot. I would very much appreciate -- well, I believe it's also a bit of a hazard, there's been several accidents on the 10 recently that have shut down the 10. Having other means to commute around that would definitely be beneficial.

And also, the economic impacts that come along with a new freeway, property values go up and the person before me just mentioned the social and economic impact for Laveen would be enormous, so I support the construction of the 202. Thank you again for your time.

THE FACILITATOR: Thank you.

Tiffany Sprague.

MS. SPRAGUE: It's so quiet in here, it's a little intimidating to walk up to.

Good afternoon, my name is Tiffany Sprague and I'm a resident of Phoenix, and I'm very strongly opposed to the South Mountain freeway. I urge ADOT to select the no-action to this project. ADOT must begin looking towards real solutions for our transportation needs and this freeway is not it. This is more than evident by our increasingly congested roads and freeways. Widening routes and building new ones only provide short-term relief. More vehicles will soon fill these uncongested areas.

2	**Alternatives, Nonfreeway Alternatives**	
3	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). By 2035, east- and westbound motorists on Interstate 10 between State Route 101L (Agua Fria Freeway) and State Route 202L (Santan Freeway) are expected to experience stop-and-go driving for over 3 hours every day. This is for a distance of nearly 30 miles. A new freeway in the Study Area would distribute commuters over an additional freeway facility. As a result, the duration of stop-and-go traffic on the region's freeways would be reduced.

ADOT is forcing people to remain dependent on vehicles, rather than looking towards real solutions that focus on getting people off the road. ADOT absolutely must shift its focus toward reducing the number of vehicles congesting our roadways, and this can only be accomplished by planning for and investing in alternative transportation solutions, including rail, bus, walking, and biking.

ADOT claims that this freeway is necessary to help the air quality within our region. However, as it's been shown by other areas of the Valley and in other cities in our nation, this freeway will just spread out the air quality problem and will in time cause it to worsen significantly.

Again, whatever congestion relief is provided by this freeway will be short-lived, as is evident by all our seriously congested freeways in the region, some of which are brand new or were just recently widened. By encouraging more vehicles to use our roadways, air quality will continue to worsen, endangering public health, negatively affecting our environment, and risking funding from the federal government.

The DEIS frequently notes that the South Mountain freeway is necessary in order to better utilize the San Tan portion of the Loop 202, but what's meant by

Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative). As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway.

better utilization of this portion of the freeway? Every afternoon I hear about how congested the San Tan portion is, so it seems like the South Mountain freeway will just increase congestion on this roadway, or is that what ADOT considers to be better utilization, more congestion and increased travel time.

Overall, this freeway is not worth the cost. It will destroy a portion of South Mountain Park, an area that was set aside to protect natural resources and to provide public benefit. It will destroy wildlife habitat and movement corridors. It will exacerbate air quality concerns and climate change. It will endanger public health, and it will do all of this without any real added benefit to our communities, so we should not build the South Mountain freeway. Thank you.

THE FACILITATOR: Thank you.

Ana Morago?

If you'd like to speak and are not yet registered, please go out to the front desk registration.

Steve Schwab. Please feel free to use either microphone.

MR. SCHWAB: Good afternoon. My name is Steve Schwab. I've been in the Valley for 31 years and I have witnessed a lot of freeway growth here and I strongly, strongly urge you to accept the action alternative here.

7	**Section 4(f) and Section 6(f)**	
8	**Biology, Plants, and Wildlife**	
9	**Air Quality**	This document does not incorporate an analysis of the greenhouse gas emissions or climate change effects of each of the action alternatives because the potential change in greenhouse gas emissions is very small in the context of the affected environment. Because of the relative insignificance of the greenhouse gas impacts, those impacts would not be meaningful to identification of the Preferred Alternative. The Federal Highway Administration is working to develop strategies to reduce transportation's contribution to greenhouse gasses—particularly carbon dioxide emissions—and to assess the risks to transportation systems and services from climate change (see Final Environmental Impact Statement pages 4-85 through 4-86). Construction best practices represent practicable project-level measures that, while not substantially reducing global greenhouse gas emissions, may help reduce greenhouse gas emissions on an incremental basis and could contribute in the long term to meaningful cumulative reduction when considered across the Federal-aid highway program.

RTP there was also a freeway system, which working together to provide, you know, all modes of travel for the community.

With regard to the funding itself, there are some firewalls built into the regional transportation plan and it does limit the ability to both use freeway funds for transit projects, as well as to take money from transit projects and use them for freeways.

So that would be something that would have to probably be, you know, vetted at the top of MAG. It would be a decision made by them, but there are fire walls built in that would really limit or do not allow the mixing of those funds.

THE FACILITATOR: Scott Sprague. "In pre-design meetings for I-11, ADOT representatives have repeatedly stated that no part of the I-11 or scenic drive has been identified beyond a very wide 30-mile swath between Phoenix and Las Vegas. Upon approaching Phoenix, ADOT has insisted that many alignments through and around the city are still on the table. This contradicts what the map shows tonight. Please explain the disconnect."

MR. SPARGO: Can I have you repeat just the part about where the information was coming from that

it's not --

THE FACILITATOR: ADOT representatives.

MEMBER OF PUBLIC: I can clarify, if you like. In pre-design meetings with the I-11 route, they, ADOT, has provided maps for where they're looking and they purposefully, upon request of a more refined map, they said there's nothing set. This is all that's been decided is this 30-mile swath, and again, I have no, this is just a guess, but there's a swath between Phoenix and Las Vegas and then their map has actually several arrows that spread out at the Vegas end and Phoenix end, and they said even those areas aren't even in consideration at this point or they're pre-designed. That's the next step is entering Phoenix, so I'm just curious, if that's very pertinent to that meeting, so if it's set, it's going to be over there, it's more important to me for that meeting than this meeting.

MR. SPARGO: I guess I'm not in tune with all the things going on with I-11 study. I don't know if anybody wants to add anything, but we can follow up after this meeting with more information regarding that, with the I-11 team that's doing that study.

THE FACILITATOR: Scott Sprague. "If

transit, light rail is truly a priority for the future of the Valley's transportation infrastructure, why was a co-located line not considered as part of this project?"

MR. SPARGO: A co-located line, I mean, we do in the Draft EIS discuss the option to co-locate lines. There are some of those that are in the plan today along I-10 west from downtown, as well as the potential for something in around the SR 51 corridor. I think the unique part is that being more of a loop facility, it doesn't facilitate as much for the type of uses that the light rail is, where it's being developed more as a -- more in the spokes from the downtown area.

And just like ADOT and MAG do, you know, regional freeway planning and sort of put this system together that works together, you know, Valley Metro and the transit planners have looked at where the best places are based on the density of population, the jobs, and the housing and things like that to put together their plan. And they've identified the corridors that you see in the RTP at this time. Which are more geared towards those other areas and not this area.

THE FACILITATOR: Okay. Let's do the

follow-up to your question, then I'll wrap up with the last one.

Yes, ma'am.

MEMBER OF PUBLIC: Okay. Regarding the Game & Fish being approached in 2002 and 2003, have the discussions continued since then, because a lot of information has been learned about appropriate wildlife crossing structures since 2002, and made leaps and bounds of discovery since that time.

UNIDENTIFIED SPEAKER: Not specifically on that topic, no.

MEMBER OF PUBLIC: Okay.

THE FACILITATOR: One last question, the others remaining here we either addressed earlier tonight or have been referenced in the EIS, the draft. So we'll put the responses to these on the Internet so we have time for closing. Fair enough?

The last question, then, from Scott Sprague, "What about the Tucson Shovelnose Snake?," is that what it's called, it is another candidate species in the region.

assessment is that there really is not much appropriate habitat.

THE FACILITATOR: Okay. That concludes the open questions from the general public.

I'd like to introduce Chaun Hill. And before Chaun comes up or while she's coming up, please keep in mind we do have a quorum and we need to close the meeting out shortly thereafter, but Chaun has a couple comments. I have a closing comments, and then we'll return.

CAT MEMBER: I have a question. What are they going to do with these after the meeting?

THE FACILITATOR: What are we going to do with the Draft EIS documents after the meeting?

MR. SPARGO: We use them at the public hearings, to provide the public an opportunity to look through. We'll have them at the public forums as well. Beyond that, we don't have any.

on this, so if I botch up some words, let me know. Are these all from the same --

MEMBER OF PUBLIC: No.

THE FACILITATOR: Have you identified who is who?

MEMBER OF PUBLIC: No.

THE FACILITATOR: Let's do that. Okay.

MEMBER OF PUBLIC: Sure.

THE FACILITATOR: What Fred is passing out is the meeting evaluation form, please fill it out. The first question is from Tiffany Sprague.

MEMBER OF PUBLIC: Sprague.

THE FACILITATOR: "Has the Arizona Game & Fish been consulting regarding wildlife habitat and mitigation efforts. For example, planning for any wildlife proxy requires a multi-year effort to determine the species, attempted crossing locations, and where to place structures, in-depth analysis on appropriate site, etc. Was Game & Fish consulted on multi-functional design based on available information such structures do not work for many species?"

MR. SPARGO: Curt, go ahead.

UNIDENTIFIED SPEAKER: Yes, in early, I think it was 2002, 2003, Game & Fish was approached

1

Code	Issue	Response
1	**Biology, Plants, and Wildlife**	Not for mitigation specifically. The Federal Highway Administration and Arizona Department of Transportation have committed to continue coordination with the Arizona Game and Fish Department and U.S. Fish and Wildlife Service regarding wildlife concerns that could result from the proposed freeway's implementation. This commitment will be carried forward in the Final Environmental Impact Statement and Record of Division.

Code	Comment Document

about the opportunity for providing structures on the west end of the South Mountain Preserve area and a meeting was held with FHWA and Game & Fish to talk about the options. It was determined by Game & Fish that the jurisdictional washes there, the corridors, the movement corridors, the obvious locations for multi-functional crossings would best serve wildlife, and -- you can't hear?

In 2002, 2003, a meeting was held between FHWA and Arizona Game & Fish Department to discuss the opportunity for placement of wildlife crossings. It was determined that the jurisdictional washes provided the best opportunity, those are movement corridors for a wide variety of wildlife. And it was determined that because of the, let's say, the population densities of wildlife in the area, it was most beneficial on the western side of the South Mountain Preserve to kind of access between the floodplains and the Gila River; as far as the designs, that's something that I think is potentially still on the books to discuss. It was determined that those were the best locations and opportunities for any kind of crossing structures in the project area. And that area has the most impact in terms of lack of development.

SOUTH MOUNTAIN PUBLIC HEARING
(Public comments to reporter)
May 21, 2013
10:00 a.m.
REPORTED BY:
April Lassiter, CSR #1521

DANIELLE SPRING: I'm a part of the community river of the Gila community. I live in District 6 in the village of co-op. I live on 67th Avenue and Elliot and I am appalled by the loop 202 extinction being pursued through the South Mountain. I don't believe the EIS has proper address on this freeway. I don't even see that they are acknowledged as living there, even though we have lived there for thousands and thousands of years before Christ was born -- our people have lived there.

1

We are not a tribe that was relocated though the "Trail of Tears" or anything like that. We have always lived here. We were created here. We have always been here.

They did not succeed in killing us off completely yet. I know with the 202 that is their intentions of killing our people. I think this genocide in our community, I don't believe it has been addressed -- the pollution for the next five years, 20 years, 40 years and beyond. Our people have lived here for thousands of years and you can't project thousands of years.

2

3

I know these Laveen people don't care about that, because they've only lived five, 10 years, maybe 30. When the pollution comes, they're gonna leave. They didn't come from here. They don't belong here. They're going to go home where they belong. Who's going to be stuck here if we're still around the atrocities of what's happening to our community?

I think that, as I said, it has not been properly addressed. They do not see. And I've seen in the Title IV, that it has no bearing; this EIS, but that's ridiculous, because we are a minority.

The Gila River is comprised of about twenty thousand community members, all of which do not live on the reservation. They've been displaced by lack of jobs and

Code	Comment Document
4	things of that nature, so they had to move off the reservation, especially in the District 6 area -- thousands of people. So we're on the verge of extinction. It's very sad. They continue to push onto our people, onto our community. I don't see any preparation (sic) from the dusty lane area in Laveen. I don't believe they even have the right-away in that area; for the Ahwatukee Foot Hills. They don't explain how pollution is going to affect them, how the pollution will sit between the South Mountain and the Estrella Mountains. It's no outlet for it. It's the only place in the valley that I believe any freeway system will be going through that is right between the valleys of these two mountains. They're not far apart. They're close together. There's no way for the two to escape.
1	I heard the EIS spoke with the Gila River community. They work in conjunction. I don't see that reflected in the EIS. They don't address the effects of our community as folks on that mountain. They might speak on it occasionally, but it's not thorough. I know it says that the community doesn't allow certain information. They didn't want it to be made public, but that is just certain locations. They didn't want it to be made public, which I don't understand why they would care, since they're going to blast through it. They have no regard for that. It's not cultural significance, but it is.
5	They say there aren't any historical sites back there, but there are plenty historical sites back there. They have ancient trails back there. They aren't recreational trails, as if people are going to buy groceries -- icing these trails. That's why they're not made historical sites, because people aren't going to use them to go buy groceries. It's crazy. Who uses those mountains to go buy their groceries? That's stupid. I think that's ridiculous. I don't think that's a reason to not be historical. It is historical. It's been there thousands of years. Also, it has not been addressed -- oh yeah, I was talking about the minority of the people. Community people are a minority -a small minority, as related to the Phoenix area. There's millions of people, millions of people. Like I said, in District 6 there's only

Code	Issue	Response
4	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
5	**Cultural Resources**	Prehistoric trails have been identified through archaeological survey and consultations with Native American tribes.

Code	Comment Document

3 4

17 about 3000 people. In District 7 there's less than a
18 thousand people. All of that pollution is going to
19 cloud that area, right between Estrella and South
20 Mountain. And when the wind comes and it blows, there's
21 nowhere for it to go but south. When it goes to the
22 south region, then that's going to affect the rest of
23 our community members.
24 District 5, 2, 3, 1 -- there's no where else to go,
25 because those mountains just make the valley for the
1 Gila River community. It's one valley. I didn't see it
2 addressed in the EIS about the Gila River environmental
3 award in 2010, how we have clean air. We won a national
4 award. I don't see that addressed in that -- how it's
5 going to address our people.
6 When the Phoenix area is heavily polluted, you can
7 see the clouds and smoke. It's ridiculous. They want
8 to bring that down to our area. I don't agree with
9 that. I don't believe it's a good policy they should be
10 having, regardless.
11 To that one point, nine billion dollars on a freeway
12 for 3 -- two miles is a huge waste of resources. They
13 could use that money for something better -- do
14 something more constructive with their time with that.
15 I see that they said that there's going to be a lot
16 of traffic if they don't build this freeway.
17 Oh yeah, they came to our community in District 6,
18 and I think they told us that if we didn't build a
19 freeway, then the projections in 2030 would be that
20 there would be 15 to 16 thousand vehicles traveling 51st
21 Avenue. Ok. But then, the freeway - if the freeway's
22 built, it's going to be 250 thousand vehicles traveling
23 on that freeway. That's stupid. That's retarded.
24 That's dumb.
25 Why is that better for our community to have 250
1 thousand communities, rather than 16 thousand? It
2 doesn't make sense. It's retarded. That is outrageous.
3 I can't believe it.
4 Hold on, I got more. Let me think. Those people are
5 too much for me.
6 Also, if it hasn't been made aware that our culture
7 is still alive, we're still here. We're not dead. We
8 haven't been extinct yet. We are still practicing our
9 culture and we still go to the mountain. We still pray
10 at those sites that they're planning to blast through.

6

1	11 We leave our blessings there. We leave our prayers, our 12 words of strength, guidance. We go to this mountain to 13 gather those things for the types of things that we have 14 to go through on a daily basis. We need that strength. 15 We need that power that comes from our community. And 16 we call it Nulduck (sic). That is our sacred place of 17 being. That's where our creator was born. That's why 18 he came out of the ground after the floods came and he 19 created our people. That's why we live here, the 20 Alamalech (sic), them people -- A-I-K-E-M-L -- I don't 21 know how to spell it. Another -- which is O-T-H-O-M, I 22 think I spelled it right. That's why the creator 23 created the Othom people, to protect the land, to 24 look after it. All the sites, the creator gave to us. 25 That's what South Mountain means to us. That our 1 creator was from there, and he created us from out of 2 clay. That was used on the mountain. 3 Maybe you people don't believe in any of that. You 4 don't care. You just came out of nowhere, the dust of 5 something. We don't know where you came from -- where 6 you came from. We know where we came from and our 7 beliefs. We know where we were created. I don't know 8 where you people were created and you probably don't 9 know either. That's why it's probably not significant 10 to you. That's not our fault. That's your fault for 11 leaving your land, then you would know where you came 12 from. Let me see. Ok. I'm running out of stuff to 13 say. Thank you.

Laveen because Laveen's kind of north of that, but we live in the valley that's right between it. I don't see anywhere in the EIS that addresses that, not in the last five years, but 10, 20, 30, 40 years, what are the projections from this pollution that's going to be trapped in those mountains, in those little valley areas? I didn't see that addressed anywhere.

In our community in the district we only have maybe 2- or 3,000 people that live there, so we're a small minority. I know we're not Phoenix area where they have six million people so, of course, their voices are going to be louder than our voices can possibly be. There's more of them, there's few of us. When we talked about extinction and things of that nature, I think our people are going to be extinct if you project those projections, what is it going to say, that they're all

4

going to be sick from cancer and who knows all what other diseases that will come up from those toxins that come in there, and there's no way for that pollution to escape.

I'm sorry for all you people. I know you don't care, because you don't live out there, you live over there on the north side and wherever you live, I know you people don't concern yourself with us, just because we've

5

been here since way before any of you people ever even have thought of coming out here. Our people have lived

Code	Comment Document

out there for hundreds of years, not in the last couple of decades, no, we've been out there for hundreds of years, thousands of years, truly. It affects us more than it affects anybody else.

1 I mean, besides the fact that the mountain is sacred to us, yeah, it is sacred. I looked in the EIS and it says oh, some people might be upset about this that live in the community. Yeah, upset is not the word that I would use for that. It's really disgusting, really, how we feel about that, but I'm just talking

2 specifically about the pollution and how it affects our people. I didn't see anything of that in the EIS. It didn't even really act like we live there. I'm even -- I don't even think it talked about the effects that would have on the people that live in Ahwatukee and in the Laveen area, because they would all be affected too. There's all that congestion that's at the I-10 now already where the Litchfield is and all that area, all that pollution just stands there, stays there. If the

3 wind is blowing to the south it'll come straight down between the bypass, come straight down through our community, all the way to the other end.

So I have to say we're against this freeway being built, it's just awful and tragic, and I would like to see that addressed in EIS. What are your projections

Code	Issue	Response

Code	Comment Document

for the future in 10, 15, 20 years for the people that live out there? Thank you.

THE FACILITATOR: Thank you very much.

Andrew Pedro.

MR. PEDRO: Hello, I'm from the Gila River Indian Community and I'm one of our community managers, our community manager, David White for Gila River, he stated that transportation officials were to be taking cultural awareness training, and has that ever happened for people part of the 202? Anyone? And if it were, who would be taking those cultural awareness training classes; would it be construction? Would it be ADOT officials themselves? And in the DEIS it does say that if any uncovered cultural items, that construction would stop immediately. How are they supposed to know if training never happened?

And like Danelle said, it is a sacred place to us and we have been here thousands of years, you people have been here 200 years. And that thing in the EIS, except for saying that it could cause loss of cultural property and that is like -- that's a violation of our religious rights, that is a sacred place. How is ADOT able to go through there with being that it's a public park and it's a public preserve, so it's owned by the public; how are you supposed to get those right-of-ways

THE REPORTER: Please state your name.

MS. SPRING: My name is Danelle Spring. I'm a member of the Gila River Indian Community. I live in District 6 in the Co-Op Village. And I read the EIS, and I believe that it is old, and it should be updated. I think I read it, it was in like 12 years ago, that they did this statement, and 10 years ago. We just barely got our new hospital. We just got our dialysis center. We just got different things that have been built around the area, that they're proposing to put this freeway, and I don't think they took any of that into consideration. As a matter of fact, I don't think they took the effects it would have on the Gila River Indian Community into consideration very much.

It doesn't talk about the award that we got for the clean air in 2010, because this State EIS was done over a decade ago. So I think that that's not right, that they should do it again and be more accurate. And I think the study area should be expanded because of the vicinity between District 6 between Estrella Mountain and South Mountain and it should be considered more in depth.

For the next 20 years, 30 years, not just

1 the next coming-up years, but in the future, how it's
2 going to look and how it will affect the people that
3 live in the Valley area right here, between, like I
4 said, the Estrellas and South Mountain.
5 I looked at the alternatives, and the
6 alternatives are just different ways to build the
7 freeway. I don't see alternatives for different
8 types of roads or different kinds of transportation,
9 other than a freeway. There's just alternatives to a
10 different freeway, because that's not alternatives.
11 Alternatives are more than one choice, you get more
12 than one choice. You get alternatives to one
13 freeway.
14 I would like to say that the impacts of
15 blasting through South Mountain in our community
16 culturally is just disgusting, really, that they
17 would attempt to do that. They hold sacred buildings
18 that they built 10 years ago, 20, 30, they hold that
19 as some kind of special building, and yet a place
20 that we consider to be our church can just be
21 demolished, and they know that there are sacred sites
22 up there that they're going to demolish, and they say
23 in the EIS that that could affect some community
24 members, they don't know whether they're hemda
25 [phonetic] or not, it doesn't matter, it still

3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative). As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway.

2

affects them. It still affects them. And it affects all of us and the future of our people and how we perceive ourselves, especially in our district.

We know that we are the original people in this land. We did not move here. We did not migrate here. And our creation stories are from that mountain, saying that we were born from the mountain or grandfather created us. And that's how we know ourselves to be who we are as O'odham people. And no study can really explain that to you. Either you have that feeling and you know that or you don't know it. You can't study that. You can't explain that. You can't feel that way unless you're one of us. If you're not one of us, then you wouldn't know, and you never will know.

Most of the people that do these studies are from other countries, from other lands, they have to be, because they're not originally from here. Maybe their ancestors lived here for a couple of decades, but our ancestors have lived here from the beginning of time. You can't understand that unless you live in a place where your ancestors came from and you will never know what that's like. And it can't be explained.

I know that there are six million people

Code	Issue	Response

Code	Comment Document

in Phoenix, and there's only 20,000, maybe 10-, 11,000 of us that live in this community, that live in this area. Of District 6, there's only about 3,000 people that live here. So our voices are not being heard as loudly as the voices on the outside. And our voices could not possibly be heard as voices on the outside. It's not possible. And that's due to already taking away our land and already killing our people from different things, stealing our water, and things of that nature. Killing off all our elders and not having enough of us out here. It's already been done. And this is a continuation of that genocide on my people. It just keeps going and going, and there's never enough. They take a little bit for one road and then they want more and more and more. And they're just trying to get rid of everybody, it seems like. They have no feelings or concerns for the original people that live here.

(5)

In studying the alignment, I don't see why it has to be a freeway. Why can't it just be the roadways that go through there? Why does it have to be a freeway? Pecos Road already comes down to just a little bit below the mountain and it's on the south side, and it's four lanes, but there's two lanes going east and westbound. And then on Gila River

Code	Issue	Response
5	**Environmental Justice/Lifestyle**	While the Preferred Alternative would have an adverse effect on environmental justice populations, impacts would be temporary and would not create undue hardship or be disproportionately high compared with projected impacts on all populations in the Study Area. All populations would benefit from the proposed action's implementation through improved regional mobility and reduced local arterial street traffic.
6	**Alternatives**	In the best-case scenario, a parkway would carry approximately 105,000 vehicles per day, well below the average daily traffic on the proposed freeway, which would range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-19). As a result, the Arizona Parkway would lack sufficient capacity to meet projected travel demand. The Arizona Parkway would not adequately address the projected transportation system capacity deficiency, would not remove a sufficient amount of traffic from arterial streets, and, therefore, would not meet the project's purpose and need. For these reasons, the Arizona Parkway was eliminated from further consideration.

8

side, there's the Vee Quiva Casino, and that has two, the same thing, it has two lanes, two ways to go on north and -- east and west, north and south. So I don't understand why one of the alternatives is just to not connect those two pieces of road and have them be together. And then that would open up that area for the people. But not to allow big diesel trucks on those roads. Not to allow hazardous material on those roads, but really just to be for local traffic. That makes more sense than blasting through the mountain. That would save all of the Pecos people's homes in Ahwatukee. That will save all of the Laveen people's homes that live on Dusty Lane. And it doesn't seem like it's necessary to blast through the mountain and put an eight-lane freeway, so that all these trucks can pass through there, giving off all their diesel fuel and things like that.

It doesn't make any sense at all, when they already have the road that goes down south and comes around the Estrella Mountains. That's already supposed to be a truck bypass. They're using that truck bypass, the 303. The 303 is coming through; then why do you need the 202? The 303 is already almost put together, so why would they need the 202 as well to be expanded over here? It doesn't make

13

any sense. It seems like it's a significant waste of money and resources and trying to kill people is outrageous to me.

Also, I got to keep remembering, now I lost my train of thought. Also, there's a lot of traffic congestion on the 10, near 51st Avenue and 75th, I mean, that's already out of control over there, so I don't see how adding to that through this freeway going north towards 51st Avenue where they intersect with the 10 is going to make that any better. I don't see how that could be possible. It doesn't seem possible. It seems like it would just make it even worse congestion that's already over there, I don't know, but if you ever tried to travel westbound in the City of Phoenix to Litchfield, Jesus, that is ridiculous. And now you add more traffic to that area with this freeway going up to that same area? I mean, at least -- they could have at least put it through to the 91st area where it would have connected with the 101 over there. That might have been a little bit more better than to have all that traffic converging on one little area. To me that doesn't make sense. I don't understand who is doing this and why they think that that is a good idea. I don't understand that. It doesn't make

sense.

Also, they came to our community, and they have a whole chapter devoted to the Gila River Indian Community, blah, blah, blah, and they don't seem to take note that every time they come to the Gila River Indian Community, we've been saying no for 20 years, 30 years, however long this has been coming up, everybody has been saying no. We don't want it in our community. We have our resolutions against it. We have resolutions to try to protect the mountains and we intend to push our council representatives to take a lawsuit against the State of Arizona for continuously taking advantage of us, and for not listening to us, and not taking our opinions into their EIS. They just overlap it, and don't even consider it.

I mean, I read the whole chapter and it seems pretty stupid. And it says that the community won't allow them to share, or whatever, they won't tell them what's the significance of the mountains to us. I don't understand that. It doesn't make any sense. I think we have told them numerous times, but it just doesn't seem to get into the EIS report.

All I know is that if ADOT continues to push this freeway through our community, we will be

Finally!!! The benefits far outweigh the hindrances.

1 We, however, trust that the people whose homes or businesses are being affected or lost will be very fairly compensated. And..we trust that they will also receive the help and guidance they might need to start over again somewhere else.

Thank you! Please.... enough planning. 28 years should do it. Let's get this done!!

MR. ST. LEGER: My name is Jim and last name is St. Leger. I've been living in Arizona 17 years. When my wife and I moved here, we didn't have children at the time. We looked long and hard before we decided where in the Phoenix metro area we would live. The factors that impacted our choices were quality of life, access to the outdoors and clean air.

I have a distinct memory of looking at pollution maps that showed the prevailing winds in the Phoenix metro area pushing more pollution to the northeast area including Scottsdale and that part of town, and was extremely happy to see that Ahwatukee had some of the cleanest air in Phoenix which is why I moved there.

I was aware of the potential freeway at the time, but then watching Loop 202, Loop 101 get built, the impact of what might come hit home. When I look at the -- who might use this highway, I can't fathom the need in an Ahwatukee area of a six to ten lane freeway. The population clearly can't justify it nor can the traffic.

1

However, if I drive up I-10 into downtown and lived in that corridor, I would love to see all of that traffic off-loaded onto Santan Freeway, Loop

202. Which as a resident, I absolutely never want to see happen because of the diesel particulates from the tractor-trailers, the noise, the traffic, the congestion and frankly what it will do to my quality of life, and specifically the three children I now have today being impacted by it.

So from that perspective, I'm tremendously against a full freeway. If the argument is valid that people that live in the Phoenix metro area absolutely need it themselves, then put in a four lane parkway and ban the use of tractor-trailers. That would meet the local metro needs for traffic while eliminating the truck pollution problem, including trucks from Mexico that are not required, nor do they meet EPA air standards today.

Beyond that, I just struggle to see why we need to destroy our environment, South Mountain. For me the single most logical solution to the overarching metro traffic problem including I-10 through traffic would be to create a bypass that would be a shorter route for trucks likely off of I-8 through some other desolate area that doesn't impact any people or environments. And I think that's enough.

Page 30

Code	Issue	Response
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Noise**	
4	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
5	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). By 2035, east- and westbound motorists on Interstate 10 between State Route 101L (Agua Fria Freeway) and State Route 202L (Santan Freeway) are expected to experience stop-and-go driving for over 3 hours every day. This is for a distance of nearly 30 miles. A new freeway in the Study Area would distribute commuters over an additional freeway facility. As a result, the duration of stop-and-go traffic on the region's freeways would be reduced.
6	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to the Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
7	**Alternatives**	In the best-case scenario, a parkway would carry approximately 105,000 vehicles per day, well below the average daily traffic on the proposed freeway, which would range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-19). As a result, the Arizona Parkway would lack sufficient capacity to meet projected travel demand. The Arizona Parkway would not adequately address the projected transportation system capacity deficiency, would not remove a sufficient amount of traffic from arterial streets, and, therefore, would not meet the project's purpose and need. For these reasons, the Arizona Parkway was eliminated from further consideration.
8	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Code	Issue	Response
12	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.

To Whom It May Concern:

I have attached a letter voicing my opinions on the DEIS report for the South Mountain Freeway (202 Extension). It is important for those of us residing in the Ahwatukee community to express our concerns regarding this proposed highway and the impact it will have on our unique area.

1

It is hoped this letter will be read and appreciated for its content. The primary concern is the quality of life for those of us who reside in Ahwatukee.

Regards,

Larry Stackhouse

June 18, 2013

ADOT Loop 202 South Mountain Freeway Study
1655 W. Jackson Street
MD 126F
Phoenix, AZ 85007

To Whom It May Concern:

The most critical point of concern regarding this or any construction of highways in our state must be the welfare of its residents. Any number of studies can focus on important issues but none that I have seen address this most important aspect.

(2) (3) (1)

In reviewing this latest proposal from DEIS, it appears perfectly clear that this roadway will be a truck bypass. It will disrupt, degrade and pollute the Ahwatukee subdivision and the Gila River Indian Community. It does not enhance the quality of life or even maintain our present community attributes.

(4)

In speaking to neighbors and others residing in the area, less than 1% have told me they would use this highway. This is a clear sign that it is not meant to improve our quality of life but rather make it easier for commercial vehicles to save travel time by means of this bypass.

(5)

This has been proven by listening and talking to a number of trucking companies whose terminals are in close proximity to the I-10 junction of this extension. In fact, I have personally been told that no less than 100 trucks per hour will be using this 202 Extension.

(6)

This does not include the truck traffic that will originate in Mexico, which allows higher levels of sulfur in diesel fuel. They will be well into Arizona and past Phoenix before they will need to refuel. This will most definitely add to an already high level of pollution.

Code	Issue	Response
2	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Air Quality**	
4	**Purpose and Need, Lack of Support**	
5	**Purpose and Need**	Commercial trucks would use the proposed freeway. As with all other freeways in the region, trucks would use it for the through transport of freight, for transport to and from distribution centers, and for transport to support local commerce. Nevertheless, the primary users of the proposed freeway would be automobiles.
6	**Trucks**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document
7	**As the proposed highway marches toward the Estrella Mountain Range it will make a bend to the north to either circumvent South Mountain or be tunneled under it. This area is already plagued by pollution. The area between the northeast section of the Estrellas and the northwest part of the South Mountain range forms a funnel that does not allow for air to move through the pass. This is true now and will only become more troublesome if this roadway is built. Additionally, on the north side of South Mountain, at 43rd Avenue and Broadway there is an air quality monitor. The station already reports air quality levels that are above acceptable levels and more traffic will not improve this fact.**
8	
3	
9	**There has also not been a comprehensive report and study on emergencies and hazardous spills that could occur on this freeway. Access by emergency vehicles does not seem to be addressed or defined by the plans in the report. People will die and be exposed to everything from fuel spills, chlorine and any number of other highly dangerous substances.**
10	**There are a number of public schools, at least five, and private schools that are located within a half mile of the proposed new road. Studies have shown the negative effect upon children whose schools are in close proximity to highways. Asthmatic conditions are heightened and other health risks are adversely affected.**
11	**The design also is planned to displace a community church at the corner of Pecos and 32nd Street. I have never known this to happen in several other major metropolitan areas in which I have resided. Again, another example of degrading the life of community residents.**
4	**What I also do not understand is the selection of this route, when it could be the most expensive limited access highway ever built. It will also add to an already poor air quality and cause additional traffic delays during high travel periods. I-10 on the west side of the city is already one of the most backed up of stretches in the valley. Adding more stopped cars is not going to improve travel, air quality and the quality of life for the people in the area.**
3	
1	
12	**The only realistic option I can imagine for a highway that is meant to bypass the downtown part of the city is one that is west of the Estrella Mountains. A highway that will travel south to Route 8 and connect to I-10 near the 303 makes much more sense. This would displace the least amount of people, provide a true truck bypass with less impact on residents, add much less pollution to an already poor air quality area and cost a lot less money.**
13	**If this SMF proposal is meant to be a benefit to the area, then why not restrict it to non-commercial vehicles? This has been done in and around the Baltimore/Washington DC area, Philadelphia, PA, Florida and numerous other areas around the country.**

Code	Issue	Response
7	**Alternatives**	The Draft Environmental Impact Statement provides a summary of the project team's analysis of the Tunnel Alternatives. Please see pages 3-14, 3-16 and 3-17, and 5-18 through 5-20. Options to build a tunnel under the South Mountains were eliminated from further study not just because of high costs. They would not protect the South Mountains. Tunnel Alternatives would create safety and constructibility concerns, undesirable intrusion-related impacts, and maintenance issues. Tunnel Alternatives would not achieve avoidance of the South Mountains or meaningfully reduce use-related impacts under Section 4(f). Tunnel Alternatives would have less visual, noise level, and habitat acreage impacts than would the open-cut design of the proposed action.
8	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
9	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
10	**Health Effects**	
11	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
12	**Alternatives**	The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
13	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County.

Code	Comment Document
	This proposal has left me highly suspicious. I can only hope that land owners and politicians are not taking advantage of a situation to improve their own standing at the expense of the tax paying public.
2 1	**In conclusion, there seems to be little advantage to building this highway as proposed. With the millions of dollars spent on studies, reports and analysis, it is one of the least comprehensive studies of have ever seen. The only benefit I can draw from the information provided is to conclude it would be an excellent truck bypass for companies both far and near. It certainly would not improve the quality of life for those living in the area.**
	Respectfully,
	Larry Stackhouse
	Cc: PARC

LARRY STACKHOUSE: To whom it may concern: The most critical point of concern regarding this or any construction of highways in our state must be the welfare of its residents. Any number of studies can focus on important issues but none that I have seen address this most important aspect.

In reviewing this latest proposal from DEIS, it appears perfectly clear that this roadway will be a truck bypass. It will disrupt, degrade, and pollute the Ahwatukee subdivision and the Gila River Indian Community. It does not enhance the quality of life or even maintain our present community attributes. In speaking to neighbors and others residing in the area, less than one percent have told me they would use this highway.

This is a clear sign that it is not meant to improve our quality of life, but rather make it easier for commercial vehicles to save travel time by means of this bypass. This has been proven by listening and talking to a number of trucking companies whose terminals are in close proximity to the I-10 junction of this extension.

In fact, I have personally been told that no less than 100 trucks per hour will be using this 202 extension. This does not include the truck traffic that

1	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to the Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
4	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Purpose and Need**	Commercial trucks would use the proposed freeway. As with all other freeways in the region, trucks would use it for the through transport of freight, for transport to and from distribution centers, and for transport to support local commerce. Nevertheless, the primary users of the proposed freeway would be automobiles.

9

will originate in Mexico which allows higher levels of sulfur in their diesel fuel. They will be well into Arizona and past Phoenix before they will need to refuel. This will most definitely add to an already high level of pollution.

As a proposed highway marches toward the Estrella Mountain range, it will make a bend to the north to either circumvent South Mountain or go through it. This area is already plagued by pollution. The area between the northeast section of the Estrellas and the northwest part of South Mountain range forms a tunnel that does not allow for air to move through the pass. This is true now and will only become more troublesome if this roadway is built.

Additionally, on the north side of South Mountain around 43rd Avenue and Broadway there is an air quality monitor. This station already reports air quality levels that are above acceptable levels and more traffic will not improve this fact.

There also have not been comprehensive reports and studies on emergency and hazardous spills that could occur on this freeway. Access by emergency vehicles does not seem to be addressed or defined by the plans in the report. People will die and be exposed to everything from fuel spills, chlorine, and any number of

Code	Issue	Response
6	**Trucks**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Alternatives**	The Final Environmental Impact Statement provides a thorough summary of the project team's analysis of the Tunnel Alternatives. Please see pages 3-14, 3-16 and 3-17, and 5-18 through 5-20. Options to build a tunnel under the South Mountains were eliminated from further study not just because of high costs. They would not protect the South Mountains. Tunnel Alternatives would create safety and constructibility concerns, undesirable intrusion-related impacts, and maintenance issues. Tunnel Alternatives would not achieve avoidance of the South Mountains or meaningfully reduce use-related impacts under Section 4(f). Tunnel Alternatives would have less visual, noise level, and habitat acreage impacts than would the open-cut design of the proposed action.
8	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.

other highly dangerous substances.

There are a number of public schools, at least five, and private schools that are located within a half mile of the proposed new road. Studies have shown the negative effect upon children whose schools are in close proximity to highways. Asthmatic conditions are heightened and other health risks are adversely affected.

The design is also planned to displace a community church at the corner of Pecos and 32nd Street. I have never known this to happen in several other major metropolitan areas in which I have resided. Again, another example of degrading the life of community residents.

What I also do not understand is the selection of this route when it could be the most expensive limited access highway ever built.

It will also add to an already poor air quality and cause additional traffic delays during high travel periods. I-10 on the west side of the city is already one of the most backed up stretches in the Valley. Adding more stopped cars is not going to improve travel, air quality, and the quality of life for the people in the area.

The only realistic option I can imagine for a highway that is meant to bypass the downtown part

13

of the city is one that is west of the Estrella Mountains. A highway that will travel south to Route 8 and connect I-10 near the 303 makes much more sense.

This would displace the least amount of people, provide a truck route bypass with less impact on residents, add much less pollution to an already poor air quality area, and cost a lot less money.

If this SMF proposal is meant to be a benefit to the area, then why not restrict it to non-commercial vehicles?

This has been done in and around the Baltimore, DC area, Philadelphia, Florida, and numerous other areas around the country.

This proposal has also left me highly suspicious. I can only hope that landowners and politicians are not taking advantage of a situation to improve their own standing at the expense of the tax-paying public.

In conclusion, there seems to be little advantage in building this highway as proposed. The millions of dollars spent on studies, reports, and analyses, it is one of the least comprehensive studies I have ever seen. The South Mountain Freeway will get built, better to build it sooner that latter as it will only get more expensive as time goes on.

•The money to build the freeway is in the budget. It was approved by voters twice, first in 1985 and again in 2004.

•The project will create 30,000 jobs during the five to six year construction period and result in a $2 billion investment in the Phoenix-area economy.

•If we don't build the South Mountain freeway, traffic in the region will get much worse over the next two decades. According to ADOT's own study:

•Traffic on I-10 between Ahwatukee and Goodyear will grow 28%
•Another 103,000 cars will use the Broadway Curve each day
•Another 38,000 cars will jam the Tunnel every day
•Morning and evening commute times will increase 39% to 82%
•Traffic congestion on city streets will increase 46%

MS. DOROMAL: Hi, good afternoon. My name is Lisa Doromal and I am a resident of Laveen and I am for the Loop 202 to bring sustainability to our community and have the hospital brought in, it is all contingent with the 202 being built. Thank you.

THE FACILITATOR: Thank you.

Mike Doromal.

MR. DOROMAL: Good afternoon. My name is Michael Doromal, I'm also for the Loop 202. Laveen is an underserved community, there's a lot of services and businesses that will come into Laveen once the 202 is built. The residents are looking for it. It's been an option since the '80s, so let's get this freeway built. Thank you.

THE FACILITATOR: Thank you.

Brian Stadnick.

MR. STADNICK: Yes, good afternoon. I'm Brian Stadnick, I'm a resident of Glendale, but I use the West Valley freeways extensively and I think it's with the help to aid the traffic congestion in the I-10, plus I think that now is the perfect time to build this freeway. The contracting environment and the economy the way it is, I think there's no time like the present to be able to build this thing for the cost savings of the public, so let's get this thing built. Thank you.

Subject: Construct the 202 South Mtn freeway

Thanks for the opportunity to give input regarding this subject. I think that this unique by-pass would really alleviate the traffic congestion on I-10 going east into Phoenix, especially during the "rush hour" period. This is an obvious statement. I feel that then air quality in Phoenix would be impacted in a positive way.

1

The alignment I prefer is a continuation of the existing 101 west to the south from I-10.

Hal Stedman.
Goodyear, AZ

I commute to the west side of Phoenix/Glendale and would love to see this freeway finished. It was supposed to be built years ago and the homes that were built in its path were put there with the knowledge of this freeway project. Yet they chose to build there anyway. We owe them nothing and the freeway should go on as proposed. Please help me cut my commute time in half by finishing the project that should have already been started.

Thank you,
Anthony Stedry

From: Sierra Club on behalf of Donna Lee Steele
To: Projects
Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 8:44:14 AM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

No, No, NO AND NO!!!!!!!!!!!!!!!!

(2) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to (3) effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(4) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more (5) vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(6) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be (7) destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(8) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(1) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Ms. Donna Lee Steele
1524 N Sunset Dr
Flagstaff, AZ 86001-1440

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Health Effects**	
6	**Section 4(f) and Section 6(f)**

Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Subject: Southmountain Freeway comments

1

I understand the purpose of the freeway is to relieve traffic on I-10 through metro Phoenix.

2

I commute from the Northwest Valley North/South on the West Loop 101 Aqua Fria freeway to I-10 east to 59th avenue. During the high traffic season August through May when winter visitors as well as students/teachers add traffic to the freeways, I-10 is backed up from the Loop 101 all the way to I-17 daily. Why would ADOT want to add more traffic?

I believe adding the Southmountain Freewau route in general is going to encourage more traffic off of I-8 and bring it to I-10

I can not understand why the preferred route would be anywhere east of the Loop 101 and utilizing I-10. Additionally, the W59 has the most disruption to people and businesses. How could this be considered the preferred route?

3

At a minimum this route should start at the West Loop 101. Now that the Loop 303 is starting to take shape, why has this connection not being considered?

If in fact the study shows that the traffic is not metropolitan but regional, the Loop 303 would take even more traffic out of the metro area and would allow easy access to I-17 to the north and route traffic away from any part of I-10 east of the Loop 101.

4

I operate a capital intensive manufacturing facility at 55th avenue just south of I-10. Although I do not believe my business will be impacted, if it were, it would cause me considerable financial losses if I have to move my facility due to the amount of power and process piping that is required for my business.

Sincerely,

Ray Steinhart

1	**Purpose and Need**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County.
2	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Alternatives**	Alternatives as far west as State Route 303L were considered in the corridor screening process (see Final Environmental Impact Statement pages 3-6 and 3-7 and Figure 3-4, on page 3-7). They were eliminated early in the alternatives development process for the reasons identified on those pages, chiefly for not meeting the project purpose and need criteria.
4	**Acquisitions and Relocations**	Agencies may acquire only those properties located entirely or partly within the project right-of-way limits (see Final Environmental Impact Statement page 4-45).

Subject: Comments in opposition to South Mountain Freeway
Date: Tuesday, June 04, 2013 9:37:21 AM

Jun 4, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) (3) (4) Two billion dollars? To encourage more pollution and destroy this rare open space jewel in the city? Why not use OUR money to improve clean transportation/public transportation, supporting OUR health and slowing the rise of OUR health care costs ?
The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(3) (2) (5) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(6) (7) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(8) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(1) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. If you get any flack from oil companies, refer them to me. Thank you!

Sincerely,

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
5	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Section 4(f) and Section 6(f)**

8	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Subject: South Mountain Project Public Comment
Date: Wednesday, July 24, 2013 11:48:05 PM

To whom this may concern,

1 The proposed South Mountain Freeway project would have a negative effect on my family by increasing the traffic and congestion on S. 17th Ave between W. Chandler Blvd and E. Pecos Road--the proposed freeway.
<!--[if !supportEmptyParas]--> <!--[endif]-->

2 I have a current student enrolled in the Tempe High School district and South 17th Avenue is a Tempe Union High School bus route for picking up and dropping off my student. The street is also a Kyrene Middle School bus route for picking up and dropping off other local students. I fear for the safety of these students because of the increase traffic and lack of proper crosswalks.
<!--[if !supportEmptyParas]--> <!--[endif]-->
If the freeway must be built, please consider extending W. Liberty Lane out to S. 27th Avenue (in addition to the W. Chandler Blvd extension) to alleviate the increased traffic along South 17th Ave.
<!--[if !supportEmptyParas]--> <!--[endif]-->
Thank you for your consideration.
<!--[if !supportEmptyParas]--> <!--[endif]-->
Sincerely,
<!--[if !supportEmptyParas]--> <!--[endif]-->

1	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement). The daily traffic volume on 17th Street in 2011 was approximately 4,500 vehicles per day just north of Pecos Road (see <phoenix.gov/streets/traffic/volumemap>). With the proposed freeway in place, an additional 4,000 vehicles day would use 17th Avenue to gain access to residences west of 17th Avenue. The total daily traffic would be well below the capacity of a two-lane road (approximately 15,000 vehicles per day). The extension of the Liberty Lane to the west is not part of the proposed project. This road would likely be built in the future along with the development of the Arizona State Land Department property.
2	**Design**	The extension of Liberty Lane to the west is not part of the proposed project. This road would likely be built in the future along with the development of the Arizona State Land Department property. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the freeway on the local street system. The City study found no adverse effects on the local street system from the proposed freeway. The traffic volume on 17th Street in 2011 was approximately 4,500 vehicles per day just north of Pecos Road (see <phoenix.gov/streets/traffic/volumemap>). With the proposed freeway in place, an additional 4,000 vehicles day would use 17th Avenue to gain access to residences west of 17th Avenue. The total daily traffic would be well below the capacity of a two-lane road (approximately 15,000 vehicles per day).

You only show cars on the proposed 202. You know it will be bumper to bumper of semi's on this short cut around Phoenix. We moved to Ahwatukee Foothills to be away from the noise of the city and the smog. I am apposed to the current alignment mainly due to the pollution it will leave us in. The mountain will lock in the smog to settle down around us like a blanket gradually killing off wild life, plant life and human life.

1	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to the Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
5	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

they need to be listened to rather than people who don't live in that area. I've been around long enough that I know the Sierra Club and Don't Waste Arizona, when they worked against medical waste incinerators in the Laveen and South Phoenix area. People [unintelligible] because their studies then were very important to stopping those incinerators. Now, however, some of the same people who worked to stop those incinerators seem to think this freeway is a great idea, because it saves them five minutes' driving. So that's crazy to me. It's still the health of the individuals that are more important, the children who are going to school and the people living and working in the area along where this freeway will be built. It needs to be put somewhere where it's not as dangerous healthwise for the people living there.

Thanks.

THE FACILITATOR: Thank you.

Don Steuter.

MR. STEUTER: Thank you.

Use this one?

THE FACILITATOR: Yes, please.

South Mountain Freeway and your Draft Environmental Impact Statement. I've had an opportunity to read quite a few different Environmental Impact Statements over the years, and there's a lot of good information in your document. I appreciate that, and I must say it does seem to be, as opposed to being an objective document, it seems to be predisposed biased in favor of the freeway, so I have to say that at the outset. But there is a lot of good information in there, and I do appreciate that.

The main thing I want to tell you about is that I think that the freeway, I remember when it was first proposed back in the 1980s, and at the time I would have to say I was probably in favor of it or didn't give it a whole lot of thought. But today, in 2013, it seems like quite an outdated idea. The challenges that we're up against seem to be considerably different than what we were dealing with back in the 1980s. And foremost among those is things like climate change that we don't want to think about, but seem to be upon us, whether we want to deal with it or not. And I noticed that the draft EIS does talk about CO2 emissions, but it talks about those emissions in the context that the EPA has not made any decisions. There's no cap. There's no

1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	Climate change is an important national and global concern. While the earth has gone through many natural changes in climate in its history, there is general agreement that the earth's climate is currently changing at an accelerated rate and will continue to do. Human-caused greenhouse gas emissions contribute to this rapid change. Carbon dioxide makes up the largest component of these greenhouse gas emissions. Other prominent transportation-related Greenhouse gases include methane and nitrous oxide. Greenhouse gases trap heat in the earth's atmosphere. Because the atmospheric concentration of greenhouse gases continues to climb, our planet will likely continue to experience climate change-related phenomena (see Final Environmental Impact Statement pages 4-85 through 4-86). To date, no national standards have been established regarding greenhouse gases. Greenhouse gases are different than other air pollutants evaluated in federal environmental reviews because their impacts are not localized or regional due to their rapid dispersion into the global atmosphere. The affected environment for greenhouse gas emissions is the entire planet. In contrast to broad-scale actions such as those involving an entire industry sector or very large geographic areas, it is difficult to isolate and understand greenhouse gas emissions' impacts for a particular transportation project. Furthermore, presently there is no scientific methodology for attributing specific climatological changes to a particular transportation project's emissions. Under the National Environmental Policy Act, detailed environmental analysis should focus on issues that are significant and meaningful to decision making. The Federal Highway Administration has concluded, based on the nature of greenhouse gas emissions and the exceedingly small potential greenhouse gas impacts of the proposed freeway (as shown in Final Environmental Impact Statement Table 4-37 on page 4-85), that greenhouse gas emissions from the proposed freeway would not result in "reasonably foreseeable significant adverse impacts on the human environment" [40 Code of Federal Regulations § 1502.22(b)].

Code	Comment Document

limits. Nationwide on CO2 emissions, and so, therefore, Arizona Department of Transportation thought that it's not in their purview to have to address that.

But it's hard to know if we don't start talking about it, at least start talking about these things at the local level. How are we going to get anywhere with dealing with it? And I'm sure that many others of the 50 states are basically in the same situation, they're looking around and having freeways that they're considering building. And if everyone has that attitude, we're going to end up still with a lot of freeways that, admittedly, a lot of people want, but there are many other, you know, long-term considerations that we need to start talking about.

So I would hope that in the final EIS that you take more time and flesh out the old CO2 issue further, try to figure out which other states might be trying to address it, and if there are some things that Arizona could pick up on and follow up on that.

A lot of people -- I'm a hiker, and a lot of us are very jealous, as I'm sure you heard today, about our parks and preserves in the Phoenix area. And personally, I've been involved in several over

Code	Issue	Response

the last 25 years, fights over trying to project, enhance our Phoenix Mountain Preserves, and whenever something happens, we worry. I guess it's hikers, outdoor people's nature that when we see something happening to one of our parks or preserves, we get very worried. We think it possibly could be a precedence. In the past there's been a lot of wonderful activists who have worked to protect the preserves, but, you know, I hate to say it, but we're all starting to get more gray hair, if we're still around even. And so we hate to see projects like this that take a chunk out of the park without really being mitigated in any way, shape, or form.

We're going to, in effect, lose about 30 acres of South Mountain Park and --

THE FACILITATOR: Would you wrap up?

MR. STEUTER: Sure. And there is no proposal really to do anything about that. We've planned, but not built other freeways in the past, the Paradise Freeway was planned, never built. The 143 extension north never happened, so we do sometimes concede the freeways and we don't build them, so it's possible we could live without the South Mountain Freeway as well.

Thank you very much for your time.

1 educator and parent in the Valley here. I've lived
2 here 12 years, and I'm speaking today to say that my
3 belief is no-build. Speaking to let you know that
4 because I value really, most of all, I value my son
5 and really all people who enjoy breathing clean air.
6 Their ability to have that clean air. And also
7 because it seems irresponsible to continue to pursue
8 the alternative of building the freeway when a
9 satisfactory plan has not been developed in these
10 decades that have gone on. I was a member of the
11 South Mountain Citizens Advisory Team for about a
12 year and a half, I believe, 2005 to '6.
13 And at that time really nothing's changed
14 in those years, as far as what's being offered.
15 Definitely to impact South Mountain in any way is not
16 a good option for anyone in the community, it's a
17 world-class resource. Both in terms of the habitat
18 that it provides to wildlife and in the gift that it
19 offers to anyone who values that land, which really,
20 you know, just speaking for myself and my family,
21 it's invaluable. It is an amazing place.
22 In terms of what we're doing to our world
23 with continuing the same old path of build more
24 roads, build more roads, we -- studies have shown
25 that it continues to foster more congestion. It's a

6

short-term Band-Aid for the problems that are cited as a reason to build a freeway of there's not enough road space. It doesn't solve the problem. So I'm suggesting no-build. And instead, alternatives such as better land planning involving mixed uses, looking to railway and other non-polluting alternatives, especially given current realities about what the level of carbon dioxide is in the atmosphere. I think we reached 400 parts per million last week. It is a really important thing. And no matter what a person believes regarding the state of the atmosphere, whether we should continue to do the same old thing, it seems only responsible in terms of our future clean air, as well as just general lung health for all people who are breathing this air, to pursue a path that would invite that air and the parts per million of carbon to decrease.

So if you could look at railway, light rail, not building the road, and maybe I'll have some more time -- I think I just went over. Yes?

THE FACILITATOR: Yes, you did. You're also welcome to provide additional comments to the court reporter in the room next door, but your time is up.

MS. STEWART: So thank you for listening

to me, and thanks. Good-bye.

THE FACILITATOR: Andrew Pedro. Andrew, are you in the auditorium?

Claudia Reifschneider.

MS. REIFSCHNEIDER: Here.

THE FACILITATOR: If you would, if you could turn the microphone and address the front, you'll be able to see the time better that way.

MS. REIFSCHNEIDER: Perfect. Thank you. I'm here in favor of the 202 South Mountain Freeway. I think it's time that we build it, and keep the congestion off of our highways, make our air circulate better so we don't have cars that are idling on the freeway, and producing more poor air that we breathe. I -- also, you'll probably hear today not only a lot about air, but you're going to hear about the South Mountain Park and the mountain there. I believe there are some people that believe that it is sacred land, but I'm here to say that it is federal and state land. And as far as I know, it hasn't been deemed as sacred.

Although it is a beautiful park and we all love it, we have many states in our country that have had to make tough decisions and had to shave off small portions of their mountains throughout our

CALLER REMARKS/QUESTIONS:

1 I am definitely in favor of the 202 south loop around South Mountain Freeway. In fact, I support working with the Indian tribe to put it on the res and not cut into the corner of the mountain taking advantage of the easy build job and saving all the money to not go through the mountain and not worry about all the houses that have been bought in Ahwatukee, etc. etc. I sure something can be worked out with the tribe. I just think they are going to delay it as long as possible to get the best possible price. Just like the Pima Freeway. I don't think there's any [voicemail unclear] there, but I strongly support it. I think it needs to move ahead as fast as possible, the traffic is a mess and that will be much improved from the big cul-de-sac in Ahwatukee. I live just off the 101 and Guadalupe.

LOOP 202
South Mountain
Freeway Study

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

ADOT

I strongly disagree with the extinction of Rd 202 to be able to connect to our ~~Ahwatukee~~ AHWATUKEE neighborhood.

1 2 It will destroy our Schools, Churches, Homes & Pollute the Area.

3 4 We do not need an "National Interstate" to transport goods from the Lower Americas to Canada - using our AREA.

Hello and thank you for accepting my comments on the Draft Environmental Impact Statement for the proposed South Mountain freeway. The best alternative to put into action regarding this proposed freeway is to not build it. (1)

My family and I deeply value clean air, public health and South Mountain Park. This freeway would be terrible on all three accounts.

The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them. (2) (3)

South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be emptied into our air, worsening asthma, cancer, and other diseases. (4) (5)

The freeway would also harm our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area. (6) (7)

The freeway will also make our existing urban sprawl even worse. The expenses associated with its construction, with increased air pollution and traffic congestion will only further burden Arizona's taxpayers. The building of this freeway would simply continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center. (8) (4)

Instead of this proposed freeway, we need to encourage innovative, incentive-based programs to optimize carpooling and biking opportunities, as well as the optimal use of public transportation. As well, we need increased funding for public transportation options like fuel-efficient buses and rail projects. (3)

Thank you.
Respectfully,

Michelle Pulich Stewart

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). By 2035, east- and westbound motorists on Interstate 10 between State Route 101L (Agua Fria Freeway) and State Route 202L (Santan Freeway) are expected to experience stop-and-go driving for over 3 hours every day. This is for a distance of nearly 30 miles. A new freeway in the Study Area would distribute commuters over an additional freeway facility. As a result, the duration of stop-and-go traffic on the region's freeways would be reduced.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

Thomas Stillwell

Document Created: 5/21/2013 5:13:45 PM by Web Comment Form

I have lived in the Ahwatukee Foothills Village since 1989. I relocated my law office to the same area 10 years ago and I continue to live and practice there. I have spoken at public meetings regarding this freeway going back at least 10 years. It is fascinating to me that ADOT claims to have considered the no-build option, yet I cannot remember that ever being the case...we've been told that it's going to happen eventually, and despite the fact that it's an old idea and far too expensive, here we are again having to speak out against it. (1) (2)

A fundamental question that must be answered, in order to justify the expense and societal costs of this freeway, is whether or not the SMF will signficantly reduce traffic on I-10. The proponents used to (during past public meetings) cite "studies" that they argued supported a "yes" answer to that question. In particular, an engineer from ADOT explained how they had counted trucks at I-10 and Chandler Blvd, and again on I-10 in the West Valley. From that "study" they concluded that most trucks currently passing through Central Phoenix were merely passing through, and would be likely to take the SMF, thus bypassing downtown and reducing I-10 truck traffic signficantly. (3)

I rose and questioned the engineers' methodology and logic. I pointed out that they had made no attempt to see whether the trucks they counted on the incoming side were the same trucks they counted on the outgoing side. The reason that is significant is that Central Phoenix is home to a) one of the largest trucking company yards in America, and b) many other truck-dependant shipping operations (e.g. the airport-bound truks of the various delivery companies, and the Amazon warehouses.) Trucks coming into Phoenix that are headed for such major trucking centers would NOT use the SMF. In an astounding bit of deception, the SMF proponents no longer cite that "study," but instead merely claim that the freeway will accomplish its goals...totally ignoring the above facts. (4) (5)

The EIS Panel must, of course, weigh impact against benefit. Having already addressed the shaky claim of at least one benefit, let me point out the reality of the impact. Our neighborhood has the lowest crime rate in the Valley. That is in no small part due to the fact that we are isolated by the lack of entrance/egress to the south and west. This freeway would fundamentally change the nature of our neighborhood, and the EIS has completely failed to address this change. (6)

The EIS has also failed to address the impact of this freeway in the instance of traffic accidents...only the impact of the "ideal" situation has been included. For example, if there were a fatal accident (e.g. a freeway closure) on the eastbound SMF, on the east end near I-10, traffic would have to exit the freeway at one of the proposed exits (40th St? 32nd St? 24th St? 17th Ave?) and take surface streets over to I-10. The streets of the Ahwatukee Foothills Village are not designed to handle a large volume of detoured trucks, let alone such a huge influx of other vehicles, and in fact, such detoured traffic would have to be directed to use Ray Road to I-10, which would take them through a school zone on weekdays! Such decisions should not be made solely on the basis of a best-case-scenario, and when looks at (7)

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need, Old Plan or Use of Old Data**	
3	**Purpose and Need**	In 2035, the average daily traffic on the proposed freeway is projected to range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-62). The estimated volume depends on location. The purpose and need for the South Mountain Freeway are not solely to relieve congestion on Interstate 10 (Maricopa Freeway). Facilitating mobility in the Maricopa Association of Governments region does not mean just relieving congestion on the Broadway Curve (see Final Environmental Impact Statement page 1-21). Among other criteria, the proposed freeway is to permit the entire Regional Freeway and Highway System to function as designed. Optimal function of that design includes completing all the segments of the State Route 202L system (see Final Environmental Impact Statement pages 3-35 and 3-37). With implementation of the South Mountain Freeway, many motorists would be able to get from Point A to Point B, a route that never included needing to use Interstate 10.
4	**Purpose and Need**	Commercial trucks would use the proposed freeway. As with all other freeways in the region, trucks would use it for the through transport of freight, for transport to and from distribution centers, and for transport to support local commerce. Nevertheless, the primary users of the proposed freeway would be automobiles.
5	**Traffic**	The responsiveness of the proposed freeway to purpose and need criteria is presented in the Draft Environmental Impact Statement, beginning on page 3-27. Information related to total daily traffic on other regional freeways, including Interstate 10, with and without the proposed freeway, is presented in Figure 3-12. Information related to traffic distribution on Study Area freeways and arterial streets, with and without the proposed freeway, is presented in Figure 3-13. Information showing hours of congestion on the region's freeways, with and without the proposed freeway, is shown in Draft Environmental Impact Statement Figures 3-15 and 3-16.
6	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
7	**Traffic**	The Arizona Department of Public Safety (which includes the State Highway Patrol) has primary responsibility for enforcing traffic laws. It also has primacy when calling in support for traffic accidents, including hazardous materials accidents (see text box on Final Environmental Impact Statement page 4-166). The Arizona Department of Environmental Quality maintains a list of contractors who provide emergency response services, as well as local municipalities whose fire and police departments operate in cooperation with the Arizona Department of Public Safety on incidents within their jurisdiction.

(Responses continue on next page)

	just that easily-imagined example, one sees that this freeway could spell future nightmares on the streets of my neighborhood. Finally, our area would be much better-served if the billions of dollars this freeway will cost were spent to get more cars off the existing freeways, or to use the existing freeway locations more efficiently. ONE bus line serves the area. NO light rail is planned or even being considered. No consideration appears to have been given to the possibility of multi-level freeways (as is commonly done in California) using the existing freeway locations. I personally would probably benefit if this freeway were built, because west-side clients would consider me as their attorney, but IT'S NOT WORTH IT. Nor are the weakly-supported benefits that the Valley will allegedly enjoy. Ruining the quality of life of hundreds of thousands of people for purely speculative benefits is simply ridiculous. The EIS is merely a slick retelling of the same arguments ADOT has been making for years. This current process is clearly designed to diffuse opposition and allow ADOT to politely claim it listened. I oppose this freeway. I always have, and I always will, and no number of displays and videos will change the facts I've stated above.

Code	Issue	Response
8	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative). As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway.
9	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
10	**Alternatives**	The double-deck option suggested in the comment would have similar benefits and impacts as the Bridge Alternatives evaluated in the Draft Environmental Impact Statement (see pages 3-13 and 5-20). Options to build a bridge through or over the South Mountains were eliminated from further study because of incident management, constructibility and maintenance issues, future expansion limitations, substantially higher estimated construction costs, and undesirable intrusion-related impacts.
11	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

From: Sierra Club on behalf of Joyce Stoffers
To: Projects
Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 9:14:26 PM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) Enough with more freeways. It's time for mass transit! Stop sectioning up the land and destroying our wild treasures. The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(3) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(4) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(5) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(6) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

(7) Sincerely,

Ms. Joyce Stoffers

MR. STOKEBRAND: I sent an e-mail to ADOT regarding just how I support the 202. It's much needed for the people living -- it will bring much needed funds to the City of Phoenix in terms of tax revenue and for all us citizens who leave Laveen and City of Phoenix to go to Goodyear, Avondale, and other cities. I will be a lot happier to keep those tax funds inside of our city for community centers, things of that sort. And I'm someone who lives close, within half a mile of the proposed freeway and I still support it just because it will make my life better, easier to get around the city, and alleviate some of the congestion on Baseline Avenue.

That's about it. The rest of it is pretty well documented, so I don't have anything else to add.

Thank you.

MR. THOMAS: My name is Jim Thomas. I live in Goodyear, Arizona. I work at Broadway and 40th Street, so I drive I-10 every day and the traffic is bad in the morning and it's horrible in the afternoon. I normally get to the office between 5:30 and 6:00 and it takes me 35 minutes, it's about 30 miles. In the evenings, it takes me at least 45 minutes, sometimes an hour to get home so this would be very helpful.

And I think, if they would take the bypass off of the 101 -- if you go down to 59th, you're just

1

The loss of entrance ramps at 51st Ave. will be bad for business and the community. 51st Ave is the gateway to the Maryvale area. There is considerable traffic that enters and exits the I-10 freeway at 51st Av. One major impact will be on the traffic to and from the Maryvale Baseball Park where spring training games are held. Map 21 shows a confusing and illogical design that will keep thousands of cars on roads longer and lead to more conjestion and poor air quality of neighborhoods. It also appears that you are diverting even more traffic into the area with the loss of ramps at 59th Av. South of I-10 are 2 major truck stops that will have a huge negative business impact due to traffic's inability to exit. I am a community leader in an adjacent neighborhood and I oppose this part of the plan.

Code	Issue	Response
1	**Design**	The majority of motorists who enter and exit Interstate 10 at 51st Avenue are coming from or going to the east. The ramps on the east side would not be affected by the proposed freeway. To allow for the freeway-to-freeway connection, local access along Interstate 10 between 51st Avenue and 67th Avenue would be reconfigured (see Draft Environmental Impact Statement Figure 3-29 for more details). The new configuration includes access roads between 67th Avenue and 51st Avenue on the northern and southern sides of Interstate 10 to allow vehicles to gain access to Interstate 10.

Code	Comment Document

flat community. The bulk of Ahwatukee slopes up from Pecos Road up into the Foothills, well above the noise abatement wall. Noise travels, it bounces off the mountain and is amplified back, so you'll have a significant noise increase farther away from the freeway than your measurements would indicate.

Essentially, what this boils down to is ADOT is sacrificing a community of 85,000 for the purpose of building a truck bypass, a truck bypass that could be easily done using the I-8 to 85 corridor and improving the 85 highway from I-8 to I-10. If the purpose is to provide and route trucks away from Central Phoenix, this is a far better alternative than the Loop 202 truck bypass. Thank you.

THE FACILITATOR: Thank you, Mr. Knight.

Again, as a reminder, out of mutual respect and as a courtesy to all participants, we ask that you refrain from clapping and making reactions to speakers' comments.

I'd like to invite our next speaker, Tim Stone.

MR. STONE: Do I introduce myself? I don't know the rules.

THE FACILITATOR: Thank you, Mr. Stone. You have three minutes.

MR. STONE: My name is Tim Stone, I've been a

member of the South Mountain advisory team since back in 2007. My recommendation is a no-build on the 59th Avenue alternative. To me it's the wrong highway in the wrong location. We were advised that the 202 loop was designed to relieve the current and future congestion at the Broadway curve, and if that's our goal we need to start diverting the expected traffic flow through the west -- further west than 59th Avenue. In the past we have seen where they talked about the Loop 101 and the 202 matching up out by 99th Avenue; that's something that would be better. Or better still, if we just push it further west and kept all of the heavy traffic that just wants to skirt Phoenix well south of the population areas of Phoenix. My recommendation on that would be to go to the furthest away from like the Estrella mountains, the Salt River, and then the reservation as a guideline to keep things further south and away from the city.

In part of our hearings they were indicating that the traffic creating the exhaust emissions, 85 percent of it or 81 percent of it would be based on diesel-type vehicles, rather than cars, which to me indicates a lot of semi-tractor-trailer-type traffic. They told us there would be 19,000 semis that would not be stopping in the Valley at all, just transiting through heading to the East Coast or whatever, but that the

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives, W59 Alternative Versus W101 Alternative**	
3	**Alternatives**	There is an existing route (Interstate 8 and State Route 85) that provides a bypass of the Phoenix metropolitan area. Signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. This route continues to be available for interstate and interregional travel.
4	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Trucks**	The referenced statement would be that 85 percent of the emissions are caused by diesel-type vehicles, not that the percentage of trucks on the proposed freeway would be 85 percent. The Maricopa Association of Governments regional travel demand model forecasts approximately 10 percent truck traffic on the South Mountain Freeway in 2035 (see Final Environmental Impact Statement page 3-64). This percentage is similar to current conditions on Interstate 10 between Loop 101 and Interstate 17 and on U.S. Route 60. Air quality and noise modeling for the Draft and Final Environmental Impact Statements used this forecast truck traffic (see Final Environmental Impact Statement pages 4-68 and 4-100, respectively). Based on 10 percent truck traffic, this would be 19,000 trucks as indicated in the comment. Not all of these trucks would be passing through the Phoenix metropolitan area without stopping (see Final Environmental Impact Statement page 3-64).

Code	Comment Document

Loop 202 would be carrying up to 129,000 vehicles per day. If 81 percent of that is semi-type diesel, that's an awful lot of semi-trucks that, in my mind, we need to try and keep away from neighborhoods and congested areas with a lot of people and schools.

And we were provided by a presentation at the CAT meeting by a Pete Hyde from the school of engineering at ASU, they provided us with a health study on nine selected sites here in the Valley who wanted I-10 and 27th Avenue as the closest to the freeway put down by the facts and progressively getting further away. The data it shows was incidents of cancer and the incident rate for that first site was 700 per million and as you got further away the furthest remote one was out by Roosevelt Lake and that was 100 cases of cancer per million that far up. And as you work your way through it, it definitely showed a connection between in some method cancer and petrol chemical vehicles and cars, trucks, and gas.

So to me, we need to keep the roadway once again further away from neighborhoods and a lot of people than -- we're hearing at the meetings that they were talking about making the 202 a narrower footprint than like we have, say, on the southern part of the Loop 101.

THE FACILITATOR: Thank you, Mr. Stone, your

the build of Loop 202, we get none of that. Shame on us if we bury our heads in the sand.

MR. STONE: Tim Stone, S-t-o-n-e.

I'm a member of the South Mountain CAT Team that undertook part of the study of the Loop 202. In our April meeting we were provided with the results of the Sonoma Technology, Inc., presentation on State Route 95 near Las Vegas and its effects on two schools in that area as they were producing and building the road and then using it afterward. The study concentrated on black carbon impact on the schools. What the school -- what the study indicated was that there was significant downwind effects that would occur if the school was in close proximity to the highway, but it would mitigate as it comes further away, more remote from the highway.

This is of concern because along the Loop 202 route, Betty Fairfax High School is not all that remote from it. It's close. And there's another elementary school down near the Pecos Road. And these downwind effects would be adverse to the children there.

In their study they indicated that with proper filters, the classrooms could remain safe, but outdoor activities would be at hazard, especially as it -- if it occurred near peak traffic transit; in other words, the rush hour time for morning or afternoon, with the kids

outside, like high school kids and -- practicing baseball, football, soccer, or whatever. It's not advantageous to them.

Let's see. The other item of concern that I noted was in the study they provided us, they talked about a noncontinuous sound and noise and dust wall along the side of the highway. I think it needs to be throughout the area near the crest where it's most effective rather than down at the property line where the highway is supposed to be up to a 23-foot level, would be way over it unless they built an atrociously tall wall. So it would be better to put it up near the side of the road. But it needs to cover all communities along it, not selective ones or areas just like the school.

2

That's all I had to add over what I said in there, so...

Okay? Thank you very much.

MR. MARTINEZ: H-e-n-r-y, Henry. Martinez, M-a-r-t-i-n-e-z.

I understand that this is voted on by the people of Phoenix to get the 202. We were offered three different places where it could be put in. And as of June 2006, ADOT changed their mind. They didn't give us that fourth option, the option of today where it's at 59th Avenue. Because here it's at -- sorry --

ADOT:

Thank you for the opportunity to comment on the above Draft EIS.

1

While I have only done a cursory review I definitely would prefer the W101 Alternative for the western section compared to the W59 or W71 options. In the "big" picture it just does not make sense to continue to funnel all traffic along I-10 in the section between L101 and 59th Avenue (in the W59 option). This is true for both directions of travel. Having the W101 option serve as an extension of L101 appears to "complete the loop" to provide the bypass around Phoenix that is the primary purpose of the South Mountain Freeway. In travelling this area every day the AM traffic typically moves well until the I-10 and L101 traffic must merge on I-10. The W101 alternative will better help to alleviate this congestion.

This environmental impact draft study doesn't seem to think that it will worsen the air quality on the sensor that's on 43rd Avenue, which will be two to three miles away from this construction. So it really needs to be understood that it could -- could risk Arizona losing its federal funds. And then the City and our citizens will have to pay the bill. This could turn into one of the more expensive highways. And I think a separate study of that impact is very, very important before we go to the final phase of the environmental study.

So thank you very much for your time. I appreciate the opportunity to comment.

MR. SMITH: They've already spent a lot of money studying this thing, right? And they might as well finish the project or a lot of people's work has been wasted already.

And as far as alignments go, I think, even though the one that's more expensive, that would link up to the 101, is probably a better option in the long run, even though it looks like it might be more expensive now. I don't think I have anything else to say.

MR. STROOP: Well, I just wanted to say that I am a Laveen resident and that I am for the proposal to build the freeway in any of the capacities that I saw today. I don't really have a preference on an alternative, but I would prefer it to get built as soon as possible.

MR. ALLEN: I don't know what ADOT's plans for

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

Wildlife corridors!
While I see display boards that address wildlife movement corridors, I wish to emphasize the importance of these corridors to the long-term survivability of our dwindling fauna! The Estrellas + South Mountain are host to many mammal species — from mountain lions to small rodents and each has different corridor needs: one size does not fit all. Flyovers above natural drainages, large box culverts and smaller culverts all need to be in the mix. Additionally, more is better than only a few.
Wildlife-friendly fencing: This also needs special attention where fencing is a necessity.

Subject: Support For South Mountain 202

My name is Paul Sublasky, I work in the Aerospace / Manufacturing / IT Staffing Industry. I am a life long resident of The east valley and think that the

South Mountain Loop 202 Freeway, which has been approved by Maricopa voters twice, first in 1985 and again in 2004 should be built immediately. The traffic jams are stupid and unnecessary. Arizona residents want it, it will bring jobs and money to our economy. Infrastructure is the key to growth- if you build it they will come!!!! What is the delay? is it you? If you do not approve this to get this going than why are you running the show? Maybe we need new officials. This is an outrage that it has taken so long to build. Don't you work for the people of Arizona? DO YOUR JOB OR GET OUT.

Dear ADOT Representative,

1 I am in support of the building of the South Mountain freeway; Because, as our communities increase in population and many more travelers passing through our communites; It is imperative to have the freeway built to help limit gas emissions, congestion, and allow the flow of traffic to continue; So, it can limit road rage!
I thank-you for hearing my concerns in support of the building of the South Mountain freeway.

Sincerely,

John H. Sullivan

Sent: Monday, July 15, 2013 11:06 AM
To: Projects
Subject: South Mountain Freeway

I am offering my public comment about the proposed South Mountain Freeway.

(1) First off, I don't have any illusions my comments will have any impact on the final decision. I strongly believe the decision has been made and this is just a formality to satisfy some legal requirements. Nonetheless, I will submit my comments.

When the freeway alignment was proposed 30 years ago (approximately), there was nothing in the area to impede construction. At that time, even though I didn't live in the Ahwatukee Foothills area, I thought the loop was a good idea.

(2) (3) (4) (5) However, many things have changed since then. First and foremost, there is a complete community (Ahwatukee Foothills) that will be affected. Despite the findings in the EIS, I do not believe there will be little or no adverse impact on the community. Ahwatulee Foothils will be trapped between the freeway and South Mountain. Noise and pollution WILL SIGNIFICANTLY increase. Just the fact this freeway will be a truck by-pass makes this consequence inevitable.

(6) (7) Second, there is the Kyrene de los Lagos elementary school that butts up to the free alignment. I firmly believe the noise and pollution from the freeway will have a serious adverse impact on the children. Given what we know today about the effects of noise and pollution on children, It is unconscionable to put a freeway so close to a school.

(8) Personally, I live about 1/2 mile from the alignment (40th and Pecos) . I know I will experience increased noise and increased pollution. I can hear freeway noise coming from the I-10, and that is 1-1/2 miles away.

(9) (10) I have 2 questions for ADOT. First, is there any possibility this freeway will not be built? Second, if the freeway is built, can I sue the state for adversely affecting my property values?

Sincerely,

Craig Sullivan

1	**Public Involvement**	Public comments are a vital component in the decision-making process. Public comments have been solicited from project inception and through key milestones in the environmental impact statement process. The interests and needs of the public, along with all other social, economic, and environmental issues and impacts, must be fully analyzed and included in the Draft and Final Environmental Impact Statements. Comments made during development of the Draft Environmental Impact Statement have been used to adjust plans, explore new questions, or make changes—all within the scope of the National Environmental Policy Act. Public comments received on the Draft Environmental Impact Statement were reviewed and addressed in the Final Environmental Impact Statement. Public comments received on the Final Environmental Impact Statement will also be considered and addressed as appropriate. More information about the entire public involvement process is available in Chapter 6, *Comments and Coordination*, of the Final Environmental Impact Statement
2	**Purpose and Need**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Noise**	
4	**Air Quality**	
5	**Purpose and Need, Truck Bypass**	
6	**Noise**	According to the Arizona Department of Transportation Noise Abatement Policy and Federal Highway Administration regulations, interior noise levels are considered only for noise-sensitive land uses with no active outdoor use area. These are not common, because homes, schools, childcare centers, etc., all typically have outdoor use areas that are considered for noise mitigation. Typical building construction reduces interior noise levels by 25 -30 decibel compared with outdoor noise levels, so if the outdoor noise standard is achieved, the interior noise level will be well below the interior noise standard. Insulating buildings to achieve greater noise reduction is a noise abatement strategy of last-resort (because of cost) and can only be done for publicly owned, public-use buildings, according to Federal Highway Administration regulations. While this may be possible for schools, noise barriers are usually much less expensive and more effective because they also reduce outside noise for the playgrounds that building insulation alone does not achieve. Because of Federal Highway Administration regulations and other laws regarding using public funds for private property benefits, it is not possible to provide building insulation for homes or private childcare centers.
7	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
89	**Noise**	Noise barriers are designed to provide a substantial reduction in noise levels along freeways, but do not and cannot eliminate noise from passing into nearby neighborhoods. Just because noise can be heard does not mean that noise barriers are ineffective. Even at the levels considered "acceptable" by the Arizona Department of Transportation Noise Abatement Policy and Federal Highway Administration regulations, noise is still readily audible and can be heard for some distance from the freeway.
9	**Alternatives**	After publication and receipt and consideration of public and agency comment on the Final Environmental Impact Statement, a decision regarding the Selected Alternative will be made by the Federal Highway Administration in its record of decision. This process is described in Draft Environmental Impact Statement pages S-2, S-3, and 6-23. The Selected Alternative could be the No-Action Alternative (see page 3-40).
10	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area..

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1. Initiate radio-telemetry for movement + habitat use bobcat, desert tortoise

2. Consider corridor movement for smaller wildlife thru the roadcuts - expanded culvert designs

3. Consider planting Elephant Tree (bursura spp) on appropriate disturbed sites — consult with Desert Botanical Garden for best practices

4. Maximize large span bridges across drainages on EI Route beside thru South Mt. Preserve

Thank you for taking time for such a thorough public input process!

I oppose the SW Loop 202 freeway project. This is an idea whose time has come and gone. (1)

We have passed peak oil. Young people and those my own age are driving less. This freeway doesn't connect residential areas with employment centers. (2) (3)

It won't serve any real purpose, but it will encourage continued sprawl. We cannot afford that. (1) (4)

Thanks for listening!

Code	Issue	Response
1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	The comment is based on national trends for travel; however, the local conditions and setting of the Phoenix metropolitan area are not consistent with areas of high-density cities in other parts of the country. In Maricopa County, daily vehicle miles traveled levels increased by almost 2 percent between 2011 and 2012, and the 2012 daily vehicle miles traveled approached the 2007 prerecession peak in. (*Source:* the Arizona Department of Transportation's Multimodal Planning Division's Highway Performance Monitoring System Data for calendar years 2012 and 2011) Even if the recently observed national trend of per capita vehicle miles traveled decreasing continues, total vehicle miles traveled in the region would still increase along with increases in total population. The Maricopa Association of Governments approved new population, employment, housing, and traffic projections in June 2013. The new data are presented in the Final Environmental Impact Statement beginning on page 1-11. The purpose and need and analysis of alternatives were updated and reevaluated using these new socioeconomic projections and corresponding projections related to regional traffic. While new projections based on the 2010 Census showed a lower anticipated population and vehicle miles traveled in 2035 than the previous projections, the conclusions reached in the Draft Environmental Impact Statement were validated in the Final Environmental Impact Statement (see Chapter 3, *Alternatives*). The traffic analysis demonstrated that the proposed project is needed today and will continue to be needed into the future.
3	**Purpose and Need**	Information related to origins and destinations of motorists that would use the proposed freeway is presented in Figure 3-18 on page 3-36 of the Final Environmental Impact Statement. The definition of freeway users considers only those motorists who travel through the South Mountains; so, motorists who begin their trips in Ahwatukee Foothills Village and travel east to Interstate 10 (Maricopa Freeway) or motorists who begin in Laveen Village and travel north to Interstate 10 (Papago Freeway) are not counted in the analysis. The analysis of origins and destinations shows that 73 percent of travelers would be involved in trips beginning or ending in the Study Area or areas immediately surrounding it. Seven percent of the trips would begin, end, or begin and end outside of the Maricopa Association of Governments region; ten percent would either begin or end in Pinal County.
4	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Subject: Loop 202 South Mtn Freeway: OPPOSED
Date: Wednesday, July 24, 2013 9:40:29 AM

Hello,

1 2 The draft EIS for the South Mtn Freeway was sloppy, ignoring induced demand and making an utterly false claim that to build this mega-project would actually improve air quality -- absolutely false and as an alumnus of MIT with a graduate degree in Transportation, I'm ashamed that this state's top transportation professionals would peddle such a dishonesty to the public.

3 Stop studying the South Mtn Freeway which wastes our taxpayer dollars.
Stop trying to build the South Mtn Freeway which will damn our region to more auto-centric development in the midst of an environmental, health, and economic crisis which more highways will only make worse all around.

4 5 Start putting more resources into the Phoenix-to-Tucson rail project, which will open up the region to better development patterns and connect our economic abilities.
Start helping cities build better transit, bike, and pedestrian infrastructure.

6 This is an opportunity for ADOT to change gears and become leaders of a better future for Arizona. The first step to doing so, however, is to stop creating EIS documents based on disproven traffic engineering assumptions that haven't changed since the 1970's, and to stop pursuing this damaging Loop 202 extension project.

Sincerely,
Sean D. Sweat
President, Thunderdome Neighborhood Association for Non-Auto Mobility

1	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Purpose and Need**	The analysis used to assess the purpose and need for the proposed freeway followed Federal Highway Administration guidance. The proposed freeway is needed to serve projected growth in population and accompanying transportation demand and to correct existing and projected transportation system deficiencies. See Chapter 1, *Purpose and Need*, in the Draft Environmental Impact Statement. Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). By 2035, east- and westbound motorists on Interstate 10 between State Route 101L (Agua Fria Freeway) and State Route 202L (Santan Freeway) are expected to experience stop-and-go driving for over 3 hours every day. This is for a distance of nearly 30 miles. A new freeway in the Study Area would distribute commuters over an additional freeway facility. As a result, the duration of stop-and-go traffic on the region's freeways would be reduced.
4	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.

(Responses continue on next page)

Code	Issue	Response
5	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative). As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway.
6	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the Responses to Frequently Submitted Public Comments beginning on page B733 of this appendix.

Subject: objection to freeway

Dear ADOT,

(1) I am unable to attend the public hearings this time. (I have attended others in the past.) I would like to express my objection (again) to the construction of the South Mountain Freeway. Apparently not building a freeway still remains an option, and that is my preferred option.

(2) (3) I would highly prefer to see the funds allocated used to extend the light rail system. It would be much better to encourage people to use mass transit rather than private vehicles. Please build the light rail south down I-10 instead!!! In my opinion, it would be a much better use of the money. And it would modernize our city and prepare it for the rest of the 21st century.

A few of the reasons for my objection include:

(4) 1) I think the impact on the freeway on Phoenix South Mountain Park/Preserve is too great. Right now, the park is an oasis in the middle of the city that I frequently enjoy. You can be hiking in the park and not hear any road traffic; it is like you are not in the city, and that's really wonderful and should be preserved. Of course, there are many other negative impacts on the park.

(5) 2) I do not like the placement of the freeway. I do not wish to see it connect to Pecos Road on the south side of Ahwatukee. If it has to be built, I prefer a route further south (even beyond the Gila River native community if needed).

But really, I prefer that the freeway not be built at all.

Please note my objection.

Violet R. Syrotiuk, Phoenix resident
403 E Brookwood Ct.
Phoenix, AZ 85048-1957

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1 I believe the environmental impact studies have been significantly reducing the actual air pollution effects the eastern section would have on the homes just south of South Mountain. The freeway would encourage significant increases in truck traffic. The freeway would frame the Ahwatukee Foothills bedroom community between the roadway and South Mountain. This would have the consequence of condensing the pollutants upagainst South Mountain and directly over the homes directly to the north of the freeway. Environmental studies have ignored this problem. The public statements say the data is inconclusive. The video conveniently doesn't show one

2 American truck traveling down the proposed freeway,

3 this is actually [illegible] pertaining to the residents affected.

2	**Purpose and Need, Truck Bypass**	
3	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.

1 MR. SZEJN: Brian Szejn. I'm extremely
2 against the proposed freeway for many reasons,
3 health, truckers coming up from Mexico is another
4 reason, pollution, movement of the church at 24th
5 Street and the homes that would have to be moved. I
6 feel there's a much better route that could be
7 attained by just a little bit of thought. I believe
8 that there are people that are going to profit from
9 the alignment on Pecos, and those people should be
10 looked at to find out why the Pecos alignment has
11 been the only route really looked at.
12 Yeah, I'm very touchy about this one. I
13 feel like in the past, ADOT has not listened to
14 people that are actually against the freeway and
15 welcomed all others who are for it. That's pretty
16 much it. Thank you.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1 I feel the freeway would cause major air and pollution
2 I live along Liberty Lane and would decrease the value
3 4 of my home. I don't want to sit on my patio and listen
to a freeway. It would ruin the beauty of the desert
5 6 along Pecos and cutting into South Mountain. All the
homes and our Church would be torn down. The schools
7 along Pecos area would be affected by the air pollution.
8 It would become a major truck route for trucks coming
from Mex. It would benefit the native americans to
9 10 have the freeway farther South to aress their casinos,
11 hotels, and shopping. It needs to be presented to them.
Phoenix doesn't need another freeway if it ruins
12 3 neighborhoods.

Code	Issue	Response
1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
3	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
4	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
6	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Subject: Loop 202 South Mountain Freeway Study

Over 30 years ago, my husband and I saw a large model for housing developments south of South Mountain (Ahwatukee). The model showed a proposed new freeway. It was a selling point for the developers.

Over 20 years ago, at a planning and zoning meeting, my husband proposed a route for the freeway to connect with Interstate 10. Your representatives dismissed it as ludicrous. Today it is your "Preferred Alternative."

Over the last 20 years vehicular pollution has hurt EVERYONE. The congestion (bumper to bumper, stop and go) on downtown Interstate 10 has made it many times worse.

Now, what are you going to gain by another "study?" Who is doing the "studies?" How much money are they making? Can they use me, a retired industrial engineer? People who do "studies" have no incentives to stop.

1 Please, just build the freeway.

1	Ron Tafoya Document Created: 6/26/2013 1:28:06 PM by Web Comment Form I wholeheartedly support the recommended construction of the Loop 202 using Pecos on the south, and the 59th Ave. alternative. I prefer to see it happens as soon as possible. My home is near Chandler Blvd. and 17th Ave. which is near one of the proposed exits. I am originally from the Los Angeles area where poorly planned transportation routes have taken a major toll on quality of life. Population expansion and development will continue in metro Phoenix. It will only get more expensive as time passes to deal with transportation infrastructure. This freeway can be added now, with relatively minimal impact to the environment and without excessive cost due to eminent domain (property acquisition). Those against this freeway have no argument. I live in the Ahwatukee Foothills and assert that my property values, quality of life, and convenience will all be enhanced as a result of the construction of this freeway. The 50 MPH speed limit on Pecos, which dead-ends at 27th Avenue is inconvenient. The community will still be relatively secluded, except with the added convenience of nearby major highway access. Failure to provide better access to and through this area will continue to box Ahwatukee into a corner and isolate it from downtown Phoenix. If L.A. is any indication of the future of this city, that commute will get much worse in the coming years, and providing 2 routes to and from downtown will help. Not to mention, those who commute from East to West Valley or vice versa would be able to avoid downtown altogether. There is a clear benefit to building this freeway. I support it, and would like to see the project expedited.

I have major concern regarding building the freeway by cutting ridges off the South Mountain, destroying parkland and disturbing wildlife. I would consider this highway a truck bypass largely since people live along the path will not benefit a lot from transportation convenience perspective. Actually I am troubled knowing that quite a number of houses and communities will be leveled to make room for the freeway. If such a freeway is really necessary for re-routing traffic, can we just make the current exiting path of US-85 a freeway instead?

Code	Issue	Response
1	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Biology, Plants, and Wildlife**	
3	**Purpose and Need, Truck Bypass**	
4	**Purpose and Need, Lack of Support**	
5	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
6	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.

Rene Tanner Document Created: 5/21/2013 9:21:17 PM by Web Comment Form

The resources to build a freeway through South Mountain should be used on other projects including increasing the light rain, bus operations and making Phoenix a more livable city. Adding additional miles of freeway encourages urban sprawl and increases air pollution including carbon emissions, which are warming our planet.

Code	Issue	Response
1	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.
3	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative). As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
5	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
6	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Air Quality**	Climate change is an important national and global concern. While the earth has gone through many natural changes in climate in its history, there is general agreement that the earth's climate is currently changing at an accelerated rate and will continue to do. Human-caused greenhouse gas emissions contribute to this rapid change. Carbon dioxide makes up the largest component of these greenhouse gas emissions. Other prominent transportation-related Greenhouse gases include methane and nitrous oxide. Greenhouse gases trap heat in the earth's atmosphere. Because the atmospheric concentration of greenhouse gases continues to climb, our planet will likely continue to experience climate change-related phenomena (see Final Environmental Impact Statement pages 4-85 through 4-86). To date, no national standards have been established regarding greenhouse gases. Greenhouse gases are different than other air pollutants evaluated in federal environmental reviews because their impacts are not localized or regional due to their rapid dispersion into the global atmosphere. The affected environment for greenhouse gas emissions is the entire planet. In contrast to broad-scale actions such as those involving an entire industry sector or very large geographic areas, it is difficult to isolate and understand greenhouse gas emissions' impacts for a particular transportation project. Furthermore, presently there is no scientific methodology for attributing specific climatological changes to a particular transportation project's emissions. Under the National Environmental Policy Act, detailed environmental analysis should focus on issues that are significant and meaningful to decision making. The Federal Highway Administration has concluded, based on the nature of greenhouse gas emissions and the exceedingly small potential greenhouse gas impacts of the proposed freeway (as shown in Final Environmental Impact Statement Table 4-37 on page 4-85), that greenhouse gas emissions from the proposed freeway would not result in "reasonably foreseeable significant adverse impacts on the human environment" [40 Code of Federal Regulations § 1502.22(b)].

way through here, until you come to the very center.

The center of this maze is Mawduc, South Mountain. To us, that's the center of the universe. That is where our creator, Siuuhu, he lives there, Elder Brother. He lives in that area. That's his house. He built this maze to get away from his enemies.

But in our way, we use this to show what life is about. That's our culture. That's our religion. That is our tradition. It's our way of life, what we call our -- what we say is our himduc.

That is the religious significance to us and our way, because he's our creator. Elder Brother is our creator. Elder Brother made us. That's why that mountain is very significant to us. We hold -- you know, to go up there and do ceremonies.

2 There are animals up there. There's the desert tortoise. There's the Gambel's quail.

There's vegetation up there that's still used as herbal medicines by our people, a root that's up there that's used to heal with: the greasewood, shegoi. Greasewood, that's used to heal. Drink it when you have a cold. Drink it when you're sick, like a tea. And you use that to help clear yourself.

3 There's a lot of places up there that are old prehistoric trails, where all the Hohokam used to go, our

Code	Comment Document

ancestors. Our ancestors walked up there and did their ceremonies up there. That's the center of the universe for all of us. That's where we come from.

Your -- If somebody wanted to go downtown and build a freeway through St. Mary's Basilica downtown, all the Catholics would get up, and they would be angry about it. They would get mad about it and they would say, "No."

That is the same thing. We don't want that. We don't want that freeway through there. We don't need that freeway through there. Our people have been here for hundreds and thousands of years.

When the forty-niners first came through here, our people were the ones that helped find those forty-niners that were lost. Our people went out with mercy patrol, with gourd water, gourd canteens with water in them. They had corn and melon, all these different things, looking for the forty-niners that were lost out there in the desert.

And when they found them, they gave them the water and told them, "Go. Go that way. Follow the mountains back there. Follow, see where Mawduc is and the Camelback Mountain and the Estrellas."

Below those mountains are our people, all along the Gila River. Our people took care of them, helped them.

In 1847 the United States sent their first cavalry patrol through here. And when they came through here, they

Code	Issue	Response

Code	Comment Document

asked Antonio Azul if they could trade horses with them so that they could continue on to California. And he agreed, on a handshake. On a handshake, he said, "Yes," and he traded horses with them.

The Spanish garrison that was over in Tucson, they wanted those horses. They tried to come and take it. They wanted to take it away from us. Antonio Azul said, "If you want those horses, come and get them. But you're going to have to fight for them."

They never came back and got those horses because Antonio Azul said, "I made a promise, on a handshake, that I would take care of these horses for those white people that went through here, came through here. And they'll be back, and I'll give them back to them."

From that time on, our allegiance and our loyalty was given to the United States of America. Our great-grandfathers and our grandfathers, our fathers and our brothers and our uncles fought alongside many of the white people from the State of Arizona, when they fought in World War I, World War II, Korea, Vietnam, all the way up to now, to Iraq and Iran.

All over the world, our young men and women are standing, side by side, with many of those people. We're all a -- We're all a part of the -- We're all a part of the Creator. We're all a people of the Creator. We're all

Code	Issue	Response

Code	Comment Document

children.

And we need to understand that nobody owns the land, the way our elders told us. No one owns the land. The land belongs to everyone. It was made and given to us so that we can live in harmony and balance with all of the vegetation, with the mountains, with the waters, and with all of the little animals and all the birds in the sky. We live in harmony and balance with one another and to take care of one another.

That's why we, as Akimel O'oodham and Pee Posh people, we -- we are the caretakers of this land. That's what we're supposed to be doing.

We don't want that freeway. We don't need that freeway. They're not telling us about what the pollution is going to do. They're not telling us about the toxins that's going to come off of those tires after it rains. It's going to pollute our waters that we're sitting on top of.

Our river doesn't run anymore because the people that -- that are on the east side, those people are cutting -- cutting, to take the water away from us. That water was our life. That water, the river, was what made us who we are. But it's not running anymore.

The white man has come and is strangling us. They're taking that water away from us. Now they want to destroy our mountain that's sacred to us, but not only to us but also to the Salt River, to the Tohono O'oodham, to the

Code	Issue	Response

Code	Comment Document

Ak-Chin community, to many of the tribes that are in the surrounding areas. It's significant to them, in their ways, too.

All we have is a little bit of strip of land, from 110th Avenue, Phoenix International Raceway, that corner along the Salt River, all along to here, to South Mountain, all the way towards Coolidge, all the way towards Casa Grande and Maricopa and coming back around, back to the Estrellas, of all the land we had. When we were strong, when we were a true Nation, our land stretched from the headwaters of the Gila River, outside the city of Silver City, New Mexico -- that's where the Gila River begins -- all the way down to almost to the Colorado River.

Many of our -- Many of our Hohokam relatives, ancestors, their homes are up along the Mogollon Rim, all along that way. They're up there because our land stretched that far, all the way into Mexico.

When the Spanish first came, they called this whole area Pima-eria Alta. Pima-eria Alta, the Northern First Ones. We have relatives in Mexico. They are the Baja Pima-eria. They are the Southern First Ones.

This is who we are, since the coming of the European settlors, coming through here, stealing land from us, lying to us, cheating us, just as they're doing now, telling us lies and half-truths, what they really want, by either stealing

Code	Issue	Response

Code	Comment Document

or cheating from us, making bad deals with people who want to -- think that money is good.

That time -- That's how we lost both of our lands. That's how we lost this whole state.

But not only us, but all the rest of the other tribes, too. The 21 tribes that are here in this state have been reduced to small little pockets, reservations. And all their traditional lands have been stolen from them.

All tribes are fighting. All tribes are trying to stand up. All tribes are trying to take back what was theirs. But it's hard because the white man will not listen to us. The white man is too greedy. They're thieves and liars. So it has been said, from a long time ago. But all tribes have dealt with them. That's what they've come to find out.

We'll continue to fight. Those of us that are against it, we'll continue to try and stop it, any way we can. And, if all the other tribes in the outside understand, stand with this, then, all together, we can make one last stand and we can prevent the white man from coming through here and taking what doesn't belong to them.

That's all I have to say.

Subject: South Mountain Freeway Project

ADOT Loop 202 South Mountain Freeway Study

Where to join the 202 with I-10.

Resident Comment:

1 The most logical and practical and best plan for the overall long term city traffic flow is to join in the 202 at the 101W and I-10 interchange. Connecting the 202 to I-10 at 51st Ave would cause extreme traffic congestion on that section of I-10, especially between 51st Ave and 101W which is an already over-crowded freeway section leading to more traffic accidents and deaths. Freight transport trucks attempting to by-pass Phoenix will be using this route heavily. The increase truck traffic this would cause on this section of I-10 will only add to the problem and more accidents.

2

Connecting the 202 to 101W and I-10 interchange will reduce traffic on I-10 between I-17 and 101W and provide an overall more seamless and safer freeway system with fewer accidents and traffic deaths. And isn't providing the safest freeway system for the parents and children traveling them the ultimate goal. Look at the big picture. Plan to reduce the congestion, not increase it.

Thank you.

I had high hopes that the GRIC negotiations would be successful but they appear to have fallen through.
At this point all I can ask is that the proposed route be moved or abandoned entirely due to the serious, detrimental
effects that it would have on the immediate community of Ahwatukee Foothills. The congestion, the pollution (noise
and air)and the added pressure of traffic and people would all contribute to the degradation of our neighborhoods,
our schools and our health. Neighborhood preservation must be a priority.
Our community abutting Pecos Road will suffer…which was never an issue at the time of inception, but is very much
an issue now. Thank you for listening.

Howard Teeter.

CALLER REMARKS/QUESTIONS:

1 I support the planning and construction of the South Mountain Freeway. The freeway will reduce Downtown Phoenix traffic, including the tanker and boxcar trucks. This is a great way for moving traffic through Phoenix. It would be an excellent idea to help improve the economy.

CALLER REMARKS/QUESTIONS:

1 I do believe that the Loop 202 of the South Mountain below Ahwatukee should be built. I've lived here my whole life and I've always thought there should be a freeway down there. I thought it should be built before Ahwatukee was expanded and built upon. Thank you and I do hope that the freeway will go through because I do think it would alleviate a lot of pressure in Central Phoenix. Thank you.

1 2 3 4

I am AGAINST the build of the Loop 202 South Mountain Freeway along Pecos Road. I am a resident of the Ahwatukee neighborhood and ask the ADOT to find a different or another alternative. This will take away from my hard earned property value; it is a destruction of well established neighborhood, churches, schools and local communities.
regards
tgt

Code	Issue	Response
1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138 -47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
3	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to the Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
4	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)

Subject: Oppose Loop 202 South Mountain Freeway

To whom it may concern,

1 I would like to express my formal opposition to the proposed 202 expansion project. The spending of public funds on a freeway around the south-side of South Mountain does not reflect the best interests of Arizona residents, and I believe in prioritizing public funds, it
2 does not currently warrant funding ahead of other public transportation options (expanded light rail, Tucson-Phoenix rail, etc).

The Regional Freeway System, approved by voters in 1985, reflected a need for expanded freeways that existed at the time. This has created substantial benefits for the community in Maricopa County, but it has also shaped our society in a number of negative ways. Unfortunately, population growth has followed the construction of the freeways, and rather than build up to take advantage of the many advantages urban density provides, Phoenix has
3 grown ever-outward, to the detriment of more central communities. This has led to more cars on the roads driving longer distances, and in turn dirtier air, and greater health problems. Current popular sentiment has turned, such that I believe a large portion of the population now wants to pull back from this course on which we have set ourselves.

"If you build it, they will come" is the general sentiment here. WE get to determine how we want to shape our society. If we want to create a society that commutes from Chandler to Avondale and vice versa, and expands ever-outward at the margins, then this plan makes
4 sense. If we want to further promote Arizona as a drive-through State, and bring more regional trucks onto our roads by making it easy to bypass Phoenix, then we will be well
1 served by this freeway. OR we could instead invest our public funds in making Phoenix and Maricopa County a destination. We could expand our light rail lines that have already sparked a tremendous amount of local development and given our citizens something to be proud of. Or we could connect our Capital City with our southern neighbor, Tucson, via a high-speed rail line, further reducing traffic on our freeways.

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need, Lack of Support**	
3	**Purpose and Need**	The Southwest Loop Highway—the South Mountain Freeway predecessor—was integral to the Regional Freeway and Highway System approved by Maricopa County voters in 1985. Although other facilities were considered a higher priority early in development of the Regional Freeway and Highway System, the South Mountain Freeway has been included in every subsequent update. The same route was approved by the State Transportation Board in 1988. In 2004, Maricopa County voters approved Proposition 400, which was designed to fund completion of the remaining segments of the Regional Freeway and Highway System, including the proposed South Mountain Freeway (Final Environmental Impact Statement page 1-21).
4	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. GOOD PRESENTATION ON MAY 21, 2013 AT PHX CONVENTION CENTER. PRETTY MUCH AGREE WITH PLAN AS PRESENTED (W59) STRONGLY SUGGEST GIVEN PRESENT INDIAN COMMUNITY ATTITUDE THAT ANY CONNECTIONS NOW OR LATER GIVING ACCESS TO TRIBAL LAND BE PAID FOR ENTIRELY BY THE INDIAN COMMUNITY. (1)

CONSIDERATION SHOULD BE CONSIDERED FOR ADDING ADDITIONAL LANE(S) TO I-10 WEST BOUND FROM 59TH AVE AND FROM I-10 CONNECTION 304TH FROM 202. (2)

Code	Issue	Response
1	**Alternatives**	Federal law prohibits the denial of access to any community. Thus, traffic interchanges would be located along the freeway where it borders the Gila River Indian Community (see Draft Environmental Impact Statement page 3-51). Roadway connections on Gila River Indian Community land to the traffic interchanges would be the responsibility of the Gila River Indian Community, in coordination with appropriate jurisdictions.
2	**Design**	Construction of the proposed freeway would include widening along Interstate 10 to facilitate entrance and egress of vehicles between the two freeways. Additional information related to the Interstate 10 modifications can be found in Figure 3-26 on page 3-49 and Figure 3-29 on page 3-53 of the Draft Environmental Impact Statement. The design of the connection to Interstate 10 and the widening along Interstate 10 were developed in accordance with the Federal Highway Administration's Interstate System Access Informational Guide and has received an initial determination of operational and engineering acceptability from the Federal Highway Administration.

I'm very much in favor of using the E1 Alternative, unless Gila River Indian Community and it's Members decide otherwise, and tying the freeway into Loop 101 using the W101 alternatives. In terms of system planning, and looking at the transportation facility from a regional perspective, tying it into L101 makes the most sense. I worry that utilizing either the W59 or W71 alternatives will pour additional traffic onto a facility not able to address it, and futher, will reduce the viability and attractiveness of the South Mountain Freeway as a transportation facility to those looking to move north/west and/or south/east.

MR. STOKEBRAND: I sent an e-mail to ADOT regarding just how I support the 202. It's much needed for the people living -- it will bring much needed funds to the City of Phoenix in terms of tax revenue and for all us citizens who leave Laveen and City of Phoenix to go to Goodyear, Avondale, and other cities. I will be a lot happier to keep those tax funds inside of our city for community centers, things of that sort. And I'm someone who lives close, within half a mile of the proposed freeway and I still support it just because it will make my life better, easier to get around the city, and alleviate some of the congestion on Baseline Avenue.

That's about it. The rest of it is pretty well documented, so I don't have anything else to add.

Thank you.

MR. THOMAS: My name is Jim Thomas. I live in Goodyear, Arizona. I work at Broadway and 40th Street, so I drive I-10 every day and the traffic is bad in the morning and it's horrible in the afternoon. I normally get to the office between 5:30 and 6:00 and it takes me 35 minutes, it's about 30 miles. In the evenings, it takes me at least 45 minutes, sometimes an hour to get home so this would be very helpful.

And I think, if they would take the bypass off of the 101 -- if you go down to 59th, you're just

Code	Comment Document

adding trucks and a longer length of I-10 that will congest the traffic even more, so the faster you can get them off I-10, the better off we will all be.

Other than that, I hope that they build it quickly, you know, cause this would not take forever to build.

Okay. Thank you very much.

MR. HUSTON: I just want to say that I am in favor of the project and after I've reviewed all the boards and the entire process, it seems to make sense what they've narrowed it down to. I think, based on cost alone, it seems like 59th is the best alternative. If cost weren't a factor, I think some of the ones that go further to the west would also be nice to help tie into the west valley. It seems like a long time coming.

It seems like a great project. I think it would be good for, not only our freeway system, but putting people back to work. Overall I just think it would be a really good thing for the community.

That's it.

MR. BAREHAND: My name is Harlan Barehand. I'm from the Gila River Indian Community. I'd like to thank ADOT for finally listening to us and not putting it on the Reservation. I just got through seeing a video next door; it was beautiful. I think it works out fine.

EDITH THOMAS: My name is Edith Thomas. I'm a member of the Gila Indian River community who just happens to be also an archeologist.

I would like to bring several issues to the attention of the DEIS regarding the archeology of South Mountain. South Mountain is known to us. I am Akimel O'Odham, Pima. I grew up within the Gila Indian River community. I'm going to present two perspectives based on my own personal experience based on the traditions, him-dag, of my People. I'd also like to present the archeological perspectives, which are also based on the Akimel O'Odham.

1

South Mountain is a culturally significant location for the members of the Gila River Indian community. It is part of our songs. Our songs are significant because it is a cultural perspective. Our songs are part of our historical record. It's a recording or a recounting of the history of our People that dates back to over thousands of years ago. For our People this is a factual account that is recorded within the songs.

South Mountain is part of the migration pattern of my People, so it is not just a mountain as the non -- the non-members of the Gila Indian River community may view it. It's not a mountain; it's a sacred site.

Driver and Nix Court Reporters - (602) 266-6525

And that word "sacred" also has special meaning to us. It is not sacred in comparison to a church or to a religious aspect.

"Sacred" means to us that it's part of who we are. It's where we derive from. It's where we originate. Everything is connected to us: The land, the plants, the animals. There is no differentiation between all of these things. They are not just objects. They are part of our whole life cycle, so to try to classify it as just a geological formation would not be accurate.

What I'm trying to convey to you is that South Mountain is extremely significant to us. Muadag, South Mountain, is part of our story, part of who we are.

Also, based on my archeological expertise, we have several archeological sites that were not cited within the DEIS report. There are artifact scatters on the surface. As an archeologist, it is well documented that when you have an artifact scatter, that's part of the community, there are significant remains underneath the surface of the ground. So when you have your maps or your location within the report, that was not shown.

I would like to bring my concerns or point out that there needs to be further archeological investigations conducted by ADOT or for the DEIS because this was not represented accurately. This is significant

1 2

Driver and Nix Court Reporters - (602) 266-6525

Code	Issue	Response
2	**Cultural Resources**	For protection from vandalism and desecration, archaeological sites are not shown on maps provided to the public. The Arizona Department of Transportation will continue to survey the proposed alternatives for archaeological resources. Any negative impacts on archaeological sites would be mitigated through excavations.

Code	Comment Document

3

to us because it is the historical and prehistoric evidence of our ancestral remains.

Another issue that I have a concern about is that because of the sacred designation, I guess you could classify it as "sacred," we are not being treated equally. I believe that, if this were possibly a sacred site such as from Europe like the Vatican or something comparable, that this would be held more in higher significance to the rest of the population, but because we are Native American and that we are indigenous, our voices and our concerns are not being held at a higher level than they are.

I'm hoping that all of my comments will be taken seriously and be looked at professionally because I felt that there weren't enough experts contributing to this report where it didn't accurately depict the meaning of what this location and the desecration that the 202 would do to our mountain and how it would impact our community.

Thank you.

Code	Issue	Response
3	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.

Since 1985 my husband & I have followed the ongoing saga of SMF. We have been "for it" from the beginning.

We do not understand how a few well financed & connected people here been able to drag their heels & shut down the discussion over & over. This is our fifth meeting for input studies.

We NEED this freeway! NO BUILD is NOT an option.

Please BUILD IT.

1 No Action! Lakewood Owns Wells!

2 I am very Concerned how it is going to affect Lakewood and the Lake. The Wells were on the books before the Freeway. Also, I am concerned about the Water to the Lake @ Miralago where my Brother owns.

3 4 The Freeway On Pecos will severely affect Lakewood because reclaimed water will smell!! Also, the Lagos Jr. School is right on Pecos. It is going to hurt our Property Values! Lakewood already has Crime due to its proximity to the Freeway. Easy Access in and out.

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to state regulations/standards. (See text box on Final Environmental Impact Statement page 4-108.)
3	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
4	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.

CALLER REMARKS/QUESTIONS:

1 I am calling in support of the Loop 202 freeway. Been hoping for it to be done for quite awhile now. I expect it will reduce traffic congestion along Baseline significantly. I know friends that live in the East Valley that have to come in through I-10 West 60 to get into Phoenix and some of them have commented that coming around Loop 202 would be faster for them. Thank you.

Subject: Comments in opposition to South Mountain Freeway

May 28, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) The proposed freeway would cause more problems than it would solve, while providing only short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(4) (5) Despite the claims of the Draft Environmental Impact Statement, the South Mountain Freeway would worsen air quality in the region over time, increasing public health risks. More vehicles would introduce more pollution, aggravating conditions of asthma, cancer, and other diseases.

(6) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(8) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(1) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Ms. Nancy Tierney
101 N 7th St Unit 244
Phoenix, AZ 85034-1038

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

I just want to officially voice my objection for the following reasons:

1 * The original proposed freeway was not as extensive as what is currently planned. This is much greater noise, pollution, congestion and therefore accidents than what the original residents (such as myself) had planned.

2 3 4 * A bypass already exists in Case Grande. If this is inadequate, it would be less expensive to upgrade this system.

5 * The study does not include Pima County, why? This area is still growing and has the higher growth potential.

6 * A compromise to all parties would be to continue Pecos road connecting the West side of town - no Freeway.

7

Code	Issue	Response
1	**Traffic**	The alignment identified as the Preferred Alternative (W59 and E1 Alternatives) closely follows the alignment identified in the 1988 Environmental Assessment and Design Concept Report (see Final Environmental Impact Statement Figure 1-2 on page 1-6 and text on page 1-8 for more information). In 1988, the freeway was proposed as having three general purpose lanes in each direction with an open median for a future high-occupancy vehicle lane in each direction. This configuration is similar to the existing loop freeways. The current proposed freeway, as depicted in Figure 3-34 on page 3-58 of the Final Environmental Impact Statement includes constructing three general purpose lanes and a high-occupancy vehicle lane in each direction. With respect to the number of lanes and location, the proposed freeway has remained relatively the same.
2	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Air Quality**	
4	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). By 2035, east- and westbound motorists on Interstate 10 between State Route 101L (Agua Fria Freeway) and State Route 202L (Santan Freeway) are expected to experience stop-and-go driving for over 3 hours every day. This is for a distance of nearly 30 miles. A new freeway in the Study Area would distribute commuters over an additional freeway facility. As a result, the duration of stop-and-go traffic on the region's freeways would be reduced.
5	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
6	**Alternatives**	The Maricopa Association of Governments regional travel demand model does include Pinal County. The potential freeway users with origins or destinations in Pinal County are included in Final Environmental Impact Statement Figure 3-18, on page 3-36. They would represent 10 percent of the total freeway users.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
7	**Alternatives**	The study evaluated the concept of extending Pecos Road as a parkway. In the best-case scenario, a parkway would carry approximately 105,000 vehicles per day, well below the average daily traffic on the proposed freeway, which would range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-19). As a result, the Arizona Parkway would lack sufficient capacity to meet projected travel demand. The Arizona Parkway would not adequately address the projected transportation system capacity deficiency, would not remove a sufficient amount of traffic from arterial streets, and, therefore, would not meet the project's purpose and need. For these reasons, the Arizona Parkway was eliminated from further consideration.

Subject: Comment on the South Mountain Freeway Loop 202 Draft Environmental Impact Statement.

ADOT,

I wish to comment on the South Mountain Freeway Loop 202 Draft Environmental Impact Statement.

1 2 3 4 5

ADOT must desist from proposing to build 202 on Pecos Road. This proposed leg of the freeway will degrade the quality of life in Ahwatukee Village, disrupt wildlife and recreational use in South Mountain Park Preserve and destroy a Gila River Indian Community sacred site.

We bought our home in Ahwatukee Foothills because my daughter and I suffer from asthma and we place high value on the better quality of air in the area, in particular during the summer months. We treasure the relative quiet and small-town feeling of Ahwatukee Foothills, the easy access to quiet and scenic hiking trails in our backyard of South Mountain Park, the low-traffic roads near our schools and in our neighborhoods, and its proximity to our Gila River Indian Community neighbors, which affords us a scenic view of relatively undisturbed desert land in our daily commute.

But by building the South Mountain Freeway on Pecos Road and through South Mountain Park Preserve:

6 7 2 8 9 10

1) There will be a substantial increase in vehicle traffic in the Ahwatukee Foothills neighborhood and local arterial streets.
In addition, the proposed freeway will become the truckers route of choice.

2) The overall impact on the quality of life in the Ahwatukee Foothills area will suffer tremendously as sound walls cannot prevent the noise rising over due to elevation (upwards) in the Foothills.

3) Ahwatukee would have two elementary, one middle and one high school either immediately adjoining or within 1/8 of a mile of the proposed freeway. The air quality our children breathe will suffer permanent damage as the estimated 140,000 vehicles/day traverse the proposed freeway.

Code	Issue	Response
1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to the Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
3	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Section 4(f) and Section 6(f)**	
5	**Cultural Resources**	
6	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the freeway on the local street system. The City study found no adverse effects on the local street system from the proposed freeway (see Appendix 3-1 of the Final Environmental Impact Statement). The daily traffic volume on 17th Street in 2011 was approximately 4,500 vehicles per day just north of Pecos Road (see phoenix.gov/streets/traffic/volumemap). With the proposed freeway in place, an additional 4,000 vehicles day would use 17th Avenue to access residences west of 17th Avenue. The total daily traffic would be well below the capacity of a two-lane road (approximately 15,000 vehicles per day).
7	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Noise barriers are designed to provide a substantial reduction in noise levels along freeways, but do not and cannot eliminate noise from passing into nearby neighborhoods. Just because noise can be heard does not mean that noise barriers are ineffective. Even at the levels considered “acceptable” by the Arizona Department of Transportation Noise Abatement Policy and Federal Highway Administration regulations, noise is still readily audible and can be heard for some distance from the freeway.
9	**Noise**	As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway,

(Response 9 continues on next page)

Code	Comment Document
5 3 4 11 12 13	4) Destruction of a portion of South Mountain Park Preserve, which the Gila River Indian Community view as a sacred mountain, is unacceptable. 5) The proposed routes through South Mountain Park Preserve will permanently damage native Arizona plants and wildlife. 6) Growing business opportunities is not a need for residents in Ahwatukee. We find there is already in place everything we need and want. In summary, I object to the building of the South Mountain Freeway on Pecos Road and through South Mountain Park Preserve as it will do permanent harm to our environment. ADOT should seriously reconsider the alternative of building 202 through uninhabited parts of Maricopa. Jeannine Maldonado Timmes 410 E Brookwood Ct. Phoenix AZ, 85048 Confidentiality and Nondisclosure Notice: This email transmission and any attachments are intended for use by the person(s)/entity(ies) named above and may contain confidential/privileged information. Any unauthorized use, disclosure or distribution is strictly prohibited. If you are not the intended recipient, please contact the sender by email, and delete or destroy all copies plus attachments.

Code	Issue	Response
9 (cont.)		nearby homes that may be elevated above the road, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Phoenix metropolitan area and across the country.
10	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
11	**Purpose and Need, Lack of Support**	
12	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
13	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.

Subject: Re: comment on south mountain freeway loop 202 environmental impact statement

ADOT,

A wish to comment on the south mountain freeway loop 202 environmental impact statement.

1 2 1) There will be a substantial increase in vehicle traffic in the Ahwatukee Foothills neighborhood and local arterial streets.
In addition, the proposed freeway will become the truckers route of choice.

3 4 5 2) The overall impact on the quality of life in the Ahwatukee Foothills area will suffer tremendously as sound walls cannot prevent the noise rising over due to elevation (upwards) in the Foothills.

6 7 3) Ahwatukee would have two elementary, one middle and one high school either immediately adjoining or within 1/8 of a mile of the proposed freeway. The air quality our children breathe will suffer permanent damage as the estimated
140,000 vehicles/day traverse the proposed freeway.

8 9 4) Destruction of a portion of South Mountain Park, which the Gila River Indian Community view as a sacred mountain, is unacceptable.

10 5) The proposed routes through South Mountain Park will permanently damage native Arizona plants and wildlife.

11 12 13 In summary, I object to the building of the south mountain freeway on pecos road.
I suggest you consider building the freeway through uninhabited parts of maricopa.

Sincerely,

frank timmes

Even at the levels considered “acceptable” by the Arizona Department of Transportation Noise Abatement Policy and Federal Highway Administration regulations, noise is still readily audible and can be heard for some distance from the freeway.
5	**Noise**	As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes that may be elevated above the road, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Phoenix metropolitan area and across the country.
6	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Health Effects**

8	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Cultural Resources**	
10	**Biology, Plants, and Wildlife**	
11	**Alternatives, Gila River Indian Community**	
12	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
13	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.

Subject: Loop 202 South Mountain

To Whom it May Concern:

I am writing to inform you of my support of the Loop 202 South Mountain project that is currently pending.

1

As a resident of South Phoenix (on the boarder of Laveen- off of 51st Avenue and Ellwood) I strongly support this initiative, even though I know that it will literally place a freeway in my back yard. As a home owner and business owner, this project is imparative to the vitality of the southwest valley.

Please, continue moving forward this project. The revenue it will bring to this area is badly needed, and the ability to connect to the rest of the city will vastly improve our way of life.

Sincerely,

Jennifer Tingwald

Hi South Mountain Team,

1 As a Foothills Club West resident I am opposed to the Pecos alignment in entirety.

2 I would support an alignment that is 1-2 miles south on the Gila River Reservation.

3 I do not support the Pecos alignment for the following reasons:
Pollution
4 Traffic Noise
5 Truck Noise
6 Crime
7 Loss of Bike way
Increased traffic density in community
8 Increased accidents

Thanks,

1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives, Gila River Indian Community**	
3	**Air Quality**	
4	**Noise**	
5	**Noise**	The Maricopa Association of Governments regional travel demand model forecasts approximately 10 percent truck traffic on the South Mountain Freeway in 2035 (see Final Environmental Impact Statement page 3-64). This percentage is similar to current conditions on Interstate 10 between Loop 101 and Interstate 17 and on U.S. Route 60. Air quality and noise modeling for the Draft and Final Environmental Impact Statements used this forecast truck traffic (see Final Environmental Impact Statement pages 4-68 and 4-100, respectively). Noise mitigation is designed for this predicted noise level, including the noise from trucks.
6	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
7	**Traffic**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
8	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the freeway on the local street system. The City study found no adverse effects on the local street system from the proposed freeway (see Appendix 3-1 in the Final Environmental Impact Statement). The daily traffic volume on 17th Street in 2011 was approximately 4,500 vehicles per day just north of Pecos Road (see phoenix.gov/streets/traffic/volumemap). With the proposed freeway in place, an additional 4,000 vehicles day would use 17th Avenue to access residences west of 17th Avenue. The total daily traffic would be well below the capacity of a two-lane road (approximately 15,000 vehicles per day).

5008

MR. TOLLEFSON: I'm Jason Tollefson. So I think the one thing after talking with several of the project team members that stands out in my mind is that there is no replacement for recreation on Pecos. So currently there's a lot of people that go out all week long on Pecos Road riding bikes and jogging, whatever, and there's no alternative once this project happens. So that's a pretty big concern for me because I use that and lots of people I know use that.

A second overall concern is noise. And I saw that the plan currently is to raise the freeway from the current grade. And talking with one of the planning engineers, he noted that that actually increases noise level. So I understand the way to try and mitigate that is a wall, but my location and my house is such that if the freeway's additionally raised and then there's a wall, it's going to have a severe obstruction to my view from my home, and also concerns me with the noise. The fact that it's that much higher and could transmit over to my house, which we already get Pecos noise, and this will probably be more.

And then I guess the last concern is truck noise. I believe that this freeway will be

1	**Traffic**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
2	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Visual Resources**	For most of the alignments of each of the action alternatives, the proposed freeway would be elevated above the natural grade of the surrounding land. This elevated profile would allow noise to carry farther, creating noise impacts at greater distances from the freeway. Depressing the profile of the freeway below grade might reduce traffic noise levels adjacent to depressed sections. However, it would be necessary to also construct at-grade noise barriers to achieve noise reduction goals at receiver locations adjacent to depressed freeway sections (see page 4-99 in the Final Environmental Impact Statement). This strategy would reduce visual impacts associated with high noise barriers on elevated freeways, but would entail ground-level noise barriers and their associated interference with views. Thus, with either approach to noise reduction, views of nearby mountains could be disrupted. The specific impacts would depend on the geometrics of the height of any noise barriers constructed, the intervening topography, and the distance of the barriers from the residences in question.
4	**Noise**	As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes that may be elevated above the road, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Phoenix metropolitan area and across the country.
5	**Noise**	Noise barriers are designed to provide a substantial reduction in noise levels along freeways, but do not and cannot eliminate noise from passing into nearby neighborhoods. Just because noise can be heard does not mean that noise barriers are ineffective. Even at the levels considered “acceptable” by the Arizona Department of Transportation Noise Abatement Policy and Federal Highway Administration regulations, noise is still readily audible and can be heard for some distance from the freeway.

7

used quite a bit as a bypass to Phoenix, and so that's going to bring just additional noise 24/7. It's one thing to have commuter noise, you know, which -- which goes down in the evenings, but truck noise is something that I think won't cease because truckers are trucking 24/7. So that's -- those are my concerns and hopefully they're taken into consideration.

8

So I just want to make it clear that I'm not opposed to a freeway, but I'm opposed to the current alignment of the freeway. I noticed during the selection process there were lots of alternatives. Of course some of them are very difficult because they involve the Indian reservation, but I oppose that.

9

And the last thing I'd like to add to that is it really doesn't -- in my opinion, it doesn't help this community as much as it helps the communities outside of this community because it helps the people on the west side get to the east side, and the people on the east side get to the west side, but it really doesn't benefit us who live here that much.

We already have easy access out to the freeway, and personally I'm willing to do the commute

Subject: SouthMountain Freeway Construction

I am a member of Phoenix Mountains Preservation Council (PMPC) and Preserving Arizona's Resources and Children (PARC) and am writing to express my opposition to the proposed South Mountain Freeway.

1 2 3 4 5 6 7 8

The proposed route would run through South Mountain Park and would result in three ridges being leveled with the removal of 4 million cubic yards of earth in order to accommodate this 10 lane thoroughfare. We, the citizens of this valley, are very protective of our parks and we, the citizens, were not asked if we approved of this alignment.

I am also concerned about air pollution in the South Mountain area. The freeway route sits in a natural valley, one where air pollution is already a significant problem. The addition of this truck route would increase the air pollution significantly. We are already in danger of losing over a billion dollars in federal funding due to poor air quality. More trucks in this valley is not what we need.

I believe that a freeway should be built along the path of US85. No parklands would be destroyed, no homes and businesses would have to be leveled and relocated, and it would keep the large polluting trucks out of the valley.

I implore you to do what you can to stop the construction of this freeway through South Mountain Park.

Sincerely,

Bob Toloskiewich

1	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Design**	The proposed freeway would be eight lanes wide, not ten lanes. See Figure 3-34, on Final Environmental Impact Statement page 3-58.
3	**Public Involvement**	No public vote was held as part of the Draft Environmental Impact Statement review process. Members of the public were encouraged to participate and submit their comments on the Draft Environmental Impact Statement during the 90-day comment period. The proposed Loop 202 South Mountain Freeway has been a critical part of the Maricopa Association of Governments' Regional Freeway and Highway System since it was first included in funding approved by Maricopa County voters in 1985. It was also part of the *Regional Transportation Plan* funding passed by Maricopa County voters in 2004 through Proposition 400.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
6	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.

Subject: I oppose the $2.6B-wasting, sprawl-enabling, pollution-increasing Loop 202 extension

1 2 3 4 5 6

I do not trust the dishonest Draft EIS which critically ignores the well-documented dynamic of induced demand.

As a cyclist, motorist and valley resident since 1996, Phoenix does NOT NEED more freeways. This kind of development post housing boom and in a down economy is a waste of money. Driving in the Phoenix Metro area is easy, too easy. It discourages smart development, alternative transportation and pollutes our valley. The valley has gone downhill since 1996 in my opinion. We're an urban sprawl hell.

Thank you,

-Tom
Mesa, AZ

Code	Issue	Response
1	**Secondary and Cumulative**	Induced travel and induced growth are addressed under subheadings of those names on Draft Environmental Impact Statement pages 4-170 through 4-174.
2	**Secondary and Cumulative**	The proposed freeway is a response to existing and anticipated travel demand in the metropolitan Phoenix area. It is not meant to increase travel beyond that expected to be generated from existing and anticipated population and employment growth and related land development. It is important to consider that improvements proposed for any type of transportation system (e.g., a new bus route, rail transit line, commuter rail service) would likely lead to changes in travel behavior, which, in turn, would lead to increased use of the particular system. Improvements made to a given transportation system are meant to attract new users (see Final Environmental Impact Statement pages 4-170 through 4-174). If this were not a primary goal, the improvements would be neither effective nor warranted. For the proposed action, a goal is to attract users of other segments of the Regional Freeway and Highway System and the local arterial street network, now and in the future, to the proposed action to optimize, in part, the entire regional transportation system (as outlined in the proposed action's purpose and need in Chapter 1).
3	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). By 2035, east- and westbound motorists on Interstate 10 between State Route 101L (Agua Fria Freeway) and State Route 202L (Santan Freeway) are expected to experience stop-and-go driving for over 3 hours every day. This is for a distance of nearly 30 miles. A new freeway in the Study Area would distribute commuters over an additional freeway facility. As a result, the duration of stop-and-go traffic on the region's freeways would be reduced.
4	**Purpose and Need**	The worldwide recession that began in late 2007 generated a substantial downturn in growth rates for new housing and employment across the United States. Arizona particularly suffered the effects of this recession because, beginning in the early 2000s, Arizona in general and Maricopa County specifically experienced some of the fastest population, housing, and employment growth rates in the country. Because the need for the proposed freeway is predicated in part on projected growth, one might conclude the recession reduced that need. An economic downturn associated with a given recession is, however, generally considered a short-term phenomenon with respect to the longer-term planning horizon established for the proposed freeway. Socioeconomic indicators have steadily and consistently increased in the region since the early 1900s. The critical factors underlying these indicators remain unchanged. (See the sidebar on Final Environmental Impact Statement page 1-11.)
5	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
6	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

1	Document Created: 7/16/2013 7:16:35 PM by Web Comment Form You are proposing to link the new 202 to Interstate 10 at about 51st Avenue. I am sure this is the easiest place to place the junction in terms of acquiring right-of-way. It is an area whose citizens will offer little resistance to eminent domain. The problem with this alignment and subsequent junction is that it will create one of the worst bottlenecks that Arizona has ever seen. The expansion of interstate 10 to accommodate the huge number of westbound trucks that will choose this route to avoid the center of Phoenix will need to be immense. I have already seen how you folks join routes: Exhibit 1: the junction of northbound 51 to westbound 101- a nasty little bottleneck. Exhibit 2: the junction of the westbound 101 to northbound I-17-another unfortunate piece of bottleneck engineering. A more sensible alignment (albeit more problematic and costly) would be to join the 202 to the existing 101and avoid that already congested corridor of Interstate 10 between 51st and 99th Avenues. I know, this makes way too much sense. Thanks for listening. Frank Tonis Associate Broker HomeSmart Real Estate.

1 This proposal does not cover even half of the impact this extension of Loop 202 will have on the population in Ahwatukee and surrounding area. The air quality will be severely impacted. The noise generated by the traffic will be trapped in the residential area by the mountain.

2

3 There is no reason to construct this freeway. It will be simply a truck by-pass. Very few people in the Ahwatukee area will benefit from this.

4 Those who feel the freeway will benefit them when commuting to their work should consider moving closer.

2	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes that may be elevated above the road, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Phoenix metropolitan area and across the country.

Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Purpose and Need, Lack of Support**	

Code	Comment Document

children with the status quo, using the exorbitant right-of-way freeway paid the landowners the highest buildout cost. The Arizona legislature has done that to us.

Nor should we ignore the many deaths, semi rollovers, and the expensive public responders to the many and frequent crash freeway accidents.

Now, what we need is safe, efficient, useful, sustainable, affordable, state-of-art regional connective transportation.

And even considering a fast train, high-speed elevated train, from Tucson to Phoenix around this Broadway Curve as a viable alternative.

MANUEL TOPETE: And I live in Laveen, 51st and Baseline. And I can't wait for this to happen. As simple as that.

My only regret is I won't live to see it. Just I wish it was already done. I think you should also hear this, aside from all this bad.

KARIN GRAY: I have been a resident of Ahwatukee for over ten years, moved here from Texas, and absolutely love South Mountain. One of the reasons I moved to that area was to have access to all 15 miles of the Nation Trail, from one end to the other on South Mountain, the biggest city park in the United States.

It thoroughly disgusts me your idea to degrade the value of properties in the Ahwatukee area by insisting in building the Loop 202 project. It is preposterous that after developing this area as a quiet residential zone and 20 something years planning this road to benefit a few at best, you still vow to disrupt our tranquil lives by building such a monstrosity so close to our homes. I suppose that I don't have to reiterate my opposition to such a project, but I will go further than that. If you insist on building this road, you will lose another taxpayer from the state because I will move from Arizona. I will also tell you that around this area there are

3

many people sharing my sentiments in regards to the project and moving from the state if this venture ever comes to fruition.

Sincerely,

Jose A. Torres

Code	Issue	Response
1	**Acquisitions and Relocations**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values. A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to the Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
3	**Acquisitions and Relocations**	There is no evidence that the proposed facility would cause people to leave the area. The regions' benefits would remain, and improved access to residences and businesses would make them more desirable.

1	Gerardo Torres Document Created: 7/1/2013 12:45:38 AM by Web Comment Form Why is map 16 missing off-ramp and on-ramps? It's missing off/on-ramps southbound on lower buckeye and northbound on Broadway. It really would not make sense to have to drive a mile and wait for another stoplight. Especially people driving north from Broadway. This would create a jam of people coming north from broadway and people going north on lower buckeye. Thanks!

Code	Issue	Response
1	**Design**	The interchanges at Broadway Road and Lower Buckeye Road have been designed as half-diamond interchanges due to the future State Route 30 traffic interchange that is planned to connect to State Route 202L in this location. A full diamond interchange would create potential weaving issues with the addition of the system ramps from the future State Route 30 traffic interchange.

1 2 3 Please let it be known that we as property and home owners in the Ahwatukee Foothills do strongly oppose this freeway in this area. It will become a Truck Route for all trucks adding pollution to this area. Especially, Mexican trucks using this route which will add pollution due to their diesel fuel mixtures regarding sulphur. Chemical spills are another great concern.

4 Plus all the homes that will have to be destroyed disrupting many families.
Again I would like to appeal to you to NOT build this freeway in this area.

Thank you

kind of crap won't be happening anymore.
Thanks.
Thanks for typing.
THE FACILITATOR: Good afternoon. I'd like to introduce the 2:00 to 4:00 p.m. panel, with the Arizona Department of Transportation, Brock Barnhart, with the Federal Highway Administration, Director Moreno, and with the Arizona Department of Transportation, Brent Cain.
Our next speaker is Richard Tracy, Sr.
Mr. Tracy, you now can pick up the microphone.
MR. TRACY: Can I have about five minutes to catch my breath?
THE FACILITATOR: Most certainly.
MR. TRACY: It wasn't always this way, you know. I just lived here 43 years too long.
THE FACILITATOR: Welcome, Mr. Tracy, you have three minutes.
MR. TRACY: All right. Thank you very much. It was quite difficult for me to come here. It's been difficult for me to attend meetings all over the Valley and send letters, and disappointing when nobody pays any attention to it. I hope this is -- okay, as I say, it was difficult to come here.

THE FACILITATOR: Before you start, I'm going to reset your clock so you have a full three minutes.

MR. TRACY: Fine. Thank you. And it was difficult to go to many meetings around the Valley, because I spoke for such things as having the stadium in the middle of the community. It's over on the outskirts. I spoke against people who wanted to have the light rail to the Mormon Temple rather than to the stadium where 20 or 30 people congregate and spend three or four hours going and coming from events.

The selfish people in this community are their worst enemy. We've had a lot of projects fail, and this is going to be another one. We have a traffic jam at 60 and 10. A continuation of 60 across to Avondale will relieve that traffic jam. A highway on the other side of South Mountain will give the casinos another opportunity to destroy our economy.

I have prepared a number of things that I would like somebody that's in authority to review. They don't only deal with the 202; they deal with the whole community. Because you're not just deciding what's going to happen out there, you're deciding

what's going to happen at Washington and Central. We have a large area between Baseline and Washington Street that should be rejuvenated. The transportation should be available. When I went to school, I had the subway, I had buses. There are people here who cannot work because they don't have a car. It's an absolute necessity. 110 degrees.

But the 202 is important to the people who, for example, recommend that we go with the light rail out to the trailer park area instead of to the west side where there are people jammed up in the morning. I ask for a fair review of this. Believe me, when it comes to corruption, Phoenix has led the nation. And this is another attempt by certain people to gain what should be given to the populace. As I say, the west side and the south side of Phoenix should be built up so we have decent transportation, so people like me don't get COPD.

I thank you for your opportunity to do something constructive for a change. The hockey stadium out in the middle of Glendale is going to go bankrupt. It's a threat to people who can't afford it. It should be in Scottsdale, but ASU took that property for their own benefit. They could have put that Windsong anywhere in the County --

Code	Issue	Response
2	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
3	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

MR. TRACY: I am Richard Tracy, 2238 South Cottonwood Street in Mesa, Arizona. I have been a resident here for 43 years, lived in an area within a mile of the Black Canyon, and it contributed to the fact that I have HOPD now -- COPD. I'm sorry. It's like H. But I'm on 24-hour oxygen as a result of living too close to the freeway.

The 202 Extension is just a pie-in-the-sky idea of some Las Vegas and Phoenix people who wish to create more casinos, various other economic advantages. It's a highway to nowhere. It will not reduce the congestion we have on our roads. It may -- important place is what they call the curve or the bend between Route 60 on 10 and into Washington Street. And that traffic could be relieved with a road that would continue 60 into Phoenix. There are many, many roads off of that Baseline alignment that would be served. The community along Baseline should be rejuvenated.

There's no doubt in my mind the selfish interests did such things as making sure that the light rail went to the unnecessary Mormon temple rather than to the stadium. They fought efforts to put the stadium for the Cardinal football team in the center of the community. As a result, people are traveling three and four hours to get to and from when they have a sporting event, which is

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). By 2035, east- and westbound motorists on Interstate 10 between State Route 101L (Agua Fria Freeway) and State Route 202L (Santan Freeway) are expected to experience stop-and-go driving for over 3 hours every day. This is for a distance of nearly 30 miles. A new freeway in the Study Area would distribute commuters over an additional freeway facility. As a result, the duration of stop-and-go traffic on the region's freeways would be reduced.
3	**Alternatives**	The alternative proposed by the commenter is similar to the U.S. Route 60 Extension and Interstate 10 Spur alternatives evaluated for the proposed project. The reasons these alternatives were eliminated from further study are presented on page 3-12 of the Final Environmental Impact Statement.

Code	Comment Document

totally unnecessary.

Chasing the hockey group out to Glendale rather than putting it in Scottsdale, again, was a selfish effort by certain leaders, the same people who now are trying to get the 202 rather than a very useful road that would go from 10 over to the 59th Avenue would relieve the traffic, would relieve the effort in downtown Phoenix which has everybody routed through the small area of Washington or McDowell. It's a plan for the future to have a freeway in the alignment between Baseline and Broadway.

I have many articles that I'd like to submit. And one of them, of course, is the fact that Phoenix leads the nation in scams. And anytime there's been a fraud on a large scale, Phoenix has been the leader. We are last in the educational support. We're last in helping people who need help.

The community is divided between the very rich and the very poor, which is not a healthy situation. But it has existed, and it's perpetuated by outfits like John Birch Society and today the Tea Party and various other interests rather than a blended community which would help everybody. We don't have that here, and it's unfortunate.

I was fortunate. I went to college and

If The extnsion of 202 was inportant to traffic and clean air it would not have needed millions of PR and twenty years to build. My fear is each group make it impossible to develope a stainable community.We needed a stamium and it ended up ten miles from the center. Same the Arena. Things fail here because of prtty greedy inconsistent leadership.

1 The 202 extention is not as important as a rail line from Tucson or Mexico to Vages.

2 It is not going to benefit any one but the highway builders and the casinos. Light rail from Baseline to Washington St and extra Lanes I- 10 where 60 joins it will save lives money and

3 jobs. 202 will gice us fewer jobs and tourists. Damage a Park that will grow in importance as

4 the population grows. From an COPD family please reduce not increase auto use with sprawl.

4	**Secondary and Cumulative**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

January 2,,2012
MORE COUNTY BAIT AND SWITCH
The Promise of Beneficial Transportation
Pending Threat of Continued Urban Sprawl

Dear Mr. Hogan:

I was pleased to have attended the gathering to honor you for the years of dealing with extremist political groups, Others share your frustrations. We have community leaders that value money more than public health and corruption is ignored. Transportation far exceeds the County frauds connected with the Criminal Tower or the Fiesta Bowl both being white washed. The Court Tower will continue to control the Justice system for the next fifty years. Avoiding intermediate City Civil Courts that distribute traffic and a chance of justice locally.

The County had purchased the Baseline Justice Center property for eleven million dollars so the construction downtown was for the State Bar Association to preserve the 1950 court system and its mandatory Rent a Judge ADR program that makes small civil cases into big ones. Just another County Bait and Switch of Tax funds like proposition 400 is turning out to be.

I find it hard to believe that the past legislature may have given us a key to a better, healthier life style with the passage of SB1525. City infill, public transport and walking to work or school, to replace blight from more Urban Sprawl. Add to that, the Republic printed Steven Betts My Turn article," Inward development," December 10. That gives hope of user friendly cities. The "20-Year Transit Plan Progresses." article of 23rd Audit General summary fails to reveal Prop.400 has been hijacked by,"investors" and Metropolitan Business Plan partners. The lack of documentation (accountability) and that light Rail ridership has exceeded expectation is true.

The Republic and ADOT still promote the 1960 growth agenda as does the city of Mesa. Normal residential evolution failed to develop because Historic preservation and NIMBYs dominated planning. Families were forced to the outskirts where developers profited. The article by Mr. Betts the local Chair of Urban Land Institute is enclosed. Most of that information was included in my letter to Senator Barbara Boxer, Federal Transportation Chairperson sent after Governor Brewer rejected the Western auto emissions standards. Copies enclosed, I will not repeat the issues. The toll from Pollution increases, includes me with COPD and my daughter, disabled for five years. Many middle aged people on twenty four hour oxygen. The American Lung Arizona branch has documented the work/medical cost.

The Maricopa County Transportation program, Proposition 400 if off track, aided by EPA in more ways than one. Prop.400 emphasized balance transportation methods, Freeways we had but Public Transit near 5%, The recession has been used as an excuse to stop Light Rail going north on 19th Avenue to Dunlap by 2012,Metro Center promised for 2017 and 79th Avenue, 2119. No effort to consider the true population growth south of the original route projected in 2003. The East Valley growth was ignored in 2007. Millions from Federal Stimulus, Transportation and various earmarks followed in 08 and more than offset the local Sales Tax Revenue shortfall. That was not used to further plans to move people or to reduce pollution. Just the opposite, car pool no longer stressed.

There was money for Sound Walls, HOV lanes, art. Loop 303 for sprawl, Rebuilding the city of Mesa, studies and more studies, Something like the shortest distance to the greatest population compromised for Church or Temple locations, to please NIMBY groups. Rebuild Mesa where ten to twelve million dollars is being spent to increase the distance people will travel with road closings around the Fiesta Mall. Thirty five millions to purchase white elephants. Eventually increase the distance for Light Rail if it is built eight to ten miles to the growth areas. Gilbert and Queen Creek, Chandler, ASU and Gateway Airport.

Tax discrimination has kept multi million dollar vacant properties downtown for decades. That affects adjoining properties. Phoenix did not benefit from the recent billion dollar public construction . Just the opposite, it causes the public to avoid downtown. Retail and entertainment adds staggered hours, distributes traffic loads as it did years ago.

ADOT is being pressured to continue new Freeway lanes though downtown Phoenix as they do now, except for the Loop 202 extension proposed in 1960. that will also preserve their midtown course. Greedy small town mentality that the highway go through the town center. Route 60 over Rt 10 to Avondale via a Baseline Rd. alignment would relieve congestion into town for less than what is proposed, end congestion. TPC studies do not benefit the public, the taxpayers who suffer delay. Metropolitan Business Plan partners and the investors are planing more urban sprawl., Nationally

Code	Issue	Response
1	**Secondary and Cumulative**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
2	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document

freeways are being converted to Rail. light or Commuter. Such Infill would solve our problems. Four dollar a gallon gas changes things.

The MAG Transportation Policy Committee is not on the public's side. Legal promises broken, conflict of interests ignored, corruption, no accountability and breach of Fiduciary duty all apparent in the past few years. Ignoring our pollution offenses all of seven months last year, yet ADEQ proposes to weaken the Clean Air standards. The Maricopa Association of Governments and ADOT are abandoning their public obligation to provide balanced transportation. See prop.400 summary, all funds were to be used. They plan no reduction of auto traffic, our major contributor of ozone along with road dust .TPC is submitting programs that would limit future Public Transportation to rubber tired vehicles. The," investors" even ASU wants Toll Roads to off set tax cuts.

Hearing on various transportation issues will take place soon and will mean nothing without the prospect of action like that filed December 2009 against EPA. (Bahr v Jackson) The EPA has found the 5% PM 10 reduction is inadequate to protect the health of residents of Maricopa County. MAG, mostly small town officials want more sprawl, less Light Rail in large cities, $10 rush hour Toll fees in spite of failures nationwide. Gas prices go up but some businessmen want to end the tax on gasoline rather than an increase to cover road maintenance.

Note the recent T.P.C. Summary seeks to satisfy," Stakeholders" investors, not to fulfill their obligation to existing residents promised in the passage of Proposition 400. Now with less that twenty miles completed MAG is setting Metro adrift. The Governor's Transportation Oversight Committee Chairman, Roc Arnet, also Chairman of the East Valley Improvement Committee was a cheerleader for the tracks to the dead end at the Mesa Mormon Temple, not Gilbert or San Tan.

3

That TPC Summary calls for widening I-10, adding H.O.V. lanes on I-10 between I-17 and I-60 with the implementation of a local express lane system to provide additional capacity along I-10 (That is code for private Toll Roads at public expense). What they call sustainable transportation is non-sustainable residence support. The extension of Loop 202, a 22 mile road to nowhere was planned in 1960. Now mainly for casinos operated from Los Vegas, will kill our economic future.

The small map shows projected population in the pre 2004 campaign material, That stated,"By 2007, nearly 150 miles of Freeway will be complete. Now is the time to look at the next round of transportation investments." That give the impression that public transportation was ending workers daily ordeal of traffic delays. Note the TPC Summary last paragraph does not address the public need or traffic congestion but rather the, "difficulty of developers in assembling various land parcels." Infill in south Phoenix would reduce congestion, there is our hope for the future.

When the 2007 scoping took place to determine the future course of Light Rail as stated above only Central Mesa was discussed and considered. Projected growth did not occur, Mesa's Conservatives rejected progress. Gilbert's population increase, 83% and Queen Creek San Tan area went from 4.400 in 2000 to over 30,000, Gateway and ASU plus the Fiesta Area with its College and Hospital presented the obvious need for the Light Rail that would serve the South East Valley best. Drawing from both east and west. Main Street to Power would add eight or nine miles and about twenty minutes and draw very little from the east or north. Mesa business view, let them drive 5 or 10 miles. Who will pay to operate that branch, Mesa's debts are climbing.

Metro approved Light Rail to Mesa Drive, a location so lacking potential riders that almost immediately the need to extent from the Temple to Gilbert Road became vital. Five hundred thousand dollars bought that commitment from Metro Light Rail. Downtown Mesa property owners have hit the lottery, Several million for environmental adjustment, Thirty-five million for property that has had little value, now being negotiated and failing businesses subsidized during two years of Construction. The substandard older homes and buildings had been housing for thousands undocumented, mostly construction workers families. Wealthy property owners moved to Gilbert or new Lehi. Mesa is said to have twenty thousand homes vacant or in foreclosure but millions of dollars has been provided by congress to start construction of Tempe style housing along the Light Rail track. Being built without a University or employment opportunity nearby like Tempe.

I enclosed material that reveals the deception and explains the problems and promise of increased health hazards. Election promises are contracts. Because of Media confusion and public apathy we have no community leaders demanding enforcement. The press supports sprawl, most people feel it is no use trying to buck the system. Major employers representatives and professionals are enlisted to keep people from objecting unless that is what the powers that be want at the time.

I hope that your office and the Sierra Club will intercede and provided the public mass transit as promised for Maricopa County, with truly Happy New Years. Urban sprawl has caused waste and driven up costs the middle class and small business. Public interests are not considered.

Very truly yours

Richard T. Tracy,Sr.

Phoenix must look to inward development

12-16-11

MY TURN
STEVEN BETTS
Urban Land Institute

In this post-recession environment, much is being made about great forces of change — population and demographic shifts, economic drivers, environmental concerns — that will dramatically reshape community building for the rest of the century.

In this time of change, it is critical to anticipate how the impact of urban design and development will meet expectations of Valley residents for livability, amenities, flexibility and choice.

This much is clear: Where we've been is not where we are headed.

How much of the anticipated population growth for the U.S. will be happening in Greater Phoenix? Is Phoenix appealing to talented workers? Does Phoenix have an adequate supply of housing that is both affordable and close to jobs? And, how can future development help position Phoenix as being progressive and innovative for the 21st century?

Research from the Center for Neighborhood Technology tells us that in the Phoenix metropolitan area, residents in outer communities (where the majority of Valley residents live) spend more than 45 percent of their income on housing and transportation alone. Most drive more than 18,000 miles per year for work and errands, and most have seen their auto gas costs double, even quadruple, since 2000. This is simply not a sustainable growth model.

Building the Phoenix metropolitan region in a way that conserves land and energy, de-emphasizes auto dependency, and enhances the natural environment is critical to our region's success. Less new construction and a greater emphasis on reusing and adapting existing space is our future. We need to do a better job of developing inward, utilizing parcels already benefiting from municipal services and infrastructure.

Phoenix must build the region in a way that conserves energy and land, enhances the natural environment and de-emphasizes auto dependency. This is critical to our future. ROB SCHUMACHER/THE REPUBLIC

Seventy-five years ago, the Urban Land Institute was founded to research, analyze, and encourage responsible patterns for long-term urban growth, and explore what constitutes sound real-estate development projects and practices.

For the Urban Land Institute Arizona, December 14, 2011, is a new starting point — a date to think ahead about what's to be accomplished for the next 75 years. As ULI founder J.C. Nichols once wrote, "An intelligent city plan ... does not forget the greater needs of tomorrow in the press of today. It is simply good, practical sense."

Whether we've learned from the past will be measured by how much of what we build remains relevant, appealing and worth preserving in 75 more years.

Steven A. Betts is chairman of the Urban Land Institute, Arizona District Council.

MAG Transportation Director Eric Anderson's press release of October 8, 2011 spoke nothing of MAG joining in a plan that replaces the objectives and funding of Prop.400. The Metropolitan Business Plan means more sprawl less funding for clean air. Note funding committed all sources. Now MAG TPC is using that to fund Toll Roads, fringe development and doubling I-10. And extending Loop 202. Funds for Light Rail committed areas but are personal piggy banks for some. Clean Air and Sunshine was what made Phoenix, not pie in the sky developments scams. Dirty air and dirty politics may destroy it.

Anderson on MAG on not funding what was promised:

MAG Transportation Director Eric Anderson's press release of October 8, 2011 spoke nothing of MAG joining in a plan that replaces the objectives and funding of Prop.400. The Metropolitan Business Plan, means more sprawl less funding for clean air.

MAG Director Eric Anderson"Some Valley freeway projects will be delayed up to five years by a sharp downturn in revenues prompted in part by the recession, regional transportation officials say.

Proposition 400, approved by Maricopa County voters in 2004, imposed a countywide half-cent sales tax for 20 years to fund regional transit projects - freeways, streets, buses and light rail. The tax expires in 2025.

However, revenues are now expected to be $2.2 billion, or 24 percent, lower than projected for the remaining 15 years of the program, according to the Maricopa Association of Governments, a coalition oflocal governments that serves as a planning agency for the Greater Phoenix area. The regional transit plan is overseen by MAG.

When Prop. 400 was implemented, MAG projected $14.6billion in revenues through the life of the program. The new projection is $8.7 billion.

While the effect on transit programs is still being reviewed, MAG has determined that at least 11 Valley freeway projects will be delayed. It is too early to say whether they will be eliminated entirely from the current 20-year plan. Completion of those projects would require an extension of the program for an extra five years and a new Error! Hyperlink reference not valid. source - potentially including another voter-approved ballot initiative.

"I would expect, following the pattern of Prop. 400, by sometime after 2020, there would be a move to renew that tax source. Conceivably, it could happen sooner than that," said the MAG Director.

Read more: http://www.azcentral.com/news/election/azelections/articles/20111 0/08/20 III 008maricopa-county-proposition-400- funds-shortage.html#ixzz 1 hncyR 1 AO

Sample Ballot

Proposition 400

If approved by the voters of Maricopa County, Proposition 400 would continue the one-half cent sales tax for 20 years, through December 31, 2025. This sales tax would be used for construction of new freeways, widening of existing freeways and highways, improvements to the arterial street system, regional bus services and other special transportation services, and high capacity transit services such as light rail, bus rapid transit and express buses. All projects to be funded from the proposed sales tax are specified in the Maricopa Association of Governments (MAG) Regional Transportation Plan.

Regional Transportation Plan

Utilizing input from the community, the MAG Transportation Policy Committee developed the Regional Transportation Plan (the Plan). The 22-member committee included elected officials and representatives from cities and towns across the region, the business community, the Arizona Department of Transportation, Maricopa County, the freight industry, transit, and the Citizens Transportation Oversight Committee.

The Regional Transportation Plan includes $15.8 billion in proposed projects, taking into account all regional funding sources. About half of the funding, $9 billion (based on 2002 dollars and including $500 million set aside for interest expense) would come from the passage of Proposition 400.

Mesa Republic 12/10/11

After a campaign to give Phoenix Mesa Gateway Airport an internationally identifiable name I made efforts to get to plans for the Light Rail at Sycamore and Main Street to go south to the Airport or San Tan. I spoke again to the Gateway Board made up mostly of the Mayors of the surrounding cities that are involved. The Chairmen that day was Mesa Mayor Scott Smith. He did not seem receptive at all. I then went to the Board of the Maricopa Association of Governments and guess what Mayor Smith was also the Chairman and no more receptive. The same was true at the Mesa City Council meeting.

You see at completion of Loop 101 the sleeping downtown Mesa business and property owners awoke. The highway no longer ran through their Main Street, there was no business. It was in the newly developed Fiesta and Val Vista areas. That started efforts and publicity to attract the public downtown. Keep the Light Rail going east not south where there had been a population explosion over the past ten years.

TPC Meeting Summary

Update on the Southeast Corridor Major Investment Study

The TPC heard an update on the Southeast Corridor Major Investment Study. The purpose of the study is to examine the existing transportation investments proposed for the Southeast Corridor, which primarily encompasses the Interstate 10 corridor from Central Phoenix to the East Valley. These investments include widening of Interstate 10; reconstruction of the traffic interchange connecting I-10, State Route 143 and 48th Street; connection improvements to the US-60 (Superstition Freeway) and the Interstate 17 (Black Canyon Freeway) traffic interchanges; construction of an additional HOV lane on I-10 between I-17 and US-60; and implementation of a local express lane system to provide additional capacity along I-10. The Arizona Department of Transportation is currently completing an Environmental Impact Statement for the I-10 corridor within the study area.

Along with reviewing these investments and other parallel facilities, the Southeast Corridor Major Investment Study will study the travel demand between the East Valley and Central Phoenix to identify the potential for alternative transportation mode strategies to accommodate demand, along with freeway widening scenarios.

Staff reported that the consultant conducting the study has developed and analyzed three "bundles" of more than 25 different transportation alternatives. The bundles include a basic mobility bundle ($350 million investment), peer competitive bundle (systems common in peer regions, a $2.8 billion investment), and transit focus bundle ($5.1 billion investment).

Sustainable Transportation – Land Use Integration Study

Staff provided an update on the Sustainable Transportation – Land Use Integration Study. The study was launched in 2010 and includes a market analysis and research of best practices for sustainable transportation. Staff noted that one issue is that many people interpret the words "sustainable transportation" differently, with definitions ranging from traffic demand reduction to mode choice to the environment. Eight factors typically found when measuring sustainable transportation performance include a neighborhood street network, housing and employment density, mixed-use neighborhoods, regional accessibility (especially job centrality and concentration), frequent/convenient transit service, demand management/incentives, transit-oriented development (including mixed income housing), and demographics.

Staff noted that a focus group found the existence of obstacles that make infill development a higher risk than fringe development in the Valley. These include parking availability and zoning laws, as well as difficulty for developers in assembling various land parcels. The focus group expressed interest in bus options, and suggested the region take a hard look at "rubber tire" transit options. Additional observations based on stakeholder input were that mobility solutions are needed throughout the region, but that limited parts of the region can support transit oriented development and high capacity transit in the near term. Next steps will include identifying mobility priorities, modeling various scenarios, and developing policies, with an eventual outcome of recommended policies, investments, and pathways.

Mag interest in Urban Sprawl

not modern Rail.

clean Rail.

Agenda Item #5

MARICOPA ASSOCIATION OF GOVERNMENTS
INFORMATION SUMMARY... for your review

DATE:
November 9, 2011

SUBJECT:
Update on the Southeast Major Investment Study

SUMMARY:
The fiscal year (FY) 2010 MAG Unified Planning Work Program and Annual Budget, approved by the MAG Regional Council in May 2009, was amended in March 2010 to include $300,000 to conduct the Southeast Corridor Major Investment Study. On May 17, 2010, the MAG Regional Council Executive Committee selected HDR, Inc. to conduct the study.

The Arizona Department of Transportation (ADOT) is in the process of completing an Environmental Impact Statement (EIS) for the widening of Interstate 10, the Maricopa Freeway, between the SR-51/SR-202L/Red Mountain "Mini-Stack" and SR-202L/Santan-South Mountain "Pecos Stack" traffic interchanges. The subject of this EIS is an environmental clearance that would allow the reconstruction of the Interstate 10/SR-143/48th Street traffic interchange, connection improvements to the US-60/ Superstition Freeway and the Interstate 17/Black Canyon Freeway traffic interchanges, construction of an additional high occupancy vehicle (HOV) lane between Interstate 17 and US-60, and implementation of a local-express lane system to provide additional capacity along Interstate 10 that could accommodate more than 400,000 vehicles per day. ADOT is in the process of wrapping up this EIS and proposes obtaining a Record of Decision (ROD), the final action in the EIS process, in early 2012.

Presently, the Regional Freeway and Highway Program of the MAG Regional Transportation Plan provides approximately $650 million for an initial phase of the project between 32nd Street and SR-202L/Santan-South Mountain Freeways. The remaining sections of the project, from 32nd Street to SR-51/SR-202L/Red Mountain Freeway, is estimated to cost $850 million and is presently identified for implementation in the fifth phase of the Regional Transportation Plan.

During the course of the EIS, questions have been raised by MAG member agencies about the investment being made in this corridor and the need for alternate transportation options, in addition to widening Interstate 10 and improving the system traffic interchanges, to accommodate the growing travel demand between the East Valley and Central Phoenix. In response, MAG began developing the Southeast Corridor Major Investment Study for these purposes. The work program for this Study has the following tasks:

- Review of all transportation investments proposed for the Southeast Corridor, including those proposed along other parallel facilities, such as SR-101L/Price Freeway and SR-202L/Red Mountain Freeway;
- Study of the travel demand shed between the East Valley and Central Phoenix to identify the potential for alternative transportation mode strategies to accommodate demand in addition to freeway widening scenarios;
- Consultation with project stakeholders on the project's findings and recommendations; and

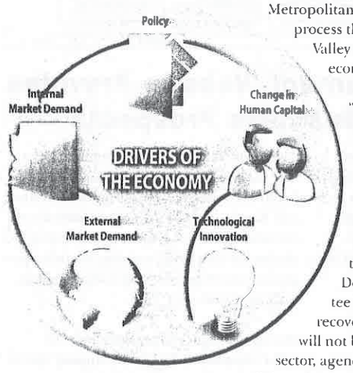
MAG Launches Metropolitan Business Plan

With the Valley just beginning to climb out of one of the most significant economic downturns in U.S. history, the Maricopa Association of Governments (MAG) and economic development leaders from across the region have launched a Metropolitan Business Planning process that will move the Valley toward a more secure economic future.



"We have experienced tens of thousands of foreclosures in the Valley, and the pain isn't over yet," said Litchfield Park Mayor Thomas Schoaf, who chairs the MAG Economic Development Committee (EDC). "The region's recovery from the recession will not be driven by a single sector, agency or individual. A collaborative approach is needed to make dramatic changes in our economy."

Mayor Schoaf said MAG is coordinating with a range of stakeholders to develop a business plan that will help put the region back on the path to prosperity. In August, MAG was selected by the Brookings Institution as one of only a handful of pilot cities to participate in a collaborative partnership to develop a Metropolitan Business Plan. Other partners in the project include the Greater Phoenix Economic Council (GPEC), Arizona State University, the Thunderbird School of Global Management, Maricopa Community Colleges, and the Arizona Commerce Authority.

"Not only are we tapping into some of the brightest minds in our region, the value of working with Brookings is that they can help us identify new opportunities through their connections with best practices around the country," said MAG Chair and Tempe Mayor Hugh Hallman. "This will help us leverage key assets to better compete in a global economy," he said.

Mayor Hallman pointed out that the effort will build upon the hard work that has already taken place in the region, including incorporating economic development plans already underway.

"We are relying on the expertise of our partners in economic development and on our regional leaders to identify the actions necessary for revitalizing our economy," said Hallman. "The great advantage of this project is that it gives us a chance to work together instead of in our individual silos to create a unified economic development strategy."

GPEC President and CEO Barry Broome said he is excited about the partnership, agreeing that it is time to change the way we think about economic development.

"If we want to transform Greater Phoenix into a world-renowned region of excellence, we need a shift in

Mr. Robert Forrest
Metro Light Rail, Suite 1300
101 North 1st Ave.
Phoenix, Az 85003

2238 S Cottonwood St
Mesa, Az. 85202

Dear Mr. Forrest:

TRANSIT PARTS CONSIDERED SEPARATELY
COUNTY TOTAL EPA SCORE, POOR, WHY?

May 27,May 26,count back to December19 before you can find a good air day in Maricopa County. Once known for its clean air, a respiratory cure center and laid back life style, is now a place compared to Los Angles. Urban sprawl. Traffic delays, smog-obscuring view.. The EPA and Federal Departments of Transportation, free of local influences are guilty of betraying their obligation to the residents. They give lip service to anti pollution measures but support federally funded projects that contribute to poor planing of a community, waste, traffic jams, accidents and increased pollution.

The Light Rail is badly needed where there are young families, working middle class and college students. Light Rail's goal to reduce traffic instead is being diverted to a retirement area. First stop Mesa Dr. along mostly abandoned Main Street to the Cemetery, large park across from the LDS Temple, Historic single family home districts. They want it, because it's almost free. All local funds are going to redevelop east of Mesa Drive that is where the Mormon Community of Lehi is being reborn.,

The future plan after 2016 is to extend to Gilbert Road a trailer park area on the north, mostly vacant six-month a year. Growth and traffic jams are miles to the South. Help would come to finance a connection between the two major airports, but to go east to Power Rd. then south, would add nine miles and at least twenty minutes to the trip and maybe twenty years before completion.

The East Valley at the last census has grown to over a million people. Mainly in the Gilbert, San Tan, Queen Creek, Chandler areas. Only a small percentage reside north of Route 60. Mesa Main Street died when Route 60 moved south and residents resisted change. Mesa has ten thousand homes empty or in foreclosure. The ADOT Citizens Overview Committee and MAG Chairman, the Mesa Mayor, are both strong Mormon leaders ignore the facts. And public interest. Suggest people can drive five to ten miles to Light Rail. EPA and Metro have a responsibility to get traffic off the road on to rail, but for five years only Mesa Central Main was considered.

The Maricopa Association of Governments are controlled by Developers, it encourages only Urban Sprawl, not infill and we have thousands of empty newer buildings, they and people are not a developers concern, only buying BLM land, building and making a profit. ADOT is planning roads for the developers into 2024. Travel time, empty buildings pollution all increase, as do no-burn days. The community already so spread out the two car families have grown to three or four with teen agers. Excessive travel demands, costs and blight are not a concern of County Planners.

Light Rail should go south from Sycamore to the Fiesta Mall area with its Hospital and College campuses, dozens of empty buildings and locations for apartments. Actual, not just potential riders. Then through Gilbert southeast ending near Mesa Gateway Airport and San Tan Village. ADOT's plan a twenty four lane road west of Tempe that could become a Toll Road. More about that in the attached addition to go with the Exhibits and articles.

Very little is done to get express buses between cities except for the West Valley to Downtown Phoenix and that did provide results. There is very little effort to get the single driver of the road. Proper placement of Light Rail and extending Rt. 60 just does not fit the powers to be plan for this large county that is run like a hick town by people who remember it as it was, do not know how it could be. It is clear to an impartial observer that there is not sufficient passenger prospects for Light Rail at Central Mesa and there is not enough room for proper traffic movement in Central Mesa, but then drivers will avoid going there, the public and private investment wrote it off when Freeways developed south then north. Its common the greedy take from the needy around here.

Sincerely

Richard T. Tracy, Sr.

Code	Issue	Response

PURPOSE OF STUDY

1. Identify a transit alternative that increases efficient access to employment opportunities throughout the Central Phoenix/ East Valley region for City of Mesa residents.
2. Identify a transit alternative that provides improved travel times in a congested environment over local bus.
3. Identify a transit improvement

THE SCOPING PROCESS

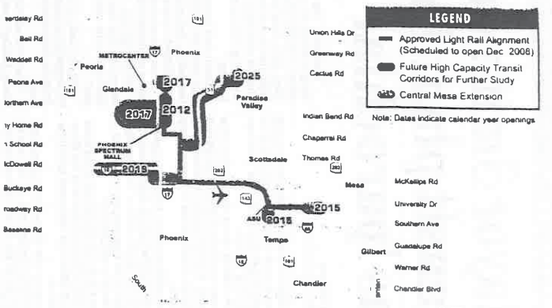
aug 2007

What is it. Why do it?

Scoping is a study process designed to inform the public, interested groups and participating agencies about the proposed project, potential alternatives under consideration, and issues for public and agency review and input. The main goal is to encourage the active participation of the community and public agencies early in the decision-making process. It provides the public an opportunity to communicate issues and concerns to help develop alternatives before considerable resources have been expended.

The scoping process defines the alternative routes and alignments that will be examined in the study, identifies potential impacts that

FIGURE 1: REGIONAL TRANSPORTATION PLAN TRANSIT CORRIDORS



Mesa wrangles with how to pay for light rail

2002

1.1-mile segment's cost ranges from $20M to $40M

BY JASON EMERSON
TRIBUNE

Pressured to move along with plans to build about a mile of light-rail line on the city's western border, Mesa officials have yet to figure out how to pay for it.

The project moved forward last week when Valley leaders on the Regional Public Transportation Authority voted 6-1 to begin looking for an engineering firm to build the system. Mesa Mayor Keno Hawker cast the dissenting vote.

While Hawker, who represents Mesa on the authority, favors building a 1.1-mile segment to the Tempe border to the East Valley Institute of Technology at Longmore and Main Street, said he wants his full council to vote on it, he wants to know how much it will cost and he wants to know who will run the rail system.

"I would like to see some of those (questions) answered," Hawker said Monday. "And I'm not going to move forward on my vote until I'm sure the council is supportive," he said.

The City Council will discuss the light-rail project at 7:30 a.m. Thursday in the council chambers, 57 E. First St. A formal vote is expected sometime during the next two months, said City Manager Mike Hutchinson.

Plans call for 20.3 miles of rail to run from 19th Avenue and Bethany Home Road in Phoenix through downtown Tempe, ending about a mile into Mesa. Total cost is estimated at about $1 billion.

Some officials worry that if Mesa backs out of the project, it would wreak havoc with the schedule.

"It would probably cause a delay," said Jack Tevlin, Phoenix's deputy city manager.

Tevlin points to the project's lengthy environmental study, which was done based on a 20.3-mile system. If the track is shortened because Mesa backs out, a new study might have to be done, he said.

Tevlin met with each Mesa City Council member in late March to extol the merits of light rail.

"Phoenix realizes that without us, they'll have to redesign the project," said Mesa City Councilman Bill Jaffa.

Others are concerned that if Mesa backs out, Tempe may shorten its segment. Instead of extending the track to Mesa's border, which currently is planned, Tempe may cut costs and stop the rail at McClintock Road or Mill Avenue, officials said. Tempe Mayor Neil Giuliano could not be reached for comment.

'I would like to see some of those (questions) answered. And I'm not going to move forward on my vote until I'm sure the council is supportive.'

KENO HAWKER
Mesa mayor

Mesa is being asked to commit up to $40 million to build its segment at a time when the city is facing a $33 million revenue shortage for fiscal year 2002-03.

In the past, Hawker has estimated the system would cost Mesa $40 million, but Monday he revised his estimate to $30 million. The new number is based on the information that Mesa's segment will be 1.1 miles instead of 1.5 miles, Hawker said. Wulf Grote, the project director, has said Mesa's share will be about $20 million.

Some federal money might be available to reduce Mesa's cost, Tevlin said. The federal government is expected to pay about half the cost of building the system.

Report of Bob Hazlett MAG Senior Engineer 10-19-11 on
Managed Lanes(Toll Road) to MAG Transportation Committee

Lanes Network Study will look at the concept of priced managed lanes or placing a toll on HOV lanes. He stated that there are four phases to the project, with the first phase underway.

Mr. Hazlett stated that the study will evaluate future HOV needs, the viability of managed lanes, and legislative and institutional requirements. He said that stakeholders includes representatives of MAG member agencies, the Arizona Department of Transportation, and the Federal Highway Administration.

Mr. Hazlett stated that managed lanes are dedicated lanes for one or more user groups. He said that HOV lanes in this region are managed lanes. Mr. Hazlett stated that managed lanes can be high-occupancy toll (HOT) lanes, express lanes, express toll lanes, or value priced lanes. He said that names and branding vary by region and reflect different strategies. Mr. Hazlett noted that there are more than 130 managed lanes facilities in the United States, and he added that once the HOV lanes on Loop 101 are completed, the MAG region will have the fourth largest managed lanes network in the country in terms of lane miles, behind Los Angeles, San Francisco, and Seattle. Mr. Hazlett remarked that the evolution of the region's freeway system since 1985 is a remarkable achievement.

Mr. Hazlett stated that 12 projects in the country currently use price managed lanes, and the Managed Lanes Network Study consultant identified where they are being contemplated. He noted that some are express toll lanes where you must stay in the lane and cannot weave in and out. Mr. Hazlett stated that one of the more ambitious projects is in the Dallas area, where Interstate 635 will be double decked. He explained that the top lanes will be the existing lanes and the bottom lanes will be managed lanes. Mr. Hazlett stated that truck-only toll roads are being considered in Atlanta and New Jersey.

Mr. Hazlett then addressed the lessons learned from SR-91 in Orange County, California, considered the granddaddy of managed lanes, constructed in 1996. He said that it was the first managed lane facility to use value pricing and the first fully automated toll facility in the United States. Mr. Hazlett stated that SR-91 is in an area with few competing routes, and it introduced the concept of variable pricing for tolls. He said that toll setting is an ongoing process; they review the data monthly and set the tolls, with a goal of keeping traffic moving. Mr. Hazlett stated that the toll amounts vary and the peak hour toll is about $10.

Mr. Hazlett stated that SR-91 was a public-private partnership, and as a result, a lot of codicils were added that made it difficult for Orange County to do a lot of planning. He said that a buy-back by Orange County was necessary to overcome a restrictive non-compete clause contained in the lease, for example, CALTRANS could not add any lanes on nearby freeways that would compete with SR-91. Mr. Hazlett stated that SR-91 generates about $45 million in revenues annually.

Mr. Hazlett then addressed lessons learned from Interstate 95 in Miami-Dade County, Florida. He said that the project converted 21 miles of single HOV lanes to dual HOT lanes. Mr. Hazlett stated that drivers previously could enter or leave the lanes at any time, but once the lanes were converted, drivers could enter or exit only through dedicated points. From this it was learned that a good

An Increased effort to create Congestion has been apparent, No real effort to promote car pools, use public transportation or stagger hours etc. in recent years, Congestion is good for Toll Road business, Light Rail and Express Bus or extending Route 60 over I-10 bad.

Mesa rail stop leaves bad impression

Plan to extend light rail gives city 2nd chance to help business, views

By Jim Walsh
THE REPUBLIC | AZCENTRAL.COM

West Mesa's assortment of boarded-up fast-food restaurants, an abandoned supermarket, run-down motels and unattractive trailer parks didn't exactly impress a woman from Ohio riding the Metro light rail for the

Drive stations.

In each case, Metro plans to build the stations east of the intersection, combining functionality with the best potential for economic development, he said.

"Economic development was certainly one of the primary considerations," Limmer said,

He said the Sycamore Station now serves as mainly an access point for commuters because it is at the end of the rail line, with

Cold, dry weather contributing to bad air quality

DIRTY AIR
Continued from B1

themselves outdoors. The ADEQ says the air could get bad enough to make Saturday a high-pollution advisory day.

The advisory, and predictions about more to come, are based on air-monitoring data and weather forecasts.

This is a La Niña year, meaning equatorial waters in the eastern Pacific Ocean are colder than usual.

That leads to a dry, cool winter in the western United States — the exact conditions which trap winter-dust pollution in the Phoenix area.

"We anticipate a dry, stagnant weather season, and expect to see a high number of high-pollution advisories. There is a potential for a record year," county Air Quality Department spokeswoman Holly Ward said.

When winters are warm and wet, rain and wind washes away the brown cloud.

But when high-pressure ridges settle in, air is trapped. In summer, an air bubble as high as 10,000 feet collects ozone. But in the winter, cooler air drops the bubble below 5,000 feet.

"It's like a lid on top, the air doesn't mix," said Paul Iniguez, a meteorologist with the National Weather Service in Phoenix.

"Long term, we are trending toward a lot more high-pressure ridges holding over the Valley, trapping the high pollution in," said ADEQ spokesman Mark Shaffer.

The period between Christmas and New Year's Day is expected to be the worst of it, Shaffer said.

That's because the most severe pollution this week has come from fine particles, called PM-2.5 because they are smaller than 2½ micrometers in diameter. Smoke is a key contributor and with many people home for vacation, more home fires will be burning.

But the county faces another longer-term challenge from coarse, PM-10 dust, which is as large as 10 micrometers, or one-seventh the width of a human hair.

This fall, the U.S. Environmental Protection Agency told local officials that regional plans to reduce PM-10 by 5 percent were inadequate and would be rejected next month.

That starts a lengthy process that jeopardizes some federal-transportation funding, and ultimately could result in all such funds being withheld from local projects.

Next month, the county is set to clamp down on one source of the 73,000 tons of coarse dust that blows through the Valley: off-road vehicles.

Off-road vehicle fans could face stiff fines next year if a proposed county ordinance takes effect to limit driving in certain areas.

On Wednesday, the Maricopa County Board of Supervisors set for Jan. 12 a public hearing to change existing law.

The county bans all off-road driving on unmarked trails in unincorporated areas, but the new rules impose increasing fines, rather than cite first-time violators with a misdemeanor. Fines would start at $100 and climb to $250.

The proposed law says: "Vehicles in operation on either unpaved public or private properties in the unincorporated areas of Maricopa County shall remain on roads or highways."

Off-road enthusiasts can drive on unpaved trails only when they have written permission from a private landowner, or on public lands where trails are clearly marked by signs or on official websites.

Private-property owners are allowed to drive their off-road vehicles on their properties, but only if they limit the dust they kick up, apply for a dust permit or otherwise comply with other county dust-pollution laws.

The county also plans to tweak a separate law that regulates parking on unpaved lots in urban parts of the county. Violators could face fines starting at $50 and climbing to $250.

The county Air Quality Department has not issued any violations under the existing off-road vehicle law, enacted in 2008.

Law enforcement agencies have been tapped to warn off-roaders to not drive during high pollution days.

Likewise, in the last two years, the county has issued no citations under its leaf-blower or fireplace ordinances, but has warned 16 and 27 violators, respectively, said Ward.

County inspectors rely on calls from the public to enforce bans on wood-burning, leaf-blowing and off-road driving, Ward said.

Ward encourages the public to visit www.cleanairmakemore.com to check on current health advisories and anti-pollution restrictions or report violations.

MESA, AZ 85202

Mountain Study Team
ADOT MD 126F
1655W Jackson St.
Phoenix, Az 85007

July 21,2013

Dear Study Team:

1 My big concern is the High way to nowhere 202 Extension will waste $2 billion, which could solve problems in the south east Valley of Phoenix.

2 Extending Rt. 60 over and west to 59th Ave. Light Rail to the San Tan Area via Fiesta mall and Alma School Road. where people who will pay for the system live.

And most important the start of RT I-11.

3 We will be left out if we get money for 202 and the try to get money for I –11 Tucson to Vegas. Other states will claim it is their turn after we get
What would be needed to satisfy the road builder. Rail is our future not more freeways. Just like Solar but we have people fighting to keek coal.

4 My enclosed items tell the truth about the proposed extenuation of 202 on or near Pecos Road. The editorials on the other hand has a lot of false information. The so call South Mountain Freeway will not help relieve traffic. The vote on Prop 400 was to help move people with mass transit. Those people did not keep their promise. the Indians do not want their land made like Rt. 101 for the benefit of the Los Vegas investors. Look at the shacks years later, Some investors have held options on the proposed area and for years. We have too many casinos already. They have damaged the Scottsdale economy. Now wreck Chandler with 202.

5 The Light Rail did not progress for years because Maricopa Association of Governments is not moving traffic but rather edges of Cities. What MAG and East Valley movers and shakers want and what we need are set out in their Minutes of meetings. The Metropolitan Business Plan will create more blighted areas like those referred to by the citizens in the makeover question of the Feb .16th Mesa Republic article. South Phoenix is the largest area in need of a makeover. Investors gladly accept Government tax credits but develop out side the cities. Areas north and west were to have light Rail by this time. Instead money was held back for projects they call

6 Progress but leaves out our main industry Tourism. Road and home building can not take its place for long. We have the sun but pollution hides it and people do not come back when its hard to breath and every thing is twenty miles away, Not organized like Denver for example or San Degas.

Code	Issue	Response
1	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
3	**Alternatives**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.
4	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). By 2035, east- and westbound motorists on Interstate 10 between State Route 101L (Agua Fria Freeway) and State Route 202L (Santan Freeway) are expected to experience stop-and-go driving for over 3 hours every day. This is for a distance of nearly 30 miles. A new freeway in the Study Area would distribute commuters over an additional freeway facility. As a result, the duration of stop-and-go traffic on the region's freeways would be reduced.
5	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Air Quality**

SEEK FUNDS FOR BETTER FUTURE

oads and rail. These tra-
ditional means of tra-
versing vast expanses of
d sound almost old-fash-
ed in an era when informa-
n gallops across the ether.
But there's nothing retro
ut a new interstate highway
ween Phoenix and Las Ve-
, or a proposed passenger-
l line from Tucson to Phoe-
.

Both of these ideas move
zona beyond old-fashioned
ions that can hold back
ngress.

One offers an alternative to
traditional reliance on cars
personal transportation,
l the other facilitates oppor-
ities for international trade
t have been sublimated to
ncerns about illegal activity
at the border.

Consider the passenger-rail line between the state's two largest metropolitan areas.

The drive on Interstate 10 from Tucson to Phoenix takes an hour and a half to two hours. Increased traffic from population growth will slow things down. Arizona Department of Transportation planners say the trip will take five-and-a-half hours by midcentury even if the entire stretch of road is widened to three lanes in each direction.

That represents lost time and productivity, as well as increased air pollution. It also projects an image of a backward state that failed Planning 101.

These are not the kind of messages Arizona should send to those looking to invest or move here.

As part of a three-year, $6.3 million study, ADOT narrowed the possible rail routes to three, with a final recommendation expected by the end of the year. All three have stations at international airports in Phoenix and Tucson, and all connect with transit in the urban areas.

No funding has been identified. The options include public, private or a combination of sources.

Money is also a missing piece on another important proposed infrastructure improvement: Interstate 11 from Phoenix to Las Vegas.

This new highway is an important part of Arizona's awakening to a new age of increased international trade and commerce.

A north-south route connecting Mexico and Canada through Arizona has long been discussed. This Canamex corridor has great potential to help the state take advantage of our proximity to Mexico, Arizona's top trading partner and a nation with a growing middle class.

In addition to facilitating trade, a report from transportation officials in Arizona and Nevada says an I-11 between the growing metro areas of Phoenix and Las Vegas would keep up with anticipated growth and enhance economic development.

It also sets up what could be a very lucrative "Southwest Triangle" with Los Angeles.

A north-south interstate alternative between California and Texas would bring a variety of economic opportunities to Arizona.

Planning is still preliminary, but a key component — the new Hoover Dam bypass bridge — is in place. What's more, Congress has designated a general route through Arizona as I-11. This is a critical first step.

Arizona's delegation needs to actively pursue funding for both of these projects. They are not pork or earmarks. They are investments. Both prepare Arizona to embrace a more prosperous future.

e vital for commerce

7-2-13

Sean Holstege
Republic | azcentral.com

A major interstate highway
st be built between Phoenix
d Las Vegas to keep up with
e region's rapid population
owth and to facilitate global
trade, says a report released jointly Friday by transportation officials in Arizona and Nevada.

The 105-page report offered justification for constructing an Interstate 11, a multibillion dollar project to improve the link between the two metropolitan areas.

The report sets the stage for preliminary route, design and environmental studies ahead of any decision to build I-11, the nation's most ambitious interstate project in a generation.

As envisioned, the project would convert U.S. 93 into a four-lane divided highway from Las Vegas to Wickenburg, taking advantage of the new Hoover Dam Bypass bridge. From Wickenburg, planners envision the freeway eventually heading south into area west of the Hassayampa River and connecting with Interstate 10, about 40 miles from downtown Phoenix. From there, it would loop southwest, through Rainbow Valley, before rejoining I-10 near Casa

See INTERSTATE 11, Page B3

This is long overdue. Rail will move traffic efficiently and at night freight. There will be no need for I-10 expansion. ADOT and investors want it and must people do not understand our concern. The whole idea of fighting is the attitude here. Infill good for urban sprawl, from 2012 build Rail over I-10 to solve the gridlock at rush hours.

Code	Issue	Response
7	**Secondary and Cumulative**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
8	**Alternatives**	The alternative proposed by the commenter is similar to the U.S. Route 60 Extension and Interstate 10 Spur alternatives evaluated for the proposed project. The reasons these alternatives were eliminated from further study are presented on page 3-12 of the Final Environmental Impact Statement.

THE AIR WE BREATHE

A POLITICAL TUG-OF-WAR OVER CLEAN AIR

IT'S REGULATION FEARS VS. HEALTH CONCERNS

By Shaun McKinnon
The Republic | azcentral.com

In February 1998, the Governor's Air Quality Strategies Task Force delivered to Gov. Jane Dee Hull a thick report recommending actions that could reduce levels of ozone, carbon monoxide and dust particulates in metropolitan Phoenix.

Some of the recommendations were enacted, such as requiring cleaner-burning gasoline during the winter months and cleaner-burning fireplaces in new homes. Other ideas were rejected, such as a pollution tax to pay for dust reduction or limits on gas-powered landscaping equipment.

Nearly 14 years later, the task-force report remains the last attempt to address air quality in Arizona with comprehensive, forward-looking proposals.

Since then, state and local agencies have acted almost exclusively

Freeway

Continued from Page B1

tribe's requirements to qualify the petition, tribal elections officials said.

For tribe members who wanted no freeway, it was a victory, but it may be short-lived.

The action comes as the Arizona Department of Transportation nears a July 24 deadline for public comment on its environmental study on the $2 billion, 22-mile extension of Loop 202. That study says that the Laveen-to-Chandler freeway is vital to regional mobility and that the only option is to cut through South Mountain Park.

"I'm glad it's over and done with, because now, we can work on protecting the mountain," Lori Riddle, an activist who wants no freeway, said after last week's decision.

ADOT expects to finish the environmental work and seek federal approval to build the freeway next year.

The study recommends building the freeway, including cutting a 280-foot notch in the mountain, and favors among three options a 59th Avenue alignment in the West Valley.

Activists with Protecting Arizona's Resources and Children, a group established to oppose the South Mountain Freeway, have gathered enough money to hire experts to challenge ADOT's study. They've said they will sue to stop the freeway. But those who favored moving it think such hopes are deluded.

"I don't think anybody can stop that freeway going through the mountain," petition backer Joseph Perez said.

"To me, this is an historic travesty, not because of the freeway but because tribal government refuses to listen to individual people who want change."

Nathaniel Percharo, a tribal landowner and petition organizer, called the outcome a "done deal" and a "heartbreak."

"It makes you a little discouraged. If you talk to 1,500 people, and they want a recount, that's something to look at," he said, referring to the number of tribe members who signed petitions calling for a second vote in a year on the freeway.

In 2012, a plurality of tribal voters favored no freeway over the planned Pecos Road alignment or landowners' goal of a route roughly half a mile to the south.

Tribal spokeswoman Zuzette Kisto issued a statement, saying: "The community will continue to work with all the interested parties, both within the tribe and outside the tribe, to ensure that the Loop 202 process is brought to the best possible conclusion for the community."

The tribe has not taken a formal position on the options in the environmental impact statement. In statements or in meetings leading up to the decision, tribal government officials did not document the basis for rejecting the signatures.

The tribe launched an investigation after reports that petition gatherers suggested the state would pay each tribe member $2,000 if the freeway was built. Some tribal landholders were paid $50 for entering an agreement with Perez's development firm, Pangea Development Co. LLC.

Tribal police were asked to determine whether the electioneering was clean.

They issued a report, but the findings were never released. Last week, tribal-election staff said that 20 people said they didn't remember signing the papers.

An additional 173 were deemed fraudulent, without evidence or explanation.

Perez and others said the elections office gave supporters two voter lists, one 1,000 names longer than the other, and in February determined they had enough valid signatures. Pangea and the landowners asked the Bureau of Indian Affairs to intercede, but the BIA wrote back that the issue was an internal matter between the tribe and its members.

No-build activists, such as Riddle, say the tribal government is upholding tribe members' views by holding fast on the 2012 referendum.

Last week's drama on the reservation sent ripples throughout the region.

For Laveen-area residents eager to get heavy truck traffic off local streets, the no-vote ruling ends decades of uncertainty.

In Ahwatukee Foothills, the reaction was more mixed.

"This is not a positive thing for the southern part of my district. It just isn't," said Phoenix Councilman Sal DiCiccio, who has worked to move the freeway onto tribal land.

January 2,,2012
MORE COUNTY BAIT AND SWITCH
The Promise of Beneficial Transportation
Pending Threat of Continued Urban Sprawl

Dear Mr. Hogan:

I was pleased to have attended the gathering to honor you for the years of dealing with extremist political groups, Others share your frustrations. We have community leaders that value money more than public health and corruption is ignored. Transportation far exceeds the County frauds connected with the Criminal Tower or the Fiesta Bowl both being white washed. The Court Tower will continue to control the Justice system for the next fifty years. Avoiding intermediate City Civil Courts that distribute traffic and a chance of justice locally.

The County had purchased the Baseline Justice Center property for eleven million dollars so the construction downtown was for the State Bar Association to preserve the 1950 court system and its mandatory Rent a Judge ADR program that makes small civil cases into big ones. Just another County Bait and Switch of Tax funds like proposition 400 is turning out to be.

I find it hard to believe that the past legislature may have given us a key to a better, healthier life style with the passage of SB1525. City infill, public transport and walking to work or school, to replace blight from more Urban Sprawl. Add to that, the Republic printed Steven Betts My Turn article," Inward development," December 10. That gives hope of user friendly cities. The "20-Year Transit Plan Progresses." article of 23rd Audit General summary fails to reveal Prop.400 has been hijacked by,"investors" and Metropolitan Business Plan partners. The lack of documentation (accountability) and that light Rail ridership has exceeded expectation is true.

The Republic and ADOT still promote the 1960 growth agenda as does the city of Mesa. Normal residential evolution failed to develop because Historic preservation and NIMBYs dominated planning. Families were forced to the outskirts where developers profited. The article by Mr. Betts the local Chair of Urban Land Institute is enclosed. Most of that information was included in my letter to Senator Barbara Boxer, Federal Transportation Chairperson sent after Governor Brewer rejected the Western auto emissions standards. Copies enclosed, I will not repeat the issues. The toll from Pollution increases, includes me with COPD and my daughter, disabled for five years. Many middle aged people on twenty four hour oxygen. The American Lung Arizona branch has documented the work/medical cost.

The Maricopa County Transportation program, Proposition 400 if off track, aided by EPA in more ways than one. Prop.400 emphasized balance transportation methods, Freeways we had but Public Transit near 5%, The recession has been used as an excuse to stop Light Rail going north on 19th Avenue to Dunlap by 2012,Metro Center promised for 2017 and 79th Avenue, 2119. No effort to consider the true population growth south of the original route projected in 2003. The East Valley growth was ignored in 2007. Millions from Federal Stimulus, Transportation and various earmarks followed in 08 and more than offset the local Sales Tax Revenue shortfall. That was not used to further plans to move people or to reduce pollution. Just the opposite, car pool no longer stressed.

There was money for Sound Walls, HOV lanes, art. Loop 303 for sprawl, Rebuilding the city of Mesa, studies and more studies, Something like the shortest distance to the greatest population compromised for Church or Temple locations, to please NIMBY groups. Rebuild Mesa where ten to twelve million dollars is being spent to increase the distance people will travel with road closings around the Fiesta Mall. Thirty five millions to purchase white elephants. Eventually increase the distance for Light Rail if it is built eight to ten miles to the growth areas. Gilbert and Queen Creek, Chandler, ASU and Gateway Airport.

Tax discrimination has kept multi million dollar vacant properties downtown for decades. That affects adjoining properties. Phoenix did not benefit from the recent billion dollar public construction . Just the opposite, it causes the public to avoid downtown. Retail and entertainment adds staggered hours, distributes traffic loads as it did years ago.

ADOT is being pressured to continue new Freeway lanes though downtown Phoenix as they do now, except for the Loop 202 extension proposed in 1960. that will also preserve their midtown course. Greedy small town mentality that the highway go through the town center. Route 60 over Rt 10 to Avondale via a Baseline Rd. alignment would relieve congestion into town for less than what is proposed, end congestion. TPC studies do not benefit the public, the taxpayers who suffer delay. Metropolitan Business Plan partners and the investors are planing more urban sprawl., Nationally

ommuter. Such Infill would solve our problems. Four

Mr. Robert Forrest
Metro Light Rail, Suite 1300
101 North 1st Ave.
Phoenix, Az 85003

2238 S Cottonwood St
Mesa, Az. 85202

Dear Mr. Forrest:

TRANSIT PARTS CONSIDERED SEPARATELY
COUNTY TOTAL EPA SCORE, POOR, WHY?

May 27,May 26,count back to December19 before you can find a good air day in Maricopa County. Once known for its clean air, a respiratory cure center and laid back life style, is now a place compared to Los Angles. Urban sprawl. Traffic delays, smog-obscuring view.. The EPA and Federal Departments of Transportation, free of local influences are guilty of betraying their obligation to the residents. They give lip service to anti pollution measures but support federally funded projects that contribute to poor planing of a community, waste, traffic jams, accidents and increased pollution.

The Light Rail is badly needed where there are young families, working middle class and college students. Light Rail's goal to reduce traffic instead is being diverted to a retirement area. First stop Mesa Dr. along mostly abandoned Main Street to the Cemetery, large park across from the LDS Temple, Historic single family home districts. They want it, because it's almost free. All local funds are going to redevelop east of Mesa Drive that is where the Mormon Community of Lehi is being reborn.,

The future plan after 2016 is to extend to Gilbert Road a trailer park area on the north, mostly vacant six-month a year. Growth and traffic jams are miles to the South. Help would come to finance a connection between the two major airports, but to go east to Power Rd. then south, would add nine miles and at least twenty minutes to the trip and maybe twenty years before completion.

The East Valley at the last census has grown to over a million people. Mainly in the Gilbert, San Tan, Queen Creek, Chandler areas. Only a small percentage reside north of Route 60. Mesa Main Street died when Route 60 moved south and residents resisted change. Mesa has ten thousand homes empty or in foreclosure. The ADOT Citizens Overview Committee and MAG Chairman, the Mesa Mayor, are both strong Mormon leaders ignore the facts. And public interest. Suggest people can drive five to ten miles to Light Rail. EPA and Metro have a responsibility to get traffic off the road on to rail, but for five years only Mesa Central Main was considered.

The Maricopa Association of Governments are controlled by Developers, it encourages only Urban Sprawl, not infill and we have thousands of empty newer buildings, they and people are not a developers concern, only buying BLM land, building and making a profit. ADOT is planning roads for the developers into 2024. Travel time, empty buildings pollution all increase, as do no-burn days. The community already so spread out the two car families have grown to three or four with teen agers. Excessive travel demands, costs and blight are not a concern of County Planners.

Light Rail should go south from Sycamore to the Fiesta Mall area with its Hospital and College campuses, dozens of empty buildings and locations for apartments. Actual, not just potential riders. Then through Gilbert southeast ending near Mesa Gateway Airport and San Tan Village. ADOT's plan a twenty four lane road west of Tempe that could become a Toll Road. More about that in the attached addition to go with the Exhibits and articles.

Very little is done to get express buses between cities except for the West Valley to Downtown Phoenix and that did provide results. There is very little effort to get the single driver of the road. Proper placement of Light Rail and extending Rt. 60 just does not fit the powers to be plan for this large county that is run like a hick town by people who remember it as it was, do not know how it could be. It is clear to an impartial observer that there is not sufficient passenger prospects for Light Rail at Central Mesa and there is not enough room for proper traffic movement in Central Mesa, but then drivers will avoid going there, the public and private investment wrote it off when Freeways developed south then north. Its common the greedy take from the needy around here.

Sincerely

Richard T. Tracy, Sr.

CENSUS DATA

Suburban population explodes in A

By Howard Fischer
CAPITOL MEDIA SERVICES

The suburbs are where the action — and the growth — is.

New figures Thursday from the U.S. Census Bureau show that the areas just outside the state's major cities grew far faster than the long-established communities they surround. In fact, if the trend continues, they could overwhelm them.

Consider the case of Prescott Valley. The area was not even a city until 1978.

As of last April 1, when the government did its official decennial count, there are 38,822 people living there, 60 percent more than at the time of the 2000 census.

By contrast, Prescott, one of Arizona's first cities, exceeds its rapidly growing suburb now by barely more than 1,000.

In the southern part of the state, Sahuarita, incorporated in 1994, has ballooned in the last decade by a factor of close to six, to 25,259.

And Tucson? It managed less than a 7 percent growth in the entire decade, with its official population now at 520,116.

The pattern also shows that the farther out you go from the central cities, the faster the growth.

In the East Valley area of Maricopa County, Chandler, for example, grew by about a third. Gilbert shot up by 83 percent. And Queen Creek ballooned from 4,400 in 2000 to more than 26,000 now.

That is not surprising as there is more available land.

But there may be limits in how far people whose jobs still are likely in the major cities are willing to drive: Florence, further down the road from those East Valley cities, managed to grow by only 47 percent during that same period.

Census numbers released last December said there were 6,392,017 people living in Arizona last April 1. That does not include another 20,683 people who are considered Arizona residents but living overseas.

Figures show the farther you are from cities the faster the growth

That final statewide tally also showed that the annual estimates done by the federal government overstated the population increase.

The figures released Thursday provide the first look not only at where and how Arizona grew but also the change in the state's overall demographics.

Arizona is nowhere close to becoming a "majority minority" state. Hispanics still make up less than 30 percent of the population.But the Census Bureau reports that the growth in the number of those who identify themselves as Hispanic is close to three times that of other groups.

Looking at the population by race, the figures show that more Arizonans are refusing to put themselves into a single category.

While the percentage who say they are of two or more races is still small — just 3.4 percent — that is up by 49 percent from the same time a decade earlier.

A total of 73 percent of Arizonans list themselves as being white alone. Another 4.6 percent said they are American Indian, 4.1 percent are blacks, 2.8 percent Asians — and 11.9 percent who said on their census forms they were some other race.

Mesa, Chandler doing work necessary to land jobs

3-23-11

Arizona lost a higher percentage of jobs than most states during the recession. But the Southeast Valley is turning that around.

Major job-creation announcements have been made in recent weeks, including Intel's $5 billion plant in Chandler that will employ 1,000 and First Solar's $300 million factory in Mesa that will employ 600.

These are quality jobs in growing industries, the kind that create spinoff work for local suppliers and spread economic benefits across the Southeast Valley.

First Solar ...

acres with an option for 100 more on the former General Motors Desert Proving Ground. Its location — at Elliot and Signal Butte roads, northwest of Phoenix-Mesa Gateway Airport — is significant. The factory could serve as a catalyst for similar development in an area that is projected to become one of the state's largest employment centers.

First Solar could one day employ 4,800 people on the site, making it slightly larger than Boeing's Mesa campus and the city's largest private employer.

Future phases will be ... size. But the solar industry is rapidly expanding in the Southwest, and unlike other factories in the region, the Mesa plant is not simply assembling components that were manufactured overseas.

It will have the capability to turn a raw piece of glass into a finished product in 2½ hours, a state-of-the-art process that will likely involve significant research and development. That should boost the demand for highly skilled engineers and create additional opportunities to partner with researchers at ... have gone anywhere to build its plant. Competition from New Mexico and Texas was particularly fierce.

Yet, unlike several years ago, when Southeast Valley cities gave away millions of dollars to encourage retail development, Mesa snagged the plant without offering tax breaks or other traditional incentives.

It didn't need them. Company officials said they chose the city because of its location, its shovel-ready site and its willingness to expedite the construction pro- ... er-chip manufacturing lines.

That doesn't come by accident.

Chandler and Mesa spent years planning for these uses, conducting engineering studies, granting land entitlements and setting cash aside to widen roads and extend water and sewer lines. They were ready to strike when opportunity came their way.

It's been said many times on these pages that cities should use this economic slowdown to prepare for when ...

Mr. Richard T. Tracy, Sr.
2238 S. Cottonwood
Mesa, AZ 85202

Dear Mr. Tracy:

Thank you for your inquiry on the LINK bus route. According to your recent correspondence, I have provided the information that you are seeking. The Mesa Main Street route travels between Superstition Springs Transit Center and the Sycamore Station on Main Street to meet the light rail service.

"Cost of operation including equipment purchase for the first year of operation of the double buses for the Main Street Route. I would also like to receive the cost of operation and riders for the period of August 2010 and January 2011."

Equipment purchase: Each bus costs $756,305 for a total of 10 buses and will operate for an average of 10 years each.

December 28, 2008 - June 30, 2009: 187,291 miles x $5.25* per mile = $983,277
July 1, 2009 – June 30, 2010: 362,187 miles x $5.11* per mile = $1,850,775
August 2010 - January 2011: 152,293 miles x $5.30* per mile = $807,153
*These figures are based on fiscal years as that is when rate costs change.

Ridership 2010	Average Daily Passengers
August	1,238
September	1,174
October	1,127
November	1,315
December	1,218
January 2011	1,361

We hope that you find this information helpful.

Sincerely,
Susan A. Tierney

FIGURE 1: REGIONAL TRANSPORTATION PLAN TRANSIT CORRIDORS

Mesa wrangles with how to pay for light rail

1.1-mile segment's cost ranges from $20M to $40M

BY JASON EMERSON
TRIBUNE

Pressured to move along with plans to build about a mile of light-rail line on the city's western border, Mesa officials have yet to figure out how to pay for it.

The project moved forward last week when Valley leaders on the Regional Public Transportation Authority voted 6-1 to begin looking for an engineering firm to build the system. Mesa Mayor Keno Hawker cast the dissenting vote.

While Hawker, who represents Mesa on the authority, favors building a 1.1-mile segment from the Tempe border to the East Valley Institute of Technology at Longmore and Main Street, said he wants his full council to vote on it, he wants to know how much it will cost and he wants to know who will run the rail system.

"I would like to see some of those (questions) answered," Hawker said Monday. "And I'm not going to move forward on my vote until I'm sure the council is supportive," he said.

The City Council will discuss the light-rail project at 7:30 a.m. Thursday in the council chambers, 57 E. First St. A formal vote is expected sometime during the next two months, said City Manager Mike Hutchinson.

Plans call for 20.3 miles of rail to run from 19th Avenue and Bethany Home Road in Phoenix through downtown Tempe, ending about a mile into Mesa. Total cost is estimated at about $1 billion.

Some officials worry that if Mesa backs out of the project, it would wreak havoc with the schedule.

"It would probably cause a delay," said Jack Tevlin, Phoenix's deputy city manager.

Tevlin points to the project's lengthy environmental study, which was done based on a 20.3-mile system. If the track is shortened because Mesa backs out, a new study might have to be done, he said.

Tevlin met with each Mesa City Council member in late March to extol the merits of light rail.

"Phoenix realizes that without us, they'll have to redesign the project," said Mesa City Councilman Bill Jaffa.

Others are concerned that if Mesa backs out, Tempe may shorten its segment. Instead of extending the track to Mesa's border, which currently is planned, Tempe may cut costs and stop the rail at McClintock Road or Mill Avenue, officials said. Tempe Mayor Neil Giuliano could not be reached for comment.

'I would like to see some of those (questions) answered. And I'm not going to move forward on my vote until I'm sure the council is supportive.'
KENO HAWKER
Mesa mayor

Mesa is being asked to commit up to $40 million to build its segment at a time when the city is facing a $33 million revenue shortage for fiscal year 2002-03.

In the past, Hawker has estimated the system would cost Mesa $40 million, but Monday he revised his estimate to $30 million. The new number is based on the information that Mesa's segment will be 1.1 miles instead of 1.5 miles, Hawker said. Wulf Grote, the project director, has said Mesa's share will be about $20 million.

Some federal money might be available to reduce Mesa's cost, Tevlin said. The federal government is expected to pay about half the cost of building the system.

Cold, dry weather contributing to bad air quality

DIRTY AIR
Continued from B1

themselves outdoors. The ADEQ says the air could get bad enough to make Saturday a high-pollution advisory day.

The advisory, and predictions about more to come, are based on air-monitoring data and weather forecasts.

This is a La Niña year, meaning equatorial waters in the eastern Pacific Ocean are colder than usual.

That leads to a dry, cool winter in the western United States — the exact conditions which trap winter-dust pollution in the Phoenix area.

"We anticipate a dry, stagnant weather season, and expect to see a high number of high-pollution advisories. There is a potential for a record year," county Air Quality Department spokeswoman Holly Ward said.

When winters are warm and wet, rain and wind washes away the brown cloud.

But when high-pressure ridges settle in, air is trapped. In summer, an air bubble as high as 10,000 feet collects ozone. But in the winter, cooler air drops the bubble below 5,000 feet.

"It's like a lid on top, the air doesn't mix," said Paul Iniguez, a meteorologist with the National Weather Service in Phoenix.

"Long term, we are trending toward a lot more high-pressure ridges holding over the Valley, trapping the high pollution in," said ADEQ spokesman Mark Shaffer.

The period between Christmas and New Year's Day is expected to be the worst of it, Shaffer said.

That's because the most severe pollution this week has come from fine particles, called PM-2.5 because they are smaller than 2½ micrometers in diameter. Smoke is a key contributor and with many people home for vacation, more home fires will be burning.

But the county faces another longer-term challenge from coarse, PM-10 dust, which is as large as 10 micrometers, or one-seventh the width of a human hair.

This fall, the U.S. Environmental Protection Agency told local officials that regional plans to reduce PM-10 by 5 percent were inadequate and would be rejected next month.

That starts a lengthy process that jeopardizes some federal-transportation funding, and ultimately could result in all such funds being withheld from local projects.

Next month, the county is set to clamp down on one source of the 73,000 tons of coarse dust that blows through the Valley: off-road vehicles.

Off-road vehicle fans could face stiff fines next year if a proposed county ordinance takes effect to limit driving in certain areas.

On Wednesday, the Maricopa County Board of Supervisors set for Jan. 12 a public hearing to change existing law.

The county bans all off-road driving on unmarked trails in unincorporated areas, but the new rules impose increasing fines, rather than cite first-time violators with a misdemeanor. Fines would start at $100 and climb to $250.

The proposed law says: "Vehicles in operation on either unpaved public or private properties in the unincorporated areas of Maricopa County shall remain on roads or highways."

Off-road enthusiasts can drive on unpaved trails only when they have written permission from a private landowner, or on public lands where trails are clearly marked by signs or on official websites.

Private-property owners are allowed to drive their off-road vehicles on their properties, but only if they limit the dust they kick up, apply for a dust permit or otherwise comply with other county dust-pollution laws.

The county also plans to tweak a separate law that regulates parking on unpaved lots in urban parts of the county. Violators could face fines starting at $50 and climbing to $250.

The county Air Quality Department has not issued any violations under the existing off-road vehicle law, enacted in 2008.

Law enforcement agencies have been tapped to warn off-roaders to not drive during high pollution days.

Likewise, in the last two years, the county has issued no citations under its leaf-blower or fireplace ordinances, but has warned 16 and 27 violators, respectively, said Ward.

County inspectors rely on calls from the public to enforce bans on wood-burning, leaf-blowing and off-road driving, Ward said.

Ward encourages the public to visit www.cleanairmakemore.com to check on current health advisories and anti-pollution restrictions or report violations.

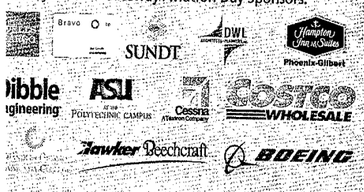
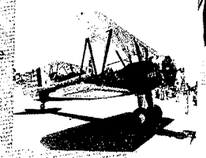
Gateway Aviation Day Sets Attendance Record

An estimated 10,000 people attended Gateway Aviation Day, presented by Wells Fargo Bank, on Saturday, March 12 to see aircraft and meet with Airport tenants and personnel. Previously known as the Airport Open House, the event was canceled the past two years due to budgetary constraints. However, thanks to corporate sponsors, the event returned and plans are now underway to host the event next year on Saturday, March 10, 2012.

"We had a good showing of aircraft on display," said Patrick Oakley, community relations coordinator and event planner. "We're grateful for the support of the U.S. Military and local aircraft owners for sharing their aircraft and love of aviation with the community. I hope to see everyone out at Gateway again next year."

Thank you 2011 Gateway Aviation Day Sponsors:





Gateway Airport Brings $685 Million to Local Economy

The Phoenix-Mesa Gateway Airport helped generate $685 million in economic benefits last year, and supports more than 4,000 jobs in the region. That's according to a new study from the W. P. Carey School of Business at Arizona State University, which looks at how the airport contributes to the local economy.

The study examined the direct spending from both on-airport activity and air visitors' activity off the Airport for fiscal year 2010. That summed up to $378.5 million. When added together with the successive rounds of re-spending that money, the total came out to $685 million for the fiscal year.

"A well-functioning airport serves as a portal that welcomes commerce and visitors into the region," says research Professor Lee McPheters, Ph.D., who headed up the study on behalf of the L. William Seidman Research Institute at the W. P. Carey School of Business. "Compared to just two years ago, visitor spending from travelers arriving at the Phoenix-Mesa Gateway Airport is up by more than 80 percent. These air visitors alone spent more than $68 million last year, and that created more than 1,000 local jobs."

In his analysis, McPheters describes how the airport truly benefits not only the rapidly growing East Valley area, but also Maricopa and Pinal counties overall. Here are some specific details:

- Forty-four employers and 1,145 jobs are at the airport.
- About 212,000 visitors arrived at the airport in fiscal year 2010.
- Air visitors spent $68.9 million off the airport in the fiscal year, supporting 1,024 jobs.
- Capital improvement and construction projects at the airport were valued at $36.4 million and created employment for 259 workers in fiscal year 2010.

The numbers are especially impressive when you consider all of this happened during one of the worst times recorded in Arizona's economic history.

OUR VIEW

Plenty of ideas for Fiesta District but no action

Mesa's Fiesta District needs help. This is nothing new.

The area near Alma School Road and Southern Avenue used to be the Southeast Valley's shopping epicenter. Now, its shopping centers are mostly empty and fighting disrepair.

Chandler Mayor Jay Tibshraeny, who owns an office nearby, recently tweeted that the Fiesta District "needs some attention from the city."

That's a recurring theme on the iMesa website, where residents can suggest and vote on ideas to improve the city. "Fix the corner of Southern and Alma School; it's the anchor of urban blight in the city," is currently the fourth-most-popular idea.

Both have a point. Given how interconnected our neighborhoods and economies are, blight in such a prime, central location is bad news for Mesa and the Southeast Valley.

So why is the city stinning its wheels?

It's not for a lack of

The Mesa Fiesta shopping center is empty but well-kept, a re

Where did that $500,000 go. The following week the 3:1 election loser, majority of committee Transportation Boss was 1.55 mile short

2nd light-rail extension studied

By Gary Nelson
The Republic | azcentral.com

Long before tracks are laid for Mesa's next leg of light rail, the city is doing early spade work on an additional two miles of the line.

The first light-rail extension, 3.1 miles from Sycamore Street to about Mesa Drive, is scheduled to open in 2016, provided federal and county money is available as promised.

It is seen as a likely catalyst for redevelopment along Main Street, the western stretches of which are marked by numerous empty storefronts.

But Mesa has said for years that ending the line near Mesa Drive doesn't make sense, transportationwise. Pushing it to Gilbert Road, planners say, would greatly increase ridership by giving far more people easy access to the trains.

So far, that idea has been nothing but talk.

On Monday night, however, the City Council is likely to approve spending $500,000 to do early planning for the extra two miles. Mesa will contract the study with Valley Metro Rail Inc., which in turn will hire HDR Inc. to conduct the study.

HDR did much of the planning for the Mesa Drive extension, which is now being designed.

Mike James, Mesa's transportation director, said the study will assess how much the extra tracks will cost, funding sources and issues for future environmental assessments.

In a report to the council, James also said the study "involves identifying station locations, street configuration, significant utility relocations" and necessary support facilities.

Public input would be part of the process.

Money for the study became available, James said, through one-time savings in this year's transportation budget.

The Maricopa Association of Governments has approved the Gilbert Road extension as a future project, but there is no commitment for funding from the Proposition 400 county street and rail sales tax that county voters approved in 2004.

Federal funding is equally uncertain because of Capitol Hill budget battles.

Even Mesa leaders know the light rail will dead end at Mesa Drive. But there will be an old Steam Engine there, No Rest Room along the whole empty line.

Fiesta Mall whose people will go has been written off by Major Smith, none deceiving in his answers to our protest. Even in the Rosie Bottom.

ADOT right to move ahead on freeway

News from the Gila River Indian Community regarding the South Mountain Freeway is that there is no news. The Tribal Council has yet to vote on whether the freeway can be built on the reservation.

Fortunately, the freeway's reality does not hinge on that decision alone.

The Arizona Department of Transportation is studying the environmental impact of the Pecos route in Ahwatukee Foothills, a plan that has been on the books for decades. The draft should be complete by the end of the year and then

South Mountain Freeway would ease traffic on I-10. It would connect Chandler and Laveen, and complete the Valley's Loop 202. Commuters have been looking forward to the convenience of using the freeway to bypass congested downtown Phoenix.

Tribal leaders' willingness to study the freeway was a welcome first step to moving it from Pecos to spare a church, homes and parts of the South Mountain Preserve. As undesirable as that would be, an Ahwatukee route is still a possibil-

Ties to land hound DiCiccio

Critics say councilman's advocacy on freeway extension represents a conflict

By Sean Holstege and Scott Wong
THE ARIZONA REPUBLIC

The proposed South Mountain Freeway has defined Sal DiCiccio's return to politics.

A year ago, the Phoenix real-estate broker filled a vacancy on the City Council, reclaiming the seat he held a decade earlier. Ever since, he's championed moving the planned Loop 202 extension south from Ahwatukee Foothills to the Gila River Reservation.

To supporters, DiCiccio is working to find the best outcome for his Phoenix constituents. Opponents say his development deals along the freeway blur personal and public matters and represent a conflict of interest.

The Arizona Republic took a closer look at DiCiccio's possible stake in the planned 22-mile freeway, examining city financial forms and court records, plus letters, e-mails and other documents obtained under a public-records request. The picture that emerged shows that DiCiccio:

» Benefited financially from a business partner's purchase of land that was resold to the state for the proposed South Mountain Freeway. The purchase, which *The Republic* uncovered in records, allowed the business

MAG Celebrates Native American Participation, Contributions to Region

MAG's membership includes three Native American Indian Communities: the Fort McDowell Yavapai Nation, the Salt River Pima-Maricopa Indian Community, and the Gila River Indian Community. The leaders of these tribal nations serve on the MAG Regional Council and bring the voices of their communities to the regional table. To celebrate their continued contributions to our region, MAG is presenting the second in a three-part series, this time focusing on the Salt River Pima-Maricopa Indian Community (SRPMIC).

SRPMIC President Diane Enos

Salt River Pima-Maricopa Indian Community

10005 E. Osborn Rd.
Scottsdale, AZ 85256
480-362-7400
www.srpmic-nsn.gov

Two Tribes, Two Cultures, One Home

The history of our people, the Pima and Maricopa, tells a story richly woven within legend and fact. Our traditions tell us that both tribes have always lived in the Southwest, settling in the Phoenix Valley of Arizona. Our presence here today is proof of the unbroken continuum that began with the Creator, was passed down to our ancestors, and is now held by us.

With two distinct backgrounds and cultures, the Salt River Pima-Maricopa Indian Community comprises two Native American tribes: the Pima, "Akimel O'odham" (River People); and the Maricopa, "Xalychidom Piipaash" (People Who Live Toward the Water). Surrounded by the cities of Scottsdale, Tempe, Mesa and Fountain Hills, the Salt River Pima-Maricopa Indian Community is a rural oasis encircled by urban growth.

Growth is also abundant in our Community: our population now has reached 9,000 enrolled members, with half under the age of 25. Our diverse economic base is also generating many business opportunities for our members and for the region, with exciting projects taking shape in our Community.

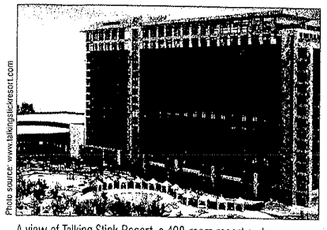

Photo source: www.talkingstickresort.com

A view of Talking Stick Resort, a 498-room resort and spa, scheduled to open in spring 2010.

Two Tribes: New Opportunities

Over the past century, our Community has been enveloped by urban sprawl. With this sort of growth, we have seen remarkable changes, faced challenges and embraced opportunities for our people.

As farmers, our ancestors built elaborate canal irrigation systems in the Salt River Valley. Today, the Salt River Pima-Maricopa Indian Community has diversified holdings. Besides two successful gaming operations and a golf club, the Community operates a cement plant, a real estate development company and a telecommunications enterprise that has wired the Community with Internet service.

Our newest venture: Talking Stick Resort, a 498-room resort featuring luxurious accommodations, 100,000 square feet of meeting space, a state-of-the art spa and a cultural arts center. The resort will open in spring 2010 adjacent to our new Casino Arizona complex, featuring several upscale restaurants, entertainment lounges, a showroom and a wide variety of gaming options.

Our Community is also embarking on a new project: a $100 million spring training facility for the Arizona Diamondbacks and Colorado Rockies major league baseball teams. The 11,000-seat facility, scheduled to open in early 2011, will be the first professional sports facility ever built on Indian land.

Two Tribes: A Shared History

With this tremendous growth, we build for our future. But our Community is also dedicated to preserving our past.

The Pima consider their ancestors to be the "Huhugam," a people who created an advanced society in central Arizona from about A.D. 300 to A.D. 1200. The word "huhugam" translates as "those who have gone before." Archaeologists refer to the Huhugam as the Hohokam.

The ancestors of the Maricopa are the Patayan, who lived in what is now northwest Arizona. The Maricopa originated from the Parker/La Paz area as five separate groups of people. Over years

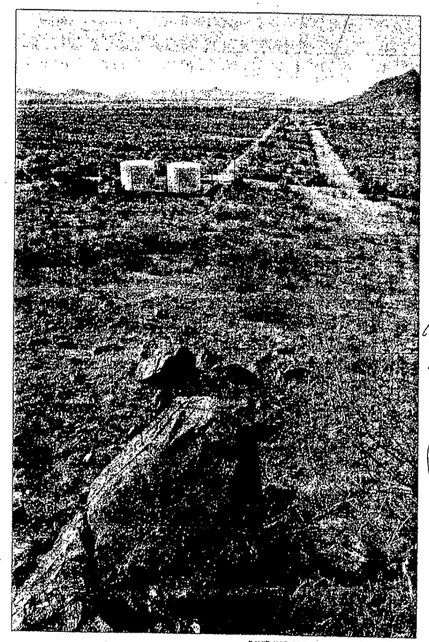
Loop 202 could find a new path

Tribe's offer may spare S. Mountain, Ahwatukee



DAVID KADLUBOWSKI/THE ARIZONA REPUBLIC

Current plans for a Loop 202 extension call for a 22-mile route that cuts through this land and slices through a ridge in South Mountain (top right). The Gila River Indian Community has agreed to talks on moving the proposed freeway onto tribal land instead.

By Sean Holstege, Scott Wong and Cathryn Creno
THE ARIZONA REPUBLIC

The controversial South Mountain Freeway could move onto tribal land if recent behind-the-scenes negotiations gather momentum.

The Gila River Indian Community, which long has opposed the Loop 202 extension through its land, has agreed to start what could be delicate talks toward reaching a pact to move the proposed freeway. That first step would involve the tribe asking the state for a formal proposal to build the freeway south of the current

South Mountain Freeway

In recent negotiations, the Gila River Indian Community said it is open to a route on its land.

Think Slip

Our stand: City Council should tell Donald Trump to move it or lose it

Three words from the City Council tonight could define the future of Phoenix:

"Donald, you're fired."

Barring legal delays and maneuverings, the council faces two basic choices at City Hall this evening: reaffirm its longstanding respect for the quality and vitality of our city's neighborhoods, or bow to New York developers by approving Donald Trump's proposed $200 million condominium/hotel project in the Camelback East corridor.

The choice is clear: The council should support homeowners and reject Trump's plan for a 150-foot high-rise on the site of the old Hard Rock Café.

In the face of neighborhood protest[s] project's height has been whittled fr[om] 190 feet to 150 feet. But even at 150 f[eet] condo/hotel is still about three times [the] lowable height in this area — 56 fe[et].

The revised condo/hotel at 26th S[treet] and Camelback Road also juts clo[se] neighbors to the south, a setback [that] amounts to a final indignity to re[si]

For all its trendy and upscale [ap]peal, Trump project is in the wrong lo[ca]tion.

A project of this height and d[en]sity belongs in downtown Phoenix, alo[ng] Central Avenue, or several blo[cks] west along Camelback, where there'd be no widespread neighborhood opposition.

In both of these alternatives, there would be easy access to Phoenix's planned light-rail line.

It's understandable why Trump, in partnership with the New York-based Bayrock Group, wants to capitalize on the site he gained control of in bankruptcy court.

The area around 24th Street and Camelback Road is Phoenix's fledgling answer to New York's Fifth Avenue, Beacon Hill in Boston and Chicago's Michigan Avenue.

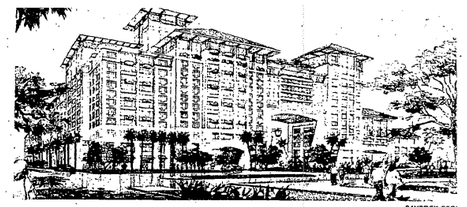
Many area homeowners, however, worry about living literally in the shadow of the Trump hotel and future high-rise buildings. They want to preserve their neighborhood's

Didn't the Arizona Republic and Coldwater Tram[s] and remaining mountain views.

[D]evelopers is nothing new [to] The Coyote Team in Bankruptcy may leave the area. Not unexpected since those controlling public opinion and governing [the] property use evolution with the religious theory rule location, location, location. There are so many that confuse the successful theory of [the] occupy the former Los Arcos mall site for the good of the same title. A caring person would have allowed the Hockey team to [re]locate at the Tempe location. They knew the Airport safety claim was false. Metropolitan Phoenix has been allowed to [re]main Councilman [a] major, costly taxpayer supported errors. You know what they have been and who has been responsible remember. The light [rail] show in the landing flight path, the Grand Prez race downtown, Patriot Square loss and emptied Civic Plaza to support the [Fi]esta Bowl. Suns basketball team owners. In Mesa, Bartley's Brake Shop stepped urban renewal. Central Phoenix has four hundred's significant ca[se]s and Camelback East Specific [a] thousand dollar, twelve hundred square feet sixty year old homes on a quarter or half-acre that should contain a fourplex at [the] least. That would provide the density needed in a BIG City. Poor plan more failures to come, only bigger, more expensive, spreading urban [de]cay in its wake. Repeating Los Angeles' failures. Proper symbol, not a raising Phoenix Bird, Rather an erupting volcano, spreading urban [de]cay in its wake.

With no opportunity to contest the proposed Light Rail extension east and west beyond that voted by taxpayers, [it] includes a residen[tial] Unaccountable politicians picked future lines with the least potential. Two main sheets in towns that refuse to enter the [Re]gional Twentieth Century. Mesa's Main Street area is Heritage, low-density. To the east are large trailer parks, retirees and [it] is poor public pol[icy] "Snowbirds" populate the area. It seems deserted six months out of the year. The growth and industry there all south. North [to] Lets try to get it right next time. Leave politics out of the Public Transit decision process. These Errors wasted billions [of] lies the Salt River and Indian reservation. Downtown Glendale would not change; urban sprawl is miles to the south and west. [a] subterranean [de]mand to the city's [es]sential to the city's [of] its Scottsdale Fastun[g] life.

How Phoenix even got to this p[oint]



BAYROCK GRO[UP]

IS ARIZONA DESERVING OF BEING CALLED THE WORST PLACE IN THE NATION TO LIVE? ARIZONA COURTS DELIBERATELY KEPT A "SYSTEM IN CRISIS" TO PROMOTE BUSINESS FRIENDLY ARBITRATION AND MEDIATION, AVOID PEERS JUDGEMENT

ARIZONA ONE OF THE FEW STATES TO IMPOSE MANDATORY ARBITRATION RULED OPPRESSIVE SINCE 1862. Conscription of attorneys regardless of legislative intent approved. Mandatory attorney fees even if successful highest sanction in the nation.Arizona again in the minority,junk science admissible, Daubert and Kumho Tire Co.fair standard only in Federal Court.

Photo Radar barred as scam in several states and cities after investigations. Speed Reasonable and Prudent can mean arbitrary standard. Location of red light photo radar altered when income drops. One second increase in yellow light reduces violations 50%, Company claims foul.

Open Court provision deleted in favor of mandatory secrecy and sealed records. Trend to distribute judges work load reversed by eliminating commissioners in a system which has judges doing clerical tasks, mandatory sentences places discretion in the prosecutor rather than impartial judge, Distortion and manipulation by some lawyers to maximize hourly fees ignored .

November 30,2001 the national, not local news reported that Arizona was rated as," ONE OF THE WORST PLACES TO LIVE IN THE COUNTRY." The list to the right is only part of the reason and does not include the lack of access to courts or reasonable legal fees. Business interests and the local media have worked to require almost all civil cases to be submitted to arbitration or mediation where the average citizen is not able to get fair treatment. To make it impossible to get justice they now want to keep lawyers and the law out of the Justice Court and make justice available only in Superior Court, down town Phoenix. Although one of the most expensive legal systems it is not functioning to benefit the public; they are not represented , money is all that matters lobbyist make the rules in the legislature and the courts.

In 1972 having practiced law in New York and Ohio and spending a year reviewing cases at the Supreme Court I pointed out that there were judges doing clerks jobs and no intermediate court to process most disputes quickly and economically. Since then the population has doubled, number of Superior Court judges,tripled. Arbitration and mediation and secret proceeding almost exclusively in Maricopa County rather than comply with the Constitution.

Washington based attorneys,Sellers and Malveaux, in the Green Tree vs Randolph case that recognized that an arbitration agreement that would impose large costs on a party opposed to it or who lacks power to bargain over terms may be unenforceable and/or unconstitutional. Denying following rights ordinarily available to citizens of other states:

The provisions for a jury trial when seeking legal relief;
The provision for a public forum in which to litigate a controversy;
The right to a public forum,thereby avoiding large expense to gain access to a forum.
The provision for a written record of litigation.
The right to have the proceedings reviewed on appeal
The right to discovery and to present relevant evidence;
The right to bind the forum to the legal precedent prevailing.

ARIZONA'S RANKINGS

(All statistics from articles in the Arizona Republic many ar the direct result of that papers leadership)

3rd Worst State to Raise A Child

CRIME

4th highest in overall crime,highest in auto theft,highest i deaths by gun.In 2000, received a grade of D by Handgu Control Inc. in annual survey on how well states protec children from violence.One of 20 states that does not strictl regulate jail standards. Due to low salaries, one of th highest turnover rates for correctional officers

HEALTH

2nd worst to provide jobs with health insurance. Childre without health coverage is one of highest in the nation 10t highest infant mortality rate.Tied with Nevada for highest i the nation for teen suicide and divorce.Among seven state to provide the least adequate supervision of insurance companies

7th highest in nursing home residents who suffer untreatec pain.Lowest in funding mental health.Below the natior average in spending to battle effects of drug, alcohol and cigarette abuse. Very poor oversight for day-care centers because of 2,500 licensed facilities, there are only 2E inspectors

EDUCATION

One of the lowest for per-pupil funding in public education,In an Arizona poll, voters gave schools a grade o C minus.On average, teacher salaries are $5,000 lower than national median.3rd lowest in school counselor-student ratios.One of seven states to try and remove evolution from school science

Tied with Nevada for the lowest rate of high school graduation in the nation.Highest truancy rate in nation.

3rd highest teen pregnancy.Tops in nation for availability of charter schools, ease of home schooling, access to voucher and level of payment for private school expenses

ECONOMICS

2nd highest disparity in family income between most affluent and poorest. 4th worst poverty rate. 13%of Arizona households in need of food assistance, compared to 10% nationally.2 million Arizona residents pay over half of monthly income for housing. Arizona Salaries among the lowest in the nation

ENVIRONMENT

3rd highest in toxic releases into the atmosphere.'F' for ozone, among worst places in nation for summertime pollutant.Four Arizona national parks are among the nations' most dangerous:

Organ Pipe Cactus, Saguaro, Grand Canyon and Lake Mead

AUTO INSURANCE - SAFETY

Arizona crash rate 12% higher than national average,fatality 33% higher, 30% uninsured,insurance pool to level costs lacking, rebates increases auto glass replacement costs,

POLITICAL CONTRIBUTIONS AND ELECTIONS

3rd lowest in contributions to Democratic candidates, frequent elections, contests rare, seldom have two viable candidates,15 to 30% voter turnout common in local elections.

ILLEGAL IMMIGRATION

July 2011

John Birch Society's new battle

Group's leader to discuss migrants' 'invasion' of U.S. during speech in Mesa

By Gary Nelson
THE ARIZONA REPUBLIC

After more than 50 years of battling communists, the John Birch Society is adding a second front to its ideological war: illegal immigration.

And it has allies among the "tea party" movement and others who believe illegal immigration is just one part of a vast conspiracy to destroy the United States as we know it.

The Birch Society, the East Valley Tea Party Patriots and others will join tonight in Mesa to hear the society's president, 75-year-old John McManus, expound on the perceived threat.

His topic: "Stealing the American Dream: How Illegal Immigration Affects You." The event is scheduled for 6:30 p.m. at Burke Basic School, 131 E. Southern Ave., Mesa; tickets are $7 at the door.

Bill Blewster of Mesa, a member of the Birch Society's national council, said his group is allied with the tea-party group, which

See IMMIGRATION Page B3

John Birch Society leader to speak

IMMIGRATION
Continued from B1

meets every Tuesday night at the school with about 75 to 100 participants. He said both organizations team with the National Center for Constitutional Studies, which was founded more than 40 years ago by conservative author and lecturer W. Cleon Skousen, a frequent visitor to Arizona and mentor of the late Arizona Gov. Evan Mecham.

Blewster said illegal immigration is an important issue to the Birch Society because it amounts to an "invasion" of the United States, which the nation is constitutionally authorized to repel.

"Mr. McManus has been on top of this issue for a long time," Blewster said.

He said illegal immigration is closely tied with efforts to forge stronger ties among Canada, the United States and Mexico, which the Birch Society believes are part of a campaign to create a North American union and destroy American sovereignty.

"That's where all this is leading to, a regional government," Blewster said. "That will totally do away with our Constitution, the Declaration of Independence, the Bill of Rights and the whole ball of wax."

Blewster said McManus is expected to outline the extent to which illegal immigration is harming the country and the Birch Society's proposed solutions, which consist of securing the border and enforcing existing laws, including Arizona's controversial Senate Bill 1070.

McManus himself is not without controversy stemming from his longtime membership in an ultraconservative religious group called the Slaves of the Immaculate Heart of Mary, which some consider to be anti-Semitic.

One former Birch staffer, William N. Grigg, claims on his blog that McManus "has spent decades promiscuously violating the JBS's standards and principles regarding anti-Jewish bigotry," citing McManus' involvement with a "deeply authoritarian para-Catholic cult founded by unabashed anti-Semite Leonard Feeney."

McManus has denied accusations of anti-Semitism, and Blewster said the Birch Society will not tolerate it, noting that some members are Jewish.

"We're certainly not an anti-Semitic group," Blewster said.

The Birch Society underwent an internal struggle in 2005 that resulted in a McManus ally being appointed executive director.

After that, former Birch members founded a new group called the Freedom First Society, which claims to adhere to the true teachings of Birch founder Robert Welch.

Ariz. cities' economies fare poorly in report

By Betty Beard
The Arizona Republic

The economy in the Phoenix and Tucson areas ranked in the bottom fifth of the nation's top 100 metro areas in the first quarter, says a Brookings Institution report being released today.

That is based on four indicators: changes in the number of jobs, unemployment rate, economic output (gross metropolitan product) and housing prices. The time periods varied with each indicator and ranged from several months to several years.

After analyzing economies in the metro areas, Brookings concluded that the nation's recovery continues to be "uneven and unsure" with sluggish job growth, high unemployment rates, housing prices that hit new lows in all 100 metros and government layoffs that are making things worse.

The Phoenix area's rating, not surprisingly, was dragged down by its weak housing market. The Phoenix area, for example, ranked second to the Las Vegas area for having the most properties in or subject to foreclosure.

The rate is about 14.55 percent per 1,000 mortgageable proper-

Plan to ax clean-car program criticized

Activists to state: Keep strict rules on emissions

By Shaun McKinnon
The Arizona Republic

State officials posted the Valley's eighth ozone pollution advisory of the season Tuesday, a fact clean-air activists noted repeatedly as they argued against a plan to repeal Arizona's vehicle-emissions rules barely six months after they took effect.

Citing enforcement costs and a legislative mandate, the Arizona Department of Environmental Quality wants to scrap the rules, also known as the Clean Cars program, and make Arizona subject to federal standards administered by the U.S. Environmental Protection Agency.

Arizona adopted Clean Cars in 2008 as part of then-Gov. Janet Napolitano's climate-change plan. The rules, based entirely on California's more-stringent emissions program, took effect in January for cars and trucks produced for the 2012 model year.

Under the Clean Air Act, California

Experts offer varied housing outlooks

Real Estate
CATHERINE REAGOR

Housing-market watchers are searching for signs Phoenix's five-year housing crash is near an end.

There's lot of real-estate information out there with different forecasts. Several reports show the market improving, and prices inching up this year. But there's also research implying the crash isn't over.

Data from Phoenix groups the Cromford Report and the Information Market:

» Home sales were up 3.5 percent in May over April.

» Pending sales were almost flat in May from April, signaling June could be another good month.

» Listings continue to fall and are down almost 10 percent from May.

» Both pre-foreclosures and foreclosures are down.

The news isn't as good for the new-home market, which must still compete with foreclosures.

RL Brown and Greg Burger's latest "Phoenix Housing Market Letter" tracked nearly 600 new-home permits in the Phoenix area, which is this year's norm for the market.

The report states the home-building industry, which was once the driver of Phoenix's economy, won't be healthy again until the economy adds 300,000 jobs.

The less-upbeat forecast comes from the Arizona Regional Multiple Listing Services Price Index. The data, based on pending sales, show metro Phoenix's median home price could fall to $106,000 in July and $97,000 in August.

If you read this column last week, you will know that the region's median price has been holding steady at about $115,000 for the past six months.

Meanwhile, former vice-presidential candidate Sarah Palin's recent $1.7 million Scottsdale home purchase is drawing more attention.

A Massachusetts official and mortgage-fraud investigator believes a "robosigner" was involved in Palin's deal.

Several Arizona real-estate experts believe Palin's title is clear and legal and say they need more evidence of any illegal signing.

Mesa Tribune
Letter To The Editor (480) 898-6362 January 21,2007
Dear Editor:

At this time while others are paying the price for comfortable summers, contending with snow and ice, we should be planning how to reduce the price we pay to escape that frigid weather. Such as the ever increasing cost of fuel, high pollution, power shortages,threatening rolling black-outs,even isolation. Much of that can be reduced with something as simple as using the cooler daylight hours. Around 4 and 5 a m is our best time of the day, May to October. Arizona is the only place left on the U.S. mainland that fails to take into consideration the earth's rotation. That is nothing to be proud of,it is a handicap. For example, most local sports events broadcast nationally end after midnight eastern time. That effects ratings and revenue.

A young Benjamin Franklin while in France measured the lamp oil saved when people arose and retired one hour earlier in the season. His experiment has been accepted in most of the industrial world as a method of conserving fuel. The concept has been adopted by out door workers, the construction industry. Home and travel energy use is reduced by many who voluntarily alter work hours. Any opportunity to avoid using the air conditioners saves fuel,reduces pollution. Ever notice when activated the auto air conditioner compressor acts as if a trailer was attached to the vehicle: Even stalled in traffic,common today, its off / on load on the motor is detectable. That is more fuel and residue exiting the tailpipe.

Arising an hour earlier most people could drive to work with car windows open, reduce home power demands. It would accommodate the construction worker as well as those communicating with offices that close three hours earlier in the east. Most important, as I pointed out,we waste the most pleasant time, before 6:00 a m.. Most Arizonans are asleep, they watched late news and went to bed an hour later than the rest of the country.

Its nice in the earlier morning, to get up and take a walk around the block, say Hi to your neighbor. There are benefits to adjusting to nature, and there are clocks that adjust to day light savings time automatically for those challenged by the task. Richard T. Tracy,Sr. (480)-839-1153

Environmental study touts freeway

ADOT: S. Mountain leg would ease congestion, aid air quality

By Sean Holstege
The Republic | azcentral.com

Build the South Mountain Freeway and the Valley's traffic moves more smoothly and the air gets cleaner than if the region builds nothing at all, according to a long-awaited environmental impact statement for the $2 billion project released Friday.

After 12 years and $21 million, the study answered some technical questions about the proposed 22-mile reliever for Interstate 10 but didn't seem to change any minds on the plan.

The extension of Loop 202 has been controversial since regional traffic planners penciled it on the map 30 years ago.

Friday's environmental study is among the most complex in Arizona Department of Transportation history.

Its release moves the project into the final planning phases, but it ramps up the divisive politics of the route on and off the neighboring Gila River Reservation.

The study compared building an eight-lane highway between Laveen and Chandler, which is projected to carry about 140,000 cars a day, with doing nothing.

Federal environmental law requires planners to compare

Ties to land hound DiCiccio

Critics say councilman's advocacy on freeway extension represents a conflict

By Sean Holstege and Scott Wong
THE ARIZONA REPUBLIC

The proposed South Mountain Freeway has defined Sal DiCiccio's return to politics.

A year ago, the Phoenix real-estate broker filed a vacancy on the City Council, reclaiming the seat he held a decade earlier. Ever since, he's championed moving the planned Loop 202 south from Ahwatukee Foothills to the Gila River Reservation.

To supporters, DiCiccio is working to find the best outcome for his Phoenix constituents. Opponents say his development deals along the freeway blur personal and public matters and represent a conflict of interest.

The Arizona Republic took a closer look at DiCiccio's possible stake in the planned 22-mile freeway, examining city financial forms and court records, plus letters, e-mails and other documents obtained under a public-records request. The picture that emerged shows that DiCiccio:

» Benefited financially from a business partner's purchase of land that was resold to the state for the proposed South Mountain Freeway. The purchase, which *The Republic* uncovered in records, allowed the business returned to city politics last year.

Sal DiCiccio

OPINIONS

MESA REPUBLIC

VP/ Mic

VIS

Transit specifics needed

Tempe Mayor Hugh Hallman's proposal to build commuter rail before widening the Broadway Curve on Interstate 10 has prompted a healthy response from readers. Since his proposal ran Jan. 20 on these pages, we have received 14 letters, most of them positive and pleading for action on the idea.

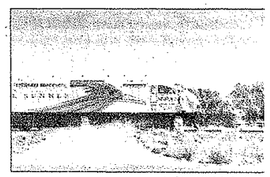
OUR VIEW

That's far more letters than we have received during that time on any other subject.

Granted, 14 letters hardly is a representative sample of the population. But Hallman's proposal clearly has touched a nerve with readers who feel that commuter rail is long overdue.

Whether you agree with Hallman's idea or not, at least his proposal was specific, not just lip service. We challenge other elected leaders to either join Hallman on his idea or express their own specific plans to speed transit improvements.

Given how little cash there is, and how great the need is to improve traffic flow without spewing more pollution, residents should have several creative ideas to debate.



JACK KURTZ/THE RE

New Mexico's Rail Runner, which runs fr Belen to Bernalillo, went from idea to inception in less than four years.

What do you think?

Want more elected leaders to get specif about transit? Tell them!

E-mail Mesa's mayor and council at **council@mesaaz.gov**. Find your legislator **azleg.gov**. And copy us on your message, **se.letters@arizonarepublic.com.**

Curve's design is problem

Reading the debate about the dreaded Broadway Curve: Is it just traffic volume, or does the horrendous design of the Broadway Curve enter into the problem just as much if not more so?

YOUR VIEWS

Nearing the Broadway Curve, you have the steady lane of traffic from Arizona 143 entering the freeway, followed immediately by Broadway Road on-ramp traffic and then by the Superstition Freeway off-ramps.

Do we really need 12 lanes of traffic, or do we just need a way to funnel those cars entering at the 143 and Broadway Road to get onto I-10 after the Superstition interchange?

It's a mess right now, and though I favor commuter rail, I don't know if that will have much impact on reducing the traffic as it currently stands.

— **Paul Nicholson**, *Tempe*

Rail system must be extensive

I agree with Tempe Mayor Hugh Hallman that a rail system should be built before widening the Broadway Curve. The is traffic gridlock is to take more cars o road.

Building more freeways will onl cars and pollution. The train would n be an extensive network, though, to ge ple to all parts of the Valley in order to fective.

— **Pam Smyth,**

Closer look at Justice Courts

There has been considerable effort by the local press to convey the impression that the Justice of the Peace Courts are "the people's court" where one can go without an attorney and the judicial officer need not be an attorney. The opposing parties may not be so inclined. They are entitled to be represented and it is possible that one could be required to pay his attorney fee in an amount greater than that in dispute.

The Justice Courts in Maricopa County are overburdened. Though the population has doubled, only two additional courts were created.

The power to vest civil jurisdiction in municipal courts has existed since 1960. Their judges are attorneys accountable to local governing body review and comply with the Constitution, which requires a judicial officer with authority to award over $1,000 to be an attorney in good standing and a resident of the state for five years.

Recently, state lawmaker Marilyn Jarrett of Mesa said she would introduce legislation so that the justice would be able to "understand and think through the problems." She did so primarily because of the inappropriate behavior of several elected to the office of JP.

Of more concern should be inappropriate decisions and arbitrary treatment. In the old days, the JP conducted hearings at night at his home in his bathrobe for a traveler. Only that the correct law was applied was important.

Times have changed. JP courts have been abolished elsewhere because of the complexity of the law, commerce, technology in an effort to give true meaning to the phrase over the entrance of the U.S. Supreme Court, "Equal Justice Under The Law."

To change the standard for JP would require a state constitutional amendment. To substitute a county and municipal court with the same jurisdiction in Maricopa and Pima counties requires only a legislative enactment by the Legislature and county supervisors.

Since 1963, certain matters which come before the JP require that the defendant be represented by an attorney, the state is represented by an attorney. Should not the judge be their equal to truly understand the problems?

CALLER REMARKS/QUESTIONS:

1 Yes, I do support the freeway. The South Mountain freeway, but you need to stop playing politics with it and build it. But you need to build it where you will disrupt the least amount of people. Also, I take exception with having to listen to this message in Spanish. If you are a voter you need to be able to read and write in English. Thank you.

1	Jennifer Tran Document Created: 5/21/2013 2:34:51 PM by Web Comment Form I live in Avondale and commute to work every day on the 10E to Tempe, AZ. Traffic in the morning is typically really bad once I approach around 43rd Ave. In the past 8 years, I've noticed that accidents tend to occur before, in or after the downtown tunnel. One of factir that I believe contributes to these increase in accidents in this area is the short amount of distance after you exit the tunnel to either enter the 202 0r the 51. I believe that with the proposed loop 202 in the west side will definitely decongest traffic going into the tunnel and hence, reduce accidents.

MS. TRAVIS: Janet Travis and my address is 44177 West Palmen Drive in Maricopa and 85138. I think the first comment I have is in this report there is absolutely no information on the tonnage. And this is a point that we repeatedly asked, I'm sure it was ADOT, MAG, all these representatives that were there, the bigwigs here, decisionmakers on this. Repeatedly asked them for that information, and they did tell us, "Yes, yes, we will have that information." That's very, very basic information regarding freeway and employees.

And not just a public meeting, you know, something like this, but departmental meetings, air quality program with decisionmakers at Gila River, transportation meetings, a number of meetings over the years. We were told we would have that information. It's not in there. And that it's a basic, basic piece of information that is included in normal environmental impact statements.

As an example, the amount of vehicle miles traveled, or the amount of cars per day on that 18-mile stretch on the community, Interstate 10, there's 17,000 tons of carbon monoxide emitted annually. This needs to have tonnage and it's just not there.

1

Code	Issue	Response
1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The total tonnage of emissions by pollutant is not presented because the regulations require that the analysis be compared to the National Ambient Air Quality Standards, which are not based on tonnage. However, tonnage (total emissions) was reported for mobile source air toxics because there are no standards.

Code	Comment Document

3

2

1

4

Okay. Another point is, there is absolutely nothing about health impacts on this. And I know not all environmental impact statements have that included, but many do. And in this case, it should be included because this freeway, unlike all the others in the Valley, is located between two mountain ranges during periods of inversion layers, stagnant air. That's going to sit right there between the mountains.

And the level of health problems out here, especially with kids with asthma, it's going to skyrocket. And right now, there's kids playing football outside. And pollutants have been proven to have a strong impact on the population within a mile and a half of a freeway. So there's schools, of course, residents and they're going to be sitting in that smog.

We need numbers, tonnage on carbon monoxide, ozone, volatile organic compounds. Just all of the things, particulate matter. And one thing they did not address, they did mention particulate matter and 10 -- PM 10, but they do not address PM 2.5, smaller particulates, and those are especially the problem with diesel trucks, PM 2.5.

And the community has an air quality

Code	Issue	Response
2	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
4	**Air Quality**	A particulate matter ($PM_{2.5}$) analysis is not required since the area is in attainment for the particulate matter ($PM_{2.5}$) National Ambient Air Quality Standard.

Code	Comment Document

monitoring site. You could almost see it it's so close. And we have baseline levels and it will be interesting to see what those levels increase to once the freeway is put in. And we did our 2.5 measurements, PM 2.5. We did what is called speciation on that particular type of pollutant, and that picks up the hazardous air pollutants. So this does not address that. It does not really address air toxins.

1

From what I can understand, this is pretty complex. They did two, have monitoring criteria from the point in Chandler where the freeway -- where 202 will meet I-10 and around on the other side. Those end points, they have carbon monoxide monitoring numbers. Although it is not in tons, it is just saying they meet the standard and that's not enough information. And then they have no monitoring or estimated numbers for all along the community, and that information is actually easy to gather.

All you have to do, if you estimate vehicle miles traveled and put these particulate types of pollutants into a modeling program and it comes up with tonnage. So I know they have the information. They just did not express it in the way that they should have. This is very, very basic

Code	Issue	Response

Code	Comment Document

information because it affects public health on a level that is unimaginable.

I know Maricopa County, City of Phoenix, they have met a number of EPA standards. They have made some progress, but there's a few that they haven't met, and I do need to gather more information on that. But it seems like Phoenix pretty much does the minimal amount to meet those standards. They could do more. It's not easy, but it's based on health standards, federal health standards, and it seems like they never go beyond the minimum.

And I know they've been threatened with sanctions, and it seems like that's the only time they move forward. And to me that indicates more of an economic concern rather than a health concern, so.

And as far as where they discussed benefits, impacts, social economic environmental impacts, that was all done for the other side, not for the Gila River side. Especially what really upsets me is no mention of health impacts. I mean, in a way, they are addressed because those standards of pollutants are based on federal numbers, measurements, and anything beyond certain levels has these impacts spelled out.

2

Well, we don't know the tonnage, so we

Code	Issue	Response

Code	Comment Document

can't estimate what those health impacts might be. And that's kind of a simplified way to say it, but I've been out of the loop for a while, but there are some basics that I do know. And after being told they would be addressed and to not have it in there I think is really disrespectful and a slap in the face to Gila River, and this is why one reason this is so controversial.

And I know this is going to be built. I've known from the beginning, but I just thought it would be done in a way where the information would be out there for residents of Phoenix, but the residents of Gila River, I just don't understand why we are not allowed the same information that is provided to all the other freeway environmental impact studies that have been done in the past.

So I know a lot of people view the City of Phoenix as the 2,000 pound gorilla, you know, when it comes to economic development and a lot of things. And this kind of supports that, as much as I hate to say it, but...

And then as far as cultural, I will let a lot of these other people address that because I think they are more knowledgeable than I am, so I don't need to go into that. And as far as direct

Code	Issue	Response

Code	Comment Document

impact on water quality, on wildlife, that is also information that will be addressed more in-depth from one of the departments in Gila River.

So our comments as a whole different environmental program have been submitted, and they will be reviewed by the higher-ups before they are released as official statements. In the meantime, I think it would have been good to have a lot of this information out so people would know the right questions to ask so that they would insist upon answers.

And my familiarity with public hearings where you actually have to do the legal requirements, which you guys are doing right here, and the fact that there's no question-and-answer, you know, I realized that's how it was going to be. I was kind of hoping they might tweak that a little bit, but, I mean, I'm kind of at a loss for words just because I was so surprised at what I read -- or I should say what I didn't read, what should have been there.

Actually, when I did park here and I saw those kids out there, I was just thinking in the future how they will be impacted by this. I know one of the benefits for the freeway is like transportation of emergency vehicles and stuff like

5

Code	Issue	Response
5	**Public Involvement**	At the public hearing, in addition to the public hearing room (Ballroom 3), and the project video (Ballroom 1), information, resources, and staff were set up in an open house style format in Ballroom 2. Several copies of the Draft Environmental Impact Statement document were available for review; 63 banners explaining the participation process, the Draft Environmental Impact Statement, and the next steps were displayed; approximately 25 staff members were available to answer questions; computer stations were set up to accommodate online comments; comment cards were provided at tables for written comments; and court reporters were available to record verbal comments.

Code	Comment Document

6

that. I know they're going to have, oh, what do you call that, the roads on either side of the freeway? Service roads. And that will, you know, be part of the benefit, but then it also came to mind that, okay, you're making it easier for emergency vehicles, which is a good thing because you're probably going to be out here a lot picking up little kids that have asthma attacks in reality.

The rate of diabetes, which pollution does affect, the rate of asthma of course is extremely high out here. A lot of people know that. So they kind of get lost in the big picture when it comes to that. And that's -- they should have the priority, the little kids, of impacts to them.

And I think another issue is, there's a lot of people around right now, community members that remember when Interstate 10 was built. And I've always heard that they weren't paid fair market value for some of the land. I don't know if that's true. At one particular meeting, ADOT was asked to provide numbers of how much were they paid back in the early '60s, and they had a number, but then you hear different people say, no, we only got this or that.

So that's really not something I can make a comment on because I just don't know. But one

Code	Issue	Response
6	**Design**	The proposed freeway would have eight travel lanes, but would not have frontage roads in the area along the Gila River Indian Community land (see Figure 3-14 in the Final Environmental Impact Statement).

Code	Comment Document

thing is the people that do have the memory of that, and I was surprised to hear this, we were promised frontage roads. We were promised more exits when that was built. We're still waiting for the frontage roads. People remember that because they've been here for generations. And that information, you know, it's passed down and it pisses people off. They remember because the people here live here for years and their children and their children.

And a lot of these people here, they didn't grow up here. Their parents still live here. Their grandparents live here and great, great grandparents live here, and that's why it's become so personal, and I think that's something that a lot of people don't realize and they don't see it this way.

Well, maybe five, ten years, you know, maybe you'll move to wherever. Maybe I will too, but most of the people here don't. They stay and they remember. I'm going to make some silly sarcastic comments, but I better not. This is official.

But anyway, I think those are my main points, just to include the basic information. And I really would like to ask directly the people that, the engineers monitoring, overseers, whatever, are they going to have that in the final draft? I know

Code	Issue	Response

Code	Comment Document

7

they're not. I just know they're not. But I just want them to know we were told they were, and that is one reason that people are weary of things, one of many reasons.

And then it does go into how this will benefit the Phoenix area. Sure it's going to relieve congestion, it's going to reduce air pollution. Well that's great if you're on the other side of the mountain, that's really great, but here we're not.

And whenever you talk about this kind of thing, casinos always come up into the mix, so I don't know. It seems like, well, you guys have those casinos. Like we're not allowed to complain about anything because we have casinos. That gets kind of old.

There's a number of people out here, whether you want to call them activists or just concerned people. I consider myself a concerned resident, not really an activist because I'm kind of too lazy, but they're getting a lot of the kids involved. And I think I would like to see more of the other side, you know, not just the emotional so those kids can actually have scientific background to back up what they're so passionate about. So maybe in the future we'll have more of that, but right now

Code	Comment Document

just to see the kids expressing themselves, having a voice, that's really great.

I think something that's kind of scary about all of this and the controversy that comes with it for a lot of tribal members out here, this is like the last straw. So I don't know how that's going to affect things in the future, but just wanted to get that out there. I'm not saying it's the last straw. You're not going to see me laying in the freeway or laying in front of a bulldozer that's trying to, you know, but no promises there won't be other people doing it.

And actually, the model that they used, this Mobile 6 model where they figure out no pollutants, you know, measurements like that and vehicle miles traveled, blah, blah, blah, we used that same model to do our emissions inventory for the Interstate 10. And specifically I didn't do it, but it's been done. And it wasn't contracted out, air quality personnel did it themselves, and they happen to have a lot of experience with other jurisdictions outside, so they pretty much know what they're doing as far as technical and policy issues because they go hand-in-hand, you know.

Don't even get me started on Arizona's

Code	Issue	Response

Code	Comment Document

politics. I won't mention Jan Brewer's name, but you know what I mean. So air quality here does have familiarity with the type of technology used when figuring emissions. And I do know that these calculations are also done on projected situations like better quality gas, better mileage for vehicles, you know, that kind of thing. And that is technically, yeah, you do want to include that information, but the way it is right now, I think that's all people see. They're not going to sit back, well, 35 years from now, things will be better, you know. You can't do that. Nobody really wants to do that.

I mean, it just in many ways, it doesn't make sense, but I do know that is information you have to include when you're figuring these things out. So I do understand that's part of it, but the assessment does make those assumptions, but they are assumptions and not based on the way things are now.

And people are also curious, I am too, about what classification on air quality that this Gila River -- okay, I know I'm rambling here, but we currently have what's considered clean air based on three years of monitoring data which is a federal requirement. How is that going to impact it? Are we

Code	Issue	Response

Code	Comment Document

now going to be considered nonattainment dirty air area? How will that affect economic development? There is a direct relationship that really affects that, and Phoenix has had the upper hand on that for years. Finally got that changed. I could go into a lot of other things, but it gives me a headache, so...

And currently we don't do emissions testing based on the fact that the air is considered clean out here, and I do believe all that will change. Even where Phoenix might have monitors for different pollutants that do meet the standard, once that air is trapped between the mountains, that's going to change. I don't care what anyone says, that is going to change. So that is another thing that residents of the community, I'm sure they will be required to do emissions testing because right now they don't.

One thing I would like to mention is that Gila River Environmental Department, we've always had a good relationship with the state and the county and federal PA people. We've had a good relationship, and that has helped a lot because many, many tribes do not have a good relationship with the state, where we actually did play well together and we have worked

1

Code	Issue	Response

Code	Comment Document

8

together on different projects. So it is not something personal, you know. It is all about policy and my opinion of what is fair.

Another thing I want to mention, as far as environmental issues or conditions that were out here at one time, a lot of the elders remember when the rivers were around, Gila River and Salt River. They remember the wildlife. They remember all of the fields that were growing. They remember all of that. And in a very short period of time, it's gone. And, you know, I understand that Phoenix is a city. It's growing, but to be honest, I had no idea this would happen because I always thought it's so hot there. Who would want to move to Phoenix? And what am I doing, I'm back in the Valley.

But I guess my main point is, even myself just in talking to my mother, she lives in District 7 right near where the Salt River once was, and she tells stories about swimming there every single day and hauling watermelons on the horse so they'd have something to eat. I mean, just these amazing scenarios that I can't even imagine.

And the elders, there's less and less of them. So many of us have no clue of what it was like on a personal level. We see old pictures, we hear

Code	Issue	Response

Code	Comment Document

9

stories, but it's gone and that's in a very short period of time. And a lot of natural resources that are now gone were directly tied to cultural elements. And I think that's another thing that people don't understand is how many ceremonial cultural things still take place here. I think many of them don't believe it because to be honest, people more or less remember the negative, the native people that they see wherever in the city. It's not always pretty. That's what they know. And they have no idea that so many ceremonial cultural events still happen and they're still important. People just have no clue.

And I would go into some of those, but I really don't think this is the place to do that as far as public comments, but I just want people to realize it's there. They're probably never going to see it, but they need to know these are there. After this is over and you have all of these comments, and you're going to have a lot of them, not just here but from Ahwatukee, Phoenix, environmental clubs, industry, whatever, the process I think people know they are aware they may feel that what I'm saying right now isn't going to make a damn bit of difference. That state environmental impact statement is not going to be realized based on what

Subject: Against the South Mountain Freeway

Dear ADOT,

I do not support the proposed South Mountain Freeway.

1 (1) That valley is beautiful and scenic at present. I like it unspoiled.

2 (2) Making it even easier to access Phoenix by car can only worsen the traffic density downtown.

3 4 (3) Smog in winter in the valley is already unhealthy. There are certain days when the kids in my daughter's school (Awakening See in South Phoenix) were not allowed to play outside because of poor air quality

5 6 (4) I would prefer you to focus more on ways to reduce the number of single-passenger cars. I like the new downtown tram system. I would prefer you to put your resources into that project, which potentially serves more people.

7 You do a great job designing and maintaining the roads in the valley. I am impressed. I am not persuaded that another artery into Phoenix is needed. I sense that this movement is driven by residents of West Ahwatukee who do not like having to travel East to the I10 in order to get around South Mountain. The freeway will reduce their commute time, but the rest of the Valley will not be served so well.

Sincerely

Mike Treacy
Resident of South Tempe.

Code	Issue	Response
1	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-170 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Health Effects**	
5	**Alternatives, Nonfreeway Alternatives**	
6	**Alternatives**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.
7	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The proposed freeway is not an arterial road into Phoenix. The proposed freeway is needed to serve projected growth in population and accompanying transportation demand and to correct existing and projected transportation system deficiencies. See Chapter 1, *Purpose and Need*, in the Final Environmental Impact Statement.

BUILD THE 202 FREEWAY NOW...
After moving and making the Phoenix area as my family's permanent residence Since 1987 We have witnessed the transformation of Phoenix from a small city to a major city that requires Big city infrastructure facilities..

The smoothly functioning I-17 is a product of proper transportation planning and execution of long term transportation planning. MAG and ADOT have proven it in the past, the 202 freeway will be another good news from ADOT in the future.

Therefore let us build the 202 freeway NOW!

I-17 freeway was slowly

Subject: Comment on the proposed Loop 202 extension

AZ DOT,

1 2 3 4 5 6 7

I live in the Ahwautkee Foothills and am one of many that oppose the build out of the Loop 202. I do not believe the environmental impact study is complete and I do not think this benefits the residents of Ahwatukee at all. I am very concerned about the air pollution, noise pollution and the drop in property values that this extension will produce. There are multiple schools that will be impacted by the noise/air pollution. I urge you to reconsider building out the extension at all when it will only benefit truckers who will detour out of the city to connect to I-10 on the east side. We do not need it and cannot afford it!

Respectfully,
Ron Tuszynski

Code	Issue	Response
1	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Noise**	
4	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
5	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Purpose and Need, Truck Bypass**	
7	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources.

CALLER REMARKS/QUESTIONS:

1 Hi, I do support the new freeway along Pecos Boulevard. I happen to be in the transit area of the 51 going north. And even though I am close, I think it's for the betterment of entire city and county that the freeway goes through as soon as possible. It has been on the drawing board for a long time. I feel bad for those people but no one felt bad for me up here at 32nd and Shay and it hasn't really hurt that much. Thank you. Goodbye.

1	Robert Upham Document Created: 5/21/2013 3:15:21 PM by Web Comment Form I would like to see the bridge at 32nd Street eliminated. Without a Traffic Interchange there and no access to the freeway, I would prefer to see 32nd street just dead end. I have experienced enough crime that can enter our neighborhoods from the reservation (from other connections and personal experience into the City). I don't want future access to the reservation from my neighborhood. having future access from 40th street and 24th street is enough.

Code	Issue	Response
1	**Design**	The bridge at 32nd Street is included to allow potential access to land south of the freeway.

I am a retired Maricopa County public works street maint. Superintendent and agree this freeway is way overdue in being built and should get started right away. I would enjoy being part of a discussion or focus group to start discussions with Indian tribe and its leaders to start this project and get the ball rolling. Thank You. Frank Urquiza

THE FACILITATOR: Thank you. Jim Vaaler.

MR. VAALER: Yeah, thank you for the opportunity to speak, just got basically two words for you, no-build. I think the purpose and need for this freeway is outdated. I think you could improve existing infrastructure and use mass transit in place of this freeway.

My other concern is the intrusion this potential freeway would have on South Mountain Park. I think you set a very bad precedent by proposing to build it in the park. Any deletion from the park, I mean, 30 acres is unacceptable. Those are the two points I'd like to make.

Thank you.

THE FACILITATOR: Thank you.

Anybody who would like to speak, please go out and register at the registration table. We'd be happy to hear you.

Larry Weeks. Larry, could I ask you to go to this microphone, please. Trying to do it equally for the court reporter.

MR. WEEKS: Good afternoon, my name is Larry Weeks. I'm in the 85048 zip code, specifically in the Lakewood and Ahwatukee area. And my concerns are the increase in noise and increase in pollutants

1 MS. VALENCIA: I would like to say that this
2 freeway would affect my civil rights as not only an indigenous
3 person, but as a woman, a parent, a descendant, and a future
4 ancestor of my future generations. My connection to this
5 mountain was during a spiritual run called the Peace and
6 Dignity Run, a spiritual run called the Peace and Dignity
7 Journeys, which unites the indigenous people from South
8 America, Mexico, the United States, Canada, and Alaska.
9 We are -- We are all people who run, and we pray
10 together to bring strength to our -- to our people across the
11 world. And this run happens only every four years. And my
12 connection with South Mountain was the prayers and the
13 spiritual connection that I had while running, for over
14 eight miles, and how it's sacred to our people.
15 If the sacred site is destroyed, it will affect
16 anyone, not only just the southern people in Arizona, but also
17 our relatives from other continents.
18 And I would just like to ask -- like, say: Why
19 should we have to fight to defend our sacred rights -- I mean,
20 our sacred lands if they're protected by the U.S. Government?
21 And I'd just like to clarify how it will violate my
22 freedom of religion, not only, like, as an indigenous person.
23 But I feel like I'm -- we have been discriminated against,
24 because, like, I mean, I live, like, in Gilbert. And I read
25 the newspapers, that they have, in that Gilbert area, and they

1	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.

had a meeting for the, you know, Loop 202 in Phoenix.

And there was a lot of people that I know from the reservation who went and attended that, who were opposing against it, outside with signs and banners.

And, in the article that I read, it had nothing to do with Gila River and how it will affect the people who were there protesting against it. And it had no -- Like, it sort of makes it sound like it's something good, like it's a positive thing.

And there's nothing -- There's nothing in the -- you know, in the visual aid and in the research, that they haven't put who -- like, the air quality, like, what scientists and, like, who proved that. And, like, it just doesn't really seem like reliable information that they would put out. So I don't know.

3

But, again, I would just like to say that this freeway would violate my civil rights as a person. And that's it.

The Loop 202 (South Mountain Freeway) project will create 30,000 jobs during the five to six year construction period and result in a $2 billion investment in the Phoenix-area economy. Not only will the project create numerous jobs and become and investment to the Phoenix area, the money to build the freeway is in the budget.

1 I believe it is time to build the Loop 202 (South Mountain Freeway). Valley commuters have waited long enough.

In Arizona, we have an urban-sprawl problem and we are also in an economic depression. Yet you along with MAG, the Federal Highway Administration, corporate & developmental interests want to build an unneeded, polluting, and destructive freeway extension through the sacred mountain: Muhadag Do'ag (South Mountain).

There are many issues with the Draft Environmental Impact Statement (DEIS), which has taken too long to produce in the first place. Plus, this project is an incredible wa$te of money.

Joel van de Sande

Code	Issue	Response
1	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
2	**Purpose and Need**	The worldwide recession that began in late 2007 generated a substantial downturn in growth rates for new housing and employment across the United States. Arizona particularly suffered the effects of this recession because, beginning in the early 2000s, Arizona in general and Maricopa County specifically experienced some of the fastest population, housing, and employment growth rates in the country. Because the need for the proposed freeway is predicated in part on projected growth, one might conclude the recession reduced that need. An economic downturn associated with a given recession is, however, generally considered a short-term phenomenon with respect to the longer-term planning horizon established for the proposed freeway. Socioeconomic indicators have steadily and consistently increased in the region since the early 1900s. The critical factors underlying these indicators remain unchanged. (See the sidebar on Final Environmental Impact Statement page 1-11.)
3	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Rory Van Den Berg

•It is time to build the South Mountain Freeway. Valley commuters have waited in traffic jams long enough. Based on the traffic studies in the Draft EIS, this will greatly help commute times in a busy area of roads.

•The freeway will cut traffic congestion across the metro area, reduce air pollution, and save drivers time and money.

•64.3% of likely voters in Maricopa County support construction of the freeway according to the results of a new poll commissioned by We Build Arizona. Just 19.6 percent said they were either opposed or likely to oppose the project.

•In a separate survey, also commissioned by We Build Arizona, 59 percent of likely voters living in Ahwatukee and Laveen support the freeway as well.

•If we don't build the South Mountain freeway, traffic in the region will get much worse over the next two decades. According to ADOT's own study:

•Traffic on I-10 between Ahwatukee and Goodyear will grow 28%
•Another 103,000 cars will use the Broadway Curve each day
•Another 38,000 cars will jam the Tunnel every day
•Morning and evening commute times will increase 39% to 82%
•Traffic congestion on city streets will increase 46%

•The same report indicates the project also will reduce air pollution by reducing the time vehicles spend stuck in traffic.

•The project will create 30,000 jobs during the five to six year construction period and result in a $2 billion investment in the Phoenix-area economy.

•The money to build the freeway is in the budget. It was approved by voters twice, first in 1985 and again in 2004.

1 •There is no more important project to the area's commuters and workers than the South Mountain Freeway project. We must build it now.

Subject: Loop 202 South Mountain Freeway Draft EIS.

Dear Sir or Madame,

The proposed completion of Loop 202 South Mountain Freeway has been part of the planned freeway system in Phoenix for over 30 years, and there is no better time to build it than now, so we can take care of traffic issues before they become bigger problems. I have read through the Draft EIS, and seeing the numerical data further reinforces my thoughts on completing Loop 202 . Below are some key points to consider.

- It is time to build the South Mountain Freeway. Valley commuters have waited in traffic jams long enough.
- The freeway will cut traffic congestion across the metro area, reduce air pollution, and save drivers time and money.
- 64.3% of likely voters in Maricopa County support construction of the freeway according to the results of a new poll commissioned by We Build Arizona. Just 19.6 percent said they were either opposed or likely to oppose the project.
- In a separate survey, also commissioned by We Build Arizona, 59 percent of likely voters living in Ahwatukee and Laveen support the freeway as well.
- If we don't build the South Mountain freeway, traffic in the region will get much worse over the next two decades. According to ADOT's own study:
  - Traffic on I-10 between Ahwatukee and Goodyear will grow 28%
  - Another 103,000 cars will use the Broadway Curve each day
  - Another 38,000 cars will jam the Tunnel every day
  - Morning and evening commute times will increase 39% to 82%
  - Traffic congestion on city streets will increase 46%
- The same report indicates the project also will reduce air pollution by reducing the time vehicles spend stuck in traffic.
- The project will create 30,000 jobs during the five to six year construction period and result in a $2 billion investment in the Phoenix-area economy.

Subject: Proposed South Mountain Freeway Routes

(1) (2) (3) (4) (5) (6) (7)

I am completely opposed to the E1 Alternative route for the proposed South Mountain Freeway. I have lived in Ahwatukee for more than 12 years, and have listened and watched the debate over this freeway extension project the entire time. This road path may have made sense when planners looked at an aerial map of the Valley in the early 1980s…but it certainly is a bad idea today. It is inconceivable to me that responsible area leaders hope to displace homeowners, schools, churches, an efficient local travel road…and destroy a beautiful and scared mountain range…to enable interstate truck traffic to bypass downtown Phoenix. I know…the "pro" arguments also say this freeway is needed so people can travel from the far East Valley to the West Valley and vice versa. Really? Both the U.S. 60 and the existing 202/I-10 routes seem to work pretty well for this. Transportation planners really need to STOP negatively impacting our air quality and natural resources with highway/freeway designs like this.

(8) (1) (4) (5) (3) (9)

NO on the 202.
NO on the Pecos Road alignment.
NO on ANY destruction of South Mountain.
NO to increased interstate truck traffic in my neighborhood.
NO to destroying homes, churches, and schools.
NO to harming and destroying wildlife habitat.

I feel that the proposed route to I 10 and 59th Ave hook up is a bad idea as it will add to traffic jams on I 10 at that point.
I advise that the loop take the W101 alternative and be a straight shot north. I realize that pressure is attached to the 59th as people want to be closer to downtown in their commute, however, that can be obtained by adding a expressway up 59 th ave to I 10 with limited access at every mile. A mini freeway.
But until all this stuff is delt with maybe make a deal withthe Reservation about a toll road connecting the pecos and 51st. going past the casino. A 2 lane short cut other than the long round about one travels now to the South.
Phoil Van Dyke

MR. VAN DYKE: I'm all for a loop. I'm all for a loop, okay? But as long as it is -- that it is a loop. And -- and the 51st and fifty -- I mean the 59th and the 71st alternatives are not a loop. They -- they desecrate the idea of having a loop by -- by cutting it short, which will make -- make for congestion on I-10 considerable at those points.

Where traffic is going to come in and then it's going to go east or west on I-10, they're not going to widen I-10, so you're going to have a mess. And anybody that lives out west and uses the 10 to come into town is going to be very upset, you know, because they're going to have to wait a lot more time in traffic, you know, and burn a lot more gas.

Whereas, I hear now that the reason why they don't want to use the 101 -- I guess it's the 101 alternative, whatever the wide one is, the wide one here, yeah, the W-101 -- is that it would cut Tolleson in half and then they'd have to take out 1300 homes, versus 59th Avenue, which is only, like, 53 homes, 53 houses or something like that, which would save them a lot of money.

But it's -- But it's going to increase congestion on I-10 considerably. If you've been to California, you know that any time two freeways meet, what the congestion is like, you know, any time of day. Okay? The -- So I say that, you know, they have to somehow keep the -- keep the Loop 202 being a loop. That's why we designed a loop, is to keep the traffic

from getting inside of town and congesting the town.

Any traffic going east or west, in other words, if you have a semi truck or something like that going east and west, you don't want to go through town because it's going to slow you down. And if you go -- If you use the 59th -- If you're going to use the 59th Corridor that they have planned, you're going to have to get back on the I-10 in the middle of town again, you know. And it's going to be -- There's going to be even more congestion there than if it was down at the 101, where a lot of traffic could either go north and then -- and also west.

And all I know is that the 59th Avenue and 71st Avenue are -- are bad plans because it's not part of the loop.

And I do say that we need to make 59th Avenue an expressway, where, like, if you live north of town here, you go up 51st Avenue, it gets to three lanes. But you have every -- every street comes in on it. Well, you need to not do that on an expressway. You -- Only like on Dobbins and Elliott and the major roads, you know, that are one mile apart would be the access to the expressway, so there wouldn't be congestion slowing down traffic between the lights.

And, that way, the Ahwatukee people, that want to go around the mountain that way, can get downtown faster. But we still need to keep the loop a loop.

2

I even made a comment, over there with the reservation people, is that the reservation needs to continue their -- their -- their four-lane road that goes past their casino there, the Vee Quiva or whatever it is, and take it down to Pecos Road, for now, because this is going to take years and years to build, and make it a toll road. That way, you know, a person can pay $2 to shortcut, to get from 51st Avenue to Pecos and get into Tempe for $2, versus having to go all the way through their town, which is 35 miles an hour, go all the way down to the -- go all the way down to the road that goes to Maricopa, and then come back into town that way, which would save a lot of gas and time.

The reservation would make a lot of money and -- and drive right past their casino, for a refreshment break. I don't know.

It's -- it's -- I think there's a lot of money that needs to be spent on this, and it needs to be spent wisely, not -- not just -- The cheapest route is not the best route, you know?

And in fifty years from now, it -- it'll remain the same. Gas will be a lot more expensive, and we'll have the same problems. And people are not going to want to spend money and gas, sitting in a car waiting for traffic, because we did it wrong now. So that's all.

MR. HAYES: Robert Hayes. I have my little notes,

Page 4

Code	Issue	Response
2	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic—including truck traffic—to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The alternative proposed by the commenter is similar to the Riggs Road Alternative evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement. Further, the Gila River Indian Community opposes any concept that doesn't limit truck and commuter traffic through its land (see page 2-8 of the Final Environmental Impact Statement).

I love the layout for the loop 202 expansion to support the greater Laveen area. It is obvious that, over the past decade, much work has been done to align the freeway to satisfy the the communities that will gain the most benefit from this expansion.

I know that a 202 expansion would help all commuters get between both east and west valley with less fuel and time consumption.

1 PLEASE BUILD THE FREEWAY!

how to protect their land, so I will stand on the side of protecting in any way that we can.

I'm with codepink.org. It's a national group. Okay. No build is the only option to conclude.

MR. VASQUEZ: My name is Roy Vasquez. I've been a resident of the Phoenix metropolitan area since 1978. I've experienced the massive infrastructure improvement of the highways during that period of time up until today and really see a need for -- for this project to go forward. More currently, I'm a resident of Laveen and will really feel the impact of this project to my family life and to the community that I live in.

One of the things that I'm in favor of is what it will do for the arterial roads improvement, the projected business improvement environment, also a much needed hospital project. That impacted me because several years ago, I had an appendix attack and I had to go way to Avondale to get that taken care of. So it will be more of a -- that was a personal view point.

I think the routing from Pecos west through the South Mountain area is important. It will give a nice viewpoint for travelers. It will

and car ownership by young adults. Why, then, assume that patterns that held prior to 2005 will inevitably be repeated over the next few decades? Why not reinforce this positive trend toward diminished driving by enhancing transit, rather than building a freeway that may counteract the positive trend with an inducement to drive more?

Please don't destroy part of South Mountain on the basis of insufficient justification. I urge you to rethink this report and the freeway it recommends.

THE FACILITATOR: Thank you, Mr. Bickford.

Shana Velasquez.

MS. VELASQUEZ: Hi, thank you. I may not be as eloquent of a speaker as my speakers before me, but I'm here today as a mother that lives in Laveen. And we moved there originally four years ago because we were told there's going to be a lot more things that were going to be built, and so far that has not happened because we do not have the access to the 202. We can't have a hospital, we don't have a rec center, I have to drive my children 30 minutes just to, you know, take them to dance classes.

I personally work in Tempe, I used to work in North Scottsdale when I originally moved to Laveen and that takes me the same amount of time to get to Tempe as

1 it took me to get all the way up to the Desert Ridge
2 area, so I know that we need this 202. We need a
3 hospital. When I gave birth to my son, it took me 40
4 minutes to get to the hospital just to be able to give
5 birth.
6 I mean, I understand about South Mountain, I
7 love hiking, I'm a biker. I mean, when you do build the
8 202, we definitely want the bike route along it so we can
9 have that access. We want sound-proof barriers, we want
10 it to be pretty, we don't necessarily want to destroy
11 South Mountain, but we also need to make some sacrifices
12 in order to, you know, take into account all of the extra
13 building that's going to be happening in Laveen shortly.
14 We can't overlook the fact that all the growth
15 is still going to be continuing within the next ten
16 years, and now is our opportunity to be able to handle
17 all the extra traffic, especially with the casino that
18 will be opening in July. Thank you.
19 THE FACILITATOR: Thank you.
20 David Gironda. Did I pronounce that properly?
21 MR. GIRONDA: Gironda. I do have a written
22 statement which I can give to the court reporter.
23 THE FACILITATOR: Thank you, Mr. Gironda.
24 Prem Goyal. Did I pronounce that name
25 correctly? Is Prem Goyal in the auditorium?

The effort to keep traffic moving has another option. Begin farther south away from the City connect to the 1-10 west of the town Buckeye. We live in a valley, all the air pollution stays down in the valley. View this from Sunset Point coming south. People and commercial traffic needing to the I-10 only can avoid city traffic by beginning father south and ending farther west. Cutting thru South Mountain is just ridiculous. Education and common sense HAS to meet somewhere is this project. Do you want a freeway next to your house? Or tear down a neighborhood unnecessary? Put the business and travel loop away from the city. Manifold the freeways away from residential areas and reduce the downtown traffic and air pollution. People who have a money interest will fight you all the way. Remember who bought property along the CAP canal before it was built he advised his family to purchase land there. This Senator is now retired. You and I wont make the decision, its the people higher up who's strings are being pulled by special interest/investors. Air and traffic pollution don't mean a thing to them, they don't live here. All it takes is one hazardous cargo truck rolling over close to town to create a panic. A problem that could be avoided by directing that traffic away from town. Its called PREVENTION thinking and planning. Thank You.

Code	Issue	Response
1	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Draft Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
2	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Air Quality**	
4	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
5	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
7	**Purpose and Need**	The Proposed freeway is not a business or travel loop. The proposed freeway is needed to serve projected growth in population and accompanying transportation demand and to correct existing and projected transportation system deficiencies. See Chapter 1, *Purpose and Need*, in the Final Environmental Impact Statement.
8	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

LOOP 202
South Mountain Freeway Study

2013

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. We do not believe that the Pecos E1 Alternative should be the preferred Route for the proposed Loop 202 South Mountain Freeway. (1)

1) The wildlife natural habitats on the preserves will be disturbed. (2)

2) There is an extra ordinary amount of people, homes, schools, church that will be affected & displaced. (3)

3) This will bring much more pollution to residents. (4)

4) This will bring much more Noise to residents. (5)

5) Who does this benefit? This does nothing to help the commuters get to Downtown. It would put the commuters at 59th Ave. This is quite an overshot of the Downtown area. (6)

6) It seems to benefit only trucks & puts their Dangerous loads into our back yards. (7) (8)

Code	Issue	Response
9	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Draft Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
10	**Alternatives**	The study includes an evaluation of the alternatives noted in "a," "b," and "c." The assessment and outcome are described on page 3-9 of the Draft Environmental Impact Statement. The study also considered an alignment on Gila River Indian Community land (see page 3-24 of the Draft Environmental Impact Statement), but ultimately, the Gila River Indian Community voted against the alignment and it was not carried forward for further study.
11	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). Nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study.
12	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

(Responses continue on next page)

Code	Issue	Response
13	**Public Involvement**	Public comments are a vital component in the decision-making process. Public comments have been solicited from project inception and through key milestones in the environmental impact statement process. The interests and needs of the public, along with all other social, economic, and environmental issues and impacts, must be fully analyzed and included in the Draft and Final Environmental Impact Statements. Comments made during development of the Draft Environmental Impact Statement have been used to adjust plans, explore new questions, or make changes—all within the scope of the National Environmental Policy Act. Public comments received on the Draft Environmental Impact Statement was reviewed and addressed in the Final Environmental Impact Statement. Public comments received on the Final Environmental Impact Statement will also be considered and addressed as appropriate. More information about the entire public involvement process up to publication of the Draft Environmental Impact Statement is available in Chapter 6, *Comments and Coordination*, of the Draft Environmental Impact Statement.

I am adamantly opposed to building the freeway on the Pecos Road route in Ahwatukee. It will substantially increase the air pollution and noise throughout the Ahwatukee area. You should do everything within your power to have the freeway relocated further south on the Gila Indian reservation,

Thank you.

Wanda Vermeer
Resident of Ahwatukee

The South Mountain Freeway would cut through a portion of South Mountain Park, exacerbate air quality problems, destroy wildlife habitat and cut off wildlife movement corridors, endanger public health, and more. It would also continue the Arizona Department of Transportation's (ADOT) short-sighted focus rather than looking toward long-term transportation solutions such as better mass transit.

I kindly ask that you please select the No Build Alternative in order to protect our environment and our communities.

Sincerely,

Dawn Vetter

1	Nathan Vigness Document Created: 5/21/2013 3:53:18 PM by Web Comment Form I am in favor of building the South Mountain Freeway. As a resident of Laveen I am excited about the prospect of getting new business to move into the area and create a better way of life for Laveen residents. I also see a great benefit of a bybass for those who would not like to sit idol in traffic through Phoenix to head south on I10. I see a great economic impact as well as enviromental impact that we can not get wrong. Please move forward with this project!

To Whom It May Concern,

1 Although my husband and I will not be able to attend the public hearing today we want to let you know that as residents of Laveen for almost eight years, we are very much in favor of this freeway being built. We have heard about it since we moved here and hopefully it will become a reality before too much longer.

Respectfully Submitted,

Genny and Vincent Villa

DRAFT 6-4-13

SUBJECT: ALTERNATIVE TO PROPOSED LOOP 202 EXTENSION

SUMMARY: Reroute I-10 interstate thru traffic between I-10 exits 112 and 199 using I-8 to Gila Bend and existing state 85 ROW (RIGHT-OF-WAY) to Buckeye FOR NEW I-10 CONSTRUCTION. Result= less traffic and pollution in the metropolitan Phoenix area. see sketch "A".

1

INFORMATION NEEDED TO EVALUATE ALTERNATIVE Vs 202:

1. % I-10 existing local traffic and % thru traffic.
2. Same as 1 in 10 years. estimate
3. Same as 2 but include NAFTA (North American Free Trade Agreement) North-South traffic.
4. Same traffic as 1, 2 and 3 but with respect to air pollution.
5. Estimated cost comparisions – see sketch "B" work sheet
6. Financial impact on business and home owners between Laveen and I-10

CONCLUSION: If cost and environmental concerns favor the alternative route, then build it ASAP. Wait 10 years to see how traffic and the effect of more public transportations develop.

2

Then, maybe a less costly extension may suffice connecting to I-10 further west. Also include ROW for a high speed rail link for East valley to West Valley public transportation.

3

2013

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:
- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1. A LOW COST ALTERNATIVE TO THE LOOP 202 EXTENTION FOR REDUCING I-10 THROUGH TRAFFIC IN PHOENIX IS AVAILABLE. DIVERT THROUGH TRAFFIC ON TO I-8 AT CASA GRANDE to GILA BEND. THEN GO NORTH TO I-10 AT BUCKEYE USING STATE ROUTE 85.

2. LOOP 202 EXTENSION COMMENTS ARE CONTAINED IN ENCLOSURE A.

3. HOW DOES ADOT AND VALLEY METRO COORDINATE THEIR "PEOPLE MOVING" PLANNING. ADOT BUILDS FREEWAYS, VALLEY METRO BUILDS PUBLIC TRANSPORTATION e.g. BUS ROUTES & STREET LEVEL LIGHT RAIL. TOGETHER LIGHT RAIL CAN BE INCLUDED IN FREEWAY CONTRUCTION. ENCLOSURE "B" IS A PLANNING TOOL FOR DETERMINING COMMUTER HOME/WORK DENSITIES. ENCLOSURE "C" SAMPLE TRANSPORTATION PLAN THAT WOULD REDUCE COMMUTER GRIDLOCK IF 30% OF COMMUTERS USE IT

4. I AGREE WITH PARC, PROTECTING ARIZONA'S RESOURCES AND CHILDREN, ASSESMENT ON INCREASED AIR POLLUTION. SEE ENCLOSURE D.

Code	Issue	Response
1	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
2	**Planning**	The proposed freeway is part of the multimodal *Regional Transportation Plan* (see Draft Environmental Impact Statement page 1-5 for more information regarding the *Regional Transportation Plan*). The *Regional Transportation Plan* addresses freeways, streets, transit, airports, bicycle and pedestrian facilities, freight, demand management, system management, and safety. The proposed freeway is only one part of the overall multimodal transportation system planned to meet the travel demand needs of the Maricopa Association of Governments region. The Maricopa Association of Governments, as the region's metropolitan planning organization, has the responsibility to perform regional multimodal planning. The Arizona Department of Transportation is charged with implementation of the freeway program (of which the proposed freeway is a part) within the *Regional Transportation Plan*. Similarly, Valley Metro is charged with implementing the transit program within the *Regional Transportation Plan*.
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document
4	ENCLOSURE A – LOOP 202 EXTENSION COMMENTS EASTERN SECTION 1. DELETE THE 17TH AVE INTERCHANGE. IT ONLY SERVES ABOUT 1500 HOUSE HOLDS (BY COUNTING ROOFS ON GOOGLE MAPS). A 2-LANE ACCESS ROAD ON THE 202 EXTENSION NORTH EDGE FROM SOUTH CHANDLER BLVD, NEAR 27TH AVE TO THE DESERT FOOT HILLS INTERCHANGE WOULD BE ENOUGH. 2. DELETE THE 24TH ST INTERCHANGE FOR THE SAME REASONS AND CONTINUE THE ACCESS ROAD BETWEEN DESERT FOOTHILLS AND THE 24 ST INTERCHANGES. 3. NOTE THAT THE AREA HAS LITTLE ROOM FOR POPULATION GROWTH BEING SANWICHED BETWEEN SOUTH MOUNTAIN PARK AND THE GILA RIVER INDIAN LAND. WESTERN SECTION 1. DELETE THE ELLIOT ROAD, DOBBINS ROAD AND SOUTHERN AVE INTERCHANGES. BECAUSE: a. THE LAVEEN VILLAGE IS BASICALLY AN ENCLAVE BOADERED BY THE SALT RIVER, SOUTH MOUNTAIN PARK AND THE GILA RIVER INDIAN LAND b. BASE LINE ROAD AND SOUTHERN AVE ARE ADEQUATELY HANDLING MOST EAST-WEST COMMUTER TRAFFIC c. THE BASE LINE ROAD INTERCHANGE IS MORE THAN ADEQUATE FOR EXISTING AND FUTURE LAVEEN AREA NEEDS. BOTH SECTIONS – REGARDING INTERCHANGES "WHY SPEND SO MUCH FOR SOO FEW"

Code	Issue	Response
4	**Design**	The locations of the planned interchanges were determined in coordination with the City of Phoenix. The current plan balances the need to minimize impacts on the adjacent community with the need to provide acceptable access to the region's transportation system.

Code	Comment Document
5	ENCLOSURE B COMMUTER DESTINATION PLANNING ZIP CODES ARE A USEFUL TOOL FOR PLANNING COMMUTER TRAFFIC PATTERNS. THE SOCIAL SECURITY DATA BASE FICA, FEDERAL INCURANCE CONTRIBUTION ACT, PROVIDES NEEDED DATA FOR PLANNING: 1. EMPLOYER ZIP CODE. 2. NUMBER OF EMPLOYEES 3. NUMBER OF EMPLOYEES SHARING THE SAME ZIP CODE EXAMPLE: 85 XXX 500 EMPLOYEE 85 XX1 50 " 85 XX2 100 " 85 XX3 150 " 85 XXH 200 " THEN 4. IN EACH ZIP CODE TOTAL ALL EMPLOYEES AND ALL EMPLOYEES THAT SHARE THE SAME ZIP CODE IN ZIP CODE 85XX1 THERE IS A TOTAL OF 10,000 EMPLOYEES. OF WHICH 1000 LIVE IN 85XX2 4000 " " 85XX3 5000 " " 85XXH 5 LIST THE TOTAL AMOUNTS IN DESCENDING ORDER. 6. THE TOP OF THE LIST IS WHERE TRAFFIC PROBLEMS MAY OCCUR. IF THE SOCIAL SECURITY ADMINISTRATION DID THE WORK THEN THE MAN-HOURS (MORE CORRECTLY STATED, PERSON-HOURS) CAN BE BILLED TO THE FEDERAL DOT WHO IN TURN CAN DEDUCT THE AMOUNT FROM THE STATE'S DOT ALLOTMENT. NOW THERE EXICTS A CONSTANT TOOL THAT ANY CITY CAN ACCESS SHOWING HIGH VOLUME TRAFFIC AREAS FOR PLANNING. THIS BEATS THE CURRENT PROCESS OF "HERE A FREEWAY, THERE A FREEWAY, EVERY WHERE A FREE WAY" THE PLANNING PROCESS WILL BE FACILITATED IF MUNICIPALITIES. WOULD COORDINATE AND AGREE ON AREAS FOR FUTURE LARGE EMPLOYEE DEVELOPEMENT.

Code	Issue	Response
5	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

NOTES.

1. PHOENIX ON RIVER STATION - THE AREA BETWEEN S. 5TH AVE AND CENTRAL WHICH MAY BE AN OLD LAND FILL SITE BETWEEN WATKIN ST AND THE SALT RIVER BED APPEARS TO BE AN IDEAL LOCATION
2. THE AHAVIATUVEE STATION SHOULD BE LOCATED ON THE GILA RIVER INDIAN LAND BECAUSE IT MAKES THEIR ENTERPRISES, WILD HOURSE PASS, ETC. MORE ACCESSIBLE VIA PUBLIC TRANSPORTATION AND BE A TERMINAL POINT INTERCONNECTING LIGHT RAIL & BUS SYSTEMS.
3. RESEARCH THE OWNERSHIP OF ABANDONED MARICOPA TO TEMPE OR PHOENIX RAIL ROAD. SEE ATTACHED DRAWING
4. ROUTE 2, SUN CITY - AVONDALE, LIGHT RAIL CONSTRUCTION SHOULD UTILIZE EITHER A LOW EMBANKMENT OR TRESTLE. WADEL DAM PROTECTS THE AGUA FRIA RIVER FROM FLOODING.
5. ROUTES 10 & 11, PR TO TEMPE, LIGHT RAIL CONSTRUCTION SHOULD BE BASED UPON THE FLOW RATES AND WATER LEVELS THAT OCCURRED DURING BACK-TO-BACK, 100 YEAR FLOOD LEVELS IN THE 1970's.
6. ALL FUTURE FREEWAYS SHOULD BE DESIGNED TO INCLUDE LIGHT RAIL CONSTRUCTION IN THE MEDIANS OR OF EDGE OF RIGHT-OF-WAY.
7. ALL FUTURE FREEWAYS SHOULD INCLUDE SPARE CONDUITS FOR FUTURE COMMUNICATION NEEDS INSTEAD OF DIGGING UP EXICTING STREETS.
8. WITH A PHOENIX-MARICOPA LIGHT RAIL IN SERVICE WOULD A PHOENIX-TUCSON RAILROAD LINK BE NEEDED. SEE ARIZONA REPUBLIC ARTICLE ON 7-11-13. A "BUDD RAIL DIESEL CAR" (SEE WIKIPEDIA ARTICLE OR SOMETHING SIMILAR COULD ACCOMPLISH THE SAME RESULT AT MUCH LESS COST.

ENCLOSURE D
AIR POLLUTION

6 3

THE 202 EXTENTION ALIGNMENT IS GENERALLY CLOSE TO THE GILA RIVER BED, THE LOWEST POINT IN THE VALLEY. THE VALLEY'S GENERAL WEATHER PATTERN IS WEST TO EAST. THE VALLEY SITS IN A BOWEL WITH HIGH EDGES ON THE NORTH, EAST AND SOUTH. THE SMOG BUILDS DUE TO TRAFFIC POLLUTION ESPECIALLY DURING THE WINTER. STRONG WEST TO EAST WEATHER AND RAIN TEMPORARILY DISSIPATE THE SMOG.

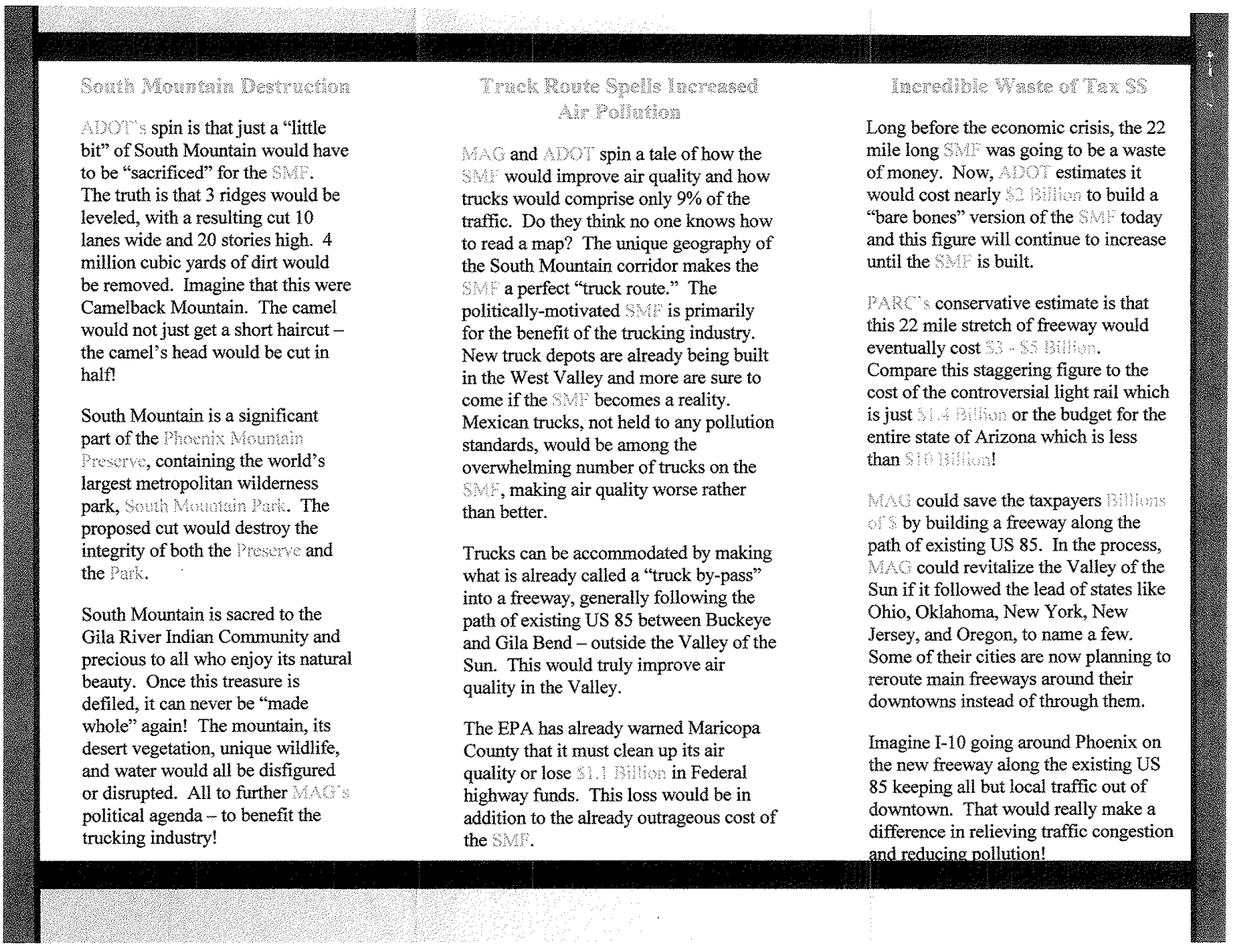
THE ELEVATIONS ABOVE SEA LEVEL, SHOWN ON THE ATTACHED MARKED DRAWING, ILLUSTRATE THE BOWEL EFFECT.

ALSO ATTACHED IS A PORTION OF PARC'S PAMPHLET ENTITLED "TRUCK ROUTE SPELLS INCREASED AIR POLLUTION" WHICH DECRIBES THE PROBLEM BETTER THAN I CAN.

Code	Issue	Response
6	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.

Code	Comment Document

Code	Issue	Response



South Mountain Destruction

ADOT's spin is that just a "little bit" of South Mountain would have to be "sacrificed" for the SMF. The truth is that 3 ridges would be leveled, with a resulting cut 10 lanes wide and 20 stories high. 4 million cubic yards of dirt would be removed. Imagine that this were Camelback Mountain. The camel would not just get a short haircut – the camel's head would be cut in half!

South Mountain is a significant part of the Phoenix Mountain Preserve, containing the world's largest metropolitan wilderness park, South Mountain Park. The proposed cut would destroy the integrity of both the Preserve and the Park.

South Mountain is sacred to the Gila River Indian Community and precious to all who enjoy its natural beauty. Once this treasure is defiled, it can never be "made whole" again! The mountain, its desert vegetation, unique wildlife, and water would all be disfigured or disrupted. All to further MAG's political agenda – to benefit the trucking industry!

Truck Route Spells Increased Air Pollution

MAG and ADOT spin a tale of how the SMF would improve air quality and how trucks would comprise only 9% of the traffic. Do they think no one knows how to read a map? The unique geography of the South Mountain corridor makes the SMF a perfect "truck route." The politically-motivated SMF is primarily for the benefit of the trucking industry. New truck depots are already being built in the West Valley and more are sure to come if the SMF becomes a reality. Mexican trucks, not held to any pollution standards, would be among the overwhelming number of trucks on the SMF, making air quality worse rather than better.

Trucks can be accommodated by making what is already called a "truck by-pass" into a freeway, generally following the path of existing US 85 between Buckeye and Gila Bend – outside the Valley of the Sun. This would truly improve air quality in the Valley.

The EPA has already warned Maricopa County that it must clean up its air quality or lose $1.1 Billion in Federal highway funds. This loss would be in addition to the already outrageous cost of the SMF.

Incredible Waste of Tax $$

Long before the economic crisis, the 22 mile long SMF was going to be a waste of money. Now, ADOT estimates it would cost nearly $2 Billion to build a "bare bones" version of the SMF today and this figure will continue to increase until the SMF is built.

PARC's conservative estimate is that this 22 mile stretch of freeway would eventually cost $3 - $5 Billion. Compare this staggering figure to the cost of the controversial light rail which is just $1.4 Billion or the budget for the entire state of Arizona which is less than $10 Billion!

MAG could save the taxpayers Billions of $ by building a freeway along the path of existing US 85. In the process, MAG could revitalize the Valley of the Sun if it followed the lead of states like Ohio, Oklahoma, New York, New Jersey, and Oregon, to name a few. Some of their cities are now planning to reroute main freeways around their downtowns instead of through them.

Imagine I-10 going around Phoenix on the new freeway along the existing US 85 keeping all but local traffic out of downtown. That would really make a difference in relieving traffic congestion and reducing pollution!

Subject: BUILD NOW - Loop 202 - South Mountain Freeway
Date: Wednesday, July 24, 2013 6:06:29 AM

To Whom it May Concern

1 I am writing this letter in support of getting the Loop 202 South Mountain Freeway moving forward. We represent land and business owners that will benefit from building this stalled freeway. While they will directly benefit, I cannot overstate the importance of building this freeway now and its importance to all citizens of our State.

- relief of existing and coming massive congestion along Interstate 10 at I-17
- Jobs that will be created by the construction of the freeway
-tax base in property, income, sales all increasing and benefiting the entire State
-environmental benefits of relief of congestion

This freeway has been on the books for almost 30 years. It is time for the State, City and local governing bodies to step up and lead and build this massive missing link to our transportation network.

We look forward to seeing this Freeway completed this decade.

Dear Sir / Madam,
Several months ago, I suggested that Loop 202 South Mountain Freeway consider (if feasible) a "double deck" design, similar to I-70 Colorado's double decker through Glenwood Canyon. At that time, the answer I received was **NOT** adequate.
Please provide detailed information as to why this "double deck" suggestion is not a viable solution.

1	**Alternatives**	The double-deck option suggested in the comment would have similar benefits and impacts as the Bridge Alternatives evaluated in the Draft Environmental Impact Statement (see pages 3-13 and 5-20). Options to build a bridge through or over the South Mountains were eliminated from further study because of incident management, constructibility and maintenance issues, future expansion limitations, substantially higher estimated construction costs, and undesirable intrusion-related impacts.

I came here primarily because I understood that the freeway was going to make a loop and enter our reservation at Pecos Road, and my niece just told me that I was mistaken, that it's not going to, that it is going to stay on Pecos Road, so my presentation is really ineffective and has no balance as to -- like I said, my whole thought is to not put anything on the reservation, because we cannot lose any more land, and I congratulate you on the wise decision not to put it on the Ahwatukee side, and I think that'll be best for everybody and speed up the process of the freeway and so forth. And I thank you very much, and that's all I have to say. Thank you.

THE FACILITATOR: Thank you.

Do we have another name up there? There it is.

Dave Von Tersch. Did I pronounce that right? Dave Von Tersch.

As a reminder, anyone in the auditorium, if you would like to speak just register at the front desk, your name will appear on the screen, and we will call you up.

Ken Lapierre.

Dave Von Tersch, is that you, sir?

MR. VON TERSCH: Hi, my name is Dave Von Tersch, I live in Ahwatukee. I'd like to suggest, as long as there's no ordinance against it or law against it, that the committee 202 project team might consider a

double-deck approach to the proposed freeway. Thank you.

THE FACILITATOR: Thank you.

Ken Lapierre.

MR. LAPIERRE: Hello, my name is Ken Lapierre, I live in Ahwatukee Foothills Reserve, and my initial comments here about the EPA draft study is I feel it's deficient on a couple of points. One is it's really not up to date. I'm not sure what data set was used, but if you look at, in particular, the violation of the EPA standards we have at the 43rd Avenue EPA sensor, it doesn't really look like we've acknowledged that that would get worse. My concern is that we will have a loss of federal highway funding if we violated 13 times on 43rd Avenue already and we're going to build a highway that's going to be a mile away, that's going to impact that sensor. Then we'll have more violations.

The other thing that I'm very concerned with is benzene in the air. I don't really know if you've studied the benzene levels in the Gila Indian Community, where I live in a community that borders that. I don't know if that's allowed or part of the study, but it's very toxic, people have health hazards. I work in a health advocacy group in Phoenix, and children are already experiencing asthma symptoms from the smog and the soot and the dust particulates from that area

1	**Alternatives**	The double-deck option suggested in the comment would have similar benefits and impacts as the Bridge Alternatives evaluated in the Draft Environmental Impact Statement (see pages 3-13 and 5-20). Options to build a bridge through or over the South Mountains were eliminated from further study because of incident management, constructibility and maintenance issues, future expansion limitations, substantially higher estimated construction costs, and undesirable intrusion-related impacts.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

Has a "Double Deck" approach been considered? If not, I would suggest that a "Double Deck" design be considered (in applicable areas).

Hello and thanks for possibly taking my input!
My name's Alex Votichenko,born and raised here in the valley and I just want to urge you to please consider a No Build Option for the the 202 extension through part of the South Mountain preserve-it's really a cherished landmark and point of pride here in the valley,all of the preserve really.
I bring out of town visitors to the park frequently and it's important to so so many valley residents.
Thank You !
Alex Votichenko

Subject: Please don't build the freeway

1 2 3 4 5

We are against building the freeway as it is presently proposed. If the Gila River Indian Community is willing to have it build on their land, this would be acceptable. But to tear down homes, wreck parts of South Mountain, create a huge noise factor near thousands of homes, and invite crime into our neighborhoods is unacceptable.

Code	Issue	Response
1	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). Nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

I am in complete support of this project; This is a crucial piece to our community and regional transportation needs. The South Mountain Freeway is also critical to support the economic needs of the Southwest valley which will promote job creation and growth in my community. My concerns are more in the event that the freeway is not constructed. I am very concerned with the fact that the casino on the South Side of the reservation boundary and 51st Ave is growing (adding hotel and night clubs) yet there is not currently access to this casino site other than driving through my community on surface streets.

1 2 3 4 5

I am a resident of the ahwatukee foothills and am opposed the long standing alignment of the 202 south mountain loop. I was told the mountain behind my house was preserve and would remain if the 202 south mountain loop was constructed. The latest alignment shows the mountain removed and my fence as the wall of the freeway This design and proximity to our community will have multiple impacts in noise and air pollution. Additionally, the freeway is exceptionally close to 2 grades schools, a middle school and high school. This is not a healthy environment for our children. I am fully supportive of exploring options that would move the freeway further away from the population centers and eliminate the need to destroy portions of south mountain. As stewards of the land and our future generations I believe we should aggressively pursue options that will be mutually beneficial to the impacted community, as well as, the greater metropolitan area.

Rgds,

Maria Walker

Hi,

I am responding with comments on Draft EIS.

(1) I live in Ahwatukee. The new freeway will be going by four schools around where I live (Pecos and 24th street). I do not think that is acceptable.

(2) (3) (4) In addition, I think the freeway will bring much more crime, pollution and noise to this area. I plan on moving if the freeway goes in.

If you have any questions, please contact me at 480-227-6262.

Subject: Proposed 202 Freeway extension
Date: Wednesday, July 24, 2013 4:18:34 AM

To whom it may concern:

1 2 3 4 This extension should absolutely NOT be built. Not only will the freeway itself bring more air, noise, and visual pollution into the area of its route, but, even worse, it will encourage commercial and real estate development, further despoiling the area.

5 We should respect the wishes of the native tribes who consider South Mountain sacred. Too often we have callously disregarded their respect for nature to our own detriment, needlessly offending their spiritual beliefs because of greed.

6 Let us instead use the funds to improve and maintain the highways we already have.

Michael Walker, 5315 W. State Ave., Glendale AZ 85301.

1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Noise**	
3	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-170 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
4	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
5	**Cultural Resources**	Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
6	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.

LOOP 202
South Mountain
Freeway Study

2013

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. In the early planning of Loop 202, ADOT discussed the need to get trucks out of Central Phoenix. The regional Plan should be modified to re-route trucks out to US. 85.

(1)

I have lived in two Phoenix neighborhoods where freeways (the 10 and 51) were built. Noise and pollution are inevitable, along with the inherent medical problems and crime that follow — and deteriorating neighborhoods.

(2) (3) (4) (5) (6)

South Mountain needs to be protected from a Wilderness and Cultural Standpoint for everyone.

(7) (8)

Code	Issue	Response
1	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Draft Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and inter-regional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, it was eliminated from further consideration.
2	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Air Quality**	
4	**Health Effects**	
5	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
6	**Economics, Socioeconomics**	There is no evidence that the proposed facility would cause people to leave the area. The regions' benefits would remain, and improved access to residences and businesses would make them more desirable.
7	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Cultural Resources**

Please begin construction on the south mountain loop 202. We need this freeway to cut down on congestion and bring jobs and business to the Laveen area. One of our elementary schools was the #1 elementary school in the state last year. We need this with the growth of our community.

Thank you for your time.

Kathleen Ward

Subject: 202 SanTan extension. . . . .

Good Afternoon,
My wife originally puchased the home we reside in back in 1987, making her an original owner in the Mountainside subdivision. In 1985 as I recall, we supported for and subsequently voted for the plan to build the loop freeway system circumnavigating the valley while we were living in another neighborhood.To date the only portion of that freeway not built, much to our dismay, is the portion that now ultimately affects us the most. I feel that it is high time that that last section of the 202 SanTan freeway around the back side of South Mountain be built without delay. The people spoke on this issue long ago, and it is unconscionable that all of our votes be ignored , regardless of how long ago it was. We tire of having to deal with living in what has become known as "The World's Largest Cul-De-Sac". I would further suggest that it not be built on reservation land as many have suggested. The fewer entanglements we engage in with that delightful "Sovereign Nation" the better off we will be. When Greg Stanton was a city council member representing the area he stated that this section of the freeway "Would never be built on HIS watch" ! I never voted for him because of that statement, and it is unfortunate that he is now our Mayor, because he won't support what needs to be done. FINISH THE FREEWAY PLEASE !
Sincerely,
Ken Ward

COMMENT RE: SOUTH MOUNTAIN FREEWAY

I would like to urge that there be a stipulation that commercial billboards (including electronic) are not allowed anywhere along the entire length of the proposed South Mountain Freeway. We live in a beautiful state where magnificent scenery surrounds our roadways; the South Mountain Freeway will be no exception. These same roadways shouldn't subject us to the seemingly endless stream of advertising that pervades the rest of our lives. An Arizona Court of Appeals decision found that billboards (including electronic) were illegal in relation to the Arizona Highways Beautification Act.

Visitors provide vital economic activity for Arizona and an unmarred landscape helps promote tourism. We are blessed to live in the gorgeous State of Arizona where it's not unlikely to be rewarded with a scenic view at every turn. Let's take action to make sure it stays that way.

Rich Warren

richwarren13@yahoo.com

Code	Issue	Response
1	**Visual Resources**	The State of Arizona (through the Arizona Department of Transportation) administers an Outdoor Advertising Program as mandated by the Federal Highway Beautification Act. Arizona's program provides regulations for the permitting, placement, and maintenance of outdoor advertising signs along Interstate highways as well as State highways within Arizona. The State statutes (Arizona Revised Statutes §§ 28-7901 through 28-7915) and the State rules (R17-3-701 and R17-3-701.01) provide that the Arizona Department of Transportation must regulate any sign that is within view of, directed at, and intended to be read from the main traveled way of a controlled highway. (A controlled highway is any highway that is part of the National Highway System along with specific State routes. The South Mountain Freeway would be both a State route and part of the National Highway System.) While the Arizona Court of Appeals did decide in November 2011 that electronic billboards violate the 1970 Arizona Highway Beautification Act, a new law was passed by the State Legislature that banned such billboards in much of the state but allowed them in most of Maricopa County and parts of Pinal, Yuma, and La Paz counties. Weeks later, the Phoenix City Council created a zoning ordinance to regulate such billboards on city streets and highways. Chapter 7, Section 705, of the Zoning Ordinance of the City of Phoenix does not permit billboards to occupy public property or to extend across a property line where such property line borders a public highway. Electronic messages are permitted only on land zoned as commercial or industrial or zoned as a nonresidential use in Residential Districts. Under current zoning, this eliminates most, if not all, of the land along the E1 Alternative. Such signs might be permissible along portions of the W59 Alternative. Such signs may not be illuminated between 11 p.m. and sunrise "when (1) located within one hundred fifty (150) feet of Single Family Residential zoned property and (2) visible from such development or property." Erection and operation of any billboards on Gila River Indian Community land would be subject to regulation by the Gila River Indian Community.

Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 12:45:09 PM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

2 3 The proposed freeway would cause more problems than it would solve and would provide only short-term congestion relief. ADOT needs to focus instead on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

4 5 The freeway would have very detrimental effects on our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, and valuable public spaces will be lost. The freeway would set a terrible precedent by demolishing what should remain a protected area.

6 The freeway would also exacerbate urban sprawl forcing Valley residents to remain vehicle-dependent, and increase residents tax burden in order to support infrastructure so that others can live farther and farther from a city center.

1 Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Mr. Craig Warren
7857 W Crocus Dr
Peoria, AZ 85381-8526
(623) 878-3189

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Biology, Plants, and Wildlife**	

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
6	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

Subject: Public input regarding Loop 202 South Mountain Freeway
Date: Tuesday, July 23, 2013 5:32:19 PM

1 2 3

I am writing to express my opposition to the Loop 202 South Mountain Freeway. My home will be very close to the freeway and my biggest concern is the increase in air pollution that will result from the freeway traffic. I also believe it is wrong to cut roadways through the ridges of South Mountain Park/Preserve. I understand the need for new freeways but I do not think we should destroy any part of the South Mountain Park/Preserve in order to build a freeway. South Mountain Park is a natural treasure and should be protected from this kind destruction.

Thank you,

Susan Waters
Ahwatukee Resident

Code	Issue	Response
1	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Draft Environmental Impact Statement pages 4-16 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

From: Ravi Watts
To: Projects
Subject: Not too late to comment on the South Mountain DEIS I hope
Date: Wednesday, July 24, 2013 4:37:36 PM

Good afternoon,

I would just like to say that a 900+ page study is not really public friendly, and this is coming from someone who is familiar with reading research publications on the daily. My name is Ravi Raj Watts, and I live in Laveen. Having switched my standpoint from 2002 (pro-202) to where I am now, currently in opposition, I feel like there is not enough justification for this proposed freeway through the preservation/reservation. Sure, projected growth by 2035 is estimated to be large, and with it comes more roadway congestion, but I think the greater issue is an inappropriate amount of vehicles/motorists.

1

Why does every single commuter require their own vehicle in Phoenix? Surely there are some families and carpools from neighborhoods to workplaces, but the majority of traffic and congestion could be easily avoided if the public took mass transportation more seriously. Rather than destroy a natural habitat that is the south mountain preserve with an immense freeway, we should implement better public transportation.

2

That is my brief comment
Sincerely,
Ravi Raj Watts

THE FACILITATOR: Thank you. Jim Vaaler.

MR. VAALER: Yeah, thank you for the opportunity to speak, just got basically two words for you, no-build. I think the purpose and need for this freeway is outdated. I think you could improve existing infrastructure and use mass transit in place of this freeway.

My other concern is the intrusion this potential freeway would have on South Mountain Park. I think you set a very bad precedent by proposing to build it in the park. Any deletion from the park, I mean, 30 acres is unacceptable. Those are the two points I'd like to make.

Thank you.

THE FACILITATOR: Thank you.

Anybody who would like to speak, please go out and register at the registration table. We'd be happy to hear you.

Larry Weeks. Larry, could I ask you to go to this microphone, please. Trying to do it equally for the court reporter.

MR. WEEKS: Good afternoon, my name is Larry Weeks. I'm in the 85048 zip code, specifically in the Lakewood and Ahwatukee area. And my concerns are the increase in noise and increase in pollutants

that are expected by vehicles that will traverse in that area. Also, as a resident of the Lakewood area I'm concerned about the elementary school in the Lakewood area, and the high school in that area, although we've capped at 32nd Street. What will happen, then, is the folks from 24th Street through 40th Street will head east to 40th down Chandler Boulevard, increasing traffic flow.

Also, the parents that drop off at Desert Vista will begin to use the Lakewood community more frequently to short-cut their way past the elementary school to 40th Street, so I project a bottleneck happening at 40th Street and Chandler Boulevard. I see an increase in traffic, local traffic, coming from the 24th Street, 32nd Street areas up to 40th Street backing up to Chandler Boulevard. And Chandler Boulevard, the morning commute is backed up now, and as folks make decisions whether or not to take the 48th Street arterial routes or try to make their way to the 10. So if the 202 is an alternative for the folks going downtown, I don't really see them, you know, they're going to have to make some decisions as to whether or not to go all the way down to 59th or 51st, and then cut back to downtown. so -- but my main concern is the increased traffic in

the Lakewood community area.
That's it.
THE FACILITATOR: Thank you.
Patricia Weeks.
MS. WEEKS: All right. Actually, I just wanted to expound upon what my husband said. And my concern is the fact that you're closing off 32nd Street off of Pecos, off the 202. The concern, just to elaborate a little further, is specifically off of Fry Road and Liberty, and the amount of traffic that will be going through that Lakewood area. Right now we have concerns where there is an elementary school in that area, and there is police officers there to try and slow down traffic.
And the quantity of traffic is what my concern is, because it's just a complete loop in that Lakewood area. Like to just kind of make sure that maybe there's some type of provisions that are made, maybe, to eliminate some of that traffic. Please consider that. Thank you.
THE FACILITATOR: Thank you.
If anybody out here would like to speak, please go out and register at the front desk here and then come on back in.

better because you already have connections.

The 59 gives the Laveen community a way to get to the main freeway so they can go to downtown Phoenix or to the west regardless of where they live in Phoenix. So 59 is more involved for the living community to connect to downtown and the rest of the city.

On top of that, to me it feels like there is no freeway connecting Laveen into any of the city. So I think this might allow us to connect to the city a lot better, to let us bring our ideas to the city, commute back and forth.

I guess that's all I have.

***

PATRICIA WEEKS: Our concerns are once they close off 32nd Street off of Pecos and 32nd Street, the road that goes from Frye off of 32nd Street into the Lakewood subdivision and out through --

LARRY WEEKS: -- will be used to bypass Chandler Boulevard getting to 40th Street to get to the freeway on the 202 and the Briarwood exit.

PATRICIA WEEKS: That's one of the concerns.

LARRY WEEKS: The other concern is there is

Code	Issue	Response
1	**Design**	The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix. Construction of the interchange would have resulted in the displacement of over 100 homes and the interchange would have been located near an existing high school. Access to 32nd Street is to remain available from Chandler Boulevard and other east–west local streets. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the freeway (and the removal of an access point at 32nd Street) on the local street system. The City study found no adverse effects on the local street system from the proposed freeway (see Appendix 3-1 in the Final Environmental Impact Statement). The traffic projections for Chandler Boulevard (see Figure 3-12, on page 3-29 of the Final Environmental Impact Statement) show a reduction with the proposed freeway when compared with conditions without the proposed freeway.

Code	Comment Document

an elementary school in the Lakewood subdivision and we will see an increase in traffic.

PATRICIA WEEKS: And currently there are police officers there to make sure people are slowing down just with the roads open right now.

LARRY WEEKS: So there's already things going on in the Lakewood area that is going to increase with this capping of the on-ramp at 32nd Street.

The other thing is we'd like to know what the projected increased volume of vehicles will be on 40th Street and Chandler Boulevard once the project is complete. So moving east on Chandler and south on 40th Street as they make their way down the ramp to the new 202.

And then I don't know if we pose it as a question, but what provisions have they made as far as to eliminate the traffic that may go through the subdivision, which is the Lakewood subdivision, once they close off 32nd.

It would be nice to close Frye Road too.

Mike Franklin, I live in South Tempe. South Mountain is the place I go hiking most, because it takes less gasoline for me to get there. There are parts of South Mountain that kind of take you out of the city, and there aren't too many places you can go to around here like that. It's always interesting to find new discoveries, there's lots of petroglyphs, it's unique. It won't be unique if the west end is chopped off with eight lanes of traffic, polluting the air, making it noisy, totally destroying the natural experience of being up in the mountains. To do this, to take about five percent of the traffic or whatever it is off of the interstate just doesn't seem worth it to me.

I think once you've -- the oil production gets down we're going to have to find better ways of transportation or we're going to get stuck with this expanse of asphalt there forever, at least during my life. And I vociferously disagree with that tact of moving traffic, it's kind of a 20th-century solution to a 21st-century problem. That's what I have to say.

THE FACILITATOR: Thank you.

Patricia Weeks.

MS. WEEKS: Hello. Actually, I just want to expound upon what my husband said. Can you guys hear me? Can you hear me?

Subject: I oppose Loop 202 extension
Date: Wednesday, July 24, 2013 12:10:12 PM

To whom it may concern,

I want to be put on record as being opposed to the Loop 202 extension as currently proposed.

1 2 3

If we can learn anything from the Great Recession, it's that pursuing policy that extends urban sprawl is reckless and short-sighted. Adding more freeways and extensions only exacerbates the current situation, it will not improve it, and it is potentially harmful to both the Gila River Community and South Mountain Park.

1	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Hello. I would like to give my input on the Loop 202 extension. Either it needs to be farther South so as not to encroach on the existing developments, or it needs to be scrapped! The money spent on buying the homes in the path could be used to facilitate a deal with the Tribe to use their land.

Thank you!

NO they should not build on to the 202 South Mountain there is enough freeways where people can commute or just take the streets.... people are always complaining that we are in debt so why waste money on a freeway that's not needed.

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.

1

It's hard to believe that we are still attempting to build freeways based on the old Wilbur Smith Report of 30 years ago. I thought the Paradise Freeway, which was stopped by Governor Symington, would be the final chapter of that report.

2 3

All the alternatives presented here result in the loss of some of the South Mountain Preserve. No alternatives have been explored that don't have this result. This concerns me. The so called "alternatives" W101, W71, or the Recommended Alternative, are not very relevant. All alternatives leave 140,000 vehicles a day on our crowded, polluted freeways.

4

5

Some of ADOT's other studies are more helpful. May I refer you to the ADOT Passenger Rail Corridor Study of December 2012. This provides some REAL alternatives. The study concepts of the red and green routes connecting all the way from Avondale to LA could the beginning of something big – a high speed rail line connecting our two largest cities and the jump-start of a high speed connection from Avondale to Los Angeles. All we need is more money!

6

The billions that would be spent on more freeways might be better spent on mass transit. Mass transit will take more cars off the freeways, and will be the wave of the future.

Frank Welsh
Phoenix .AZ

2	**Section 4(f) and Section 6(f)**	
3	**Alternatives, E1 Alternative**	
4	**Alternatives**	Many alternatives were considered to avoid having to alter the South Mountains. These are discussed in the Final Environmental Impact Statement in Chapters 3 and 5. South Mountains Avoidance Options is the subheading on page 3-13 where these discussions begin. Table 3-5, on page 3-12, summarizes alternatives such as using Ray Road, extending U.S. Route 60, tunneling through the South Mountains, and bridging the South Mountains. The latter two are described on pages 3-16 and 3-17 and in text that begins on pages 3-13 and 5-20. The reasons these alternatives were eliminated are made clear.
5	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). 1	Juanita Welsh Document Created: 7/16/2013 12:28:34 PM by Web Comment Form I have been studying the South Mountain Freeway Alternatives for years now. I voiced my opinions when the first public meetings took place. I do not understand why developers would want to merge the SMF at the 59th Ave junction. The grid lock now at rush hours traveling West is a mess. It makes no sense to add to this by merging the SMF at this point. The most logical option is the W101 Alternative Central Option. AT this juncture traffic can go North, East or West. At the 59th juncture the options are only West or East.

Reporte Del Impacto Ambiental
FORMULARIO DE COMENTARIOS

Comentarios Adicionales: I WOULD APPRECIATE YOUR RECONSIDERATION OF THE PLAN TO BUILD THE SOUTH MOUNTAIN FREEWAY. WE HAVE SPECIFICALLY CHOSEN TO LIVE IN AHWATUKEE BECAUSE OF ITS RELATIVE REMOTENESS AND QUIET LIFESTYLE. I FEAR THAT THE PROPOSED FREEWAY WILL DO MORE HARM THAN GOOD OVERALL. (1)

- ENVIRONMENTAL HARM: THE NOISE AND DESTRUCTION OF A PORTION OF SOUTH MOUNTAIN PARK, THE DISPLACEMENT OF WILDLIFE, AND THE ADDED POLUTION ARE ALL TERRIBLE EFFECTS OF THIS PLAN. (2) (3) (4) (5)

- SAFETY HARM: THE PLACEMENT OF THE FREEWAY IS CLOSE TO EXISTING HOMES AS WELL AS THE KEYSTONE MONTESSORI SCHOOL. THE USE OF TRUCKS (WHICH WILL UNDOUBTEDLY OCCUR) ALONG THIS ROUTE TO BYPASS I-10 POSES ANOTHER GRAVE DANGER CONSIDERING MANY OF THOSE TRUCKS CARRY HAZARDOUS MATERIALS. (6) (7)

QUALITY OF LIFE HARM: MANY PEOPLE SPECIFICALLY MOVE TO AHWATUKEE TO LIVE APART FROM THE HURRIED AND CROWDED ATMOSPHERE OF THE CITY AND NEARBY INDUSTRIAL AREAS. THE NOISE POLLUTION FROM GREATLY INCREASED TRAFFIC, THE VISUAL POLLUTION FROM THE UNSIGHTLINESS OF A FREEWAY (CLEARLY VISIBLE FROM THE BEAUTIFUL SOUTH MOUNTAIN TRAILS), AND THE CONCENTRATION OF EXHAUST POLLUTION WILL ALL HAVE DELETERIOUS EFFECTS ON THE OVERALL QUALITY OF LIFE IN THE AREA. (1) (8) (5)

I URGE YOU TO NOT BUILD THE SOUTH MOUNTAIN FREEWAY. THIS ACT WILL RUIN THE QUALITY OF LIFE WE HAVE ALL SOUGHT OUT IN THIS COMMUNITY. (9) (1)

1	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Draft Environmental Impact Statement pages 4-16 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
2	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Section 4(f) and Section 6(f)**	
4	**Biology, Plants, and Wildlife**	
5	**Air Quality**	
6	**Purpose and Need, Truck Bypass**	
7	**Hazardous Materials**	
8	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-170 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
9	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

FORMULARIO DE COMENTARIOS

Gracias por participar en el proceso de recopilación de comentarios sobre el Reporte del Impacto Ambiental del proyecto de la autopista South Mountain.

ADOT alienta a todos los interesados, a presentar sus comentarios por escrito sobre cualquier aspecto del Reporte del Impacto Ambiental. ADOT considerará todos los comentarios en la preparación final de este reporte e incluirá las respuestas a todos los comentarios, conclusiones finales sobre impactos potenciales, y la recomendación final de ADOT.

Para ADOT es muy útil recibir comentarios sobre:

- Alguna alternativa en particular, cúal sería su impacto ambiental y las medidas propuestas para reducir dicho impacto.
- Cualquier información que usted sienta que está incompleta o incorrecta.
- Cómo le afectará a usted la acción propuesta.

Los comentarios deben ser recibidos o tener el sello postal con fecha límite del 24 de julio de 2013.

Subject: Comments in opposition to South Mountain Freeway

May 28, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

More commitments by politicians broken.

(2) (3) South Mountain Park is the largest city park in our nation and it was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(4) Taxpayers flip the bill for urban sprawl and developers' profits.

(5) This newest freeway will force residents to remain vehicle-dependent while we pay for roads that developers and home builders can use to gain more profit through more construction. Residents are pushed farther and farther from a city center.

(6) Building more roads is not the answer.

(7) ADOT needs to focus on planning for and investing in long-term transportation solutions, especially rail and other mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(1) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Use the tax dollars that would be spent on this project to expand light rail in the metro area and high speed rail between PHX and Tucson. Thank you.

Sincerely,

Mr. Sam Wercinski

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Section 4(f) and Section 6(f)**	
3	**Biology, Plants, and Wildlife**	
4	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
5	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.

Subject: South Mountain Freeway comments

Please add the following to the discussion:

1 2 3 4 5 6 7 8 9

1. We live near Desert Foothills Parkway (DFP) and I understand that this is where noise and air quality impacts would be worst, given the road's slope approaching the hill. What is to be done to mitigate this? Can the grade be reduced?
2. Has anyone considered how construction will, I'd guess, drive every snake and scorpion, of which we all have plenty already, right through our neighborhoods?
3. Will funding be provided to assist schools with improvements to air filtration systems?
4. Has growth inducement potential on the reservation and the secondary effects of that growth been fully considered?
5. Sorry for my ignorance, but how is DFP to be connected, via a bridge?

I am not opposed necessarily, and part of me likes the idea of *some* good commercial development on the reservation and our better integration into the metropolitan area, but, of course, I think a better alignment would be 1/2-1 mile south of Pecos, if that can be worked out.

John Werner

Code	Issue	Response
1	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes, which may be elevated above the roadway, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Valley and across the country.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
3	**Noise**	Noise walls would range in height from 8 feet to 20 feet tall in the Ahwatukee Foothills area. Noise barriers are designed to provide a substantial reduction in noise levels along freeways, but do not and cannot eliminate noise from passing into nearby neighborhoods. Just because noise can be heard does not mean that noise barriers are ineffective. Even at the levels considered "acceptable" by the Arizona Department of Transportation Noise Abatement Policy and Federal Highway Administration regulations, noise is still readily audible and can be heard for some distance from the freeway. Noise modeling is used to determine the most appropriate and effective location for noise barriers.
4	**Design**	The current level of engineering is used to determine the limits of environmental and construction impacts due to the proposed freeway. The location and profile of the freeway are evaluated to minimize potential changes to the freeway as the design level would progress. The current level of engineering is an accepted industry standard for determining impacts. (See Final Environmental Impact Statement sidebar on page 3-40 for more discussion.)

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
5	**Construction**	Issues with pests are not assessed in the Draft Environmental Impact Statement. Temporary construction impacts are discussed on Draft Environmental Impact Statement page 4-173.
6	**Air Quality**	At this time, the mitigation measures do not include funding to assist schools with improvements to air filtration systems.
7	**Secondary and Cumulative**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
8	**Design**	No bridges are proposed to connect the proposed freeway to Desert Foothills Parkway. Embankment material would be used to construct the on- and off-ramps at Desert Foothills Parkway.
9	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 6:14:18 PM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit (e.g. expanding the rail). (3) The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(4) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, (5) more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(6) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, (7) wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(8) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(1) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Mr. Terry Whitaker
2678 E Lines Ln
Gilbert, AZ 85297-8136

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Caleb Whitaker Document Created: 7/22/2013 10:34:55 AM by Web Comment Form

(1) I understand that the "carrot orange" coloring on the tail of the male Desert Chuckwalla (Sauromalus ater) is unique to South Mountain. Hasn't this been identified as a separate species or sub-species? Why was this not mentioned in the Draft EIS? The EIS made it sound as if the Chuckwallas found on South Mountain were the same as any others found in the Southwest. I do not believe this to the case. The Chuckwalla population found on South Mountain is unique and deserving of special protection. It cannot be found anywhere else, and the freeway will significantly disturb its habitat.

(2) I do not support the freeway for this and many other reasons. The freeway may have been a good idea thirty plus years ago, but in the meantime a large community has grown up in the proposed route. It would be a shame to ruin this fine community, especially when there is so much open land to the south. If the Gila River Indian Community will not allow the freeway on tribal land, then another route should be found even further to the south. The freeway should be directed away from people and homes, not right in backyard of tens of thousands of people. There are other and better options.

(3)

Code	Issue	Response
1	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The coloring of the male common chuckwalla is unique to the South Mountains; however, it is one of two color patterns and is not a separate species or subspecies (see Arizona Game and Fish Department's abstract for the common chuckwalla). The color pattern for the common chuckwalla was not mentioned in the Draft Environmental Impact Statement because that was not relevant to the study.
2	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Draft Environmental Impact Statement pages 4-16 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
4	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Alternatives even farther south have been considered, such as an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Draft Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the purpose and need fro the proposed action as part of a regional transportation network and, therefore, it was eliminated from further consideration.

Subject: South Mountain Freeway Comment

I have many questions pertaining to the proposed South Mountain Freeway.

1 One of the most important is that of the current level of pollution that is already being experienced along the proposed route. What, if anything, is going to make this current situation any better by adding thousands of vehicles passing through this area on a new route around the city?

2 On just about many given day when an inversion layer is present, you can see the brown air in the area with the mountains as a backdrop. How can anyone with any level of intelligence say that this situation will improve with a major highway added into the mix? This pollution tends to sit in the area until there is a strong enough air flow to push that dirty air out of the area, which takes weeks to happen in most cases.

3 No matter if above ground, at ground, or below ground, the same issue is present and needs to be addressed with a plan. With the use of alternative fuels by fleets on the rise, why couldn't the route be restricted to alternative fuel vehicles, much like the HOV lane is today on existing highways. This would have minimal impact on the environment along the existing route, take advantage of the current trends in alternative fuels, and allow for a speedy alternative for those vehicles qualifying to use such a route.

Thanks

Doug Whitfield

MR. WHITMAN: I'm just against it. I've been against it, and I just feel like a lot of people are. And I just don't want it to happen.

I mean, it's impacting our community a lot. And on the video, it just seems like they are more concerned about other historic places, in different towns and stuff, but little interest in ours and did whatever they wanted. So that's basically it. That's basically it.

1 2 3 4

No, no, no. This freeway will not produce long term relief to traffic congestion and will only worsen air quality. More freeways are not the answer. Carving up more of our desert is not the answer.

Code	Issue	Response
1	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). By 2035, east- and westbound motorists on Interstate 10 between State Route 101L (Agua Fria Freeway) and State Route 202L (Santan Freeway) are expected to experience stop-and-go driving for over 3 hours every day. This is for a distance of nearly 30 miles. A new freeway in the Study Area would distribute commuters over an additional freeway facility. As a result, the duration of stop-and-go traffic on the region's freeways would be reduced.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Subject: 202 Expansion

1

As a resident of Laveen, I am glad to see that after "30 years" the 202 expansion will finally happen at some point in the future. Having viewed the material, it's disappointing that we may not have a true loop around the downtown area unlike other metropolitan areas in which I have lived. If long range planning had been in place – the build up around the Loop 101 could have been avoided. Many of our visitors are surprised that all traffic must travel through the downtown area. The preferred access from 59th Ave is obviously the cheapest and least intrusive but I fail to see how this alternative will relieve Interstate 10 of the congestion that builds everyday between 91st Ave and 7 Ave. In addition, this route does not provide much of an improvement for access to the west valley from the Laveen area where much of the anticipated growth will occur.

Obviously, my family would prefer that the 202 loop connect at the 101 and failing that, further out at the 71st interchange. 59th Avenue seems like a short-sited solution to the current problem.

I support the "No Build" option.

1 2 3 4

The cost is just too high and Sierra club lists this as the worst project for transportation environmentally and essentially relocates Indigenous peoples and destroys their sacred sites.

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Sierra Club Report**	The Arizona Department of Transportation and the Federal Highway Administration respectfully disagree with the referenced Sierra Club Report. As noted in the Final Environmental Impact Statement, when compared with the No-Action Alternative, the Preferred Alternative would result in less energy consumption (page 4-172), regional improvements to air quality (page 4-74) that would be expected to produce health benefits, and economic benefits of reducing regional traffic congestion (page 4-65), and would be consistent with local and regional long-range planning efforts (page 4-18).
3	**Acquisitions and Relocations**	No residences on Gila River Indian Community land would be acquired and no relocations of people living on Gila River Indian Community land would occur.
4	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Subject: No S. Mountain Freeway #1315503651
Date: Tuesday, June 04, 2013 8:04:16 AM
Attachments: image001.png

6/4/2013 12:46:09 AM
I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative. (1)

The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them. (2) (3)

South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases. (4) (5)

The freeway would also negatively affect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area. (6) (7)

The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center. (8)

Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you. (1)

Sincerely,
Cliff Wilkinson

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

I am a resident of Ahwatukee area and would love to see our commuter trains expand to this area.
This would eliminate the need for more freeways and added pollution.
I voted for the trains years ago but they never came to our neighborhood.
I believe the train could be elevated above the interstate 10 with ease , like that of the Denver lines.
Why can't we utilize what we have more effectively and thus eliminate the need for more freeways that would only serve the community more. THE city of Phoenix should spend our tax dollars with the future in mind , let's campaign for alternatives which would make our city more livable.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

us up to all of the Valley, and also help us to stay and keep our dollars in Phoenix as well.

Thank you so much. And appreciate your time.

THE FACILITATOR: Thank you, Ms. Herring. Our next speaker is Ethel Williams. Welcome, Ms. Williams, you have three minutes.

MS. WILLIAMS: Thank you. Thank you for hearing me, and thank you for being here. Thank you for addressing our problems that we're having in the Laveen community. I know that these improvements will help the whole community and the surrounding communities.

Mainly, I moved to Laveen after my daughter, who just spoke, and my son, and her mother-in-law moved to Laveen, because everything looked promising, and we thought it would be a very good move to help improve some of the things that are going on in our surrounding areas in the City of Phoenix area.

But I think that this will bring a lot of help to us, as far as accidents are concerned, because, like she said, the traffic problems are horrendous during the rush hours. And for my

family's safety, if for nothing else, I say yes, let's do it. And the 59th Avenue Freeway is the one that I would be concerned about.

Thank you very much.

THE FACILITATOR: Thank you, Ms. Williams.

We welcome our next speaker, Diane Barker. Welcome, Ms. Barker, you have three minutes.

MS. BARKER: Oh, thank you. And I imagine you're the ADOT board; is that who I'm addressing? Can I get you to respond? Okay. Now that you notice, I came in with my suitcase. I am a person that believes in [unintelligible]. I have just seen your video, and I've read the bulk of your EIS. And I would like to apologize up front if what I have to say offends anybody, but I believe it's the truth, certainly mine.

I favor a no-build. 40 CFR 15024 stipulates that the Environmental Impact Statement conducted by ADOT and all will be a rigorous exploration of alternatives to a real problem, need an action herein, of any possible growth in population with socioeconomic viability, as we are one of the USA's largest and fastest-growing counties, Maricopa.

Therefore, completion of the South 202 Loop

Code	Issue	Response

Code	Comment Document

I-10 plugs up, they all hit the surface streets, and the surface streets from South Phoenix to Laveen just get jammed up. A lot of accidents are starting to happen, more serious accidents than ever before.

So I am in favor of building the freeway. I have been in the path of the freeway since '85 when it was designed, and we voted for it in '86. And we are still waiting to see whether this is going to be built or not. But I would strongly suggest that the freeway be built.

Thank you very much.

ANONYMOUS: Well, we are for it, wish it would happen. I have been following it since 1985. Nothing has happened that we can see. And I live on 51st, off of 51st Avenue. And right now the traffic is horrendous. Two miles down south of where I live, the Vee Quiva will open its new phase in July with seven restaurants and a resort, which they don't have right now. So it already -- 51st Avenue will be a freeway. And that's our concern.

We want the freeway.

ETHEL WILLIAMS: The main thing I would like to do is say that my whole family -- not my whole family, but two-thirds of us, three-fourths of us, moved to Laveen because of all the things they promised

1 to do before we moved in there. One was to build a
2 bridge across 67th Avenue at the river.
3 And right after we moved in there, I remember
4 that bridge was closed by the river. We had no access
5 across the river for like -- it might have been four
6 months or five months; I can't remember. I got so used
7 to it that I wouldn't even think about going across.
8 But we do need that freeway, too, which would
9 be the W-59 route we are talking about.
10 We need a community center. When we first
11 moved in there, they had the -- we are seniors; my
12 husband and I, we're seniors. When we first moved in
13 there, they had the SilverSneakers program at the Cesar
14 Chavez High School that they closed down. And we have
15 never had any input about what facility we're going to
16 use for SilverSneakers since then.
17 What else? When I travel from my daughter's
18 house to my house, sometimes I take forever getting
19 across Baseline just to go -- like if I want to go to
20 Fry's. I do live to the right. Sometimes I exit her
21 house to go to Fry's or to go to the shopping center on
22 51st. And it takes forever. It takes a lot of time
23 just to make the turn to get out of that complex, out
24 of the complex where they live. And she lives in
25 Cottonfields, right there at 56th and Baseline.

We do have a light at 67th, which makes it a lot better for us. We didn't have the light for a long time. But they did put a light in, I guess, about a year or year and a half ago. Which I knew if they did that at the place where we exit from her home, it would make it a lot better too. They don't have a light there. They have one four blocks down the street. And we can sit there forever trying to get out of there.

And I guess that's about it for now. That's all I can think about right now.

Oh, except for the infrastructure. They did promise us we were going to have shopping centers and other things to make it convenient for us to live in that area. And they have never materialized.

My comments are certainly my own, and they may not be many of the other people's.

DIANNE BARKER: I am a resident, citizen resident here in Phoenix and have lived in the Valley for over 25 years.

I was raised in Ohio, The Buckeye State. And I do want to thank you for this opportunity to be heard and believe I will be considered by ADOT.

I am favoring no-build scenario. 40 CFR 1502.4 -- that's federal regulations -- stipulates that the Environmental Impact Statement, this EIS, be

I do agree with running that freeway through, but I think you should go around that neighborhood out there and around the outskirts of South Mountain so that the sacred area with the Indians is not upset and those houses are not upset and we're not paying millions of dollars to people to move to a different location so we can destroy their homes.

Subject: South Mountain Freeway Draft EIS and General Comment

As a resident of Ahwatukee, I am supportive of the proposed Loop 202 South Mountain Freeway expansion/ construction, in fact I would further request that we begin construction as soon as humanly possible with the proposed 59th Avenue alignment. As resident in the area for many years I have seen this project come and go, it is my suggestion that we simply make it work on our own land, whether we have to buy up houses, Churches etc. I just don't want to waste anymore time or money dealing with the Indian Community any longer. It would appear that they just want to bog the process down with potential options of construction on their land, and then pull out of the options later, so the project never gets constructed even though it would be a huge benefit for their community. If they don't have the foresight to see that, that's fine. Maybe it is difficult for them to see the benefit that the Loop 101 has provided for the Salt River Community. In any case I would think it best to just leave their land out of the equation and if they want future connections to the freeway then they should have to pay for it and it should not be a part of this budget. Let us please move forward with the project and build the freeway already, which is at least a decade overdue. Thank you for your time and consideration.

1

Sincerely,

Nathan Williams

1	**Alternatives**	Federal law prohibits the denial of access to any community. Thus, traffic interchanges would be located along the freeway where it borders the Gila River Indian Community (see Draft Environmental Impact Statement page 3-51). Roadway connections on Gila River Indian Community land to the traffic interchanges would be the responsibility of the Gila River Indian Community, in coordination with appropriate jurisdictions.

LOOP 202
South Mountain
Freeway Study

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. The alignment along Pecos road is unacceptable due to the following.

1 Our concerns are: Air Pollution!!
2 3 • Noise - major issue
• added community traffic
4 • negative visual impacts
- ugly noise walls impeding views
5 - commercial signage
6 - electronic billboards: hideous, glaring, visible flashing obnoxiously for miles
7 We need Pecos road for what it currently is. Easy access out of Club West and the Foothills communities. Limited traffic stops and easy access the Desert Vista High School without having to cross over a freeway or more lanes.
8 If there is damage during construction to adjacent properties such as windows or walls - what is the recourse.

Optional

Code	Issue	Response
1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Noise**	
4	**Traffic**	The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix. Construction of the interchange would have resulted in the displacement of over 100 homes and the interchange would have been located near an existing high school. Access to 32nd Street is to remain available from Chandler Boulevard and other east -west local streets. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the freeway (and the removal of an access point at 32nd Street) on the local street system. The City study found no adverse effects on the local street system from the proposed freeway (see Appendix 3-1 in the Final Environmental Impact Statement). The traffic projections for Chandler Boulevard (see Figure 3-12, on page 3-29 of the Final Environmental Impact Statement) show a reduction with the proposed freeway when compared with conditions without the proposed freeway.
5	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-170 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
6	**Visual Resources**	Decorative or aesthetic treatments are sometimes applied to noise barriers and other freeway structures to help them blend into the surroundings and/or fit in with the tone of the community. The Arizona Department of Transportation Roadside Development Section is responsible for assigning a wide range of standard treatment applications and wall materials, including color, to noise barriers and other structures. Typically the community where the wall will be constructed would work closely with its City Architect or planning department to decide on a theme for the wall. Usually, this can be accomplished by using the Arizona Department of Transportation's standard applications. The Arizona Department of Transportation has expanded its selection of acceptable wall treatments to include thematic emblems or symbols and, in some cases, more than one color.

(Response 6 continues on next page)

Code	Comment Document

Code	Issue	Response
6 (cont.)		As an example, for State Route 101L (Pima Freeway) in Scottsdale, the City of Scottsdale chose to add public art to the noise barriers. The City's intent went above and beyond the Arizona Department of Transportation's guidelines of reasonable aesthetic treatment and, therefore, the Arizona Department of Transportation did not fund the aesthetic portion of the project. The Arizona Department of Transportation and the City of Scottsdale entered into an intergovernmental agreement for the purposes of allowing Scottsdale rights to design and construct artistic embellishment on the Arizona Department of Transportation-supplied noise barrier. The Arizona Department of Transportation provided the funds for construction of the noise barriers themselves, but the City of Scottsdale provided the funds to cover the aesthetic portion of the walls. Pages 4-158 and 4-159 in the Draft Environmental Impact Statement explain the process municipalities might take to achieve the desired aesthetic treatment for noise barriers or other structures.
7	**Visual Resources**	The State of Arizona (through the Arizona Department of Transportation) administers an Outdoor Advertising Program as mandated by the Federal Highway Beautification Act. Arizona's program provides regulations for the permitting, placement, and maintenance of outdoor advertising signs along Interstate highways as well as State highways within Arizona. The State statutes (Arizona Revised Statutes §§ 28-7901 through 28-7915) and the State rules (R17-3-701 and R17-3-701.01) provide that the Arizona Department of Transportation must regulate any sign that is within view of, directed at, and intended to be read from the main traveled way of a controlled highway. (A controlled highway is any highway that is part of the National Highway System along with specific State routes. The South Mountain Freeway would be both a State route and part of the National Highway System.) While the Arizona Court of Appeals did decide in November 2011 that electronic billboards violate the 1970 Arizona Highway Beautification Act, a new law was passed by the State Legislature that banned such billboards in much of the state but allowed them in most of Maricopa County and parts of Pinal, Yuma, and La Paz counties. Weeks later, the Phoenix City Council created a zoning ordinance to regulate such billboards on city streets and highways. Chapter 7, Section 705, of the Zoning Ordinance of the City of Phoenix does not permit billboards to occupy public property or to extend across a property line where such property line borders a public highway. Electronic messages are permitted only on land zoned as commercial or industrial or zoned as a nonresidential use in Residential Districts. Under current zoning, this eliminates most, if not all, of the land along the E1 Alternative. Such signs might be permissible along portions of the W59 Alternative. Such signs may not be illuminated between 11 p.m. and sunrise "when (1) located within one hundred fifty (150) feet of Single Family Residential zoned property and (2) visible from such development or property." Erection and operation of any billboards on Gila River Indian Community land would be subject to regulation by the Gila River Indian Community.
8	**Construction**	Provisions would be taken to ensure adjacent properties would not be damaged during construction.

Sirs - this entire project, smf202, is a joke. Your DEIS states 'improved polution characteristics' are likely. My 5th grader can easily prove this wrong. How many ozone alerts have we had annually the past 10 years? I missed that in the report. Ahwatukee suffers, kids cough, get displaced, and see church and schools close. Further, you intentionally say nothing of TRUCK traffic using this bypass to circumvent downtown traffic. This is ludicrous. And by the way, it's a 30 year old plan! You morons. I could go on, but what is the point. Your pr machine is unstoppable. And laveen needs more min wage wal mart and gas station jobs.

Subject: Loop 202 South Mountain Freeway

When the portion of Loop 202 was constructed several years ago through the Lehi-area in Mesa, ADOT agreed to forego exits for several miles in order to preserve the lifestyle residents within Lehi were accustomed to. A similar approach for Loop 202 as it passes through Ahwatukee may make it more amiable for local residents while also reducing the cost to construct (fewer homes/businesses that would need to be acquired through eminent domain, etc.).

1

The 'existing' interchange at Pecos Road and 40th Street could remain with the Park and Ride facility nearby and perhaps one other exit (Desert Foothills Parkway?) where there are not many homes/businesses that would need to be removed to facilitate an interchange.

Traffic flows on this portion of the Loop 202 should benefit from having fewer points where vehicles are merging too.

Regards,

Tom Wilson

1	**Design**	The locations of the planned traffic interchanges were determined in coordination with the City of Phoenix. The current plan balances the need to minimize impacts on the adjacent community with the need to provide acceptable access to the region's transportation system. The spacing of the interchanges would be approximately 1.5 to 2 miles, which would provide acceptable weaving conditions.

Subject: Loop 202 South Mountain Freeway

First I will admit I am not happy with the W59 option because I live near (about 1/4) mile from where it will run but I was aware of the expansion and made the decision with eyes at least a little bit open.

With that out of the way, I see a big problem with both the w71 and w59 approach that may in the future mark this expansion as a big mistake. The problem is both approaches share the I10 freeway and will place an additional load on the freeway which is already at times near it's limit. Additional cost will be added to the project at some point to expand the I10 and it will only solve part of the problem because when a blockage occurs, both I10 and loop 202 traffic will be stopped. The best way to keep the traffic moving will be to share the freeway as little as possible and go with the w101 approach. I know the w101 will require redesign of the 101/I10 interchange but I suspect the cost will be less that fixing the I10 freeway to handle the additional load.

1

One additional wrong though about the expansion is it will be needed to handle the additional traffic from the Laveen area. I think this is incorrect for two reasons. The first reason much of the traffic I see on baseline road has to be people who would use the w101 because they are skipping the freeway system or have come in from Riggs road and they are not locals. The second mistake is Laveen is backed up against park land and Indian Reservation. Little additional traffic will come from either area and while the existing farm land will be developed, I think the existing road surface streets will be able to handle the traffic with the w101 expansion.

My background in software design has shown me that sometimes a little fix is not the solution to the problem and you have to bite the bullet reworking a big chunk of code to fix the problem correctly. Any option other than the w101 will come back to cause many problems in the future.

I am in favor of the South Mountain Freeway for these reasons:
- It will Complete the Phx Metro freeway system
- It will help lessens traffic on the I-10
- If we die to! have a freeway system, NO ONE area is exempt just because they don't want a freeway in their back yard - NO one does; that didn't stop it elsewhere
- The Ahwatukee residents don't think about or care that they produce massive traffic in Somebody else's neighborhoods.

4306

And the issue with Laveen is that it has always been planned as a lower-density overall area, which has grown significantly in population. And as we see these populations would need, moving in to Laveen and actually Ahwatukee, as well, we are ill-prepared to handle those social needs that come with that increase in population.

And it's not just the low-income populations, but it's others that also have that kind of need. So without the freeway, we're not going to have that concentration of resources or really much opportunity to develop that concentration of resources. So, like the hospital argument where we need to bridge the populations to give ample rooftop counts to support a hospital, the same is going to be true of any other social services and -- and other amenities or public resources that -- that are there to serve based on larger concentrations of population. That's all.

MS. WINKLER: I think I am in favor of this. I think this is a good idea. I live in the central city area, and I know that a lot of people in the Ahwatukee area may be in opposition to this.

But I particularly look at this as an issue of equality, that if the rest of the city all has to have freeways that border or come into their areas, that no one single area should be exempt. I think it will complete the grid system for the freeway if -- the freeway grid system.

And, actually, I -- I was talking to one of the -- one of the planners or engineers, and I think the best route would be to go through Tolleson and connect to the 101. But he was saying that there is a lot of issues regarding that. So he said it'll probably be 53rd Avenue or somewhere around there.

But I personally think that the logical route would be to connect to the 101 and, you know, that, that far-most route. So, no, but, overall, I just think it's a good idea. I think it's, like I said, a matter of equality, that no one area should be singled out that's not -- just because they don't want it coming into their neighbor -- around their neighborhoods.

And, although, I am not in favor of it prompting more people to move here. I was looking at the information, and it was saying that supposedly 3 million, close to 3 million more people, are going to be moving here within the next 20 to 30 years. And I certainly don't think -- believe we need 3 million more people in a land of finite resources.

But that's not for -- Yeah. I don't understand this constant push for more tourists, more households, more homes, more whatever. It's like no other city in this country is so -- more about pushing, pushing more and more and more and more people into an area as the Phoenix area. And I just don't -- I just don't get that because I think it's making the Phoenix metropolitan area just unlivable.

Driver and Nix Court Reporters - (602) 266-6525

And that's why I was actually just talking with one of the planners and was saying about how, when it starts to get hot, that people just, all of us, starting to get -- start to get angry. Just all of a sudden. It's just within a couple of weeks. And -- And I said it's because people are -- You know, it's already congested. You know, now it's hot, on top of it.

And so, anyway, regarding this issue of making more freeways, so then we bring more people into the area; we don't need more people.

And, you know, and it's -- Unfortunately, I've worked for land developers and builders and land developers, and that type. And it's -- It's all about money, power, and greed, unfortunately. And that's what we'll never change about this town, because it's all about those three things.

So, but, as far as the freeway, I think it's a good thing. So thank you.

MR. ROYER: All right. Well, first off, I am strongly opposed to this for very simple reasons. First, I care about the environment, and I care about people. And I think, no matter how you look at this, it negatively affects environment, without a doubt. And it would negatively affect a lot of people, without a doubt.

Now, there's other reasons to oppose this. So I feel like a lot of this is of an elaborate, almost, scheme to justify more freeways.

Code	Issue	Response

Code	Comment Document

Steve Winn.

MR. WINN: Good morning. Thanks for your time, appreciate it. I don't have a lot to say, I just want to say that I approve the construction of the 202. I do use South Mountain Park a lot, I live in Laveen, I use it a lot, all the time, couple times a week. And although I would regret if we had to take a portion of that park away, you know, it seems to be the greater good at this point. I would look very much forward to, like the previous speaker said, having a hospital come in, the prospect of having some hospitals and some development come to Laveen, so I'm not spending a bunch of extra time driving very far to go to those services.

You know, in my personal life, you know, the environmental impact of not having that there would, you know, far surpass it, because I'm driving a lot more, a lot farther to these services that hopefully can potentially come into the town there. So I would also encourage some bypass along the route, especially access to South Mountain Park, things like that, and that's all I have. Thanks.

THE FACILITATOR: Thank you.

Sharon Finell -- no? Which one is it? Okay, thanks.

Thank you.

everything going downhill, but what it's done is it's just made it even worse in that area because of no development, not only because of the economy, but there's just no roads, no highways. We're just kind of like very secluded.

This should have been done a long time ago. It needed to be done a long time ago. We've got to look at the big picture.

And I looked at the studies. It looks like it's been done very thoroughly. It looks like all interests have been taken into account. Now it's time to get going on it and quit playing.

MR. WINNER: I live at 47th Avenue and Baseline roughly. I support the freeway coming through. I have a three-year-old daughter and the first two years of her life she was chronically ill. I was in and out of the hospital. The closest children's pediatric urgent care is at Central and Baseline. The closest hospital is obviously in downtown. There's nothing -- west there's Thunderbird and there's another hospital, I believe it's on 5th Avenue, so I support it primarily for the expected hospital facility that they are going to be putting in.

That's it. Simple.

UNIDENTIFIED SPEAKER: The problem with I-10 is it turns into a bottleneck, and they are not

Subject: In support of 202 W59 Alternative

Greetings,

My name is Amy Winter, I reside at 2920 W Shumway Farm Rd in Phoenix.

1 I support the 202 going in near 59th Avenue. While no one wants a freeway in our back yard, the growth in this area (including the new enlarged casino) has created significant safety issues regarding traffic.

While I am in support of the 202 being completed in that location, I hope that the planners are mindful of wildlife habitat and safety, noise reduction for the residents, and safe options for pedestrians and bicyclists.

Warm Regards,
~Amy Winter

is overlooked in the decision-making.

And that's all I want to say. Okay? We are definitely not in favor of it for so many reasons.

MR. WITHERS: My name is Thelbert Withers, T-h-e-l-b-e-r-t, last name Withers, W-i-t-h-e-r-s.

I'm in support of the freeway just for the simple fact that Laveen is a growing area now. We need more hospitals and more advanced things in this area and that community, not to mention that it's going to bring a lot more jobs and building the freeway and everything.

But I just want to put I'm in support of the freeway. I -- you know, let me think.

Just for entertainment purposes, you know, movies, you know, out -- evenings out, there's not really nothing too much in the Laveen area to choose from. I just think with this freeway, it will bring more of those type of -- restaurants, type of -- entertainment activities.

And like I said, more importantly, a freeway will bring a hospital, which is something that we really need in Laveen.

So I just want to put my support down for it. And if there's anything I can do to support it to get there, I'm on board with it.

So thank you. I appreciate your time.

Code	Issue	Response
1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Acquisitions and Relocations**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Agencies may acquire only those properties located entirely or partly within the project right-of-way limits (see Draft Environmental Impact Statement page 4-45).
3	**Public Involvement**	No public vote was held as part of the Draft Environmental Impact Statement review process. Members of the public were encouraged to participate and submit their comments on the Draft Environmental Impact Statement during the 90-day comment period. The proposed Loop 202 South Mountain Freeway has been a critical part of the Maricopa Association of Governments' Regional Freeway and Highway System since it was first included in funding approved by Maricopa County voters in 1985. It was also part of the *Regional Transportation Plan* funding passed by Maricopa County voters in 2004 through Proposition 400.
4	**Public Involvement**	Public comments are a vital component in the decision-making process. Public comments have been solicited from project inception and through key milestones in the environmental impact statement process. The interests and needs of the public, along with all other social, economic, and environmental issues and impacts, must be fully analyzed and included in the Draft and Final Environmental Impact Statements. Comments made during development of the Draft Environmental Impact Statement have been used to adjust plans, explore new questions, or make changes—all within the scope of the National Environmental Policy Act. Public comments received on the Draft Environmental Impact Statement was reviewed and addressed in the Final Environmental Impact Statement. Public comments received on the Final Environmental Impact Statement will also be considered and addressed as appropriate. More information about the entire public involvement process up to publication of the Draft Environmental Impact Statement is available in Chapter 6, *Comments and Coordination*, of the Draft Environmental Impact Statement.
5	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Draft Environmental Impact Statement pages 4-16 and 4-21). No evidence exists that many people would relocate because of the freeway. A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138-47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.

Subject: South Moutain Freeway, Loop 202

Hello,

1 2 3

My husband and I reside in the Ahwatukee Foothills community and have since 2005. We moved here from California and fell in love with the area, it was the deciding factor for us moving to Arizona. We love the remote, quiet location & community feel. We were looking for a place to live and settle our family down and due to the beautiful peaceful rural area of Ahwatukee we decided to make it home. We are extremely opposed to the loop 202 freeway expansion for this area due to noise, property value decreasing(I am a real estate agent and I know this would make it alot harder to sell our home in the future and definitely bring down the value), pollution and many other personal reasons.

4

My husband is an umpire for major league baseball and that is part of the reason we moved to Arizona, finding a community that was close to the airport but felt remote and removed from all the hustle bustle of every day life was key and extremely important to us as he travels alot and when he comes home peace and quiet is a priority. We do not feel we can maintain that remote, quiet, quaint community feel with the proposed frwy.

Thank you for taking our comments to oppose the frwy into consideration.

Lara and Jim Wolf

2013

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. _____

LOOP 202
South Mountain
Freeway Study

2013

Draft Environmental Impact Statement
COMMENT FORM

Additional Comments:

1 - Pecos alignment serves no useful purpose for most Ahwatukee residents. Little use for most residents to go to 59th Ave & to Hwy 10 on a daily basis

2

3 4 - Will have adverse effect on air quality since pollution will be trapped by South Mountain

- ADOT has not shown good faith effort to study more southern route for this alignment. How about Riggs Road? or the Hwy 85 to Hwy 8 alignment? All actions have been to shove this alignment down our throats.

Code	Issue	Response
1	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Information related to origins and destinations of motorists that would use the proposed freeway is presented in Figure 3-18 on page 3-36 of the Draft Environmental Impact Statement. The definition of freeway users considers only those motorists who travel through the South Mountains; so, motorists who begin their trips in Ahwatukee Foothills Village and travel east to Interstate 10 (Maricopa Freeway) or motorists who begin in Laveen Village and travel north to Interstate 10 (Papago Freeway) are not counted in the analysis. The analysis of origins and destinations shows that 73 percent of travelers would be involved in trips beginning or ending in the Study Area or areas immediately surrounding it. Seven percent of the trips would begin, end, or begin and end outside of the Maricopa Association of Governments region; ten percent would either begin or end in Pinal County.
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
5	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
6	**Alternatives**	The study did evaluate the Riggs Road Alternative and the State Route 85/ Interstate 8 Alternative. A thorough evaluation using the multidisciplinary criteria outlined in the alternatives development and screening process was performed and, based on the results of this evaluation, the alternatives were eliminated from further study (see page 3-9 of the Final Environmental Impact Statement for more details). The Gila River Indian Community Council approved Resolution GR-164-11 authorizing a referendum of Community members to favor or oppose the construction of the proposed South Mountain Freeway on Community land or to support a no-build option. The coordinated referendum occurred in February 2012, and Community members voted in favor of the no-build option. This has meant and still means that, moving forward, an alignment(s) of the South Mountain Freeway cannot be located on the Gila River Indian Community (see Final Environmental Impact Statement page 3-25). Therefore, the Community Alignment was not carried forward for further study and the E1 Alternative was carried forward as the only action alternative in the Eastern Section.
7	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Draft Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.

From: David Wright
To: Projects
Subject: Comment on Proposed Loop 202 (South Mountain Freeway)
Date: Wednesday, July 24, 2013 10:28:39 AM

1 2 Regarding the proposed Loop 202 Freeway extension south of Ahwatukee, I urge that this project not go forward. A massive freeway just south of Ahwatukee will have negative consequences for our community and for South Mountain Park.

3 4 Vehicle exhaust – including noxious diesel fumes – from a massive freeway would foul the air in our neighborhood and in the park. Any expectation that the project would reduce regional air pollution simply reflects spreading that pollution into Ahwatukee. We don't want it. This would reduce the attractiveness of Ahwatukee as a place to live. If Ahwatukee becomes as hazy as the rest of Phoenix, property values here will suffer.

5 Additional traffic on a major freeway to our south and west would inevitably increase traffic in our neighborhoods – quite simply, there would be more cars in the area if a freeway is wrapped around us. Traffic here is bad enough as it is. Cut-through drivers would be speeding down our streets when they realize that speed limits are not enforced in our residential neighborhoods.

6 7 The proposed project has many negatives for Ahwatukee and South Mountain, and precious few positives. The main positive results of this project would accrue to developers who would profit by increasing suburban sprawl, and to the firms that build the road. These profits would come at the expense of reduced quality of life in Ahwatukee.

2 3 8 Ahwatukee does not need or want increased air pollution and traffic. Yes, these will increase with time anyway, but they would increase to a greater degree (and sooner) with the 202 extension in our backyard. South Mountain Park would be degraded by having a major freeway truncating its western boundary. NO BUILD is the best option.

David Wright, PhD
Ahwatukee, Phoenix, AZ

Code	Issue	Response
7	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
8	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

1

I am a long time Phoenix resident. I strongly support to build the Southmountain 202 as soon as possible to reduce every day's traffic congestion, air pollution, time wasting and energy wasting. To build the Southmountain 202 is Arizona voters' decision. We have approved twice already. Please take actions without further delay!

Jian Wu

Subject: Support South Mountain Loop 202 Freeway

Dear Colleagues,

The South Mountain Loop 202 Freeway has been approved by Maricopa voters twice, first in 1985 and again in 2004. Funds are available to construct the project which consists of 22 miles south of Ahwatukee and the South Mountain and west to the Levine Area to connect to I-10 on the far west. Attached are talking points that have been gathered from a recent survey done by interested parties in moving forward the Freeway indicating public support, also

1		Comment noted.

Code	Comment Document

attached is a fact sheet from ADOT.

On Tuesday, May 21, the Arizona Department of Transportation will conduct a day-long hearing to gather comments from the public about the proposed South Mountain Freeway project in metro Phoenix. This is where we need your help:

We need you, your executives and employees to make plans to attend the hearing on Tuesday, May 21 at the Phoenix Convention Center North Ballroom, 100 N. 3rd Street, Downtown Phoenix. It will take place from 10 a.m. to 8 p.m. People are invited to attend at any time during the 10-hour hearing period. Parking will be validated.

Those who attend can make up to three minutes of comments before a study panel, or submit a written comment in support of the project at computers set up in the ballroom for the event.

A show of support is important. The FHWA and ADOT study group needs to see that many people want this project to happen. They need to see and hear from Valley residents who are tired of the traffic jams and the government delays over this project. They need to hear that you want the freeway built because it will create 30,000 jobs and pump $2 billion into our still-struggling economy.

If you or your employees cannot make it to the hearing in person, please submit your comments directly to ADOT at projects@azdot.gov. Be sure to put in your title "Support For South Mountain 202". For more information and facts about the importance of the South Mountain Freeway, please visit a website at www.buildthe202.com that is providing information and support.

Thanks for your help and participation.

South Mountain Freeway Talking Points

- It is time to build the South Mountain Freeway. Valley commuters have waited in traffic jams long enough.
- The freeway will cut traffic congestion across the metro area, reduce air pollution, and save drivers time and money.
- 64.3% of likely voters in Maricopa County support construction of the freeway according to the results of a new poll commissioned by We Build Arizona. Just 19.6 percent said they were either opposed or likely to oppose the project.
- In a separate survey, also commissioned by We Build Arizona, 59 percent of likely voters living in Ahwatukee and Laveen support the freeway as well.
- If we don't build the South Mountain freeway, traffic in the region will get much worse over the next two decades. According to ADOT's own study:
  - Traffic on I-10 between Ahwatukee and Goodyear will grow 28%
  - Another 103,000 cars will use the Broadway Curve each day
  - Another 38,000 cars will jam the Tunnel every day
  - Morning and evening commute times will increase 39% to 82%
  - Traffic congestion on city streets will increase 46%
- The same report indicates the project also will reduce air pollution by reducing the time vehicles spend stuck in traffic.
- The project will create 30,000 jobs during the five to six year construction period and result in a $2 billion investment in the Phoenix-area economy.
- The money to build the freeway is in the budget. It was approved by voters twice, first in 1985 and again in 2004.
- There is no more important project to the area's commuters and workers than the South Mountain Freeway project. We must build it now.

Fact Sheet

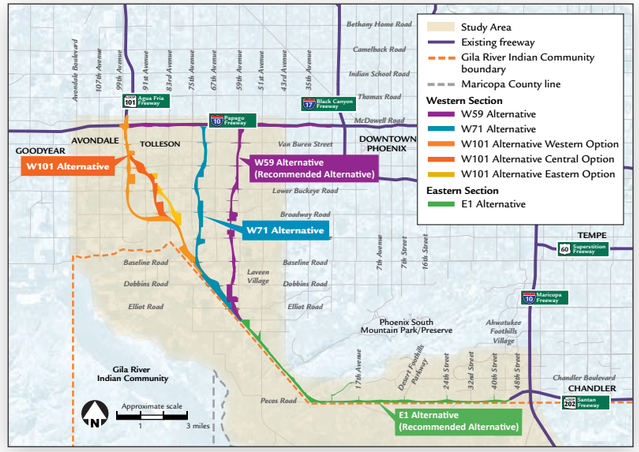
LOOP 202 South Mountain Freeway Study

Introduction

The proposed Loop 202 South Mountain Freeway has been a critical part of the Maricopa Association of Governments' (MAG) Regional Freeway Program since it was first included in funding approved by Maricopa County voters in 1985. It was also part of the *Regional Transportation Plan* funding passed by Maricopa County voters in 2004 through Proposition 400. The proposed freeway is a key component of the region's adopted multimodal transportation plan and the Regional Freeway and Highway System and is the last piece to complete the Loop 202 system.

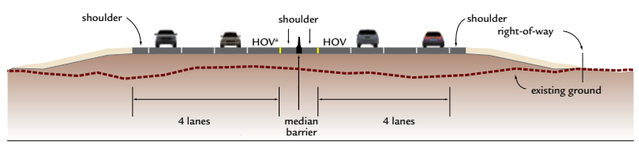
Additionally, the Loop 202 South Mountain Freeway provides an important link between the southeast and southwest areas of the Valley and an alternative route to Interstate 10. Traffic volumes for the proposed freeway are expected to be in the range of 137,000 to 142,000 vehicles per day by 2030, which is comparable to current use on the Loop 101 and existing segments of Loop 202. The analysis of travel patterns shows the demand for the freeway consists of mostly regional traffic, not traffic moving through metro Phoenix.

Alternatives studied in the Draft Environmental Impact Statement



Where will the Freeway be Located?

The proposed freeway is broken up into two segments, an eastern section and a western section. The eastern section connects to I-10 adjacent to the current Loop 202 Santan Freeway, and the western section veers north to connect the freeway loop to I-10. For the eastern section, the proposed alignment follows Pecos Road. This alignment was first proposed in 1985 and affirmed in the 1988 Environmental Assessment. For the western section, the proposed freeway alignment is called the "W59 Alternative," which provides a north-south connection of the South Mountain to I-10 near 59th Avenue. A "no build" option also is being evaluated, as required by federal law.



The configuration of the freeway is anticipated to be eight lanes (three general-purpose lanes and one high occupancy vehicle lane in each direction).

Fact Sheet

What is the Current Status?

The Arizona Department of Transportation and the Federal Highway Administration have finalized a detailed evaluation of the proposed Loop 202 South Mountain Freeway through the preparation of a Draft Environmental Impact Statement, or "Draft EIS." Under federal law, the Draft EIS must address 26 factors outlined in the National Environmental Policy Act of 1969. These factors cover the entire range of environmental study, including impacts on South Mountain, wildlife, air quality, storm-water drainage, and neighborhoods.

How can the Public be Involved?

The Draft EIS is available for a 90-day public review and comment period, starting **April 26, 2013**, and ending on **July 24, 2013**. During this review and comment period, the document is available online (**azdot.gov/SouthMountainFreeway**) and at public locations such as public libraries and community locations. A full listing of these locations is available on the study website.

PUBLIC HEARING

Tuesday, May 21, 2013
10:00 a.m. – 8:00 p.m.
Phoenix Convention Center, North Ballroom
100 N. 3rd St., Phoenix, AZ 85004
Validated parking and transit vouchers will be provided.

Members of the public are encouraged to provide comments on the Draft and Final EIS.

Formal Public Hearing Comment Process

Note that the public hearing provides the only opportunity for members of the public to make comments on the Draft EIS in front of a study team panel (within a three-minute time limit). Court reporters will also be available to take individual verbal comments; comments provided to a court reporter are not subject to the three-minute limit. Comment forms will be available for written comments.

Online Public Hearing

All of the materials presented at the public hearing, including a study video and comment forms, will be available from May 21, 2013 to July 24, 2013 at **azdot.gov/SouthMountainFreeway**.

There are several opportunities for the public to provide comments on the Draft EIS. All comment methods are considered equal.

Community Forums

Community forums will be held at various locations in the study area after the public hearing. Technical staff will be at the forums to answer questions, and study materials, including the study video, will be available to view. Court reporters will be available to take individual verbal comments. Written comments can also be submitted, but no formal "hearing" will occur at these community forum meetings. Forum locations will be posted at **azdot.gov/SouthMountainFreeway**, emailed to the e-newsletter subscribers, and published in the newspaper and local publications.

Mail, E-mail, Phone

At anytime during the 90-day comment period, comments can be provided in the following methods:

ADOT Loop 202 South Mountain Freeway Study
1655 W. Jackson Street
MD 126F
Phoenix, Arizona, 85007

projects@azdot.gov

602.712.7006

azdot.gov/SouthMountainFreeway

When Would the Freeway be Built?

If the outcome of the study is a build alternative, then the timing of construction will depend upon the completion of final design, right-of-way acquisition, and utility relocation. A corridor implementation plan developed by ADOT will identify how to construct the overall project, including the length and sequence of construction segments. The current Regional Freeway and Highway Program identifies construction funding for the freeway to begin in fiscal year 2015.

1

We will be unable to attend the Public Hearing on May 21, but we would like to have our voice heard! **We are in favor of the proposed Loop 202 South Mountain Freeway**. Driving from the West Valley (Goodyear) to Tucson or other points east on I-10, the Loop just makes good sense as it removes traffic from the heavy populated Metro Phoenix Area.

Please "count our vote as a YES and look forward to work beginning in 2015".

Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 10:14:55 AM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) As an Arizona resident, one who has lived in Phoenix and frequently travels there, I assert the proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(3) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(4) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(5) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(6) At the risk of sounding crass, I have long known the culture of ADOT and realize that project is likely a foregone conclusion. However, if I am mistaken, please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

(7) Sincerely,

(8) Mr. Judson Wynne
661 Kiowa

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Health Effects**	
6	**Section 4(f) and Section 6(f)**	
7	**Biology, Plants, and Wildlife**

Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

Subject: Comments on Loop 202 South Mountain Freeway (SMF) Study
Date: Tuesday, June 18, 2013 8:53:47 PM

I am against the loop 202 extension.

1 2

a. It would be environmentally irresponsible for the region! The SMF would become a truck by-pass, introducing much more truck traffic into the region and increasing pollution.

3

b. It would be an irresponsible destruction of natural resources identified for preservation!

4 5

c. It would be fiscally irresponsible! It would require a disproportionate amount of tax dollars to build the SMF, money that could be much more effectively used for other regional transportation projects.

2	**Air Quality**	
3	**Section 4(f) and Section 6(f)**	
4	**Alternatives**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.
5	**Purpose and Need, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.

Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 2:45:03 PM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

As a native of Arizona, born and raised in Tempe, I am discouraged by our state's lack of consideration for it's natural environment. The desert landscape that surrounds Maricopa County has long been subject to environmental degradation and urban sprawl. It doesn't make sense, ecologically,that a seemingly uninhabitable terrain such as ours is

(2) developed the way it is. The South Mountain Freeway is just another example of how our citizens are being coerced into relying entirely on the private automobile for transportation. Our citizens would not choose this way of life if there were other alternatives. The money

(3) that is projected to build the freeway should go towards a more sustainable form of mass transportation, such as extending the Tempe light rail, because it is the most socially, and environmentally responsible way to address our state's transportation needs.

(4) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer.

(3) ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(5) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more

(6) vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(7) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a

(8) freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(2) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.

1	Akicita Yellowman Document Created: 5/21/2013 8:44:42 PM by Web Comment Form I do not see the point of saving 9 minutes or 6 minutes. I believe that saving only 6-9 minutes does not justify the means of building a highway.

Code	Issue	Response
1	**Purpose and Need**	Travel time savings is only one aspect supporting the purpose and need for the proposed freeway. While a single trip may only save 6 or 9 minutes, when travel time is considered for all travelers and all trips, the travel time savings is significant. In the section, *Impacts on the Traveling Public*, beginning on page 4-67 of the Final Environmental Impact Statement, travel time savings is monetized and as a region, implementation of the proposed freeway would save motorists an average of $200 million per year between 2020 and 2035.

Subject: Comments in opposition to South Mountain Freeway
Date: Wednesday, July 24, 2013 10:36:01 AM

Jul 24, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) (3) (4) The proposed freeway would cause more problems than it would solve. decimation of the environment, increased air pollution, and unrelenting noise in a presently pristine locale would be the payment for predicted consumer convenience. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer, just as passing more laws to criminalise an act cannot make it more illegal. ADOT needs to focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them. Why have not the mediae of existing freeways been utilised for elevated rail construction? De-privatising public transportation, removing profit seeking from the equation, is a start. If Washington DC can have reliable bus service augmenting its rail service, so can Phoenix. LA did it. Why can't we?

(5) (2) (6) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would acutely worsen, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, COPD, cancer, and other diseases, in both the pediatric and adult populations.

(7) (8) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. In addition to violently assaulting the quality of life, blasting a freeway through a portion of this park will destroy wildlife and habitat. Movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area. When would a corridor be cut through Piestewa Peak Park, or Encanto Park?

(9) The freeway will exacerbate urban sprawl and further burden Arizona's taxpayers, not to mention the exacerbation of our already diminishing water supply. We live in a desert. At present, we squander our water resources keeping golf courses green. Let's not further the demise, by rapidly advancing growth, where it does not belong. This construction would continue ADOT's trend of forcing residents to remain

1 My husband David and I are very supportive to build the South Mountain Freeway. We would love to see that happen. It would cut my husband's commute down drastically. We would love to go over to the west side more often and that freeway would really help us to see family and friends. It would cut our commute time shorter. It would be really wonderful. We are definitely in favor of building the South Mountain Freeway. Thank you.

Subject: South Mountain Freeway public input

I heard on PBS Arizona Horizon about the new South Mountain Highway.

1 My input is like the system we have today and more highways will only cause more use of fossil fuels versus making cities green and more incentives for people to live in the inner city. This valley is so car orientated and an ugly city. It is to bad years ago this valley did not adopt Portland's land use policy.

2 We stay addicted to cars and oil and deny climate change then when we hear that the Artic ice is melting and all the countries can do is meet in Norway and find ways how they can use the resources which is all part of a system that will someday destroy humanity. We have hit over 400 ppm for carbon dioxide for first time and going to in twenty years hit 450 ppm.

3 How does that relate to South Mountain Highway? If people move out in these areas then do not expect me to pay for the sick of idea of progress of urban sprawl that destroys our connection to nature and sick system of progress.

To be honest, I just do not figure you can understand these concepts.\\

Enjoy the sickness and blowback.

Code	Issue	Response
1	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
2	**Air Quality**	Climate change is an important national and global concern. While the earth has gone through many natural changes in climate in its history, there is general agreement that the earth's climate is currently changing at an accelerated rate and will continue to do. Human-caused greenhouse gas emissions contribute to this rapid change. Carbon dioxide makes up the largest component of these greenhouse gas emissions. Other prominent transportation-related Greenhouse gases include methane and nitrous oxide. Greenhouse gases trap heat in the earth's atmosphere. Because the atmospheric concentration of greenhouse gases continues to climb, our planet will likely continue to experience climate change-related phenomena (see Final Environmental Impact Statement pages 4-85 through 4-86). To date, no national standards have been established regarding greenhouse gases. Greenhouse gases are different than other air pollutants evaluated in federal environmental reviews because their impacts are not localized or regional due to their rapid dispersion into the global atmosphere. The affected environment for greenhouse gas emissions is the entire planet. In contrast to broad-scale actions such as those involving an entire industry sector or very large geographic areas, it is difficult to isolate and understand greenhouse gas emissions' impacts for a particular transportation project. Furthermore, presently there is no scientific methodology for attributing specific climatological changes to a particular transportation project's emissions. Under the National Environmental Policy Act, detailed environmental analysis should focus on issues that are significant and meaningful to decision making. The Federal Highway Administration has concluded, based on the nature of greenhouse gas emissions and the exceedingly small potential greenhouse gas impacts of the proposed freeway (as shown in Final Environmental Impact Statement Table 4-37 on page 4-85), that greenhouse gas emissions from the proposed freeway would not result in "reasonably foreseeable significant adverse impacts on the human environment" [40 Code of Federal Regulations § 1502.22(b)].

Dear Sirs,

1 I would like to express my approval of the proposed new freeway. I feel it is a much needed improvement for not only the east but also the west valley. I applaud the Arizona Department of Transportation for there foresight in this matter. I feel it would be a mistake to wait on a project such as this. Waiting only causes more problems and helps no one. Thank you for considering my opinion.

Sincerely,

Thomas Zane

speak next, please move forward.

MR. MILLS: Thank you for your time. As someone who was born and spent his entire life in Arizona, I strongly support the South Mountain, even when it was initially voted upon in the mid '80s. I think it's a huge -- it would be a huge component in relieving traffic congestion, particularly in the central part of the Valley, greatly aid the commuter traffic from the West Valley over to the Southeast Valley.

And then also, in these pretty tough economic times, taking into account the construction industry, it'll bring immense value to the construction industry. Thank you for your time.

THE FACILITATOR: Thank you.

Debbie Zapatka.

MS. ZAPATKA: Hi, I'm Debbie Zapatka and I live in Laveen, and we've lived there for five years now with the hope of the 202 coming in, and it was kind of promised when we moved there. Our development in the area, we have empty shopping centers just sitting there, we really need economic development, and the only way for that to happen really is to get the 202 in, as well as our area has no hospital and a hospital will not come in unless the 202 gets in. And I don't even know where the closest hospital is, it's probably 99th Avenue and

1 McDowell, which in an emergency would be really far.
2 Let's see, we have heard that other people would
3 move in like a movie theater and shops and restaurant
4 owners, as well as the hospital if the 202 went in. The
5 only way for our rooftops -- right now we're at 40
6 rooftops, we need 50 for those people to start coming in.
7 If the 202 was built, Ahwatukee would then be counted as
8 a rooftop because they're so close, they're within our
9 mile range. That would make a huge difference to our
10 area economically.
11 I'd also love to see if the 202 gets built, the
12 sound barriers to be built nicely and maybe represent
13 Laveen in some way. I'm an artist and I would love to
14 even donate my time to create artwork that would go onto
15 the sound barriers and to have possibly hiking trails or
16 some kind of bike trails that follow the 202, because we
17 have that South Mountain so beautiful right there and
18 just to keep more trails and parks. Thank you for your
19 time.
20 THE FACILITATOR: Thank you.
21 Chad Hartley.
22 MR. HARTLEY: First I want to say thank you for
23 the opportunity to be able to voice opinions, we
24 appreciate that.
25 Second, I'm a daily commuter of the Broadway

Code	Issue	Response
1	**Alternatives**	The Arizona Department of Transportation Roadside Development Section is responsible for assigning a wide range of standard treatment applications and wall materials, including color, to noise barriers and other structures. Typically the community where the wall will be constructed would work closely with its City Architect or planning department to decide on a theme for the wall. Usually, this can be accomplished by using the Arizona Department of Transportation's standard applications. As an example, for State Route 101 Loop (Pima Freeway) in Scottsdale, the City of Scottsdale chose to add public art to the noise barriers. The City's intent went above and beyond the Arizona Department of Transportation's guidelines of reasonable aesthetic treatment and, therefore, the Arizona Department of Transportation did not fund the aesthetic portion of the project. The Arizona Department of Transportation and the City of Scottsdale entered into an intergovernmental agreement for the purposes of allowing Scottsdale rights to design and construct artistic embellishment on the Arizona Department of Transportation-supplied noise barrier. The Arizona Department of Transportation provided the funds for construction of the noise barriers themselves, but the City of Scottsdale provided the funds to cover the aesthetic portion of the walls. Draft Environmental Impact Statement pages 4-158 and 4-159 explain the process municipalities might take to achieve the desired aesthetic treatment for noise barriers or other structures.

This email is to voice my support for the 202 South Mountain Freeway Loop. I too am a resident of Laveen but would support this project if I lived anywhere in the Valley. The need for this Freeway was seen in the 80s and nothing has changed. This Freeway has been planned, promised and approved by vote since the 90s. Why do the loud voices of a relative few override the voices of the voters. The reasoning against this project by those in opposition make little sense. It does not add more pollution. The same amount of vehicles will be driven in the Valley. It will move some of the congestion and pollution from these vehicles from the densely populated area through Phoenix, Tempe and Chandler to the south side of South Mountain. This project can be constructed in a manner causing relatively minor disruption to the area while providing prosperity and access to many.
This project has my full support.

David Zebro

Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 10:44:20 AM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

We count on our leaders to make sensible decisions on behalf of the public.
This freeway is a bad idea.

2 The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

3 South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

4 5

The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

6 7

The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

8

1 Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Ms. Ruth Zemek

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

***

THE REPORTER: State your name, please.

MR. ZHONG: Yang Zhong.

I am a Laveen resident here to show my support for the proposed South Mountain Freeway. Because it's -- it's going to alleviate the traffic congestion anticipated in the near future. And without the freeway, the air quality is going to be much worse, because of the traffic congestion. And besides this, these environmental benefits, the freeway's going to greatly reduce the Laveen resident's time spent on traffic, also bring much needed facilities, such as hospitals, and business, such as shopping centers, to Laveen.

And I think these economical environmental issues should also be as part of the environmental impact. And I also noticed that in -- there are many -- I -- because I concerned about this freeway, I pay attention to the media, and any news about the freeway, and I noticed that certain communities has voiced out about this freeway, but I didn't see too much about what Laveen residents thinks and what they do, but I think, as a growing and continuing growing community, Laveen's opinions should also be considered.

No, No, No. We do not need to turn Pecos road into a freeway or have access around the south and west of South Mountain. This is Millions of Dollars wasted to save a handful of people a few minutes of driving time. If there are funds in the budget how about paying some decent teacher salaries or funding afterschool sports or music classes. Repair the roads that exist, clean up abandoned strip malls. There are so many more valuable was to spend these funds than to destroy a wonderful park and make it an island in a sea of freeways.

Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need, Lack of Support**	
3	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.

There are always those who will object to progress and change. Frankly, I've found myself doing the same once in a while. But unless we think that our Valley of the Sun will get *smaller* over the years, and *less* busy, then I suggest we face the necessity of improving our freeway network. There is ample evidence to support the building of this extension.

follow-up to your question, then I'll wrap up with the last one.

Yes, ma'am.

MEMBER OF PUBLIC: Okay. Regarding the Game & Fish being approached in 2002 and 2003, have the discussions continued since then, because a lot of information has been learned about appropriate wildlife crossing structures since 2002, and made leaps and bounds of discovery since that time.

UNIDENTIFIED SPEAKER: Not specifically on that topic, no.

MEMBER OF PUBLIC: Okay.

THE FACILITATOR: One last question, the others remaining here we either addressed earlier tonight or have been referenced in the EIS, the draft. So we'll put the responses to these on the Internet so we have time for closing. Fair enough?

The last question, then, from Scott Sprague, "What about the Tucson Shovelnose Snake?," is that what it's called, it is another candidate species in the region.

MR. SPARGO: Yeah, it is a candidate species, so therefore, as a candidate species therefore it isn't something that has a regulatory requirement, but it will be considered. The initial

ANONYMOUS SPEAKER: Basically I'm opposed to the freeway coming through my neighborhood. I would prefer to see the alternative W101, western option. I live in this neighborhood, I have for a while. I call it home. I don't want a freeway that's going to bring pollution and crime, displace a lot of good folks. I just think we need to go as far west as possible.

I think we need to rethink this whole thing so you're not displacing people in any of these locations. I don't think it should depend on money. I don't think people who have money should be making these decisions. I think it should be the people who live in these neighborhoods. I want our opinions to count. I want my voice to be heard.

I can't imagine living right behind a freeway. It's going to take away what I call home. That's not an option. They are ruining lives. I'm not going to stand for it. You know, I don't want it in my backyard. What I'm saying is: I don't want it in my backyard.

I want to know how they are coming up with these alternatives. I want these people to come into these neighborhoods and see us face to face and see what you're taking away. These homes have been here for years.

Code	Issue	Response
1	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
4	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
5	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Public Involvement**	Public comments are a vital component in the decision-making process. Public comments have been solicited from project inception and through key milestones in the environmental impact statement process. The interests and needs of the public, along with all other social, economic, and environmental issues and impacts, must be fully analyzed and included in the Draft and Final Environmental Impact Statements. Comments made during development of the Draft Environmental Impact Statement have been used to adjust plans, explore new questions, or make changes—all within the scope of the National Environmental Policy Act. Public comments received on the Draft Environmental Impact Statement was reviewed and addressed in the Final Environmental Impact Statement. Public comments received on the Final Environmental Impact Statement will also be considered and addressed as appropriate. More information about the entire public involvement process up to publication of the Draft Environmental Impact Statement is available in Chapter 6, *Comments and Coordination*, of the Draft Environmental Impact Statement.
7	**Neighborhoods/ Communities**	While the W59 Alternative is adjacent to residential areas, a freeway has been planned in this location for many years (see Draft Environmental Impact Statement pages 4-16 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
8	**Alternatives**	Chapter 3 in the Draft Environmental Impact Statement details the process used and alternatives developed in the course of the project.

(Responses continue on next page)

Code	Comment Document

They need to go back to the drawing board and rethink it. I don't think any of these people are living in any of the neighborhoods they are destroying, so I guess that's what I want to say. It's just sad. It's a sad day when you take down somebody's home and not care. It's just sad.

creator was from there, and he created us from out of clay. That was used on the mountain.

Maybe you people don't believe in any of that. You don't care. You just came out of nowhere, the dust of something. We don't know where you came from -- where you came from. We know where we came from and our beliefs. We know where we were created. I don't know where you people were created and you probably don't know either. That's why it's probably not significant to you. That's not our fault. That's your fault for leaving your land, then you would know where you came from. Let me see. Ok. I'm running out of stuff to say. Thank you.

FRANK EVEN: We need the highway badly. The only question we have is, can it be sooner rather than later. I mean, seriously. No, I mean, just in time to work, my commute on Baseline is miserable. Too much stop and go. It takes anywhere from 20 to 30 minutes to travel 14 miles, whereas with the new highway, I'll be able to do that in 10 to 15 minutes and probably use less gas in the process. The end. Please start it in 2013 instead of 2014 or I'll have to move out of the area. Now, the end.

1 ANONYMOUS SPEAKER: I want it faster. I have been waiting many, many years for this.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. This expansion will create more jobs, in return more revenue for the state. Build the W59 and E1 help our economy

though we're right next door until we and our kids and our people realize that we can make bigger strides if we apply ourselves and our children and not be afraid to stand in places where we need to stand up. That's about it.

Thank you very much.

MS. FORGY: My name is Janet Forgy. I have lived in Laveen area, the 67th Avenue and Baseline subdivision, Laveen Meadows, for about six years in November. And I can tell you we desperately need to have this 202. It's imperative. It's like we're out in the boondocks. Businesses are not developing. We have to go five miles to get to I-10, that's the shortest distance, five or 13 miles to get to an interstate.

I-10 is like a parking lot sometimes. There's no development of businesses. I mean, there's nothing. We need that desperately, and so I strongly encourage the 202 to be developed as soon as possible without any delays cause we definitely need it.

UNIDENTIFIED SPEAKER: One of the things I want to stress is that when I purchased my house in November of 2007 I saw the possibilities of development and I was assured that it was going to be developed. It subsequently has not. As a matter of fact I understand because of the economic situations, things had a way of

everything going downhill, but what it's done is it's just made it even worse in that area because of no development, not only because of the economy, but there's just no roads, no highways. We're just kind of like very secluded.

This should have been done a long time ago. It needed to be done a long time ago. We've got to look at the big picture.

And I looked at the studies. It looks like it's been done very thoroughly. It looks like all interests have been taken into account. Now it's time to get going on it and quit playing.

MR. WINNER: I live at 47th Avenue and Baseline roughly. I support the freeway coming through. I have a three-year-old daughter and the first two years of her life she was chronically ill. I was in and out of the hospital. The closest children's pediatric urgent care is at Central and Baseline. The closest hospital is obviously in downtown. There's nothing -- west there's Thunderbird and there's another hospital, I believe it's on 5th Avenue, so I support it primarily for the expected hospital facility that they are going to be putting in.

That's it. Simple.

UNIDENTIFIED SPEAKER: The problem with I-10 is it turns into a bottleneck, and they are not

To Whom it May Concern:

(1) (2) (3) (4) (5)

I am a concerned homeowner in the Ahawatukee Foothills community who is not in favor of building the Loop 202 South freeway along Pecos Rd. The only thing between my home and the new freeway is an empty strip of land (a wash). I am of the understanding that my home is not considered to be in the right of way, and thus not eligible for housing relocation. My quality of life will change for the worse if the freeway is built, since I will have to not only endure all of the negative impacts of the construction of a major freeway in very short proximity to my home, but also will be subject to long term increased traffic noise, environmental pollution and the overall general change of the fabric of my community. My home, my quality of life, and community will suffer negatively if the freeway is built. Please do not build.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

I strongly oppose the 202 South Mountain project.

Optional

1 UNIDENTIFIED SPEAKER: Basically I guess
2 I have a lot of questions about the pollution issue
3 because I don't think that's really been analyzed
4 enough or discussed enough. And the fact that we
5 sort of have an environment here where we kind of go
6 up in elevation up to the mountain, and I live right
7 at the base of the mountain. I guess I'm more
8 concerned about pollution issues because I understand
9 it's going to get a lot of truck traffic, and trucks
10 are pretty dirty, dirtier than cars. So I'm more
11 concerned about the pollution issue than I am about
12 the sound issue.
13 Obviously if I lived next to the proposed
14 freeway, I would be more concerned about the sound
15 issue, but I'm three miles up, so, but I have mixed
16 emotions about it. I am on the surface right now not
17 really understanding everything about it. I'm
18 opposed to it. And I think the only way that we
19 could even begin to get our voices heard would be to
20 mobilize and litigate against it, but I -- I don't
21 know if people are afraid enough or understand it
22 enough, you know, to form a big enough organization.
23 I can see from a city standpoint to
24 complete the loop and put us where we're supposed to
25 be, but from an environmental standpoint, that's my

3

biggest issue. And I guess the air quality is the major concern to me, but I don't think there's a brace that's mobilized for us residents to put up a logical fight against the freeway. I don't know, but I'm going to look into it.

And I guess the fact that it's going to be so close to the schools, to Desert Vista, I just -- I don't like that. Kids are graduating, they're gone, but I just, I have an issue with the environmental factor 100 percent so that's my comment. And, you know, to get people to mobilize and become one voice is very, very difficult. But if there's anything that would cause people to mobilize, it would be this freeway, I would think.

So I can see it from ADOT's standpoint, but I can see it from people who live next to the freeway. I don't know of a place in the Valley where a freeway cuts so close. Maybe the 101 goes up through Squaw Peak there. What is that, the 51? That's right up in the mountains there. I don't think they have a pollution issue, but I don't know. I mean, I just have never gotten involved.

Well, I'm going to become more aware of what's going on and voice my opinion because I'm not for this in any way, shape or form until they can

1 4

come up with some scientific evidence that pollution won't increase. But how will that increased pollution settle up against the mountain? Because that's one of the beauties is that the pollution index is very high on the other side of the mountain. Over here, minimal. So, I mean, that's -- that's one of my major concerns.

1

And obviously if you have an eight-lane freeway, you're dramatically increasing the pollution. But other than that, great looking plan.

5

I don't like them cutting up the mountain. I just go out the door and I'm on the mountain. I don't go that far down. I don't want to stop progress, but I have to make a stand at some point.

That's a hell of a presentation that ADOT's done. A tremendous amount of work. Very well done.

Code	Issue	Response
4	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
5	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

1

I FAVORED THE CONSTRUCTION OF THE 202 LOOP FOR REASONS DESCRIBED BELOW
1) TRAVEL TIME ALONG THE 10 WILL BE GREATLY REDUCED.
FREEWAY FROM 59th AVE TO 10 FREEWAY INTERSECTION.
2) REDUCED TRAVEL TIME MEANT LESS GAS COST, LESS ENVIRONMENTAL IMPACT ON OZONE PRODUCTION ~~KEYS~~ THAT AFFECTS OUR ENVIRONMENT (AIR WE BREATH & POLLUTION.

everything going downhill, but what it's done is it's just made it even worse in that area because of no development, not only because of the economy, but there's just no roads, no highways. We're just kind of like very secluded.

This should have been done a long time ago. It needed to be done a long time ago. We've got to look at the big picture.

And I looked at the studies. It looks like it's been done very thoroughly. It looks like all interests have been taken into account. Now it's time to get going on it and quit playing.

MR. WINNER: I live at 47th Avenue and Baseline roughly. I support the freeway coming through. I have a three-year-old daughter and the first two years of her life she was chronically ill. I was in and out of the hospital. The closest children's pediatric urgent care is at Central and Baseline. The closest hospital is obviously in downtown. There's nothing -- west there's Thunderbird and there's another hospital, I believe it's on 5th Avenue, so I support it primarily for the expected hospital facility that they are going to be putting in.

That's it. Simple.

UNIDENTIFIED SPEAKER: The problem with I-10 is it turns into a bottleneck, and they are not

Code	Issue	Response

(Comment codes begin on next page)

Code	Comment Document

1

improving I-10 as far as adding additional lanes. I know the 202 is going to take a while to merge, but it's a bottleneck right there and this is going to make it worse because people are going to be coming down the 202 to go down for morning rush hour and then going home just the opposite. It's going to make that area worse.

From the 101 to around 35th Avenue is a nightmare in the morning, a nightmare, just a parking lot, a parking lot. And then coming home it's flip flopped. And I don't see them improving the I-10 at least adding one lane on each side. They are not doing nothing there.

Instead of building this freeway, why don't they just make our freeway wider?

That's my comment plain and simple. If they are going to add a freeway to a freeway, they need to add extra lanes to the freeway they are adding it to. Get rid of this bottleneck we have or else it's even going to get worse. It's a bottleneck now. It's going to make it worse. No doubt about it.

I mean, the freeway is awesome if it was all done at once, and it's not going to be. They will stop it at Baseline. It's going to make it bad for a long time for a lot of people. If it was done all the way to 202 all at one time and then open it, yeah, it

Code	Issue	Response
1	**Alternatives, W59 Alternative Versus W101 Alternative**	The proposed connection to Interstate 10 (Papago Freeway) would include substantial improvements (widening) along Interstate 10 to allow traffic to and from the South Mountain Freeway to smoothly enter and exit the Interstate 10 main line.
2	**Construction**	The Arizona Department of Transportation is evaluating construction delivery methods for the proposed freeway. One concept is to deliver it as a single design-build project. This method would expedite the construction duration for the entire project to around 3 to 3.5 years. Another concept would be to deliver the project in a more traditional method breaking the 22-mile corridor into nine segments (each 1 to 3 miles long) and constructing them in phases. Each segment would be under construction for 1 to 3 years and the total construction duration for the entire corridor would be 5 to 6 years. A discussion of construction implementation is provided beginning on page 3-59 of the Final Environmental Impact Statement. Any particular area of the Preferred Alternative would not be expected to see construction activities beyond an approximate 2-year period.

Code	Comment Document

would be fine, but it's not.

Thanks.

MR. NELSON: As a resident of the Gila Indian Community, I feel that the Loop 202 is needed. It would serve all the communities, not just the southern part, but the northern part.

As far as serving the state, I have to go back to the history of the loop of the I-10 when it was constructed in 1957 and the right-of-way was put through Gila River. In 1957 it was 11 miles. At that time there was promise of frontage roads, better interchanges. To this date there really hasn't been anything done as far as fulfilling any of those promises. So one thing that I would like to come out of the Loop 202, if it is to come into the community, is that those promises are fulfilled, not only for the Loop 202, but for the I-10 that goes through the community towards Casa Grande and into Tucson.

At this time, the landowners there are a small voice, but yet they are not as loud as the opposition in the community. One thing that the State and ADOT has to know on the federal highway is that those people that are against the Loop 202 don't speak for the whole community even though they speak loud.

One thing that's been done in the tribe is

1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Noise**	
3	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.

Code	Comment Document

1 UNIDENTIFIED SPEAKER: I live in the
2 Lakewood community which I moved into in 1992 for one
3 reason is the fresh water well fed -- fresh water
4 wells. That's fresh water. Like, that's all we have
5 is the lake. We don't have a golf course. We don't
6 have anything else but that fresh water lake that's
7 literally filled with well water which we own as the
8 owners of Lakewood properties.
9 And they're telling us now that the
10 lake's -- I mean, the wells will be gone and they
11 said they could come up with an alternative water
12 source, but that's not acceptable. Those are stocked
13 with fish and that's the entire reason you would live
14 in Lakewood. Everything centers around that lake.
15 All of our greenbelts are around the lake. So I'm
16 totally opposed to this freeway for that and for the
17 possible climate.
18 We've got climate warming and everything
19 else and putting concrete all around that entire
20 community the way they want to do it, forget it.
21 They're going to destroy our quality of life. So I'm
22 completely opposed to this, and I really want the
23 wells addressed because we do not want reclaimed
24 water. We don't want -- we don't want any reclaimed
25 water. We don't want any city water to fill that

(1) (2) (3)

Driver and Nix Court Reporters - (602) 266-6525

Code	Issue	Response
1	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to State regulations/standards. (See the text box on Final Environmental Impact Statement page 4-108.) The well replacement program as outlined by State law has been regularly implemented by the Arizona Department of Transportation to effectively mitigate well impacts associated with its projects throughout the region.
2	**Air Quality**	Climate change is an important national and global concern. While the earth has gone through many natural changes in climate in its history, there is general agreement that the earth's climate is currently changing at an accelerated rate and will continue to do. Human-caused greenhouse gas emissions contribute to this rapid change. Carbon dioxide makes up the largest component of these greenhouse gas emissions. Other prominent transportation-related Greenhouse gases include methane and nitrous oxide. Greenhouse gases trap heat in the earth's atmosphere. Because the atmospheric concentration of greenhouse gases continues to climb, our planet will likely continue to experience climate change-related phenomena (see Final Environmental Impact Statement pages 4-85 through 4-86). To date, no national standards have been established regarding greenhouse gases. Greenhouse gases are different than other air pollutants evaluated in federal environmental reviews because their impacts are not localized or regional due to their rapid dispersion into the global atmosphere. The affected environment for greenhouse gas emissions is the entire planet. In contrast to broad-scale actions such as those involving an entire industry sector or very large geographic areas, it is difficult to isolate and understand greenhouse gas emissions' impacts for a particular transportation project. Furthermore, presently there is no scientific methodology for attributing specific climatological changes to a particular transportation project's emissions. Under the National Environmental Policy Act, detailed environmental analysis should focus on issues that are significant and meaningful to decision making. The Federal Highway Administration has concluded, based on the nature of greenhouse gas emissions and the exceedingly small potential greenhouse gas impacts of the proposed freeway (as shown in Final Environmental Impact Statement Table 4-37 on page 4-85), that greenhouse gas emissions from the proposed freeway would not result in "reasonably foreseeable significant adverse impacts on the human environment" [40 Code of Federal Regulations § 1502.22(b)].
3	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Draft Environmental Impact Statement pages 4-16 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

I think that, traffic issues aside, the proposed expansion will be beneficial to economic growth along the new corridor. Not to mention the jobs the construction itself will bring to the valley for years.

get around the way we used to anymore and it's nearly impossible to get from our place to Ahwatukee, so we are in favor of -- we support the building of the freeway. We think it's way past time.

Thank you.

UNIDENTIFIED SPEAKER: I feel that while the study has been -- followed the process, it needs to be completed. It's been 12 years since this study has gone on. I think it's high time they finish it up and develop a road and move on with design. And I'm a proponent of having it on Pecos Road alignment. I'm a proponent of tying it into the 101, Loop 101, instead of 59 like Phoenix wants it.

I also feel Phoenix, it has been some of the delay because they allowed planning or community development along the Ahwatukee area when they could have easily set aside property and right-of-way. So I feel a lot of onus belongs to the City of Phoenix, not ADOT. Other communities have set aside properties as freeways have moved through. I'm talking about the East Valley in particular.

I'm a proponent of the South Mountain Freeway. I do not feel that air quality is an issue. And Ahwatukee is very -- there are a lot of opponents to Ahwatukee area, vocal, and they bring -- I think because

2	**Acquisitions and Relocations**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Draft Environmental Impact Statement.

Code	Comment Document

of the social status down there they have a lot of -- a strong voice unfortunately.

I don't care how they build it. I just hope they build within the next five, ten years. That's all I have to say.

UNIDENTIFIED SPEAKER: Maricopa County has about five or six million people. It takes a certain number -- a certain amount of facilities to move traffic for five or six million. Probably there's three plus million cars.

The corridor from California to the East Coast, we're right in the way. This tunnel down here was the last piece of I-10 that was built and opened, so we have been in bottleneck for a long time. Coming from across 10, this is really and truly parallel to I-40 and I-10 and they both go all the way coast to coast virtually. And so we need this commercial -- I'm hunting the word -- to be tied to a commercial link.

We're right out here in the middle of the desert not doing squat except collecting cactus, so it would be a good thing for us to have a link commercially between West Coast and East Coast and we do after a fashion.

I-40 doesn't go through either Tucson or Phoenix. I-10 does. So we need to do everything we can

Comments must be received or postmarked by July 24, 2013. THE ESSENSE OF THE LAKEWOOD COMMUNITY IS OUR FRESHWATER LAKES WHICH ARE FED BY FRESH WATER WELLS.

NO ACTION

I purchased my house in Lakewood in 1992 because of the spectacular environment & the wells fresh water lake - NO RECLAIMED WATER! NOT CITY WATER!

1 I do not want my quality of life adversely affected by another freeway. Our lakes in Lakewood are fed by wells - fresh water wells. Our lake water is not city water or reclaimed water!

We do not want these fresh water wells impacted by a freeway. Lakewood Residents own these wells & we do not want a substitute water source.

1 UNIDENTIFIED SPEAKER: It's simple that
2 it would be a negative impact to everything we do in
3 Ahwatukee in that little, you know, part of Arizona.
4 It would be very, very devastating if everything, all
5 the construction takes place north of Pecos Road or
6 on Pecos Road to the north end of it. It seems like
7 it would be a truck route, it would be bad, it would
8 be noisy and smelly and environmentally bad. It
9 wouldn't make Ahwatukee a better place. And the
10 people who live here and have lived here 20 years
11 would be hurt by it. It's fairly simple.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

So, I understand environmental impact side of construction but most of the alignment is desert shrubs - not even true prehistoric lake Sonoran Desert - just dried lake bed with creosote bushes. ADOT will do its usual good job of trying to lower impact as much as possible.

of the social status down there they have a lot of -- a strong voice unfortunately.

I don't care how they build it. I just hope they build within the next five, ten years. That's all I have to say.

UNIDENTIFIED SPEAKER: Maricopa County has about five or six million people. It takes a certain number -- a certain amount of facilities to move traffic for five or six million. Probably there's three plus million cars.

The corridor from California to the East Coast, we're right in the way. This tunnel down here was the last piece of I-10 that was built and opened, so we have been in bottleneck for a long time. Coming from across 10, this is really and truly parallel to I-40 and I-10 and they both go all the way coast to coast virtually. And so we need this commercial -- I'm hunting the word -- to be tied to a commercial link.

We're right out here in the middle of the desert not doing squat except collecting cactus, so it would be a good thing for us to have a link commercially between West Coast and East Coast and we do after a fashion.

I-40 doesn't go through either Tucson or Phoenix. I-10 does. So we need to do everything we can

Code	Issue	Response

(Comment codes begin on next page)

Code	Comment Document

to facilitate the movement of goods through Phoenix. If you come across 10 under this tunnel that we really didn't need and go around the curve past the airport, it's a constant strain and congestion. If you come down I-17 and it curves and go out, 17 is stopped from the Stack to where 17 meets 10. Well, that don't work. Now, if anything happens, an accident or anything, it's tied up for hours.

If we build the south -- build the 202, it's more than just a reliever. It will be used. They say it will move 150,000 cars, vehicles, a day. No, it won't. It will try to move 200,000 a day because, when I-17 and I-10 find out they can get by with not having to come through downtown Phoenix, they will use it and the traffic will increase, not exponentially, but almost. It will increase linearly.

And I know there are a lot of environmental impacts. I've been doing this all my life. So the problem is that there are a number of people that will be impacted, all 285 of them as opposed 200,000 every day. I feel sorry for the people that are impacted; however, there is, to my way of thinking, a greater good.

My stories can get pretty long and windy.

In the end, there is a greater good and

1

Code	Issue	Response
1		Comment noted.

Code	Comment Document

the greater good is right now Maricopa County could stand a two billion dollar boost, you know. That's what it's going to cost roughly. And that will all be spent in Maricopa County.

Finally somebody is talking about it. The governor came out with a letter and she was the first one I read that mentioned the economic benefit of building the 202 South Mountain.

There -- I'm trying -- I'm hunting for a place to put a period.

It's not that I'm not sympathetic to the Indian community, but they have delayed this long enough. And, in fact, you know, they play games, "Well, we're going to vote about putting it on our land."

When they did 101 on the east side, the people in Scottsdale said, "Well, put it on the Indian land." They did not understand that this was a separate sovereign country and you don't condemn a separate sovereign country's land, so they did this after the Pimas came out and closed their half of the Pima Road. Here was all these cars now having four lanes of cars on two lanes.

ADOT started buying right of way through Scottsdale. Well, as time went on, negotiations with the Pimas picked up and they were able to -- they didn't buy

Code	Issue	Response

Code	Comment Document

the right-of-way. They leased the right-of-way for two or 300 years. Indians can't sell it. They can lease it. The social benefit, the economic benefit to the Pimas, they ultimately got $189 million, a promise to buy all the materials from them, a promise to hire their young men to work on the project. They was pretty smooth. They beat the White man at his own game. Now they are pretty prosperous.

They've got a lot of coins in their pocket. These poor people that need help, the social help, like, you know, all the old people are hunting for a place to live and it's getting harder and harder to find nursing care, you know, just because of the money. Well, this is an opportunity for them to ensure the economy of the 35,000 people. I would hope that they would get on board. They haven't yet. And I don't agree with that. I can see that it can work like it did for the Pimas.

The road, I-10 from Phoenix to Tucson, is being widened to three lanes each way. It's really nice, maybe four lanes in some areas. Where I-10 crosses the GRIC land, it spans two lanes. GRIC wants to know, "Well, where is our widening?"

We ain't widening theirs. It's not a revenge motive. It's just they're too hard to deal with.

Code	Issue	Response

Code	Comment Document

It's still their land. The right-of-way that I-10 is on where the highway is built still belongs to the GRIC, so they have -- they have took dead aim at their foot and shot it, just about shot it off. I'm sorry.

In fact, my great, great grandmother was a full blooded Chickasaw, so I have not animus. I'm not anti-Red man but I'm anti being dumb, that's what I'm anti.

President Eisenhower signed the Interstate Act in 1956. The interstate system provided a means to make these connections. It was more than just a new highway system. All these cities with 50,000 population or more were connected all over the United States. These connections would connect us and Tucson, us and Denver, us and LA, on and on, Utah, Salt Lake City. I don't want to leave Salt Lake City out.

When the interstate system started, there was not a link between Phoenix and Flagstaff. There was an old Army road that you pulled your mules on wagons through. It went up toward Payson. I walked it. I worked on 87. Well, it followed the old Army road that would eventually get you to Flagstaff. Flagstaff was a pretty big place then.

You're getting a history lesson, you know.

Now I-40, it replaced U.S. 66. U.S. 66

Code	Issue	Response

Code	Comment Document

came from Chicago almost to L.A. It was a historic road. There was not very many transcontinental roads around then. U.S. 66 connected Chicago with the West Coast. That was good because they could haul -- we had two ways to get commerce to the West Coast and from the West Coast to the middle of the country-- trains and highways. The highways were not very fast. They went through every town of a hundred people, so you can imagine how many stop signs and stop lights there were from L.A. to Chicago. I-40 replaced most of that.

You could drive all the way from Chicago to L.A. and all you had to do was stop for gas and go to the restroom. And you could do it at high speeds, at 70 miles an hour. It meant the size of the trucks could increase to haul more commerce. They originally were like 40, 45 feet, the trailers were 40, 45 feet long, then they started putting two of them together. That was like a train on the road rather than on the tracks.

Well, the rails fell into disrepair because of a lot of reasons, but, if you notice a lot of places you'll see railroad ties as architectural landscaping. Well, they came from the railroads that was taken out, so the idea of the highways being a commercial link that link the whole United States, they hadn't thought of that ahead of time. They might have dreamed

Code	Issue	Response

Code	Comment Document

of it, but nobody thought of it.

All of the east/west highways, interstate highways end in a zero, I-40, I-10, I-20, I-50, I-60. All of the north/south ones end in usually a five, but they don't have to be a five. All of the diagonals are three numbers that usually end in either a five or zero. Look at the map sometime. You'll see what I'm talking about.

Where did the idea come from?

Well, when Eisenhower was in Germany in World War II Hitler had built these highways to move troops, materials, and whatnot. Eisenhower brought this idea back to the U.S. and did the same thing. The original reason for building the interstate system was to be able -- we were still in the cold war -- was to be able to move men and material. All the design specifications for bridges were to hold up tanks, not haul a truckload of furniture, but haul up these big low boys that had tanks on the back of them so when they drove across it the bridge wouldn't fall in.

Well, there's your history lesson. Thank you.

MR. MORALES: I'll keep it short. I'm concerned about the archeological sites. South Mountain is our most sacred of all sacred mountains. Elder

UNIDENTIFIED SPEAKER: You know what's sad about Arizona, put the -- put the freeways in first and give us a chance to say whether we want to live near something. Don't take our quality in 20 years and then put something like that on top of us and say tough luck now. You know, you don't devalue someone's property.

Put the freeways around. If people want to choose to live by them afterwards, then build it around stuff, but don't add stuff later that destroys quality of life, right? That's what they're doing. That's absolutely appalling and that's what they've done.

I've been here 35 years and they do it everywhere and enough is enough. They've done it to other communities. They've destroyed other communities. We don't want it, so...

Code	Issue	Response
1	**Social Conditions**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Draft Environmental Impact Statement.
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Draft Environmental Impact Statement pages 4-16 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
3	**Acquisitions and Relocations**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values. A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.

Ahwatukee Public Forum Meeting
6/18/13 4:00 PM to 7:00 PM

NO ACTION! LAKEWOOD OWNS WELLS!

1 I am very concerned how it is going to affect Lakewood and the Lake. The wells were on the books before the Freeway. Also, I am concerned about the water to the Lake at Miralago where my brother owns.

2 3 The Freeway on Pecos will severely affect Lakewood because reclaimed water will smell! Also, the Lagos School is right on Pecos. It is going to hurt our property values! Lakewood already has á crime due to its proximity to the freeway easy access in and out.

Geri Thompson
15830 S. 36th Street

Comments must be received or postmarked by July 24, 2013. Completion of the loop 202 would improve the economy and highway travel throughout the valley drastically. It should be completed as soon as possible, as the project will only be more costly as more time passes. Some say it will cause environmental harm, but it would actually reduce total pollution. Development would also only affect a very small portion of South Mountain, which the native tribes had the opportunity to prevent. Please move forward with construction.

don't get their jobs back. We'll give them to people with sense in their heads.

Anyhow, thanks for listening. ADOT, you're depressing as always.

* * *

UNIDENTIFIED SPEAKER: The biggest thing right now, I think, is why is it that it's only one day and during the workday, like, this particular public hearing and the forum and everything like that? Because normal people work Monday through Friday, 8:00 to 5:00, so it seems like it would be better, like, on a weekend, all day Saturday and all day Sunday.

Because there's a lot of information for people to kind of comprehend, especially for the people who may be newer to the community and not familiar with the NEPA process, not familiar with the technical process, I think a bigger span of time would have been better.

* * *

MR. CASTLE: Patrick, C-a-s-t-l-e.

I just spoke in the other room, but I think that the key thing that we saw in years in living in an area

Code	Issue	Response
1	**Public Involvement**	This study, which began in July 2001, is expected to be completed in 2014. During the study process, community members have had and will continue to have various opportunities to ask questions, express opinions, and provide comments about the proposed action. The Draft Environmental Impact Statement had a 90-day comment period—twice the duration that federal regulations require. A public hearing was held on May 21, 2013, at the Phoenix Convention Center from 10 a.m. to 8 p.m. where individuals provided comments for up to 3 minutes in front of a project team panel or provided comments with no specific time limit to a court reporter. Comment forms were available for written comment. At any time during the 90-day period, comments could be made using e-mail, phone, the project Web site, and by mail. Six additional community forums were held at locations within and in close proximity to the Study Area.

Draft Environmental Impact Statement
COMMENT FORM

Additional Comments:

This "plan" has been going on much too long. In spite of what was in place 20 years ago, it should have been re-evaluated once so much of Ahwatukee was developed.

You are forcing a huge, ugly road on a community that was developed to be family-friendly, safe and yes, sheltered.

The funding for this road will not allow a highway to be built below grade to help reduce noise. There are schools too close to the roadway. There are homes that will be destroyed.

Please work more with the Indian Community and give them time to work thru their own process slow though it may be.

After this many years this road on the Pecos alignment is a horrible idea. It will be a truck route - no doubt about it.

Code	Issue	Response
1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Draft Environmental Impact Statement pages 4-16 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
3	**Alternatives**	The project team analyzed the belowground option, also called the depressed freeway option. The analysis indicated that depressing the freeway would increase the cost of construction and right-of-way acquisition, displace additional residences, create the need for additional pump stations and detention basins, and still need the installation of noise barriers. Because the belowground option would result in substantially greater costs and residential displacements, this option was eliminated from further study (see Draft Environmental Impact Statement pages 3-15 and 3-18).
4	**Noise**	Although depressing the freeway would reduce noise levels, noise walls would still be needed to further reduce noise to meet the Arizona Department of Transportation noise policy. Whether the freeway is built aboveground with tall walls or belowground with shorter walls, the final mitigated noise levels would be nearly the same at nearby residences. The major disadvantage of building a depressed freeway would be the increased construction cost and the possible acquisition of additional right-of-way for pump stations and retention basins.
5	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
7	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

UNIDENTIFIED SPEAKER: You can just state there that I'm also totally opposed to the construction of this, and the reasons being for the fact that this will be additional noise, trucker traffic, pollution in an area that we purchased a home in in order to have the peace and quiet of the Ahwatukee atmosphere. And also particularly opposed to the exit off 17 having a new -- due to the fact that that will increase the crime rate in the area.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

(1) (2) (3) I am in opposition to the extension of the 202 for many reasons. Among them are noise, crime and more pollution.

Noise:

People move out to this area for a number of reasons. One of them is to get away from the noise of the city and freeways. This will end with the building of the 202.

Crime:

With the building of this Freeway, neighborhoods will be much more accessible to criminals. This proposal contains (4) too many exit ramps opening up neighborhoods to increased crime.

Pollution:

(3) Eight to ten lanes of freeways will do nothing but add more pollution to the metro area, →

5	**Alternatives**	The proposed Loop 202 South Mountain Freeway has been a critical part of the Maricopa Association of Governments' Regional Freeway and Highway System since it was first included in funding approved by Maricopa County voters in 1985. It was also part of the *Regional Transportation Plan* funding passed by Maricopa County voters in 2004 through Proposition 400. There are no current plans to build a freeway through Cave Creek or Desert Mountain.

back on the I-10 and 51st Avenue, and that would relieve a lot of the truck traffic and accidents and other things.

The other thing would be just -- that would also help pollution and air quality and cars idling and trucks idling. And so all of those benefits, I think, would be beneficial to building the freeway on that. And also HOV lanes and stuff would be included on the South Mountain Loop, so that's probably the main reasons why I support it.

* * *

MS. HERRING: Patrice Herring. And I definitely want a yes vote on the 202 for the W-59 link because I am a Laveen resident. I bought a house in Laveen because I was promised that this freeway was coming through. We have horrible traffic in our area. We have problems with the river -- when it gets flooded, getting over the river. Sometimes we're stuck where we can't even cross over to the other side of the city. This will reduce pollution, as well, and bring much needed businesses to the Laveen area, and link us to other areas of the city. We definitely need the Loop 202 freeway and we need the W-59 route. Thank you.

* * *

UNIDENTIFIED SPEAKER: I really want you to

build it as soon as you can. We need access to -- like a hospital, I know they're building a hospital, and I want to have a hospital close by. When it floods 67th and 91st, kind of out in the middle of nowhere, and it takes a long time. We have to go all the way to 51st from 74th Avenue.

And my parents live in Apache Junction and it takes us a long time to get from 74th to the 10, just to get on the 60. And there's a lot of traffic lights and they keep putting in more traffic lights and there's more traffic and it's overwhelming.

And the closest mall is probably ten miles, so that means more driving. I guess in order for us to get a hospital in our area, they need more access -- people that can access it. And the only way to do that is to build this highway. It would just make things so much easier.

I know I had -- one morning I had to take my husband to the hospital. He had a kidney stone and we had to go way across the north just to get to the hospital. It would be so much nicer to have one closer for emergencies. I mean, if it does flood on 67th and 91st, that means it would be taking longer time, if there was an emergency, for emergency vehicles to come to where we're at. We're just secluded over there in a corner,

with no access.

I guess that's pretty much it. We're in Laveen Meadows. It's just west of 67th and, well, it's just south of Baseline. I know I was talking to someone here that said that they -- this has come up before, and they still haven't gotten anywhere. And we really want to see it in the near future.

* * *

UNIDENTIFIED SPEAKER: I'll say a few words. I think from the perspective of creating over 30,000 jobs for the community that it would be a big benefit of the project. It would put in, like, a mall, as well as a hospital -- places I could possibly work since I'm unemployed. I just got a degree in behavioral health from Glendale.

It would definitely speed up traffic. And I think the pollution would kind of go down because there'd be less idling cars -- if that helps any. I think it just pretty much is going to put in some jobs. It's going to speed up the freeway, I mean, you know, the traffic so you can get over to Apache Junction quicker. And it doesn't look like it's going to move too many houses out. Obviously a couple businesses up along some areas, but that shouldn't affect it too much. The 59 alternate would be less houses. And it wouldn't affect

1 30 years on the books / still no big changes
Why have we waited? no money to build
here, money elsewhere Chandler did a
great job at planning for the 202. PHX
chose to allow building instead of planning
in my opinion to gain PROP TAX $$.
Now the cost has sky rocketed.
1998 the Gila River Comm said they would
be interested in the 4th on their land
ADOT ignored them. 13 years after they
"penciled in" the plan they choose to ignore
A very easy answer here we are 17
years later looking at spending 3 billion
2 NOT A Good PLAN!

1	**Alternatives, Gila River Indian Community Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Social Conditions**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Draft Environmental Impact Statement.

UNIDENTIFIED SPEAKER: We're really against the freeway, and hope that they do not go through with it, and that it's going to cause a lot of pollution, noise, and aggravation for our community. And there will be too many homes that are lost.

So I don't know if I'm saying too much too fast?

COURT REPORTER: No, you're fine.

UNIDENTIFIED SPEAKER: But we're going to have to -- We'd rather that they even bought out our home. It's going to be too difficult for us to even stay there, probably, because we're too close to the wall and we can't -- we can't -- I don't think that we're going to be able to take all the noise and everything. So I'm hoping that they do something else. Okay?

I know they're still going to build it.

Reporte Del Impacto Ambiental
FORMULARIO DE COMENTARIOS

Gracias por participar en el proceso de recopilación de comentarios sobre el Reporte del Impacto Ambiental del proyecto de la autopista South Mountain.

ADOT alienta a todos los interesados, a presentar sus comentarios por escrito sobre cualquier aspecto del Reporte del Impacto Ambiental. ADOT considerará todos los comentarios en la preparación final de este reporte e incluirá las respuestas a todos los comentarios, conclusiones finales sobre impactos potenciales, y la recomendación final de ADOT.

Para ADOT es muy útil recibir comentarios sobre:

- Alguna alternativa en particular, cúal sería su impacto ambiental y las medidas propuestas para reducir dicho impacto.
- Cualquier información que usted sienta que está incompleta o incorrecta.
- Cómo le afectará a usted la acción propuesta.

Los comentarios deben ser recibidos o tener el sello postal con fecha límite del 24 de julio de 2013.

We moved to the Ahwatukee area because of its beauty, quiet, and high quality of life. All of this is threatened by the building of an 8-10 lane interstate freeway. We will no longer be able to look south and see the beauty of the open desert land of the Gila River Community. We will instead see vehicles and concrete. The structure of South Mountain will be cut through by the freeway. We live in one of the few areas of metro Phoenix where you cannot hear a freeway or major arterial. If this highway is built, the sound of cars, trucks, and semis will be constantly heard. There will be increased air pollution in an already polluted area. This will further compromise health. Our area which has relatively low crime will probably see an increase with easy access to neighborhoods provided by the Interstate with its many on and off ramps and associated development at these areas.

Code	Issue	Response
1	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-170 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
2	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Noise**	
4	**Noise**	The Maricopa Association of Governments regional travel demand model forecasts approximately 10 percent truck traffic on the South Mountain Freeway in 2035 (see Final Environmental Impact Statement page 3-64). This percentage is similar to current conditions on Interstate 10 between Loop 101 and Interstate 17 and on U.S. Route 60. Noise modeling for the Draft Environmental Impact Statement used this forecast truck traffic, with the model accounting for greater noise generation by trucks in the future (see Final Environmental Impact Statement page 4-88). Noise mitigation is designed for this predicted noise level, including the noise from trucks.
5	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Health Effects**	
7	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
8	**Design**	The locations of the planned traffic interchanges were determined in coordination with the City of Phoenix. The current plan balances the need to minimize impacts on the adjacent community with the need to provide acceptable access to the region's transportation system.

The above problems happen every time a freeway is built. It completely changes the neighborhoods it is built through and near. A complex, expensive study did not have to be done. Look at any area in Arizona or in the country where an interstate has been built. The numbers can easily be manipulated to the bias of the people who want it built.

For these reasons and others I am very opposed to the building of the freeway in this area.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. this will help traffic & Im all for more roads!

with no access.

I guess that's pretty much it. We're in Laveen Meadows. It's just west of 67th and, well, it's just south of Baseline. I know I was talking to someone here that said that they -- this has come up before, and they still haven't gotten anywhere. And we really want to see it in the near future.

* * *

UNIDENTIFIED SPEAKER: I'll say a few words. I think from the perspective of creating over 30,000 jobs for the community that it would be a big benefit of the project. It would put in, like, a mall, as well as a hospital -- places I could possibly work since I'm unemployed. I just got a degree in behavioral health from Glendale.

It would definitely speed up traffic. And I think the pollution would kind of go down because there'd be less idling cars -- if that helps any. I think it just pretty much is going to put in some jobs. It's going to speed up the freeway, I mean, you know, the traffic so you can get over to Apache Junction quicker. And it doesn't look like it's going to move too many houses out. Obviously a couple businesses up along some areas, but that shouldn't affect it too much. The 59 alternate would be less houses. And it wouldn't affect

Code	Comment Document

me because I'm over on 74th Avenue. That's pretty much all I have.

* * *

UNIDENTIFIED SPEAKER: I think they're a little late in doing this, but I hope they do do this at some point. I don't see any reason not to do this. I think in Phoenix, in general, they wait until it's too late to do some of this planning. So I think with all the information available, it's very overwhelming. But this project is definitely needed and just to alleviate some of the stress downtown with traffic and help have alternative ways of getting to West Phoenix other than driving through Central Phoenix.

So I'm a native to Ahwatukee, and this has been something on the burner for a while now and hasn't come to fruition, so I think that's my statement.

I don't see any reason why they haven't built it around. I think of all the new opportunities, it will -- housing and jobs and stuff, just "build it and they will come" kind of thing. If they build a freeway, there might not be anything there now, but why wait until everything is there and then build it -- not aggressive or proactive, but that's basically it.

* * *

NO!!

1 2 Why would you destroy a perfectly placed township of Foothills by building a truck by pass freeway. From the materials presented it seems evident that no significant steps have been adopted to mitigate the following issues:

3 4 5 6 7 8 9 10
1. property value losses (views / noise / crime)
2. visibility of overpass (± 30 feet up in the air)
3. pollution
4. the destruction of S. Mountain park
5. dislocation of "houses of worship"

Code	Issue	Response
1	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Draft Environmental Impact Statement pages 4-16 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
2	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
4	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-170 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
5	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
7	**Visual Resources**	Draft Environmental Impact Statement page 4-158 of the mitigation section for visual impacts lists four measures that could be taken to mitigate the visual impacts of overpasses: · placing landscape treatment on the periphery of right-of-way areas at overpass locations as well as at other areas adjacent to residential development · using earth colors for overpasses, retaining and screen walls, and noise barriers · using bridges and overpass structural systems that help unify a visually complex landscape · minimizing structural sizes and/or recessing the face of structural members from the edge of the roadway to reduce real or apparent breadth of structures" Additionally, Draft Environmental Impact Statement page 4-159 discusses "how structures are aesthetically treated and how the public could be directly involved in developing aesthetic treatments."
8	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Section 4(f) and Section 6(f)**	
10	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)

UNIDENTIFIED SPEAKER: I prefer anonymous but as a resident of Ahwatukee.

I'd like to say that, first of all, I'm extremely concerned about the air quality, the degradation of air quality. We all know that Mexico has a different standard for their trucks than the United States does. There are all sorts of studies that -- For example, one just came out today that shows that diesel particulates, the women that have lived near highways with that have twice the rate of autism of women that don't. And we know that there's even some studies saying that up to three miles away from this highway, this truck route for Mexicans and long-haul truckers and Canadians, will only damage Ahwatukee.

It's going to destroy our neighborhoods. It will increase crime. And I don't see any benefit to the Ahwatukee residents. We have a wonderful community here. So I'm very disappointed. It's near schools. It's near parks. It's near many houses. And there's just no value.

That's it, I guess. I would highly recommend that they look for an alternative path. And I wish that they would take the residents' opinions into consideration, versus doing what they want to do, which is really what it is.

So thank you.

(The public hearing proceedings concluded at 7:00 p.m.)

1	**Socioeconomics**	The analysis in the Draft Environmental Impact Statement requires socioeconomic and traffic projections at the regional analysis zone and traffic analysis zone level. While the Arizona Department of Administration published population projections based on the 2010 Census in 2012, Arizona Department of Administration estimates only provide control totals at the county level. At the time of publication of the Draft Environmental Impact Statement, Census 2010-based socioeconomic data at the regional analysis zone and traffic analysis zone level had not been adopted by the Maricopa Association of Governments and was not available to the project team. Therefore, the data used in the Draft Environmental Impact Statement was the most appropriate information available. In other areas of the Draft Environmental Impact Statement, such as Environmental Justice and Title VI, Census 2010 data was used. The project team acknowledged the potential uncertainty in the projections in the sidebar, "*How will the economic downturn affect growth rates?*", on page 1-11 of the Draft Environmental Impact Statement. The Maricopa Association of Governments approved new population, employment, housing, and traffic projections in June 2013. The new data are presented in the Final Environmental Impact Statement beginning on page 1-11. The purpose and need and analysis of alternatives were updated and reevaluated using these new socioeconomic projections and corresponding projections related to regional traffic. While new projections based on the 2010 Census showed a lower anticipated population and vehicle miles traveled in 2035 than the previous projections, the conclusions reached in the Draft Environmental Impact Statement were validated in the Final Environmental Impact Statement (see Chapter 3, *Alternatives*). The traffic analysis demonstrated that the proposed project is needed today and will continue to be needed into the future.
2	**Purpose and Need**	The worldwide recession that began in late 2007 generated a substantial downturn in growth rates for new housing and employment across the United States. Arizona particularly suffered the effects of this recession because, beginning in the early 2000s, Arizona in general and Maricopa County specifically experienced some of the fastest population, housing, and employment growth rates in the country. Because the need for the proposed freeway is predicated in part on projected growth, one might conclude the recession reduced that need. An economic downturn associated with a given recession is, however, generally considered a short-term phenomenon with respect to the longer-term planning horizon established for the proposed freeway. Socioeconomic indicators have steadily and consistently increased in the region since the early 1900s. The critical factors underlying these indicators remain unchanged. (See the sidebar on Final Environmental Impact Statement page 1-11.)
3	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

1	**Social Conditions**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Draft Environmental Impact Statement.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1 WE HAVE LIVED IN AHWATUKEE FOR ALMOST 20 YRS. AND LOVE IT HERE. WE LOVE THE FACT
2 THAT IT'S KIND OF PRIVATE, THERE'S NOT
3 VERY MUCH CRIME OR NOISE AND THAT'S THE WAY WE WANT IT TO STAY!

1 ALLOWING THE 202 TO BE BUILT ALONG PECOS RD. WILL CERTAINLY DISRUPT THIS WAY OF LIFE.

4 BUILDING THIS AT THIS POINT IS TOTALLY UNFAIR
5 TO THOSE THAT HAVE BEEN ALLOWED TO BUILD IN THE PAST 20 YRS.; HOMES, CHURCHES, SCHOOLS. TO TEAR THESE DOWN WOULD BE A CRIME!

1

ANONYMOUS SPEAKER: I just want to know what kind of --

How do I want to say this?

What kind of study has been done as far as making the 101 go south to the I-10 through Chandler and hooking to the I-10?

That would alleviate a lot of the traffic they are talking about alleviating up through the 101 allowing people to go to Flagstaff or whatever they want to do and allowing people to leave the city going to Tucson instead of via the 10. So it would be a plus in both directions.

2

I also want to know what kind of impact study they've done as far as the residents and the owls and the wildlife that's going to be eliminated?

Because I have two owls right now that fly over my house every night. And as soon as this freeway goes over, it's not going to happen. They land on my fence and they are there every night. Not going to happen.

3 4

Pollution up against the mountain obviously is going to increase.

2

I don't think some of these questions have been fully answered. And I think they need to answer more questions as far as a wildlife study.

Page 9

Driver and Nix Court Reporters - (602) 266-6525

Code	Issue	Response
1	**Alternatives**	The proposed freeway was developed to improve mobility between the western and southeastern portions of metropolitan Phoenix. See the text beginning on Final Environmental Impact Statement page 3-27 for more information related to the responsiveness of the proposed freeway to the purpose and need criteria. The new freeway linkage (extending State Route 101 Loop [Price Freeway] south to Interstate 10) proposed by the commenter would address a potential need; however that need is not consistent with the purposed and need identified for this study. The Arizona Department of Transportation and Maricopa Association of Governments continue to study regional transportation needs, and this new linkage may be considered in other future studies.
2	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Air Quality**	
4	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.

7

8

There's obviously other routes they can take. And I don't think they are looking at what's best for the people other than the cost. They need to look at what they are spending on this compared to some other alternatives they have.

You know, they have had some issue in other areas with the type of road construction they've done and how long the road is going to last until it needs to be repaired again. Because, by the time they finish the project, it looks like they probably will have to start making repairs already.

So how long is it going to go until it's completely done? What's the overlook as far as the ongoing construction?

People in the area need to know that.

You know, the lights, that's out here, they are just not as bright an area as the City of downtown Phoenix.

Have they done a study on the crime that's going to go up?

I have seen nothing on what they expect the crime for Ahwatukee to be. They will have more access to the city. Instead of one way in and one way out, it's going to be anybody can jump on the freeway and go wherever they want. I don't know if they've done any

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
5	**Alternatives**	Alternatives were screened for their (see Draft Environmental Impact Statement page 3-3): · ability to satisfy purpose and need · ability to minimize impacts on the human and natural environments · ability to improve operational characteristics of the region's transportation system · degree of public and political acceptability · ability to be constructed within project budget
6	**Construction**	The Arizona Department of Transportation is evaluating construction delivery methods for the proposed freeway. One concept is to deliver it as a single design-build project. This method would expedite the construction duration for the entire project to around 3 to 3.5 years. Another concept would be to deliver the project in a more traditional method breaking the 22-mile corridor into nine segments (each 1 to 3 miles long) and constructing them in phases. Each segment would be under construction for 1 to 3 years and the total construction duration for the entire corridor would be 5 to 6 years. A discussion of construction implementation is provided beginning on page 3-59 of the Final Environmental Impact Statement. Any particular area of the Preferred Alternative would not be expected to see construction activities beyond an approximate 2-year period.
7	**Visual Resources**	Light from the freeway would be produced from vehicle headlights and taillights and from fixed light poles at interchanges along the freeway. Nighttime users of the park and residents of Ahwatukee Foothills Village may see lines of seemingly crawling vehicles, each with lights front and back. Fixed freeway lighting would be provided for safety reasons only at interchange exit and entrance points. Freeway lighting at these locations would be designed to reduce illumination spillover onto sensitive light receptors such as residential areas (see page 3-58 of the Final Environmental Impact Statement).
8	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.

COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

(1) (2) (3) (4)

I support the building of the 202 only if it was built on the Gila River Indian Reservation. I do not support the building of the free way on the peras road alignment. I live in the ahwatukee foothills and the free way would be less than 1 mile from my home, the freeway would bring exessive noise & pollution to my community. I strongly oppose the current aligned proposal of E1.

hospital 40 hours a week, and this is from my own experience. And it is not caused by cars driving on the 202. In fact, having the 202 will reduce the stop-and-go traffic that you have on the surface streets and reduce pollution in that way, I believe. So that's all I had to add.

* * *

UNIDENTIFIED SPEAKER: I'm very much for the highway for Laveen, I feel that it would bring in jobs, especially for the youth and the community; and I think that that will assist with some of the crime and the graffiti if we had the highway, which would bring more businesses.

The hospital, we have a lot of senior citizens that live in the area, and unfortunately, the nearest hospital is -- I think it's Maricopa Integrated, and that is a long way when it's an emergency.

So that is my comment, and my reasons for supporting the I-10 highway -- Loop 202 South Mountain Freeway.

1

* * *

MR. HERNANDEZ: David Hernandez. I live in the preferred route, 59th Avenue south of I-10, and they need to build the freeway. Yes, I agree with it. However, the route that they are taking is shortsighted.

1 SINCE THERE ARE SO MANY QUESTIONABLE & OBJECTIONABLE REASONS FOR BUILDING THIS FREEWAY ALONG PECOS ROAD THE ALTERNATIVES SHOULD BE THOUROUGLY & FULLY EXAMINED.

2 1.) A FINAL COST BETWEEN 3-4 BILLION FOR A 21 MILE FREEWAY IS INSANE. ESPECIALLY CONSIDERING THAT IS ALMOST 40% OF THE STATE OF ARIZONA'S BUDGET FOR 2013.

3 2.) EXCAVATING THE EQUIVALENT OF 2 CHASE BALLPARKS (PRO BASEBALL STADIUM 52,000 CAPACITY) FROM A CITY PARK IS UNACCEPTABLE. WE ARE SUPPOSE TO BE STEWARDS OF THIS LAND FOR FUTURE GENERATIONS. THIS MOUNTAIN WILL NEVER BE THE SAME

4 **Optional** 3.) THERE IS AN OPTION WITH THE GILA TRIBE BUT ADOT/AZ.GOV IS UNTRUSTING IN THEIR

Name _____ Email _____

Address _____ VIEW. NEED TO GET TRUSTWORTHY INDIVIDUALS INVOLVED

City _____ State AREA CAN NOT Zip _____

Phone _____ Fax 4.) THE AHWATUKEE BUILD TIME OR THE FUTURE HANDLE THE ENVIRONMENTAL DAMAGE. FOOTPRINT IN AHWATUKEE IS TOO SMALL.

Code	Issue	Response
1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Economics, Socioeconomics**	The proposed freeway would not cost $3-$4 billion as indicated by the commenter. The proposed South Mountain Freeway would be funded by State, federal and local dollars. The total budget for constructing the proposed freeway is $1.9 billion, approved by the Maricopa Association of Governments Regional Council in May 2012. The approved program includes design, right-of-way, and construction of the proposed action. Funding for project-related activities is included in the current 5-year program identified in the regional Transportation Improvement Program as well as in the State Transportation Improvement Program. The cost estimates for the proposed freeway, as described beginning on page 3-59 of the Draft Environmental Impact Statement, were developed in accordance with accepted engineering practices by professional engineers. The project has been subject to multiple peer reviews of both the quantities and unit costs used in the estimate by the Arizona Department of Transportation, Federal Highway Administration, Maricopa Association of Governments, and their consultants. In each case, the estimate was found to be reasonable and accurate.
3	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Alternatives, Gila River Indian Community Alignment**	
5	**Construction**	The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours may be needed during construction. (See Draft Environmental Impact Statement page 3-2.)
6	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Draft Environmental Impact Statement pages 4-16 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

attention.

I've talked to some of the homeowners in the area that live nearby me, and they never received this mail that stated that they were going to have an ADOT meeting today.

If I got it, why didn't they get it? Or did they just pepper the area with this mailing about announcing this meeting? That's not right. So, like I say, I agree, they should make the freeway, but it should be further west. And if they are, which I believe they will, build it down 59th Avenue, I wish they'd buy the homes on the west side of 59th Avenue and build a bigger buffer with the existing houses that are there, because it's going to ruin the area, as far as I'm concerned. That's it.

* * *

UNIDENTIFIED SPEAKER: I just feel that there's a reason that this has not been built. It was first proposed about 25 years ago and there's a reason why it wasn't built; that's because it's a bad idea.

This is one of the few good things about this area is South Mountain, one reason why people come to this area because of the natural beauty of the South Mountains. So it's going to be an economic loss. It's also just truly beautiful, and we don't have a lot of

4

beauty because we have a lot of urban sprawl. And to take that away, after 25 years of avoiding it, is a travesty to the city.

I'm also furious because I keep hearing about how this state has no money, but there is money when it comes to building this freeway that should not be built -- this freeway from hell that's going to destroy one of the most beautiful parts of this area.

And I was just talking to my friend, in fact, and she thinks that this freeway might actually create additional problems in destroying the habitat and also the natural corridor for their travel.

But she thinks that the situation might be worse for people who are headed south. They might start using other streets such as Baseline to cut across the Valley so it could actually cause additional problems in some areas because of this factor that people will be using this freeway then and maybe also taking surface streets. So it could create problems for people in that area.

But basically my major objection is that it's going to destroy a beautiful and natural habitat and a source of recreation and beauty for this area.

3	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
4	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Phoenix, just near Baseline and Central. As you know, Baseline is the main corridor for people who live in Laveen and work/shop in the East Valley. I suspect that an interchange on the proposed freeway at Baseline will now funnel even more traffic through the area. In fact, all of the West and Northwest Valley will now have access to east/west roads through South Phoenix.

Already, when there is a problem on I-17 or I-10, Baseline becomes a parking lot. Now, image the potential for a problem on any of the I-10, I-17, or Loop 202. Baseline will bear the full brunt.

Perhaps South Phoenix, because it is home to many lower economic residents of Phoenix, is not of particular import to the powers that be. We certainly saw that when the city counsel thumbs its nose at the Baseline master plan and allowed developers to run roughshod over the area.

Another consideration is the Phoenix point of pride -- South Mountain Park. The road to San Juan Lookout, which is closed to traffic every day except for one weekend per month, goes through a valley that is a quiet haven. That, of course, will no longer be true when a freeway runs adjacent.

What good is the claim to the largest city park if that park is perpetually bombarded with traffic

2

noise? How is it possible that we do not have space and inclination for just one quiet retreat within the confines of this sprawling city? I urge you to reconsider the plan to build a freeway with so much impact on South Mountain Park.

(The proceedings concluded at 8:00 p.m.)

Code	Issue	Response
3	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Although recreation uses are considered in the noise analysis as noise-sensitive land uses, another consideration is the reasonableness of providing noise mitigation for a particular land use. For recreational land uses, typical considerations include the number of people using the facility and the amount of time the facility is in use throughout the day. Many of the recreational uses in the western portion of Phoenix South Mountain Park/Preserve receive infrequent use, and noise mitigation would not be reasonable given the high cost of construction.

ADOT · U.S. Department of Transportation Federal Highway Administration

FOR MORE INFORMATION:
azdot.gov/SouthMountainFreeway

Code	Issue	Response
1	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Purpose and Need**	The proposed freeway is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. The *Regional Transportation Plan*, as described on pages 1-5 and 1-10 of the Draft Environmental Impact Statement, addresses freeways, streets, transit, airports, bicycle and pedestrian facilities, freight, demand management, system management, and safety. The proposed freeway is only one part of the overall multimodal transportation system planned to meet the travel demand needs of the Maricopa Association of Governments region.
4	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Alternatives**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.

If we did that sort of thing, we would be able to cut down the amount of cardiovascular disease that we have, we would reduce Alzheimer's. All these terrible diseases. We would do away with all of that. We could eliminate a lot of these diseases, or decrease them certainly. Guess I can't think of anything else.

MS. KEENAN: Erika Keenan, E-r-i-k-a K-e-e-n-a-n, Laveen, Arizona. I took time off from work today to come down to speak, and I said my three minutes, and I was cut off at my three-minute mark. I understand why rules are in place, but the panel had been sitting there for at least 20 minutes with no one to speak, and I was the only one next in line to speak, so I'm not sure why they couldn't have given me the courtesy of letting me finish what I had to say, especially since we're taking our personal time to come down and say this and there was nobody else around. Thank you.

UNIDENTIFIED SPEAKER: We live on Pecos Road on the street right there, and it's right next to, you know, where the highway would be or -- and on the other side of that would be the Indian reservation where they're struggling to come to a decision. And I've lived there for about nine years,

Page 19

(Comment codes begin on next page)

Code	Comment Document

but there's been just a big fight, and that's been going on for about 30 years now. And really it's just a waste of money and it's a waste of time. Everybody's just trying so hard to focus on the highway.

1 You know, 30 years ago, everybody was always just focused on the highway. It's been going on that long. You know, and Phoenix has grown. We do know that, but it's not enough. You know, trains. We don't use enough trains. Oh, sure we have the Light Rail. We do have that, but I mean, that's just not enough. We need more transportation, like the 101 east or maybe the west 101. I mean, we have all of that. We have all these highways all over the

2 place, and I think that we need less pollution is what we need less of.

3 And the highway like I-10 that runs right through, we need less of that, you know, because people can go to trains instead because it saves on gas and, thus, going to save insurance. Going to save all that money.

4 And so as far as the government, you know, focusing all the time on trying to build this freeway and do some sort of improvements, they're not trying to do improvements, they're only trying to

1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Alternatives, Nonfreeway Alternatives**	
4	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.

focus on the freeway. And the government owes $16 trillion. That's how much the government owes, and we're still just focusing on all of this. Trying to pay off for all the work that's going to be done for the staff, for the advertisements, for everything. All that money, the interpreter. It's just so expensive to do this, to focus on this. It's been going on for 30 years now and really it's just a big waste.

I just recently had a sign that said about how, hey, look up on this website, usdebtclock -- usdebtclock.org and you can see how much money is owed right there. Trillions of dollars just wasted and wasted. And, you know, what I want, what we want is to not have it built. Just to be done with it. Just to stop it and to save money.

I would just like there to be peace, you know, for the tribes, the reservation and for our area where we live where the freeway would be. Just leave it alone, and maybe just focus on the public transportation, on the trains, and grow it that way instead.

You know, you're going to ruin our homes. You're going to run right through our homes. It's going to cause more pollution, there's going to be

And kids that are in the area, all the children, how they play around right now, I mean, they won't be able to do that then. It's just going to be much more limited for them and I don't think that's right. I think that we need to focus on public transportation, like trains, and cause less pollution that way and less destruction to the environment. Maybe focus on solar electricity and things like that. So, please, I want everybody to stop fighting about it, and I don't want a freeway to be built period. That's it.

UNIDENTIFIED SPEAKER: Hello. I live in Ahwatukee in Phoenix on Pecos and 32nd Street, right there, and it's been about eight or nine years. You know, I felt like it was the best place for my kids to go to school, and now they're graduated and they left the nest and they've gone to college, and now I feel kind of stuck because I can't really sell my property because of all the struggle that's going on with the freeway.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. Appears EIS route has been decided and any delay would fill the pockets of lawyers and politicians.

As for the West Routes, wouldn't it just make sense to choose both W59 & W101, relieving the congestion on I10 East & West, adding travel options for residents of Tucson and Southern Arizona to Hwys 51 & I17 as well as the I10 West connection to popular destinations in Northern AZ, CA & NV Better commerce for the state.

You know, I feel like my investment has been in there, and it's not fair because, I mean, other people want to move in and out to be near family, to be near schools with their children, and that's what they would want to do and they're doing that in my area, but I'm stuck because we're older. You know, everybody else has opportunities for their families.

And I think that we should fight about that because my point is, as far as the reservation goes right there, you have tribes. And we have to honor and respect their spiritual being and the thing that they're trying to do there. And if you destroy their land, I don't know what would happen to them. Because I did learn to respect tribes and learned it from Israel. They pass things down from generation to generation. And I feel like we need to respect and honor their nature and their tribes and their lives and so that's why I want to stop it.

I think maybe think twice about it, you know, increasing the amount of trains and things. Because when people have so many cars, it's so expensive. Electricity 's becoming expensive. I mean, there's just more opportunities I know, and more things economically for people to do if we had

FORMULARIO DE COMENTARIOS

Comentarios Adicionales: My comments are very brief. I think the video presentation is excellent. All of the visual documentation around the room is very good and somewhat technical. My main concern is the air quality issue which I think is everyone's concern. Many days in the year air quality in Phoenix on the other side of the mountains is very poor yet ours is minimal due to our location. The proposed freeway would obviously change the overall quality of the air which would cause us to look like Phoenix proper on a high pollution day.

I can see the need to complete the loop around Phoenix but I think the environmental potential issues are enough to put me against the freeway.

Obviously the only way we can be heard is to organize and become a total force against this project. The chances of people putting their passion and money against this are unlikely. But if there is an issue which would unite this community I think this is it.

1	**Design**	The proposed freeway main line is no closer than 100 feet from any residences along Pecos Road. The bridge sections include concrete barriers that prevent vehicles from leaving the roadway. The noise walls along the proposed freeway would be of a height such that vehicles could not see over them and into residences.
2	**Safety**	To reduce the number of freeway accidents and the expenses associated with responding to them, particular attention was paid to safety factors in the design of the proposed freeway. The proposed South Mountain Freeway's eight-lane section is shown on Draft Environmental Impact Statement page 3-58, with discussion and remarks that the freeway would be consistent with the design of other freeways in the region and thereby would improve driver expectancy and safety. The sidebar on Draft Environmental Impact Statement page 3-59 discusses the safety features of auxiliary lanes (used at traffic interchanges) for facilitating acceleration and deceleration, thereby reducing potential conflicts with through-traffic and travelers merging onto or exiting from the proposed freeway.

As a person who uses I 10 to I 17 going N/S to see family several times a week, I find such congestion ironic to access I 10 from I 17 South+West bound that I take Durango Drive, get off on Durango Son 35th to Broadway to get back to Laveen. Traffic after 3 PM is backed up on I 10 exit to McDowell Road. Often, in theory, taking 17 to 10(W) to SMTN & Norway sounds good, but not practical time wise. What plans are there to relieve congestion @ 17/10 interchange.?

constraints of all the drainage out of Ahwatukee trying to sync the -- subset the bridges as low as possible at all the major interchanges, in particular 40th Street. Every foot the bridge can go down, the better for the sound walls. So I think that's kind of most of it.

UNIDENTIFIED SPEAKER: Hello. Okay. I have another perspective now that I've been looking around at all of these advertisements and these banners and I've been seeing what's been posted, and I'm understanding a little bit more completely now. But something that had me thinking twice is the level of medication that other people take, maybe the prescriptions, maybe these people who take prescriptions and different pills can't drive because they're afraid of getting a DUI, or maybe people who have, you know, no driver's licenses or something like that. I mean, they don't have the opportunities. Sure, there's going to be a freeway there. Maybe we should think twice about maybe putting a train there instead.

You know, it would be a little bit less of a headache for other people, you know, other people who have had DUIs or mental illness or something and they're a risk to other drivers. And

so if we put a train there instead of the freeway, I think that will be better. That way blind people could have the opportunity to get around the valley. People who have a disability, they could be more social while on a train. They wouldn't have to worry about a car because a lot of people are stuck and they can't use a car or they can't afford a car. But if they're riding on a train, it would be more social.

If people don't have driver's licenses, they'll get in less trouble with DUIs or accidents. You know, maybe people are out for a good time and they'll have better opportunities to be able to take public transportation instead of driving, and I just think those are things that you could think twice about.

UNIDENTIFIED SPEAKER: I was just discussing this with Ben about the 32nd Street and the Pecos interchange right there, the crossroads right there. There's going to be a bridge built over it and it's going to block it, and there's no way I'm going to be getting through because there's not being a ramp there. There are homes in the area on both sides, but those people in the homes won't be able to use straight through 32nd Street. They're going to

1 The South Mountain 202 alignment is an outdated plan. The population growth has increased past the point that the proposed route will serve the purpose of relieving traffic congestion on I-10. The people in the Southeast Valley need more options for commuting into central Phoenix employment areas, just as people in the West Valley do. Money could be better spent to improve & increase public transportation.

2 3 To eliminate the truck traffic around Phoenix a bypass should be established at Casa Grande going East on I-8 and south to I-10. The roads would need to be improved but the cost would be less.

4 5 6 The detrimental impact on the Ahwatukee Foothills community is far greater than the savings after commuter cost

1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives, Nonfreeway Alternatives**	
3	**Alternatives**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.
4	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Draft Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
6	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Draft Environmental Impact Statement pages 4-16 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

Draft Environmental Impact Statement
COMMENT FORM

Additional Comments: and little consideration has been given to this community. Pollution and noise will greatly increase if an 8-10 lane freeway is built along Pecos Road. If the freeway is elevated and a tunnel or trench is built floodgates may be created where none currently exist.

Do Not Build on Pecos

7	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Noise**	
9	**Drainage**	Pecos road drainage is designed as a pass-through system. In other words water is allowed to drain along its natural existing pathway underneath the freeway and to Gila River Indian Community land. If an action alternative were to become the Selected Alternative, the E1 Alternative would be constructed aboveground and the existing culverts would extend to pass drainage under the freeway. Pecos Road currently has numerous existing culvert crossings. Depressing the freeway in this area would eliminate the existing culvert crossings and potentially have adverse flooding impacts on adjacent properties. Extending the existing culverts or upsizing the culverts would maintain or improve drainage flows. Doing so would ensure that there would be no adverse flooding impacts to adjacent properties. (See Draft Environmental Impact Statement pages 3-18, 4-98, and 4-107.)
10	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

so if we put a train there instead of the freeway, I think that will be better. That way blind people could have the opportunity to get around the valley. People who have a disability, they could be more social while on a train. They wouldn't have to worry about a car because a lot of people are stuck and they can't use a car or they can't afford a car. But if they're riding on a train, it would be more social.

If people don't have driver's licenses, they'll get in less trouble with DUIs or accidents. You know, maybe people are out for a good time and they'll have better opportunities to be able to take public transportation instead of driving, and I just think those are things that you could think twice about.

UNIDENTIFIED SPEAKER: I was just discussing this with Ben about the 32nd Street and the Pecos interchange right there, the crossroads right there. There's going to be a bridge built over it and it's going to block it, and there's no way I'm going to be getting through because there's not being a ramp there. There are homes in the area on both sides, but those people in the homes won't be able to use straight through 32nd Street. They're going to

Code	Issue	Response
1	**Design**	The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix. The interchange would have required the displacement of over 100 homes and would have been located near an existing high school. The City recommended that, based on these impacts, the interchange be removed from the study. At the same time, the City conducted a traffic circulation study to evaluate the impacts of the freeway (and the removal of an access point at 32nd Street) on the local street system. The City study found no adverse effects on the local street system from the proposed freeway (see Appendix 3-1 in the Final Environmental Impact Statement).

have to go through -- through an area of a lot of homes, and there's going to be a lot of cars going through the residential area in order to arrive to 40th Street. So there's going to be a lot of cars and a lot of traffic in that area.

You know, so's there's going to be a lot of cars taking those smaller side roads and a lot of traffic in that area. And you have to think about, it's just a waste of time. You know, it's going to take me 10 to 15 minutes just to go through that residential area. I don't think that's right. I don't think it's fair. You have to respect our home, our community, 32nd Street. There's a high school right there.

2

It's easy if we had a ramp to get right through there. It would be a lot easier. We could get through. And from the Indian reservation, they could come straight through on 32nd Street and get off right there, and they could go to the high school in that area. There's just too many -- it's too crowded in that area on 40th Street and from 32nd Street because there's a lot of homes right there in that area. I think it's a really bad idea, so please don't build this over on 32nd Street. Okay. Done.

UNIDENTIFIED SPEAKER: Don't waste any

I am a recent (2 years) relocatee to Phoenix. As a resident who spends substantial time in the West Valley area, primarily work, the effects of the new freeway section will be obvious. It would relieve overall congestion, provide access to the East Valley, and allow for an efficient way to travel on I-10 East. There for I support the project as proposed, it will be tough on some in the path, but the overall population will benefit, in my opinion.

Freeways are friendlier to the environment. With freeways we see less pollution + less traffic accidents. It keeps ~~our~~ our city streets from being as populated. This project will bring jobs to the Valley which Phoenix is hurting for. It will provide employment opportunities to many and bring jobs back to our state. Our parkways are already very busy + this freeway will help to redirect some of the traffic + help with rush hour traffic. The 202 project will definitely be a win win !!!

I-10 plugs up, they all hit the surface streets, and the surface streets from South Phoenix to Laveen just get jammed up. A lot of accidents are starting to happen, more serious accidents than ever before.

So I am in favor of building the freeway. I have been in the path of the freeway since '85 when it was designed, and we voted for it in '86. And we are still waiting to see whether this is going to be built or not. But I would strongly suggest that the freeway be built.

Thank you very much.

ANONYMOUS: Well, we are for it, wish it would happen. I have been following it since 1985. Nothing has happened that we can see. And I live on 51st, off of 51st Avenue. And right now the traffic is horrendous. Two miles down south of where I live, the Vee Quiva will open its new phase in July with seven restaurants and a resort, which they don't have right now. So it already -- 51st Avenue will be a freeway. And that's our concern.

We want the freeway.

ETHEL WILLIAMS: The main thing I would like to do is say that my whole family -- not my whole family, but two-thirds of us, three-fourths of us, moved to Laveen because of all the things they promised

UNIDENTIFIED SPEAKER: Where to start. Well, I guess, first of all, I'd like to say that I'm a little frustrated by this whole process, because I'm an Ahwatukee resident. I've been coming to these meetings for years now. And nothing ever really changes. It's the same smoke and mirrors every year, every meeting. And it's like, oh, well, this is the study that we're doing, and this is where we're going. And yet we never get there. There's never a decision. There's never a, this is the drop-dead date, which, you know, in my line of work, in any job I've ever had, you know, if you have a job, you always have a suspense date that, you know -- by which it's supposed to be finished. And so that's probably the most frustrating thing with this, living in an area that's going to be affected by this.

The other thing too is that I really resent the fact that this has always been marketed as a commute alternative and a way to improve people that work downtown Phoenix and are commuting from the East Valley to downtown Phoenix, because it's not. This doesn't even take you downtown. It takes you way on the west side, 59th Avenue.

So that's great if you're going out of town or if you're a semi or people passing through Phoenix. I just wish that they would market it and address it for what it is. It's a city outer loop truck bypass. It's

Code	Issue	Response
1	**Purpose and Need**	The proposed freeway was developed to improve mobility between the western and southeastern portions of metropolitan Phoenix. See the text beginning on Draft Environmental Impact Statement page 3-27 for more information related to the responsiveness of the proposed freeway to the purpose and need criteria.
2	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document

not a commute option.

In fact, it even shows on their board over there that this will save you six minutes travel time from Ahwatukee to downtown. The problem with that is, one, like I said before, it's not taking you downtown. And two, if it's saving you that time, it's because you're still going down the I-10, and maybe there's fewer cars or trucks on there because now they're taking the outer loop because they're not going downtown. So...

And as a -- as a homeowner that's going to be directly affected by this, it would be really nice if they'd have some dates and some drop-dead, concrete dates that they could give, or at least some, you know, proposed dates that, hey, by this date, this is going to happen, because I can't -- I'm -- I've been living in limbo. Can't make any decisions on my house or what to do.

3

So I guess that's -- that's it.

And -- oh, one more thing. And the people that are giving positive comments are the people that don't live in an area that's affected by it. I can tell you that the meetings I've gone to, all those that speak highly of this are the people that -- in Ahwatukee, anyway, because I can't really speak to the Laveen area -- are those folks that live north of Chandler Boulevard. So they're not affected by this. But I guarantee you if they

Code	Issue	Response
3	**Construction**	The schedule for the next steps includes publishing the Final Environmental Impact Statement in 2014. A 60-day public review period will be provided. Then the record of decision would be published. If a build option is selected, construction could begin as early as 2015.

Code	Comment Document

were, then their comments wouldn't be so positive.

One more thing. Since it's always been said that, well, this has been in the works since like 1985 or before and -- that being the case, why were the homes that are built along the right-of-way of the freeway or even, in my case, right up to the freeway, allowed to have been built? Because initially they were not in the planning as far as those communities. Where my house sits, and the whole row of houses, were not originally supposed to be built.

Likewise, there's a brand-new housing development down on the west part of Pecos at probably about 15th Avenue that was just built in the last few years. And it's going to be taken out by the freeway.

So the only rationale I can see is that they wanted to draw property taxes on it until they finally did make a decision on the freeway. But since they knew this was going to go through all along, those should never have been allowed to be built.

UNIDENTIFIED SPEAKER: I was studying this -- a map over here, and the layout and everything, and I can see that there's going to be new bridges that are going over the top. And I just think that it's just too many trucks that are going to be passing over the top of the bridges. And I think it's -- suppose they crashed?

Page 34

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
4	**Social Conditions**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Draft Environmental Impact Statement.

Code	Comment Document
1	Document Created: 7/10/2013 1:53:15 PM by Web Comment Form I think the freeway should be as elevated as possible because elevated freeway sections are better looking, and keep the sound out of the underlying communities. I think the freeway would best serve the people if it was entirely elevated.

Code	Issue	Response
1	**Noise**	The freeway profile, or elevation, is determined by a number of engineering factors including geology, drainage, and cost, among others. Like most freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would maintain a rolling profile, being elevated above most major cross streets and dropping to near ground level between interchanges.

I am unable to attend the hearings you held regarding the loop 202 extension West of the I10 South of Phoenix toward I 10 on the West side. Not only do I support this extension I hope it can be done sooner rather than later. Hopefully the indians will allow routing on the reservation which would be of economic advantage to them. I recommend the routing connecting with the Loop 101 and I10 to maximize the benefit of bypass traffic to get off I-10 as far west as possible and reduce traffic congestion into Phoenix from this point.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1

FAVORED 202 LOOP CONSTRUCTION DUE TO THE FOLLOWING ADVANTAGES.

- THE ALIGNMENT WILL BYPASS DOWNTOWN AREA FOR BIG TRUCKS GOING TO TUCSON OR EAST SIDE — LESS TRAFFIC VOLUME AT THE 10 FREEWAY — LESS BIG TRUCKS LESS ACCIDENTS DUE TO LESS VEHICLES @ SUCH HAULS.
- IT WOULD OPEN UP NEW BUSINESSES & HOUSING DEVELOPMENT ALONG THE NEW 202 LOOP ALIGNMENT

UNIDENTIFIED SPEAKER: I was resident of Laveen. I was there since 2007 to 2000 -- end of 2012. I work in Chandler, and my commute was only through Baseline Road, and it was like a nightmare every day, and I pretty much couldn't stay anymore because I had to have early morning meetings, so I had to move out to Chandler. But I still have my home back in Laveen. And I'm -- it's rented right now.

So I'm very interested to see this freeway getting built, because if you stay -- if you ever go to Laveen, you'll see that area has a lot of prospects, but it's just not developing or growing because of not having a proper freeway there yet. It's just like a cul-de-sac, with only one road, Baseline, going back and forth.

So -- so I really hope and thank the ADOT team for committing the years. I know it's a long process, and I hope this process moves faster and quickly so that the freeway gets built as soon as possible.

MR. ROSS: Richard Ross, R-i-c-h-a-r-d, R-o-s, as in Sam, -s, as in Sam.

So I am against the building of this road for a lot of reasons. One, I don't believe -- I don't believe we have the money. Or another way of saying it is I think the money could be spent in a better way. I don't believe we need more roads built. We have an incredible

It is completely unclear to me what it is that you are planning to do, there are so many options listed, that I cannot tell what you really have planned. Our existing highways need correction already, why would I want you to build another problem child? I-10's cut down of lanes at 75th Avenue is the worst of the traffic hazards. The way the freeways travel now, I can get to work almost as fast by avoiding it for the most part.

1	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.

were, then their comments wouldn't be so positive.

One more thing. Since it's always been said that, well, this has been in the works since like 1985 or before and -- that being the case, why were the homes that are built along the right-of-way of the freeway or even, in my case, right up to the freeway, allowed to have been built? Because initially they were not in the planning as far as those communities. Where my house sits, and the whole row of houses, were not originally supposed to be built.

Likewise, there's a brand-new housing development down on the west part of Pecos at probably about 15th Avenue that was just built in the last few years. And it's going to be taken out by the freeway.

So the only rationale I can see is that they wanted to draw property taxes on it until they finally did make a decision on the freeway. But since they knew this was going to go through all along, those should never have been allowed to be built.

UNIDENTIFIED SPEAKER: I was studying this -- a map over here, and the layout and everything, and I can see that there's going to be new bridges that are going over the top. And I just think that it's just too many trucks that are going to be passing over the top of the bridges. And I think it's -- suppose they crashed?

They could crash directly into our home and destroy our home, destroy our lives, destroy our houses. It's just a threat. It's just a threat to our life and the environment as well. It's just going to ruin the environment.

My home has these windows. They're going to be dirty. They're going to be black with soot. The roofs are going to be black because there's too many trucks on these highways and of all the traffic that's going to be passing by. So there's just no way.

I mean, if there's cars, that's okay, but it's just the trucks that I'm worried about. Trucks are always filthy and full of pollution with all the smoke that they create.

And I just think it's going to be very, very dangerous for our environment, for our health, you know, for the farm and the gardening that we have in the back yard. It's going to ruin the environment completely with the pollution.

There's schools in the area. There's lots of schools in the area where kids play sports or just around, and it's just going to be -- and their health is going to be affected by it all along this area.

And if you have the bridge -- if you have this bridge built, people aren't going to buy my house,

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
1	**Safety**	To reduce the number of freeway accidents and the expenses associated with responding to them, particular attention was paid to safety factors in the design of the proposed freeway. The proposed South Mountain Freeway's eight-lane section is shown on Draft Environmental Impact Statement page 3-58, with discussion and remarks that the freeway would be consistent with the design of other freeways in the region and thereby would improve driver expectancy and safety. The sidebar on Draft Environmental Impact Statement page 3-59 discusses the safety features of auxiliary lanes (used at traffic interchanges) for facilitating acceleration and deceleration, thereby reducing potential conflicts with through-traffic and travelers merging onto or exiting from the proposed freeway.
2	**Design**	The proposed freeway main line is no closer than 100 feet from any residences along Pecos Road. The bridge sections include concrete barriers that prevent vehicles from leaving the roadway. The noise walls along the proposed freeway would be of a height such that vehicles could not see over them and into residences.
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Purpose and Need, Truck Bypass**	
5	**Health Effects**	
6	**Visual Resources**	Draft Environmental Impact Statement page 4-158 of the mitigation section for visual impacts lists four measures that could be taken to mitigate the visual impacts of overpasses: · placing landscape treatment on the periphery of right-of-way areas at overpass locations as well as at other areas adjacent to residential development · using earth colors for overpasses, retaining and screen walls, and noise barriers · using bridges and overpass structural systems that help unify a visually complex landscape · minimizing structural sizes and/or recessing the face of structural members from the edge of the roadway to reduce real or apparent breadth of structures Additionally, Draft Environmental Impact Statement page 4-159 has nearly a full page discussing "how structures are aesthetically treated and how the public could be directly involved in developing aesthetic treatments."

because it's going to be right there. So it's going to hurt the resale of our house. It's not going to be worth it for them to spend money on my house.

The government already owes -- the government already owes money, $16 trillion in debt. It's not worth fighting for this. It's been 30 years.

So please, please don't build this. It's just going to be horrible. You should no build the bridges across the top because of the bad environment. There are other organizations that already filed complaints. Just ADOT, you know, they're going to -- and other organizations will also file complaints some day.

MS. MILES: My name is Carmen Miles, and I've been living on the Gila River Indian Reservation for all of my life. And whenever I leave the reservation, I still never forget it. If I move -- I have moved away for a year. But I still always remember that's where I -- I was raised, and that's my home. And knowing that people want to use my land as a transportation system that might affect it for the future and all the generations to come, it hurts me, and it also hurts my people. So I don't feel like this is helping my land at all. Looking at it, how it's still in a bad condition today, but I will always work for my land. I was always -- I always have hope for my land, and I always support it.

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
7	**Property Values**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
8	**Acquisitions and Relocations**	By law, the State must pay market value for real property acquired. Market value is determined by an independent appraiser. Additional information about the property acquisition process is available on the Arizona Department of Transportation's Web site at <azdot.gov/business/RightofWay_Properties/booklets-and-manuals>.
9	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Hello: I am writing on behalf of my oppositions to the loop 202 freeway going through Pecos st. I am an ahwatukee resident and I am against the freeway being built on Pecos. South of Pecos would be fine. I live in lakewood on a lake and am concerned about the relocation of the wells as well as the increased noise and pollution. Home prices have taken a hit over the years and i am concerned.

1	**Public Involvement**	This study, which began in July 2001, is expected to be completed in 2014. During the study process, community members have had and will continue to have various opportunities to ask questions, express opinions, and provide comments about the proposed action. The Draft Environmental Impact Statement had a 90-day comment period—twice the duration that federal regulations require. A public hearing was held on May 21, 2013, at the Phoenix Convention Center from 10 a.m. to 8 p.m. where individuals provided comments for up to 3 minutes in front of a project team panel or provided comments with no specific time limit to a court reporter. Comment forms were available for written comment. At any time during the 90-day period, comments could be made using e-mail, phone, the project Web site, and by mail. Six additional community forums were held at locations within and in close proximity to the Study Area.

Build the Loop 202 South Mtn. Freeway. The traffic congestion on the I-10 through west Phoenix is intolerable. The traffic moves at a snails pace for much of the day and this freeway will take much of this traffic off the I-10. The traffic congestion is only going to get worse on the I-10 (if that is possible) over time if this segment of the 202 is not built. I feel the pain of the homeowners in the freeway corridor, but not enough to stop construction. Most were well aware of the future plans for their area before they purchased their property. They should be compensated for their property, but should not be allowed to stop the construction of the Loop 202 South Mtn.. Build the Loop 202 South Mtn. Freeway - the sooner the better. Thank you for this opportunity to give my input.

Build the Loop 202 South Mtn. The traffic conditions on the I-10 in west Phoenix are intolerable. Traffic during most of the day moves at a crawl. Something has to be done to relieve this situation and I think building the Loop 202 South Mtn. will relieve much of this traffic congestion. Those people who bought and built in the freeway corridor should be compensated, but then should have no legal right to continue to stall freeway construction. Thank you for this opportunity to comment on the freeway project.

MAY 21 - 2013.

I have been a resident of Phoenix for over 18 years and have seen this city grow/sprawl with no overall strategic planning. What a shame for a city I really enjoy living in. This freeway is another project which will increase sprawl — cost tax payers over $3 billion and affect so many communities in the name of progress. We will be no different than LA with its sprawl and countless bill boards which are now, sadly, part of Phoenix landscape.

Code	Issue	Response
1	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
2	**Construction**	The proposed freeway would not cost $3 billion as indicated by the commenter. The total budget for constructing the proposed freeway is $1.9 billion, approved by the Maricopa Association of Governments Regional Council in May 2012. The cost estimates for the proposed freeway, as described beginning on page 3-59 of the Draft Environmental Impact Statement, were developed in accordance with accepted engineering practices by professional engineers. The project has been subject to multiple peer reviews of both the quantities and unit costs used in the estimate by the Arizona Department of Transportation, Federal Highway Administration, Maricopa Association of Governments, and their consultants. In each case, the estimate was found to be reasonable and accurate.
3	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Draft Environmental Impact Statement pages 4-16 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1	**Alternatives**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Draft Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.

The Preferred Alternative will be a great addition to the System. Reduced emissions and reduced travel times by regional traffic are big plusses +!

1 Please go forward with the Preferred Alt.

Heavy traffic on 51st Avenue, Raveon, is primarily due to semi-trailers avoiding I10 Thru downtown Phoenix. This is more than a nuisance; it is a safety-factor for pedestrians small vehicles, bikes, etc.

1 S Mountain must be built. It was needed 10 years ago, it is needed now. And it need will never be eliminated.

The freeway link around South Mountain is very important. You all know it. It was approved decades ago. So why are you all allowing those racists people in Auwatukee control this decision. The Gila have suggested a plan and the public voted on a plan. What is the problem????

1	**Economics, Socioeconomics**	The proposed South Mountain Freeway would be funded by State, federal and local dollars. The total budget for constructing the proposed freeway is $1.9 billion, approved by the Maricopa Association of Governments Regional Council in May 2012. The approved program includes design, right-of-way, and construction of the proposed action. Funding for project-related activities is included in the current 5-year program identified in the regional Transportation Improvement Program as well as in the State Transportation Improvement Program.

Here's another opinion on the 202 S. Mt. project.

1

7/24/2013 8:25:41 AM
The 202 Should be built along the original planned route. I looked at housing near Desert Vista High School in 1989 before the school was even built. At that time the builder was advising potential buyers that the houses were being built on planed freeway land. Anyone who did due diligence knew they could lose the house, church, or any other building on the land. Additionally the original builder in that area went out of business for being honest with buyers many of the homes there were framed and finished years later very weathered wood surprising that they passed inspections. there is absolute no reason tax payers should have to buy additional land at today's prices.

From: Otto Rocket
To: Projects
Subject: No to building the South Mountain Freeway
Date: Wednesday, July 24, 2013 2:22:49 PM

ADOT,

1 I am writing this in opposition of constructing the Loop 202 Freeway down Pecos Rd and through the community of Ahwatukee. As a new resident to the state of AZ (just over a year) I was drawn to the outdoor lifestyle, weather, mountains, and parks. As I spent more and more time in Ahwatukee, I realized this was the community for my family and me.

2 As I have read more and researched details about the proposed highway I cannot believe that this is still being considered. For something that was planned years and years ago does not mean it applies to current times and population of the area. Yes I have read that people and organizations knew that the freeway was a possibility and built there anyway. So you're going to uproot hundreds of families, greatly decrease property values, and have houses and schools back straight up to the freeway? Let's not mention the new pollution that will be trapped between South Mountain and the Estrella range.

3 4 5 6 In a time where cities are restoring their parks and protecting their historical districts this project is going to blast a hole through our park? The largest municipal park in the United States? Phoenix will be a laughing stock. Is this worth ruining one of the most unique communities (worlds largest cul de sac) and a state park (yes it will ruin both) for a roadway we do not need or at the very most a convenience for a small number of commuters?

7 8 9 10 The money reserved for this project could be used for existing infrastructure that is more than adequate for current commuters. I have read that funds are lacking for maintenance and upkeep of existing roads and this money could be used to alleviate that situation.

Please do the sensible thing and re purpose these funds to fix current infrastructure, do not write off Ahwatukee, the GRIC, and South Mountain to build this unnecessary roadway.

Thank you,

Concerned Resident

Code	Issue	Response
1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need, Old Plan or Use of Old Data**	
3	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
4	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
5	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
7	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
8	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Draft Environmental Impact Statement pages 4-16 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
9	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
10	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa County region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund the projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of Federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make additional funds available for other statewide projects.

1 2 3 4 5 6 7 8 9 4

We all know that this will be a TRUCK ROUTE to bypass downtown which will include all hazardous materials ! I look south of pecos and see only desert but you want to tear down houses , a church & build next to a school. Why can't you at least put on land just south of pecos, which will keep from taking down structures. The best would be to move it out closer to riggs road. If built on pecos traffic would be a nightmare during construction chandler blvd could not handle it all & there is no road besides pecos to foothills reserve where I live. There would also be a lot of pollution for years while being built , with everyone using surface streets, stop lights/stop signs etc. There would be a lot of traffic going next to a lot of schools ,since all streets would be very busy & schools are on main side streets. Please talk to indians on res. & put just south of pecos at the very least would save $$ time & prevent traffic congestion . Thanks, Ahwatukee resident since 1978

Code	Issue	Response
1	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Hazardous Materials**	
3	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
4	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Alternatives, Gila River Indian Community Alignment**	
6	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). Nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study.
7	**Traffic**	The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours may be needed during construction. (See Draft Environmental Impact Statement page 3-27.) In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the freeway on the local street system. The City study found no adverse effects on the local street system from the proposed freeway (see Appendix 3-1 in the Final Environmental Impact Statement).

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
8	**Safety and Health**	To reduce the amount of construction dust generated, particulate control measures related to construction activities must be followed. The following mitigation measures would be followed, when applicable, in accordance with the most recently accepted version of the Arizona Department of Transportation *Standard Specifications for Road and Bridge Construction* (2008). Prior to construction and in accordance with Maricopa County Rule 310, Fugitive Dust Ordinance, the contractor shall obtain an approved dust permit from Maricopa County Air Quality Department for all phases of the proposed action. The permit describes measures to be taken to control and regulate air pollutant emissions during construction (see page 4-173 of the Final Environmental Impact Statement).
9	**Construction**	Although the overall duration for constructing the proposed project would be about 5 years, construction duration in any one area would take roughly 18 months, not years.

1 2 3	I am commenting as a concerned citizen and not as a representative of any organization. In discussing the proposed freeway's impact on South Mountain, ADOT Spokesperson Tim Tait has said the following: "You can't build a freeway without some sort of consequence …." That's true, but the statement fails to distinguish between acceptable consequences and unacceptable ones. If we allow the world's largest municipal park to be violated by a freeway, Phoenix may become the world's largest municipal laughing stock. If we absolutely must have this freeway, then another route must be found. Nevertheless, it's unclear if this freeway is needed at all. After reading the entire report, I believe it is based on out-of-date assumptions and faulty reasoning. Starting with the issue of induced demand, I quote from the draft: "The purpose of the proposed action is not to promote economic development but to respond to a growing need for additional transportation capacity as a result of regional growth occurring now and as projected. Therefore, the action alternatives are not expected to contribute to induced growth in the region." That wording is astonishing. The claim being made in the passage above can be compared to going to the doctor, telling him or her that you eat nothing but bacon, but that you don't expect any negative impact on your health because you aren't eating bacon with the intent of hurting your health. If only we could simply wish away the unintended consequences of our actions. The more likely outcome is that this freeway will provide short term relief but then induce more traffic. Contrary to the claims made in the report, induced demand happens routinely as a result of road building, even when transportation demand exceeds supply. The induced traffic may not come primarily from the Laveen and Ahwatukee neighborhoods linked by the proposed freeway, but instead from more far-flung suburban regions that become more appealing when a commute that had been previously unthinkable suddenly becomes "not so bad." Is it really in the best interests of the metropolitan area to enable daily drives between Buckeye and Queen Creek, for example? Supporters of the South Mountain Freeway claim that construction of this road will bring economic development to Laveen. While a freeway is likely to bring construction projects and real estate investment to the area, the most likely result will be inefficient, unsustainable job sprawl instead of a strong local economy. The idea of decentralized employment has been pursued for years, most notably in Phoenix's urban village concept, and its failure is evident in the long suburb-to-suburb commutes that have resulted. Because contemporary labor markets are so specialized, few job seekers find work in their particular professional niches close to home. Instead, the jobs in one suburb are often filled not by nearby residents, but instead by people commuting long distances in single-occupant motor vehicles from another suburb miles away. Even if one is lucky enough to find work close to home, job transfers and office relocations are such a frequent occurrence that the congruence of residence and workplace can disappear with little notice. Likewise, even someone employed close to home may find his or her spouse, domestic companion, or adult child traveling a long distance to find employment in his or her area of specialized area of expertise. For all those reasons, a far better scenario is not a freeway connecting two suburban

Code	Issue	Response
1	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need, Lack of Support**	
3	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Code	Comment Document
4	neighborhoods and encouraging unproductive land use, but instead enriching those areas with the best possible rail and bus links to existing employment centers. Unfortunately, the draft report dismisses these options with insufficient consideration. Chapter 3 notes that no planned rail lines will serve the territory connected by the proposed freeway, but doesn't even contemplate that additional rail lines beyond those currently planned could be added. That's quite an omission considering how many times the map of planned light rail extensions has been revised since the passage of Proposition 400 in 2004. The original map did not envision light rail in South Phoenix, but a line to that part of town is now being studied. A second phase extending that line to Laveen might be feasible. While the study acknowledges that other modes of transport could be added in the future, relegating non-automotive modes to a wish list is not responsible planning. The time to look at those alternatives in depth is now, before any park land is sacrificed for a freeway.
5 6	Similarly, the report considers each mode of transport in isolation without appropriate attention to the possibilities that an appropriate mixture of modes might present. Could the proposed freeway be built as a parkway with a smaller footprint? The study claims that would not fulfill transportation needs by itself, but doesn't address the possibility of a parkway combined with investments in public transit as a more balanced approach to regional transportation needs.
7	A strategy that does not rely exclusively on automotive travel would be in line with shifting demographic realities, ones that were ignored if the draft EIS. Since 2005, the date from which most projections in the report are extrapolated, there has been a substantial downturn in driving and car ownership, particularly by young adults. Quoting from the U.S. Public Interest Research Group's May 2013 report, "The Millennial generation is leading the change in transportation trends. 16 to 34-year-olds drove a whopping 23 percent fewer miles on average in 2009 than in 2001— the greatest decline in driving of any age group." Why then assume that patterns that held prior to 2005 will inevitably be repeated over the next few decades?
	Of course, one might argue that a reduction in driving could offset the induced traffic mentioned earlier in these comments. That optimal balance between opposing forces would come about only with extraordinarily good fortune. Instead of relying on luck, why not reinforce the positive trend toward diminished driving instead of building roads that might have a contrary effect of inducing traffic? In addition, why spend substantial amounts of money on a freeway that may not be needed when it is clear that increasing numbers of Americans want to see more investment in public transit, along with bicycling and pedestrian infrastructure.
2 7	In light of all these considerations, the only logical conclusion is that the draft report relies on outmoded data and assumptions to forecast growth in vehicle miles traveled, and it casually dismisses non-automotive modes of travel that might meet transportation demand, either by themselves or in conjunction with a smaller road project. Even if ADOT's VMT projections are accurate, it likely the freeway will only worsen the problem due to induced demand. Don't destroy part of South Mountain on the basis of such insufficient justification. Please rethink this report and the freeway it advocates.

Code	Issue	Response
4	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
6	**Alternatives**	In the best-case scenario, a parkway would carry approximately 105,000 vehicles per day, well below the average daily traffic on the proposed freeway, which would range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-19). As a result, the Arizona Parkway would lack sufficient capacity to meet projected travel demand. The Arizona Parkway would not adequately address the projected transportation system capacity deficiency, would not remove a sufficient amount of traffic from arterial streets, and, therefore, would not meet the project's purpose and need. For these reasons, the Arizona Parkway was eliminated from further consideration.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
7	**Traffic**	The historical growth in the Maricopa County region is discussed in the Draft Environmental Impact Statement beginning on page 1-5. The critical factors such as available land, mild climate, affordable cost of living, and employment opportunities that led to the historical growth rates in the region remain unchanged. The comment relies heavily on national trends for travel; however the local conditions and setting of the Phoenix metropolitan area are not consistent with areas of high-density cities in other parts of the country. In Maricopa County, daily vehicle miles traveled levels increased by almost 2 percent between 2011 and 2012 and the 2012 daily vehicle miles traveled is approaching the prerecession peak in 2007. (*Source*: Arizona Department of Transportation Multimodal Planning Division Highway Performance Monitoring System Data for the Calendar Year 2012 and 2011). Even if the trend of vehicle miles traveled "per capita" decreasing continues, the total vehicle miles traveled in the region would still increase along with increases in total population. A critical factor not acknowledged in the comment is that the proposed project is needed today. Details of this need are presented in the Final Environmental Impact Statement beginning on page 1-13. While new projections based on the 2010 Census and emerging national trends may show a lower anticipated population and vehicle miles traveled in 2035 than the previous projections, the need for the freeway has not changed. The Maricopa Association of Governments approved new population, employment, housing, and traffic projections in June 2013. The new data are presented in the Final Environmental Impact Statement beginning on page 1-11. The purpose and need and analysis of alternatives were updated and reevaluated using these new socioeconomic projections and corresponding projections related to regional traffic. While new projections based on the 2010 Census showed a lower anticipated population and vehicle miles traveled in 2035 than the previous projections, the conclusions reached in the Draft Environmental Impact Statement were validated in the Final Environmental Impact Statement (see Chapter 3, *Alternatives*). The traffic analysis demonstrated that the proposed project is needed today and will continue to be needed into the future.

1
2

The draft ESI did not take into consideration that the freeway will be within several hundred meters of several schools including gradeshcools. The freeway will be right next to these shcools and the playgrounds of these schools. The study did not accuratley are adequately study or address the harmful and permanent damage that freeway pollution has on human lungs especially gradeschool children whose lungs are developing.

3

The study did not include or reference completed scientific studies which have shown and proven the long term health effects of freeway pollution on human lungs especially gradeshcool age children who will be spending 8 hours a day 5 days a week breathing the smog from the freeway. Leaving out these scientific studies and only referencing studies that are not complete is gross negligence and incompetency bordering on fraud to blindly support a freeway which has been poorly planned.

The freeway does not belong at this location.

Code	Issue	Response
1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Health Effects**	
3	**Air Quality**	The Draft and Final Environmental Impact Statements present information and analysis about the proposed action and the enhanced conditions when compared against the No-Action Alternative and would not cause significant adverse effects. The Federal Highway Administration and Arizona Department of Transportation Draft and Final Environmental Impact Statements account for the potential effects when considering both adverse and beneficial impacts. The Draft and Final Environmental Impact Statements provide in-depth discussion of potential air quality impacts of the proposed alternatives. The carbon monoxide analysis presented on page 4-65 of the Draft Environmental Impact Statement and updated on page 4-75 of the Final Environmental Impact Statement represents projected carbon monoxide concentrations along the project corridor, including those proposed interchange locations along the South Mountain Freeway corridor. The Arizona Department of Transportation also conducted a quantitative particulate matter (PM_{10}) hot-spot analysis that is discussed on page 4-76 of the Final Environmental Impact Statement. Both of these analyses demonstrate that the health-based National Ambient Air Quality Standards for carbon monoxide and particulate matter (PM_{10}) would not be exceeded at worst-case locations along the project corridor. The emission modeling developed for the proposed action showed that for the mobile source air toxics study area, there would be little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions (see discussion beginning on page 4-77 of the Final Environmental Impact Statement). The carbon monoxide and particulate matter (PM_{10}) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.

CALLER REMARKS/QUESTIONS:

1

I live in the Laveen area. We do not want the South Mountain Freeway in our backyard, I'll guarantee you that. It will only create more issues for our wonderful little village that has been ruined by all the growth. And a freeway through our backyard is only going to ruin it even more so. We are a village not a city. This freeway would only make more sense to go out to 91st or 99th Avenue, where it goes into the industrial area, it goes into businesses, not through peoples lives, not through our backyards. We don't want it and I will do everything in my power to oppose it and have others who feel the same way stand up for our rights. We don't want it.

2

3 4 5

Crime rates have gone up in Laveen and the outlying area. As I sit today and watch the news there is another homicide in Laveen. Bringing in freeways brings in crime, brings in pollution, brings in noise pollution, creates a lot of bad problems and we don't want them. We want to live in peace, it's something we just don't need here. Go to 99th or 91st Avenue, don't ruin our lives.

Code	Issue	Response
1	**Neighborhoods/ Communities**	The Laveen Village area is anticipated to have a built-out population of over 105,000 (see Final Environmental Impact Statement page 4-5). This proposed level of development places increasing demand on the road network. The City of Phoenix's General Plan for Laveen Village has designated areas along the proposed freeway for commercial development that cannot support the projected densities without implementation of the proposed freeway. Without the proposed freeway, the conversion of land from undeveloped and agricultural uses to residential, commercial, and industrial land uses would likely continue, placing a greater demand on surface streets (see Final Environmental Impact Statement page 4-14).
2	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
4	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

STATEMENT ON THE PROCEEDINGS OF THE PROPOSED 202 FREEWAY AT SOUTH MOUNTAIN

TO: Governor Jan Brewer, State of Arizona
FROM: Georgette Chase
Member of the GILA RIVER INDIAN COMMUNITY
SUBJECT: Proposed 202 Freeway Extension at South Mountain

(1) South Mountain, where you propose to construct a freeway on your boundary side is not acceptable to the Gila River Indian Community. Your Department of Transportation office states that the freeway will not be harmful to the City of Phoenix. It does not say that it will not be harmful to the Gila River Indian Community, because it will.

(2) Adolf Hitler, Germany, put the Jewish people to death in gas chambers. I do not know what kind of gas he used to accomplish this, but I do know what kind of gas Arizona will use to try to kill our people. It will be automobile emission fumes. The pollution will settle between South Mountain and the (3) Estrella Mountains in the District 6 and District 5 areas. Governor Brewer will succeed in doing what the U.S. Calvary could not do. What a feather in her gaudy hat! Come to think of it, what kind of a feather, a roadrunner feather perhaps?

In about 1909 the Pima Tribe had ONE case of diabetes. Today our 21,000 Gila River population is the grand total of 80% diabetic. If your auto emission's poison doesn't wipe us out first your fast food industry and all

Code	Issue	Response
1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.

Code	Comment Document

kinds of unhealthy chemical additives in just about every product sold will do the job. But don't get too gleeful about that yet. We are survivors.
Your settlers upstream helped themselves to our life giving river water and then the Coolidge Dam was constructed and it took the rest. The Gila River went dry. Giant cottonwood trees dried up and fell every which way like giant white toothpicks lying motionless like dead bones waiting for time and the hot desert wind to erase the evidence that they ever existed. Cries of babies were heard throughout the land. The once plentiful sweet melons and crops were gone, game perished or left. Children were hungry. Mothers cooed, "Hush" as they rocked them to sleep.
The gracious government with all its cruel power was going to herd us off to the far away land of Oklahoma, but our Chief Azule out-maneuvered them. Not with bows and arrows, but with diplomacy. Our people were spared the tragedy of "The Long Walk" the Navajos called their experience. And the Cherokees called theirs, "The Trail of Tears." We temporarily escaped that grievous trial. The government's Relocation Program we did not escape, but many came back home. We survived. We are still here and so you will have to deal with us today. We are going nowhere.
Dawes Act gave away; or "sold" to white settlers 90 million of the 140 million acres of tribal lands granted for Indian reservation. They took back what they promised! Have you no shame? I guess not if you have no integrity to begin with. In Docket 228 this same federal government gave 6 million dollars to three tribes, Gila River, Salt River and Ak Chin for lands taken by Americans in settling Arizona. That computed at 25 cents an acre. You settlers have taken enough of our lands for little or nothing, this "the buy low, sell high," business tactic that made this country an economic wonder was used on us. You got 90 million acres for nothing, sold it for $1.25 an acre and collect taxes from cattle ranches, etc. up to this day. We migrated here some time, somehow, for whatever reason, but the fact is that we were here first. That is why we call it our land. Furthermore, we displaced no one. Not even the wildlife that was here. We did not pollute the water or the air. We lived in harmony with Nature.
We rescued and took care of your ancestors on their way to California, the

Code	Issue	Response

Code	Comment Document

same as the natives on the East Coast rescued and took care of the remnant Pilgrims from across the ocean. We likewise also accommodated the U.S. Calvary in various ways mostly with supplies of food. There is a story of a Calvary officer who came to a Maricopa village, asking to purchase food. The Maricopa Chief said, “Food is to eat, not to sell. Take what you need.” The officer told the Maricopa Chief that it was only right to pay for the supplies. The Chief replied, “If you want to pay for the food and have money than alright, but if you had come to us and had no money it would have been our pleasure to give to you.”
Our people were kind, generous, and compassionate. But we were dealing with foreigners very different from us. And it did not take long to learn that. Now we are not going to take care of your present day settlers, getting them to the west side of Phoenix at their convenience. They knew when they got their jobs and decided to live however far away from their jobs that time spent and transportation to and fro was going to be a major problem. You made the decision now live with it. The problems we have today are the result of the decisions we made yesterday.
Do not demand that we bail you out. Enough is enough. Grow up and take care of yourselves. Should you insist on pursuing the construction of the proposed extension of your 202 Freeway, expect a legal battle in court. You already got Interstate I-10. We are not going away and we are not going to roll over and play dead. You had other avenues earlier and failed to act, saying, you had other priorities.
A copy of this correspondence will be forwarded to President Obama and Vice President Biden, the Department of the Interior, the Senate and the House of Representatives, because they have trust responsibility over Indian Nations.

To Whom It May Concern,
I am a student in California and am doing some research on public private partnerships specifically related to transportation projects and how P3s might impact the future of urban planning. I am particularly interested in the South Mountain freeway project in Maricopa County and was wondering if you could let me know how ADOT determined that a public private partnership would be beneficial as well as what the process is for accepting bids, the timeline, as well as if P3 bidding processes are public.
I look forward to hearing from you. Thanks for your time.
Jay Donahue

For the east project we support utilizing the existing Pecos Rd corridor.

1 Please consider adding an exit at 32nd street for Desert Vista High School. Skipping this road will add excessive traffic burden to Chandler Blvd.

2 Noise abatement is important to the residential areas so plan ample budget for walls and other noise abatement methods. Thank you for attention to blending and beautifying landscaping.

3 In the simulation the majority of the exits/entrances to the freeway are the traditional design that require two traffic lights to get through the intersection. I recommend the design that requires only one traffic light to get vehicles through the entire intersection (e.g. freeway 143 & Washington St.).

Code	Issue	Response
1	**Design**	The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix. The interchange would have required the displacement of over 100 homes and would have been located near an existing high school. The City recommended that, based on these impacts, the interchange be removed from the study. At the same time, the City conducted a traffic circulation study to evaluate the impacts of the freeway (and the removal of an access point at 32nd Street) on the local street system. The City study found no adverse effects on the local street system from the proposed freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
2	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Design**	The diamond interchange configuration was used to evaluate service traffic interchange needs. The actual configuration(s) of the service traffic interchanges would be determined during the design phase of the Selected Alternative, if an action alternative were to be identified.

INCOMING CALL/COMMENT DATE:	INCOMING CALL/COMMENT TIME:
7/29/2013	
CALLER: Beth Gagnon	CALLER ADDRESS: Ahwatukee & Pecos Road resident
PHONE:	EMAIL: beegee62@hotmail.com

COMMENTER REMARKS/QUESTIONS:

(1) I totally oppose the South Mountain loop of the 202, but am glad to see ADOT finally be honest and calling it what it truly is - a truck bypass - "...provide a long awaited route to bypass downtown Phoenix." It is not a commute route for people living in the southeast valley and working in downtown Phoenix and will, therefore, not reduce commute traffic on I-10. It will, however, be a truck bypass, or outer loop, for commercial trucks and other commercial and private vehicles who wish to bypass downtown Phoenix as they pass through Arizona.

(2) (3) (4) It will also be a means by which traffic, pollution and crime will be brought into Ahwatukee. This has already been demonstrated by the connection of Pecos Road to I-10. It will also result in businesses such as fast-food restaurants, gas stations/convenient stores, truck stops and other such businesses along the proposed freeway, which will bring in more transient populations, creating the potential for increased crime, not to mention the noise, light and air pollution. All of this will result in the decrease (5) (6) (7) in property values of homes in the Ahwatukee area, and other residential areas near the freeway.

You can argue that the freeway plans have been on the books for 20-30 years, but what you fail to acknowledge is the fact that the area where homes now sit along the alignment was originally zoned as commercial. These homes along or in the path of the freeway were not to be built, which would make sense with the original plans. However, in the State's desire and greed to collect property taxes on land that would otherwise sit "useless" until the freeway could be funded and built, the area was rezoned and 100s of homes built along the freeway route. If the original zoning can be changed; the freeway alignment can be changed! The zoning should never have been changed and the homes (8) should never have been built, if the State is going to stand by 30-year old plans!

In addition, the continued song and dance, and smoke and mirrors performances by ADOT just delays what appears to be the inevitable and places a major hardship on those of us most directly affected by the freeway (the homes along Pecos). We cannot sell our houses, because who wants to buy a house that is either going to be demolished or have a freeway running through its backyard? And we cannot make needed improvements/repairs, because it is wasted money, if our home is only going to be torn

Code	Issue	Response
1	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the freeway on the local street system. The City study found no adverse effects on the local street system from the proposed freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
5	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-170 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
7	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138-47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.

(Responses continue on next page)

Code	Comment Document
	down to make way for a freeway. I am a disabled veteran and a single mom. I worry daily if I am physically going to be able to continue to perform my current job. My very future hangs in limbo because of ADOT's inability to stop tap-dancing around with all of these repeated studies and meetings that never present anything new or different, and just make a decision. I cannot change jobs or move. I also cannot plan financially for my potential inability to work by doing things such as paying off my house, because it is not financially sound for me to pay off a house that is either going to be destroyed or made unlivable by the freeway. If you do nothing else, have the common decency and courtesy to be upfront and honest with (at least) the homeowners along Pecos Road and state, flat-out, in writing, exactly what is the future status of our homes (demolished/bought-out/or giant sound wall and freeway in our backyards) and on exactly what date will this occur. If you cannot do this, and ADOT is determined to build the freeway, then the State should be obligated to acquire the homes along Pecos, so that we can all get on with our lives. Bottomline: you preach that the plans are 30 years old…well, 1) obviously, they are outdated and irrelevant to the current situation and 2) Phoenix, as well as the communities directly affected by the proposed alignment have grown, prospered and survived without (and because of the lack of) the freeway. This is blatant and concrete evidence that the proposed freeway will not serve these communities and is not needed.
9	
10	

Code	Issue	Response
8	**Neighborhoods/ Communities**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land despite the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Draft Environmental Impact Statement.
9	**Acquisitions and Relocations**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

1 We desperately need this freeway completed. I am driving every day to the East Valley and the commute is too long. In addition, my kids feel very isolated here - we spend several hours each week just driving to and from activities - and the freeway would cut our drive time in half! I hope and pray we have this freeway completed soon. Thank you!

To whom it may concern,
As a Laveen resident who lives off 67th Avenue and Baseline, I strongly feel as though the proposed South Mountain Freeway would be a huge benefit to the community. The simple fact is that traffic on Baseline is, in truth, horrendous. A drive that should take no more than 20 minutes takes more than twice as long simply due to the amount of traffic on Baseline. A freeway would help alleviate this issue.
I also feel as though it would add to the quality of life, as residents would be better able to move about freely and easily take part in activities throughout the Valley.
Thank you for your time,

RECEIVED
APR 30 2014
AZ Dept of Transportation

25 April 2014

Victor M. Mendez, Federal Highway Administrator
Federal Highway Administration
1200 New Jersey Avenue, SE
Washington, DC 20590

Mr. Mendez:

Since 2005, I've been living in a house under the pall of the Loop 202 South Mountain Freeway. I bought my new house in July of 2004 and moved in in August of 2005. About a month later, ADOT – under your stewardship – foisted an announcement upon the public at a local hotel that my house would be plowed down to make way for the freeway. As a lawyer, physicist, engineer, and business professional, I'm typically fairly well informed. Further, I had visited relatives in the Lakewood area for more than a decade beforehand. I was well aware of the general concept of a freeway.

But, watching the construction of the I-10 / Pecos interchange orientation taking shape, noticing the placement of houses, schools, and churches along Pecos Road, and finally, purchasing a house freshly permitted and built where mine was, the logical take-away was that the freeway would not be built or be built elsewhere. All else was hearsay. But I appear to have been mistaken. Wow, how counter intuitive. Or, rather, what administrative arrogance.

Let me explain something to you: I will not fold like a cheap card table. And I will not wait another 8 years until you decide to authorize this freeway or not. I am tired of waiting. Like so many others in my neighborhood, I have no back yard, my house is valued well below what I paid for it and what I expended in real cash American, and I cannot move without great personal cost. I live in a transient neighborhood that has become largely blue collar. And, until I complained last year, ADOT-owned houses were not kept up in keeping with the HOA requirements we are all bound to. This is an *interest in land* that your agency and ADOT is tinkering with. Your counsel will understand what that "*interest in land*" thing means.

Let me also explain to you that I also know of your involvement with VINTEK and REDFLEX. I know how the laws of the state of Arizona were modified in violation of the federal mandate for MUTCD to bring Redflex to Arizona. That's why they're headquartered in Arizona, isn't it? That whole thing is a travesty. VINTEK has no idea what title means, but they're here complicating our lives and earning money. Don't even get me started about your involvement with the National Forest Service in Oregon. Do we all really need to understand your business connections?

In Reply Refer To:
HEPE

Mr. Dietmar Hanke
2729 West Redwood lane
Phoenix, AZ 85045

Dear Mr. Hanke:

Thank you for your letter to Federal Highway Administrator Victor M. Mendez regarding the proposed Loop 202 South Mountain Freeway.

The Arizona Department of Transportation (ADOT) initiated the freeway project and is responsible for project development. The Loop 202 South Mountain Freeway has been included in the Maricopa Association of Governments' Regional Freeway Program since 1985 when Maricopa County voters approved funding under Proposition 300. In 2004, the voters again approved funding under Proposition 400 for the Regional Transportation Plan, which included the freeway.

In cooperation with our Arizona Division Office, ADOT is advancing the proposed project in compliance with the National Environmental Policy Act (NEPA). As part of this process, ADOT prepared a draft environmental impact statement (EIS) examining the potential environmental effects of proposed alternatives for the project and identifying measures to mitigate adverse impacts. The draft EIS also identified a preliminary preferred alternative for the proposed freeway. On April 14, 2013, Division Administrator Karla S. Petty approved the draft EIS.

Public involvement is an important element in any NEPA review process. The ADOT made the draft EIS available to the public for review and comment from April 26 through July 24, 2013, and held a public hearing on May 21, 2013. We appreciate your detailed comments, which ADOT has received. All substantive comments on the draft EIS are being carefully considered as ADOT prepares the final EIS. The final EIS will identify the preferred alternative and evaluate all reasonable alternatives considered. The final EIS will also include responses to all substantive comments received on the draft EIS and describe any mitigation measures that will be incorporated into the proposed action.

Following our approval, ADOT will make the final EIS available to the public. No less than 60 days later, Ms. Petty may approve the Record of Decision (ROD), which will present the decision, the basis for it, and summarize any mitigation measures incorporated as part of the project. The ROD is the final administrative step in the NEPA review process.

Code	Comment Document

Here's the deal: I can keep ADOT and the FHA in court for years. But, I can keep my mouth shut too. I'm originally from California and I understand precisely the history of the Long Beach Freeway litigation and the fallout (e.g. 210 Foothill Freeway). Litigating costs me virtually nothing. And, I have good friends in many legal places.

So, my proposition is this: I will be happy to entertain your agency's offer to *remove my standing* (e.g. Administrative Settlement) pursuant to *my math*. In the alternative, I will file suit in Maricopa Superior Court to finally get some resolution to this matter. And, I will do so shortly: May 31st, to be precise. And I may do so irrespective of your subsequent actions. I have waited in limbo long enough. I will not wait until the "industry" responds to the latest request for information. That would be the very industry that stands to profit from the building of this freeway.

Go on, give me all of your lawyers' trite responses. I have no problem with that at all. I deal with those kinds of responses all day long. You all might be surprised about what *Kelo v. New London* really means in the broader sense, irrespective of what the pundits and your lawyers say.

In the meantime, you should read the attached response I sent to ADOT about the South Mountain Freeway DEIS a few months ago. While I have absolutely no confidence most of my points will be addressed even obliquely, it should give you an idea about the legal battle you (FHA) and ADOT are in for. You might also want to view my LinkedIn profile as well. Understand this: at some point, things do get personal. And I don't get intimidated. And you're on notice that you're about to waste a lot of taxpayer money.

Hoping to hear from you soon. Time is of the essence. Choose your next words wisely.

Best Regards,

Dietmar Hanke

You requested purchase of your property now via an administrative settlement. Real property needed for a Federal-aid highway project is normally acquired after the ROD and detailed design. Because ADOT is responsible for the project, its officials can best respond to your request for acquisition.

The Federal Highway Administration is not involved in decisions by local officials on permits for homes. You may wish to contact appropriate local officials if you have any questions about the issuance of the permit.

Sincerely yours,

Gloria M. Shepherd
Associate Administrator for Planning,
Environment, and Realty

South Mountain Freeway (Loop 202) SR202L

ADOT Project Number: 202L MA 054 H5764 01L
Federal Aid Project Number: NH-202-D(ADY)
Draft Environmental Impact Statement ("**DEIS**")

Homeowner: 2729 West Redwood Lane ("I")

1

1. Environmental Impact Statement Process

While the document presented is truly impressive in its sheer folly and largess, it contains virtually nothing in the way of facts or analysis as required by 42 U.S.C. § 4321 et. seq., nor does it conform to the goals articulated by the preamble to the National Environmental Policy Act of 1969.

This particular Draft Environmental Impact Statement formally enlists the input and considers the needs of "business leaders" and representatives of "The Indian Nation" in addition to the mayors of the cities within Maricopa County (MAG). Neither of the two former categories of participants, irrespective of state legislature and executive actions, are competent to make decisions that affect private land owners in these United States of America. In fact, MAG as it stands is an unconstitutional form of representative government.

Under what authority and pursuant to what facts are members of the Indian Nation to be included in the decision making process for the Pecos Road Alignment, an alignment which is NOT on the lands of The Indian Nation? Surely it's not the single forged hieroglyph found in the proposed right of way on South Mountain or the vista onto the lands not on the Indian Nation lands from a *sovereign nation*. This artifact of Arizona government has not yet been challenged. But it will be.

2. Historical Context

The South Mountain Freeway may have been originally included in the proposed 232 -mile Maricopa Association of Governments (MAG) Regional Freeway System (now called the Regional Freeway and Highway System) as planned in 1985. However, it was never indicated as an easement or even a possibility on any plat anywhere near my house. What was indicated was an easement 500 feet from my house for the extension of Pecos Road.

Since 1985, the city of Phoenix has issued building permits in what is now to be considered the "right of way" for the proposed freeway. In my case, less than one year before the notorious homeowner notification in October of 2005. If the "general location" of the proposed freeway was so well known, why were these building permits issued? Isn't this a glaring case of wasting taxpayer money? Also, if the

Code	Issue	Response
1		Responses to the originally submitted letter can be found on page B1828

Code	Comment Document

Pecos Road alignment was so precisely defined and a decision had already been made years ago, why weren't there any right of way markers indicating where it would go? California had to learn that concept the hard way, decades ago!

3. Purpose and Need

The DEIS purports that traffic in general will continue to increase at exponential rates in Maricopa county. This is identified as the primary reason for the need for the South Mountain Freeway. All biological systems that experience geometric growth will stabilize or collapse at some point in time. This is a concept of real science. Why is this concept not a factor in the DEIS? It is omitted altogether. In a day and age when telecommuting is increasing at geometric rates, this is inexcusable.

Furthermore, the DEIS cites a fictitious need for residents of the Central West Valley to commute to the Chandler/Gilbert/Queen Creek area and vice versa. Surely we are all in agreement that there is no such "need" between the residents of Chandler and Ahwatukee Foothills and the residents of Tolleson; the demographics just don't comport. Why isn't there any study mentioned of how many cars travel from Chandler/Ahwatukee Foothills to the Central West Valley now? License plate recognition software and hardware is readily available and can access registrations nearly instantaneously. That's because such travel doesn't exist. Isn't ADOT's insistence of the former merely a case of "if you build it, they will come"? How are general valley traffic volume statements and projections even relevant here?

Inherently, there is no local need now. After all, Chandler and Ahwatukee Foothills are more than 95% developed. Everything south of Pecos Road and west of its current terminus is Indian Nation lands. ADOT, Phoenix, and MAG (if it is legal entity) cannot make decisions about private lands in Arizona based on the needs of the Indian Nation. Isn't that the exclusive purview of the BIA of the Department of Interior for these United States of America?

So where *could* increased traffic come from? The better question is where *will* increased traffic come from? It will come from the CANAMEX Highway. When Congress adopted NAFTA, this highway became a requirement of the United States Government – not Arizona. But where is the segment between the I-10 at Pecos Road and Las Vegas? It doesn't exist! Which is why the federal government is paying for a significant portion of the local freeway. Why is the CANAMEX traffic load not considered in the DEIS? How is CANAMEX a responsibility of the Arizona or Maricopa or Phoenix taxpayer?

To cast the need for the South Mountain Freeway in terms of relieving the congestion on the I-10 freeway between Pecos Road and the 143, irrespective of the CANAMEX Highway, overlooks two fundamental issues. First, from Pecos Road to the 143, fourteen lanes of traffic are crammed into seven. Worse, carpool travelers going to PHX from the I-60 must cross six lanes within the most crammed quarter mile to get

Code	Issue	Response

Code	Comment Document

to the airport. Wouldn't an elevated HOV cross-over be much more efficient? Isn't this the real problem?

4. Gila River Indian Community Coordination

The Federal Highway Administration may not have the right to survey the lands of The Indian Nation, but the federal government does have the right to condemn lands of the Indian Nation under eminent domain. That's exactly why the USDOT has stepped back in this case. Just as the Bureau of Indian Affairs is chartered to address the transportation needs of the Indian Nation, the states and their subordinate organizations are *not*! More specifically, MAG's "coordination" is not/should not be decision-making. Fire Departments, ambulance companies, and hospitals all coordinate with each other, but neither makes decisions for any other. How can ADOT confuse such fundamental concepts?

Significantly, the proposed South Mountain Freeway alignment is not within any portion of the tribal lands of the Gila River Indian Community. One tribe's lands are even completely outside of Maricopa County. Why is that community involved in the decision-making process affecting the properties of Phoenix landowners? More importantly, why is ADOT proposing off ramps and street stubs that serve the property and business developments of The Indian Nation? Who in The Indian Nation's allotted landowners stands to profit from Casino developments and billboard placements? Does the greed of these Indian Nation profiteers outweigh the rights of those residents not within the Indian Nation? Apparently, they also outweigh the desires of the rest of their tribal members.

Finally, how can a tribal representative for a tribe of a few hundred have the same voting or veto power as the mayor of Phoenix? Don't we have a concept of one person one vote in these United States of America? ADOT needs to revisit the standards against which its administrative agency action is tested. After all, Kelo v. New London only added another standard; it didn't replace the other tests (arbitrary & capricious, illegal, prohibited actions) to the validity of administrative actions.

5. Alternatives

Proclaiming a fictitious need inherently corrupts any further analysis of the viable alternatives. This is a fundamental concept of real science and the scientific method. Unfortunately, this concept is, modernly, largely lost on administrative agencies that rely on repeating unfounded dogma and buttressing the interests of special interest groups until most people believe it.

Thus, if one is to proceed with the notion that there is a real, current need for commuter travel from the Central West Valley to the Chandler/Gilbert/Queen Creek area and vice versa, certainly an extension of Pecos Road would suffice. After all, it's a four lane divided road with very few traffic control signals. Why is the lack of achieving a "projected traffic" flow of dubious origins for a freeway whose true

Code	Issue	Response

Code	Comment Document

nature and purpose are not addressed even relevant here? That's because traffic flow is a yardstick for CANAMEX Highway purposes.

And, if the real need is to comport with the lane and flow requirements of CANAMEX, both a real freeway is required and multiple alternatives come to mind. The logical question that follows is *why did ADOT not consider an alternative route from Casa Grande (or close by on the I-8) to Tolleson*? Such an alternative would not cause any of the social or environmental consequences identified below, nor traverse tribal lands or cost as much. It would cost much less, in fact. It would, however, lie almost exclusively on federal lands. Is this a conflict of interest for USDOT? Why was this alternative not studied by ADOT or identified in Figure 3-5 of the DEIS?

The Casa Grande to Tolleson alignment can be detailed to exclude all residential property condemnation. Further, it would truly be a truck bypass, avoiding all residential contact except for, possibly, but not necessarily, a one eighth ($1/8^{th}$) of a mile long stretch. How does such an alignment differ from any "studied" alignment for interstate traffic purposes? Why was that not discussed in the DEIS?

The Casa Grande to Tolleson alignment can also be designed to include two or more lanes that interchange with the I-10 or I-8 at the southern end and at the 303 and the I-10 at the northern end without significantly disrupting traffic. This is required by the CANAMEX Highway specifications. The Pecos Road alignment, on the other hand, would require massive reconstruction to achieve such. Why was this not discussed in the DEIS?

Furthermore, why did USDOT not study condemning lands of the Indian Nation for the Riggs Road Alternative? If this is a CANAMEX segment, USDOT certainly should be at the forefront of the alignment studies and condemning decisions; *not ADOT, not MAG, not anyone else*.

Vertical alignment is much more complex than the short shrift given to it in the "Alternatives" section of the DEIS. The complexities of this are discussed in the relevant sections below.

6. No-Action Alternative

As noted above, there is no articulable, scientifically supportable need for this freeway, absent CANAMEX. The "No-Action Alternative" and/or the Casa Grande to Tolleson alignment (for CANMEX traffic) are the only two supportable alternatives. Further, an I-60 to 143 overpass is notably a significant I-10 traffic mitigation option which is likely to yield the most results for non-CANAMEX traffic. Why was this not discussed in the DEIS as a viable traffic mitigation option?

a. Displacements, Relocations, and Economic Impact

Code	Issue	Response

Code	Comment Document

What's a home worth? That's the overriding issue ADOT has not addressed. It's the elephant in the room. I purchased my new home in 2004 in the Mountain Reserve after reviewing 128 model houses in all states of completion. I moved in in August 2005. I paid $355,000.00 for it and spent another $40,000.00 in front yard and window coverings required by the association. I spent much more on cabinetry. I had leveraged the economy of a tract builder with the freedom to request a multitude of customizations. My house is truly unique.

I had put $140,000 down as a down payment. I have no back yard. Most people who bought near around the time I did don't (check Google Earth). Why? Because ADOT announced that my house probably will be mowed down for the Loop 202 Freeway, seven weeks after I moved in. That was before the housing bubble collapsed and values collapsed even further.

The last house that sold on my street (with a back yard and a pool) sold for $173,000 (check Zillow.com). Wow, I might as well have flushed $100,000.00 down the toilet eight (8) years ago and I'd still be more than $60,000.00 ahead of the game. I may even have had a back yard down through those years. How much is a back yard worth? …for 8 long, hot years? I think that most people will agree that it's worth a lot.

Also, I have lived in a community where transient rentals were the norm for eight (8) years. Monthly rentals were common. There was absolutely no sense of community. Indeed the HOA had no forum of board members for years. Nobody cared. The ADOT owned houses were blight in the neighborhood for many years. What's that worth? Is there any mention of this in the DIES?

I moved to my neighborhood because of the views and the low levels of traffic, noise pollution, light pollution, air pollution, and lack of fast access by the criminal elements of the various crime riddled areas of the west valley. Why is the latter not addressed in the DEIS?

So, again, what is a house worth? Is it the current standard of the "reasonable market value"? Or is it something else? I suggest it is the value of buying property, building the same house thereon, and putting my family up in a resort during the time of its construction. And further, that property has to have similar characteristics with regard noise, views, light and air pollution, property taxes, and access by criminal elements. Why not? Can anyone articulate why not?

In the end, how much is all of this worth to a tax-paying resident of Phoenix? One that's been paying property taxes for eight years and commuting to a remote location *when he's never been able to even realize a back yard*? The DEIS does not address this. Why? Because it's painful and expensive maybe? Yes it is. And, ADOT may not want to admit to the true cost of such land acquisition and the replacement of a *home*.

Code	Issue	Response

Code	Comment Document

b. Noise

The DEIS addresses noise pollution. Unfortunately it uses the average hourly noise level as its only metric and does not incorporate any temporal variations. While it does acknowledge that it barely achieves federal maximum mandates, it does not even address the more pertinent parameters of the characteristics of noise and timing of thereof. Internationally, noise classification has advanced well beyond the crude "average pressure level" used in the DEIS.

Irrespective of the international classifications, the DEIS statement does identify that the Pecos Road alignment will barely achieve federal maximum noise levels in most cases, even if abatement walls are used. Why is that not a major problem? Further, these maximum classifications are based on abstract generalizations of laterally displaced noise level estimates. Why is there no mention of the "directed" and "channeled noise" from the freeway segments converging on Parcel D of the Mountain Preserve? Mountain reserve residents would be subject to air brake and incline ascending noises of both domestic and CANAMEX trucks, both of which are of a frequency not subject to ADOT's simple projections. Lower frequencies travel farther. Period. What if the actual noise levels exceed the federal maximum noise levels? What then? What's the homeowner's recourse?

And, more basically, ADOT submits factually incorrect current ambient noise levels for comparison. Noise levels not within the narrow arrival and departure times of commuters and not within the high heat, air conditioning months (October through May) are much lower than presented in my neighborhood. Typically, they are in the decibel ranges from the 30's to low 40's on my back porch at my house and even lower during the night. Why has ADOT not provided the true, evening, no-AC, ambient noise levels?

Furthermore, noise can come in all forms. ADOT would have one believe that the sounds of birds at my bird feeder and sounds of my neighbor's children playing are equivalent to the recurrent, revolving, and pulsating mechanical sounds of lumbering trucks and motorcycles. It's embarrassing to even have to address this. The rest of the world has moved on. The quintessential question is why does ADOT rely on outdated and erroneous metrics? Most likely because they're convenient, obfuscating tactics that serve the profiteers. There are much more relevant international standards and measurements that are available.

ADOT itself pontificates that "it is recognized that transportation noise is perhaps the most pervasive and difficult source to avoid in society today". This is exactly what we currently don't have at the western end of Pecos Road! This was a major consideration when I bought my house. How is the maximum tolerable noise level relevant here? How about maximum noise pollution, air pollution, light pollution, disaster risk, and transient crime combined? Who would want to live in such an environment? Think about that.

Code	Issue	Response

Code	Comment Document

Finally, the question of time of day when noise is absent is avoided entirely. Why? So a noise at midnight is equal to a noise during the day. How is that possible? Is it rational? Whether CANAMEX or a general truck bypass is the main ingredient of the traffic on the proposed freeway, it is likely that the louder, lower frequency noise generated by large trucks will dominate. And, that this noise will continue 24x7 and carry further at night. How does that compare to the crude measurement and prediction that ADOT proffers? It doesn't. It really doesn't. And, why has ADOT not addressed the conflict between wildlife corridor bridges and sound barriers? (More on that topic below.) All this appears to be absent in the DEIS.

c. Water Resources & Floodplains

The DEIS identifies the flood plain relevant to the Pecos Road alignment. Unfortunately, its roaming generalizations do not address several pertinent aspects of drainage. The South Mountain Park and adjacent southern alluvial flood plains drain to the south. It is this author's experience that, during summer deluges, the entire area from South Dessert Foothills Parkway to Chandler floods and drains through and *across* Pecos Road.

This drainage can cause the entire area from Chandler to South 17th Avenue to flood and drain through the multiplicity of drainage culverts *and over Pecos Road itself*. The current "alignment" proposes that the Loop 202 will be elevated along its passage by my house and, that the alignment (not including any sound barrier) will be 22 feet above the current grade. Wow, kind of like Hoover Dam in your back yard. (More on that later.)

With only one drainage culvert in the segment, what is the strategy to channel/buffer drainage waters? Further, and more significant, what are the consequences of erosion damage on the tribal lands of The Indian Nation? Now it is farm land, but it will be casinos if the freeway is built. Why has the DEIS not even addressed this? It is a sure consequence of law that the damages of The Indian Nation will be adjudicated by the Indian Council (see recent decisions by the federal courts) and dictated to Arizona taxpayers. What is the potential cost of that? I don't see anything that addresses this in the DEIS. Nothing at all. It is an environmental issue that potentially has large cost implications.

d. Biological Resources

The South Mountain Park ("SMP") is the largest municipal park in the world. It is the place where local citizens can enjoy *nature*. It hosts a plurality of *natural* inhabitants, from the Chuckwalla lizard to numerous bird species. It is a natural ecosystem that interacts with the desert flatlands and the adjacent Estrella Mountains on a genetic and predator-prey basis.

If anyone can believe all species in an isolated park can proliferate for more than a few years though a couple of tunnels (4 that I see) and one bridge traversing a 300 or

Code	Issue	Response

Code	Comment Document

500 foot right of way, please present the scientific evidence. While the importance of wildlife corridors, such as those in the Ahwatukee Foothills area, have been scientifically established, drainage culverts and bridge corridors have not. That's a fact.

Quite the contrary, for many species they present a gauntlet to navigate while opportunistic predators, such as foxes and coyotes, cash in on the parade of traversers. Furthermore, position, size, food sources, and cover are key factors in determining which species will attempt to employ the use of such underpasses. Progressive proposals have been made to create vast corridor overpasses over the I-10 to Tucson. Is ADOT regressing in its thinking? Does it have better data?

The species least likely to traverse a tunnel or bridge corridor would be Road Runners, the Giant Sonoran Desert Toad, Desert Tortoises, Gila Monsters, horned lizards, Chuckwallas, rabbits, squirrels, skinks, low flying birds such as the Gila Woodpecker and Gambels Quail. And even if they do, the restricted opportunities to traverse will sharply decrease their genetic diversity and survival chances in the SMP's ecosystem.

Most of these species are not likely to cross at the proposed Rio Salado Oeste project area either, as they do not inhabit marshes. All of these species have appeared in my back yard. Most of these species are an intimate part of the *nature* evident in the park today. Many of these species migrate daily or seasonally from the mountains to the flatlands. All communicate genetically with the greater Sonoran Desert inhabitants. The bottom line is this: Coyotes and Javelinas are the most likely species to use the tunnel and bridge corridors. Is there any shortage of those? Why has the natural biodiversity, genetic isolation, unbalanced predation, and ecosystem health of the SMP's fauna not been addressed in the DEIS? This is fundamental stuff, folks.

Further still, should ADOT decide that a bridge corridor is necessary somewhere in the vicinity of the Pecos Road terminus, what is the strategy for a sound barrier there? I've never seen such a barrier on a bridge outside of Europe. Bridge corridor, vertical alignment, sound barrier, and ecosystem health are all related. There's no discussion of this in the DEIS. None. Most significantly, the DEIS avoids altogether the question of what the goals of the mitigation efforts are. Is to save endangered species? Or is it to maintain the health of the SMP's ecosystem and natural state?

Let's also not forget that any corridor's effectiveness can be completely thwarted by commercial developments on the Lands of the Indian Nation. Quite frankly, evidence has shown that they just don't care. They'll build a casino where ever they please and recent court challenges have borne out yet again that no agreement with municipalities or the State of Arizona has any affect. Why is that fact completely ignored in the DEIS?

e. Hazardous Materials

Code	Issue	Response

Code	Comment Document

The current alignment would have the CANAMEX, or highway trucker-bypass, a few yards from my house, if it's not torn down altogether. But, then again, ADOT hasn't decided on the true right of way width yet. So we don't know. Do we? Why is that? Irrespective of this indecisiveness, the specter of a mishap on the Loop 202 resulting in an errant vehicle carrying hazardous materials rolling down the 22 foot embankment into a residential neighborhood is scary.

Why is there no discussion of this vertical alignment issue, especially with CANMEX truckers in mind, other than in general concepts? Isn't the transport of hazardous and harmful materials a key element to the freeway's alignment? How is the above scenario different than the Deck Park Tunnel? Has Homeland Security been advised of this? Is it aware of this?

ADOT instead chose to concentrate this section of the DEIS on the potential to disturb *existing* Haz-mat sites. How about what the proposed alignment (both horizontal and vertical) *creates* as far as Haz-mat circumstances and situations? Why hasn't that been considered? Interesting, isn't it?

f. Visual Resources

As mentioned above, the current vertical alignment places the Loop 202 at 22 feet above grade near the terminus of Pecos Road. With another 20 feet of sound barrier on top of that, the remaining front line of homes will be greeted by the view of Hoover Dam to the south. While some folks are worried about sacred views of mountains *not on their lands*, taxpayers near the right of way will be greeted by an atrocious industrial strength view that is tantamount to visual blight *on the lands of the United States from the lands of these United States*. What's the value of that? And why is there no mention of this specter in the DEIS? And why aren't non-Indian Nation landowners' views even considered.

g. Light Pollution

The DEIS avoids altogether any discussion of light pollution. Though discussed at various public meetings, ADOT summarily responds with generalizations about mitigation measures. Light pollution is, however, a complex issue poorly understood by administrative agencies such as ADOT. Light pollution is a matter of water vapor, particulate air pollution, and the location and direction of light sources.

Merely lowering light standards is laughable. Even thirty foot standards would emit light 52 feet above grade near Parcel D of the Mountain Preserve. Furthermore, vehicle lights traveling in both directions approaching Parcel D of the Mountain Preserve will illuminate the area from higher elevations based on the proposed

Code	Issue	Response

Code	Comment Document

vertical alignment. Vehicles also emit the very particulates and water vapor notorious for scattering and reflecting light. Particulate emissions from Mexican trucks (CANMEX) will be even higher than domestic commercial diesel trucks.

Even more important, what will stop the business interests on the adjacent tribal lands from erecting illuminated billboards and jumbotrons? One need only look at the Santan Freeway between I-10 and the Loop 101. Does ADOT think a contract with the Indian Nation not to build such will be upheld in federal court? Recent decisions indicate they won't. And the Indian Nation only cares about revenue, nothing else.

I purchased a home in Parcel D of the Mountain Preserve because I can see the Milky Way on many evenings. That is not possible even in the Lakewood area of Ahwatukee Foothills. How much is that worth and who gets to decide that?

h. Air Pollution

As noted above, air pollution is a function of the level of traffic, the type of traffic, even the time of such traffic and the direction of the prevailing winds. There is absolutely no mention of what the pollution levels will be during cool evenings when the truckers dominate and the air is heavy, moving only slowly in the direction of the prevailing winds in parallel with the proposed Pecos Road alignment. Why is this worst case evening scenario not even addressed in the DEIS?

i. Temporary Construction Impacts and other Issues

Finally, the DEIS statement only obliquely addresses temporary construction impacts. Where is the estimated commute time to get from South Mountain Preserve to the Santan Freeway? There is no mention of the air quality and local health impact of soil stabilization techniques (lime and potassium chloride), diesel fumes, blasting noise from the mountain gorge, and temporary water drainage. Why? How much is living next to a construction site for several years' worth?

Why does the DEIS summarily avoid the cost impact of implementing all of the mitigation measures on the overall cost of the freeway? Could it be because the freeway would never be built if these cost estimates were actually included?

Hoffman

Document Created: 7/25/2013 9:23:34 AM by Web Comment Form

1 I am waiting for 18 years that the Loop 202 (South Mountain Freeway) is getting build. Phoenix needs this Loop to offload the through traffic going through the center of the city. With the expansion of I-10 to three lanes between Tucson and Phoenix the traffic on I-10 in Phoenix will be 12 hours a day at 25 miles/hour.
Living at 7th Street I would like to avoid going through the city every time I need to go to the West side of Phoenix.

COMMENTER REMARKS/QUESTIONS:

Hi,

1 I live at 16922 S. 16th Lane, Phoenix AZ 85045. My House is right off of Pecos and 17th Ave and right adjacent to Pecos. I am really curious to understand if my house will be taken away as part of this 202 Extension. Can you please advise? You may also call me 704 517 0256 if needed.

Thank you,

Umang Jokhaker

1	**Acquisitions and Relocations**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Aerial maps showing the proposed freeway (W59 and E1 Alternatives) are accessible through the project Web site, <azdot.gov/southmountainfreeway>.

Document Created: 7/25/2013 12:41:24 AM by Web Comment Form

1 Transportation officials who are part of 202 planning were to have taken cultural awareness trainings put on by the Gila River Indian Community, as stated by Community Manager David White. When were those trainings conducted, what GRIC department conducted them, and what were the policy shifts, if any, that resulted from the cultural awareness trainings?

2 Was the Section 106 process for South Mountain ever begun between the Tribal Historic Preservation Office and the Arizona Department of Transportation? If no, when can GRIC expect that process to start, in order to comply with the Religious Freedom and Restoration Act, as well as the National Historic Preservation Act?

3 If the freeway were to be built, what type of assurances are there that air quality assessments for Gila River and Maricopa County will be kept separate? Gila River brought honor to our community when GRIC was awarded a Clean Air Excellence award by the Environmental Protection Agency. Our community does not want any of our air quality measurements to fall under the

4 On January 19, 2011, the Environmental Protection Agency Regional Administrator signed the Gila River Indian Community's (GRIC) Tribal Implementation Program (TIP) into effect. The effect of this action was to make the TIP federally enforceable. The TIP regulates air quality within the boundaries of Gila River, and its purpose is to enforce air quality standards in the GRIC reservation. Within the TIP, there are ordinances that require GRICDEQ staff, tribal attorneys, and if needed, the GRIC tribal police, to assume civil and criminal enforcement actions against persons who violate clean air standards outlined in the TIP. If the E1 alignment is built, and air quality monitors in Gila River exceed PM10 and ozone standards, what will be the procedure for Gila River to prosecute federal agencies or persons whose actions violate clean air standards within the TIP?

5 On January 25, 2011 the State of Arizona withdrew plans for a State Implementation Plan (SIP) to meet particulate matter-10 standards in the Maricopa County PM-10 nonattainment area, thus failing to comply with provisions of the Clean Air Act. By withdrawing the SIP, the State of Arizona triggered a January 31, 2011 decision by the Environmental Protection Agency to begin a sanctions clock on Maricopa County, because the county's air quality plan does not adequately protect human health. What air quality permits will the Arizona Department of Transportation have to secure in order to begin construction on the E1 alignment in Maricopa County, especially in light of being under the sanctions clock by the EPA?

6 Because of South Mountain's religious and cultural significance to the Gila River Indian Community, the Salt River Pima-Maricopa Indian Community, and the Colorado River Indian Tribes, building the E1 alignment will have an adverse impact on the exercise of Native

Code	Issue	Response
1	**Cultural Resources**	Cultural sensitivity training sessions were held on May 24, 2010, June 14, 2010, December 28, 2010, and January 20, 2011. The training sessions were led the Gila River Indian Community's Tribal Historic Preservation Officer and by staff from the Gila River Indian Community's Cultural Resource Management Program. The purpose of the training was to raise awareness and sensitivity to cultural and natural resources that would be encountered by personnel as they conducted field investigations on Community land for the proposed Gila River Indian Community Alignment. The training was recommended by the Gila River Indian Community's Cultural Resources Standing Committee at the time they issued the right of entry to the South Mountain project team. The training did not result in policy shifts or scoping comments for the study. As noted on page 2-8 of the Draft and Final Environmental Impact Statement, the coordinated referendum occurred in February 2012, and Community members voted in favor of the no-build option. Therefore, the Gila River Indian Community Alignment was eliminated from further study.
2	**Cultural Resources**	Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires that federal agencies take into account the effects of their undertakings on historic properties. This process requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, many different tribal authorities, and the State Historic Preservation Office. The consultation has resulted in concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. In 2003, the Federal Highway Administration and Arizona Department of Transportation initiated National Historic Preservation Act Section 106 consultations with all Native American tribes that claimed cultural affiliation to the Study Area. Consultations were initiated with the Ak-Chin Indian Community, Gila River Indian Community, the Hopi Tribe, the Salt River Pima-Maricopa Indian Community, the Tohono O'odham Nation, the Yavapai-Apache Tribe, and the Yavapai-Prescott Indian Tribe. As noted in Table 4-47 that begins on page 4-145 of the Final Environmental Impact Statement, the Gila River Indian Community was consulted in 2003 with subsequent contact in 2005, 2006, 2007, 2008, 2010, 2011, 2012, and 2013. This supports an early and continued consultation with the Gila River Indian Community related to resources of importance. In 2005, the Federal Highway Administration and Arizona Department of Transportation consulted with all Native American tribes in Arizona to ensure all interested Native Americans were included in the process and had the opportunity to communicate their concerns. These tribes were the Ak-Chin Indian Community, the Chemehuevi Tribe, the Cocopah Tribe, the Colorado River Indian Tribe, the Fort McDowell Yavapai Nation, the Fort Mojave Tribe, the Fort Yuma-Quechan Tribe, the Gila River Indian Community, the Havasupai Tribe, the Hopi Tribe, the Hualapai Tribe, the Kaibab-Paiute Tribe, the Navajo Nation, the Pascua Yaqui Tribe, the Pueblo of Zuni, the Salt River Pima-Maricopa Indian Community, the San Carlos

Code	Comment Document
6	American religious beliefs. If MAG, ADOT, and the State of Arizona continue with plans to build the proposed E1 alignment, these agencies and the state will be violating parts of the Religious Freedom And Restoration Act (RFRA), specifically as defined in 42 U.S.C. Amendment 2000cc-5. The proposed E1 alignment would introduce visual, atmospheric, and audible elements that would diminish South Mountain's cultural and religious significance. Many O'odham feel that South Mountain is in eminent danger from construction plans that will impact their sacred site for all time. There has been a lack of good faith consultation with O'odham traditional religious leaders, and almost a complete lack of diligence in the Section 106 process with GRIC. When will ADOT begin to consult closely with O'odham religious leaders, and to also inform them that the proposed 202 extension is also part of the Maricopa Association of Governments' plan to build the Sun Corridor between Phoenix and Tucson?
7	Roughly 30 acres of the South Mountain Preserve would be taken to build the E1 alignment, and since a city park qualifies as a 4(f) resource, as it is a publicly owned park, why hasn't ADOT had to comply with a 1985 City of Phoenix provision that a roadway could not go through preserve land without having a public vote on the matter? Why was ADOT simply allowed to create a freeway proposal through a nature preserve without a public vote? How is ADOT going to be able to secure right of ways in a nature preserve?
	) Truck Traffic from Mexico and High-Sulfur Diesel; Truck Bypass Negated
8	The modeling of air pollution impacts in the DEIS do not include the additional air pollution from truck traffic from Mexico. The DEIS briefly mentions the issue, but it claims it has no way to know what impact this would be. Patently absurd.
	We should remember why the idea of a truck bypass came up in the first place, all those years ago. It is because there have been chronic issues about air quality in the Phoenix metro area, so bad and for so long that public policy makers suggested as one of the strategies to reduce particulate matter from truck exhaust in urban Maricopa County was to designate a bypass for truck traffic around the urban area. This bypass is also now the designated route of the Canamex Highway, and it is Interstate 8 (south of Casa Grande) to State Highway 85, to Interstate 10, west of the Phoenix metro area. If the South Mountain Freeway is built, the bypass route, which has few amenities, would be a substantially longer route, about 55-60 miles longer than the route using the SMF. There is no law that would force trucks to use the longer route, so it is entirely likely all these trucks would come through Phoenix, negating the whole bypass strategy, and negating a public policy decision. By completing the South Mountain Freeway, this would all be negated, but the reversal of this public policy decision is never mentioned in the DEIS.
	Further, trucks originating in Mexico will be fueled with diesel that doesn't meet the CARB diesel standards adopted by Arizona over a decade ago. In Mexico, there is no regulation about the sulfur in diesel fuel. In Arizona, the law was changed to allow only diesel fuel to be sold that has had 98% of the sulfur removed. This was another part of the strategy to bring

Code	Issue	Response
2 (cont.)		Apache Tribe, the San Juan Southern Paiute, the Tohono O'odham Nation, the Tonto Apache Tribe, the White Mountain Apache Tribe, the Yavapai-Apache Tribe, and the Yavapai-Prescott Indian Tribe. Most of these tribes did not express an interest in the proposed project. The Ak-Chin Indian Community, the Salt River Pima-Maricopa Indian Community, and the Tohono O'odham deferred to the Gila River Indian Community to take the lead with Section 106 consultations on this proposed action project. Consultation with Native America tribes has been extensive and demonstrates a reasonable and good faith effort to include all interested Native American tribes in the process to take their concerns seriously in the planning effort.
3	**Air Quality**	The Clean Air Excellence Award was awarded to the Gila River Indian Community Department of Environmental Quality Air Quality Program Team based on the development of a multi-program Air Quality Management Plan to regulate air quality, the first of its kind for an Indian Community. The award was not in any way an indication of the quality of the air within Gila River Indian Community land. The Gila River Indian Community is not included in the Maricopa County Carbon Monoxide Maintenance Area or the Maricopa 8-hour Ozone Nonattainment Area. The northern part of the Gila River Indian Community is within the Maricopa County Particulate Matter Nonattainment Area (see Figure 4-20 on pages 4-61 and 4-71 of the Draft and Final Environmental Impact Statements, respectively). The Community is part of the Maricopa Association of Governments and as such is included in air quality conformity demonstrations for the Maricopa Association of Governments region. The air quality assessment for the proposed freeway analyzed impacts from carbon monoxide and particulate matter (PM_{10}) and followed U.S. Environmental Protection Agency guidelines. No violations of either the carbon monoxide or particulate matter (PM_{10}) standards were identified, even at worst-case locations along the project corridor. Thus, the carbon monoxide and particulate analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones. For mobile source air toxics, the analysis showed that for the Study Area, constructing the freeway would have a marginal effect on annual emissions in 2025 and 2035 (less than a 1 percent difference in total annual emissions between the Preferred Alternative and No-Action Alternative). With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions. The air quality analyses were updated for the Final Environmental Impact Statement, including a quantitative particulate matter (PM_{10}) analysis, and are more fully described beginning on page 4-68 of the Final Environmental Impact Statement. Congestion relief resulting from the proposed freeway would provide localized air quality emissions reductions on area freeways and arterial streets and at interchanges, benefiting users of area highways and those living near congested roads.

Code	Comment Document
	Maricopa County into compliance with the particulate matter standards required by the Clean Air Act (CAA).There was extensive modeling of the effect of adopting the CARB diesel standards and a discussion of this at the Arizona legislature, where it passed, so the data is in government hands. Also, we know exactly the number of trucks arriving from Mexico and their destinations in the US, so this is data that is available for the DEIS. And again, the reversal of this public policy decision is never mentioned in the DEIS. Once this additional pollution is honestly quantified and factored in, there would be a huge net increase in air pollution from the SMF, and associated increases in asthma, heart disease, premature death, and other adverse health impacts.
9	2) Air Toxics Already a Crisis but Not Mentioned In 2005, there was an extensive air monitoring of certain toxic chemicals (air toxics) conducted by EPA and ADEQ in a joint effort named the Joint Air Toxics Assessment Program (JATAP). The monitoring sites included a site near St. Johns on the GRIC, and some in west Phoenix and South Phoenix. The JATAP monitoring results were reported in 2006, during a time the data for the DEIS was being gathered, and it found levels of certain toxic chemicals associated with vehicular emissions were above the standard of a one in a million chance of cancer in a lifetime of exposure in the west Phoenix, south Phoenix, and GRIC sites. The JATAP monitoring found in the high end of the monitoring levels, formaldehyde at 34 times this standard; benzene at 8 times this standard, 1,3 butadiene at 7.5 times this standard, acetaldehyde at 3.4 times this standard. And, remember, citizens are being subjected to all of these carcinogens, not just one. Some of these chemicals are attributed to “mobile sources,” or vehicular traffic burning hydrocarbons. Obviously, adding more vehicular traffic emissions by building a freeway where there had not been one would add to this toxic burden. The JATAP results are not included in the DEIS, but instead there is a strange missive about the uncertainty of the risk from these air toxics standards, which is simply not true. The cancer risk standards have been promulgated and published by EPA after extensive research and study, and they are well-known.
10	3) Risks from Hazardous Materials Transportation Incidents Due to the SMF There are no industries using and emitting toxic chemicals in Ahwatukee Foothills, and no hazardous materials (hazmat) transportation issues and risks because none of these chemicals, other than gasoline and diesel, are being shipped into the area, other than incidentally adjacent on Interstate 10, which is east of the area. Since the NEPA process started, Ahwatukee Foothills residents and others have consistently raised concerns about the added risks from the transportation of hazmat on the new SMF, and in doing so they have consistently voiced concerns regarding the additional problems with hazmat response

Code	Issue	Response
4	**Air Quality**	The Gila River Indian Community’s primary purpose for developing the Tribal Implementation Plan and the Air Quality Management Plan is to provide a regulatory structure for industrial sources that were not permitted by the Gila River Indian Community nor U.S. Environmental Protection Agency. The Gila River Indian Community’s regulatory authority is limited to enforcement of these permitted facilities.
5	**Air Quality**	In May 2012, the Arizona Department of Environmental Quality submitted a revised Maricopa Association of Governments 2012 Five Percent Plan for the region. On July 20, 2012, the U.S. Environmental Protection Agency made an official finding that the Maricopa Association of Governments 2012 Five Percent Plan was administratively complete. This decision ended the sanctions clocks associated with Arizona’s decision to withdraw the Maricopa Association of Governments 2007 Five Percent Plan. On February 6, 2014, the U.S. Environmental Protection Agency published a notice in the *Federal Register* proposing to approve the Maricopa Association of Governments *2012 Five Percent Plan for Attainment of the PM-10 Standard* for the Maricopa County Nonattainment Area. In the same notice, the U.S. Environmental Protection Agency stated that it would concur with exceptional event (as a result of haboobs and dust storms) documentation prepared by the Arizona Department of Environmental Quality, which would give the region the 3 years of clean data needed for attainment of the particulate matter (PM_{10}) 24-hour standard. Finally on May 30, 2014, the U.S. Environmental Protection Agency approved the 2012 Five Percent Plan and found the area in attainment of the 24-hour particulate matter (PM_{10}) standard based on monitoring data for the years 2010 to 2012 (see page 4-72 of the Final Environmental Impact Statement for more information). The air quality assessment for the proposed freeway analyzed impacts from carbon monoxide and particulate matter (PM_{10}) and followed U.S. Environmental Protection Agency guidelines. No violations of either the carbon monoxide or particulate matter (PM_{10}) standards were identified, even at worst-case locations along the project corridor. Thus, the carbon monoxide and particulate analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones. The Arizona Department of Transportation will need to obtain dust control permits from Maricopa County Air Quality Department. These requirements are typical for this type of project.

Code	Comment Document
	in the affected area. Ahwatukee Foothills has its own unique layout and design, sometimes characterized as a large cul-de-sac, and in the event of a hazmat incident requiring shelter in place, or especially involving evacuation, there would be particular problems and risks. Due to the proximity of schools, parks, and other public facilities, there would have to be extensive planning and drills for shelter in place and evacuation, an assessment of the types and amounts of hazmat traffic and the chemicals involved, and much more. NEPA requires examination of cultural, social, and economic impacts, and the new hazmat traffic and risks caused by the SMF would affect all of these topic areas. The data about the types and amounts of hazmat on the highways is collected and analyzed periodically by the Arizona State Emergency Response Commission using federal funds, in something called a Commodity Flow Study, which also includes hazmat moved by rail. So an agency of the state government has this information. In a real DEIS, the analysis of this data is common. But there is nothing in the DEIS that even mentions the hazmat transportation and risks issue! This raises many issues, from the $20 million spent on this deficient study, to the scoping for the DEIS that was designed to restrict citizen input rather than allowing and encouraging it, to the blatant ignoring of actual, well documented statements of these concerns by citizens. Hazardous Materials has been mostly limited in the DEIS to a discussion of hazardous materials that might be encountered in the soils during construction. Yet, despite this alleged concern, the fact that the proposed path of the freeway crosses contaminated property near Interstate 10 near 55th Avenue is neither mentioned or examined, much less the financial liability the taxpayers might be assuming by purchasing the contaminated property. That would certainly be an economic impact. 4) More Air Quality Issues: The Straw That Broke the Camel's Back
11	The portion of Maricopa County that is characterized as the Phoenix metro area has had problems for decades meeting the air quality standards for particulate matter (PM) and other criteria pollutants. (Ozone levels are too high in the East Valley and Fountain Hills, for example.) There have been several exceedances of the standards for PM set by EPA under the authorities given the agency by the Clean Air Act (CAA). The problem has been so bad over the years that every possible delay and postponement allowed under the CAA to come up with a plan to meet regulatory levels of particulate matter have now been exhausted. So, currently, EPA is examining sanctions that include blocking a billion dollars in highway funds. The Arizona Department of Environmental Quality has tried to explain away the several exceedances of the PM standards in the last year or so by blaming it on dust storms and weather-related problems. (Having reviewed the ADEQ arguments, I don't believe it was all related to weather.)

Code	Issue	Response
6	**Cultural Resources**	Since the beginning of the environmental impact statement process, the Federal Highway Administration and Arizona Department of Transportation have been carrying out cultural resources studies and engaging in ongoing, open consultation with the Gila River Indian Community Tribal Historic Preservation Office regarding the identification and evaluation of places of religious and cultural importance to the tribe that may be adversely affected by the proposed freeway. Such places are referred to as traditional cultural properties. As a result of these discussions and of studies conducted by the Gila River Indian Community's Cultural Resource Management Program, the Gila River Indian Community has identified traditional cultural properties that are eligible for listing in the National Register of Historic Places and that could be affected by construction of the proposed freeway. In certain cases, listing these properties on the National Register of Historic Places may offer them protection under Section 4(f) of the Department of Transportation Act. The traditional cultural properties identified are culturally important to other Native American tribes as well. For more discussion of traditional cultural properties, see the section, *Cultural Resources*, beginning on page 4-140 of the Final Environmental Impact Statement and pages 5-26 through 5-28. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires that federal agencies take into account the effects of their undertakings on historic properties. This process requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, many different tribal authorities, and the State Historic Preservation Office. The consultation has resulted in concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The Draft Environmental Impact Statement, after consultation and coordination efforts, accommodates and preserves (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. A very small portion of the mountain would be impacted by the proposed freeway (less than 0.03 percent of the total area). Although the Draft Environmental Impact Statement describes the impact on the South Mountains as adverse, Native Americans would not be kept from practicing their beliefs, access to the mountain would be maintained, and mitigation measures would be implemented based on input from members of the Community. As detailed in Chapter 1, *Purpose and Need*, in the Final Environmental Impact Statements, the proposed action is needed to address local capacity deficiencies, not to address the Sun Corridor between Tucson and Phoenix, and has been developed in response to local growth in population, housing, employment, and travel levels. As further discussed, on page 1-5 of the Final Environmental Impact Statements, the proposed action is based on logical termini, sufficient length, independent utility, projected travel needs, and construction priorities. The proposed action is not needed in response to national freight movement, nor is it intended to provide service primarily for freight movement.

(Responses continue on next page)

Code	Comment Document

Almost every one of these PM exceedances have been detected at the air quality monitor at 43rd Avenue and Broadway Road. The placement of a freeway about a mile to a mile and a half upwind from a monitor that has had all these high levels seems foolish and short sighted. And of course, the impacts and risks of this are not examined in the DEIS. Nor does the DEIS examine the dust that would be kicked up during the construction phase, when thousands of tons of dirt would be moved around upwind of the monitor. The proposed path of the South Mountain Freeway would take it over the Salt River bed. To construct the bridges would involve extensive earthmoving. Also, blasting South Mountain would also release enormous amounts of dust (PM), and the natural wind currents and prevailing wind patterns would push this PM toward the air monitor at 43rd Avenue.

The South Mountain Freeway could therefore be the most expensive freeway ever built. Not only the construction costs, and the $20 million already spent on the bogus DEIS, but then there would be the loss of the billion dollars in highway funds. This is a gift that keeps on giving, or taking, as there would be subsequent billions lost through the years due to PM exceedances.

12

5) Traffic Congestion Issues at West I-10 Junction

The junction of the South Mountain Freeway on its west end with Interstate 10 may have been an idea conceived many years ago, but the traffic congestion that exists at the area between 59th and 51st Avenues on that freeway during morning and evening rush hours is already more than extreme. It is like a parking lot. Yet there is no mention in the DEIS of the cumulative impacts and effects of traffic congestion at that proposed junction. (A long line of vehicles sitting with engines idling while waiting to get on Interstate 10 at the junction with the SMF would also likely impact the aforementioned air monitor at 43rd Avenue and Broadway.)

There is much talk about the problems at the Broadway Curve, which is near the confluence of Highway 60, the 143, and Interstate 10. Let us be reminded that the Maricopa Association of Governments (MAG) and ADOT caused this problem through their shortsightedness and design problems. They planned these traffic nightmares. So now these same agencies, failed agencies, want to do this South Mountain Freeway. Will we be talking about the new junction in west Phoenix in the same way?

ADOT already completely ignored the recommendations of the original SMCAT, the group ADOT formed to skirt the proper NEPA scoping, in choosing the proposed alignment. The SMCAT, after months of study, had recommended that the SMF connect to the 101 on the west. So ADOT ignored even the recommendations of its own group and planned the SMF to connect with the I-10 at the currently proposed alignment.

This leaves a large question: If ADOT did that at that time long ago, what is to stop it from completely ignoring the current SMCAT should SMCAT vote for a “NO BUILD” option?

Code	Issue	Response
7	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Trucks**	
9	**Air Quality**	Assessment of mobile source air toxics is presented in the Draft Environmental Impact Statement beginning on page 4-68 and the summary information about the findings of the Joint Air Toxics Assessment Project study is provided as background information in the Draft and Final Environmental Impact Statements, but the study itself is not relevant to the type of analysis done pursuant to the Federal Highway Administration’s mobile source air toxics guidance, which is an emissions analysis. Monitored ambient concentrations of mobile source air toxics (the focus of the Joint Air Toxics Assessment Project) do not inform this type of analysis. While monitoring data can be useful for defining current conditions in the affected environment (to the extent that the monitoring data are current), they don’t tell us anything about future conditions, or the impacts of the project itself, which is why an emissions analysis was performed. The mobile source air toxic analysis presented beginning on page 4-77 of the Final Environmental Impact Statement is an estimated inventory of mobile source air toxic emissions for the entire Study Area for 2025 and 2035. This approach was used because the inventory estimate accounts for changes in traffic and emissions on all roadways affected by a proposed project, and would, therefore, be a more reliable predictor of changes in exposure to mobile source air toxics. The mobile source air toxics emission modeling developed for the project (which factored in the U.S. Environmental Protection Agency’s recent rules for the 2035 analyses) and discussed beginning on page 4-77 of the Final Environmental Impact Statement found little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions. Available information from the U.S. Environmental Protection Agency indicates that mobile source air toxics are a small component of overall cancer risk, and the analysis for the Final Environmental Impact Statement indicates both that the Preferred Alternative would result in a small change in the emissions contributing to this risk and that emissions will decline by a large amount regardless of alternative. As discussed on page 4-79 of the Final Environmental Impact Statement, results from a health risk assessment would be influenced more by the uncertainty introduced into the process through assumptions and speculations rather than by genuine insight into the actual health impacts directly attributable to mobile source air toxic exposure associated with a project. Therefore, outcomes of such a health risk assessment do not provide useful information for decision makers, as required by 40 Code of Federal Regulations Section 1502.1. The Federal Highway Administration emissions analysis meets the requirement to produce information that is useful for both disclosure and decision making because it allows the public and decision makers to see which alternative has less mobile source air toxic emissions, with much less uncertainty than a health risk assessment.

(Response 9 continues on next page)

Code	Comment Document
13	6) Blasting South Mountain: Religious and Racial Discrimination and Civil Rights Violations in SMF DEIS The DEIS clearly discriminates on the basis of religion and race, and the ongoing ADOT plans for blasting Muhadagi Doog (South Mountain) are ongoing civil rights violations. Throughout the DEIS, it is acknowledged that the GRIC and other native American tribes hold Muhadagi Doog as a sacred site. From the actual language of the DEIS: "The South Mountains are highly valued and considered sacred by some Native American communities. The Community, which includes the Akimel O'odham (River Pima) and Pee Posh (Maricopa) tribes, and other Native American entities—including the Colorado River Indian Tribes and three O'odham groups: the Salt River Pima-Maricopa Indian Community, the Ak-Chin Community, and the Tohono O'odham Nation—consider the South Mountains to play a role in their cultures, identities, histories, and oral traditions." There is plenty of correspondence in the DEIS and its Appendices in which the GRIC repeatedly asserts and reminds ADOT of this, to no avail. ADOT plans to blast Muhadagi Doog. If we were to take a look at the same issue and frame it as a danger to a sacred site that plays a role in cultures, identities, histories, and oral traditions of a white, European-based religion, such as the Vatican, a sacred site for the Roman Catholic Church, we can illuminate how this is clearly religious discrimination, and likely racial discrimination. If Rome, Italy decided there needed to be a freeway that needed to take out part of the Vatican, well, that would just be unthinkable to the people there of the Roman Catholic faith. Think of the outrage and outcry such a proposal would muster, even worldwide! So what is the difference between the Vatican and Roman Catholics' beliefs, and Muhadagi Doog and the "Native American entities?" This attitude and planned action deliberately and intentionally violates the civil rights of the "Native American entities." In a 1979 consultation on the issue, the United States commission on civil rights defined religious discrimination in relation to the civil rights guaranteed by the Fourteenth Amendment to the United States Constitution. [Section 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.] As for racial discrimination, the equal protection clause was originally added to deal with the lack of equal protection provided by law to all in the course of administering justice in the states that had Black codes. The United States commission on civil rights noted, "Whereas religious civil liberties, such as

Code	Issue	Response
9 (cont.)		Given the uncertainty of a mobile source air toxic health risk assessment, the Federal Highway Administration instead addresses the potential impacts of mobile source air toxics through an emissions assessment in its National Environmental Policy Act documents. For smaller projects with a lower likelihood of a meaningful impact, this discussion is qualitative. For larger projects, emissions analysis is conducted. The Federal Highway Administration approach is consistent with the Council on Environmental Quality's direction in 40 Code of Federal Regulations Section 1502.2(b) to discuss impacts in proportion to their significance. The results of an emissions analysis can be summarized concisely in a National Environmental Policy Act document and provide useful information for decision makers (e.g., an alternative that has lower emissions is likely to be "better" from a mobile source air toxics health risk standpoint than one that has higher emissions). While the U.S. Environmental Protection Agency and the Federal Highway Administration both agree on the usefulness of addressing mobile source air toxics in National Environmental Policy Act documents for highway projects, the agencies disagree about the value of health risk assessment as a method for doing so. Another consideration with respect to health impacts is that the Preferred Alternative would also reduce in-vehicle mobile source air toxics exposure as opposed to the No Action Alternative. The U.S. Environmental Protection Agency has found that in-vehicle benzene concentrations were between 2.5 and 40 times higher than nearby ambient concentrations, based on a review of studies discussed in the Regulatory Impact Analysis for the U.S. Environmental Protection Agency's 2007 mobile source air toxics rule-making (Final Regulatory Impact Analysis, Environmental Protection Agency 420-R- 07-002, 3-17 [February 2007]). Construction of the Preferred Alternative would result in a reduction in benzene exposure to drivers and passengers for two reasons: decreased travel times (motorists would spend less time in traffic to reach their destinations) and lower emissions rates (attributable to speed improvements). Reducing on-road exposure would provide a health benefit for motorists using the roadway network. Congestion relief resulting from the proposed freeway would provide localized air quality emissions reductions on area freeways and arterial streets and at interchanges, benefiting users of area highways and those living near congested roads.
10	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

	the right to hold or not to hold a religious belief, are essential for Freedom of Religion (in the United States secured by the First Amendment), religious discrimination occurs when someone is denied "the equal protection of the laws, equality of status under the law, equal treatment in the administration of justice, and equality of opportunity and access to employment, education, housing, public services and facilities, and public accommodation because of their exercise of their right to religious freedom." (Emphasis added.) Also, the American Indian Religious Freedom Act (commonly abbreviated to AIRFA) is a US federal law and a joint resolution of Congress that was passed in 1978. It was created to protect and preserve the traditional religious rights and cultural practices of American Indians, Eskimos, Aleuts and Native Hawaiians. These rights include, but are not limited to, access of sacred sites, repatriation of sacred objects held in museums, freedom to worship through ceremonial and traditional rites, including within prisons, and use and possession of objects considered sacred. (Emphasis added.) The Act required policies of all governmental agencies to eliminate interference with the free exercise of Native religion (Emphasis added.), based on the First Amendment, and to accommodate access to and use of religious sites to the extent that the use is practicable and is not inconsistent with an agency's essential functions. It also acknowledged the prior violation of that right. Clearly, the No Build Alternative is the only viable option that does not constitute a violation of the 14th Amendment to the Constitution and a violation of the American Indian Religious Freedom Act as any freeway alternative proposed in the DEIS of the South Mountain Freeway requires blasting away part of Muhadagi Doog.

Code	Issue	Response
11	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. A response to this issue can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. In May 2012, the Arizona Department of Environmental Quality submitted a revised Maricopa Association of Governments 2012 Five Percent Plan for the region. On July 20, 2012, the U.S. Environmental Protection Agency made an official finding that the Maricopa Association of Governments 2012 Five Percent Plan was administratively complete. This decision ended the sanctions clocks associated with Arizona's decision to withdraw the Maricopa Association of Governments 2007 Five Percent Plan. On February 6, 2014, the U.S. Environmental Protection Agency published a notice in the *Federal Register* proposing to approve the Maricopa Association of Governments *2012 Five Percent Plan for Attainment of the PM-10 Standard* for the Maricopa County Nonattainment Area. In the same notice, the U.S. Environmental Protection Agency stated that it would concur with exceptional event (as a result of haboobs and dust storms) documentation prepared by the Arizona Department of Environmental Quality, which would give the region the 3 years of clean data needed for attainment of the particulate matter (PM_{10}) 24-hour standard. Finally on May 30, 2014, the U.S. Environmental Protection Agency approved the 2012 Five Percent Plan and found the area in attainment of the 24-hour particulate matter (PM_{10}) standard based on monitoring data for the years 2010 to 2012 (see page 4-72 of the Final Environmental Impact Statement for more information).
12	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. A response to this issue can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Analysis of impacts in future conditions accounted for cumulative effects of the planned 2035 roadway network including the proposed freeway. 40 Code of Federal Regulations § 1508.7 defines cumulative impacts as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency or person undertakes such other actions." The future conditions with and without the proposed freeway are presented in Figure 3-40 on page 3-66 of the Final Environmental Impact Statement. As noted on page 1-13 of the Final Environmental Impact Statement, the 2035 transportation network includes all improvements from the Maricopa Association of Governments *Regional Transportation Plan* except for the proposed freeway in the Study Area. The traffic projections also included Maricopa Association of Governments' projected growth in population, housing, and employment in the Maricopa Association of Governments region, which can result from public or private actions.

13	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project, would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.

1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Health Effects**	
3	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.

COMMENTER REMARKS/QUESTIONS:

Dear Sir or Madam,

My wife and I have read with interest the accounts of the latest report and developments in regards to the loop 202. We have been residents of the Foothills since 1995 and have been looking forward to a decrease in congestion the I-10 traffic for many years. Yet, the proposed alignment, in particular the East part, is simply not appropriate.

While we are about 3/4 mile from Pecos, we will affected very negatively by the freeway is build along Pecos:

1 (1) the crimes/thefts are likely to increase dramatically with the much increased access. Being the "largest dead end" of the world has limited the unintended/crime driven traffic making the entire area a pretty safe area.

2 (2) the traffic, especially of trucks, is likely to increase making the roads more congested and creating much danger for the schools many of which are close to Pecos

3 4 (3) the noise, etc. will likely generate further decreases in house prices already much depressed.

5 When we came, in 1995, it was the perception that the East alignment would be somewhat South of Pecos on the reservation. That is a perfect solution, it takes care of the I-10 traffic issue while disconnecting (mostly) the freeway from the entire Foothills, Club West, Lakewood, Mountain Park Ranch communities. It is my understanding that the tribe does not support the construction of the freeway but as in many problems, incentives are key...

Code	Issue	Response
1	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
2	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
3	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Property Values**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
5	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Milanovich

Document Created: 7/25/2013 1:48:36 AM by Web Comment Form

The Loop 202 South Mountain Freeway was envisioned decades ago, and included in plans approved by voters that built and expanded hundreds of miles of freeway across the Valley. While the South Mtn Fwy was lower on the priority level, other freeways were built or added capacity as part of a bigger plan. Without the reliever freeway, other communities will continue to suffer traffic tie-ups and bottlenecks. It's time to begin construction as soon as possible.

As we've seen, any crash on I-10 between the Broadway Curve and Chandler Boulevard quickly causes gridlock. Backups can quickly extend into Tempe, Mesa and Chandler. And when it's a bad one (like the deadly tanker truck fire at Chandler Blvd in 2011), there aren't many options. Neither Priest Drive nor 48th Street are really major thoroughfares North of Elliot. Because of that, even on a regular day, the I-10 is bumper-to-bumper most mornings. The wait to turn from Eastbound Elliot Road to Westbound I-10 can often take several cycles. A reliever freeway just South of Ahwatukee would funnel some traffic off of I-10, and during traffic events, would give drivers a much needed alternative.

That said, ADOT should look very closely at how they design and build this freeway. This is a one-time chance to create a new generation of freeway from scratch, with the best in safety and design standards. It should be a showcase for our state to be proud of, and for ADOT to win plenty of awards for.

(1) At the Eastern end of the alignment, if the Pecos Road route is indeed the final decision, I strongly encourage ADOT to place the freeway below grade, like the US 60 and Loop 101 through Tempe. Because of the uniqueness of Ahwatukee, it would be best if the freeway not be seen, and dropping the lanes below grade would also help with noise pollution.

(2) Echoes from cars and trucks on I-10 already bounce off the mountain. An elevated or at-grade freeway would exasperate matters. Cross street overpasses should be placed at grade, and freeway lighting should use lower light standards where needed and practical. Many understand the concerns of those who live in the area. Lowering the freeway would be an acceptable way to address concerns about noise and property values.

(3) At the Western end of the freeway, not connecting directly to the Loop 101/I-10 interchange is a recipe for disaster. With both the Cardinals and Coyotes playing in Glendale there will be many days (and especially nights) where you'll see folks in the East Valley jump on the South Mountain Freeway to get to the West side. But having to get off on I-10 and then go West to the Loop 101 would create new bottlenecks. Imagine what traffic on I-10 between the two freeways would look like for Monday Night Football? Or the Fiesta Bowl? The idea of this "reliever" freeway is to take traffic OFF of other freeways… especially Interstate 10. This would do the opposite. Anyone trying to use the freeway to bypass Phoenix traffic would still be caught in it, in a way defeating the purpose of the whole thing.

If the concern is about giving people access to Downtown Phoenix, then a suggestion would be consider extending the terminus of the SR 801/SR 30 project further East, looping it back to I-10 or to I-17 at the Durango Curve. That would be much better than dumping a bunch of traffic on I-10 halfway between the Loop 101 and I-17. The West side commute would become even more of a nightmare, and the next generation would have to expand I-10 to 16 lanes to fix it.

Code	Issue	Response
1	**Design**	A depressed freeway option was evaluated in the Final Environmental Impact Statement and is described on pages 3-15 and 4-91. Although depressing the freeway would reduce noise levels, noise walls would still be needed to further reduce noise to meet the Arizona Department of Transportation noise policy. Whether the freeway is built aboveground with tall walls or belowground with shorter walls, the final mitigated noise levels would be nearly the same at nearby residences. The major disadvantage of building a depressed freeway would be the increased construction cost and the possible acquisition of additional right-of-way for pump stations and retention basins.
2	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Alternatives, W59 Alternative Versus W101 Alternative**	

Code	Comment Document

Lastly, if for some unfortunate reason the final decision is “no build,” then I highly recommend cutting-off unrestricted access to the Loop 202 and I-10 at Pecos Road. Right now, drivers who use Pecos as their own personal freeway don’t even have to stop at a ramp meter before getting on either freeway. Of course they don’t want to see this freeway built. They’d have to share “their” road. There’s nowhere else in the Valley where anyone has such unrestricted access. If there were ramp meters on the fly-ramp to I-10, maybe the backup down to the US 60 each morning wouldn’t be as bad.

Arguments by the GRIC about “destroying” the mountain are moot. There are already roads around the base of the mountain, parts cut away for homes and golf courses, and dozens of transmission towers at its summit. A freeway would not be any more intrusive, even if there was some blasting work done to create it.

Complaints about potential pollution in the area (especially schools) are also hypocritical. Drivers who use Pecos add to the congestion on I-10, backing up traffic throughout Tempe, where several schools are located along the US 60. A reliever freeway may alleviate some of those backups, and improve quality of life in surrounding communities.

Everyone knows ADOT needs to reconfigure the Broadway Curve. In order to do that, overpasses at 48th Street and Broadway Road will almost undoubtedly need to be torn down for future expansion of the I-10. The South Mountain Freeway should be built first. It will give drivers an alternative to get around what will likely be our own version of “Carmageddon.”

I have lived in Tempe and now Ahwatukee for the better part of the last 20 years. When I first came here, I-10 was two lanes in each direction South/East of Baseline Road. The freeway plan that widened I-10 and allowed for the dramatic growth South of Baseline, is also the same plan that includes the South Mountain Freeway. No one’s saying we should go back to two lanes in each direction. No one’s calling for the demolition the access ramps from I-10 and Loop 202 to Pecos Road. And as such, no one should be saying “don’t build the freeway.”

It’s time to turn the shovels and get to work!

COMMENTER REMARKS/QUESTIONS:

Hello,

I live in Laveen and I've been reviewing the information on the proposed Loop 202 South Mountain Freeway on the ADOT website. I have some questions about the information that was presented in the video about this project.

(1) The video states sound walls will be constructed to reduce noise. Assuming the preferred W59 alternative is adopted, where in Laveen would these walls be placed? Will the adjacent surface streets (such as Dobbins, Baseline and Broadway) be redone with rubberized asphalt? I live in Laveen Meadows (which is located near 67th Avenue and Baseline) and I currently experience significant traffic noise from Baseline even though my house is not next to Baseline. (My house is closer to the Laveen conveyance channel than it is to Baseline.) Since I currently hear considerable traffic noise during the morning rush hour and I would expect this freeway to generate even more traffic I would hope that using rubberized asphalts on these major streets is being planned to help mitigate some of these noise.

(2)

(3) Will any of the houses in Laveen be acquired by the City and if so, can you tell me approximately where these houses are located? I am very concerned about the impact of this project to the value of my home. I realize having convenient access to freeways is considered a "plus" but I also know that a home that is close to a highway where there is significant highway noise is not desirable.

(4)

Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Potential barrier locations are shown on Figures 4-26 through 4-29 beginning on page 4-90 of the Final Environmental Impact Statement.
2	**Noise**	Surface replacement of arterial streets is the responsibility of the local jurisdiction, such as the City of Phoenix. Rubberized asphalt will be applied to the freeway pavement.
3	**Acquisitions and Relocations**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Aerial maps showing the proposed freeway (W59 and E1 Alternatives) are accessible through the project Web site, <azdot.gov/southmountainfreeway>.
4	**Property Values**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the built environment and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.

5	The video also mentioned the Dobbins Road interchange was planned for a possible future connection with State Road 30. Can you please elaborate on this? I was unable to locate any information online about SR 30 in relation to the Loop 202 South Mountain Freeway (I did find information about the 303 and SR 30) so any information you can provide on this additional project would be greatly appreciated. Thank you in advance for your response. Sincerely, Donna Snow

Code	Issue	Response
5	**Design**	The reference in the video was to State Route (SR) 30. The State Route 30 alignment is currently under study by the Arizona Department of Transportation.

1	**Public Involvement**	The schedule for the next steps includes publishing the Final Environmental Impact Statement in 2014. A 60-day public review period will be provided. Then a record of decision would be published. If a build option is selected, construction could begin as early as 2015. Right-of-way acquisition would begin after a record of decision.

PMPC is steadfastly opposed to any alignment of the Loop 202 South Mountain Freeway that allows for trespass onto the Mountain Preserve or for any excavation into the South Mountain what so ever. These mountain preserves ensures a lifestyle that 80% of Arizona voters consistently support. The mountain preserves are unique and are for people and wildlife, not for vehicle trespass. PMPC does not agree with many of the DEIS assumptions finding them objectionable and deficient in the following analysis areas.

(1)

Unexceptable Pre-Decisional Actions: ADOT has made some pre-decisional actions with the purchase of property before the Draft Environmental Impact Statement (DEIS) was released. Phoenix Mountains Preservation Council (PMPC) questions the legality of this action and the entire DEIS when it appears ADOT has already made considerable financial investment to establish the alignment for the South Mountain Freeway rather than follow the prescribed process.

(2)

Dismal Wildlife Connectivity: The DEIS does not meet the minimal requirements for coordination and analysis of wildlife resources. The Arizona Game and Fish Department was consulted in 2009 during scoping. The current connection to the Estrella Mountains allows for passage of mule deer, javelina, bobcat, and mountain lion. There is no evidence of further efforts to ascertain wildlife connectivity needs or possible mitigation. The Sonoran desert tortoise provides additional evidence of inadequate cumulative analysis given its status as a U.S. Fish & Wildlife Service's candidate species. The mountain ridge area slated for demolition meets the definition for the tortoise's habitat.

(3)

Unreasonable Taking of Mountain Preservation Lands: The DEIS states in Figure 5-7 Public Parkland the avoidance of taking over 30 acres of the Preserve is "not prudent and feasible". The taking of this mountainside will destroy important archeological, spiritual, cultural and recreational sites with no realistic or reasonable mitigation possible in the study. The study failed to recognize and address new two trails, Gila and Bursera Trails, created in the southwest end of the Preserve in 2010.

(1) (4) (5)

Outdated Data Projections Used: The DEIS is based on outdated data projections that are now six to eight years old. The analysis does not acknowledge the impact the major economic downturn had and it brings into question the validity of projected growth levels put forth in the DEIS. In all the alternative studies, the DEIS does not provide one alternative analysis to the demolition of the southwest ridges of South Mountain. Furthermore, nowhere in this study is there an assessment of hazardous material truck traffic nor any mention of managing this truck traffic and the consequences of a serious hazard waste incident.

(6)

Over 3 million visitors come to South Mountain Park/Preserve annually, according to City of Phoenix statistics. Destroying any part of the mountain to align a high-capacity freeway will only have a negative impact on tourism and the many unique resources the park offers.

(7)

We urge ADOT to stop providing studies that do not accurately or thoroughly address the impact this freeway has on South Mountain. It's time to stop the $20 million and more in wasted tax payer's money to study the environmental impact and design for an alignment that no longer makes sense.

1	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Right-of-way**	Federal Highway Administration regulations do not allow the ownership of right-of-way to be a factor in the decision regarding the selection of an alternative.
3	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Cultural Resources**	
5	**Section 4(f) and Section 6(f)**	South Mountain's newest trails are the Bursera and Pyramid Trails (see Final Environmental Impact Statement page 5-8). The E1 Alternative is approximately 1 mile south of the Pyramid Trail and even farther from the Bursera Trail; thus, it would not affect either trail. The trails have walk-in access from Chandler Boulevard and 19th Avenue, with on-street parking. This walk-in access would be north of and adjacent to the planned extension of Chandler Boulevard and, thus, would not be directly affected. The walk-in access point and the part of the Pyramid Trial at the access point are located adjacent to a residential neighborhood and the City of Phoenix's planned Chandler Boulevard Extension. These trails are typically used for high-intensity recreational activities such as running, hiking, and biking, not noise- or viewshed-sensitive activities. All proposed action alternatives would span existing and proposed trails to avoid impacts. However, during construction (if an action alternative were selected), trails that would be spanned or would be near potential freeway construction would be closed for limited times for safety reasons. Closures would necessitate that trail users detour around construction sites to rejoin the trails farther along their length. According to Phoenix South Mountain Park/ Preserve rangers, the Gila Trail—although well-defined—is not a designated trail within the park. That said, the Gila Trail would not be affected by the proposed freeway or by the Chandler Boulevard Extension. The Final Environmental Impact Statement Appendix page A665 contains information directly from the Phoenix General Plan and early coordination with the City of Phoenix Parks Department. The trails in the preserve are exceptions to this statement and were always meant as such. The trails within 1/4 mile of the proposed alternatives were treated separately, as in the case of the Maricopa County Regional Trails System. Should an alternative be selected, the Arizona Department of Transportation and Federal Highway Administration would work closely with the City of Phoenix during final design to ensure the connectivity of trails is maintained, whether they are eligible as Section 4(f) resources or not.
6	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

1 I am satisfied with the alignment as proposed. It will provide a much needed, unhindered travel path through South Phoenix, Laveen, and connect both ends of the I-10.

I know that this draft is to discuss the alignment and environmental impacts. I also want to voice my concern that this freeway not be an ugly scar across the lands, without any consideration of art or plant beautification along the way. For example, I don't want it to look anything like the ugly brown ditch we call the I-17. Freeways in the East Valley and the more recent extensions have been given some consideration as to the overall look presented to those traveling on the freeway,. The same consideration needs to be given to this project, as it will be one of the first impressions visitors traveling through the area will see. Local travelers should also consider this a source of pride, not just another eyesore in the South Phoenix corridor.

Code	Issue	Response
1	**Visual Resources**	The proposed freeway would include aesthetic treatments similar to the other loop freeways in the region (see page 4-171 in the Final Environmental Impact Statement).

Very concerned about how the SMF will affect the wells along Pecos that supply water to the Lakewood lakes and landscaping.
The close proximity to homes and schools and the ability to evacuate 85,000 people should there be a major chemical spill. Also concerned about blasting through sacred South Mountain. (The hiking trails will no longer be used because no one wants to exercise in a smog infested area.

Code	Issue	Response
1	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to State regulations/standards. (See text box on Final Environmental Impact Statement page 4-108.)

COMMENTER REMARKS/QUESTIONS:

1

We have viewed your video and interactive materials found online for the proposed South Mountain 202 Freeway. It sounded like the deadline to submit comments was July 2013. Have you determined then where the 202 loop will most likely occur? Is the 59th Ave corridor still the "preliminary preferred," or did you determine that one of the alternative plans is better?

Thank you for your time,
Linda and Bill Weaver

Code	Issue	Response
1	Alternatives	A combination of the W59 Alternative in the Western Section and the E1 Alternative in the Eastern Section is identified as the Preferred Alternative in the Final Environmental Impact Statement.
