1	**Acquisitions and Relocations**	The text box "Freeway Awareness," on Final Environmental Impact Statement page 4-13, provides a thorough history of the public disclosure of the proposed South Mountain Freeway, beginning with a map made public in 1980 and one in 1984 showing more or less the current alignment. This text box also explains the legal requirements for developers and other home sellers to "inform potential buyers of conflicts with planned transportation projects like the proposed action." The Southwest Loop Highway—the South Mountain Freeway predecessor—was integral to the Regional Freeway and Highway System approved by Maricopa County voters in 1985. Although other facilities were considered a higher priority early in development of the Regional Freeway and Highway System, the South Mountain Freeway has been included in every subsequent update. The same route was approved by the State Transportation Board in 1988. In 2004, Maricopa County voters approved Proposition 400, which was designed to fund completion of the remaining segments of the Regional Freeway and Highway System, including the proposed South Mountain Freeway (Final Environmental Impact Statement page 1-21).
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Noise**	
4	**Trucks**	
5	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
6	**Noise**	As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes that may be elevated above the road, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Phoenix metropolitan area and across the country.

LOOP 202
South Mountain
Freeway Study

Draft Environmental Impact Statement
COMMENT FORM

Additional Comments:

We also question the value of this freeway southeast of the city: who will be using this: probably trucking companies from Tucson or Mexico heading to the west valley. Residents in this area or in homes East and North of this freeway will have no reason to take this freeway as it is end of the valley.
How many people in the East valley need to travel to the west valley for work? Most may work in the downtown area and have no need to travel to 59th a 75th Ave to turn around and head into town. This does not make sense.

ADOT TRACS No.: 202L MA 054 H5764 01L • Federal-aid Project No.: NH-202-D(ADY) 13-102

Code	Issue	Response
7	**Acquisitions and Relocations**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values. A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
8	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Purpose and Need**	An analysis of the origins and destinations of projected freeway users is presented in Figure 3-18, on page 3-36 of the Final Environmental Impact Statement. Freeway users are defined as those motorists who pass through the bend of the freeway (around the South Mountains). So, this does not count motorists in Laveen Village who go to Interstate 10 (Papago Freeway) and motorists in Ahwatukee Foothills Village who go to Interstate 10 (Maricopa Freeway). The results of the origin-destination analysis show that 73 percent of the traffic going around the South Mountains has origins or destinations in the area within or around the Study Area and supports the conclusion that the proposed action would serve east–west mobility consistent with commuting movements.
10	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

I oppose the $2.6 billion-wasting, sprawl-enabling, pollution-increasing Loop 202 extension. Not only is the proposed extension a bad idea, but I do not trust the dishonest draft EIS, which critically ignored the well-documented dynamic of induced demand. Please stop planning transportation systems for a world that hasn't existed in five decades and which is never coming back.

Matthew Klopp

1	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Secondary and Cumulative**	The proposed freeway is a response to existing and anticipated travel demand in the metropolitan Phoenix area. It is not meant to increase travel beyond that expected to be generated from existing and anticipated population and employment growth and related land development. It is important to consider that improvements proposed for any type of transportation system (e.g., a new bus route, rail transit line, commuter rail service) would likely lead to changes in travel behavior, which, in turn, would lead to increased use of the particular system. Improvements made to a given transportation system are meant to attract new users (see Final Environmental Impact Statement pages 4-170 through 4-174). If this were not a primary goal, the improvements would be neither effective nor warranted. For the proposed action, a goal is to attract users of other segments of the Regional Freeway and Highway System and the local arterial street network, now and in the future, to the proposed action to optimize, in part, the entire regional transportation system (as outlined in the proposed action's purpose and need in Chapter 1).

in the '70s and the '80s have studied, documented, and written books about petroglyphs and other artifacts discovered on the South Mountain over the past 40 years. The Gila River Indian Community elders, cultural resources department, community members have told MAG, ADOT, and the State of Arizona of the cultural significance of this mountain and what it means to us. I consider this racial discrimination. You are discriminating against our people and what they believe in.

This is not the first time Maricopa County has done this. They are doing this to North Mountain Church, who has already moved because of the freeway, they did that when they expanded the airport, there's the church in the middle of -- just in the middle of the city between 16th and 24th Street because of progress. This needs to stop. This will not help the community, this will not benefit the people, not to mention what it'll do to the environment and the plants and animals and the natural habitat. I thank you for your time.

THE FACILITATOR: Thank you, Mr. Morago.

We'd like to welcome our next speaker, Mr. Robert Knight.

Welcome, Mr. Knight. You have three minutes.

1 Knight, I'm a park member and Ahwatukee resident and a
2 small business owner in Ahwatukee. I'm very concerned
3 about the impact that this truck bypass will have on
4 Ahwatukee; let's face it, that's what it is. Commuter
5 traffic is not going to be using this road because
6 commuter traffic destination is Central Phoenix. This is
7 going to be largely a truck route. Would you like a
8 truck bypass in your backyard? I wouldn't. The plan has
9 been on the books for some 30 years. When it started, it
10 was mostly farmlands; that's changed. Now you have some
11 85,000 residents that call Ahwatukee home.
12 Air pollution. Not really reducing air
13 pollution here, they're simply moving it to an area of
14 the Phoenix area which currently doesn't have it. They
15 will have an increase in air pollution at 59th Avenue and
16 I-10 from vehicles idling because of the traffic
17 congestion at the I-10 area of that part of the I-10.
18 Pollution along Pecos Road will be significantly
19 increased as it's blown into the Ahwatukee community; it
20 has nowhere to go, the mountains are in the way.
21 Noise pollution. The measurements being taken
22 along Pecos Road, yes, I understand that the requirements
23 are that you restrict your noise abatement and noise
24 issues to a quarter mile from the freeway. Fundamental
25 challenge here in Ahwatukee is not a

8

flat community. The bulk of Ahwatukee slopes up from Pecos Road up into the Foothills, well above the noise abatement wall. Noise travels, it bounces off the mountain and is amplified back, so you'll have a significant noise increase farther away from the freeway than your measurements would indicate.

Essentially, what this boils down to is ADOT is sacrificing a community of 85,000 for the purpose of building a truck bypass, a truck bypass that could be easily done using the I-8 to 85 corridor and improving the 85 highway from I-8 to I-10. If the purpose is to provide and route trucks away from Central Phoenix, this is a far better alternative than the Loop 202 truck bypass. Thank you.

THE FACILITATOR: Thank you, Mr. Knight.

Again, as a reminder, out of mutual respect and as a courtesy to all participants, we ask that you refrain from clapping and making reactions to speakers' comments.

I'd like to invite our next speaker, Tim Stone.

MR. STONE: Do I introduce myself? I don't know the rules.

THE FACILITATOR: Thank you, Mr. Stone. You have three minutes.

MR. STONE: My name is Tim Stone, I've been a

7	**Noise**	As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes that may be elevated above the road, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Phoenix metropolitan area and across the country.
8	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.

my name is John Knight. we live ay 4036 W Kiva Street in Laveen. aligning to I-10 anyplace other than 99th avenue/101 Northbound does not make any sense. bringing more traffic through 55th or 59th avenues and placing additional stress from 99th avenue to these junction points is not a sound structure. traffic around phoenix needs to get off of I-10 as quickly as possible easing traffic within the city itself. The impact also to these residential areas is overwhelmingly negative.

Subject: Loop 202 South Mountain Freeway

To Whom It May Concern:

I am unable to attend the hearing/meeting being held today at the convention center regarding the Loop 202 South Mountain Freeway, but I wanted my voice and opinion heard regarding this critical piece of Phoenix infrastructure. I am a resident of Laveen and truly feel the addition of this freeway would greatly help and benefit our community, as well as the whole of Phoenix. Not only will this freeway cut traffic congestion across the metro Phoenix area, it will also reduce pollution and save drivers time and money. Several years ago I worked in downtown Phoenix and commuted to Gilbert. On a good day, my drive was 45 minutes each way. Good commute days were very rare. I can only imagine that the route I used to take has gotten considerably worse over the years—and will continue to do so as the East Valley increases in size with added commuters making the trek from East Valley cities to areas near downtown or the West Valley for their jobs. This project also will create roughly 30,000 jobs during the 5-6 year construction period and result in a $2 billion investment in the Phoenix area economy. How could that possibly be turned down?! Job and economic growth for our city?! Yes, please!

1

My husband and I are both avid cyclists and triathletes and currently make use of 51st Avenue for long training bike rides, as do many other cyclists in the valley. It's a great stretch of road with wide shoulders that make it easy (and somewhat safe) for bike riding. Please add in a pedestrian/bike trail along the freeway. We believe no road should be built unless there is a sidewalk/trail/whatever for pedestrian/bike traffic next to it.. you should be able to travel any way you can.

Thank you for your time.

Regards,
Claire Knightly

1	**Design**	Recreational or equestrian trails are not included in the proposed project. The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.

Please consider the extension of the 202 around South Mountain. While we reside in Chandler, we are on the West side of the Valley due to kids events almost weekly. It would be very important to our family and a tremendous improvement in our quality of life if we can make this happen.

Warmest regards,

Doug Knolles

1 Keep the Freeway on the W59 Preferred Alternative where we all thought it was going to be built, and don't run it through all the new homes with one of the other proposals. I realize that it was a planning blunder not to connect the 202 to the 101, but there is sufficient room on the I-10 to widen it multiple lanes in each direction to alleviate the traffic congestion between the 101 and 59th Ave.

Thank you for allowing me to comment. I hope that common sense will prevail in this decision.

As a resident of Ahwatukee I am begging ADOT to NOT build the freeway in my backyard. If the freeway moves forward we will relocate our family out of the area. I see no benefit to the freeway. Instead it will bring increased traffic, air pollution, crime and destruction to our neighborhood.

I urge the ADOT and the state to find a solution with the Indian Nation to the south. I feel there is a need for an ext. of the 202. However the current plan is faulty and ill-planned.

Yours,
Nicole Koester

Code	Issue	Response
1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
5	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
6	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Hi just my input about the 202 loop.. All the residents some live in that area close where
the 202 loop to go do not like the free way to go there.. They do not care about the hazardous
some happen when
they come down the 48 sty where I live close bye . morning going and coming at night
nobody think about that .. They only think about them self and held about rest of us...
there live in there pat down close to us..
thank you

1	Christopher Komar Document Created: 7/24/2013 5:43:42 PM by Web Comment Form In terms of your impact studies, I'm wondering if noise pollution has or will be studied. My particular concern is the neighborhood I live is unique as it is in close proximity and is elevated. A noise abatement wall would likely not be sufficient. I'm hoping as part of the study our neighborhood would be a one of the datapoints.

Code	Issue	Response
1	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes that may be elevated above the road, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Phoenix metropolitan area and across the country.

1 2

I am appalled that this on grade design would be contemplated in such close proximity to four schools in Ahwatukee. I assume the freeway is on grade because of cost? Please confirm a traffic study has been completed to understand the increase traffic on Chandler Blvd. due to this freeway design. Please provide me information on how I can get a copy of the cost estimates developed for the on-grade E1 Alternative any estimates for any below grade alternatives. How do I get information on your consultant design team and or construction manager at risk? I do not see much creativity in the design of this E1 Alternative. It reeks of lowest cost wins and schools/neighbors tough luck. This freeway needs to be below grade with retaining walls to minimize visual and noise impact to the schools and community. Hey isn't that how it was done in Scottsdale? I am totally against this on-grade solution. More money should be budgeted for this section.

3 4

James Kyle Kotchou

Code	Issue	Response
1	**Design**	The project team analyzed the belowground option, also called the depressed freeway option. The analysis indicated that depressing the freeway would increase the cost of construction and right-of-way acquisition, displace additional residences, create the need for additional pump stations and detention basins, and still need the installation of noise barriers. Because the belowground option would result in substantially greater costs and residential displacements, this option was eliminated from further study (see Final Environmental Impact Statement pages 3-15 and 3-18). The evaluation presented in the Final Environmental Impact Statement includes cost estimates. Technical memoranda documenting this evaluation (including detailed cost estimates) are available upon request from the Arizona Department of Transportation, Urban Project Management section. Information related to the design consultant, final designers, and contractors can also be requested from the Urban Project Management section.
2	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1).
3	**Visual Resources**	For most of the alignments of each of the action alternatives, the proposed freeway would be elevated above the natural grade of the surrounding land. This elevated profile would allow noise to carry farther, creating noise impacts at greater distances from the freeway. Depressing the profile of the freeway below grade might reduce traffic noise levels adjacent to depressed sections. However, it would be necessary to also construct at-grade noise barriers to achieve noise reduction goals at receiver locations adjacent to depressed freeway sections (see page 4-99 in the Final Environmental Impact Statement). This strategy would reduce visual impacts associated with high noise barriers on elevated freeways, but would entail ground-level noise barriers and their associated interference with views. Thus, with either approach to noise reduction, views of nearby mountains could be disrupted. The specific impacts would depend on the geometrics of the height of any noise barriers constructed, the intervening topography, and the distance of the barriers from the residences in question.
4	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Phoenix, AZ 85023

July 10, 2013

Dear Elected Official,

1

I am opposed to any alignment of the Loop 202 South Mountain Freeway that allows destruction of any portion of the Phoenix Mountain Preserves.

Voters consistently support park land preservation and as the city increases in density these open spaces will become more valuable for maintaining a balanced lifestyle. Kiplinger named Phoenix one of the 10 best cities for young people in part because of our natural environment and National Geographic lists Phoenix among the best cities for hiking. Two new trails, the Gila and Bursera Trails are in the southwest end of the park which will be impacted by this project. Over three million visitors come to South Mountain Park/Preserve annually and I expect that number will increase as the city becomes more compact. A high capacity freeway will only have a negative impact.

2 3

Taking preserve land sets a bad precedent. Much more than 30 acres will be impacted by introducting additional pollution, erosion and habitat destruction.

Please find an alternative to this placement of the 202 freeway.

Thank you.

Barbara Krajewski

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

When can we start?

1 All in for the construction of the 202 Loop

I believe the benefits to the valley outweigh the negatives to the few impacted.

relief from building traffic along the 10 corridor will help all those who use this route daily.

Subject: Comments in opposition to South Mountain Freeway
Date: Tuesday, May 28, 2013 9:16:32 AM

May 28, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(3) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(4) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(5) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(6) PROTECT our communities, our health, and our environment by selecting the No Action Alternative. Again, if you are confused as to why, reread the above paragraph regarding Habitat destruction and wildlife disruption. We want a SMART solution. Concentrate on a well-planned mass transit. Be progressive and forward thinking, don't blow this!

(7) Sincerely,

Sandie Kubie
9680 W Rain Lily Ln

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Health Effects**

Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

Subject: loop 202 south mountain
Date: Tuesday, June 04, 2013 12:47:13 PM

1) Alignment:

1 Pecos Road west connecting with I-10/loop 101 at 99th avenue.
Any other I-10 intercept is economically and environmentally unacceptable.

2 2) There shall be no exits on the Pecos Road alignment that allow access to the GRIC.

If GRIC wishes access to the freeway, the GRIC will 100% fund all studies for such access and if studies, and AZDOT approve, GRIC will reimburse AZDOT all construction costs.

Code	Issue	Response
1	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	Federal law prohibits the denial of access to any community. Thus, traffic interchanges would be located along the freeway where it borders the Gila River Indian Community (see Final Environmental Impact Statement page 3-51). Roadway connections on Gila River Indian Community land to the traffic interchanges would be the responsibility of the Gila River Indian Community, in coordination with appropriate jurisdictions.

a lot of congestion as our community grows. The freeway would help cut the congestion in an area, reduce air pollution. 64 percent of the voters voted it in, and we are still waiting.

Traffic on the I-10 between Ahwatukee and Goodyear will grow about 20 percent and will have another 10 -- 103,000 cars that will use the Broadway curve each day. Another 38,000 cars will jam the tunnel every day. Morning and evening commute times will increase by 40 percent to almost 82 percent, and traffic congestion on the city streets will increase by 46 percent unless they build the freeway.

The project will create approximately 30,000 jobs during the five to six-year period -- construction period and can -- will result in a 2 billion investment in the Phoenix area economy. The building -- the money to build the freeway is already in the budget and was approved by voters twice; first in 1985 and again in '04.

So there is no more important project to the area's commuters and workers than the South Mountain Project Freeway. So we must build it now.

MR. KUEFER: William, last name K-u-e-f, like Frank, -e-r.

SOUTH MOUNTAIN PUBLIC HEARING
Public comments to reporter)
May 21, 2013
10:00 a.m.
REPORTED BY:
Bonnie Ponce, RPR
AZ Certified Reporter No. 50669

MR. KUGEL: Tom Kugel.
I own a house down there, and while it's not
on Pecos, several streets in, so I think it will impact
me personally, will be mitigated. I still feel that
there's going to be a visual eyesore there. There's
going to be an audio issue.
And then I don't know how clear they've
defined whether they're going to raze -- exercise
eminent domain and raze some properties. My
understanding is the church might go on 24th Street.
I'm concerned about what it's going to do to
housing valuations in Club West where I'm at. There's
a school right along the line on Pecos line.
The film I just saw had a variety of options
for the Pecos Road alignment, but then they went on to
say the Pecos Road alignment was the preferred one,
which puzzled me, because it's right next to the
school.
What's going to happen to the valuations of
the homes that are on Pecos? What's the time frame?
Are they still negotiating with the Gila River Indian
Community? Because I've not heard anything about that.
I initially heard there was. Where can I get the EIS?

That's not clear. How many lanes, 10 or 8? I don't
know.
So I just -- I strongly oppose it for those
reasons and the detrimental impact it will have on the
foothills and Club West community. It will change the
whole dynamic of that area.
That's pretty much it.

Code	Issue	Response
1	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
2	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Acquisitions and Relocations**	
4	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
5	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
6	**Construction**	If an action alternative were to be the Selected Alternative, right-of-way acquisition would begin immediately after the record of decision and construction of the entire freeway corridor is estimated to take approximately 5 years.
7	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Public Involvement**	Printed copies of the Draft Environmental Impact Statement and related documents are available for purchase from the Arizona Department of Transportation upon request by calling (602) 712-7767. Copies of the Draft Environmental Impact Statement are available for viewing at the Phoenix Public Library (Ironwood Branch and Burton Barr - Central Library), Sam Garcia Western Avenue Library, and Tolleson Public Library. Electronic versions are available for download from the Arizona Department of Transportation Web site, <azdot.gov/southmountainfreeway>.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
9	**Design**	The proposed South Mountain Freeway is planned to be eight lanes wide. It would have, in each direction, three 12-foot-wide general purpose lanes and one high-occupancy vehicle lane. The four lanes in one direction would be separated from the other four lanes by a median barrier with left shoulders adjacent. Figure 3-34, on Final Environmental Impact Statement page 3-58, provides a typical cross-section representation of the freeway.
10	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

Dear South Mountain Study Team,

1

I am writing to comment on the draft environmental impact statement (DEIS) you released for the Loop 2002 South Mountain Freeway study. As a professional economist, a parent of young children, and a resident of Phoenix, I am deeply concerned about what I believe are serious flaws with your DEIS. Please find attached a pdf file containing a cover letter and 12 specific comments that explain some of my concerns. I look forward to seeing your responses to the specific issues I raise in your final EIS. In the meantime, I would be glad to elaborate on any of the issues I raise. Feel free to have your staff contact me with questions.

Best Regards,

Nick Kuminoff

RE: Comments on Draft EIS for South Mountain Freeway (FHWA-AZ-EIS-13-01-D)

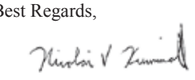
Dear South Mountain Study Team,

1

I am writing to comment on the draft environmental impact statement (DEIS) you released for the Loop 2002 South Mountain Freeway study. As a professional economist, a parent of young children, and a resident of Phoenix, I am deeply concerned about your DEIS. Overall, I think the DEIS reflects an unwarranted bias toward building the freeway with the Pecos Road alignment. After careful review, I cannot help but think that the DEIS systematically overstates the benefits of building the freeway and systematically understates the negative externalities on safety and environmental quality. Furthermore, the DEIS should be forthright about the fact that the precise magnitudes of both the benefits and costs are uncertain. Yet the DEIS has an asymmetric treatment of uncertainty. Economic costs, such as the public health consequences of increased air pollution in Ahwatukee, are dismissed entirely because they are uncertain. Meanwhile, economic benefits, such as the projected reductions in congestion on the I-10, are falsely presented as certain outcomes, despite the deeply uncertain nature of such projections. Finally, the DEIS falls far short of established "best practices" for the analysis of public projects as defined by the U.S. Office of Management and Budget (Circular A-4) and the U.S. Environmental Protection Agency's *Guidelines for Preparing Economic Analysis* (2010). I think it would be highly irresponsible to proceed with building the freeway without first conducting a serious economic analysis that quantifies the benefits and costs, and fully addresses uncertainty.

Please find attached 12 specific comments that explain my concerns with selected aspects of your DEIS. I look forward to seeing your responses in the final EIS. I would be glad to clarify any of the issues I raise to your staff. Feel free to contact me with questions.

Best Regards,



Nicolai V. Kuminoff
kuminoff@gmail.com

Code	Issue	Response
1	**Purpose and Need**	At the beginning of the environmental impact statement process, the need for a major transportation facility was reexamined to determine whether such a facility is still needed. Validation of those findings occurred throughout the entire environmental impact statement process. Analysis of the purpose and need for the proposed action followed National Environmental Policy Act and Federal Highway Administration implementing guidance on the subject matter and used state-of-the-practice analytical tools, as pointed out in Table 1-3, "Traffic Analysis Tools," on page 1-13 of the Draft Environmental Impact Statement. The results of the analysis determined that a transportation problem does exist and that problem will continue in the foreseeable future (see section, *Conclusions*, on page 1-21). The comment implies that the freeway condition was predetermined. As noted on page 3-1 in the section, *Reconfirm the Purpose and Need for the Proposed Action*, a continuous validation process was undertaken throughout the environmental impact statement process to ensure past conclusions in the environmental impact statement process remained valid. The social, environmental, and economic effects of all alternatives, including the No-Action Alternative, are presented in the Draft and Final Environmental Impact Statements.

Code	Comment Document
2	Comment #1: The DEIS implies that a majority of Maricopa County residents support building the proposed South Mountain Freeway without having any factual basis to support this implication. There are numerous examples of this, especially in the early chapters of the DEIS. One example is the "What do the results of Propositions 300 and 400 tell us" sidebar on page 1-9. The problem is that the proposed South Mountain Freeway was a fairly minor detail in the information provided to voters on the broader regional transportation plan. Voters have never had an opportunity to express their opinions on the South Mountain Freeway separately from other regional transportation projects that were bundled as part of these propositions and were in more immediate need of funding at the time the propositions were presented to voters. Furthermore, neither proposition provided voters with basic details on the South Mountain Freeway such as the expected construction cost and the number of lanes. Furthermore, at the time people voted on proposition 300 the town of Ahwatukee was largely undeveloped. Likewise, the regional transportation plan provided to voters as part of the Proposition 400 election of 2004 failed to anticipate the location, size, use, financial cost and social costs of building the freeway. It is also noteworthy that both votes occurred before the onset of the great recession. The bottom line is that there is no reason to expect that Maricopa county voters would support building the South Mountain Freeway, if they were given the opportunity to vote today. In addition, the question of whether or not voters liked the idea of a new freeway extension 30 years ago or 10 years ago is entirely irrelevant to the question of whether or not it makes sense to build the freeway today.
3	Comment #2: The effort to model the effect of the freeway on ambient concentrations of criteria air pollutants is inadequate and misleading. For example, the discussion of carbon monoxide (CO) in section 4-65 of the DEIS points out that impacts were modeled using information from Maricopa County's current network of air quality monitoring sites in the region. Yet the discussion fails to mention that Maricopa County does not have any air quality monitoring sites in the Ahwatukee foothills (http://alert.fcd.maricopa.gov/alert/Google/v3/air.html). This is a serious flaw in the modeling assessment because the prevailing wind patterns and foothills topography will likely cause most of the emissions of pollutants to be blown into pockets of

Code	Issue	Response
2	**Public Involvement**	The section, *Summary of Past Agency and Public Involvement Pre-EIS Process*, outlines the outreach by the Maricopa Association of Governments and others since the 1980s over the South Mountain Freeway. In that outreach, through the development of the *Regional Transportation Plan*, people were provided opportunities to express concerns over the specifics of the proposed South Mountain Freeway as well as learn about the costs and design of the facility through the years. Construction cost estimates are subject to constant updates just as, for reasons noted in the comment, economic conditions are subject to change. The amount of funding set aside for the proposed action in the *Regional Transportation Plan* is in line with projected costs. Regarding the sidebar on page 1-9 of the Draft Environmental Impact Statement referenced in the comment, the text makes no reference to the proposed action. The comment asserts that the page 1-9 sidebar is an example of the Draft Environmental Impact Statement "implying that a majority of Maricopa County residents supports building the proposed South Mountain Freeway." The sidebar referenced says 1) there is "continued public support for investment in regional transportation projects," 2) "voters in 90 percent of the county's 1,058 voting precincts voted in favor of Proposition 400 and the projects it would fund," and 3) "voters in 81 percent of the 31 voting precincts in the Study Area favored Proposition 400 and the projects it would fund."
3	**Air Quality**	The air quality assessment for impacts from carbon monoxide followed the U.S. Environmental Protection Agency guidelines in Guideline for Modeling Carbon Monoxide from Roadway Intersections (A-OAQPS, 1992). Inputs to the model were based on U.S. Environmental Protection Agency-recommended values or were selected to provide a conservative estimate of impacts. Modeling methodology and results were reviewed by the Federal Highway Administration, Arizona Department of Transportation, and Maricopa Association of Governments. As noted on page 4-65 of the Draft Environmental Impact Statement, over 700 receptors were modeled for carbon monoxide concentrations. Receptor placement met the criteria for selecting modeling locations as specified in 40 Code of Federal Regulations Part 93.123(a). The air quality analyses were updated for the Final Environmental Impact Statement, including a quantitative particulate matter (PM_{10}) analysis, and are more fully described beginning on page 4-68 of the Final Environmental Impact Statement.

Code	Comment Document

localized air pollution above residential neighborhoods in Ahwatukee in between the freeway and South Mountain Park.

4 Comment #3: Failure to model the impact of the freeway on ground level ozone concentrations above residential neighborhoods in Ahwatukee is a serious problem as emissions generated by the freeway may very well exceed national standards for 8-hour ambient ozone concentrations. As noted earlier, the prevailing wind patterns and topography of the region are likely to cause most of the emissions to sit in air pockets above residential neighborhoods in Ahwatukee. Furthermore, these neighborhoods are highly populated by families with young children who are identified by the Environmental Protection Agency as being a "sensitive group" with respect to ozone (Federal Registrar, Vol. 64, No. 149, Wednesday, August 4, 1999, Rules and Regulations).

5 Comment #4: The lack of air quality monitors in the Ahwatukee foothills area undermines the credibility of the entire air quality assessment provided in the DEIS. Air quality monitors are needed to inform the assessment of potential effects of the freeway on air quality. The current assessment does not make a serious attempt to model air quality impacts in Ahwatukee, which contains the neighborhoods that will experience the largest negative effects of increased air pollution generated by the freeway.

6 5 Comment #5: The DEIS's overall conclusion that building the freeway will not cause an increase in violations of federal ambient air quality standards is misleading. This conclusion simply exploits the current placement of air quality monitors. By providing an incentive for truckers and non-local drivers to avoid traveling through central Phoneix, the South Mountain freeway will divert air pollution away from the areas that have air quality monitors and into areas that do not have air quality monitors, such as the Ahwatukee foothills. Ambient air quality will surely worsen in Ahwatukee and may very well violate federal standards for the criteria pollutants. Of course this will not cause any violations if there are no air quality monitors to measure the violations. This highlights the need for a more serious assessment of air pollution impacts from the proposed freeway, and it also highlights the need to place air quality monitors at several locations in the Ahwatukee foothills.

Code	Issue	Response
4	**Air Quality/ Children's Health**	As noted on page 4-76 of the Final Environmental Impact Statement, since ozone is a regional pollutant, there is no requirement to analyze potential impacts and no possibility of localized violations of ozone to occur at the project level. The Maricopa Association of Governments is responsible for developing plans to reduce emissions of ozone precursors in the Maricopa area. The Preferred Alternative is included in the *Regional Transportation Plan* that has been determined by the U.S. Department of Transportation to conform to the State Implementation Plan on February 12, 2014. A common theme in public comments on the proposed project has been the potential impacts of the project on children's health, primarily through vehicle emissions and noise. Many commenters raised concerns about the proximity of the project to schools or other aspects of the project that may affect children. In addition, the U.S. Environmental Protection Agency requested that the Final Environmental Impact Statement address Executive Order 13045, *Protection of Children from Environmental Health Risks and Safety Risks*. Throughout the Final Environmental Impact Statement, potential impacts on and subsequent mitigation for human health are disclosed and identified, as inherent in the environmental impact statement process. The Final Environmental Impact Statement incorporates an assessment of the potential impacts of the proposed project on all populations, including children. The Final Environmental Impact Statement addresses potential impacts of the project on children in the Chapter 4 environmental consequences analyses. The U.S. Environmental Protection Agency's Toxicity and Exposure Assessments for Children's Health report (see page 4-73 of the Final Environmental Impact Statement) indicated that indoor air concentrations of benzene are usually higher than outdoor levels and that indoor air in smokers' homes is a significant contributor to children's exposures. It mentioned children when identifying the effects of acute exposure to naphthalene. The Final Environmental Impact Statement acknowledges and fully discloses public scoping comments that raised the topic of health effects on neighborhoods and adjacent schools (see page 4-31 of the Final Environmental Impact Statement). The Final Environmental Impact Statement evaluates Clean Air Act criteria air pollutant concentrations in Maricopa County and the Phoenix area (see pages 4-75 to 4-77 of the Final Environmental Impact Statement). With regard to air quality impacts, the Final Environmental Impact Statement addresses children's health impacts within the broader discussion regarding health impacts under the National Ambient Air Quality Standards. Clean Air Act Section 109(b)(1) requires the U.S. Environmental Protection Agency to promulgate primary National Ambient Air Quality Standards at levels that allow an adequate margin of safety and are requisite to protect the public health. As noted by the U.S. Environmental Protection Agency in its 2013 rulemaking for particulate matter, Clean Air Act Section 109's legislative history demonstrates that the primary standards are "to be set at the maximum permissible ambient air level... which will protect the health of any [sensitive] group of the population" (78 *Federal Register* 3086 and 3090) (quoting S. Rep. No. 91-1196, 91st Cong., 2 Sess. 10 [1970]) (alterations in original). Accordingly, the Final Environmental Impact Statement National Ambient Air Quality Standards-based evaluation of criteria air pollutants includes a health-based review of sensitive populations, including children, given the National Ambient Air Quality Standards inherent consideration of those factors. Furthermore, the National Ambient Air Quality Standards-based assessment

(Response 4 continues on next page)

Code	Comment Document
7	Comment #6: Pages 4-69 and 4-70 provide a deeply flawed rationale for ignoring the impact of the freeway on human health outcomes. The DEIS claims that decision makers should not be provided with information on health outcomes of building the freeway because the magnitudes of those outcomes are judged by DOT to be highly uncertain. I will explain three problems with this logic:
8	A. Ignoring uncertainty violates federal standards for evaluating public projects, as outlined by the United States Office of Management and Budget's Circular A-4 (http://www.whitehouse.gov/omb/circulars_a004_a-4) and the United States Environmental Protection Agency's *Guidelines for Preparing Economic Analysis*. For example, OMB Circular A-4 has a special section devoted to the appropriate treatment of uncertainty in the evaluation of public projects. It clearly states that uncertainty outcomes should be quantified and this information should be provided for public review and to decision makers. For example, it instructs analysts involved in the preparation of impact statements that "*the important uncertainties connected with your regulatory decisions need to be analyzed and presented as part of the overall regulatory analysis*" and that "*by assessing the sources of uncertainty and the way in which benefit and cost estimates may be affected under plausible assumptions, you can shape your analysis to inform decision makers and the public about the effects and the uncertainties of alternative regulatory actions*" and that "*wherever possible, you should use appropriate statistical techniques to determine a probability distribution of the relevant outcome*." It also states that "*when uncertainty has significant effects on the final conclusion about net benefits, your agency should consider additional research prior to rulemaking. The cost of being wrong may outweigh the benefits of a faster decision. This is true especially for cases with irreversible or large upfront investments*."
7	B. The South Mountain Freeway is likely to have large negative health effects. The large impacts of air pollution on morbidity and mortality are well documented as is the fact

Code	Issue	Response
4 (cont.)		ensures adequate consideration of health-based issues as "[t]he requirement that primary standards provide an adequate margin of safety was intended to address uncertainties associated with inconclusive scientific and technical information ... and to protect against hazards that research has not yet identified" (78 *Federal Register* 3090). Sensitive receivers for air and noise are already included in the air quality and noise analyses in accordance with State and federal guidance. Both sections, *Air Quality* and *Noise*, beginning on Final Environmental Impact Statement pages 4-68 and 4-88, respectively, have addressed requirements under the National Environmental Policy Act. As stated on page 4-89 of the Final Environmental Impact Statement, over 220 sensitive receivers were evaluated at exterior locations from a traffic noise perspective. All of the receivers represent noise-sensitive land uses in proximity to the proposed project, including homes, schools, and parks, and these receivers would have higher noise levels than similar facilities more distant from the proposed action. Receptor placement met the criteria for selecting modeling locations as specified in 40 Code of Federal Regulations § 93.123(a). The carbon monoxide analysis was updated in the Final Environmental Impact Statement. Although a qualitative analysis of particulate matter (PM_{10}) was presented in the Draft Environmental Impact Statement, a quantitative project-level particulate matter (PM_{10}) hot-spot analysis is included in the Final Environmental Impact Statement. The results of the air quality updates are summarized in the prologue to the Final Environmental Impact Statement (page xiii) and are more fully described beginning on page 4-68 of the Final Environmental Impact Statement. The carbon monoxide and particulate matter (PM_{10}) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones. Through analysis, the Federal Highway Administration has determined that the proposed project would not produce disproportionate impacts on children.
5	**Air Quality**	Data from various Maricopa County Air Quality Department monitoring sites were used in the air quality analyses. Siting, operation, and recording information from monitoring sites are the responsibility of the Maricopa County Air Quality Department. See <maricopa.gov/aq/>. The monitoring information used in the air quality analyses is discussed in greater detail in the air quality technical report prepared for the project which is available on the project Web site at <azdot.gov/southmountainfreeway>. The results of the analyses are summarized in the Final Environmental Impact Statement. According to Environmental Protection Agency guidance, new monitors are not necessary to analyze air quality impacts.
6	**Air Quality**	The air quality assessment for impacts from carbon monoxide followed the U.S. Environmental Protection Agency guidelines in Guideline for Modeling Carbon Monoxide from Roadway Intersections (A-OAQPS, 1992). Inputs to the model were based on U.S. Environmental Protection Agency-recommended values or were selected to provide a conservative estimate of impacts. Modeling methodology and results were reviewed by the Federal Highway Administration, Arizona Department of Transportation, and Maricopa Association of Governments. Included in the analyses are data on the proposed vehicles using the proposed freeway, including heavy trucks.

(Response 6 continues on next page)

Code	Comment Document

that these impacts are largest for sensitive groups such as children and seniors. This is of special concern due to the large proportion of families with young children and communities of seniors in Ahwatukee. See the EPA's (2011) *Second Prospective Study 1990-2020 of the Clean Air Act* and the associated appendices for the epidemiological consensus on health impacts and calibrated dose-response functions. The range of potential health impacts should be quantified and monetized using standard measures of the "value of a statistical life" consistent with best practices in regulatory evaluation established in the OMB and EPA guidelines. Even the lower bound on number of lives lost is likely to be sufficiently high to raise serious concerns for policy makers.

7

C. The effects of the freeway on health outcomes are no more uncertain than the effects of the freeway on commute times. Yet, there is no mention of uncertainty in commute times. Throughout the DEIS, the economic benefits of building the freeway are conveyed with a false sense of precision whereas the environmental costs are dismissed altogether because they are uncertain. This asymmetric treatment of uncertainty has the effect of biasing the DEIS in favor of building the freeway with the Pecos road alignment.

9

Comment #7: The DEIS fails to adequately address the uncertainty of benefits from building the freeway. For example, the actual reduction in commute time that would be realized if the freeway were to be build will depend on several sources of uncertainty, including but not limited to: (i) future patterns of residential development; (ii) future location choices made by firms; (iii) future residential and job location choices made by workers; (iv) future trends in telecommuting; (v) future trends in "flex-time" and the ability of workers to commute during off-peak hours; (vi) future trends in the national economy; (vii) future trends in in the international economy and trade that influence the rate of trucking through Phoenix; (viii) future trends in automobile design; (ix) the impact of building the freeway on the desirability of living in Ahwatukee; and (x) future trends in the price of gasoline, electricity, and other factors affecting commuting costs. These sources of uncertainty should be carefully analyzed and policy makers should be informed

Code	Issue	Response
6 (cont.)		As noted on page 4-65 of the Draft Environmental Impact Statement, over 700 receptors were modeled for carbon monoxide concentrations. Receptor placement met the criteria for selecting modeling locations as specified in 40 Code of Federal Regulations Part 93.123(a). The carbon monoxide analysis was updated in the Final Environmental Impact Statement. Although a qualitative analysis of particulate matter (PM_{10}) was presented in the Draft Environmental Impact Statement, a quantitative project-level particulate matter (PM_{10}) hot-spot analysis is included in the Final Environmental Impact Statement. The results of the air quality updates are summarized in the prologue to the Final Environmental Impact Statement (page xiii) and are more fully described beginning on page 4-68 of the Final Environmental Impact Statement.
7	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Impacts**	Comment is duly noted. The Draft Environmental Impact Statement notes matters of uncertainty throughout the entire document. Examples include study findings in the sections, *Air Quality, Noise, Visual Resources, Land Use, Displacements and Relocations, and Cultural Resources* in Chapter 4. In Chapter 3, *Alternatives*, reference is made to continued monitoring of design and cost to account for needed updates. On page 4-1, in the text box, "*Can the Impacts Change and, If So, How?,*" text is presented on how such dynamics are tracked.
9	**Environmental Analysis**	40 Code of Federal Regulations § 1500.1(b): NEPA procedures must insure that environmental information is available to public officials and citizens before decisions are made and before actions are taken. The information must be of high quality. Accurate scientific analysis, expert agency comments, and public scrutiny are essential to implementing NEPA. Most important, NEPA documents must concentrate on the issues that are truly significant to the action in question, rather than amassing needless detail. The Council on Environmental Quality regulations state information for decision making must be of high quality and based on accurate scientific analysis. The models, methods, and assumptions used throughout the Draft Environmental Impact Statement account for reasonably foreseeable future conditions and dismiss speculative considerations.

Code	Comment Document

about the statistical distribution of possible outcomes for commute times. More broadly, sources of uncertainty should be addressed throughout the discussion of benefits of building the freeway.

10

Comment #8: The DEIS systematically overstates the likely benefits of building the freeway to Phoenix commuters. The estimated benefits are based on statistics for projected future traffic patterns provided by the Maricopa Association of Governments. However, these statistics are primarily extrapolations of past trends. In other words, they are "made up". They are not derived from a consistent model of residential location choice or a realistic model of commuting choices. It is difficult to believe that many workers would make residential and job location choices that would induce them to use the new freeway. Projections for future traffic congestion also fail to incorporate future growth in the share of workers who work from home or are allowed the flexibility to commute during off-peak hours. Furthermore, estimates for the opportunity cost of time used to quantify the value of reduced commute times are not consistently linked to the actual commuters who use the freeway during peak hours, but are likely driven by high-income commuters living in places such as Scottsdale who will not use the new freeway if it is build. In addition, the models of traffic congestion in the DEIS are inadequate for estimating the impact of the freeway on commute times. The DEIS fails to provide even the most basic facts about commuting. For example, what fraction of today's metro area commuters would experience a shorter commute (in terms of physical distance) if the South Mountain Freeway were built? This information can easily be obtained from the U.S. Census Bureau's annual Public Use Microdata Sample of respondents to the *American Community Survey*, which provides information on workers' house locations, job locations, time leaving home to go to work, and travel times.

11

Comment #9: Throughout the DEIS, the analysis of benefits of building the freeway is based on a false premise that the demand for transportation will be the same whether or not the freeway is built. This results in overstatement of the benefits of building the freeway. In reality, building the freeway is likely to change residential development patterns which, in turn, will increase the demand for using the freeway relative to the demand if the freeway had not been built. In other words, building the freeway will increase the demand for using the freeway due to increases in

Code	Issue	Response
10	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The models, methods, and assumptions used throughout the Draft Environmental Impact Statement account for reasonably foreseeable future conditions and rightfully dismiss speculative considerations. As examples, the Maricopa Association of Governments, as the federally designated regional transportation planning agency, is nationally recognized as a leader in air quality modeling and traffic modeling and forecasting. The models used account for the assumptions made in the comment.
11	**Traffic**	The Federal Highway Administration and the U.S. Environmental Protection Agency approved the air quality conformity determination that includes the Maricopa Association of Governments regional travel demand model that produced the traffic projections used in the traffic analysis for the projecty (see page 3-27 of the Draft Environmental Impact Statement). The model is run with and without the proposed freeway. Traffic projections are regularly updated by the Maricopa Association of Governments based on studies of travel patterns and changes in land use conditions. The traffic projections in the Draft Environmental Impact Statement are from a model adopted in 2011.

Code	Comment Document

driving by current residents, increases in commercial traffic, and increased migration to areas near the freeway. These "feedback effects" will increase congestion on the freeway, diminishing its benefits, especially for existing residents of Phoenix. This effect is well known to transportation economists as "The Fundamental Law of Road Congestion". Yet recognition of this effect is completely missing from the transportation models throughout the DEIS. In perhaps the most comprehensive empirical study of the causal relationship between road projects and traffic congestion, Duranton and Turner (2011) concluded that adding a new road with the characteristics of the South Mountain Freeway is unlikely to relieve congestion. See: Duranton, Gilles, and Matthew A. Turner. "The Fundamental Law of Road Congestion: Evidence from US Cities." *American Economic Review*. 101 (October 2011): 2616-2652.

12

Comment #10: There is overwhelming evidence in economics journals and federal regulatory evaluations that freeways produce negative externalities that substantially diminish the quality of life for those living nearby. Some of these effects will likely be reflected in reductions (or slower growth) in property values for residential neighborhoods experiencing diminished quality of life. It is standard practice to use hedonic property value methods and contingent valuation methods to quantify these costs as part of regulatory evaluations. However, no such effort is undertaken in the draft EIS. The following impacts should be quantified and included in the EIS using best practices in methods for economic valuation of environmental impacts of public projects as outlined in EPA's Guidelines for Preparing Economic Analysis: (1) effect of air pollution on property values; (2) effect of noise pollution on property values; (3) cost of water pollution produced from freeway runoff; (4) value of lost recreation benefits to joggers and bicyclists who currently use Pecos road for recreation; (5) value of diminished recreation benefits for people using South Mountain Park due to visual disamenities, noise, dust, odors, and non-visible air pollution created by the freeway; and (6) the impact of building the freeway on crime in Ahwatukee and, in turn, the effect of increased crime on property values. This last point deserves some explanation. At present, weekly statistics from the police blotter indicate that there is virtually no violent crime or property crime in western Ahwatukee. The vast majority of Ahwatukee crimes occur in the eastern part of the town close to the I-10. The lack of crime is western Ahwatukee is likely due to the fact that, as the end of a big cul-de-sac, criminals have no

Code	Issue	Response
12	**Neighborhoods/ Communities**	The Draft Environmental Impact Statement followed standard Federal Highway Administration guidance for travel time benefits. Potential additional indirect or secondary impacts, not limited to property values, were not quantified as part of this analysis. A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pages 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.

Code	Comment Document

escape route. Building the freeway will provide such an escape route and increase the attractiveness of the area to criminals as a result. Those who argue in favor of building the freeway often claim that Ahwatukee residents should have known that these effects might eventually occur as a result of the freeway when they first purchased property in the area and that, as a result, the negative externalities are already capitalized into property values. This claim is false. The conventional wisdom of real estate agents and homebuyers in Ahwatukee is that the freeway would never be built and that the original 1985 plan to build the freeway was simply a relic of "pre-Ahwatukee" regional planning. As a result, the freeway will act as a shock to the local housing market and depress property values.

13

Comment #11: In the event of heavy traffic, road work, or accidents, drivers on the South Mountain Freeway are likely to use Chandler Blvd. as a bypass. GPS devices will mechanically divert drivers off the freeway and onto Chandler. This is especially true for the Chandler Blvd segment from S. 17th Ave to Desert Foothills Parkway because this segment has 4 lanes, a speed limit of 45mph, and no stop signs or traffic lights. This will create a serious public health hazard because the aforementioned segment of Chandler goes right through the residential neighborhood of "Club West". Joggers, bicyclists, families and children use Chandler Blvd during the morning and evening commute hours for recreation and to walk/bicycle to/from school and parks. Young children on foot or on bicycle and joggers with headphones are often seen crossing the street. The lack of stop signs and crosswalks is not currently a problem because traffic is light. However, with some freeway commuters using the Chandler Blvd corridor as a bypass, there is likely to be a surge in traffic accidents and traffic-related pedestrian deaths in this family-oriented residential neighborhood. These effects are entirely ignored in the DEIS.

14

Comment #12: The DEIS violates the spirit of Presidential Executive Order #13045 by failing to identify and assess the environmental health risks and safety risks that may disproportionately affect children as a result of the freeway. An example of the environmental health risk is the increase in ambient ozone concentrations that will affect children living in Ahwatukee, particularly those who use the numerous public schools and public parks located between South

8

Code	Issue	Response
13	**Traffic**	Hazardous Materials Commodity Flow Studies and other information are used by emergency response planners (such as the Arizona State Emergency Response Commission statewide and the Maricopa County Local Emergency Planning Commission for Maricopa County) as one of the elements considered when developing Emergency Response Plans. If the plan were amended, it would be made available to the Arizona Department of Transportation. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement). The traffic projections for Chandler Boulevard (see Figure 3-12 on page 3-29 of the Final Environmental Impact Statement) do show a reduction with the proposed freeway when compared with conditions without the proposed freeway.
14	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. With regard to noise impacts, schools were included in the categories of activities considered in the noise pollution analysis for the project in keeping with 23 Code of Federal Regulations Part 772 (see page 4-80 of the Draft Environmental Impact Statement). As stated in the Final Environmental Impact Statement on page 4-91, sensitive receivers, including schools, would be affected by implementation of the project. These impacts, however, would be mitigated as discussed in the Final Environmental Impact Statement on pages 4-90 to 4-91. Through analysis, the Federal Highway Administration has determined that the proposed project would not produce disproportionate impacts on children.

Code	Comment Document

Mountain Park and the proposed Pecos Road alignment of the freeway. The EPA identifies children as a "sensitive group" for ambient ozone. An example of the safety risk is the increase in traffic on arterial streets that wind through residential neighborhoods in Ahwatukee, particular during periods of heavy traffic, road work, or freeway accidents when drivers will naturally use Chandler Blvd as a bypass. The traffic poses a safety risk because children frequently walk / bike / run / play on the streets that will experience increased traffic, such as Chandler Blvd from S. 17th Ave through Desert Foothills Parkway. This will increase the risk of accidental deaths of children.

1	Susan Lacke Document Created: 5/21/2013 7:29:03 PM by Web Comment Form As someone who lives in the proposed Eastern Section of the Loop 202 South Mountain Freeway, I am discouraged that this is even being considered. Why can't this money be spent on sustainable efforts, such as a rail system, which will allow people to commute without the environmental impact? I would throw 100 percent of my support behind a rail project - but encouraging even more dependance on fossil fuels and destroying what little nature we have left in this city is not the way to go. It's shameful that this is even being considered. Let's start making choices that will result in a healthy environment for future generations.

Subject: South Mountain Freeway Comments

I strongly oppose the building of South Mountain Freeway. Although this freeway has been in the works for the past 30 years, poor planning / action has occurred during this time to preserve the land for future freeway use. Instead, lots of land was sold to builders to build thousands of homes in this quite area of Phoenix. As a result a beautiful community was created. Now through ADOTs actions, this community is on the verge of being destroyed. The dynamic of this community will NOT be the same if this freeway is built. Many people who live in Ahwatukee chose this area because it is quiet, safe, and easy to get around without traffic. This area is unique in that you get a small town feel with close access to big city amenities. This freeway will significantly increase the pollution, traffic and noise and destroy every great aspect of this community.

If one of the goals is to reduce traffic in the Phoenix, then how will this freeway help? By building more freeways, traffic is NOT reduced; it's only redistributed. Why hasn't there been a concentrated effort to expand our public transportation such as the light rail system?

Code	Issue	Response
1	**Social Conditions**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.
2	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
3	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
6	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

(Responses continue on next page)

Code	Comment Document

This will have a greater impact of reducing traffic by taking cars off the road instead of moving them elsewhere and increasing the area of pollution. Plus a larger more efficient public transportation system will draw more local people to visit the downtown area and other parts of the valley. And if we had a significantly better public transportation system, it will likely draw other people from around the country to consider Phoenix as a place to live because of the ease of getting around town without relying on high cost fuel cars.

9 Another concern of mine is that this "route" will ultimately be a big truck bypass, creating even more noise, pollution and traffic that what was "studied". The simulation video did not depict the big trucks passing through. This area hasn't been adequately addressed.

Overall, I think this freeway will do more harm than good. **I DO NOT want this freeway in my "backyard".** ADOT needs to seriously reconsider the impact this project will have on already well-established community areas.

Confidentiality and Nondisclosure Notice: This email transmission and any attachments are intended for use by the person(s)/entity(ies) named above and may contain confidential/privileged information. Code	Issue	Response
7	**Purpose and Need**	The purpose of the proposed action is not to reduce traffic. The analysis used to assess the purpose and need for the proposed freeway followed Federal Highway Administration guidance. The proposed freeway is needed to serve projected growth in population and accompanying transportation demand and to correct existing and projected transportation system deficiencies. See Chapter 1, *Purpose and Need*, in the Final Environmental Impact Statement. The proposed freeway is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. The *Regional Transportation Plan*, as described on pages 1-5 and 1-10 of the Final Environmental Impact Statement, addresses freeways, streets, transit, airports, bicycle and pedestrian facilities, freight, demand management, system management, and safety. The proposed freeway is only one part of the overall multimodal transportation system planned to meet the travel demand needs of the Maricopa Association of Governments region.
8	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Hello. I am writing in opposition to the building of the South Mountain Freeway. I find the proposed construction of this highway deeply troubling due to a) its intrusion into sacred and historic sites of the native community of the area, b) its impact on natural areas, and c) the fact that it further commits our community to a car culture that will exacerbate sprawl, noise and air pollution, and climate change.

8 9 10

As a resident in the Phoenix area, I am quite dismayed by the lack of widespread mass transit options. This would seem to be a wonderful opportunity to redirect the billions to be spent on yet another highway toward innovative and wide-reaching transit options that encourage residents to move away from car travel and toward more sustainable transit options. This is particularly urgent as we see our area experiencing the impacts of climate change, especially in regard to rising temperatures and stress on our water supply. Continuing to promote car travel can only make these problems worse.

Code	Issue	Response
1	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Section 4(f) and Section 6(f)**	
3	**Biology, Plants, and Wildlife**	
4	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.
5	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Air Quality**	

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
7	**Air Quality**	Climate change is an important national and global concern. While the earth has gone through many natural changes in climate in its history, there is general agreement that the earth's climate is currently changing at an accelerated rate and will continue to do. Human-caused greenhouse gas emissions contribute to this rapid change. Carbon dioxide makes up the largest component of these greenhouse gas emissions. Other prominent transportation-related Greenhouse gases include methane and nitrous oxide. Greenhouse gases trap heat in the earth's atmosphere. Because the atmospheric concentration of greenhouse gases continues to climb, our planet will likely continue to experience climate change-related phenomena (see Final Environmental Impact Statement pages 4-85 through 4-86). To date, no national standards have been established regarding greenhouse gases. Greenhouse gases are different than other air pollutants evaluated in federal environmental reviews because their impacts are not localized or regional due to their rapid dispersion into the global atmosphere. The affected environment for greenhouse gas emissions is the entire planet. In contrast to broad-scale actions such as those involving an entire industry sector or very large geographic areas, it is difficult to isolate and understand greenhouse gas emissions' impacts for a particular transportation project. Furthermore, presently there is no scientific methodology for attributing specific climatological changes to a particular transportation project's emissions. Under the National Environmental Policy Act, detailed environmental analysis should focus on issues that are significant and meaningful to decision making. The Federal Highway Administration has concluded, based on the nature of greenhouse gas emissions and the exceedingly small potential greenhouse gas impacts of the proposed freeway (as shown in Final Environmental Impact Statement Table 4-37 on page 4-85), that greenhouse gas emissions from the proposed freeway would not result in "reasonably foreseeable significant adverse impacts on the human environment" [40 Code of Federal Regulations § 1502.22(b)].
8	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Purpose and Need**	The proposed freeway is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. The *Regional Transportation Plan*, as described on pages 1-5 and 1-10 of the Final Environmental Impact Statement, addresses freeways, streets, transit, airports, bicycle and pedestrian facilities, freight, demand management, system management, and safety. The proposed freeway is only one part of the overall multimodal transportation system planned to meet the travel demand needs of the Maricopa Association of Governments region.
10	**Heat Island**	As buildings, parking lots, roads, and other infrastructure replace open land and vegetation, an urban heat island may result. The heat island effect is of a regional nature and, therefore, there is no requirement to analyze potential impacts and no possibility of determining the localized contribution at the project level to the regional heat island effect. It is likely, however, that a proposed project such as the South Mountain Freeway would be a minor contributor to the overall issue.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

I live in Central Phoenix, just near Baseline and Central. As you know, Baseline is the main corridor for people who live in Laveen and work/shop in the east valley. I suspect that an interchange on the proposed freeway at Baseline will now funnel even more traffic through the area. In fact, all of the west and northwest valley will now have access to east-west roads through South Phoenix. Already when there is a problem on I-17 or I-10, Baseline becomes a parking lot. Now imagine the potential for a problem on any of the I-10, I-17, **OR** Loop 202. Baseline will bear the full brunt.

Perhaps South Phoenix, because it is home to many lower economic residents of Phoenix, is not of particular import

Additional Comments:

to the powers that be. We certainly saw that when the city council thumbed its nose at the Baseline Master Plan and allowed developers to run rough shod over the area.

Another consideration is the Phoenix Point of Pride - South Mountain Park. The road to San Juan lookout, which is closed to traffic everyday except for one weekend per month, goes through a valley that is a quiet "haven." That, of course, will no longer be true when a freeway runs adjacent. What good is the claim to "the largest city park" if that park is perpetually bombarded with traffic noise? How is it possible that we do not have space and inclination for just one quiet retreat within the confines of this sprawling city?

I urge you to reconsider the plan to build a freeway with so much impact on South Mountain park.

I am (We are) Very worried about the size and location of the freeway. I am in the Foothills Reserve against South Mtn. I am worried about the pollution, air quality from diesel trucks and the noise. A 20 foot high wall will put us in a "prison" like environment and the "heat" effect will cause more respiratory problems and heat build up.

Why not continue Pecos Rd as a Parkway? Leave the rights, provide the through passage, and discourage the trucks that will ruin our way of life. As retirees, we are stuck. Can't sell, can't afford to move.

1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Noise**	
3	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
4	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Heat Island**	As buildings, parking lots, roads, and other infrastructure replace open land and vegetation, an urban heat island may result. The heat island effect is of a regional nature and, therefore, there is no requirement to analyze potential impacts and no possibility of determining the localized contribution at the project level to the regional heat island effect. It is likely, however, that a proposed project such as the South Mountain Freeway would be a minor contributor to the overall issue.
6	**Alternatives**	In the best-case scenario, a parkway would carry approximately 105,000 vehicles per day, well below the average daily traffic on the proposed freeway, which would range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-19). As a result, the Arizona Parkway would lack sufficient capacity to meet projected travel demand. The Arizona Parkway would not adequately address the projected transportation system capacity deficiency, would not remove a sufficient amount of traffic from arterial streets, and, therefore, would not meet the project's purpose and need. For these reasons, the Arizona Parkway was eliminated from further consideration
7	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

ADOT, I've been patiently waiting for this section of Freeway to be built, 20+ years now. I think it the most critical link to alleviate truck traffic and commuter pass thru traffic from downtown I-10 and I-17. This would have provided much better benefit to Arizonans than the north portion of 303. This should have been built long time ago.

1	**Surface Water**	Alternative crossings of the Salt River were studied as part of the environmental impact statement process and are discussed in Draft Environmental Impact Statement pages 4-110 through 4-112. Impacts resulting from the proposed action crossing the Salt River would be addressed in a Clean Water Act Section 404 permit if an action alternative were to become the Selected Alternative. Washes, streams, rivers, and wetlands delineated as waters of the United States, or jurisdictional waters are regulated by the U.S. Army Corps of Engineers through use of Section 404 permits. When avoidance of waters of the United States is not practicable, minimization of impacts would be achieved, and unavoidable impacts would be mitigated to the extent reasonable and practicable. The permitting process for Section 404 requires Clean Water Act Section 401 certification. This certification is regulated by the Arizona Department of Environmental Quality for waters of the United States, except on tribal land, where it is regulated by the U.S. Environmental Protection Agency. For construction of the proposed action, the Arizona Department of Transportation and its contractors would be required to comply with Sections 401 and 404 of the Clean Water Act and ensure that permit conditions and mitigations would be met during construction. The general and special conditions of the Section 404 Individual Permit would minimize impacts on waters of the United States to the extent practicable.
2	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. 6	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Alternatives, Nonfreeway Alternatives**	
8	**Alternatives**	The proposed freeway would be capable of accommodating both residential and commercial traffic, just as all existing freeways in the Phoenix metropolitan area do. The Maricopa Association of Governments regional travel demand model forecasts approximately 10 percent truck traffic on the South Mountain Freeway in 2035 (see Final Environmental Impact Statement page 3-64). This forecast truck traffic is based on existing traffic studies and projected socioeconomic data. This percentage is similar to current conditions on Interstate 10 between Loop 101 and Interstate 17 and on U.S. Route 60.

9	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
10	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The alignment proposed in the comment is similar to freeway alignments proposed for State Route 303L south of Interstate 10 and the Hassayampa Freeway (as described in the Maricopa Association of Governments *Interstate 10/Hassayampa Valley Roadway Framework Study* and the *I-8/I-10 Hidden Valley Transportation Framework Study*). The alignment would be similar to the State Route 85/Interstate 10 Alternative evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
11	**Alternatives**	In the best-case scenario, a parkway would carry approximately 105,000 vehicles per day, well below the average daily traffic on the proposed freeway, which would range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-19). As a result, a Parkway would lack sufficient capacity to meet projected travel demand. A Parkway would not adequately address the projected transportation system capacity deficiency, would not remove a sufficient amount of traffic from arterial streets, and, therefore, would not meet the project's purpose and need. For these reasons, a Parkway was eliminated from further consideration. Also, the alignment proposed in the comment would be located primarily within Gila River Indian Community land. The Gila River Indian Community has not given permission to study in detail alternatives on its land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Draft Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.

1 2 3 4 5 6 7	LOOP 202 South Mountain Freeway Study 2013 **Draft Environmental Impact Statement** COMMENT FORM **Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.** ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation. When submitting comments, please be as specific as possible and substantiate your concerns and recommendations. **It is helpful to ADOT to receive comments on:** • A particular alternative, environmental impact assessment, and/or draft mitigation. • Any information you feel is incomplete or incorrect. • How the proposed action would affect you. **Comments must be received or postmarked by July 24, 2013.** (1) The pollution impact on our neighborhoods and schools would be significant. Two elementary schools would be directly behind the wall which would not hold back pollution. The Foothills slope up and the mountains would trap the pollution. (2) Noise. Again, the wall would have minimal impact because of the staircase elevation. (3) Safety: This would become a trucker route. This would increase truck traffic that would come into the Foothills and create a hazards. This truck traffic is not safe, is noisy (see #2), and would add pollution (see #1) (4) This will destroy sacred Native American land. Have we not learned from our previous mistreatment of Native Americans? **Optional** Name Michael Lamp Email michaellamp73@gmail.com Address 16047 S. 9th Pl City Phx. State AZ. Zip 85048 Phone Fax **Comments must be received or postmarked by July 24, 2013. Comments can be deposited at today's meeting, emailed to:** projects@azdot.gov **or mailed to:** ADOT Loop 202 South Mountain Freeway Study, 1655 W. Code	Issue	Response
1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Health Effects**	
3	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
4	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes, which may be elevated above the roadway, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Valley and across the country.
5	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Noise**	The Maricopa Association of Governments regional travel demand model forecasts approximately 10 percent truck traffic on the South Mountain Freeway in 2035 (see Final Environmental Impact Statement page 3-64). This percentage is similar to current conditions on Interstate 10 between Loop 101 and Interstate 17 and on U.S. Route 60. Air quality and noise modeling for the Draft and Final Environmental Impact Statements used this forecast truck traffic (see Final Environmental Impact Statement pages 4-68 and 4-100, respectively). Noise mitigation is designed for this predicted noise level, including the noise from trucks.

5027

MR. LANCE: Basically, we moved to the community about three years ago. We live in the Foothills, right alongside of Pecos, so we're right next to the golf course. We purchased it before, right when we started our family. And we purchased here because of the safety and the security, the seclusion. Our big concern here now is: With Pecos becoming the interstate highway, a lot of that is going to be lost. Not only the safety aspect but the environmental aspect, the air quality, the way of life, the hiking. All of those things that we were drawn to with the Ahwatukee Foothills is going to be taken away in respect to what we were expecting when we moved in here.

So it's a big concern because, even for the families that live here and have moved here for that quality, even before the highway is open, that eight- to nine-year period where they're building this highway will also have an impact on our quality. Our air, our breathing, our noise is all going to be altered, not to mention the depreciation of our house values that come during that time if for any reason we choose to move because of what we don't have anymore.

So I don't know how to convey that in a way that's not about me but about the rest of the people in the community, as well. Not to mention, our church will have to be torn down, something that we've been a part of for now three years and won't be able to attend anymore.

Code	Issue	Response
1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
3	**Construction**	The construction duration for the entire 22-mile-long freeway would be approximately 5 to 6 years (see page 3-59 of the Final Environmental Impact Statement). The project would be constructed in segments similar to how other freeways in the region have been constructed. The total duration of construction for the segment along Pecos Road would only be approximately 1 to 2 years. To reduce the amount of construction dust generated, particulate control measures related to construction activities must be followed. The following mitigation measures would be followed, when applicable, in accordance with the most recently accepted version of the Arizona Department of Transportation *Standard Specifications for Road and Bridge Construction* (2008). Prior to construction and in accordance with Maricopa County Rule 310, Fugitive Dust Ordinance, the contractor shall obtain an approved dust permit from Maricopa County Air Quality Department for all phases of the proposed action. The permit describes measures to be taken to control and regulate air pollutant emissions during construction (see page 4-173 of the Final Environmental Impact Statement)
4	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. It is difficult to estimate construction-related noise levels because they depend on numerous factors, such as construction phasing, staging of equipment and materials, and work schedules. As reported on page 4-98 of the Final Environmental Impact Statement, construction noise levels during certain phases could be as high as 85 A-weighted decibels for short periods. As equipment would move on to other areas, noise levels would be lower. Where feasible, noise barriers would be constructed as early as possible during construction to shield adjacent properties from construction-related noise.
5	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values. A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.

8

So just some of the small impacts. There's a greater good, maybe. But, based on the research I've done, there is not -- it's not going to be a faster alternative to get to the other side of the Valley. It's actually going to take a few minutes more. So the environmental impact way outweighs the need for that transportation.

I guess that's all I really need to say.

6	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
8	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.

Subject: Loop 202

Hello,
I just wanted to make some comments on the proposed extension of the 202. I am a home owner in the Foothills Reserve and do have concerns. We have owned our home for 6 years there and have enjoyed the peace and quiet the area offers. Putting a freeway through will definitely disrupt that. It will be a shame that so many houses will have to torn down and I can't figure out why they would have been allowed to build there since this extension has been talked about for so long. I also wonder what will happen to the natural habitat area that is down the street from me. I thought that was to stay undisturbed but it is in your path for the freeway. Another concern I have it that if this goes ahead, all of us will only have one way to come and go from our area. As much as we really only have one now, should for some reason that road be closed, we could still drive across the dirt where the proposed road is to go. We will have no back up plan should we have to evacuate or any other emergency. Also the concern of our property values going down. Our homes are just starting to rise in value again and this will make them drop some. My biggest concern will be the air quality and noise pollution. We are surrounded by South Mountain and the Estrellas. There is no place for the air pollution to go and the noise from the cars will just bounce off the mountains for us to listen to 24/7. I do hope the city is still trying to do some kind of deal with the reservation land or could you not use Riggs Rd? I will be a shame to see our area disrupted with this freeway.

1	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
2	**Social Conditions**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.
3	**Biology, Plants, Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Traffic**	The extension of Chandler Boulevard west of 19th Avenue is included in this project because reasonable access must be maintained to the neighborhoods at the west end of Pecos Road (see Figure 3-33 on page 3-57 in the Final Environmental Impact Statement). Early in the study process a traffic interchange at approximately 27th Avenue was evaluated but ultimately eliminated because of increased residential displacements and cost. The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours may be needed during construction. (See Final Environmental Impact Statement page 3-27.)
5	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values. A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
6	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
7	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Code	Issue	Response
9	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
10	**Noise**	As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes that may be elevated above the road, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Phoenix metropolitan area and across the country.
11	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
12	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.

Attn: Study Team Panel

1

Hello. I would like to submit my comments in favor of building the South Mountain Freeway and completing the Loop 202. As a resident of Laveen, I built my house with the plan that the freeway would be built. After large shopping centers that were slated to be completed years ago backed out I started to be discouraged. It's clearly not feasible for the Laveen area to have growth without the freeway being built.

I think that the freeway would lessen traffic congestion. Since we in Laveen only have major streets like 35th Av, 51st Av, and 67th Av to reach the I-10 in the north, or taking Baseline Rd clear east to hit the I-10 there, we are constantly traveling on city streets. In addition to regular vehicle traffic, we constantly deal with semi-trucks and trailers coming through our residential areas because it's the only path they're able to take. With the South Mountain Freeway the trucks would be able to use the freeway and get off the neighborhood streets.

There is money to build this freeway. Many, many years ago it was voter approved (twice!) and it's time to make good on what the people voted for.

The people of Laveen, southwest Phoenix, and north along the proposed W59 route, would all benefit from the freeway. Not only would building the freeway create jobs, but the stores and businesses that would come along the route would also create jobs and keep shopping in our local areas.

It is time to build this freeway.

I also want to say thank you for the great resources as I was finally able to see the visual simulation of what it may look like! Since I live very close to the proposed route I've always been a bit nervous about how it would look. While nothing is perfect, I think the impact on traffic congestion of having the freeway built and the possible economic opportunities that will come with it, are all well worth it.

Please let me know if you require additional information identifying me as an Arizona,

Subject: RE: Public Comments - Draft EIS South Mtn Freeway

Hello. I'm sorry but I would like to add some more comments.

1 2 I wanted to add that I am concerned about noise and the aesthetic look of the freeway. Being that my property is very close the proposed route I fear the noise that the freeway will bring. I am hopeful that the proposed sound barriers near communities would automatically be included. I would also like to see some sort of pedestrian or biking pathways that are nearby, as not everyone drives.

3

4 I hope that ADOPT will consider how wildlife will be displaced. I know the video states that in areas animals will be able to pass below the freeway, but I want particular attention paid to how the freeway will affect them.

4

I am pro-202 but do have reservations. I don't want a Walmart outside my driveway. But I do think the freeway is needed for all the benefits it will bring.

Thank you again for your time.

Beth A. Landish

Attn: Study Team Panel

Hello. I would like to submit my comments in favor of building the South Mountain Freeway

Code	Issue	Response
1	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Visual Resources**	The Arizona Department of Transportation Roadside Development Section is responsible for assigning a wide range of standard treatment applications and wall materials, including color, to noise barriers and other structures. Typically the community where the wall will be constructed would work closely with its City Architect or planning department to decide on a theme for the wall. Usually, this can be accomplished by using the Arizona Department of Transportation's standard applications. As an example, for State Route 101 Loop (Pima Freeway) in Scottsdale, the City of Scottsdale chose to add public art to the noise barriers. The City's intent went above and beyond the Arizona Department of Transportation's guidelines of reasonable aesthetic treatment and, therefore, the Arizona Department of Transportation did not fund the aesthetic portion of the project. The Arizona Department of Transportation and the City of Scottsdale entered into an intergovernmental agreement for the purposes of allowing Scottsdale rights to design and construct artistic embellishment on the Arizona Department of Transportation-supplied noise barrier. The Arizona Department of Transportation provided the funds for construction of the noise barriers themselves, but the City of Scottsdale provided the funds to cover the aesthetic portion of the walls. Final Environmental Impact Statement page 4-171 explains the process municipalities might take to achieve the desired aesthetic treatment for noise barriers or other structures.
3	**Neighborhoods/ Communities**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
4	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

regional availability. I have friends who live on the east side of town who want to get to the West Valley or points west, and this will also help them by being able to bypass downtown Phoenix completely. That's it for me. Thanks for your time.

THE FACILITATOR: Thank you, sir.

Larry Landry. Mr. Landry, you have three minutes. Here's your timer; please begin.

MR. LANDRY: Thank you. Hey, Steve. My name is Larry Landry; I live at 2409 East Solano Drive. I'm officially retired now; however, for 28, almost 30 years, I've worked on freeway issues, including the 1985 vote where the South Mountain Freeway was voted in. Ironically, the 303 was an optional freeway at that time. Look at all the money that we spent on that. 55th Street alignment, the preferred alignment, avenue alignment, is the key one, and it's been 28 years.

I know you have difficult decisions to make on the route, but this was on the map well before any homes were built in Ahwatukee, and sometimes the greater good, our air pollution is getting worse every day in every way, and if you -- you know, better than I, I-10, I-17, the Broadway curve is a parking lot all too often. We need this reliever.

We need it yesterday. I applaud you. It's been a long effort. I've been involved with it historically, even wrote a newspaper article once on the 55th Avenue alignment, and my colleague, who is much smarter, better looking and more [unintelligible] Jim Kretin [phonetic], does say hello, he had a family issue that came up, so he's not here. So I'm the pinch hitter, I'm not as good as the first team, but I'm trying to get to the plate and do the job.

I thank you for your time. You've had a long day, so I will stop well under my limit, thank you.

THE FACILITATOR: Thank you, sir.

David Hernandez.

You've got three minutes.

MR. HERNANDEZ: Yes, sir, howdy. Three minutes. I've lived over here on 59th Avenue and Roosevelt for about 31 years, and I've got three minutes. Off over at the Indian reservation, over there in Ahwatukee, they got more consideration than 59th Avenue. But 59th Avenue, I guess traditionally is Mexican-American. It's a Mexican-American area, and so what, we'll bulldoze that area over, we'll give them more pollution, we'll reduce the quality of

1 MR. LANK: My name is Tim Lank and I
2 guess my comment is, since this freeway has been
3 presented as something for nonpassthrough regional
4 mobility, and the preferred route for passthrough
5 trucks is the Arizona Route 85 from Buckeye to Gila
6 Bend and Interstate 8 to Casa Grande, what I would
7 like to know is, how is ADOT going to enforce the
8 bypass of I-8 to keep traffic off this South Mountain
9 -- keep truck traffic off the South Mountain Freeway?
10 Right now and for many years, there's
11 been very small signs indicating that there's a
12 possibility of going down Arizona 85 and down
13 Interstate 8 to bypass Phoenix for passthrough
14 traffic, but the signs are very small. In addition,
15 there's no amenities on that route compared to
16 Phoenix, and it's not an improved divided highway
17 with poor entrances and exits.
18 So what I would like to find out is how
19 ADOT is going to enforce that particular route as the
20 official commercial vehicle and truck bypass around
21 Phoenix to keep commercial vehicles that are
22 passthrough off the South Mountain Freeway. Or what
23 I would expect to see at a minimum is a large
24 overhead sign on I-10 at both ends of the South
25 Mountain Freeway, or rather in Buckeye and in Casa

Code	Issue	Response
1	**Alternatives**	The CANAMEX and Phoenix truck bypass (Interstate 8/State Route 85) routes are not mandatory for truck traffic; they are recommended. The Arizona Department of Transportation does not enforce these routes. It is not anticipated that these routes would be enforced as mandatory in the future.

Code	Comment Document

Grande and some active enforcement by DPS using truck logs and bills of lading from commercial truck drivers to enforce this. I guess that's it.

Subject: South Mountain Freeway

To whom it may concern,

1 2 3

The proposed South Mountain Freeway route through reservation lands should not be approved. The South Mountain preserve is considered sacred by O'odham Tribes and the land within the preserve should not be reallocated.

Thank you for considering this comment.

Sincerely,
Lisa Lanning

Kenneth Lapierre Document Created: 5/16/2013 11:58:14 PM by Web Comment Form

Please enter my comments officially for no highway to be built.

(1) The environment study did not use up to date 2013 data and I am opposed of its construction.

(2) Study does not have accurate 2013 car counts and air quality figures nor was it independently verified. I think we all need to pause and have some one study this study and the politics of how it was written and unfounded in truth. There is a major issue in the study to (3) which also does not accurately add the additional impact from the build phase and from the new traffic count phase. It did not note correctly detail the truck traffic from Canada LA CA (4) and to Mexico with hazardous material going thru a park and reserve with many homes within 1-2 miles.

(5) No truck traffic counts detailed correctly since this is a truck bypass not a commuter road. So material omissions and intent to hide the truth in an official document.

(6) (2) Project and study did not address the current 2012 epa 13 day violations in the west valley and how the air quality will get worse during construction and during the 6 lanes for truck traffic. also did not show design which will impact environment along the Awatukee / Pecos section. Design does impact the environment differently and to say we will address during the (7) building phase is very unethical and unfair to home owners who have millions on the line with no legal representation. What is the design height depth walls near homes and schools and churches?

(8) You did not consider Indian petroglyphs and burial grounds in or near the path way.

(9) (10) No mention of how the heck foothill reserve residents will drive to work no outlet planned on any map. We only use Pecos and our commuting road.

(2) No mention of dust and Indian res. air quality which is bad and getting worse. Must consider current toxins in the air as of 5-14-2013 at GILA and Awatukee south of Pecos.

(1) No 2015 projections accurate in the study seems like its based on very old data.

(11) Also to have the city pre buying homes is some what unethical as well.

(12) (13) (14) Please note I am opposed since it will not allow me faster commute to downtown and will tear down hundreds of homes in my subdivision with no explanation of how it will impact home values or views and noise.

(15) (2) Need to study the possibility this project will cause phoenix to loose 1 billion in federal

1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. In May 2012, the Arizona Department of Environmental Quality submitted a revised Maricopa Association of Governments 2012 Five Percent Plan for the region. On July 20, 2012, the U.S. Environmental Protection Agency made an official finding that the Maricopa Association of Governments *2012 Five Percent Plan* was administratively complete. This decision ended the sanctions clocks associated with Arizona's decision to withdraw the Maricopa Association of Governments 2007 Five Percent Plan. On February 6, 2014, the Environmental Protection Agency published a notice in the *Federal Register* proposing to approve the Maricopa Association of Governments *2012 Five Percent Plan for Attainment of the PM-10 Standard* for the Maricopa County Nonattainment Area. In the same notice, the U.S. Environmental Protection Agency stated that it would concur with exceptional event (as a result of haboobs and dust storms) documentation prepared by the Arizona Department of Environmental Quality, which would give the region the 3 years of clean data needed for attainment of the particulate matter (PM_{10}) 24-hour standard. Finally on May 30, 2014, the U.S. Environmental Protection Agency approved the 2012 Five Percent Plan and found the area in attainment of the 24-hour particulate matter (PM_{10}) standard based on monitoring data for the years 2010 to 2012 (see page 4-72 of the Final Environmental Impact Statement for more information).
3	**Trucks**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Hazardous Materials**	
5	**Purpose and Need, Truck Bypass**	
6	**Construction**	To reduce the amount of construction dust generated, particulate control measures related to construction activities must be followed. The following mitigation measures would be followed, when applicable, in accordance with the most recently accepted version of the Arizona Department of Transportation *Standard Specifications for Road and Bridge Construction* (2008). Prior to construction and in accordance with Maricopa County Rule 310, Fugitive Dust Ordinance, the contractor shall obtain an approved dust permit from Maricopa County Air Quality Department for all phases of the proposed action. The permit describes measures to be taken to control and regulate air pollutant emissions during construction (see page 4-173 of the Final Environmental Impact Statement).

Code	Comment Document
	matching funds when the EPA monitoring station in the west valley east of hwy 51 have more violations than 10 per year. Also its not from dust storms... and will increase. Then with out the matching federal dollars our taxpayers have to pay this. This end up being could be the most expensive project any US city every had to pay for forever. This is not a one time expense and with our federal dollars AZ budget need to increase its funds. It could hurt the city in many ways financially and for poor planned growth.
	You should be required to accurately tell the EPA the correct this environmental study with all up to date 2013 environmental impacts... 21 million spend is potentially fraudulent based on the lack of due diligence and details omitted from insiders direction who promote the freeway. It should be reviewed and independently investigated as to who directed poor study facts and obvious material omissions of fact.
5	You have unethically disguised this truck bi-pass as a 202 highway to relieve traffic on the Broadway curve. Fix the existing hwy 10 and 202 101 first before spending billions in tax dollars.
16	Consider cheaper alternative hwy 8 expansion where less folks live.
17 18	Accurately detail the health and safety impacts to home within 1 mile of a major truck route. Study the impact to terminate movement and the wildlife destruction and native cactus plants and eco system. Isn't that what an environmental study should do rather than promote the freeway?
19 20 4	Environmental study also does not address the additional destruction of wells from subdivisions, and water drainage issues. and the increase risk of truck container spills. This is critical to those who have to stay within 1-3 miles of this.
17	This will also hurt kids in schools near by the folks / elderly with breathing issues.
21	This is discrimination to the Indian community and unethical to there rights as a minority.
22 5	And to destroy South Mountain a pristine community park (common land) what a shame especially once folks see what this project really will be a USA free trade truck bi-pass. Please stop and re-think about what we are doing with the real facts and with an accurate environmental study.
	AZ will look back on this with regret if it gets approved! Please stop and think with the real facts.

Code	Issue	Response
7	**Design**	The current level of engineering is used to determine the limits of environmental and construction impacts due to the proposed freeway. The location and profile of the freeway are evaluated to minimize potential changes to the freeway as the design level would progress. The current level of engineering is an accepted industry standard for determining impacts. (See Final Environmental Impact Statement sidebar on page 3-40 for more discussion.) Potential heights of noise walls are presented beginning on page 4-90 of the Final Environmental Impact Statement
8	**Cultural Resources**	The freeway alternatives were surveyed for archaeological sites, which include petroglyphs (rock art). The archaeological survey documented several petroglyph locations. Subsequently, the freeway alternatives were redesigned to avoid the petroglyph sites. No petroglyphs would be destroyed by implementation of the proposed freeway. Because right-of-way fencing would limit access from the proposed freeway, damage to petroglyph sites would not be facilitated (see Final Environmental Impact Statement pages 4-160 and 4-187).
9	**Construction**	Temporary construction impacts are described in the Draft Environmental Impact Statement beginning on page 4-161. The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours might be needed during construction. (See Final Environmental Impact Statement page 3-27.) In general, travel times along Pecos Road would remain unchanged during construction. After construction, motorists that currently use Pecos Road could use the freeway.
10	**Design**	The extension of Chandler Boulevard west of 19th Avenue is included in this project because reasonable access must be maintained to the neighborhoods at the west end of Pecos Road (see Figure 3-33 on page 3-57 in the Final Environmental Impact Statement). Early in the study process a traffic interchange at approximately 27th Avenue was evaluated but ultimately eliminated because of increased residential displacements and cost.
11	**Land Use**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement. The Arizona Department of Transportation purchased some right-of-way along Pecos Road when it was adopted as the freeway alignment in 1988 (see Draft Environmental Impact Statement page 3-53). Should another alternative be adopted as a result of this study, the Arizona Department of Transportation would dispose of the land that has been acquired. Federal Highway Administration regulations do not allow the ownership of right-of-way to be a factor in the decision regarding the selection of an alternative.

(Responses continue on next page)

Code	Issue	Response
12	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
13	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
14	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
15	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
16	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
17	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
18	**Biology, Plants, and Wildlife**	

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
19	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to state regulations/standards. (See text box on Final Environmental Impact Statement page 4-108.)
20	**Drainage**	Flood protection levels are dictated by the design class of the highway. In the case of the proposed South Mountain Freeway, it is designated as a Class I. Therefore, flood protection levels would be designed to the 50-year (storm) level. However, as a standard Arizona Department of Transportation practice, the floodwaters developing upstream of the culvert entrance would be reviewed at the 100-year level to ensure "headwaters" do not adversely affect existing properties. (See Draft Environmental Impact Statement page 4-102.) All bridges on major waterways such as the Salt River are designed to maintain minimum water surface elevations at the 100-year level for flood levels and built to structurally withstand the superflood, a flood expected only once in 500 years.
21	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment*, *Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.
22	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

10	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
11	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
12	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
13	**Purpose and Need, Truck Bypass**	
14	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
15	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
16	**Biology, Plants, and Wildlife**	

(Responses continue on next page)

Code	Issue	Response
17	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to state regulations/standards. (See text box on Final Environmental Impact Statement page 4-108.)
18	**Drainage**	Flood protection levels are dictated by the design class of the highway. In the case of the proposed South Mountain Freeway, it is designated as a Class I. Therefore, flood protection levels would be designed to the 50-year (storm) level. However, as a standard Arizona Department of Transportation practice, the floodwaters developing upstream of the culvert entrance would be reviewed at the 100-year level to ensure "headwaters" do not adversely affect existing properties. (See Draft Environmental Impact Statement page 4-102.) All bridges on major waterways such as the Salt River are designed to maintain minimum water surface elevations at the 100-year level for flood levels and built to structurally withstand the superflood, a flood expected only once in 500 years.
19	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
20	**Health Effects**

The environment study did not use up to date 2013 data and I am opposed of its construction. Study does not have accurate 2013 car counts and air quality figures nor was it independently verified. I think we all need to pause and have some one study this study and the politics of how it was written and unfounded in truth. There is a major issue in the study to which also does not accurately add the additional impact from the build phase and from the new traffic count phase. It did not note correctly detail the truck traffic from Canada LA CA and to Mexico with hazardous material going thru a park and reserve with many homes within 1-2 miles.
No truck traffic counts detailed correctly since this is a truck bypass not a commuter road. So material omissions and intent to hide the truth in an official document.

2 6

Project and study did not address the current 2012 epa 13 day violations in the west valley and how the air quality will get worse during construction and during the 6 lanes for truck traffic. also did not show design which will impact environment along the Awatukee / Pecos section. Design does impact the environment differently and to say we will address during the building phase is very unethical and unfair to home owners who have millions on the line with no legal representation. What is the design height depth walls near homes and schools and churches?
You did not consider Indian petroglyphs and burial grounds in or near the path way.

7 8 9 10

No mention of how the heck foothill reserve residents will drive to work no outlet planned on any map. We only use Pecos and our commuting road.

2 1 11 12 13 14 15 2

No mention of dust and Indian res. air quality which is bad and getting worse. Must consider current toxins in the air as of 5-14-2013 at GILA and Awatukee south of Pecos.
No 2015 projections accurate in the study seems like its based on very old data.
Also to have the city pre buying homes is some what unethical as well.
Please note I am opposed since it will not allow me faster commute to downtown and will tear down hundreds of homes in my subdivision with no explanation of how it will impact home values or views and noise.

Need to study the possibility this project will cause phoenix to loose 1 billion in federal matching funds when the EPA monitoring station in the west valley east of hwy 51 have

1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. In May 2012, the Arizona Department of Environmental Quality submitted a revised Maricopa Association of Governments 2012 Five Percent Plan for the region. On July 20, 2012, the U.S. Environmental Protection Agency made an official finding that the Maricopa Association of Governments 2012 Five Percent Plan was administratively complete. This decision ended the sanctions clocks associated with Arizona's decision to withdraw the Maricopa Association of Governments 2007 Five Percent Plan. On February 6, 2014, the Environmental Protection Agency published a notice in the *Federal Register* proposing to approve the Maricopa Association of Governments *2012 Five Percent Plan for Attainment of the PM-10 Standard* for the Maricopa County Nonattainment Area. In the same notice, the U.S. Environmental Protection Agency stated that it would concur with exceptional event (as a result of haboobs and dust storms) documentation prepared by the Arizona Department of Environmental Quality, which would give the region the 3 years of clean data needed for attainment of the particulate matter (PM_{10}) 24-hour standard. Finally on May 30, 2014, the U.S. Environmental Protection Agency approved the 2012 Five Percent Plan and found the area in attainment of the 24-hour particulate matter (PM_{10}) standard based on monitoring data for the years 2010 to 2012 (see page 4-72 of the Final Environmental Impact Statement for more information).
3	**Trucks**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Hazardous Materials**	
5	**Purpose and Need, Truck Bypass**	
6	**Construction**	To reduce the amount of construction dust generated, particulate control measures related to construction activities must be followed. The following mitigation measures would be followed, when applicable, in accordance with the most recently accepted version of the Arizona Department of Transportation *Standard Specifications for Road and Bridge Construction* (2008). Prior to construction and in accordance with Maricopa County Rule 310, Fugitive Dust Ordinance, the contractor shall obtain an approved dust permit from Maricopa County Air Quality Department for all phases of the proposed action. The permit describes measures to be taken to control and regulate air pollutant emissions during construction (see page 4-173 of the Final Environmental Impact Statement).

(Responses continue on next page)

Code	Comment Document

more violations than 10 per year. Also its not from dust storms... and will increase. Then with out the matching federal dollars our taxpayers have to pay this.
This end up being could be the most expensive project any US city every had to pay for forever. This is not a one time expense and with our federal dollars AZ budget need to increase its funds. It could hurt the city in many ways financially and for poor planned growth.

You should be required to accurately tell the EPA the correct this environmental study with all up to date 2013 environmental impacts... 21 million spend is potentially fraudulent based on the lack of due diligence and details omitted from insiders direction who promote the freeway. It should be reviewed and independently investigated as to who directed poor study facts and obvious material omissions of fact. 5
You have unethically disguised this truck bi-pass as a 202 highway to relieve traffic on the Broadway curve.
Fix the existing hwy 10 and 202 101 first before spending billions in tax dollars. 14
Consider cheaper alternative hwy 8 expansion where less folks live.
Accurately detail the health and safety impacts to home within 1 mile of a major truck route. Study the impact to terminate movement and the wildlife destruction and native cactus plants and eco system. Isn't that what an environmental study should do rather than promote the freeway? 15 16
Environmental study also does not address the additional destruction of wells from subdivisions, and water drainage issues. and the increase risk of truck container spills. This is critical to those who have to stay within 1-3 miles of this. 17
This will also hurt kids in schools near by the folks / elderly with breathing issues. 18 19
This is discrimination to the Indian community and unethical to there rights as a minority. 20

And to destroy South Mountain a pristine community park (common land) what a shame especially once folks see what this project really will be a USA free trade truck bi-pass. 21 5 22
Please stop and re-think about what we are doing with the real facts and with an accurate environmental study.

AZ will look back on this with regret if it gets approved! Please stop and think with the real facts.

Confidentiality and Nondisclosure Notice: This email transmission and any attachments are intended for use by the person(s)/entity(ies) named above and may contain confidential/privileged information. Code	Issue	Response
7	**Design**	The current level of engineering is used to determine the limits of environmental and construction impacts due to the proposed freeway. The location and profile of the freeway are evaluated to minimize potential changes to the freeway as the design level would progress. The current level of engineering is an accepted industry standard for determining impacts. (See Final Environmental Impact Statement sidebar on page 3-40 for more discussion.) Potential heights of noise walls are presented beginning on page 4-90 of the Final Environmental Impact Statement
8	**Cultural Resources**	The freeway alternatives were surveyed for archaeological sites, which include petroglyphs (rock art). The archaeological survey documented several petroglyph locations. Subsequently, the freeway alternatives were redesigned to avoid the petroglyph sites. No petroglyphs would be destroyed by implementation of the proposed freeway. Because right-of-way fencing would limit access from the proposed freeway, damage to petroglyph sites would not be facilitated (see Final Environmental Impact Statement pages 4-160 and 4-187).
9	**Construction**	Temporary construction impacts are described in the Draft Environmental Impact Statement beginning on page 4-161. The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours might be needed during construction. (See Final Environmental Impact Statement page 3-27.) In general, travel times along Pecos Road would remain unchanged during construction. After construction, motorists that currently use Pecos Road could use the freeway.
10	**Design**	The extension of Chandler Boulevard west of 19th Avenue is included in this project because reasonable access must be maintained to the neighborhoods at the west end of Pecos Road (see Figure 3-33 on page 3-57 in the Final Environmental Impact Statement). Early in the study process a traffic interchange at approximately 27th Avenue was evaluated but ultimately eliminated because of increased residential displacements and cost.
11	**Land Use**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement. The Arizona Department of Transportation purchased some right-of-way along Pecos Road when it was adopted as the freeway alignment in 1988 (see Draft Environmental Impact Statement page 3-53). Should another alternative be adopted as a result of this study, the Arizona Department of Transportation would dispose of the land that has been acquired. Federal Highway Administration regulations do not allow the ownership of right-of-way to be a factor in the decision regarding the selection of an alternative.

Code	Issue	Response
12	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
13	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
14	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
15	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
16	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
17	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
18	**Biology, Plants, and Wildlife**

Code	Issue	Response
19	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to state regulations/standards. (See text box on Final Environmental Impact Statement page 4-108.)
20	**Drainage**	Flood protection levels are dictated by the design class of the highway. In the case of the proposed South Mountain Freeway, it is designated as a Class I. Therefore, flood protection levels would be designed to the 50-year (storm) level. However, as a standard Arizona Department of Transportation practice, the floodwaters developing upstream of the culvert entrance would be reviewed at the 100-year level to ensure "headwaters" do not adversely affect existing properties. (See Draft Environmental Impact Statement page 4-102.) All bridges on major waterways such as the Salt River are designed to maintain minimum water surface elevations at the 100-year level for flood levels and built to structurally withstand the superflood, a flood expected only once in 500 years.
21	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.
22	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

7	**Design**	The current level of engineering is used to determine the limits of environmental and construction impacts due to the proposed freeway. The location and profile of the freeway are evaluated to minimize potential changes to the freeway as the design level would progress. The current level of engineering is an accepted industry standard for determining impacts. (See Final Environmental Impact Statement sidebar on page 3-40 for more discussion.) Potential heights of noise walls are presented beginning on page 4-90 of the Final Environmental Impact Statement
8	**Cultural Resources**	The freeway alternatives were surveyed for archaeological sites, which include petroglyphs (rock art). The archaeological survey documented several petroglyph locations. Subsequently, the freeway alternatives were redesigned to avoid the petroglyph sites. No petroglyphs would be destroyed by implementation of the proposed freeway. Because right-of-way fencing would limit access from the proposed freeway, damage to petroglyph sites would not be facilitated (see Final Environmental Impact Statement pages 4-160 and 4-187).
9	**Construction**	Temporary construction impacts are described in the Draft Environmental Impact Statement beginning on page 4-161. The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours might be needed during construction. (See Final Environmental Impact Statement page 3-27.) In general, travel times along Pecos Road would remain unchanged during construction. After construction, motorists that currently use Pecos Road could use the freeway.
10	**Design**	The extension of Chandler Boulevard west of 19th Avenue is included in this project because reasonable access must be maintained to the neighborhoods at the west end of Pecos Road (see Figure 3-33 on page 3-57 in the Final Environmental Impact Statement). Early in the study process a traffic interchange at approximately 27th Avenue was evaluated but ultimately eliminated because of increased residential displacements and cost.
11	**Land Use**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement. The Arizona Department of Transportation purchased some right-of-way along Pecos Road when it was adopted as the freeway alignment in 1988 (see Draft Environmental Impact Statement page 3-53). Should another alternative be adopted as a result of this study, the Arizona Department of Transportation would dispose of the land that has been acquired. Federal Highway Administration regulations do not allow the ownership of right-of-way to be a factor in the decision regarding the selection of an alternative.

Code	Issue	Response
12	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
13	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
14	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
15	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
16	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
17	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
18	**Biology, Plants, and Wildlife**	

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
19	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to state regulations/standards. (See text box on Final Environmental Impact Statement page 4-108.)
20	**Drainage**	Flood protection levels are dictated by the design class of the highway. In the case of the proposed South Mountain Freeway, it is designated as a Class I. Therefore, flood protection levels would be designed to the 50-year (storm) level. However, as a standard Arizona Department of Transportation practice, the floodwaters developing upstream of the culvert entrance would be reviewed at the 100-year level to ensure "headwaters" do not adversely affect existing properties. (See Draft Environmental Impact Statement page 4-102.) All bridges on major waterways such as the Salt River are designed to maintain minimum water surface elevations at the 100-year level for flood levels and built to structurally withstand the superflood, a flood expected only once in 500 years.
21	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.
22	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

1 The environment study did not use up to date 2013 data and I am opposed of its construction.

2 3 4 Study does not have accurate 2013 car counts and air quality figures nor was it independently verified. I think we all need to pause and have some one study this study and the politics of how it was written and unfounded in truth. There is a major issue in the study to which also does not accurately add the additional impact from the build phase and from the new traffic count phase. It did not note correctly detail the truck traffic from Canada LA CA and to Mexico with hazardous material going thru a park and reserve with many homes within 1-2 miles.

5 No truck traffic counts detailed correctly since this is a truck bypass not a commuter road. So material omissions and intent to hide the truth in an official document.

6 2 Project and study did not address the current 2012 epa 13 day violations in the west valley and how the air quality will get worse during construction and during the 6 lanes for truck traffic. also did not show design which will impact environment along the Awatukee / Pecos section. Design does impact the environment differently and to say we will address during the building phase is very unethical and unfair to home owners who have millions on the line with no legal representation. What is the design height depth walls near homes and schools and churches?

7 8 You did not consider Indian petroglyphs and burial grounds in or near the path way.

9 10 No mention of how the heck foothill reserve residents will drive to work no outlet planned on any map. We only use Pecos and our commuting road.

2 1 11 No mention of dust and Indian res. air quality which is bad and getting worse. Must consider current toxins in the air as of 5-14-2013 at GILA and Awatukee south of Pecos.

No 2015 projections accurate in the study seems like its based on very old data.

Also to have the city pre buying homes is some what unethical as well.

12 13 14 15 Please note I am opposed since it will not allow me faster commute to downtown and will tear down hundreds of homes in my subdivision with no explanation of how it will impact home values or views and noise.

2 Need to study the possibility this project will cause phoenix to loose 1 billion in federal matching funds when the EPA monitoring station in the west valley east of hwy 51 have more violations than 10 per year. Also its not from dust storms... and will increase. Then with out the matching federal dollars our taxpayers have to pay this.

Code	Issue	Response
1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. In May 2012, the Arizona Department of Environmental Quality submitted a revised Maricopa Association of Governments 2012 Five Percent Plan for the region. On July 20, 2012, the U.S. Environmental Protection Agency made an official finding that the Maricopa Association of Governments 2012 Five Percent Plan was administratively complete. This decision ended the sanctions clocks associated with Arizona's decision to withdraw the Maricopa Association of Governments 2007 Five Percent Plan. On February 6, 2014, the Environmental Protection Agency published a notice in the *Federal Register* proposing to approve the Maricopa Association of Governments *2012 Five Percent Plan for Attainment of the PM-10 Standard* for the Maricopa County Nonattainment Area. In the same notice, the U.S. Environmental Protection Agency stated that it would concur with exceptional event (as a result of haboobs and dust storms) documentation prepared by the Arizona Department of Environmental Quality, which would give the region the 3 years of clean data needed for attainment of the particulate matter (PM_{10}) 24-hour standard. Finally on May 30, 2014, the U.S. Environmental Protection Agency approved the 2012 Five Percent Plan and found the area in attainment of the 24-hour particulate matter (PM_{10}) standard based on monitoring data for the years 2010 to 2012 (see page 4-72 of the Final Environmental Impact Statement for more information).
3	**Trucks**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Hazardous Materials**	
5	**Purpose and Need, Truck Bypass**	
6	**Construction**	To reduce the amount of construction dust generated, particulate control measures related to construction activities must be followed. The following mitigation measures would be followed, when applicable, in accordance with the most recently accepted version of the Arizona Department of Transportation *Standard Specifications for Road and Bridge Construction* (2008). Prior to construction and in accordance with Maricopa County Rule 310, Fugitive Dust Ordinance, the contractor shall obtain an approved dust permit from Maricopa County Air Quality Department for all phases of the proposed action. The permit describes measures to be taken to control and regulate air pollutant emissions during construction (see page 4-173 of the Final Environmental Impact Statement).

(Responses continue on next page)

Code	Comment Document

This end up being could be the most expensive project any US city every had to pay for forever. This is not a one time expense and with our federal dollars AZ budget need to increase its funds. It could hurt the city in many ways financially and for poor planned growth.

You should be required to accurately tell the EPA the correct this environmental study with all up to date 2013 environmental impacts... 21 million spend is potentially fraudulent based on the lack of due diligence and details omitted from insiders direction who promote the freeway. It should be reviewed and independently investigated as to who directed poor study facts and obvious material omissions of fact.

5 You have unethically disguised this truck bi-pass as a 202 highway to relieve traffic on the Broadway curve.
Fix the existing hwy 10 and 202 101 first before spending billions in tax dollars.

16 Consider cheaper alternative hwy 8 expansion where less folks live.

17 18 Accurately detail the health and safety impacts to home within 1 mile of a major truck route. Study the impact to terminate movement and the wildlife destruction and native cactus plants and eco system. Isn't that what an environmental study should do rather than promote the freeway?

19 20 4 Environmental study also does not address the additional destruction of wells from subdivisions, and water drainage issues. and the increase risk of truck container spills. This is critical to those who have to stay within 1-3 miles of this.

17 This will also hurt kids in schools near by the folks / elderly with breathing issues.

21 This is discrimination to the Indian community and unethical to there rights as a minority.

22 And to destroy South Mountain a pristine community park (common land) what a shame especially once folks see what this project really will be a USA free trade truck bi-pass. Please stop and re-think about what we are doing with the real facts and with an accurate environmental study.

AZ will look back on this with regret if it gets approved! Please stop and think with the real facts.

➢ After the public hearing, community forums will be held at various locations in the Study Area to allow for additional opportunity to provide DEIS comment. Times and locations of the forums will be posted at <azdot.gov/southmountainfreeway> and publish in newspapers and local publications.
➢ Written comments also can be submitted via the following methods:
➢ Online at <azdot.gov/southmountainfreeway>
➢ E-mailing comments to projects@azdot.gov

Code	Issue	Response
7	**Design**	The current level of engineering is used to determine the limits of environmental and construction impacts due to the proposed freeway. The location and profile of the freeway are evaluated to minimize potential changes to the freeway as the design level would progress. The current level of engineering is an accepted industry standard for determining impacts. (See Final Environmental Impact Statement sidebar on page 3-40 for more discussion.) Potential heights of noise walls are presented beginning on page 4-90 of the Final Environmental Impact Statement
8	**Cultural Resources**	The freeway alternatives were surveyed for archaeological sites, which include petroglyphs (rock art). The archaeological survey documented several petroglyph locations. Subsequently, the freeway alternatives were redesigned to avoid the petroglyph sites. No petroglyphs would be destroyed by implementation of the proposed freeway. Because right-of-way fencing would limit access from the proposed freeway, damage to petroglyph sites would not be facilitated (see Final Environmental Impact Statement pages 4-160 and 4-187).
9	**Construction**	Temporary construction impacts are described in the Draft Environmental Impact Statement beginning on page 4-161. The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours might be needed during construction. (See Final Environmental Impact Statement page 3-27.) In general, travel times along Pecos Road would remain unchanged during construction. After construction, motorists that currently use Pecos Road could use the freeway.
10	**Design**	The extension of Chandler Boulevard west of 19th Avenue is included in this project because reasonable access must be maintained to the neighborhoods at the west end of Pecos Road (see Figure 3-33 on page 3-57 in the Final Environmental Impact Statement). Early in the study process a traffic interchange at approximately 27th Avenue was evaluated but ultimately eliminated because of increased residential displacements and cost.
11	**Land Use**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement. The Arizona Department of Transportation purchased some right-of-way along Pecos Road when it was adopted as the freeway alignment in 1988 (see Draft Environmental Impact Statement page 3-53). Should another alternative be adopted as a result of this study, the Arizona Department of Transportation would dispose of the land that has been acquired. Federal Highway Administration regulations do not allow the ownership of right-of-way to be a factor in the decision regarding the selection of an alternative.

12	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
13	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
14	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
15	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
16	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
17	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
18	**Biology, Plants, and Wildlife**

Code	Issue	Response
19	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to state regulations/standards. (See text box on Final Environmental Impact Statement page 4-108.)
20	**Drainage**	Flood protection levels are dictated by the design class of the highway. In the case of the proposed South Mountain Freeway, it is designated as a Class I. Therefore, flood protection levels would be designed to the 50-year (storm) level. However, as a standard Arizona Department of Transportation practice, the floodwaters developing upstream of the culvert entrance would be reviewed at the 100-year level to ensure "headwaters" do not adversely affect existing properties. (See Draft Environmental Impact Statement page 4-102.) All bridges on major waterways such as the Salt River are designed to maintain minimum water surface elevations at the 100-year level for flood levels and built to structurally withstand the superflood, a flood expected only once in 500 years.
21	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment*, *Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.
22	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

TELEPHONE CONVERSATION RECORD
SOUTH MOUNTAIN FREEWAY INFORMATION LINE

INCOMING CALL DATE: 04/26/13	INCOMING CALL TIME: 5:34 PM
CALLER: KENNETH LAPIERRE	CALLER ADDRESS:
PHONE:	EMAIL: KENNETHLAPIERRE@GMAIL.COM

CALLER REMARKS/QUESTIONS:

(1) I have a comment for the record. The proposed South Mountain Freeway should not be on Pecos Road. There should be stronger negotiations with the Gila River Indian Community to have the alignment on their land. The current GRIC land between 20th Street and Chandler Boulevard is being used for farming, which is already causing an issue with dust to area residents at the Foothills Reserve. Rather than have this freeway located next to residents, swimming pools, schools, and walking trails, the freeway should be planned for the area a few miles south, where there currently is vacant land.

(2) (3) (4) I've heard that the freeway, planned for Pecos Road, will be built as closely as possible to homes with no regard to dust or noise mitigation. This should not be done.

(5) Also, wherever the freeway is constructed, it should have quality landscaping.

Code	Issue	Response
1	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Noise**	
5	**Visual Resources**	Page 4-170 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.

4368

double-deck approach to the proposed freeway. Thank you.

THE FACILITATOR: Thank you.

Ken Lapierre.

MR. LAPIERRE: Hello, my name is Ken Lapierre, I live in Ahwatukee Foothills Reserve, and my initial comments here about the EPA draft study is I feel it's deficient on a couple of points. One is it's really not up to date. I'm not sure what data set was used, but if you look at, in particular, the violation of the EPA standards we have at the 43rd Avenue EPA sensor, it doesn't really look like we've acknowledged that that would get worse. My concern is that we will have a loss of federal highway funding if we violated 13 times on 43rd Avenue already and we're going to build a highway that's going to be a mile away, that's going to impact that sensor. Then we'll have more violations.

The other thing that I'm very concerned with is benzene in the air. I don't really know if you've studied the benzene levels in the Gila Indian Community, where I live in a community that borders that. I don't know if that's allowed or part of the study, but it's very toxic, people have health hazards. I work in a health advocacy group in Phoenix, and children are already experiencing asthma symptoms from the smog and the soot and the dust particulates from that area

1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. In May 2012, the Arizona Department of Environmental Quality submitted a revised Maricopa Association of Governments 2012 Five Percent Plan for the region. On July 20, 2012, the U.S. Environmental Protection Agency made an official finding that the Maricopa Association of Governments 2012 Five Percent Plan was administratively complete. This decision ended the sanctions clocks associated with Arizona's decision to withdraw the Maricopa Association of Governments 2007 Five Percent Plan. On February 6, 2014, the Environmental Protection Agency published a notice in the *Federal Register* proposing to approve the Maricopa Association of Governments *2012 Five Percent Plan for Attainment of the PM-10 Standard* for the Maricopa County Nonattainment Area. In the same notice, the U.S. Environmental Protection Agency stated that it would concur with exceptional event (as a result of haboobs and dust storms) documentation prepared by the Arizona Department of Environmental Quality, which would give the region the 3 years of clean data needed for attainment of the particulate matter (PM_{10}) 24-hour standard. Finally on May 30, 2014, the U.S. Environmental Protection Agency approved the 2012 Five Percent Plan and found the area in attainment of the 24-hour particulate matter (PM_{10}) standard based on monitoring data for the years 2010 to 2012 (see page 4-72 of the Final Environmental Impact Statement for more information).
3	**Air Quality**	The mobile source air toxics emission modeling, including benzene, developed for the project (which factored in the U.S. Environmental Protection Agency's recent rules for the 2035 analyses) and discussed beginning on page 4-77 of the Final Environmental Impact Statement found little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions.
4	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

(Responses continue on next page)

2 3 5 6 7 8 9 10 11 12 13

already.

And also, I think it's important to study several air-quality standards that are in trouble right now in Ahwatukee Foothills. Certainly when we have a new highway that's going to get worse, benzene levels are going to go up maybe three or four times the amount. And to not have addressed future benzene levels, I think that's very critical. Traffic counts, of course, is going to add to that pollution. Dust particulates is a real problem right now. I don't really see much in the study about the exact level of dust particulates and how it's going to grow during the construction phase as well as after the construction phase. Toxins, the noise, the light that's going to be emitted from this highway in a community where we live.

Also, blasting through three ridges of South Mountain Park is going to be an environmental disaster. What concern do we have about the destroying parklands, destroying petroglyphs, which there are petroglyphs in that area if you go through that? The wildlife, cactus being destroyed, our subdivision wells are not being addressed in this study, and our drainage is not being addressed.

So please, please consider the health issues for children and elderly, there is an impact and it will get

Page 24

www.drivernix.com

Code	Issue	Response
5	**Construction**	To reduce the amount of construction dust generated, particulate control measures related to construction activities must be followed. The following mitigation measures would be followed, when applicable, in accordance with the most recently accepted version of the Arizona Department of Transportation *Standard Specifications for Road and Bridge Construction* (2008). Prior to construction and in accordance with Maricopa County Rule 310, Fugitive Dust Ordinance, the contractor shall obtain an approved dust permit from Maricopa County Air Quality Department for all phases of the proposed action. The permit describes measures to be taken to control and regulate air pollutant emissions during construction (see page 4-173 of the Final Environmental Impact Statement).
6	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Visual Resources**	Light from the freeway would be produced from vehicle headlights and taillights and from fixed light poles at interchanges along the freeway. Nighttime users of the park and residents of Ahwatukee Foothills Village may see lines of seemingly crawling vehicles, each with lights front and back. Fixed freeway lighting would be provided for safety reasons only at interchange exit and entrance points. Freeway lighting at these locations would be designed to reduce illumination spillover onto sensitive light receptors such as residential areas (see page 3-58 of the Final Environmental Impact Statement).
8	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Cultural Resources**	The freeway alternatives were surveyed for archaeological sites, which include petroglyphs (rock art). The archaeological survey documented several petroglyph locations. Subsequently, the freeway alternatives were redesigned to avoid the petroglyph sites. No petroglyphs would be destroyed by implementation of the proposed freeway. Because right-of-way fencing would limit access from the proposed freeway, damage to petroglyph sites would not be facilitated (see Final Environmental Impact Statement pages 4-160 and 4-187).
10	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
11	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to state regulations/standards. (See text box on Final Environmental Impact Statement page 4-108.)

(Responses continue on next page)

Code	Comment Document

much worse on the citizens who live in Ahwatukee. Thank you very much for your time.

THE FACILITATOR: Thank you, sir.

Jacob Findlay.

MR. FINDLAY: Hello, my name is Jacob Findlay. Thank you for listening to my comments. I would just encourage the committee, as it's obvious to know the not-in-my-backyard arguments, they are typical of a project like this, but they shouldn't carry weight, given that they come with every project regardless of the time, place, contacts, whatever.

This is an infill project from the City of Phoenix, and I'm exited to see it finally come to fruition. Driving out on the 303 in the middle of the desert is a little baffling when I consider that the 202 is something which we need much more desperately, it hasn't been constructed and it looks great, but there's nothing around it. And the 303 out there, it's another issue but encourages additional sprawl, that kind of thing. The 202 as an infill project that encourages more development closer to downtown, people living close to downtown living, etc.

I live in Laveen and live there because of the proximity to downtown. This freeway will enable me to get downtown more quickly, to the services, that kind of

Driver and Nix Court Reporters - (602) 266-6525

Code	Issue	Response
12	**Drainage**	Pecos road drainage is designed as a pass-through system. In other words water is allowed to drain along its natural existing pathway underneath the freeway and to Gila River Indian Community land. If an action alternative were to become the Selected Alternative, the E1 Alternative would be constructed aboveground and the existing culverts would extend to pass drainage under the freeway. Pecos Road currently has numerous existing culvert crossings. Depressing the freeway in this area would eliminate the existing culvert crossings and potentially have adverse flooding impacts on adjacent properties. Extending the existing culverts or upsizing the culverts would maintain or improve drainage flows. Doing so would ensure that there would be no adverse flooding impacts to adjacent properties. (See Draft Environmental Impact Statement pages 3-18, 4-98, and 4-107.)
13	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. 1 The environment study did not use up to date 2013 data and I am opposed of its construction.

2 3 4 Study does not have accurate 2013 car counts and air quality figures nor was it independently verified. I think we all need to pause and have some one study this study and the politics of how it was written and unfounded in truth. There is a major issue in the study to which also does not accurately add the additional impact from the build phase and from the new traffic count phase. It did not note correctly detail the truck traffic from Canada LA CA and to Mexico with hazardous material going thru a park and reserve with many homes within 1-2 miles.

5 No truck traffic counts detailed correctly since this is a truck bypass not a commuter road. So material omissions and intent to hide the truth in an official document.

6 2 Project and study did not address the current 2012 epa 13 day violations in the west valley and how the air quality will get worse during construction and during the 6 lanes for truck traffic. also did not show design which will impact environment along the Awatukee / Pecos section. Design does impact the environment differently and to say we will address during the building phase is very unethical and unfair to home owners who have millions on the line with no legal representation. What is the design height depth walls near homes and schools and churches?

8 You did not consider Indian petroglyphs and burial grounds in or near the path way.

9 10 No mention of how the heck foothill reserve residents will drive to work no outlet planned on any map. We only use Pecos and our commuting road.

2 No mention of dust and Indian res. air quality which is bad and getting worse. Must consider current toxins in the air as of 5-14-2013 at GILA and Awatukee south of Pecos.

1 No 2015 projections accurate in the study seems like its based on very old data.

11 Also to have the city pre buying homes is some what unethical as well.

12 13 14 Please note I am opposed since it will not allow me faster commute to downtown and will tear down hundreds of homes in my subdivision with no explanation of how it will impact home values or views and noise.

15 Need to study the possibility this project will cause phoenix to loose 1 billion in federal matching funds when the EPA monitoring station in the west valley east of hwy 51 have more violations than 10 per year. Also its not from dust storms... and will increase. Then with out the matching federal dollars our taxpayers have to pay this.

Code	Issue	Response
1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Trucks**	
4	**Hazardous Materials**	
5	**Purpose and Need, Truck Bypass**	
6	**Construction**	To reduce the amount of construction dust generated, particulate control measures related to construction activities must be followed. The following mitigation measures would be followed, when applicable, in accordance with the most recently accepted version of the Arizona Department of Transportation *Standard Specifications for Road and Bridge Construction* (2008). Prior to construction and in accordance with Maricopa County Rule 310, Fugitive Dust Ordinance, the contractor shall obtain an approved dust permit from Maricopa County Air Quality Department for all phases of the proposed action. The permit describes measures to be taken to control and regulate air pollutant emissions during construction (see page 4-173 of the Final Environmental Impact Statement).
7	**Design**	The current level of engineering is used to determine the limits of environmental and construction impacts due to the proposed freeway. The location and profile of the freeway are evaluated to minimize potential changes to the freeway as the design level would progress. The current level of engineering is an accepted industry standard for determining impacts. (See Final Environmental Impact Statement sidebar on page 3-40 for more discussion.) Potential heights of noise walls are presented beginning on page 4-90 of the Final Environmental Impact Statement
8	**Cultural Resources**	The freeway alternatives were surveyed for archaeological sites, which include petroglyphs (rock art). The archaeological survey documented several petroglyph locations. Subsequently, the freeway alternatives were redesigned to avoid the petroglyph sites. No petroglyphs would be destroyed by implementation of the proposed freeway. Because right-of-way fencing would limit access from the proposed freeway, damage to petroglyph sites would not be facilitated (see Final Environmental Impact Statement pages 4-160 and 4-187).
9	**Construction**	Temporary construction impacts are described in the Draft Environmental Impact Statement beginning on page 4-161. The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours might be needed during construction. (See Final Environmental Impact Statement page 3-27.) In general, travel times along Pecos Road would remain unchanged during construction. After construction, motorists that currently use Pecos Road could use the freeway.

Code	Comment Document

This end up being could be the most expensive project any US city every had to pay for forever. This is not a one time expense and with our federal dollars AZ budget need to increase its funds. It could hurt the city in many ways financially and for poor planned growth.

You should be required to accurately tell the EPA the correct this environmental study with all up to date 2013 environmental impacts... 21 million spend is potentially fraudulent based on the lack of due diligence and details omitted from insiders direction who promote the freeway. It should be reviewed and independently investigated as to who directed poor study facts and obvious material omissions of fact.

(5) You have unethically disguised this truck bi-pass as a 202 highway to relieve traffic on the Broadway curve.
Fix the existing hwy 10 and 202 101 first before spending billions in tax dollars.

(16) Consider cheaper alternative hwy 8 expansion where less folks live.

(17) (18) Accurately detail the health and safety impacts to home within 1 mile of a major truck route. Study the impact to terminate movement and the wildlife destruction and native cactus plants and eco system. Isn't that what an environmental study should do rather than promote the freeway?

(19) (20) (4) Environmental study also does not address the additional destruction of wells from subdivisions, and water drainage issues. and the increase risk of truck container spills. This is critical to those who have to stay within 1-3 miles of this.

(17) This will also hurt kids in schools near by the folks / elderly with breathing issues.

(21) This is discrimination to the Indian community and unethical to there rights as a minority.

(22) And to destroy South Mountain a pristine community park (common land) what a shame especially once folks see what this project really will be a USA free trade truck bi-pass. Please stop and re-think about what we are doing with the real facts and with an accurate environmental study.

AZ will look back on this with regret if it gets approved! Please stop and think with the real facts.

Def Yes

➢ After the public hearing, community forums will be held at various locations in the Study Area to allow for additional opportunity to provide DEIS comment. Times and locations of the forums will be posted at <azdot.gov/southmountainfreeway> and publish in newspapers and local publications.
➢ Written comments also can be submitted via the following methods:
➢ Online at <azdot.gov/southmountainfreeway>
➢ E-mailing comments to projects@azdot.gov

Code	Issue	Response
10	**Design**	The extension of Chandler Boulevard west of 19th Avenue is included in this project because reasonable access must be maintained to the neighborhoods at the west end of Pecos Road (see Figure 3-33 on page 3-57 in the Final Environmental Impact Statement). Early in the study process a traffic interchange at approximately 27th Avenue was evaluated but ultimately eliminated because of increased residential displacements and cost.
11	**Land Use**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement. The Arizona Department of Transportation purchased some right-of-way along Pecos Road when it was adopted as the freeway alignment in 1988 (see Draft Environmental Impact Statement page 3-53). Should another alternative be adopted as a result of this study, the Arizona Department of Transportation would dispose of the land that has been acquired. Federal Highway Administration regulations do not allow the ownership of right-of-way to be a factor in the decision regarding the selection of an alternative.
12	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
13	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
14	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
15	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
16	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
17	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
18	**Biology, Plants, and Wildlife**	
19	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to state regulations/standards. (See text box on Final Environmental Impact Statement page 4-108.)
20	**Drainage**	Flood protection levels are dictated by the design class of the highway. In the case of the proposed South Mountain Freeway, it is designated as a Class I. Therefore, flood protection levels would be designed to the 50-year (storm) level. However, as a standard Arizona Department of Transportation practice, the floodwaters developing upstream of the culvert entrance would be reviewed at the 100-year level to ensure "headwaters" do not adversely affect existing properties. (See Draft Environmental Impact Statement page 4-102.) All bridges on major waterways such as the Salt River are designed to maintain minimum water surface elevations at the 100-year level for flood levels and built to structurally withstand the superflood, a flood expected only once in 500 years.

Code	Issue	Response
21	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.
22	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1	**Trucks**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need, Truck Bypass**	
3	**Air Quality**	
4	**Air Quality**	Summary information about the findings of the Joint Air Toxics Assessment Project study is provided as background information in the Draft and Final Environmental Impact Statements, but the study itself is not relevant to the type of analysis done pursuant to the Federal Highway Administration's mobile source air toxics guidance, which is an emissions analysis. Monitored ambient concentrations of mobile source air toxics (the focus of the Joint Air Toxics Assessment Project) do not inform this type of analysis. While monitoring data can be useful for defining current conditions in the affected environment (to the extent that the monitoring data are current), they don't tell us anything about future conditions, or the impacts of the project itself, which is why an emissions analysis was performed. The mobile source air toxic analysis presented beginning on page 4-77 of the Final Environmental Impact Statement is an estimated inventory of mobile source air toxic emissions for the entire Study Area for 2025 and 2035. This approach was used because the inventory estimate accounts for changes in traffic and emissions on all roadways affected by a proposed project, and would, therefore, be a more reliable predictor of changes in exposure to mobile source air toxics. The Draft and Final Environmental Impact Statements present information and analysis about the proposed action and the enhanced conditions when compared against the No-Action Alternative and would not cause significant adverse effects. The Federal Highway Administration and Arizona Department of Transportation Draft and Final Environmental Impact Statements account for the potential effects when considering both adverse and beneficial impacts. The Draft and Final Environmental Impact Statements provide in-depth discussion of potential air quality impacts of the proposed alternatives. The carbon monoxide analysis presented on page 4-65 of the Draft Environmental Impact Statement and updated on page 4-75 of the Final Environmental Impact Statement represents projected carbon monoxide concentrations along the project corridor, including those proposed interchange locations along the South Mountain Freeway corridor. The Arizona Department of Transportation also conducted a quantitative particulate matter (PM_{10}) hot-spot analysis that is discussed on page 4-76 of the Final Environmental Impact Statement. Both of these analyses demonstrate that the health-based National Ambient Air Quality Standards for carbon monoxide and particulate matter (PM_{10}) would not be exceeded at worst-case locations along the project corridor.

(Response 4 continues on next page)

Code	Comment Document

Code	Issue	Response
4 (cont.)		The emission modeling developed for the proposed action showed that for the mobile source air toxics study area, there would be little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions (see discussion beginning on page 4-77 of the Final Environmental Impact Statement). The carbon monoxide and particulate matter (PM_{10}) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.
5	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
6	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document

5026

MR. LAPIERRE: I'm opposed to the quality of the Draft Environmental Impact Study, due to the fact that the hazardous material and risk of trucks overturning or spills hasn't been addressed, nor has the southbound traffic -- which will obviously carry the truck route, preferred truck route from Los Angeles to Mexico -- has not been incorporated into the Draft Environmental Study properly.

The other big concern is that the study in 2001 and the study in 2005 -- which showed particulate-matter pollution, ozone, and cancerous airborne particles -- already, in 2005, exceeded the EPA standard. That particular monitoring station is located in Gila reservation, about two miles south of the Pecos Highway preferred route. That part of the study, which was determined by the Government and the Environmental Protection Agency as nonsustainable, needs to be retested and incorporated into any environmental impact study. To not incorporate that is morally, socially, and environmentally deficient and should be litigated and brought forth as a public concern over the project.

The other concern is: Cutting through ridges of South Mountain will create particulate-matter pollution to flow into the Ahwatukee residential community, which will have a direct environmental impact.

The other concerns that we have is: The noise, which is going to be echoing through the canyon into the

4	**Air Quality**	Summary information about the findings of the Joint Air Toxics Assessment Project study is provided as background information in the Draft and Final Environmental Impact Statements, but the study itself is not relevant to the type of analysis done pursuant to the Federal Highway Administration's mobile source air toxics guidance, which is an emissions analysis. Monitored ambient concentrations of mobile source air toxics (the focus of the Joint Air Toxics Assessment Project) do not inform this type of analysis. While monitoring data can be useful for defining current conditions in the affected environment (to the extent that the monitoring data are current), they don't tell us anything about future conditions, or the impacts of the project itself, which is why an emissions analysis was performed. The mobile source air toxic analysis presented beginning on page 4-77 of the Final Environmental Impact Statement is an estimated inventory of mobile source air toxic emissions for the entire Study Area for 2025 and 2035. This approach was used because the inventory estimate accounts for changes in traffic and emissions on all roadways affected by a proposed project, and would, therefore, be a more reliable predictor of changes in exposure to mobile source air toxics. The Draft and Final Environmental Impact Statements present information and analysis about the proposed action and the enhanced conditions when compared against the No-Action Alternative and would not cause significant adverse effects. The Federal Highway Administration and Arizona Department of Transportation Draft and Final Environmental Impact Statements account for the potential effects when considering both adverse and beneficial impacts. The Draft and Final Environmental Impact Statements provide in-depth discussion of potential air quality impacts of the proposed alternatives. The carbon monoxide analysis presented on page 4-65 of the Draft Environmental Impact Statement and updated on page 4-75 of the Final Environmental Impact Statement represents projected carbon monoxide concentrations along the project corridor, including those proposed interchange locations along the South Mountain Freeway corridor. The Arizona Department of Transportation also conducted a quantitative particulate matter (PM_{10}) hot-spot analysis that is discussed on page 4-76 of the Final Environmental Impact Statement. Both of these analyses demonstrate that the health-based National Ambient Air Quality Standards for carbon monoxide and particulate matter (PM_{10}) would not be exceeded at worst-case locations along the project corridor.

(Response 4 continues on next page)

Code	Comment Document

Ahwatukee Foothills where residents live, has not been addressed. Yes, it is different than Highway 101. It is dramatically different than the current 202 that was built, because we have mountains on two angular sides, where sound currently echoes off of the mountains.

For example, if you were sitting in your backyard and you had a party, everyone in a four- to five-mile radius can hear the noise from your backyard. So can you imagine adding 150,000 trucks and cars going through that? The sound will be amplified naturally by the -- the mountain and the terrain, both sets of mountains: the Estrellas and the South Mountain.

Also, the destruction to habitat, such as goats, javelinas, wildlife, those little gophers that are in the ground, birds, and other animals. Even though it is minimized in this project, it's still going to be dramatically impacted.

So the other thing that's a concern is issues with health and breathing. Currently, most of the residents in Ahwatukee do see a lot of pollutions and toxins from the air. And a combination of these elements -- including benzine, ozone, dust particulates -- will be dramatically made worse by a highway, which will cause the elderly and the children in the community to have more respiratory problems and asthma problems.

In the last two years, there's been many studies

8

9

Code	Issue	Response
4 (cont.)		The emission modeling developed for the proposed action showed that for the mobile source air toxics study area, there would be little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions (see discussion beginning on page 4-77 of the Final Environmental Impact Statement). The carbon monoxide and particulate matter (PM_{10}) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.
5	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. In May 2012, the Arizona Department of Environmental Quality submitted a revised Maricopa Association of Governments 2012 Five Percent Plan for the region. On July 20, 2012, the U.S. Environmental Protection Agency made an official finding that the Maricopa Association of Governments 2012 Five Percent Plan was administratively complete. This decision ended the sanctions clocks associated with Arizona's decision to withdraw the Maricopa Association of Governments 2007 Five Percent Plan. On February 6, 2014, the Environmental Protection Agency published a notice in the *Federal Register* proposing to approve the Maricopa Association of Governments *2012 Five Percent Plan for Attainment of the PM-10 Standard* for the Maricopa County Nonattainment Area. In the same notice, the U.S. Environmental Protection Agency stated that it would concur with exceptional event (as a result of haboobs and dust storms) documentation prepared by the Arizona Department of Environmental Quality, which would give the region the 3 years of clean data needed for attainment of the particulate matter (PM_{10}) 24-hour standard. Finally on May 30, 2014, the U.S. Environmental Protection Agency approved the 2012 Five Percent Plan and found the area in attainment of the 24-hour particulate matter (PM_{10}) standard based on monitoring data for the years 2010 to 2012 (see page 4-72 of the Final Environmental Impact Statement for more information).
6	**Air Quality**	Air quality depends on several factors such as the area itself (size and topography), the prevailing weather patterns (meteorology and climate) and the pollutants released into the air. Cuts through the South Mountains would be expected to produce microclimate differences similar to those produced by a series of buildings in a large city that produce localized wind tunnel effects. The mountain cuts, however, would not affect regional air quality.

Code	Comment Document

about construction and homes and schools near highways, that had not been studied in 2008/2009 and is not incorporated into the Environmental Draft Impact Study. So how could an impact study that spent $21 million not take into consideration new health warnings by many, many agencies about the impact on asthma and the increase in autism caused by particulates from living near highways?

So, to go back to 2008, when this wasn't public information as a health risk, and not incorporate the state-of-the-art studies on health risks due to highway development is definitely deficient.

Other than that, just the concept of the fact that there's no additional high-tech sound barrier walls being put up. Having ADOT say, "Oh, we'll build you a ten-foot concrete wall," does not mitigate the noise because the noise is going to echo through the canyon because the highway is elevated.

The other thing is that it's directly affecting residents who have natural views. To elevate a highway and not really know how high and to destroy the views that people have from their homes and from their backyards in preserves are an impact.

The other thing that I want to bring out is, in the subdivision that I live, which is in the Crossings in the Foothills, our homes, on certain streets, back to what's called the Navy-protected wildlife sanctuary, which is specifically

Code	Issue	Response
7	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes that may be elevated above the road, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Phoenix metropolitan area and across the country.
8	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Health Effects**	
10	**Visual Resources**	For most of the alignments of each of the action alternatives, the proposed freeway would be elevated above the natural grade of the surrounding land. This elevated profile would allow noise to carry farther, creating noise impacts at greater distances from the freeway. Depressing the profile of the freeway below grade might reduce traffic noise levels adjacent to depressed sections. However, it would be necessary to also construct at-grade noise barriers to achieve noise reduction goals at receiver locations adjacent to depressed freeway sections (see page 4-99 in the Final Environmental Impact Statement). This strategy would reduce visual impacts associated with high noise barriers on elevated freeways, but would entail ground-level noise barriers and their associated interference with views. Thus, with either approach to noise reduction, views of nearby mountains could be disrupted. The specific impacts would depend on sightlines that would be determined by the height of any noise barriers constructed, the intervening topography, and the distance of the barriers from the residences in question.
11	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

Code	Comment Document

zoned to have no development, no trimming of trees, no touching of anything. Yet this part of the land that spills into Pecos is going to be taken over by ADOT. So the concern is: How can they just, through proper use or need for use, justify taking over what is currently a protected natural reserve?

(12)

And this area is not part of South Mountain. It's actually part of our community. It's funny how that is not even brought up in the study. Yet, if I cut down a plant in my backyard, I can get fined and get in trouble for that.

So destroying that part of the subdivision, and also not really sitting down with our subdivision, talking about the elimination of the multiple homes and what ADOT can do in terms of building, you know, either a park or some kind of, you know, offset for the damage that we're going to have to our community, is just not acceptable.

(13)

And to say that it will be in the design phase, which is after public input, is also kind of a catch 22, to say, "Oh, don't worry about that; we'll deal with it in the design phase," when we all know ADOT's stance is: You get a ten-foot wall, and that's what you see. And that's, you know, the remedy to any noise or whatever.

(14)

The other thing that's real important to us is when you add, to the toxicity in the air right now, trucks coming from Mexico, coming from LA, using the truck route. And the truck standards for pollution in Mexico are lower than the

12	**Acquisitions and Relocations**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
13	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
14	**Design**	The current level of engineering is used to determine the limits of environmental and construction impacts due to the proposed freeway. The location and profile of the freeway are evaluated to minimize potential changes to the freeway as the design level would progress. The current level of engineering is an accepted industry standard for determining impacts. (See Draft Environmental Impact Statement sidebar on page 3-40 for more discussion.)

Code	Comment Document

2

quality standards for trucks that originate in the U.S. That has to be studied as an additional impact.

This is not like the 101 and the current 202, where United States trucks travel to do local traffic. This is the transportation corridor going from other countries like Canada and Mexico. So the fact that there is lax standards on emissions in those trucks that are currently allowed to go into the U.S. and not study the toxic impact to the air quality, in a valley where this air just sits and pushes up against the mountain, is very deficient.

So, for example, on the Highway 101 we don't have trucks from Mexico that were added when it was built. We also have flat land on most of the 101, where the air pollution doesn't sit in a cloud and build up and create a toxin. It flows across.

It's the same thing when you go to Chandler and Gilbert on the 202. It's relatively flat. There's no mountains abutting or being cut through that can trap air pollution. So we're very, very concerned about that part of it, as well.

5 15

And the other thing that I would like to put into the record is: Homeowners in this community should be offered some kind of compensation to move out of the community due to the health risk and impact that it will cause to the residents, children, and the elderly.

Code	Issue	Response
15	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.

And if, for example, a stipend of 50,000 was given, for us to just sell out and leave the community, that should certainly be part of a $9 billion highway study and be supported by the community for those that, you know, want to get out of the way of the highway but are trapped due to the cost of moving, the cost of not being able to sell the home because homes are depreciating, not appreciating, because no one wants to live near a highway.

The other concern that we have is: What is going to happen with the access, that we enjoy now, leaving our community? We actually don't have any roads leaving out of our community. And to build another side street will just cause more congestion and more pollution buildup because people will be jammed trying to get on the highway.

So to not have that studied, when Ahwatukee is the largest subdivision in America and all of these cars get backed up, where is the part of the Draft Environmental Impact Study that says when cars are idling and emitting toxins in the air, what is going to be contributing?

You know, we talk about these studies of going out to 2035. Well, where is the pollution counts and the levels of pollution?

The other thing that's very concerning is, when you mix chemicals from trucks, unregulated or less regulated emissions from Mexico, stagnant air that's sitting and pushed

Code	Issue	Response
16	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
17	**Design**	The extension of Chandler Boulevard west of 19th Avenue is included in this project because reasonable access must be maintained to the neighborhoods at the west end of Pecos Road (see Figure 3-33 on page 3-57 in the Final Environmental Impact Statement). Early in the study process a traffic interchange at approximately 27th Avenue was evaluated but ultimately eliminated because of increased residential displacements and cost. The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours may be needed during construction. (See Final Environmental Impact Statement page 3-27.)
18	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1).

19

3 20

up against the mountain, and you mix those chemicals with the current air quality that's in violation of EPA standards today, and then you mix more compounds, you're creating an unknown compound and health risk that's going to sit in the air and not flow.

It's very apparent. Anyone with a high school education can go to Ahwatukee and see the pollution and test the air quality. But yet no one has decided to do a new test station in Ahwatukee. No one has decided to revisit the 2005 study, which showed that these particles are actually cancer-causing and are in danger, back in 2005.

And can you imagine, eight to ten years after 2005, that the pollution is worse? I think anyone can, with common sense, say: Absolutely, it is.

And it should be at least studied.

That doesn't mitigate the fact that we need a highway. But we would also urge that ADOT go back to the Indian community and maybe align a highway, to create a new alignment for a highway and approach the Indian community and find out where south on their land they would consider.

There's plenty of traffic routes, that are actually through Maricopa and up through Highway 85, that are currently used as truck traffic. And we all know this highway is for truck traffic.

For social use, it does not allow anyone from

19	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
20	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.

5

5

Ahwatukee to get to downtown any quicker than going the other way. It just doesn't do it. You're actually going to be about 15 miles outside of downtown and going into traffic on the 10 to get to downtown. So I would propose people that are going on this new highway, to go work downtown, are going to actually create more congestion on Highway 10 because Highway 10 has not been expanded.

We also need alternate routes that go east/west, other than Pecos, in addition to this highway, so that it will relieve other traffic.

The last point that's a concern for me is the environmental EPA's testing site. Pretty much, in Laveen right now, which is south of the 10, and east of 79th Avenue is it is already in violation of the EPA standards. It has 13 air-quality violations last year, 22 particulate violations last year.

And somehow the trucking industry and the City has gotten an exemption to say that: Oh, it's storm-related.

Well, you guys have to really study an environmental impact study, how that sensor which can't be moved by the EPA is going to cause the City of Phoenix to be in air-quality violation, losing Federal highway money. So this $9 billion highway could turn into a loss of $1.2 billion a year, after the highway is built, if that sensor is in violation.

Page 28

21	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
22	**Design**	Construction of the proposed freeway would include widening along Interstate 10 to facilitate entrance and egress of vehicles between the two freeways. Additional information related to the Interstate 10 modifications can be found in Figure 3-26 on page 3-49 and Figure 3-29 on page 3-53 of the Final Environmental Impact Statement. The design of the connection to Interstate 10 and the widening along Interstate 10 were developed in accordance with the Federal Highway Administration's interstate system Access Informational Guide and have received an initial determination of operational and engineering acceptability from the Federal Highway Administration.

Code	Comment Document

Everyone knows new development is going to be built in Laveen. Truck depots are being built now. Business owners, politicians are buying tracts of land. It's going to cause more toxic emissions into the environment and not less. So to reduce air-quality issues by about 5 to 10 percent, with the new highway, is going to be overridden by the increased growth, the increased traffic, the increased congestion of trucks and cars trying to get on the highway, which is going to cause that sensor to be in violation even more. And to, again, not study that is grossly negligent.

5

The other thing is toxic spills and truck accidents have to be studied more. ADOT is saying that it's about 147,000 cars or trucks a day, when our independent studies have shown it's about 15 percent more than that. And it's not even considering the additional truck traffic. So we all know the Swift Transportation, located in Laveen; truck depots being built; and also land leases on Pecos -- owned by politicians who already have designs to do truck depots and rest stops -- will cause idle trucks to emit benzine and sulfur dioxide into the air because they'll be sitting at truck depots.

1

And why has that not been studied as an environmental impact?

5

Real critical, key things that have not been studied. And I would strongly urge that the 2005 study on particulates in the air be entered into the record for the

4

1	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
3	**Purpose and Need**	The worldwide recession that began in late 2007 generated a substantial downturn in growth rates for new housing and employment across the United States. Arizona particularly suffered the effects of this recession because, beginning in the early 2000s, Arizona in general and Maricopa County specifically experienced some of the fastest population, housing, and employment growth rates in the country. Because the need for the proposed freeway is predicated in part on projected growth, one might conclude the recession reduced that need. An economic downturn associated with a given recession is, however, generally considered a short-term phenomenon with respect to the longer-term planning horizon established for the proposed freeway. Socioeconomic indicators have steadily and consistently increased in the region since the early 1900s. The critical factors underlying these indicators remain unchanged. (See the sidebar on Final Environmental Impact Statement page 1-11.)

2	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Traffic**	The Federal Highway Administration and the U.S. Environmental Protection Agency approved the air quality conformity determination that includes the Maricopa Association of Governments regional travel demand model that produced the traffic projections used in the traffic analysis for the project (see Final Environmental Impact Statement page 3-27). Traffic projections are regularly updated by the Maricopa Association of Governments. The traffic projections in the Draft Environmental Impact Statement are from a model adopted in 2011. Key model inputs used to forecast travel demand included (see Table 3-7 on Draft Environmental Impact Statement page 3-27): · socioeconomic data based on the adopted general plans of the Maricopa Association of Governments members, along with population and economic forecasts and the existing and planned transportation infrastructure as identified by the Maricopa Association of Governments members · the anticipated average number of vehicle trips within the region (including those to and from the region's households) on a daily basis (this number is tracked regularly by the Maricopa Association of Governments) · the distribution of transportation modes used by travelers in the Maricopa Association of Governments region (also tracked regularly by the Maricopa Association of Governments) · the capacity of the transportation infrastructure to accommodate regional travel · the future transportation infrastructure established using *Regional Transportation Plan*-planned projects and improvements and from known arterial street network improvements assumed to be made by the County, Cities, and private developers. In June 2013, the Maricopa Association of Governments approved new socioeconomic projections for Maricopa County. The purpose and need and analysis of alternatives were updated and reevaluated using these new socioeconomic projections and corresponding projections related to regional traffic. The conclusions reached in the Draft Environmental Impact Statement were validated in the Final Environmental Impact Statement (see Chapter 3, *Alternatives*).

2013

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

Subject: Loop 202 Expansion Through Ahwatukee
Date: Friday, June 21, 2013 11:55:52 AM

Hi! My family has lived in Ahwatukee for 7 years. We love that it's quiet, private, and somewhat secluded.

We DO NOT support the addition of another freeway through our community. I-10 is providing plenty of access for those smuggling drugs and/or people to get in and out of our community.

1 2 3 4

Our drive times to other areas of the valley are fine as they are. We do not favor extending the 202, as we feel it will increase crime, pollution, and noise.

Thanks for your consideration.

Gail Lasserre
314-322-4600

1

When I bought my property in 2003 the 202 was schedule to be built - the was a huge selling point to me as I work in Chandler and I live at 77th and Broadway the 202 would have and will reduce my commute time in half. Now 10 years later the 202 still has not been approved and being constructed. It is imperative that this project begin immediately to support existing and future traffic growth in the valley. Thank you

1	**Alternatives**	Upon completion of the environmental impact statement process, and if the Selected Alternative were to be an action alternative, the Arizona Department of Transportation would begin the design phase, which would be followed by the final right-of-way acquisition process. Then other early construction tasks such as utility relocations would begin. The corridor would be divided into multiple final design segments. Construction sequencing and duration could change based on several factors, including funding availability, traffic volumes, coordination with other major freeway projects, earthwork balancing, utility relocation schedules, and regional priorities.

Subject: South Mountain Freeway bypass

I live in Ahwatukee, and frequently use Pecos boulevard, South Mountain Park, and surrounding
areas for biking and hiking. On a typical Saturday morning, there are literally 100's of people out there, cycling along pecos, running the trails, or enjoying a beautiful hike in the solitude of
the South Mountain park and trails.

1 2 I have followed the 202-bypass discussions for many years and would like to voice my concerns –
the cost, ecological and more importantly "community" damage it will cause far exceed any benefit that adding a (primarily truck) bypass route would provide.

3 4 5 6 So I would strongly encourage ADOT to explore other options – either far south of phoenix if this is truly a truck bypass route, or a no-build option (the long-term solution to Phoenix's traffic issues will NOT be solved by building this) or even by working with the Indian nation to
get access 1-2 miles south of the existing Pecos read (where no damage will need to be done
7 8 to South Mountain park, nor will neighborhoods be destroyed).

Please feel free to let me know if you need further input. But I would like to strongly voice my

Code	Issue	Response
1	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
2	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
4	**Purpose and Need**	According to the project team's traffic analysis, without the proposed freeway, existing roads and planned road improvements would accommodate about 76 percent of the transportation demand projected for 2035, leaving 24 percent of the anticipated demand unmet. If one assumes better-than-expected performance of nonfreeway aspects of the transportation system, 13 additional percentage points of the 24 percent deficiency would be accommodated. This means that the transportation network would still have an 11 percent capacity deficiency. The same analysis with the proposed freeway in operation in 2035 concluded that the met demand would increase to 82 percent; better-than-planned scenarios noted above, if achieved, would reduce network deficiency to 5 percent. The proposed freeway would handle about half of the capacity deficiency not captured by other modes. (See Figure 3-14 on Final Environmental Impact Statement page 3-31).
5	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Alternatives, Gila River Indian Community Alignment**	
7	**Section 4(f) and Section 6(f)**	
8	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)

Subject: Objection to Loop 202 (South Mountain Freeway)

1 2 3
4 5 6

If allowed to proceed, the Loop 202 will cause permanent damage to the ecology of the area, increase air and noise pollution and destroy the natural beauty of South Mountain. This is not acceptable to me, my family, and those directly affected.

Furthermore, this is a civil rights issue. The indigenous people of the area consider South Mountain to be a sacred landmark, and to not respect the wishes of these people sets a dangerous precedent for future relations. Again, this is not acceptable to me, my family, and those directly affected.

It is for these reasons that I object to the construction of the Loop 202 (South Mountain Freeway). Construction must not continue.

1	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Noise**	
4	**Section 4(f) and Section 6(f)**	
5	**Cultural Resources**	
6	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.

4219

in a separate survey, 59 percent of likely voters living in the Ahwatukee and Laveen area support the freeway as well.

The support is there for the project, and the money to build the freeway is in the budget, as it was approved by voters twice, in '85 and in 2004. It's clearly time to begin construction on the South Mountain. Thank you.

THE FACILITATOR: Thank you, Mr. Trussell.

Ariel LeBarron.

MS. LeBARRON: Hello, my name is Ariel LeBarron, and I am a student at the School of Feasibility. I grew up here, I was born and raised. And I oppose the South Mountain Freeway, just because it would increase air pollution, and I feel there are better alternatives that we could be putting our tax money into, such as public transportation. This would increase our air quality, so that our future generations wouldn't be as affected. And I think by putting a freeway and expanding it outward is going to make people use and buy cars more, instead of trying to switch to public transportation.

I think for our future we should be focusing on better alternatives. Thank you.

MEMBER OF PUBLIC: Can I ask a follow-up to that?

THE FACILITATOR: Let me get through these.

Ariel LeBarron. "Can you look at public transit and transportation more closely to fit the needs of the citizens, both in the South Mountain area, but the Valley as the whole. Use the money for the freeway for this instead. Use examples from the counties and cities to create a working system that in the end could make money for the state." Is that a question or a comment?

MEMBER OF PUBLIC: Well, could you use that money for public transportation?

THE FACILITATOR: Can they use the money designated here for public transportation? I'm sorry, I didn't get that.

MR. SPARGO: Now, the regional transportation plan that was developed in 2004 did include a much more robust public transit portion when compared to what was done in 1985, and that included a lot of local and regional buses, as well as extensions to the light rail, the initial 20-mile segment.

So the region has already shown an investment into that system, but along in the

1	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for transit projects nor would not constructing this facility make available additional funds for transit projects.

Code	Comment Document

RTP there was also a freeway system, which working together to provide, you know, all modes of travel for the community.

With regard to the funding itself, there are some firewalls built into the regional transportation plan and it does limit the ability to both use freeway funds for transit projects, as well as to take money from transit projects and use them for freeways.

So that would be something that would have to probably be, you know, vetted at the top of MAG. It would be a decision made by them, but there are fire walls built in that would really limit or do not allow the mixing of those funds.

THE FACILITATOR: Scott Sprague. "In pre-design meetings for I-11, ADOT representatives have repeatedly stated that no part of the I-11 or scenic drive has been identified beyond a very wide 30-mile swath between Phoenix and Las Vegas. Upon approaching Phoenix, ADOT has insisted that many alignments through and around the city are still on the table. This contradicts what the map shows tonight. Please explain the disconnect."

MR. SPARGO: Can I have you repeat just the part about where the information was coming from that

Document Created: 5/23/2013 3:32:42 AM by Web Comment Form

Letter to ADOT:

(1) I live in Central Phoenix, just near Baseline and Central. As you know, Baseline is the main corridor for people who live in Laveen and work/shop in the East Valley. I suspect that an interchange on the proposed freeway at Baseline will now funnel even more traffic through the area. In fact, all of the West and Northwest Valley will now have access to east-west roads through South Phoenix. Already when there is a problem on I-17 or I-10, Baseline becomes a parking lot. Now imagine the potential for a problem on any of the I-10, I-17, OR Loop 202. Baseline will bear the full brunt.

(2) Perhaps South Phoenix, because it is home to many lower-economic residents of Phoenix, is not of particular import to the powers that be. We certainly saw that when the city council thumbed its nose at the Baseline Master Plan and allowed developers to run rough shod over the area.

(3) (4) Another consideration is the Phoenix Point of Pride—South Mountain Park. The road to San Juan Lookout, which is closed to traffic everyday except for one weekend per month, goes through a valley that is a quiet "haven." That, of course, will no longer be true when a freeway runs adjacent. What good is the claim to "the largest city park" if that park is perpetually bombarded with traffic noise? How is it possible that we do not have space and inclination for just one quiet retreat within the confines of this sprawling city?

I urge you to reconsider the plan to build a freeway with so much impact on South Mountain Park.

Claudia Leischen

Code	Issue	Response
1	**Traffic**	As shown in Figure 3-12 on page 3-29 of the Final Environmental Impact Statement, traffic on Baseline Road between 17th Avenue and 48th Street would be less in 2035 with the proposed freeway than without the proposed freeway.
2	**Environmental Justice/Lifestyle**	Low-income populations were evaluated to ensure there were not disproportionately high and adverse impacts. The Preferred Alternative would not adversely affect any census block groups with low-income populations south of the Salt River (e.g., South Mountain Village).
3	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Noise**	Although recreation uses are considered in the noise analysis as noise-sensitive land uses, another consideration is the reasonableness of providing noise mitigation for a particular land use. For recreational land uses, typical considerations include the number of people using the facility and the amount of time the facility is in use throughout the day. Many of the recreational uses in the western portion of Phoenix South Mountain Park/Preserve receive infrequent use, and noise mitigation would not be reasonable given the high cost of construction.

you to reconsider the plan to build a freeway with so much impact on South Mountain Park.

THE FACILITATOR: Thank you.

Max Dunlap.

MASTER DUNLAP: Hello, my name is Max Dunlap and this freeway would help us because we could travel a lot faster, because probably now it would take about 30 minutes to get around the mountain. We would have a lot more things and wildlife, even though it could lose some space. It would have -- we could just move all the extra we have from the mountain, and just put it on another side and all the animals would have all the space they already did have.

And, well, it's also that we have so much traffic that a lot of extra smog goes into the air and with this freeway less smog would go into the air, which means less pollution. And a lot of more happy people that can just travel from place to place.

THE FACILITATOR: Thank you.

Julie Dunlap.

MS. DUNLAP: Thank you for listening to our concerns. I live in Laveen, and we've lived there for going on eight years. And we purchased our home

Subject: South Mountain Freeway Support

Good Morning-

1

I would like to share my support for the South Mountain Freeway project. The freeway will help commuters by helping alleviate traffic jams and reducing air pollution from these consistent delays. Traffic in the area is only projected to get much worse in the next two decades without the South Mountain Freeway.

In addition to the traffic and pollution benefits, the project would great 30,000+ jobs during the 5-6 yr construction period and result in billions of investment in the Phoenix-area economy. All of this also falls within the current budget approved by voters.

Thank you for your consideration. The benefits of moving forward of the South Mountain Freeway are huge and not moving forward with the project would be at huge detriment to the Phoenix-area and its residents.

Sincerely,

Stephanie Lemek

Yes, I do support building the 202 freeway extension around South Mountain. This has been discussed for decades and really needs to happen!

CALLER REMARKS/QUESTIONS:

1 2

I oppose any more damn freeways! We do not need no more freeways! What we need to do to solve this traffic problem is to get a good light rail system, or some type of rail system – NOT, not freeways! We've had chances for 40 years to do it but the freeways haven't solved nothing since. So I will vote against it if it comes up for a vote a dozen times.

Subject: ADOT Loop 202 South Mountan Freeway Study

ADOT,

I am responding concerning the request for comments about "ADOT Loop 202 South Mountain Freeway Study."

I have been in real estate since the early 70's and this project has been discussed since before I-10 was even built. The final analysis puts the loop road on the edge of the Gila Indian Reservation property, much like the Loop 101 was done in east Scottsdale. That route left all the developable land on reservation land and created a giant economic opportunity for the Tribe that cost the City of Scottsdale and State of Arizona enormously, in my opinion. There is no reason to give the Indian tribes economic opportunity, particularly when they don't want it.

1

I suggest we pay the property owners that would be affected very well for their properties and be done with the subject. Make it a toll road, or whatever, but end the subject and leave the citizens of Arizona in charge of their fate. I am sure this will please the Tribe as well.

2

Regards,

David F. Lewis

Subject: Feedback
Date: Tuesday, July 23, 2013 5:25:32 PM

Dear Community Outreach Team:

Our family has lived in Arizona twice for a total of 21 years. We love Arizona, especially the Ahwatukee Foothills area, which we selected as our "final resting place." However, we'd rather not have our "final resting place" come too soon !!! (We chose Ahwatukee as the place to live out our lives, because of its beauty and clean air.) We do travel often to the west valley, but are willing to endure the longer drive than having the Loop 202 built over Pecos Road, which would shorten our drives, but also, I'm sure, our lives.

1 2

That which my family is most concerned about is the quality of our air, which we know will be affected negatively by enlarging Pecos for a major freeway. I especially will be affected by the bad air quality, since I spend my entire days (from sunrise to dark) in my vegetable gardens and I have had lung problems in the past.

3

Since I've been gardening (in my retirement years) I have been the healthiest that I've ever been. But, living in the bowl created by mountain/foothill ranges in nearly all directions, I know that Phoenix's dark brown cloud will be moved over us, too, and not only in the winter months. We now have too many "no-burn days." We, our children, grandchildren and soon, great-grandchildren will be permanently affected by air pollutants. And, the 202 would be too close to several of our schools where other people's children will be affected, too, for the rest of their lives.

2

Two other problems I foresee are:

4 5 6 7

1. Loop 202 becoming full of dirty, large truck traffic, created beyond our state/local use, since it WILL be used heavily by trans-Canada/Mexico traffic.
2. From what I've read, placing Loop 202 over Pecos Rd. will not reduce much traffic on I-10, and at the same time, will restrict our leaving safely our "bedroom community" in case of nuclear pollutants released from close-by reactors on our west or other terrible large-scale disasters. 202 built over Pecos WILL eliminate critical exits from Ahwatukee which we now can use to get onto Pecos Rd., if we ever need to evacuate our community.

8

After all these years of public outcries from Ahwatukee, Native American people, and other people, why not cut our losses NOW and NOT build here? If really needed, why not build 202 much further south (e.g. on I87), which would affect many fewer people and keep the quality of life better for more people curently living here.

Perhaps too simply put, I believe the final decision is really between whether to award Leveen with economic growth or keep Ahwatukee's air clean. I guess you folks will make that decision for the rest of us.

Code	Issue	Response
1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Health Effects**	
3	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
4	**Trucks**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Purpose and Need, Truck Bypass**	
6	**Purpose and Need**	Even though the region's freeways are now congested and operate poorly, conditions in 2035 would be substantially worse (see Final Environmental Impact Statement pages 1-21 and 1-22). By 2035, east- and westbound motorists on Interstate 10 between State Route 101L (Agua Fria Freeway) and State Route 202L (Santan Freeway) are expected to experience stop-and-go driving for over 3 hours every day. This is for a distance of nearly 30 miles. A new freeway in the Study Area would distribute commuters over an additional freeway facility. As a result, the duration of stop-and-go traffic on the region's freeways would be reduced.
7	**Traffic**	The E1 Alternative would affect the existing local street network. Approaches for reconfiguring the local street network include removing streets, constructing new streets, constructing the proposed freeway over existing streets, or dead-ending existing streets. Final design of local streets would be coordinated with emergency service providers, local jurisdictions, and other appropriate agencies and would continue through final design stages. See Final Environmental Impact Statement Figure 3-33, on page 3-57.

(Responses continue on next page)

Code	Comment Document
	Sincerely, Robert A. Lewis Rlewis48@cox.net

Code	Issue	Response
8	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.

Subject: South Mountain Freeway

Good Afternoon:

1 2 3 4 5 6 7 8 9 10 11

As a long time resident of the Ahwatukee Foothills community, I am compelled to register my complete objection to having the Loop 202-South Mountain Freeway constructed.
My objections begin with the flawed and outdated data utilized in the DEIS which clearly does not accurately portray current scientific data. The impact to Ahwatukee includes a total change in the character of the community, huge property devaluations, increased air and noise pollution and the real threat of a devastating and lethal toxic chemical accident. It would cause environmental harm to the South Mountain Park are and it's delicate desert environment. It is apparent that this loop would become a major highway for the Canamex truckers and not just a commuter highway as the study would have us believe.
I stand behind PARC, the Sierra Club and Don't Waste Arizona in their objections to this unneeded, wasteful and harmful project.

Sincerely,
Martha S. Light

To: Projects
Subject: Loop 202 (South Mountain Freeway)

One question: Is it worth it?

1 2 3 4 5 6 7 8

My answer is no. I believe that this freeway will harm my daughter's health. She has asthma and we would be within ¼ mile of the roadway. There will be primarily class 8 truck traffic on this extension. Truck traffic means harmful pollutants and noise. Building the proposed extension in unnecessary and a waste of resources. It will primarily only benefit people who do NOT live here as it gives a way around downtown to points east and west. The rise in pollution and crime coupled with the diminished property values do not make sense. It will mean less property tax revenues and added costs for the state of Arizona.

9

Please don't ruin our community of the Ahwatukee Foothills. This freeway will kill what our residents love about our community. There is no way to argue the benefits outweigh the costs.

Code	Issue	Response
1	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need, Truck Bypass**	
3	**Air Quality**	
4	**Noise**	
5	**Purpose and Need, Lack of Support**	
6	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
7	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
8	**Economics, Socioeconomics**	Table 4-23 on Final Environmental Impact Statement page 4-63 displays projected property tax impacts on the various affected jurisdictions from right-of-way acquisition and future land uses related to each of the action alternatives. Property tax impacts from implementing the W59 Alternative would be about twice those resulting from the E1 Alternative. The loss in annual City of Phoenix tax revenues from implementation of the E1 Alternative are discussed on page 4-65 and would, given all tax revenues for the City of Phoenix, "be nearly inconsequential."
9	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

5021

1 MR. LIMON: I'd like to put on the record that I'm
2 against the building of the South Mountain or 202 extension. I
3 feel that it's not really going to benefit many Arizona
4 residents. It's going to benefit out-of-state drivers,
5 commercial vehicles -- by your numbers, to the tune of 1194
6 commercial vehicles per hour, passing within 50 feet of my
7 home, in which I have an asthmatic daughter.
8 So, you know, what's missing there? Who's
9 benefiting? Well, Phoenix residents aren't benefiting.
10 The statement is that there will be less traffic on
11 our arterial surface streets. I don't see how that's possible.
12 I don't know anybody that takes surface streets from Ahwatukee
13 or Chandler to Laveen. So they're going to take the highway.
14 Travel time to downtown, they claim that it would
15 decrease. It would actually increase if you're taking the
16 extension; there would be an additional 10 miles.
17 And it says it will alleviate I-10 congestion. And
18 it's possible it might alleviate some of it south of town, west
19 of town. You're only going to move the truck traffic, so
20 that's -- That's not going to affect the downtown corridor,
21 since there's already a truck route that addresses that.
22 Really, traffic is caused by accidents. We don't
23 have enough volume on Phoenix freeways to really cause an
24 issue. I've lived in areas that have volume issues: Chicago,
25 New York, Boston.

2	**Purpose and Need, Truck Bypass**	
3	**Health Effects**	
4	**Traffic**	The statement related to reductions on arterial streets considers those arterials streets in and around the entire Study Area, not just in Ahwatukee Foothills Village. The traffic projections for Chandler Boulevard (see Figure 3-12 on page 3-29 of the Final Environmental Impact Statement do show a reduction with the proposed freeway when compared with conditions without the proposed freeway. The travel time comparison shown in Figure 3-17 on page 3-34 of the Final Environmental Impact Statement included a trip from Ahwatukee Foothills Village to Downtown Phoenix using Interstate 10, not the proposed freeway. This trip would take 5 or 6 minutes less with the proposed freeway in place when compared with conditions without the proposed freeway. The duration of level of service E or F (represents stop-and-go traffic) for the existing conditions and future conditions without the proposed freeway are shown in Figure 1-9 and 1-10 in the Final Environmental Impact Statement. In both conditions there are more than 3 hours of congested conditions during the morning and evening commuting periods on a number of the region's freeways, especially Interstate 10.

So I urge a no-build option because I don't see that it's going to benefit anybody but out-of-state drivers passing through, truck drivers including trucks coming from Mexico with different emissions standards much lower than our own.

And thank you very much.

In review of the alternate routes for this stretch of freeway, it makes absolutely no sense at all to tie it in to the I-10 Freeway any closer to the downtown area than the Loop 101 interchange between 95th and 99th avenues. By tying it in at the Loop 101 you also save the same distance for the future SR 801 running East to West to the South of I-10. The cost is not the issue, taking the bypassing truck traffic off of I-10 as it passes thru Phoenix is the issue.

1

I am opposed to any alignment of the South Mountain freeway that allows for trespass onto the Mountain Preserve or any excavation into the South Mountain.

the stops are, as everybody's -- all the traffic, the semi-trucks are coming from the west, California or wherever, and it all kind of bottlenecks at about 75th and doesn't clean up until about past the I-10 truck route, which is about 27th or whatever Avenue, so I can definitely see a need for this, and I'd like to see it happen, just because I'm stuck in my house out in the West Valley and have to commute to the East Valley, so that's all I have to say. Thank you.

THE FACILITATOR: Thank you.

Wes Lines. Wes Lines.

MR. LINES: Hello. Are you ready for me? I don't think I have three minutes' worth of stuff to say, but I just want to come down and put in my two cents' worth. My name is Wes Lines and I live in Laveen, I live at 51st Avenue, and I have seen -- I've lived there since 2001 and I have seen the traffic along 51st Avenue increase and increase and increase the whole time going south onto the Indian reservation and into the town of Komatke, and the road is completely overburdened and overwhelmed.

It's a county farm road, it doesn't have sidewalks or anything like that. That road is being used as a highway for people to go all the way to Tucson. You see people hitchhiking along with signs that say all the

Code	Issue	Response

(Comment codes begin on next page)

Code	Comment Document

way to Tucson, because that's how people get to it. That shows, in my opinion, that we need this freeway. I am in support of this freeway.

The casino is getting bigger and bigger and the idea of them putting people onto -- into this casino through 51st Avenue is just ridiculous. If you were to actually go and look at the road there's fatalities there all the time, there are crosses all over the road. I believe that we need this freeway.

And as far as the air quality -- the air quality, if there is a concern about air quality, then I believe that the freeway should go in, because that will keep the trucks moving along so they don't have to stop and start and stop and start from Baseline to Dobbins to Elliot and all the way down, which I see them do every single day. I would rather see them move that along at 50 miles an hour or 60 miles an hour or 70 miles an hour and just keep it moving along and not put the black dust up in the air. I'm 100 percent in supporting this. I have four kids that I'm raising there at 51st Avenue and Estrella, I plan on raising them there and living there for 10, 20, 30 years or possibly for the rest of my life, so I am 100 percent in support of this freeway and just wanted to come and say that.

Any questions that you gentlemen have for me?

The Loop 202 South Mountain Corridor plan has been stuck on the drawing board long enough. The money is there, people want it and it should be built as soon as possible. Let alone congestion, travel times will be reduced with this vital link between cities in the Phoenix Metropolitan Area.

Traffic will get worse between the current links in the next few years, let alone the next 20. There will be protest against building the new corridor, but being a public project, it is expected. At the end of the day, this project's benefits will outweigh the consequences by a lot. The project will be a boost to Arizona's economy and be a first class ticket out of the economic crawl that we have suffered during the crash.

1 This is an important and vital project to Maricopa County and Arizona, let's get this project done!

SOUTH MOUNTAIN PUBLIC HEARING
Public comments to reporter)
May 21, 2013
10:00 a.m.
REPORTED BY:
Bonnie Ponce, RPR
AZ Certified Reporter No. 50669

MR. LIPPEY: Mario Lippey.
So my comment would be I was concerned about -- I'm for the highway. However, where I live, which is the freeway -- the Foothills reserve area, right at the very end of Pecos, that's really close to the mountain.
And right now it's very quiet unless there are parties or loud vehicles that go through there. And those small noises bounce off the highway.
And with the highway coming so close to that area, my concern is that the noise levels will increase even if they put a barrier up. It will just bounce off the mountain.
In addition, the air pollution, again, we're right up against the mountain. The winds usually come from the south to north, anecdotally. I don't have any research.
But I'm concerned about the air quality being trapped right where we're located right up against the mountain. And I didn't read everything on the air quality, but those are my two main concerns, the air quality and the noise.

Code	Issue	Response
1	**Noise**	As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes that may be elevated above the road, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Phoenix metropolitan area and across the country.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
4	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document
1	Allan Lira Rios Document Created: 5/21/2013 1:58:12 PM by Web Comment Form I agree with the proposed plan because of its impact economically. This plan took in the account of the wildlife and its enviromental impacts and they have made sure that it will not affect the land as much as all the alternatives would have. The only concern I would have would be with its cutting south mountain but the freeway could be used as a channel to increase the amount of people that can enjoy South Mountain Park. The cutting could also increase the trails that the mountain could provide. I believe that this freeway would open up many opportunities to economic development like a hospital and it would impact the Laveen town in a very positive way by bringing in a lot more businesses that will also increase the job opportunities that this community can have. I think this plan will help the Laveen area by making it a lot easier for it to get to things like Central Phoenix and Tempe. Overall I think this is a good plan and I fully put my backing behind this project.

Code	Issue	Response
1	**Section 4(f) and Section 6(f)**	The "channel" would allow people visual, but not physical access to Phoenix South Mountain Park/Preserve. The freeway itself would not result in additional trails because there would be right-of-way fence limiting access to the park from the freeway and there would be no pull-offs for trailheads.

I am not opposed to the freeway I just think the W101 western option will have the least amount of impact on the communities. I live in Laveen and am not happy about looking out my back door to see a freeway. The purpose of us living that far out was to have large animals and a country feeling.

I am writing to express my objection to the Loop 202 South Mountain Freeway Project. I understand that the idea of this new project is to relieve traffic congestion, but this is at the expense of the natural environment, Native lands, and air quality. It is my strong belief that better urban planning (e.g., better public transportation, improved pedestrian and cycling infrastructure and increased investment in central Phoenix schools) will encourage Arizonans to move closer to the city. This would improve our communities by decreasing polution, boosting local business economy (rather than that of large corporate chains, which dominate our suburbs) and creating a healthier, more active community, thus, abrogating the presumed need for this expensive and harmful project. Thank you for your consideration.

Code	Issue	Response
1	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. No Gila River Indian Community or other Native American land is to be used in development of the proposed action.
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Secondary and Cumulative**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.
5	**Alternatives**	The proposed freeway is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. The *Regional Transportation Plan*, as described on pages 1-5 and 1-10 of the Final Environmental Impact Statement, addresses freeways, streets, transit, airports, bicycle and pedestrian facilities, freight, demand management, system management, and safety. The proposed freeway is only one part of the overall multimodal transportation system planned to meet the travel demand needs of the Maricopa Association of Governments region.

To: ADOT

My name is Ray Lopez and I am a long time resident of Ahwatukee. I live approximately .8 miles from the proposed highway, just north of the high school. I am writing to you today to voice my concerns with the hope that something can be done to stop the highway from being built. Rarely, if ever, have I taken the time to state my position against any government or private project. However, I am strongly opposed to the highway and can not stand by without voicing my opinion.

(1) First I would like to say that the builder of our home did NOT make it clear that this highway was a real possibility 19 years ago when we had our home built. Some would say that I did not do my due diligence in researching this matter before buying, but I believe the builder was also negligent in offering us material information on the project.

This highway has a vast impact on the residents of Ahwatukee as anyone who has read a newspaper would know. The following are just a few of my concerns

(2) The church, the school and the hundreds of homes that would be destroyed,

(3) (4) The air quality for those in the neighborhoods along the highway that would have to breath in the truck fumes. The adverse effect on our children.

(5) The noise quality that would be ever present 24 hours a day.

(6) The increased traffic congestion on the streets as they look to alternate routes just to go shopping, going to a restaurant or going to the high school.

(7) The impact to South Mountain which is sacred to the GRIC.

Code	Issue	Response
1	**Acquisitions and Relocations**	Arizona real estate law requires developers to disclose adverse conditions such as construction of a future freeway in a public document (5 Arizona Administrative Register § 650, R4-28-A1203). Realtors are required to disclose to a potential buyer any information that may affect the property (see Final Environmental Impact Statement page 4-13). Individuals considering potential sale of a property should contact an attorney with any questions regarding their responsibility to disclose information about the proposed South Mountain Freeway.
2	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Health Effects**	
5	**Noise**	
6	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
7	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

The potential for a hazardous waste accident involving trucks carrying dangerous materials.

This highway is nothing more than an alternate truck route costing billions of dollars. Can't we negotiate with GRIC in good faith to move the highway a couple of miles south onto their land if it is truly needed?.

I hope that our voice will truly be heard and that serious consideration will be given to our concerns.

Sincerely,

Ray Lopez

Subject: No Build 202
Date: Wednesday, July 24, 2013 7:30:44 PM

1 2 3 4 5

This project may have looked good on paper in the early 1980's. Today it is simply not a viable option.
The cost alone should justify a No Build Option.
The proposed 202 SMF will destroy one of Phoenix's best neighborhoods, desicrate South Mountain, and add more pollution to the Phoenix Metro Area.
Add this to the fact that ADOT desires to construct a 'low-budget' freeway, in a state rife with government agency mis-management, this is not a good idea.
As a 35 year resident of Arizona I know in depth the magnitude of the entire freeway project, and cannot think of any reason a state agency would advocate such a now ridiculous (like not connecting to the 101 on the west alignment) project only leads one to conclude that where there are billions of dollars to be bid out, graft and corruption rule the day.

From: Mike Luecker
To: Projects
Subject: South Mountain Freeway
Date: Wednesday, July 24, 2013 10:08:33 PM

Regarding the Alternatives considered:

I attended the public meeting several years ago for the I-10 CD collector roads. As presented during this meeting, traffic projections/delays were significant even with the assumption of the South Mountain Freeway (SMF) as being built.

In general terms, both the SMF and I-10 CD roads are multi-billion dollar projects. Based on budget/funding issues/short-falls, it appears that building both is not foreseeable. It would appear reasonable that ADOT determine which project is more beneficial. Unfortunately, I can't find any mention of the I-10 CD collector road project within the SMF EIS. They appear to have been analyzed as independent projects, rather than determining which one would best improve traffic and reduce congestion. As I understand it, ADOT has 'scrapped' the I-10 CD road project (for reasons I'm not sure that have been presented to the public, as follow up to the public meetings that occurred several years ago). ADOT should not be moving forward with SMF just because the EIS/engineering/funding/etc is further along than the I-10 CD project.

1

From my general/cursory viewpoint, which are based on the east valley commute issues at I-10/60/I-17, the I-10 CD roadway project may improve the daily commuter traffic more than the SMF. I further do not see how the SMF will 'relieve' I-10 commuter traffic in the west valley. ADOT seems to agree with this, based on the planned/future 'I-10 Reliever project in the west valley'. I understand that SMF will complete the freeway system that has been previously planned and also reduce truck traffic within the Phx Metro interior freeway system (since SMF would serve as a truck by pass). However, if SR 85 is improved to (near) interstate standards, along with SR 303, this would eventually serve as a more effective truck bypass, the I-10 CD road project may serve as a better alternative to the SMF.

2

3

Therefore, if I-10 CD (east valley) and I-10 reliever (west valley) improve commuter traffic (as compared to SMF) and other future improvements (SR 85/303 and possibly future I-11) improve truck bypass (as compared to SMF), then why is SMF taking priority over these other projects, other than to 'complete the freeway system'?

REQUEST FOR ADDITIONAL INFORMATION & ALTERNATIVE ANALYSIS IN SMF EIS: At minimum, ADOT should explain why I-10 CD roadway project was shelved and SMF has moved forward (based on technical/traffic analyses and comparisons). In addition, I would request that the SMF evaluate the I-10 CD and I-10 Reliever projects as an alternative, which includes a life-cycle cost-benefit comparison.

1

Code	Issue	Response
1	**Alternatives**	The proposed freeway is part of the multimodal *Regional Transportation Plan* (see Draft Environmental Impact Statement page 1-5 for more information regarding the *Regional Transportation Plan*). The *Regional Transportation Plan* includes other freeway projects, such as State Route 30 and State Route 303 Loop, that provide additional capacity and mobility in the region. All of these transportation facilities work as a system and rely on each other to provide optimum performance. The determination of purpose and need for the proposed project included an assumption that substantial improvements would be made to the Interstate 10 corridor between State Route 51 and U.S. Route 60 (see Final Environmental Impact Statement page 1-13). Even with these planned improvements to Interstate 10, the proposed project remains a vital component of the Regional Freeway and Highway System. In 2012, the Maricopa Association of Governments and Arizona Department of Transportation decided to cancel the ongoing Interstate 10 Corridor Improvement Study. The Maricopa Association of Governments, in coordination with Arizona Department of Transportation, recently completed the Southeast Corridor Major Investment Study (see <azmag.gov/Projects/>) and developed new multimodal concepts for addressing transportation issues in the Interstate 10 corridor. The Arizona Department of Transportation and Maricopa Association of Governments plan to initiate a new study to identify multimodal improvements in the Interstate 10 and Interstate 17 corridors (also referred to as the “Spine”).
2	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.

1

I support the South Mountain Freeway. I support the 59th St. alignment. I support building it as soon as possible.

I live in Laveen and have heard people from Ahwatukee discuss not wanting "those people" in their neighborhood. I am very disappointed in that perspective. The freeway will provide access, reduce congestion in other parts of Phoenix and finally connect the east and west valley from the south. I am in support.

Thank you,
Linda Lujan

MR. MACEWEN: All right. My name is Gary MacEwen and I'm a resident of the Foothills and I had a chance to review the draft environmental impact study, and there were several issues that I had with the study, but I really just want to talk about a couple of the main ones that I had. First, the configuration of I-10 as it enters and leaves Phoenix allows for the preferred location of the South Mountain Freeway to act as a convenient bypass for any traffic having no business in Phoenix, just passing through. This I think will result in a significant volume of passthrough traffic using the South Mountain Freeway right from the very beginning when it opens and then only getting worse from there.

I think the result of that will be a significant negative impact on the quality of life for residents along the freeway. And of particular concern to me is the use of the Pecos alignment for the E1 alternative as described in the report which in my opinion doesn't sound like it's being considered as an alternative at all. It really sounds like it's an imperative.

You know, there's the no build option, but that's the way it's put in the report. It's really not considered an option in my -- the way I

1	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
3	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

read the report. The freeway and then the anticipated volume of traffic that goes with that may be a benefit to the metropolitan area as a whole, but I think it will be an excessive burden on residents of Ahwatukee Foothills. The accompanying noise, the air quality effects, the visual impacts, the significant negative impact on anyone living within miles of the freeway, not to mention the detrimental effects on property values in the area.

The suggestion of a wall as a noise barrier to me is offensive and unacceptable. So I think this bypass issue has been greatly downplayed in the draft environmental impact study, and I don't see any convincing argument that this freeway will not be used, as I've tried to describe, as a bypass.

Second, I'm not convinced that ADOT has done everything within its power to find a way to locate the freeway, at least part of the freeway, on so-called community lands. Therefore, I think ADOT must throw out the E1 alternative. And if it believes that there is no other alternative to building the freeway, the South Mountain Freeway, that it's got to go back to the community and try a little harder to find a way to locate the freeway a little farther to the south. That's all I have.

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
5	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Noise**	
7	**Air Quality**	
8	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
9	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
10	**Noise**	Noise barriers are designed to provide a substantial reduction in noise levels along freeways, but do not and cannot eliminate noise from passing into nearby neighborhoods. Just because noise can be heard does not mean that noise barriers are ineffective. Even at the levels considered "acceptable" by the Arizona Department of Transportation Noise Abatement Policy and Federal Highway Administration regulations, noise is still readily audible and can be heard for some distance from the freeway.
11	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document

Code	Issue	Response
12	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.

Subject: South Mountain Freeway - Public Comments

Dear Sir or Madam,
Fundamentally I believe the South Mountain Freeway is a truck by-pass for I-10 through central Phoenix, with some helpful metro east-west connectivity. It has no place on an alignment adjacent to Ahwatukee. (1, 2)

My comments: (3, 4, 5, 6)

1. I do not believe that it belongs on the Pecos Rd alignment alongside residential Ahwatukee and through South Mountain and South Mountain Park.
2. I do not believe that 59th Avenue is the appropriate connection to I-10 on the west side. Possibly faulty modeling aside, it appears to inject tremendous traffic into a high congested point on I-10.

My thoughts on a solution: (7, 8, 9)

1. I believe the ideal connection is Riggs Rd to I10-101 in Glendale.
2. Lacking that, alternatives should be I10 Pecos, then run SOUTH of Pecos and around South Mountain, then to I10-101 Glendale.
3. Lacking that…AZ85 is your truck bypass, but then you lose southern east-west connectivity within the metro Phoenix area.

Bottom line…NO to the Pecos Road alignment.

Regards, Bill Mager

8	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

2 In these hard financial tiimes please focus tax payer money on maintenance of current infrastructure around the state.

3 4 The freeway would negatively affect the environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more.

5 6 The freeway will also exacerbate urban spread and further burden Arizona's taxpayers by having more infrastructure to maintain while the long term economic outlook remains cloudy.

Please select the No Action Alternative.

Thank you.

Sincerely,

Mr. Omid Mahdavi
5257 N Via La Doncella
Tucson, AZ 85750-7074

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.
3	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Biology, Plants, and Wildlife**	
5	**Secondary and Cumulative**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.
6	**Purpose and Need**	The worldwide recession that began in late 2007 generated a substantial downturn in growth rates for new housing and employment across the United States. Arizona particularly suffered the effects of this recession because, beginning in the early 2000s, Arizona in general and Maricopa County specifically experienced some of the fastest population, housing, and employment growth rates in the country. Because the need for the proposed freeway is predicated in part on projected growth, one might conclude the recession reduced that need. An economic downturn associated with a given recession is, however, generally considered a short-term phenomenon with respect to the longer-term planning horizon established for the proposed freeway. Socioeconomic indicators have steadily and consistently increased in the region since the early 1900s. The critical factors underlying these indicators remain unchanged. (See the sidebar on Final Environmental Impact Statement page 1-11.)

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

Great information
Thorough analysis
Excellent video presentation
Knowledgeable staff answered all my questions

1 Would love to see it built.

the freeway -- the city or whatever. But anyway, thank you.

* * *

MR. PALERMO: My name is Joe Palermo. I'm in favor of the Loop 202 South Mountain Freeway. I commute daily for work on the I-10 through downtown, and I believe that the Loop 202 will significantly help the flow of traffic through downtown.

Additionally, I believe that the traffic that is stuck in idling in downtown contributes significantly to the poor air quality of our metropolitan area. And I believe that traffic will inevitably increase over the coming years. And while we have this opportunity to build the 202 freeway, we should proceed forward, rather than be behind the curve and potentially find ourselves in a gridlock situation.

Additionally, I am an environmental consultant as my career. And I believe that this will help me and my family with opportunity to potentially be part of this important infrastructure project. And so additionally I'm in favor of it, not only for reasons for the city, but also for myself personally. Thank you.

* * *

MR. MARINO: Christopher Marino, and I'm for the freeway. I have lived in Ahwatukee for since

Code	Comment Document

1996, and the need is very prevalent. Especially when I-10 happens to be closed, it's a zoo getting out of Ahwatukee into the Phoenix area. Other times, even going to the west side takes forever. This freeway really would help out the whole situation.

I've lived near a freeway in Tempe as I was growing up, I didn't grow an extra arm or anything like that, so freeways are okay. I don't believe that putting it on the Gila River Indian Reservation should be explored any further. The routes have been there for years; people who bought houses in the path should have done their homework. And it's a need -- it's a necessity. It's not even a need; it's a necessity in that area, and it needs to be built today. That's all I've got.

* * *

MR. NORRIS: I'm in favor of building. I've worked for the City of Phoenix for almost 20 years, retired. But I watched this project and I hope that it still will be -- should have been constructed 20 years ago. Congestion around the Broadway Curve is a major problem getting back and forth from the East Valley. This would take off major trucks and people that don't need to go through Central Phoenix. They would have an alternative to go around, get off on Pecos, and then get

CALLER REMARKS/QUESTIONS:

I do believe that the extension of the freeway would diminish congestion, a faster way for people coming from the south to get to the west valley. It's been proposed seemingly since 1980 and I never seen why it hasn't been done because it's something that would really work. Anyways, thank you for your time.

Subject: Loop 202 South Mt. Comment #1316263470
Date: Wednesday, June 12, 2013 8:32:46 AM
Attachments: image001.png

Here is another comment concerning the S. Mt. project:

6/11/2013 5:24:32 PM
To Whom It May Concern:

1 2 3 4 5

I'm writing today to express my adamant protest of the proposed South Mountain Freeway. Not only would this proposed Freeway bring an enormous amount of air and noise pollution to the Community of Ahwatukee and it's residents, it would also bring the possibility of hazardous waste accidents, mammoth congestion for local traffic, and ruin the appearance and value of my property.

6 7

In addition, the impact of the proposed South Mountain Freeway is environmentally unjust and disproportionately high to the 70,000 or so residences of the Ahwatukee and Gila River Indian Community populations.

Please accept this email as my formal protest of this proposed freeway.

Sincerely,
Kelli Marshall

Thanks,

Rusty Crerand

2013

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

The construction community is here to help preserve the environment just like everyone else. We feel the impact is minimal compared to the benefits this highway will provide, less traffic in the middle of phoenix, added art moments along the highway and keeping the areas around the highway clean and being involved in the community.

Subject: South Mountain Freeway Comments

Dear Sir/Madam:
Please take into consideration the following comments with regards to the Draft Environmental Study which is currently open for public comment.

-As a resident of the Ahwatukee Foothills, I am very concerned about and opposed to the proposed plans to build the South Mountain Freeway along the current proposed path along Pecos Road. The Foothills area is unique in the Phoenix region in that it is one of the few areas that is predominantly residential in nature. The proximity to South Mountain Park offers unique views, and buffers the area from some of the Air Quality issues that plague downtown Phoenix. By proposing to build the freeway long the proposed path, I am concerned that it will adversely affect the character of the region, and greatly reduce the air quality and significantly increase the noise pollution in the area. Reduction in air quality will especially affect local residents who are already suffering air-quality related health issues, but it will also significantly affect the large number of children whose schools are in close proximity to the proposed path. Based on a review of the existing data, I strongly believe that routing the proposed freeway, which will largely act as a Phoenix Bypass and truck-route, further to the south and away from the South Mountain area is a much preferred alternative.

Specific concerns with the DEIS:
1) Regarding the Qualitative Hot Spot Analysis for PM2.5 and PM10 Nonattainment and Maintenence areas: The hotspot analysis must demonstrate that the proposed project will not "cause or contribute to any new violation of any standard in any area; increase the frequency or severity of any existing violation of any standard in any area..." No portions of the hot spot analysis provided specifically addresses the proposed path near the Ahwatukee foothills. In addition, some of the factors that should be considered as noted in the EPA's Guideline on completing this hotspot analysis are not addressed at all within the DEIS - some of these

Code	Issue	Response
1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Noise**	
5	**Health Effects**	
6	**Purpose and Need, Truck Bypass**	
7	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
8	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study.

(Response 8 continues on next page)

Code	Comment Document
11 12	include comments and analysis regarding the fact that South Mountain itself (and other local topography) creates a signficant barrier to dispersal of PM2.5 and PM10 particulates. The analysis also appears to not significantly address the issue of increased truck traffic along this route due to the fact that it will act primarily as a bypass to downtown Phoenix. Assumptions made regarding truck traffic fail to address the significant amount of international traffic whose emissions are not regulated by the US government. The hotspot analysis also fails to include evaluation of local meteorology, climate and seasonal data - specifically issues with atmospheric inversions and prevailing wind in combination with local topography that may restrict PM2.5 and PM10 particulate dispersal. The provided analysis within the DEIS also does not appear to include analysis with regards to re-entrained road dust as required for all PM10 hot-spot analyses.
11	
10	2) No PM2.5 analysis was provided - while the region may not yet be classified as being in non-attainment, it is likely that Phoenix is in non-attainment for PM2.5. While the qualitative analysis was not required per the letter of the law, it should be done to be in compliance with the spirit and intent of the law.
13	3) Within the qualitative analysis for PM10, the DEIS indicates "four service traffic interchanges were identified for review..." Including one along Desert Foothills Parkway - however no data or summary could be found for this analysis at this location within the document.
14	4) Within the hotspot analysis some numbers and estimated percentages for heavy trucks provided at 2-7%. It is not clear how this assumption was derived, nor does it take into account % of vehicles that may not be federally regulated as they may be coming from across the border where emissions restrictions are not as stringent. The analysis further concludes that "under the 2035 action scenario, the percentage of trucks would remain at the 2020 level..." It is not clear how this assumption is valid and further detail on how these numbers were derived would be appreciated.
15	
16	5) "The transportation conformity rule also requires that the analysis consider the year of expected peak emissions from the project" - it is not explained within the document how the peak is determined and what assumptions are made in identifying the year of expected peak emissions.
17	6) Data provided is dated, and argues that most of the exceedances were caused by high-wind exceptional events - more recent data is available and should be utilized. Phoenix has significantly changed since 2009, the year whose data was used to draw conclusions in this analysis. Why not use all available data and demonstrate that it is repeatable year after year? The analysis further carries on to make claims that "Fugitive dust sources are the largest contributors to ambient concentrations of PM10; Deisel exhaust is not a major contributor to ambient concentrations of PM10; and The proposed improvements would reduce travel time and congestion on the freeways and arterial streets in the area, thereby reducing exhaust emissions of PM10" None of these claims are supported with data referenced. Not only that, but the last claim regarding proposed improvements reducing travel time and congestion merely presumes that congestion may be reduced in some regions - however the traffic has to go somewhere, so it will increase in other areas. This claim also does not appear to take into account population growth in the area, which will further increase overall traffic. If the South Mountain Freeway is expected to reduce traffic around the Broadway Curve, the claim is nonsensical - Studies of traffic from Ahwatukee and points south that contribute to the
18	
19 20	

Code	Issue	Response
8 (cont.)		In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
9	**Air Quality**	Emissions from road dust and additional sources were considered in the quantitative project-level particulate matter (PM_{10}) hot-spot analysis prepared for the proposed project. The results of the analysis are summarized in the prologue to the Final Environmental Impact Statement (page xiii) and are more fully described beginning on page 4-68 of the Final Environmental Impact Statement. The carbon monoxide and particulate matter (PM_{10}) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.
10	**Air Quality**	A particulate matter ($PM_{2.5}$) analysis is not required since the area is in attainment for the particulate matter ($PM_{2.5}$) National Ambient Air Quality Standard.
11	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
12	**Air Quality**	Diesel exhaust from trucks is not a major contributor to concentrations of particulate matter (PM_{10}) in this area. Dust is the largest contributor in Maricopa County. Review of particulate matter (PM_{10}) data collected by the Maricopa County Air Quality Department suggests that locations adjacent to industrial, mining, or agricultural areas generally have the highest concentrations (see Final Environmental Impact Statement page 4-72). Locations adjacent to freeways typically have particulate matter (PM_{10}) concentrations within standards.

(Responses continue on next page)

Code	Comment Document
21	congestion at the Broadway Curve region indicate that most people are driving to jobs in Tempe and Downtown Phoenix. Diverting this traffic along the proposed south mountain freeway for these drivers makes no sense.
15	7) With regards to the comments on heavy-duty deisel emissions standards - these standards only apply to vehicles registered in the USA. It is inappropriate to presume that none of the traffic will be from across one of our international borders - either from Mexico or from Canada. Pollutants from these vehicles where less stringent emissions standards are applied must be taken into account in this analysis. With no current designated path for the CANAMEX corridor around Phoenix, this analysis becomes even more critical.
22	8) With regards to the tier II emissions standards: The analysis is predicting a decrease in nitrogen oxide emissions by 61% and VOC emissions by 24% between 2004 and 2030 - it is not clear how these values were derived. While sulfur levels were mandated to meet a certain level, has data been collected to validate that these levels have been met? In addition, what assumption is being used for the distribution of vehicle age on the roadways?
23	9) Within the DEIS, a study from Denver with regards to traffic-related air pollution was used to draw conclusions with regards to modeled levels of MSATs vs actual measurements - The summary does not discuss how accurate the various models were when compared to actual measurements - it only seems to indicate that dispersion model results were generally lower than monitored concentrations - in other words, the model underpredicted the actual levels of MSATs. It is unclear whether a) actual measured concentrations of MSATS remained below risk values, b) actual measured concentrations dropped off sharply within 50 meters of roadways c) how much higher the actual MSAT concentrations tended to be along highways vs the modeled concentrations.
5	10) it is clearly stated within the summary regarding a Critical Review on Emissions, Exposure, and Health Effects that "Overall, researchers felt that there was sufficient evidence for causality for the exacerbation of asthma" - Building this freeway so close to a residential area, and so close to schools will put residents and children especially at greater respiratory illness risk. Other studies corroborate this data, indicating that children that live next to freeways can develop permanent lung damage.
13	11) In the conclusions section the DEIS indicates that "the qualitative analysis of PM conducted for the proposed action was based on a review of monitoring site that would most closely resemble two interchange locations along the proposed action and the projected characteristics of the two proposed interchanges". Selecting two interchange locations is okay, however the analysis was not completed in an area that would likely see the most significant change. There is no current air monitoring along the Pecos Corridor - this area currently sees limited residential traffic as the Ahwatukee Foothills is an isolated community - building South Mountain Freeway along this path will significantly change and alter the type and volume of traffic in the area. The analysis needs to be provided to clearly demonstrate that there would be no exceedance of PM10 or PM2.5 standards. In addition, the analysis of the 2 locations ultimately reviewed for the DEIS is not readily found within the document for review.
24	Aside from the environmental and potential health effects of building this freeway, I am not in favor of cutting into South Mountain Park. While no official hiking trails exist in the proposed path, the land can easily be explored and enjoyed by hikers and other

Code	Issue	Response
13	**Air Quality**	Although a qualitative analysis of particulate matter (PM_{10}) was presented in the Draft Environmental Impact Statement, a quantitative project-level particulate matter (PM_{10}) hot-spot analysis is included in the Final Environmental Impact Statement. The results of the air quality updates are summarized in the prologue to the Final Environmental Impact Statement (page xiii) and are more fully described beginning on page 4-68 of the Final Environmental Impact Statement. The carbon monoxide and particulate matter (PM_{10}) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.
14	**Traffic**	The Maricopa Association of Governments regional travel demand model forecasts approximately 10 percent truck traffic on the proposed freeway in 2035 (see Final Environmental impact Statement pages 3-64 and 4-72). The forecast truck traffic is based on existing traffic studies and projected socioeconomic data. This percentage is similar to current traffic conditions on Interstate 10 between State Route 101L and Interstate 17 and on US 60. Commercial trucks would use the proposed freeway. As with all other freeways in the region, trucks would use it for the through transport of freight, for transport to and from distribution centers, and for transport to support local commerce. Nevertheless, the primary users of the proposed freeway would be automobiles. Vehicle classification counts (2007) from the Arizona Department of Transportation for Maricopa County show passenger vehicles and other nontruck vehicles make up over 90 percent of all traffic on the regional freeway system, and it is expected these percentages would not vary with the proposed freeway. Further, it is not expected that the entire 21 percent of through truck traffic (by tonnage) using Interstate 10 would divert from Interstate 10 to use the proposed freeway (see Final Environmental Impact Statement page 3-64). Trucking destinations in the Phoenix metropolitan area would still prompt trucks to enter congested areas. Choosing to travel on the proposed freeway versus Interstate 10 would not produce substantial travel time benefits. Therefore, it is expected that “true” through truck traffic (not having to stop in the metropolitan area) would continue to use the faster, designated, and posted bypass system of Interstate 8 and State Route 85.
15	**Trucks**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
16	**Air Quality**	As noted on page 4-76 of the Final Environmental Impact Statement, the year of highest particulate matter (PM_{10}) emissions is expected to be the year of highest vehicle miles traveled, 2035. According to the Maricopa Association of Governments *2012 Five Percent Plan for Attainment of the PM-10 Standard* for the Maricopa County Nonattainment Area, the largest single source category is paved road dust, including track-out, at 20 percent. By contrast, on-road mobile vehicle exhaust, tire wear, and brake wear contribute 6 percent. The relative contribution of these emissions is expected to represent about the same contribution in the future; therefore, the highest projected vehicle miles traveled occur in the design year, 2035. The analysis year(s) was determined through the process established by the Arizona Department of Transportation interagency consultation procedures [40 Code of Federal Regulations § 93.105(c)(1)(i)]. The selection of 2035 as the peak year of emissions is appropriate.

Code	Comment Document

2 25

recreationalists. In addition, the Ahwatukee Foothills was not designed to be compatible with an adjacent freeway to the south - if there were any hazardous spills (especially those that may result in a gaseous or airborn particulate plume) along this stretch of freeway, the local surface streets do not enable swift evacuation of the area.

I am submitting these comments in opposition to the freeway, and am also requesting further analysis and clarification of the data as required around the effects on the Air Quality as a result of this project.

Respectfully Submitted,

Stephanie Martin

Code	Issue	Response
17	**Air Quality**	The project team strove to use the latest data wherever available. When new data became available, they were incorporated into the analyses. For example, the air quality assessment for impacts from carbon monoxide followed the U.S. Environmental Protection Agency guidelines in *Guideline for Modeling Carbon Monoxide from Roadway Intersections* (A-OAQPS, 1992). Inputs to the model were based on U.S. Environmental Protection Agency-recommended values or were selected to provide a conservative estimate of impacts. Modeling methodology and results was reviewed by the Federal Highway Administration, Arizona Department of Transportation, and Maricopa Association of Governments.
18	**Purpose and Need**	Dispersing congested traffic to freeways that provide improved levels of service translates into improved fuel economy, faster travel times, and decreased air pollution. Even though the region's freeways are now congested and operate poorly, conditions in 2035 would be substantially worse (see Draft Environmental Impact Statement pages 1-21 and 1-22). By 2035, east- and westbound motorists on Interstate 10 between State Route 101L (Agua Fria Freeway) and State Route 202L (Santan Freeway) are expected to experience stop-and-go driving for over 3 hours every day. This is for a distance of nearly 30 miles. A new freeway in the Study Area would distribute commuters over an additional freeway facility. As a result, the duration of stop-and-go traffic on the region's freeways would be reduced.
19	**Traffic**	The Federal Highway Administration and the U.S. Environmental Protection Agency approved the air quality conformity determination that includes the Maricopa Association of Governments regional travel demand model that produced the traffic projections used in the traffic analysis for the projecty (see Draft Environmental Impact Statement page 3-27). Traffic projections are regularly updated by the Maricopa Association of Governments. The traffic projections in the Draft Environmental Impact Statement are from a model adopted in 2011. Key model inputs used to forecast travel demand included (see Table 3-7 on Draft Environmental Impact Statement page 3-27): · socioeconomic data based on the adopted general plans of the Maricopa Association of Governments members, along with population and economic forecasts and the existing and planned transportation infrastructure as identified by the Maricopa Association of Governments members · the anticipated average number of vehicle trips within the region (including those to and from the region's households) on a daily basis (this number is tracked regularly by the Maricopa Association of Governments) · the distribution of transportation modes used by travelers in the Maricopa Association of Governments region (also tracked regularly by the Maricopa Association of Governments) · the capacity of the transportation infrastructure to accommodate regional travel · the future transportation infrastructure established using *Regional Transportation Plan*-planned projects and improvements and from known arterial street network improvements assumed to be made by the County, Cities, and private developers. In June 2013, the Maricopa Association of Governments approved new socioeconomic projections for Maricopa County. The purpose and need and analysis of alternatives were updated and reevaluated using these new socioeconomic projections and corresponding projections related to regional traffic. The conclusions reached in the Draft Environmental Impact Statement were validated in the Final Environmental Impact Statement (see Chapter 3, *Alternatives*).

Code	Comment Document

Code	Issue	Response
20	**Purpose and Need**	The travel time comparison shown in Figure 3-17 on page 3-34 of the Draft Environmental Impact Statement included a trip from Ahwatukee Foothills Village to Downtown Phoenix using Interstate 10, not the proposed freeway. This trip would take 5 or 6 minutes less with the proposed freeway in place when compared with conditions without the proposed freeway.
21	**Purpose and Need**	An analysis of the origins and destinations of projected freeway users is presented in Figure 3-18, on page 3-36 of the Final Environmental Impact Statement. Freeway users are defined as those motorists who pass through the bend of the freeway (around the South Mountains). So, this does not count motorists in Laveen Village who go to Interstate 10 (Papago Freeway) and motorists in Ahwatukee Foothills Village who go to Interstate 10 (Maricopa Freeway). The results of the origin-destination analysis show that 73 percent of the traffic going around the South Mountains has origins or destinations in the area within or around the Study Area and supports the conclusion that the proposed action would serve east–west mobility consistent with commuting movements.
22	**Air Quality**	The data presented were based on the U.S. Environmental Protection Agency's MOBILE6 national defaults, including the national default vehicle fleet mix and U.S. Environmental Protection Agency's fuel control programs.
23	**Air Quality**	All national emission and dispersion models are validated before general use. However, models may certainly over- or under-predict depending on many factors. More importantly, however, is that there are many sources of mobile source air toxics other than mobile sources. As noted on page 4-72 of the Final Environmental Impact Statement, emissions from on-road sources are the largest contributors (by weight) of only two of the seven priority mobile source air toxics. As a result, levels of mobile source air toxics near roadways are often determined by these other sources.
24	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
25	**Hazardous Materials**

RE: Public Comment on the Draft Environmental Impact Statement for the Loop 202 South Mountain Freeway Study

Public Comment on the Draft Environmental Impact Statement for the Loop 202 South Mountain Freeway Study

Per Chapter 4 page 65 of the EIS transportation projects require an analysis that "… must document that no new local PM10 violations will be created and the severity or number of existing violations will not be increased as a result of the project" (FHWA 2001a). This issue is addressed through a "hotspot analysis" in PM2.5 and PM10 nonattainment and maintenance areas" found on pages 65-68 of the EIS. It is on this analysis that my comments will be directed.

First a few preliminary observations. The draft EIS states that:

> Four service traffic interchanges were identified for detailed review based on LOS and/or high traffic volumes during the evening peak hour of travel. They were Van Buren Street, Southern Avenue, Desert Foothills Parkway, and 40th Street. The 83rd Avenue interchange was included with the W101 Alternative because no interchange is planned at Southern Avenue with the W101 Alternative.

1 **Comment:** This detailed review for PM10 is found not found in the draft EIS. The tables following the above statement relate to CO only. Given that the above occurs beneath the heading of "Particulate "Matter" the assumption would be that PM10 is the pollutant of interest in the discussion.

2 **Comment:** It should be noted that no air monitors (either state or county) exist along the proposed route, in particular in the Awahtukee area, south of South Mountain. In the absence of specific monitoring data the actual impact of the freeway to the air shed cannot be measured.

Comment: Air monitoring should be performed to ensure "that no new local PM10 violations will be created and the severity or number of existing violations will not be increased as a result of the project". The qualitative analysis is insufficient given that the area is in non-attainment of the PM10 standard (and likely non-attainment of PM2.5 as well). Since monitors are affected by local emissions sources, this exercise provides no meaningful insight into the impact that a freeway will have on local air quality since the confounding variables make statistical correlation of particulate readings with proximity to a highway impossible.

3 **Comment:** A quantitative analysis for PM2.5 should be performed given the fact that the area may also be designated non-attainment for this pollutant as well.

Since no quantitative data is available, the draft EIS performs a "qualitative PM10 hot-spot conformity analyses". The qualitative analysis compared ambient concentrations of PM10 at five MCAQD PM10 monitoring sites in the Phoenix area.

PM10 Monitoring Locations, Results, and Nearby Road Characteristics, 2009

Site Name (Location)	Maximum 24-Hour PM10 Value	2nd Maximum 24-Hour PM10 Value	Number of Exceedances of PM10 Standard	Annual Average (ug/m3)	Nearest Freeway	Distance from Freeway

Code	Issue	Response
1	**Air Quality**	Although a qualitative analysis of particulate matter (PM_{10}) was presented in the Draft Environmental Impact Statement, a quantitative project-level particulate matter (PM_{10}) hot-spot analysis is included in the Final Environmental Impact Statement. The results of the air quality updates are summarized in the prologue to the Final Environmental Impact Statement (page xiii) and are more fully described beginning on page 4-68 of the Final Environmental Impact Statement. The carbon monoxide and particulate matter (PM_{10}) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.
2	**Air Quality**	Data from various Maricopa County Air Quality Department monitoring sites were used in the air quality analyses. Siting, operation, and recording information from monitoring sites are the responsibility of the Maricopa County Air Quality Department. See <maricopa.gov/aq/>. The monitoring information used in the air quality analyses is discussed in greater detail in the air quality technical report prepared for the project which is available on the project Web site at <azdot.gov/southmountainfreeway>. The results of the analyses are summarized in the Final Environmental Impact Statement. According to Environmental Protection Agency guidance, new monitors are not necessary to analyze air quality impacts.
3	**Air Quality**	A particulate matter ($PM_{2.5}$) analysis is not required since the area is in attainment for the particulate matter ($PM_{2.5}$) National Ambient Air Quality Standard.

Code	Comment Document

	(ug/m3)	(ug/m3)				
Urban locations near freeways (<½ mile)						
Central Phoenix (16th Street/Roosevelt)	153	130	0	34.5	I-10 SR 51 SR 202L	¼ mile ¾ mile ¾ mile
Greenwood (27th Avenue/I-10)	229	123	1	41.2	I-10 I-17	200 feet ½ mile
Urban locations distant from freeways (>½ mile)						
Durango Complex (27th Avenue/Durango Street)	277	161	3	44.5	I-17	¾ mile
West 43rd Avenue (43rd Avenue/Broadway Road)	317	213	7	50.7	I-17	2½ miles
Rural Locations						
Buckeye (Highway 85/Maricopa County 85)	439	400	3	38.9	I-10	4 miles

The EIS states:

> The qualitative analysis compared ambient concentrations of PM10 at five MCAQD PM10 monitoring sites in the Phoenix area. These sites represented urban areas near freeways, urban areas distant from freeways, and rural areas.

And concludes:

> The sites near freeways typically have ambient concentrations below the NAAQS.

Comment: The 2009 data above is not the most current data available. The 2011 data, in fact, shows different results for these same monitors.

Code	Issue	Response

Code	Comment Document

PM10 Monitoring Locations, Results, and Nearby Road Characteristics, 2011

Site Name (Location)	Maximum 24-Hour PM10 Value (ug/m3)	2nd Maximum 24-Hour PM10 Value (ug/m3)	Number of Exceedances of PM10 Standard	Annual Average (ug/m3)	Nearest Freeway	Distance from Freeway
Urban locations near freeways (<½ mile)						
Central Phoenix (16th Street/Roosevelt)	308	307	8	39.5	I-10 SR 51 SR 202L	¼ mile ¾ mile ¾ mile
Greenwood (27th Avenue/I-10)	388	254	7	42.2	I-10 I-17	200 feet ½ mile
Urban locations distant from freeways (>½ mile)						
Durango Complex (27th Avenue/Durango Street)	436	277	8	48	I-17	¾ mile
West 43rd Avenue (43rd Avenue/Broadway Road)	396	292	7	47.9	I-17	2½ miles
Rural Locations						
Buckeye (Highway 85/Maricopa County 85)	385	296	9	43.7	I-10	4 miles

The data above is more typical monitor data and shows higher concentrations near freeways.

Comment: The draft EIS states "The sites near freeways typically have ambient concentrations below the NAAQS." Of the monitors closest to the freeway, the 2009 data shows several NAAQS exceedances:

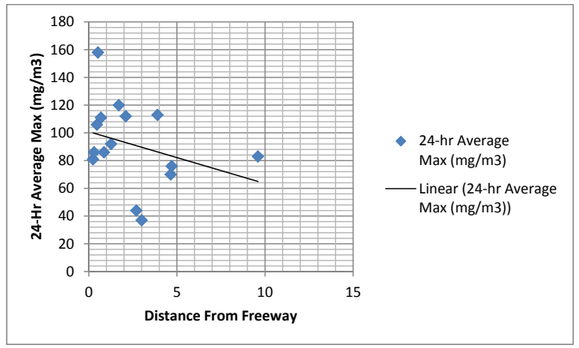
Site Name (Location)	2009 Number of Exceedances of PM10 Standard
Locations near freeways (<1 mile)	
Mesa	0
North Phoenix	0
Durango Complex	3
Dysart	1
Central Phoenix (16th Street/Roosevelt)	0
Greenwood (27th Avenue/I-10)	1
West Phoenix	1

More than half the monitors located less than a mile from a freeway exceeded the NAAQS PM10 standard in 2009. These exceedances appear to be "typical" given that more exceeded than did not.

Code	Issue	Response

Code	Comment Document

Comment: In addition to the above, plotting the 24-hr average maximum values of the various monitors vs distance from a freeway yields a strong positive correlation between distance an PM10 concentration (2010 data). The freeway would be expected to increase local PM10 concentrations.



Site Name	24-hr Average Max (mg/m3) 2010 Data
Buckeye	113
Central Phoenix (continuous)	106
Durango Complex	111
Dysart (continuous)	81
Glendale (continuous)	92
Greenwood	158
Higley (continuous)	83
Mesa	86
North Phoenix	44
South Phoenix (continuous)	120
South Scottsdale	37
West Chandler (continuous)	76
West 43rd Ave	112
West Phoenix	86
Zuni Hills	70

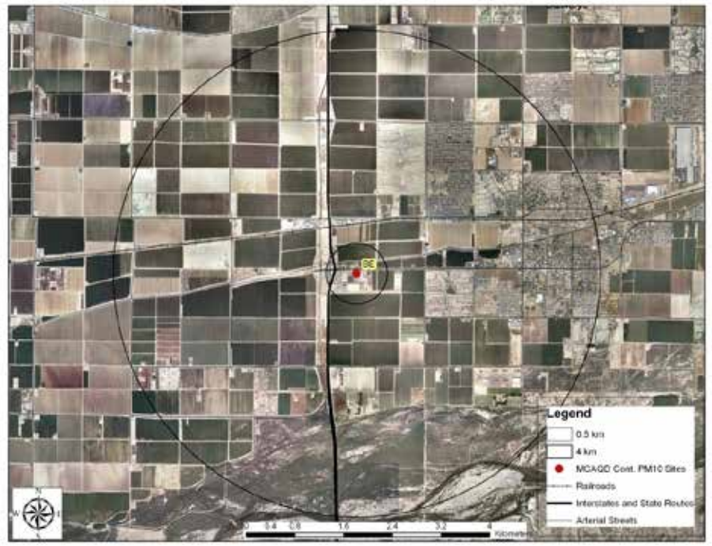
Code	Comment Document

Comment: The use of the Buckeye monitor as representative of rural locations in a qualitative examination of PM10 vs highway distances skews the results. The Buckeye monitor is surrounded by fugitive dust sources from agricultural operations and is in no way representative of ambient PM10 concentrations in developed areas. The Desert Foothills area would be considered rural, but the Buckeye monitor is in no way representative of the Foothills area. See aerial view below:



Agricultural operations are exempt from air quality rules and activities that involve disturbance of the soil generate large quantities of dust.

Comment: A more representative monitor should be chosen for the rural selection so that the particulate impact of the freeway is being compared, as opposed to the completely unrelated emissions that result from farm fields. It's not clear what monitor was used as a surrogate for the Desert Foothills area, but there is no explanation in the draft EIS as to which monitor is used, or why such monitor accurately represents emissions in the area. In no way is the Buckeye monitor representative of a typical rural area.

Comment: The urban locations (specifically the use of the Durango monitor) is also non-representative since this monitor historically reads high given its proximity to several significant industrial sources. A different monitor should be chosen that is more representative of an urban location (but that is not predominantly impacted by local emitters).

Comment: None of the monitors selected accurately represents the area at Desert Foothills Parkway. Desert Foothills Parkway is located quite far from any highway and the Buckeye monitor would not be representative of the area (Desert Foothills Parkway is residential, it is not agricultural).

4
5

Comment: The hotspot analysis is not sufficient to provide information regarding the likely degradation of air quality in the Awahtukee area and at Desert Foothills Parkway. Given that this is a residential area consisting of families with children, the fact that many schools lie along the proposed Pecos route (including: Casa Vida, Kyrene de los Lagos Elementary School, Kyrene Akimel A-al Middle School, Kyrene de la Estrella Elementary School, Kyrene de la Sierra

Code	Issue	Response
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Health Effects**	

Code	Comment Document

School, and the Keystone Montessori Charter School) and that recreation within the largest municipal park (South Mountain) lies downwind of the proposed highway, degradation of air quality in the area needs to be specifically assessed. For a number of reasons, the monitors evaluated in the draft EIS are not representative of Foothills air quality. These include:

- The fact that current air quality in the Foothills area is not monitored. A comparison with an existing monitor cannot occur since the current quality has not been assessed.
- Given the local conditions in the Awahtukee area (prevailing winds from the southwest to northeast) and the fact that South Mountain provides an impediment to dispersion of pollutants (highway emissions will be back up against the mountain), there is no other area with a monitor that is representative of local conditions.

6

Conclusion: the hotspot analysis that was performed is insufficient since no representative area was chosen (nor is one available since the currently monitored locations are not representative of the Foothills area). Instead, an air quality study should be performed for the proposed project location per the *Transportation Conformity guidance for Qualitative Hot-spot Analysis in PM2.5 and PM10 Nonattainment and Maintenance Areas* Chapter 4.1.B.

1

Comment: The *Transportation Conformity guidance for Qualitative Hot-spot Analysis in PM2.5 and PM10 Nonattainment and Maintenance Areas* requires that a hot-spot analysis include the following:

1

- A description of the existing conditions pertaining to the project and project locations.

This was not done for the Foothills area. In addition, "analysts and reviewers should be aware of existing air quality conditions so that they can understand the relative impact that the proposed project is likely to have". No information as to the existing air quality in the Desert Foothills area is provided and no monitors exist in the area. The document suggests the following approaches:

- Summarize PM2.5 or PM10 design values from nearby monitors in the nonattainment or maintenance area. Determine if a monitoring station is near the project that will provide data on local air quality conditions, including PM2.5 and PM10 concentrations. Monitors closer to the project location, but still within the nonattainment or maintenance area are preferable to those further away. In the absence of a nearby monitor, other appropriate monitors in the nonattainment or maintenance area can also be used. Interagency consultation would be used to select appropriate monitors for a given project, when monitoring information is necessary for a hot-spot analysis.

Comment: The Desert Foothills area has no nearby monitors. The above was not done.

- Consider reviewing data from monitoring stations located in other PM2.5 or PM10 nonattainment or maintenance areas that may have similar traffic and environmental conditions to the proposed project and location.

Comment: This was not done. Also, there are no areas with similar environmental conditions to the Desert Foothills area.

- Describe future estimated air quality for the attainment year, years beyond the attainment year, and any changes in PM2.5 or PM10 concentrations needed to meet attainment and maintenance schedules. Expected changes in air quality at the project location may result in changes in the background concentration and the likelihood that a given project may create or worsen an air quality problem.

Comment: This was not done. Future air quality of the Desert Foothills area cannot be assessed since no monitors exist that measure the current conditions.

- Consider PM2.5 or PM10 source apportionment studies when available.

Comment: This was not done.

- Consider future emissions trends that could affect air quality concentrations at the project's location, such as a stationary source, port, or other new source of PM2.5 or PM10 emissions.

Comment: This was not done.

- It is appropriate to also cite published scientific studies or other information regarding regional or local trend data on PM2.5 or PM10 concentrations, when such data is available and applicable to a given project and location.

Comment: This was not done.

Code	Issue	Response
6	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.

Code	Comment Document

Comment: The *Transportation Conformity guidance for Qualitative Hot-spot Analysis in PM2.5 and PM10 Nonattainment and Maintenance Areas* requires that "Built and natural environments" be taken into consideration:

- This description would include whether the character of the project area is urban, suburban or rural, and whether adjacent buildings or topography create barriers to dispersal of PM2.5 or PM10. Relevant development trends and land use patterns should be addressed if they have a bearing on potential PM2.5 or PM10 emissions and concentrations in the vicinity of the project (e.g., a new area or stationary emissions source, increased rail traffic resulting from a rail terminal, increased truck traffic due to a port or intermodal freight terminal, or due to industrial or agricultural purposes).

The topography of South Mountain, given its location and the direction of prevailing winds creates a barrier to dispersal of PM10. This was not taken into consideration in the analysis.

Comment: The *Transportation Conformity guidance for Qualitative Hot-spot Analysis in PM2.5 and PM10 Nonattainment and Maintenance Areas* requires that "meteorology, climate and seasonal data" be taken into consideration:

- This description could address atmospheric inversions, prevailing wind direction and speed, as they impact PM2.5 or PM10 concentrations in the project area, if appropriate.

This was not done.

1

General Comments:

Comment: Chapter 4 page 69 states "Diesel exhaust is not a major contributor to ambient concentrations of PM10". That may be true, but highway traffic is a major contributor (see Figure 4-22 page 62). All sources of PM10 generated by a highway, not just diesel exhaust, must be taken into account.

Comment: The hot-spot analysis requires that "the total emissions burden of direct PM10 emissions which may result from the implementation of the projects (including re-entrained road dust and construction emissions)" be included in the analysis. This was not done. The draft EIS does not take re-entrainment into account.

Comment: A hot-spot analysis must consist of "an estimation of likely future localized PM2.5 or PM10 pollutant concentrations and a comparison of those concentrations to the relevant air quality standards". A hot-spot analysis assesses the air quality impacts on a scale smaller than an entire nonattainment or maintenance area, including for example, congested roadway intersections and highways or transit terminals." The analysis performed does not estimate potential localized PM10 impacts in the Foothills area along the section of "highway" running south of the South Mountain Park. Nor can it, since no representative monitor exists.

Comment: The *Transportation Conformity guidance for Qualitative Hot-spot Analysis in PM2.5 and PM10 Nonattainment and Maintenance Areas* states "EPA believes that conformity requirements are met if areas demonstrate that no new or worsened violations occur in the year(s) of highest expected emissions – which includes the project's emissions in addition to the background regional emissions." Because the "highest expected emissions" need to be assessed, more recent data than 2009 should be used in the hot-spot analysis.

Comment: The hot-spot analysis does not serve its intended purpose. It does not provide any useful information as to whether the freeway will create new local PM10 violations or whether the number of existing violations will increase as a result of the project.

Sincerely,

Todd Martin

Re: Public Comments regarding the proposed South Mountain Freeway

July 13, 2013

Dear Sir/Madam:
Please take into consideration the following comments with regards to the Draft Environmental Study which is currently open for public comment.

1 2 3 4 5 6 7 8

-As a resident of the Ahwatukee Foothills, I am very concerned about and opposed to the proposed plans to build the South Mountain Freeway along the current proposed path along Pecos Road. The Foothills area is unique in the Phoenix region in that it is one of the few areas that is predominantly residential in nature. The proximity to South Mountain Park offers unique views, and buffers the area from some of the Air Quality issues that plague downtown Phoenix. By proposing to build the freeway long the proposed path, I am concerned that it will adversely affect the character of the region, and greatly reduce the air quality and significantly increase the noise pollution in the area. Reduction in air quality will especially affect local residents who are already suffering air-quality related health issues, but it will also significantly affect the large number of children whose schools are in close proximity to the proposed path. Based on a review of the existing data, I strongly believe that routing the proposed freeway, which will largely act as a Phoenix Bypass and truck-route, further to the south and away from the South Mountain area is a much preferred alternative.

Specific concerns with the DEIS:

9 10 11 12 11 10 13

1) Regarding the Qualitative Hot Spot Analysis for PM2.5 and PM10 Nonattainment and Maintenence areas: The hotspot analysis must demonstrate that the proposed project will not "cause or contribute to any new violation of any standard in any area; increase the frequency or severity of any existing violation of any standard in any area..." No portions of the hot spot analysis provided specifically addresses the proposed path near the Ahwatukee foothills. In addition, some of the factors that should be considered as noted in the EPA's Guideline on completing this hotspot analysis are not addressed at all within the DEIS - some of these include comments and analysis regarding the fact that South Mountain itself (and other local topography) creates a signficant barrier to dispersal of PM2.5 and PM10 particulates. The analysis also appears to not significantly address the issue of increased truck traffic along this route due to the fact that it will act primarily as a bypass to downtown Phoenix. Assumptions made regarding truck traffic fail to address the significant amount of international traffic whose emissions are not regulated by the US government. The hotspot analysis also fails to include evaluation of local meteorology, climate and seasonal data - specifically issues with atmospheric inversions and prevailing wind in combination with local topography that may restrict PM2.5 and PM10 particulate dispersal. The provided analysis within the DEIS also does not appear to include analysis with regards to re-entrained road dust as required for all PM10 hot-spot analyses.

2) No PM2.5 analysis was provided - while the region may not yet be classified as being in non-attainment, it is likely that Phoenix is in non-attainment for PM2.5. While the qualitative analysis was not required per the letter of the law, it should be done to be in compliance with the spirit and intent of the law.

3) Within the qualitative analysis for PM10, the DEIS indicates "four service traffic interchanges were identified for review..." Including one along Desert Foothills Parkway - however no data or summary could be found for this analysis at this location within the document.

Code	Issue	Response
1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Noise**	
5	**Health Effects**	
6	**Purpose and Need, Truck Bypass**	
7	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
8	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study.

(Response 8 continues on next page)

Code	Comment Document
14	4) Within the hotspot analysis some numbers and estimated percentages for heavy trucks provided at 2-7%. It is not clear how this assumption was derived, nor does it take into account % of vehicles that may not be federally regulated as they may be coming from across the border where emissions restrictions are not as stringent. The analysis further concludes that "under the 2035 action scenario, the percentage of trucks would remain at the 2020 level..." It is not clear how this assumption is valid and further detail on how these numbers were derived would be appreciated.
15	
16	5) "The transportation conformity rule also requires that the analysis consider the year of expected peak emissions from the project" - it is not explained within the document how the peak is determined and what assumptions are made in identifying the year of expected peak emissions.
17	6) Data provided is dated, and argues that most of the exceedances were caused by high-wind exceptional events - more recent data is available and should be utilized. Phoenix has significantly changed since 2009, the year whose data was used to draw conclusions in this analysis. Why not use all available data and demonstrate that it is repeatable year after year? The analysis further carries on to make claims that "Fugitive dust sources are the largest contributors to ambient concentrations of PM10; Diesel exhaust is not a major contributor to ambient concentrations of PM10; and The proposed improvements would reduce travel time and congestion on the freeways and arterial streets in the area, thereby reducing exhaust emissions of PM10" None of these claims are supported with data referenced. Not only that, but the last claim regarding proposed improvements reducing travel time and congestion merely presumes that congestion may be reduced in some regions - however the traffic has to go somewhere, so it will increase in other areas. This claim also does not appear to take into account population growth in the area, which will further increase overall traffic. If the South Mountain Freeway is expected to reduce traffic around the Broadway Curve, the claim is nonsensical - Studies of traffic from Ahwatukee and points south that contribute to the congestion at the Broadway Curve region indicate that most people are driving to jobs in Tempe and Downtown Phoenix. Diverting this traffic along the proposed south mountain freeway for these drivers makes no sense.
18	
19 20	
21	
15	7) With regards to the comments on heavy-duty diesel emissions standards - these standards only apply to vehicles registered in the USA. It is inappropriate to presume that none of the traffic will be from across one of our international borders - either from Mexico or from Canada. Pollutants from these vehicles where less stringent emissions standards are applied must be taken into account in this analysis. With no current designated path for the CANAMEX corridor around Phoenix, this analysis becomes even more critical.
22	8) With regards to the tier II emissions standards: The analysis is predicting a decrease in nitrogen oxide emissions by 61% and VOC emissions by 24% between 2004 and 2030 - it is not clear how these values were derived. While sulfur levels were mandated to meet a certain level, has data been collected to validate that these levels have been met? In addition, what assumption is being used for the distribution of vehicle age on the roadways?
23	9) Within the DEIS, a study from Denver with regards to traffic-related air pollution was used to draw conclusions with regards to modeled levels of MSATs vs actual measurements - The summary does not discuss how accurate the various models were when compared to actual measurements - it only seems to indicate that dispersion model results were generally lower than monitored concentrations - in other words, the model underpredicted the actual levels of MSATs. It is unclear whether a) actual measured concentrations of MSATS remained below risk values, b) actual measured concentrations dropped off sharply within 50 meters of roadways c) how much higher the actual MSAT concentrations tended to be along highways vs the modeled concentrations.
5	10) it is clearly stated within the summary regarding a Critical Review on Emissions, Exposure, and Health Effects that "Overall, researchers felt that there was sufficient evidence for causality for the exacerbation of asthma" - Building this freeway so close to a residential area, and so close to schools will put residents and children especially at greater respiratory illness risk. Other studies corroborate this data, indicating that children that live next to

Code	Issue	Response
8 (cont.)		In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
9	**Air Quality**	Emissions from road dust and additional sources were considered in the quantitative project-level particulate matter (PM_{10}) hot-spot analysis prepared for the proposed project. The results of the analysis are summarized in the prologue to the Final Environmental Impact Statement (page xiii) and are more fully described beginning on page 4-68 of the Final Environmental Impact Statement. The carbon monoxide and particulate matter (PM_{10}) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.
10	**Air Quality**	A particulate matter ($PM_{2.5}$) analysis is not required since the area is in attainment for the particulate matter ($PM_{2.5}$) National Ambient Air Quality Standard.
11	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
12	**Air Quality**	Diesel exhaust from trucks is not a major contributor to concentrations of particulate matter (PM_{10}) in this area. Dust is the largest contributor in Maricopa County. Review of particulate matter (PM_{10}) data collected by the Maricopa County Air Quality Department suggests that locations adjacent to industrial, mining, or agricultural areas generally have the highest concentrations (see Final Environmental Impact Statement page 4-72). Locations adjacent to freeways typically have particulate matter (PM_{10}) concentrations within standards.

Code	Comment Document

freeways can develop permanent lung damage.

13 11) In the conclusions section the DEIS indicates that "the qualitative analysis of PM conducted for the proposed action was based on a review of monitoring site that would most closely resemble two interchange locations along the proposed action and the projected characteristics of the two proposed interchanges". Selecting two interchange locations is okay, however the analysis was not completed in an area that would likely see the most significant change. There is no current air monitoring along the Pecos Corridor - this area currently sees limited residential traffic as the Ahwatukee Foothills is an isolated community - building South Mountain Freeway along this path will significantly change and alter the type and volume of traffic in the area. The analysis needs to be provided to clearly demonstrate that there would be no exceedance of PM10 or PM2.5 standards. In addition, the analysis of the 2 locations ultimately reviewed for the DEIS is not readily found within the document for review.

24 Aside from the environmental and potential health effects of building this freeway, I am not in favor of cutting into South Mountain Park. While no official hiking trails exist in the proposed path, the land can easily be explored and enjoyed by hikers and other recreationalists. In addition, the Ahwatukee Foothills was not designed to be compatible with an adjacent freeway to the south - if there were any hazardous spills (especially those that may result in a gaseous or airborn particulate plume) along this stretch of freeway, the local surface streets do not enable swift evacuation of the area.

2 25

I am submitting these comments in opposition to the freeway, and am also requesting further analysis and clarification of the data as required around the effects on the Air Quality as a result of this project.

Respectfully Submitted,

Stephanie Martin
16423 S 4th St
Phoenix, AZ 85048

Code	Issue	Response
13	**Air Quality**	Although a qualitative analysis of particulate matter (PM_{10}) was presented in the Draft Environmental Impact Statement, a quantitative project-level particulate matter (PM_{10}) hot-spot analysis is included in the Final Environmental Impact Statement. The results of the air quality updates are summarized in the prologue to the Final Environmental Impact Statement (page xiii) and are more fully described beginning on page 4-68 of the Final Environmental Impact Statement. The carbon monoxide and particulate matter (PM_{10}) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.
14	**Traffic**	The Maricopa Association of Governments regional travel demand model forecasts approximately 10 percent truck traffic on the proposed freeway in 2035 (see Final Environmental impact Statement pages 3-64 and 4-72). The forecast truck traffic is based on existing traffic studies and projected socioeconomic data. This percentage is similar to current traffic conditions on Interstate 10 between State Route 101L and Interstate 17 and on US 60. Commercial trucks would use the proposed freeway. As with all other freeways in the region, trucks would use it for the through transport of freight, for transport to and from distribution centers, and for transport to support local commerce. Nevertheless, the primary users of the proposed freeway would be automobiles. Vehicle classification counts (2007) from the Arizona Department of Transportation for Maricopa County show passenger vehicles and other nontruck vehicles make up over 90 percent of all traffic on the regional freeway system, and it is expected these percentages would not vary with the proposed freeway. Further, it is not expected that the entire 21 percent of through truck traffic (by tonnage) using Interstate 10 would divert from Interstate 10 to use the proposed freeway (see Final Environmental Impact Statement page 3-64). Trucking destinations in the Phoenix metropolitan area would still prompt trucks to enter congested areas. Choosing to travel on the proposed freeway versus Interstate 10 would not produce substantial travel time benefits. Therefore, it is expected that “true” through truck traffic (not having to stop in the metropolitan area) would continue to use the faster, designated, and posted bypass system of Interstate 8 and State Route 85.
15	**Trucks**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
16	**Air Quality**	As noted on page 4-76 of the Final Environmental Impact Statement, the year of highest particulate matter (PM_{10}) emissions is expected to be the year of highest vehicle miles traveled, 2035. According to the Maricopa Association of Governments *2012 Five Percent Plan for Attainment of the PM-10 Standard* for the Maricopa County Nonattainment Area, the largest single source category is paved road dust, including track-out, at 20 percent. By contrast, on-road mobile vehicle exhaust, tire wear, and brake wear contribute 6 percent. The relative contribution of these emissions is expected to represent about the same contribution in the future; therefore, the highest projected vehicle miles traveled occur in the design year, 2035. The analysis year(s) was determined through the process established by the Arizona Department of Transportation interagency consultation procedures [40 Code of Federal Regulations § 93.105(c)(1)(i)]. The selection of 2035 as the peak year of emissions is appropriate.

Code	Comment Document

Code	Issue	Response
17	**Air Quality**	The project team strove to use the latest data wherever available. When new data became available, they were incorporated into the analyses. For example, the air quality assessment for impacts from carbon monoxide followed the U.S. Environmental Protection Agency guidelines in *Guideline for Modeling Carbon Monoxide from Roadway Intersections* (A-OAQPS, 1992). Inputs to the model were based on U.S. Environmental Protection Agency-recommended values or were selected to provide a conservative estimate of impacts. Modeling methodology and results was reviewed by the Federal Highway Administration, Arizona Department of Transportation, and Maricopa Association of Governments.
18	**Purpose and Need**	Dispersing congested traffic to freeways that provide improved levels of service translates into improved fuel economy, faster travel times, and decreased air pollution. Even though the region's freeways are now congested and operate poorly, conditions in 2035 would be substantially worse (see Draft Environmental Impact Statement pages 1-21 and 1-22). By 2035, east- and westbound motorists on Interstate 10 between State Route 101L (Agua Fria Freeway) and State Route 202L (Santan Freeway) are expected to experience stop-and-go driving for over 3 hours every day. This is for a distance of nearly 30 miles. A new freeway in the Study Area would distribute commuters over an additional freeway facility. As a result, the duration of stop-and-go traffic on the region's freeways would be reduced.
19	**Traffic**	The Federal Highway Administration and the U.S. Environmental Protection Agency approved the air quality conformity determination that includes the Maricopa Association of Governments regional travel demand model that produced the traffic projections used in the traffic analysis for the project (see Draft Environmental Impact Statement page 3-27). Traffic projections are regularly updated by the Maricopa Association of Governments. The traffic projections in the Draft Environmental Impact Statement are from a model adopted in 2011. Key model inputs used to forecast travel demand included (see Table 3-7 on Draft Environmental Impact Statement page 3-27): · socioeconomic data based on the adopted general plans of the Maricopa Association of Governments members, along with population and economic forecasts and the existing and planned transportation infrastructure as identified by the Maricopa Association of Governments members · the anticipated average number of vehicle trips within the region (including those to and from the region's households) on a daily basis (this number is tracked regularly by the Maricopa Association of Governments) · the distribution of transportation modes used by travelers in the Maricopa Association of Governments region (also tracked regularly by the Maricopa Association of Governments) · the capacity of the transportation infrastructure to accommodate regional travel · the future transportation infrastructure established using *Regional Transportation Plan*-planned projects and improvements and from known arterial street network improvements assumed to be made by the County, Cities, and private developers. In June 2013, the Maricopa Association of Governments approved new socioeconomic projections for Maricopa County. The purpose and need and analysis of alternatives were updated and reevaluated using these new socioeconomic projections and corresponding projections related to regional traffic. The conclusions reached in the Draft Environmental Impact Statement were validated in the Final Environmental Impact Statement (see Chapter 3, *Alternatives*).

Code	Comment Document

Code	Issue	Response
20	**Purpose and Need**	The travel time comparison shown in Figure 3-17 on page 3-34 of the Draft Environmental Impact Statement included a trip from Ahwatukee Foothills Village to Downtown Phoenix using Interstate 10, not the proposed freeway. This trip would take 5 or 6 minutes less with the proposed freeway in place when compared with conditions without the proposed freeway.
21	**Purpose and Need**	An analysis of the origins and destinations of projected freeway users is presented in Figure 3-18, on page 3-36 of the Final Environmental Impact Statement. Freeway users are defined as those motorists who pass through the bend of the freeway (around the South Mountains). So, this does not count motorists in Laveen Village who go to Interstate 10 (Papago Freeway) and motorists in Ahwatukee Foothills Village who go to Interstate 10 (Maricopa Freeway). The results of the origin-destination analysis show that 73 percent of the traffic going around the South Mountains has origins or destinations in the area within or around the Study Area and supports the conclusion that the proposed action would serve east–west mobility consistent with commuting movements.
22	**Air Quality**	The data presented were based on the U.S. Environmental Protection Agency's MOBILE6 national defaults, including the national default vehicle fleet mix and U.S. Environmental Protection Agency's fuel control programs.
23	**Air Quality**	All national emission and dispersion models are validated before general use. However, models may certainly over- or under-predict depending on many factors. More importantly, however, is that there are many sources of mobile source air toxics other than mobile sources. As noted on page 4-72 of the Final Environmental Impact Statement, emissions from on-road sources are the largest contributors (by weight) of only two of the seven priority mobile source air toxics. As a result, levels of mobile source air toxics near roadways are often determined by these other sources.
24	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Public Comment on the Draft Environmental Impact Statement for the Loop 202 South Mountain Freeway Study

Per Chapter 4 page 65 of the EIS transportation projects require an analysis that "... must document that no new local PM10 violations will be created and the severity or number of existing violations will not be increased as a result of the project" (FHWA 2001a). This issue is addressed through a "hotspot analysis" in PM2.5 and PM10 nonattainment and maintenance areas" found on pages 65-68 of the EIS. It is on this analysis that my comments will be directed.

First a few preliminary observations. The draft EIS states that:

> Four service traffic interchanges were identified for detailed review based on LOS and/or high traffic volumes during the evening peak hour of travel. They were Van Buren Street, Southern Avenue, Desert Foothills Parkway, and 40th Street. The 83rd Avenue interchange was included with the W101 Alternative because no interchange is planned at Southern Avenue with the W101 Alternative.

1 **Comment:** This detailed review for PM10 is found not found in the draft EIS. The tables following the above statement relate to CO only. Given that the above occurs beneath the heading of "Particulate "Matter" the assumption would be that PM10 is the pollutant of interest in the discussion.

Comment: It should be noted that no air monitors (either state or county) exist along the proposed route, in particular in the Awahtukee area, south of South Mountain. In the absence of specific monitoring data the actual impact of the freeway to the air shed cannot be measured.

Comment: Air monitoring should be performed to ensure "that no new local PM10 violations will be created and the severity or number of existing violations will not be increased as a result of the project". The qualitative analysis is insufficient given that the area is in non-attainment of the PM10 standard (and likely non-attainment of PM2.5 as well). Since monitors are effected by local emissions sources, this exercise provides no meaningful insight into the impact that a freeway will have on local air quality since the confounding variables make statistical correlation of particulate readings with proximity to a highway impossible.

2 **Comment:** A quantitative analysis for PM2.5 should be performed given the fact that the area may also be designated non-attainment for this pollutant as well.

Since no quantitative data is available, the draft EIS performs a "qualitative PM10 hot-spot conformity analyses". The qualitative analysis compared ambient concentrations of PM10 at five MCAQD PM10 monitoring sites in the Phoenix area.

Code	Issue	Response
1	**Air Quality**	Although a qualitative analysis of particulate matter (PM_{10}) was presented in the Draft Environmental Impact Statement, a quantitative project-level particulate matter (PM_{10}) hot-spot analysis is included in the Final Environmental Impact Statement. The results of the air quality updates are summarized in the prologue to the Final Environmental Impact Statement (page xiii) and are more fully described beginning on page 4-68 of the Final Environmental Impact Statement. The carbon monoxide and particulate matter (PM_{10}) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.
2	**Air Quality**	A particulate matter ($PM_{2.5}$) analysis is not required since the area is in attainment for the particulate matter ($PM_{2.5}$) National Ambient Air Quality Standard.

Code	Comment Document

PM10 Monitoring Locations, Results, and Nearby Road Characteristics, 2009

Site Name (Location)	Maximum 24-Hour PM10 Value (ug/m3)	2nd Maximum 24-Hour PM10 Value (ug/m3)	Number of Exceedances of PM10 Standard	Annual Average (ug/m3)	Nearest Freeway	Distance from Freeway
Urban locations near freeways (<½ mile)						
Central Phoenix (16th Street/Roosevelt)	153	130	0	34.5	I-10 SR 51 SR 202L	¼ mile ¾ mile ¾ mile
Greenwood (27th Avenue/I-10)	229	123	1	41.2	I-10 I-17	200 feet ½ mile
Urban locations distant from freeways (>½ mile)						
Durango Complex (27th Avenue/Durango Street)	277	161	3	44.5	I-17	¾ mile
West 43rd Avenue (43rd Avenue/Broadway Road)	317	213	7	50.7	I-17	2½ miles
Rural Locations						
Buckeye (Highway 85/Maricopa County 85)	439	400	3	38.9	I-10	4 miles

The EIS states:

> The qualitative analysis compared ambient concentrations of PM10 at five MCAQD PM10 monitoring sites in the Phoenix area. These sites represented urban areas near freeways, urban areas distant from freeways, and rural areas.

And concludes:

> The sites near freeways typically have ambient concentrations below the NAAQS.

Comment: The 2009 data above is not the most current data available. The 2011 data, in fact, shows different results for these same monitors.

PM10 Monitoring Locations, Results, and Nearby Road Characteristics, 2011

Site Name (Location)	Maximum 24-Hour PM10 Value (ug/m3)	2nd Maximum 24-Hour PM10 Value (ug/m3)	Number of Exceedances of PM10 Standard	Annual Average (ug/m3)	Nearest Freeway	Distance from Freeway
Urban locations near freeways (<½ mile)

85/Maricopa County 85)						

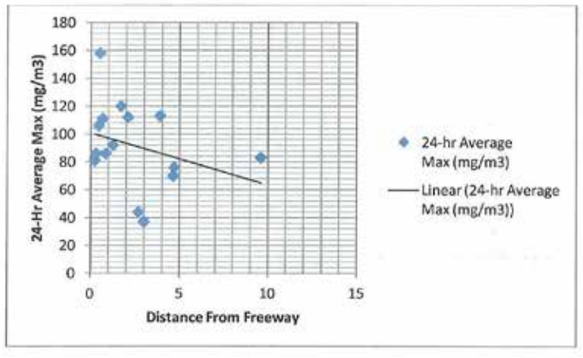
The data above is more typical monitor data and shows higher concentrations near freeways.

Comment: The draft EIS states "The sites near freeways typically have ambient concentrations below the NAAQS." Of the monitors closest to the freeway, the 2009 data shows several NAAQS exceedances:

Site Name (Location)	2009 Number of Exceedances of PM10 Standard
Locations near freeways (<1 mile)	
Mesa	0
North Phoenix	0
Durango Complex	3
Dysart	1
Central Phoenix (16th Street/Roosevelt)	0
Greenwood (27th Avenue/I-10)	1
West Phoenix	1

More than half the monitors located less than a mile from a freeway exceeded the NAAQS PM10 standard in 2009. These exceedances appear to be "typical" given that more exceeded than did not.

Comment: In addition to the above, plotting the 24-hr average maximum values of the various monitors vs distance from a freeway yields a strong positive correlation between distance an PM10 concentration (2010 data). The freeway would be expected to increase local PM10 concentrations.



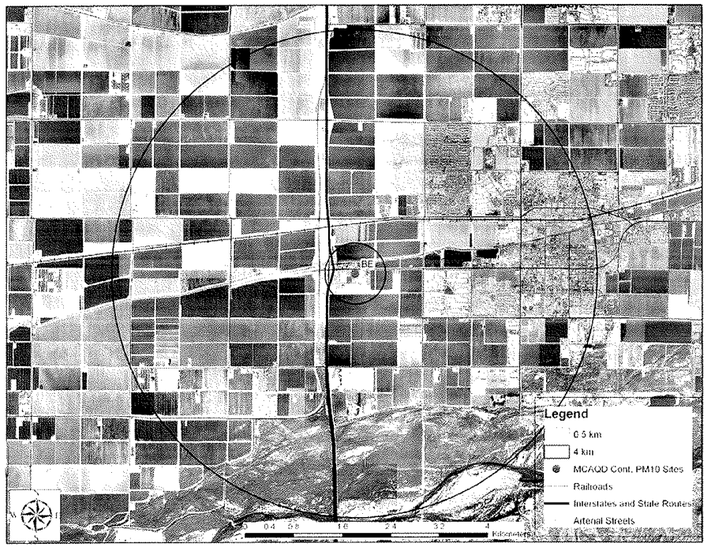
Site Name	24-hr Average Max (mg/m3) 2010 Data
Buckeye	113
Central Phoenix (continuous)	106
Durango Complex	111
Dysart (continuous)	81
Glendale (continuous)	92
Greenwood	158
Higley (continuous)	83
Mesa	86

Code	Issue	Response

Code	Comment Document

North Phoenix	44
South Phoenix (continuous)	120
South Scottsdale	37
West Chandler (continuous)	76
West 43rd Ave	112
West Phoenix	86
Zuni Hills	70

Comment: The use of the Buckeye monitor as representative of rural locations in a qualitative examination of PM10 vs highway distances skews the results. The Buckeye monitor is surrounded by fugitive dust sources from agricultural operations and is in no way representative of ambient PM10 concentrations in developed areas. The Desert Foothills area would be considered rural, but the Buckeye monitor is in no way representative of the Foothills area. See aerial view below:



Agricultural operations are exempt from air quality rules and activities that involve disturbance of the soil generate large quantities of dust.

Comment: A more representative monitor should be chosen for the rural selection so that the particulate impact of the freeway is being compared, as opposed to the completely unrelated emissions that result from farm fields. It's not clear what monitor was used as a surrogate for the Desert Foothills area, but there is no explanation in the draft EIS as to which monitor is used, or why such monitor accurately represents emissions in the area. In no way is the Buckeye monitor representative of a typical rural area.

Code	Issue	Response

Code	Comment Document

Comment: The urban locations (specifically the use of the Durango monitor) is also non-representative since this monitor historically reads high given its proximity to several significant industrial sources. A different monitor should be chosen that is more representative of an urban location (but that is not predominantly impacted by local emitters).

Comment: None of the monitors selected accurately represents the area at Desert Foothills Parkway. Desert Foothills Parkway is located quite far from any highway and the Buckeye monitor would not be representative of the area (Desert Foothills Parkway is residential, it is not agricultural).

3
4

Comment: The hotspot analysis is not sufficient to provide information regarding the likely degradation of air quality in the Awahtukee area and at Desert Foothills Parkway. Given that this is a residential area consisting of families with children, the fact that many schools lie along the proposed Pecos route (including: Casa Vida, Kyrene de los Lagos Elementary School, Kyrene Akimel A-al Middle School, Kyrene de la Estrella Elementary School, Kyrene de la Sierra School, and the Keystone Montessori Charter School) and that recreation within the largest municipal park (South Mountain) lies downwind of the proposed highway, degradation of air quality in the area needs to be specifically assessed. For a number of reasons, the monitors evaluated in the draft EIS are not representative of Foothills air quality. These include:

- The fact that current air quality in the Foothills area is not monitored. A comparison with an existing monitor cannot occur since the current quality has not been assessed.
- Given the local conditions in the Awahtukee area (prevailing winds from the southwest to northeast) and the fact that South Mountain provides an impediment to dispersion of pollutants (highway emissions will be back up against the mountain), there is no other area with a monitor that is representative of local conditions.

5

Conclusion: the hotspot analysis that was performed is insufficient since no representative area was chosen (nor is one available since the currently monitored locations are not representative of the Foothills area). Instead, an air quality study should be performed for the proposed project location per the *Transportation Conformity guidance for Qualitative Hot-spot Analysis in PM2.5 and PM10 Nonattainment and Maintenance Areas* Chapter 4.1.B.

1

1

Comment: The *Transportation Conformity guidance for Qualitative Hot-spot Analysis in PM2.5 and PM10 Nonattainment and Maintenance Areas* requires that a hot-spot analysis include the following:

- A description of the existing conditions pertaining to the project and project locations.

This was not done for the Foothills area. In addition, "analysts and reviewers should be aware of existing air quality conditions so that they can understand the relative impact that the proposed project is likely to have". No information as to the existing air quality in the Desert Foothills area is provided and no monitors exist in the area. The document suggests the following approaches:

- Summarize PM2.5 or PM10 design values from nearby monitors in the nonattainment or maintenance area. Determine if a monitoring station is near the project that will provide data on local air quality conditions, including PM2.5 and PM10 concentrations. Monitors closer to the project location, but still within the nonattainment or maintenance area are preferable to those further away. In the absence of a nearby monitor, other appropriate monitors in the nonattainment or maintenance area can also be used. Interagency consultation would be used to select appropriate monitors for a given project, when monitoring information is necessary for a hot-spot analysis.

Comment: The Desert Foothills area has no nearby monitors. The above was not done.

- Consider reviewing data from monitoring stations located in other PM2.5 or PM10 nonattainment or maintenance areas that may have similar traffic and environmental conditions to the proposed project and location.

Comment: This was not done. Also, there are no areas with similar environmental conditions to the Desert Foothills area.

- Describe future estimated air quality for the attainment year, years beyond the attainment year, and any changes in PM2.5 or PM10 concentrations needed to meet attainment and maintenance schedules. Expected changes in air quality at the project location may result in changes in the background concentration and the likelihood that a given project may create or worsen an air quality problem.

Comment: This was not done. Future air quality of the Desert Foothills area cannot be assessed since no monitors exist that measure the current conditions.

- Consider PM2.5 or PM10 source apportionment studies when available.

Code	Issue	Response
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Health Effects**	
5	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.

Code	Comment Document

Comment: This was not done.

- Consider future emissions trends that could affect air quality concentrations at the project's location, such as a stationary source, port, or other new source of PM2.5 or PM10 emissions.

Comment: This was not done.

- It is appropriate to also cite published scientific studies or other information regarding regional or local trend data on PM2.5 or PM10 concentrations, when such data is available and applicable to a given project and location.

Comment: This was not done.

Comment: The *Transportation Conformity guidance for Qualitative Hot-spot Analysis in PM2.5 and PM10 Nonattainment and Maintenance Areas* requires that "Built and natural environments" be taken into consideration:

- This description would include whether the character of the project area is urban, suburban or rural, and whether adjacent buildings or topography create barriers to dispersal of PM2.5 or PM10. Relevant development trends and land use patterns should be addressed if they have a bearing on potential PM2.5 or PM10 emissions and concentrations in the vicinity of the project (e.g., a new area or stationary emissions source, increased rail traffic resulting from a rail terminal, increased truck traffic due to a port or intermodal freight terminal, or due to industrial or agricultural purposes).

The topography of South Mountain, given its location and the direction of prevailing winds creates a barrier to dispersal of PM10. This was not taken into consideration in the analysis.

Comment: The *Transportation Conformity guidance for Qualitative Hot-spot Analysis in PM2.5 and PM10 Nonattainment and Maintenance Areas* requires that "meteorology, climate and seasonal data" be taken into consideration:

- This description could address atmospheric inversions, prevailing wind direction and speed, as they impact PM2.5 or PM10 concentrations in the project area, if appropriate.

This was not done.

1

General Comments:

Comment: Chapter 4 page 69 states "Diesel exhaust is not a major contributor to ambient concentrations of PM10". That may be true, but highway traffic is a major contributor (see Figure 4-22 page 62). All sources of PM10 generated by a highway, not just diesel exhaust, must be taken into account.

Comment: The hot-spot analysis requires that "the total emissions burden of direct PM10 emissions which may result from the implementation of the projects (including re-entrained road dust and construction emissions)" be included in the analysis. This was not done. The draft EIS does not take re-entrainment into account.

Comment: A hot-spot analysis must consist of "an estimation of likely future localized PM2.5 or PM10 pollutant concentrations and a comparison of those concentrations to the relevant air quality standards". A hot-spot analysis assesses the air quality impacts on a scale smaller than an entire nonattainment or maintenance area, including for example, congested roadway intersections and highways or transit terminals." The analysis performed does not estimate potential localized PM10 impacts in the Foothills area along the section of "highway" running south of the South Mountain Park. Nor can it, since no representative monitor exists.

Comment: The *Transportation Conformity guidance for Qualitative Hot-spot Analysis in PM2.5 and PM10 Nonattainment and Maintenance Areas* states "EPA believes that conformity requirements are met if areas demonstrate that no new or worsened violations occur in the year(s) of highest expected emissions – which includes the project's emissions in addition to the background regional emissions." Because the "highest expected emissions" need to be assessed, more recent data than 2009 should be used in the hot-spot analysis.

Comment: The hot-spot analysis does not serve its intended purpose. It does not provide any useful information as to whether the freeway will create new local PM10 violations or whether the number of existing violations will increase as a result of the project.

I am very concerned about the increased pollution in Ahwatukee that would result from the expansion of the Loop 202 freeway. A parkway extension (for passenger automobiles only) may be beneficial to the residents. However, any extension intended to reroute interstate traffic out of central Phoenix would increase pollution, increase respiratory problems in residents, decrease quality of life, and lower property values. Ahwatukee is a beautiful community and should not be ruined by using the Loop 202 to reroute interstate trucking traffic.

Code	Issue	Response
1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	The concept of keeping the facility an arterial street is similar to the Arizona Parkway concept evaluated for the proposed project. The reasons that alternative was eliminated from further study are presented on page 3-19 of the Final Environmental Impact Statement. Any alternative alignment that goes around the South Mountains would partially be located on Gila River Indian Community land. Permission to study such alternatives has not been granted by the Gila River Indian Community government (see Figure S-11 on page S-39 of the Final Environmental Impact Statement). Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
3	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Health Effects**	
5	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years ((see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
6	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.

Extending the 202 west past South Mountain would be nice for normal traffic going to and from central phoenix. However, the idea of the big semi trucks using it as an alternate route is a little upsetting. The pollution and noise it would create right by my house isn't worth the benefits of having the 202 extended. I'd much rather live with it as it is now then have all the trucking traffic going by my neighborhood.

outside, like high school kids and -- practicing baseball, football, soccer, or whatever. It's not advantageous to them.

Let's see. The other item of concern that I noted was in the study they provided us, they talked about a noncontinuous sound and noise and dust wall along the side of the highway. I think it needs to be throughout the area near the crest where it's most effective rather than down at the property line where the highway is supposed to be up to a 23-foot level, would be way over it unless they built an atrociously tall wall. So it would be better to put it up near the side of the road. But it needs to cover all communities along it, not selective ones or areas just like the school.

That's all I had to add over what I said in there, so...

Okay? Thank you very much.

MR. MARTINEZ: H-e-n-r-y, Henry. Martinez, M-a-r-t-i-n-e-z.

I understand that this is voted on by the people of Phoenix to get the 202. We were offered three different places where it could be put in. And as of June 2006, ADOT changed their mind. They didn't give us that fourth option, the option of today where it's at 59th Avenue. Because here it's at -- sorry --

55th Avenue, also 71st, and the 101. That was back before June 2006. So then it was changed, like I say, in October 2009, to go into the 59th Avenue. But you -- ADOT already bought all the land south of the I-10, because they didn't even put houses in it. They put a quota where there's no houses.

UNIDENTIFIED SPEAKER: On what street?

MR. MARTINEZ: Over on Broadway and Southern.

UNIDENTIFIED SPEAKER: Describe where our house is.

MR. MARTINEZ: Oh, where our house is, that's just too bad. We're the first house that gets taken down for the exit going south.

UNIDENTIFIED SPEAKER: From the I-10 to --

MR. MARTINEZ: Right.

UNIDENTIFIED SPEAKER: -- the transition to 59th.

MR. MARTINEZ: We live right here, this white area in there. So it's going to take our house away.

UNIDENTIFIED SPEAKER: The entire upper side of our block, our street, all the way to --

MR. MARTINEZ: The corner of 62nd Avenue and Belleview, B-e-l-l-e-v-i-e-w.

Code	Comment Document

UNIDENTIFIED SPEAKER: Street.

MR. MARTINEZ: This here has already been bought out. Here you can see houses on both sides. None here, because they already bought it out. They already predetermined this. It wasn't like -- come in and tell us where we were wrong. It's already been done. It's a done deal.

So this, to me, is all a farce, because why would you buy all this land -- there's nothing in it, no houses -- and then say come over and we'll talk about maybe changing it? I don't think so. There ain't nothing they can do after they bought it. They're not going to sell it back to people that want to put houses there, because there's no builder that will do that.

Also, there -- nobody's ever come to talk to us or one on one or anything like that. I'm a single-dwelling owner. And they sent us this to come here.

UNIDENTIFIED SPEAKER: Through the mailman.

MR. MARTINEZ: Yeah, through the mailman.

UNIDENTIFIED SPEAKER: Just a little flier.

MR. MARTINEZ: And that's it. We -- we don't have to talk to anybody. We're both handicapped, on a fixed income. And in two years, prices are going to be up. No matter what you give us for our house, it's not

2

Code	Issue	Response

Code	Comment Document

2

going to be enough to buy a new one. So where will we go? What will we do?

3

And also, here, "ADOT Buying Some Houses in Freeway Path, Ahwatukee." Yeah. They make more money than I do or I ever did. Their houses cost more. But they're the ones that are getting the break. I don't understand that either. Nobody's ever talked to me. Nobody will ever return my calls when I asked about this.

And this was in the paper. I'm not making it up. But nobody talks to you about it. Nobody lets you know what options you have. So that's not right. It's not right. Why are the people that have $200 and 400,000 homes getting a break? I have a $80,000 home. Nobody's ever said anything.

So that's what I'm disappointed in. And that's why I'm here, trying to vent.

2

UNIDENTIFIED SPEAKER: And they can't tell us what kind of process there is when they do come to us and say, we're going to buy out your property. You know, what else is incurred in that? Is it moving expenses? What? You know, nobody's sent us an official letter to say --

MR. MARTINEZ: I --

UNIDENTIFIED SPEAKER: -- anything about what's really taking place and how it's going to work.

3	**Environmental Justice/Lifestyle**	The Arizona Department of Transportation and Federal Highway Administration have engaged all population segments to ensure access to the environmental impact statement process. Assisted by this involvement, analytical results indicate the proposed action would provide net benefits to all populations in the Study Area in general by reducing traffic congestion, enhancing accessibility, and supporting local economic development plans.

Code	Comment Document

MR. MARTINEZ: And my disability and hers, we can't lift a couch. You know, we're going to have trouble moving our dining room set. We're going to have trouble moving, period.

UNIDENTIFIED SPEAKER: Boxes.

MR. MARTINEZ: We lived in that house for 26 years.

UNIDENTIFIED SPEAKER: Yeah. That was --

MR. MARTINEZ: So --

UNIDENTIFIED SPEAKER: -- going to be our forever house. And --

MR. MARTINEZ: Right.

UNIDENTIFIED SPEAKER: -- when we retired, we invested, you know, monies into fixing things that would last a long time that -- you know, air-conditioners, fencing, all those kind of improvements that we figured, you know, we're going to be here for a long time now, or hopefully a long time, and we would be investing our money into our property. And those things, we don't think they're going to, you know, compensate for fairly, because the market value is way down.

3

And we just are concerned that -- how are we going to find another place that we can afford?

MR. MARTINEZ: Right. Because like I say, in two or three years, housing market is going to be up

Driver and Nix Court Reporters - (602) 266-6525

Code	Issue	Response

Code	Comment Document

again, you know. It's rising now. So if I sold today, I might possibly be able to get another loan, a double loan, to buy a new home, because the prices today are going up. And --

UNIDENTIFIED SPEAKER: But starting all over again.

MR. MARTINEZ: Right.

UNIDENTIFIED SPEAKER: And you know, the process of, you know --

MR. MARTINEZ: And --

UNIDENTIFIED SPEAKER: -- acquiring another home.

MR. MARTINEZ: Found out that in the housing market today, that investors are buying almost every home found on the market, and within two or three days, because they have the funds to do that. We don't. We have to go through financing and everything.

And then they say, well -- they don't want to hear about your problems. They said, just show me you can do it. And that's really hard. And if the market keeps going up, when you do buy our house, we won't be able to afford another one.

Also, another thing is, that meeting that we went to, the first one, we were only allowed to write down a sentence, a question. One question. I wrote down,

4	**Public Involvement**	Public comments are a vital component in the decision-making process. Public comments have been solicited from project inception and through key milestones in the environmental impact statement process. The interests and needs of the public, along with all other social, economic, and environmental issues and impacts, must be fully analyzed and included in the Draft and Final Environmental Impact Statements. Comments made during development of the Draft Environmental Impact Statement have been used to adjust plans, explore new questions, or make changes—all within the scope of the National Environmental Policy Act. Public comments received on the Draft Environmental Impact Statement were reviewed and addressed in the Final Environmental Impact Statement. Public comments received on the Final Environmental Impact Statement will also be considered and addressed as appropriate. More information about the entire public involvement process up to publication of the Draft Environmental Impact Statement is available in Chapter 6, *Comments and Coordination*, of the Final Environmental Impact Statement.

Code	Comment Document

"What are you going to pay for our homes?" I was told fair market value at the date of acquisition. There is no fair market value in this market. And that's what irritates me the most.

If they had told me, here, we'll buy your house three years ago, I would have made out like a bandit. Everybody did. But no, not anymore. Now it's, you're going to lose big time. That's the market value. And to me it's just -- I'm venting, because I have nothing else. Nothing I can do.

UNIDENTIFIED SPEAKER: The thing is, is when they voted on it too, they had proposed places that they were going to put the lane -- you know, the exit lines. And then they -- so people voted on it, said, oh, yeah, that sounds fair, you know. These -- these are areas that are still out and not developed very much.

But then once they change it and move it in to, well, they're going to wipe out homes that are already established and that, that changes the whole picture. We didn't get to vote on that part, you know, as, you know, we've been told by other people that we should all -- everyone in the neighborhood should get a lawyer to represent us and -- you know. But most of the people that live in our neighborhood are probably immigrants or --

MR. MARTINEZ: Hispanic --

5

Code	Issue	Response
5	**Public Involvement**	No public vote was held as part of the Draft Environmental Impact Statement review process. Members of the public were encouraged to participate and submit their comments on the Draft Environmental Impact Statement during the 90-day comment period. The proposed Loop 202 South Mountain Freeway has been a critical part of the Maricopa Association of Governments' Regional Freeway and Highway System since it was first included in funding approved by Maricopa County voters in 1985. It was also part of the *Regional Transportation Plan* funding passed by Maricopa County voters in 2004 through Proposition 400.

Code	Comment Document

UNIDENTIFIED SPEAKER: Hispanic --
MR. MARTINEZ: -- illegals.
UNIDENTIFIED SPEAKER: -- illegals that have come --
MR. MARTINEZ: And they don't want to have nothing to do with a lawyer or coming, standing up for any rights or anything, because they'd be removed. I stand up, I go home.
UNIDENTIFIED SPEAKER: And --
MR. MARTINEZ: Well, we're stuck --
UNIDENTIFIED SPEAKER: -- those little girls' shoes that they send -- that the mailman drops off, they have like one little thing in Spanish. So they don't know what the heck's going on.
MR. MARTINEZ: Nobody on our street's here. Yeah.
UNIDENTIFIED SPEAKER: And there's at least --
MR. MARTINEZ: There's my house on the cul-de-sac. All right? I have a pool. It's been there a while. I should re-plaster it. But I'm not going to invest money to do that and have ADOT come and tear it down, you know. We wound up painting it. And that cost us $440 just to paint it. But it's something that has to be done rather than --

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response

(Comment codes continue on later page)

Code	Comment Document

UNIDENTIFIED SPEAKER: We don't know how far --

MR. MARTINEZ: -- $2,000 --

UNIDENTIFIED SPEAKER: -- to go with our maintenance, you know, of our property.

MR. MARTINEZ: -- $2,000 for re-plastering. So you know, like I say, I don't want to do anything on it. I don't even want to cut the grass. But still, we have enough pride to keep it green, you know, our house nice.

So it's just so disappointing that nothing was said before, you know, when they changed it back in -- what was it? -- 2009.

UNIDENTIFIED SPEAKER: And we did speak to --

MR. MARTINEZ: Yeah. And nobody told us till last year.

UNIDENTIFIED SPEAKER: We did speak to a councilman at the last meeting that we attended was at Cesar Chavez High School. And some of the concerns my husband had, he said, oh, yeah, call my office, and I'll respond to your questions. I'll talk to you, you know, tell your what your alternatives are, and you know, we'll see what we can do to help you.

We left -- called, left messages. He never

Driver and Nix Court Reporters - (602) 266-6525

Code	Issue	Response

(Comment codes continue on next page)

Code	Comment Document

returned our call, never made an effort. Didn't even send a note in the mail or -- or anything to that point, you know. So that doesn't really look good as far as trying to reach out to get --

MR. MARTINEZ: Yeah. Anybody we've talked to has not responded. No back contact.

There was even a reporter there from I think the Mesa Tribune, 'cause it was on the south side where the meeting was. And she gave me her card. She never responded, you know, to say anything about it.

But I'd like to know, is there anybody here in this building that I can talk to about this here? "ADOT Buying Some Houses in Freeway Path, Ahwatukee." I don't live in Ahwatukee. But still, I'd like to talk to somebody, tell -- have them tell me go to hell or, you know, forget it. You don't make enough money. You never did. Your house isn't worth anything.

2

UNIDENTIFIED SPEAKER: And we were -- heard that there's -- I mean, I heard that there was some type of hardship case -- I guess they would consider certain people, property, whatever. They don't specify what --

MR. MARTINEZ: Yeah.

UNIDENTIFIED SPEAKER: -- constitutes a hardship case.

MR. MARTINEZ: Well, here's a --

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response

Code	Comment Document

UNIDENTIFIED SPEAKER: So --
MR. MARTINEZ: -- paragraph --
UNIDENTIFIED SPEAKER: -- who qualifies for that?
MR. MARTINEZ: -- "for homeowners who qualify, ADOT's hardship program is a financial godsend."
I don't think they ought to put God in there, because every time I think about ADOT, I put god in it too. And that's irritating.
Is there anybody that you know of here that --
UNIDENTIFIED SPEAKER: She probably doesn't know. She's just taking down our -- our gripes.
Even our mailman, he says that he's concerned, because he says that means his route -- because on that -- on the route, it's going to take out two apartment complexes also. So he says that all the houses that he services on our street all the way to 59th Avenue, which is maybe, what, a quarter of a mile, something like that, about 50 houses there, and then two sets of 350 tenants in the apartment buildings, those are going to be gone. So he says that his workload will be cut. And there's no way he can -- and that means cutting his hours and his income.
So you know, he was very concerned about it,

2

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response

Code	Comment Document

and he doesn't even live there. So it's not that it just affects people on our street and...

I mean, we know that it's for the betterment of the whole community, but where they've placed it -- if anybody's driven down the I-10 west or come into Phoenix from the stack at the 101 on, they know it's gridlock, you know, in the mornings and late afternoons and stuff. So why not put it out farther before all that bogs down right there?

MR. MARTINEZ: They already --

UNIDENTIFIED SPEAKER: You know?

MR. MARTINEZ: -- bought the land for 59th.

UNIDENTIFIED SPEAKER: Well --

MR. MARTINEZ: This is --

UNIDENTIFIED SPEAKER: Put something else there.

MR. MARTINEZ: This is February 2010. And it shows where the -- it's going to go from -- this is 59th. And it's already showing that they already bought the land there. It's not like something new. And this is back in 2010.

UNIDENTIFIED SPEAKER: Supposedly they were just trying --

MR. MARTINEZ: Yeah.

UNIDENTIFIED SPEAKER: -- trying to still

1

Code	Issue	Response

Code	Comment Document

6

get it settled with the --

MR. MARTINEZ: Why didn't they have this meeting back in 2009, when they were going to make up their minds and they did? You know, instead of having it three years later. Well, guess what? We're going to have a meeting. It's already -- the decision's already been made. So don't bother coming. And that's the feelings I have it.

And I thank you for listening to my rant and rave. I had to vent.

MR. GOULD: All right. I'm willing to give my name. Doesn't matter. My name is Dave Gould, G-o-u-l-d. I live on 2422 East Mountain Vista Drive, which is off 24th Street. If you get off Chandler and go down 24th, take a left immediately, I'm the fifth house in.

So now I'm -- I have a couple of real big issues. Got a lot of issues, really.

Coming from one of the cleanest states in the union to one that does not have good air control, as we all know, pollution control, because you're in this valley, it's just going to be even worse where we are. And the noise pollution, the air pollution from the diesel trucks is just amazing that will be coming.

Now, this gentleman over here with the

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
6	**Public Involvement**	In November 2005, three 8-hour public meetings were held throughout the Study Area to obtain public input on the alternatives for the proposed freeway. During the meeting, people were able to review maps with aerial photography of the proposed alignments, speak one-on-one to the Arizona Department of Transportation Right-of-Way Group representatives and engineering and environmental staff, and attend a presentation and question-and-answer session (see page 6-14 of the Final Environmental Impact Statement). In February 2010, the Arizona Department of Transportation hosted a public information meeting at Sunridge Elementary School to discuss the shift from the W55 to the W59 Alternative. The purpose of this meeting was to inform area residents about the change that had been approved as part of the revised *Regional Transportation plan* (see page 6-21 of the Final Environmental Impact Statement).

I feel that moving forward with the 202 South Mountain Freeway would not only help create jobs but it would help reduce congestion. It not only gives interstate traffic an alternative to traveling through downtown but help reduce traffic on most of the other freeways in the system. By taking traffic off of arterial roadways will help reduce air pollution caused by idling vehicles and reducing trip times. By construction this roadway and giving the valley's freeway system more capacity it will also help draw business and residents to the valley.

The project has been approved by voters in Prop 400 and will help keep the local economy moving the in the right direction and create job. Please keep the project moving forward and help the valley to say a great place to live.

Thank you,

Dominic

From: Projects
To: ADOT
Subject: FW: Comments on DEIS for proposed South Mountain Freeway
Date: Monday, July 22, 2013 8:40:33 AM

FYI

From: Patti Mason [mailto:pkm6@cox.net]
Sent: Saturday, July 20, 2013 5:52 PM
To: Projects
Cc: PARCtheSMF@aol.com
Subject: Comments on DEIS for proposed South Mountain Freeway

July 20, 2013

TO: South Mountain Study Team
Arizona Department of Transportation (ADOT)
1655 West Jackson Street, MD 126F
Phoenix, Arizona 85007
projects@azdot.gov

(1) As a citizen of Phoenix, a resident of Ahwatukee, a voter, and a member of Protecting Arizona Resources and Children (PARC), I am writing to state my opposition to the proposed expansion of Loop 202/South Mountain Freeway (SMF), and urge the ADOT to NOT BUILD on Pecos Road.

In the intervening years since the project was first approved in 1985, the community of Ahwatukee was allowed to grow and expand to become a thriving neighborhood in Phoenix, with excellent schools that attracts new residents, and a good place to raise families.

When the original funding and support for this project dissipated, the project should have been scrapped, and a new plan should have considered the growth of Maricopa County since 1985, with developments to the south such as Queen Creek. Pecos Road is no longer the southern extreme of the region, but rather one of three major avenues through Ahwatukee with schools, homes, and churches bordering it.

(2) (3) The transportation needs of Phoenix, given the rising pollution levels in this city with increased EPA warnings and rising costs of fuel, would be better served by the implementation of a north-south light rail. The EPA has previously said that federal transportation funds could be withheld if Arizona cannot meet acceptable air quality standards, determining that pollution spikes cannot be attributed to simply dust storms: "Arizona currently is not meeting the national standard for particulate matter, PM-10 (one-seventh the width of a human hair). Major concerns for human health from exposure to PM-10 include: effects on breathing and respiratory systems, damage to lung tissue, cancer, and premature death. The elderly, children, and people with chronic lung disease, influenza, or asthma, are especially sensitive." (*Phoenix Business Journal*, May 25, 2010). Add the (4) (5) (6) (7) blasting of South Mountain, the bedrock blasting on the E-1 "alternative" identified by the ADOT, in the construction of the freeway itself, and the subsequent vehicular pollution, and you have a recipe for increased health risks, health costs, decreased federal funding, and overall decrease in quality of life itself.

Moreover, "a 2008 study of Maricopa County by the Arizona Department of Environmental Quality and Arizona State University found a correlation between elevated amounts of particle pollution and asthma-related absences at nearby schools." (*Ahwatukee Foothill News*, February 18, 2010.) At least three schools are within 500 meters of the proposed freeway route on Pecos Road. Not only does the proximity of the proposed freeway to homes and schools create a health risk for schoolchildren and residents, but the nature of the topography in the community itself could affect how the air pollution generated from the (3) (8)

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. In May 2012, the Arizona Department of Environmental Quality submitted a revised Maricopa Association of Governments 2012 Five Percent Plan for the region. On July 20, 2012, the U.S. Environmental Protection Agency made an official finding that the Maricopa Association of Governments 2012 Five Percent Plan was administratively complete. This decision ended the sanctions clocks associated with Arizona's decision to withdraw the Maricopa Association of Governments 2007 Five Percent Plan. On February 6, 2014, the Environmental Protection Agency published a notice in the *Federal Register* proposing to approve the Maricopa Association of Governments *2012 Five Percent Plan for Attainment of the PM-10 Standard* for the Maricopa County Nonattainment Area. In the same notice, the U.S. Environmental Protection Agency stated that it would concur with exceptional event (as a result of haboobs and dust storms) documentation prepared by the Arizona Department of Environmental Quality, which would give the region the 3 years of clean data needed for attainment of the particulate matter (PM_{10}) 24-hour standard. Finally on May 30, 2014, the U.S. Environmental Protection Agency approved the 2012 Five Percent Plan and found the area in attainment of the 24-hour particulate matter (PM_{10}) standard based on monitoring data for the years 2010 to 2012 (see page 4-72 of the Final Environmental Impact Statement for more information).
3	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Health Effects**	
5	**Air Quality**	The contractor submits a written blasting plan to the Arizona Department of Transportation prior to beginning any blasting work. The Arizona Department of Transportation Resident Engineer then ensures that the contractor has followed all requirements for a blasting permit. Prior to blasting, the areas where rock fragments may fall is mapped to ensure there will be no property damage. Residents in the area are notified of any blasting activity (see Draft Environmental Impact Statement page 4-115). Blasting is avoided if standard earthmoving equipment can be used.
6	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. 9	freeway stagnates between South Mountain and the Estrellas. The passage of Proposition 400 in 2004 for a Regional Transportation Plan was not a mandate to continue this ill-fated project. At the time of the vote, the advertising and messaging to the voters was largely about the light rail system. Voters approved the funding for new transit systems, improvements to existing roads, and construction of new freeways. But the Loop 202 extension was presented as under study with various alternative routes, and with alleged discussions with the Gila River Indian Community (GRIC). This citizen was informed, upon phoning the ADOT, when contemplating moving to Ahwatukee in 2002 that the proposed freeway project from 1985 would have to be re-envisioned if funding became available, given the growth of the community, and it was anticipated it would be relocated further south on land belonging to the GRIC. Only later, did I learn that at that time GRIC would not even allow their land to be surveyed or studied for this purpose. In retrospect, this seems to have been ADOT wishful thinking spoken as fact. As we are all aware, various negotiations did begin and stop with GRIC, and they have voted for a no-build option, an option not offered to the citizens of Phoenix in their advisory groups. Their opposition, like ours, reflect concerns not only about pollution but also destruction of ancestral and sacred land. While then Phoenix Mayor Gordon was on record (at the ADOT website) as lauding the infrastructure ensured by Prop 400's passage, he is also on record as saying that he did not support the Pecos Road alignment. (*Ahwatukee Foothill News*, March 9, 2007). There has never been a mandate for the construction of Loop 202 on Pecos Road, and yet, it continually is presented as the only possible route. Other alternatives such as the SR 85/I-8 truck bypass are dismissed in the Draft Environmental Impact Statement (DEIS) as not meeting "the proposed action purpose and need as a regional transportation network." This is a wanting explanation of its elimination from consideration; empty words to fill the pages. While the DEIS discounts the idea that the proposed South Mountain Freeway will be a truck bypass, or alternative to the Canamex route, there are no proposed restrictions to prevent trucks from Mexico, with high-sulfur diesel from choosing this route past schools and homes. There is also no serious discussion in the DEIS about hazardous waste accidents resulting from an accident on the proposed freeway. The layout of Ahwatukee itself – "the world's largest cul-de-sac" – means that any evacuation necessary would be difficult to execute. Will trucks carrying hazardous cargo be rerouted? There is certainly no discussion or plan for this contingency. This freeway will be destructive to the Ahwatukee community, to the sacred South Mountain (of the O'odham tribes) and the generally beloved South Mountain in the largest urban park nationally. It will be a financial disaster as well as an environmental one. MAG's insistence on building this boondoogle will result in the allocation of regional funds to purchase expensive homes in Ahwatukee for destruction and in costs to blast the mountain, with other projects going unfunded. The DEIS notes, in response to feedback for more light rail, that "no funds are available or anticipated to support a combined system through the Study Area." Despite the public's approval of a regional transit plan, the "plan" cannot consider light rail because it has allocated all of its funding toward implementing the outdated freeway. Not only alternative alignments, but alternative uses of transportation monies to meet the region's infrastructure needs have all been eliminated here in order to present this project as something that is inevitable. It is not. The impact will not only be this community—in terms of increased noise and air pollution, risks of greater environmental disasters with unregulated truck traffic, and loss of tax revenues with home, church, and business destruction, lowered property values of remaining homes, and increased crime—but have effects on the entire region. Those who voted for a regional transportation plan may have believed that other areas of the region would also be well served, as opposed to one area being ill-served. Solutions to the traffic congestion, for instance, in the Broadway Curve area, would be better found in engineering projects wisely addressed by civic planners than in a truck bypass in Ahwatukee. Not only would the community of Ahwatukee be blighted by the extension of 202, the entire region would suffer the consequences of this ill-spent allocation of the transportation funds. Taxpayer funding will be wasted, as ADOT and MAG continue to push for 25-year old plans to be implemented, with no forward-looking planning.

7	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
8	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
9	**Alternatives**	Funding for continuing study of the proposed action was part of Proposition 400 and has resulted in the Final Environmental Impact Statement. Consideration has been given in this continuing study to alternative routes and to potential opportunities to site the South Mountain Freeway on Gila River Indian Community land. However, siting the proposed freeway on Gila River Indian Community land must consider tribal sovereignty. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.

23 Suggestion for a depressed freeway instead of an at-grade rolling profile to possibly reduce some of the noise and visual impacts were quickly dismissed, primarily due to cost factors. In other words, there is not sufficient funds to protect the neighborhood through improved engineering plans, to do the job right. The suggestion that there would be more residential displacements is not contrasted against whether the residents whose homes are saved to front an at-grade rolling freeway would perhaps have rather been spared this atrocity. And, the final piece of "logic" offered by the DEIS that even with a depressed freeway, there would still be visual and noise impacts that would require mitigation is not an argument for the rolling profile, but for a no build option!

24 The proposed rolling profile would limit the access necessarily, and one proposed elimination would be at 32nd Street. This would serve to increase traffic on Liberty Lane, already congested in school opening and closing hours, to enable transportation to these schools. The schools and houses "saved" by the cost-cutting measures for freeway construction would suffer greatly.

25 Conclusions drawn concerning "2035 traffic conditions" in the DEIS are based on faulty reasoning as well. To suggest that nonfreeway alternatives would "capture only a small percentage of the capacity deficiency" does not consider that the alternative could be the wiser use of scarce resources to fund light rail and other forms of transportation that do not rely upon the one person-one car formula now that congests our regions and ensures more and more air pollution advisories. Rather this argument can only envision a future that is exactly like the present, and the Loop 202 would just be another congested area to further depress the living quality for Phoenix. Surely, the creators and perpetrators of the 1985 plan will have moved on by 2035, and we can only hope that the civic planners in 2035 are not left with a terrible mess to try to rectify.

3 The No Action alternative is included in this DEIS, unlike in the Citizen's Advisory Group discussions, only because NEPA requires the comparison of alternatives. Again, the logic employed for assessing the impacts of No Action assume that No Action means only not building the freeway, and not the use of the funds for the freeway to be used for alternative means of transportation to meet future needs. The argument that other transportation planning might need to be reassessed if this plan is not implemented is a circular argument, in which one is being told that no action is "inconsistent" because MAG and ADOT intend to build this freeway. The No Action option, a misnomer that should be written as "No Build" does "not satisfy" MAG's and ADOT's needs to implement this out-of-date plan. We do not need this lengthy document to understand this much.

2 Similarly, in the discussion of the impact of the proposed freeway on the cultural and historical resources, while it is admitted that all build options will cause negative impacts, and the "No Action" alternative leaves these undisturbed, the DEIS is quick to point out that "continuing urban development from projected growth in the Study Area" could result in losses as well. That's like telling the jury in a murder trial that if a murder victim had not been killed by the defendant, he might have been hit by a car anyway trying to get away.

24 Although the DEIS has as ADOT's mission "to provide a safe, efficient, cost-effective transportation system that links Arizona to the global economy [Mexican truck traffic?], promotes economic prosperity, and *demonstrates a respect for Arizona's environment and quality of life*" [my italics added], this project to extend the Loop 202, the South Mountain Freeway, fails miserably on all counts. The demonstration of respect would be laughable, indeed, if it were not such a serious threat to the residents of this area.

11 16 Sincerely,

Patricia Mason

Code	Issue	Response
16	**Section 4(f) and Section 6(f)**	
17	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.
18	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
19	**Economics, Socioeconomics**	Table 4-23 on Final Environmental Impact Statement page 4-63 displays projected property tax impacts on the various affected jurisdictions from right-of-way acquisition and future land uses related to each of the action alternatives. Property tax impacts from implementing the W59 Alternative would be about twice those resulting from the E1 Alternative. The loss in annual City of Phoenix tax revenues from implementation of the E1 Alternative are discussed on page 4-54 and would, given all tax revenues for the City of Phoenix, "be nearly inconsequential."
20	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
21	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
22	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document

Code	Issue	Response
23	**Design**	Depressing the proposed Pecos Road sections would entail installation of pump stations to drain the main line freeway. A depressed freeway would also need a drainage channel to capture the off-site flows to prevent their entering the freeway. Pump stations were not used because of the high cost of construction and maintenance needed for their operation. The preferred freeway configuration would have the E1 Alternative aboveground and the existing culverts extending to pass the drainage under the freeway. Pecos Road currently has numerous existing culvert crossings. Depressing the freeway in this area would eliminate the existing culvert crossings and potentially have adverse flooding impacts on adjacent properties. Extending the existing culverts or upsizing the culverts would maintain or improve drainage flows. This would ensure that there would be no adverse flooding impacts on adjacent properties. (See Draft Environmental Impact Statement pages 3-15 and 3-18.) To reduce impacts by depressing the proposed freeway in the Eastern Section, the Arizona Department of Transportation would: · need to spend an additional $400 million for right-of-way acquisition and construction · displace an additional 300 residences · maintain additional pump stations and detention basins for the life of the freeway · observe noise-related impacts requiring mitigation (i.e., noise barriers and their associated costs and visual impacts) Because the belowground option would result in substantially greater costs and residential displacements, this option was eliminated from further study.
24	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
25	**Traffic**	The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix (see Figure 3-8 on page 3-15 of the Final Environmental Impact Statement). The interchange would have required the displacement of over 100 homes and would have been located near an existing high school. The City recommended that, based on these impacts, the interchange be removed from the study. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).

Subject: Comments on DEIS for SMF

Dear ADOT:

I am a citizen and resident of Phoenix and the Ahwatukee area, and Associate Professor at Arizona State University School of Life Sciences. I am writing to ADOT regarding its draft environmental impact study (DEIS) for the South Mountain freeway (SMF). I would like to register my strong opposition to the building of the SMF. I am a member of Protecting Arizona's Resources and Children (PARC), and fully support its efforts to prevent the building of SMF. I have great concerns about the DEIS, as presented below.

1 2 3 4 5 6

One of my main concerns is that the DEIS greatly underestimates the impact of the SMF on the air quality for residents living nearby. The DEIS minimizes the potential pollution that will be caused by trucks burning diesel fuel, especially those coming from Mexico having fuel that is poorly regulated and high in contaminants like sulfur. The DEIS suggests that the "truck bypass" route on I-8 and SH-85 will be preferred by truckers. However, this route is substantially longer than the proposed SMF, and is thus unlikely to be viewed as economically feasible. Due to the geographic features along the E1 Pecos road corridor, concentration of the vehicle emissions is likely to compound toxicity issues in this area. The extreme proximity of several schools to the E1 route puts a huge number of children at risk of health problems due to air pollution.

7 8

The E1 route would require massive cuts in the ridges of South Mountain on the west side. This action is unfeasible for two main reasons. All of the Native American tribes in the area consider South Mountain to be sacred, and the proposed action would desecrate the land. Although that reason alone is enough to abandon the plan, another factor is more important to most of us: air quality. The blasting required for the SM ridge cuts (and other cuts along the E1 route) would generate huge amounts of airborne particulate matter. The fine dust generated by construction (especially PM10 particles that can be inhaled deeply) will produce respiratory problems for people in the area. Moreover, it will threaten federal funds for transportation that require control of air quality. Maricopa County has had great difficulty maintaining PM10 standards, and the construction of the SMF would certainly make it more difficult, if not impossible.

9 10 6

11

The DEIS makes dire predictions for adverse effects on the regional economy if the

2	**Trucks**	
3	**Purpose and Need, Truck Bypass**	
4	**Alternatives**	Choosing to travel on the proposed freeway versus Interstate 10 would not produce substantial travel time benefits. Therefore, it is expected that "true" through truck traffic (not having to stop in the metropolitan area) would continue to use the faster, designated, and posted bypass system of Interstate 8 and State Route 85.
5	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
6	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Section 4(f) and Section 6(f)**	
8	**Cultural Resources**	
9	**Construction**	The contractor submits a written blasting plan to the Arizona Department of Transportation prior to beginning any blasting work. The Arizona Department of Transportation Resident Engineer then ensures that the contractor has followed all requirements for a blasting permit. Prior to blasting, the areas where rock fragments may fall is mapped to ensure there will be no property damage. Residents in the area are notified of any blasting activity (see Draft Environmental Impact Statement page 4-115). Blasting is avoided if standard earthmoving equipment can be used.

(Responses continue on next page)

Code	Comment Document
12	"no action" option is chosen. However, we must remember that the SMF plan was first proposed more than 25 years ago, when fuel was relatively cheap and few people saw any problem with continuation of the freeway transportation paradigm. Data on climate change and greenhouse gases in the atmosphere have steadily accumulated over the years, to the point that it is obvious that we need a transportation paradigm shift in order to address the problems we face. We must reallocate most of our resources away from freeway construction and invest them in technologies that will minimize adverse environmental effects. I strongly advocate light rail expansion throughout the valley. Thus, not building the SMF should not be called "no action", because there are other actions that can be funded with the resources.
13	I strongly urge the ADOT to abandon the SMF plan and intensify studies of other transportation options that are more environmentally friendly. Sincerely, Hugh S. Mason

Code	Issue	Response
10	**Safety and Health**	To reduce the amount of construction dust generated, particulate control measures related to construction activities must be followed. The following mitigation measures would be followed, when applicable, in accordance with the most recently accepted version of the Arizona Department of Transportation *Standard Specifications for Road and Bridge Construction* (2008). Prior to construction and in accordance with Maricopa County Rule 310, Fugitive Dust Ordinance, the contractor shall obtain an approved dust permit from Maricopa County Air Quality Department for all phases of the proposed action. The permit describes measures to be taken to control and regulate air pollutant emissions during construction (see page 4-173 of the Final Environmental Impact Statement).
11	**Economics, Socioeconomics**	From the Draft Environmental Impact Statement, page 4-57: "Depending on which action alternative might be implemented—if any—travel time savings estimated through 2035 would range from $3 billion to $3.3 billion (in 2010 dollars); furthermore, approximately 15 million hours of travel time would be saved annually. Conversely, under the No-Action Alternative, substantial travel time savings in hours and dollars would not be realized." Property tax revenues retained by not converting existing land uses to a transportation use would be nearly inconsequential for a city the size of Phoenix. (Table 4-23 on Final Environmental Impact Statement page 4-63 displays projected property tax impacts on the various affected jurisdictions from right-of-way acquisition and future land uses related to each of the action alternatives. Property tax impacts from implementing the W59 Alternative would be about twice those resulting from the E1 Alternative. The loss in annual City of Phoenix tax revenues from implementation of the E1 Alternative are discussed on page 4-54 and would, given all tax revenues for the City of Phoenix, "be nearly inconsequential.")

Code	Issue	Response
12	**Air Quality**	Climate change is an important national and global concern. While the earth has gone through many natural changes in climate in its history, there is general agreement that the earth's climate is currently changing at an accelerated rate and will continue to do. Human-caused greenhouse gas emissions contribute to this rapid change. Carbon dioxide makes up the largest component of these greenhouse gas emissions. Other prominent transportation-related Greenhouse gases include methane and nitrous oxide. Greenhouse gases trap heat in the earth's atmosphere. Because the atmospheric concentration of greenhouse gases continues to climb, our planet will likely continue to experience climate change-related phenomena (see Final Environmental Impact Statement pages 4-85 through 4-86). To date, no national standards have been established regarding greenhouse gases. Greenhouse gases are different than other air pollutants evaluated in federal environmental reviews because their impacts are not localized or regional due to their rapid dispersion into the global atmosphere. The affected environment for greenhouse gas emissions is the entire planet. In contrast to broad-scale actions such as those involving an entire industry sector or very large geographic areas, it is difficult to isolate and understand greenhouse gas emissions' impacts for a particular transportation project. Furthermore, presently there is no scientific methodology for attributing specific climatological changes to a particular transportation project's emissions. Under the National Environmental Policy Act, detailed environmental analysis should focus on issues that are significant and meaningful to decision making. The Federal Highway Administration has concluded, based on the nature of greenhouse gas emissions and the exceedingly small potential greenhouse gas impacts of the proposed freeway (as shown in Final Environmental Impact Statement Table 4-37 on page 4-85), that greenhouse gas emissions from the proposed freeway would not result in "reasonably foreseeable significant adverse impacts on the human environment" [40 Code of Federal Regulations § 1502.22(b)].
13	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Subject: Loop 202

I would like to comment on Loop 202.
I live in Ahwatukee and use the trails on South Mountain frequently.
It would be tragic for Phoenix to ruin the largest city park in the country.
There is no reason to use Pecos road when Riggs road is a better solution.
The mountain would not be affected if Riggs was used thus drastically reducing the environmental impact to our city. Government is suppose to protect our open spaces not run freeways through them.
Many groups such as the girl and boy scouts use South Mountain as a valued open space which gives us a place for our younger population to experience nature and learn how to protect it. It would be a disgrace if the city of Phoenix destroys the park.
Why isn't there a feasibility study on using Riggs road?
Should it not be an obligation of the city to do this feasibility before destroying a city park?
Is the city not obligated to maintain the park for the future use of its citizens?
When the park was dedicated do you think the people that worked so hard to preserve that space wanted it used as a highway?
PLEASE STOP THE EXPANSION OF LOOP 202 onto Pecos Road.
Move the highway to Riggs Road.
Please provide me with confirmation that you received my email.

Sharon Mattern
12618 South 38th Street
Phoenix, AZ 85044

1	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
3	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

1 MS. MATTERN: This is Sharon Mattern and
2 I just don't want to see the park destroyed. It's
3 used by the Boy Scouts and the Girl Scouts and many
4 other groups, Indian guides and the apprentice
5 movement, and it's one of the largest city parks in
6 the nation and I would really like it not to be
7 destroyed with the highway cutting right through it
8 or to the side of it or to the bottom of it.
9 I think Riggs Road should be relooked at
10 as an alternative. The road already goes to 51st
11 Avenue. It would be a better alternative for
12 everyone.

ADOT,

1 2 3 4 5

Please take a serious moment to consider how our children will be effected by the proposed 202. I fear the possible threats of spills from large transportation trucks could cause serious health issues. The pollution will take away from the beautiful South Mountain that we enjoy taking bike rides, hikes and walks on many days and nights a week. Its a real shame for my husband and I to even contemplate that we will have to uproot our family and the home we've loved and made memories in because of the drastic landscape change that will leave nothing behind to be desired. Ahwatukee will see a huge decline in home ownership and small businesses. There is more to this freeway than meets the eye.

Jen Matthews
Phoenix home owner

ADOT Loop 202 South
Mountain Freeway Study
1655 W. Jackson Street
MD 126F
Phoenix, AZ 85007

Dear ADOT or To Whom It May Concern:

1 2 3 4 5 6 7 8 6 9

I am writing in regards to the proposed 202. I really fear the possible threats of spills from
large transportation trucks (especially those coming from Mexico that do not abide to the low sulfur diesel) could cause serious health issues. The quality of air that my family will breath will take a dramatic fall and sacrifice our health on a constant, daily basis. The pollution will take away from the beautiful South Mountain that we enjoy taking bike rides and walks on many days and nights a week. It's a real shame for my husband and me to even contemplate that we will have to uproot our family and the home we've loved and made memories in because of the drastic landscape change that will leave nothing behind to be desired. Ahwatukee will see a huge decline in home ownership and small businesses. I also fear that the community and schools will be exposed to more common areas (South Phoenix) and our crime rates will inevitably grow. One of the reasons we purchased a home in Ahwatukee was the seclusion, low crime and community feel. This too, will be dramatically different. There is more to this freeway than meets the eye. I hope ADOT can see that the freeway is opposed due to the alignment on Pecos road.

Sincerely,

Jen Matthews
concerned homeowner

1	Claude Mattox Document Created: 5/21/2013 5:24:14 PM by Web Comment Form This freeway segment was part of the original 1985 Freeway proposal that was approved by the voters of Maricopa County. Due economic pressures and political favors the process we are now experiencing has been delayed. This freeway needed to be built twentty years ago, as everyone expected. The quagmire now has to do with a lack of political will to move forward. It is not about one community of Phoenix, nor about the adjacent Gila River community, it is about the entire transportation system of Maricopa County and all the residents of the county. As we voted in 1985, this freeway needs to be built to save time, fuel and to accomodate the future growth the valley and this area will continue to experience.

Please build the loop 202 extension through the South Mountain region. While I no longer need to commute to work via I-10, the community really needs this highway.

Thank you

We need to have the 202 freeway built here in South Phoenix. Sine I have lived here I noticed that there has been no effort put into this community unlike Chandler, Mesa and Gilbert. What is the problem...

traffic. That's the sound of emergency personnel trying to get to a 911 call, but can't due to traffic.

The sound of truck bypass will go through your homes, your child's bus stops, schools, all these are being diverted off the truck route due to the congestion of an accident. Do you smell that? You can't now, but oh, you will, the toxic fumes left behind by trucks idling on roadways during an accident, or just morning congestion trying to merge onto another interstate. Let me remind you that the "I" in I-10 stands for "interstate." If you stand on the overpass at the I-10 and Chandler Boulevard, you will see a constant flow of trucks traveling to and from Mexico and California.

I have here a VHS tape and an eight-track tape. Do you remember back about 25, 30 years ago, when these were used? Do you still use them today? Do you still have the devices that play these? Do you remember when the State had this crazy idea about building a truck bypass along the Pecos Road alignment about that same time? Well, let me tell you what's happened in that time since that idea. A beautiful community was formed, houses and churches were built. Some people call it, at least the tax

collectors call it "Phoenix," but the people of Ahwatukee call it "Ahwatukee," house of your dreams. My question is now, over 30 years since this crazy idea was proposed, do you want to destroy houses and crush people's dreams? Why hasn't anyone in the 30 years come up with a better solution? Why isn't State Route 86, which connects to the 8 and then to the I-10, being considered as an alternate route? This truck route will have an increasing crime rate in the area, and that's a given fact.

If you think the government was negligent in helping the banks instead of the people in tanking property values in 2008, wait, you haven't seen what's going to happen if Arizona representatives are ready to flush their real estate values down the toilet. We can rename it "Ahwatoilet" and "Latrine," because both of these places will be worthless places to live if this truck bypass is built.

In closing, my heartfelt prayers go out to the citizens of Oklahoma who were devastated by the tornados yesterday. The federal government should be allocating funds like rebuilding communities like that. The State of Arizona should be ashamed and embarrassed to take money from the federal government to build what they consider truck

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
6	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
7	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the Route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
8	**Neighborhoods/ Acquisitions**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
9	**Acquisitions and Relocations**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.

Code	Comment Document

10
5

routes. If you stand here and tell me that the plan all along, and the State knowingly and willingly let these houses and churches be built so it can collect taxes, in the meantime, all knowing that you're going to take federal government money and to use this, shame on you.

Let's just say someone had an idea 30 years ago, it wasn't created, and no one longer wanted it. In fact, something has already been in its place and it's called a community

THE FACILITATOR: Excuse me, Ms. McCardy, you've gone through the three-minute time period.

MS. McCARDY: I have 22 seconds.

THE FACILITATOR: No, you've gone over.

MS. McCARDY: Oh, it's going up? One last thing. I urge you to find another solution and talk of this as a mistake of your predecessors by not acting on it 30 years ago like they should have.

THE FACILITATOR: Thank you, Ms. McCardy. Is Maxine Lakin here?

MS. LAKIN: Yes.

THE FACILITATOR: Did I pronounce the name properly?

MS. LAKIN: Yes.

THE FACILITATOR: Thank you.

Code	Issue	Response
10	**Social Conditions**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.

From: Corey McCarthy
To: Projects
Subject: Loop 202 DEIS Comment
Date: Tuesday, July 23, 2013 8:21:50 PM

AZDOT,

I believe the Loop 202 has far reaching consequences beyond that of just the DEIS. While the DEIS addresses the issues of air quality, wildlife, and noise pollution it seems to fall short in addressing the issues it will cause in the surrounding community. I have recently moved to the Phoenix area, in particular, Ahwatukee because I received several recommendations. I chose this area because it was supposedly one of the best in the valley. I am DEEPLY REGRETFUL that I have chosen to live in PHOENIX. I plan to move from the area as soon as practical due to this project.

C. McCarthy

1	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

Code	Comment Document

1 JOANN MCCARTY: The one thing I did want to
2 mention was, regarding Proposition 400 -- and the
3 officials constantly say, back in 2004, Proposition 400
4 was voted in for this freeway. However, Proposition 400
5 included the extinction of the light rail, it included
6 regional bus routes, it included new dial-a-ride buses
7 and stops and it included improved bus stops, including
8 pull-out shelters.
9 It was not necessarily the freeway or truck bypass on
10 route 202 for the continuation of that proposed loop, as
11 it is a 30-year old idea that should never be built.
12
13 DANIELLE SPRING: I'm a part of the community
14 river of the Gila community. I live in District 6 in
15 the village of co-op. I live on 67th Avenue and
16 Elliot and I am appalled by the loop 202 extinction
17 being pursued through the South Mountain. I don't
18 believe the EIS has proper address on this freeway. I
19 don't even see that they are acknowledged as living
20 there, even though we have lived there for thousands and
21 thousands of years before Christ was born -- our people

1	**Alternatives**	The proposed freeway is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. The *Regional Transportation Plan*, as described on pages 1-5 and 1-10 of the Final Environmental Impact Statement, addresses freeways, streets, transit, airports, bicycle and pedestrian facilities, freight, demand management, system management, and safety. The proposed freeway is only one part of the overall multimodal transportation system planned to meet the travel demand needs of the Maricopa Association of Governments region.
2	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

LOOP 202
South Mountain
Freeway Study

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1

Am very concerned about the proposed loss of agriculture. As a 3rd Generation AZ, growing up with cotton
Citrus
Cattle
where are these industries going to be replaced. This loss of industry must all be considered in long-term economic impact. We are losing our diversity.

1	**Agriculture**	Congress enacted the Farmland Protection Policy Act to minimize the extent to which federal programs contribute to unnecessary and irreversible conversion of farmland to nonagricultural uses and to ensure that federal programs are administered in a manner that, to the extent practicable, is compatible with State and local governments and with private programs and policies to protect farmland. The environmental impact statement process has adhered to the stipulation set forth in this Act. Urbanization in the Maricopa Association of Governments region has been occurring for years and will continue to do so with or without the proposed freeway (compare Final Environmental Impact Statement Table 4-2, on page 4-3, with Table 4-4, on page 4-7; see also Final Environmental Impact Statement page 4-161). For instance, much of the land along the Preferred Alternative in the Western Section is already slated for commercial and industrial uses.

I am sending this email to indicate to whomever is involved in making the possible extension of the 202 aware that I am another "NO" vote.
For a myriad of reasons (e.g. noise pollution, air pollution, destruction of part of South Mountain), I am strongly against running a freeway though Ahwatukee.
Please add my name to the tally of those opposed to the freeway extension.
Thank you,
Jim McDaniel

When this freeway was 1st planned the west valley was not as built up as it is today. Using old plans it not realistic as this was done with the I-17 and look at the mess it has turned out to be. You want to dump 140,00 cars as day into the busiest part of I-10 west. You will be creating the same nightmare the I-10 has at the Tempe curve or the I-10, I-60 interchange had. This freeway should not to connect prior to the 101. The 303 would be even better if the real intent is to move the traffic around Phoenix and the busy spots of the valley. Someone need to check out the fast growing southwest valley.

CALLER REMARKS/QUESTIONS:

I want to leave a comment about the EIS Environmental Study draft on the South Mountain Freeway. I am very much in favor of the west 101 Alternative because of the continuity with the freeway system. I think this is extremely important and West 101 Alternative makes sense. I've spent over 4 decades working in transportation planning up and down the west coast and here in Phoenix and so I would very much like to have my informed opinion expressed in favor of the West 101 Alternative. Thank you so much for taking my comment. Thank you for taking this message. I hope the comment is meaningful and accepted by you. Goodbye.

I travel through central Phoenix each day I go to work. With traffic flowing I can make my trip in about 40 minutes.(early morning hours) I believe the 202 South Mountain freeway will allow that commute during heavy traffic instead of the 60 minutes of stop and go traffic. (5 PM) I also believe that will eliminate many accidents that occur in heavy traffic. There is so much traffic that flows between the stack and the mini stack that eliminating any traffic from downtown will be a good decision. I know there are many concerns about building this extension. I thank you for you efforts to move this project forward.

Document Created: 5/21/2013 8:35:29 PM by Web Comment Form

Jobs, Jobs, Jobs... Its what the region needs and what the Loop 202 South Mountain Freeway can deliver if given the green light to proceed. Unemployment in Arizona has remained unchanged for the last 3 months and stagnant for the last 3 years. Building the Loop 202 South Mountain Freeway will create approximately 30,000 new jobs, generate 2 billion dollars in local goods and services throughout the life of the project breathing new life into a region that has been slow to come back after the recession.

The Loop 202 South Mountain Freeway will provide congestion relief, reduce travel times across the valley and assist in improving the overall air quality of the region.

1

It has been voter approved twice, once in 1985 and again in 2004. Its time to start building and stop talking about it.

---

i live just off Pecos and 40th Street, across from the Park and Ride. I am in favor of the freeway being built, and I wish you would get moving on it. I lived in Tucson until 2001, when I came to Ahwatukee. Tucson has in my opinion the worst system of getting around town as any I've lived in, and that includes most of my life in Chicago. One of the reasons is that although they wanted growth, and tried consistently to lure businesses there, they go on and on about protecting the desert, and don't want the traffic, blah blah blah. So here they are with one freeway that skirts one end of town. If you want to get across town, you have to drive their terribly crowded surface streets. They are an embarrassment to midsize to large metropolitan areas.

I say build the freeway where it's the most economical. Do your best to make it look nice. Put a nice big sound wall up alongside it, but get it done. We need the benefits it will bring. Yes, there will be some downside to the aesthetics of our neighborhood, but if we allow growth without a decent way to get around we'll end up just like Tucson.

Patrick McGrath

To: Projects
Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 1:14:12 PM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

We don't need another freeway!

(2) (3) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including a HIGH SPEED RAIL between Tucson and Phoenix.

The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(4) (5) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(6) (7) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(8) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(2) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Mrs. Kimberlyn McGreall

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Subject: Comment in Support of South Mountain Freeway
Date: Monday, May 27, 2013 10:15:38 AM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

This freeeway should have been built twenty years ago,
Traffic on Interstate 10 between the two points where the South Mountiain Freeway will intersect it is extremely heavy, with congestion, accidents, and air pollution from cars moving slowly and inefficiently along the I-10.

The new freeway will reduce air pollution and traffic congestion, and will ultimately improve the quality of life with shorter drive times.

The Sierra Club and some other groups opposing the freeway would like to eliminate freeways and roads and go back to the "greener days" of horseback and bicycles.

WE have wasted millions "studying" the need for an impact of the freeway, while anyone who understands transportation or urban planning can tell you we need this transportation corridor yesterday!

Sincerely,

Mr. Roger Mckee

Subject: NO on South Mountain 202 Freeway!

1 2 3 4 5 6 7 8

As an Ahwatukee resident for 22 years, we have known about the possibility this freeway could be built but are definately opposed to the construction of the South Mountain 202 freeway along the Pecos alignment. We currently have good air quality and all the truck traffic will pollute our clean air and hazardous materials will be transported past our community. A grade school will back up to the freeway where children will be playing and breathing the air. Not to mention the church and hundreds of homes that will be torn down thus the loss of property taxes. Ahwatukee Foothills is already a big cul de sac and if construction of this freeway commences, it will cripple the community with the loss of Pecos as a route out of the community.

We recommend this freeway NOT be built at all.
Thank you.

Code	Issue	Response
1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Hazardous Materials**	
4	**Health Effects**	
5	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
6	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
7	**Economics, Socioeconomics**	Table 4-23 on Final Environmental Impact Statement page 4-63 displays projected property tax impacts on the various affected jurisdictions from right-of-way acquisition and future land uses related to each of the action alternatives. Property tax impacts from implementing the W59 Alternative would be about twice those resulting from the E1 Alternative. The loss in annual City of Phoenix tax revenues from implementation of the E1 Alternative are discussed on page 4-54 and would, given all tax revenues for the City of Phoenix, "be nearly inconsequential."
8	**Traffic**	The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours may be needed during construction. (See Final Environmental Impact Statement page 3-27.)

Subject: Suggestion gor the 202 West Freeway
Date: Tuesday, June 04, 2013 6:54:43 PM

Greetings,

Suggesting—

1 Taking the present S. 101 Freeway from the connection point with the S. 202 (at Pecos Rd)---Continue the 101, along Price, - South---angling South-West using open lands to the Riggs Road and then along Riggs Rd (west) across Hwy 10 (at Riggs Rd.)—Continuing West along Riggs Rd. to the Estrella Mountains, in the South Levine, AZ area----Tunnel West through the Estrella Mountains to the West Side and Continue (NW) Along the Estrella Mountains Northward to connect with the present 303 at Hwy 10.

This would Route a good share of the East-West Trucking Traffic as well as Traffic period--- from the South and West-- and Bypass Phoenix connecting to Hwy 10 at the Riggs Rd Exit area and or the western 303 areas.

This would take care of the Sun Lakes Areas, Southern Chandler, Gilbert and any traffic that would want to connect to the West side of Phoenix or Bypass if wanted.

It would eliminate the costly inhabited areas that are now settled between the South Mountain and the Estrella Mountains and also eliminate the already overcrowded traffic problems from downtown Phoenix to the 303 areas.

A costly Tunnel, of course, but the Job creation, etc. and etc. could be offset with a "Toll Road" suggestion---

I believe Phoenix already has a company that provides Tunnel Boring Equipment?

2 The Indian Land would have to be of concern, but here again the Benefits to

Code	Issue	Response
1	**Alternatives**	The alternative suggested in the comment would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Most of the alternative suggested in the comment would be located on Gila River Indian Community land. The Gila River Indian Community has not given permission to study in detail an alternatives on its land. Therefore, tribal sovereignty must be considered. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process. Tunnelling through the Sierra Estrella would result in significant impacts and the cost would be of an extraordinary magnitude. For similar reasons as identified for the Riggs Road Alternative and the Interstate 10/State Route 85 Alternatives, the suggested alternative would not meet the purpose and need for the proposed action (see page 3-9 of the Final Environmental Impact Statement). For all of the reasons above, the suggested alternative would be eliminated from further study.
2	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Comment on the Draft EIS and Preferred Alternative selection

1 2

I would hope that the idea of chopping off the end of the South Mountain Preserve would be so onerous that no one would sanction it. There is a better solution to leaving that as our legacy. That a freeway is more important than the value of having that left intact. It is not just the Gila River Indian Community, it is all who live here, who moved here to be near that view and who honor preserving it that way.

Thank you,
Deborah McMillion
homeowner in Ahwatukee for 25 years/Arizona for 54 years.

1	Andrew McNeish Document Created: 7/21/2013 10:34:44 PM by Web Comment Form I am a concerned Ahwatukee resident and would like to see that the South Mountain Freeway is stopped. If that is not possible I believe it should be routed south of the Gila Reservation.

Code	Issue	Response
1	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the Route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.

Subject: NO to LOOP 202 alternatives 59th Ave/ 63rd ave & 71st Ave

To Whom it may Concern:

1 I am writing this to oppose the Loop 202 expansion at 59th Ave/63rd ave (as well as at 71st Ave.) This may be your preferred route but it certainly is NOT mine. I live in Laveen on 65th Drive and do not want a freeway in my front yard.

My husband and I moved to our little slice of Heaven ,Laveen in 2001 little over a year after we moved here we got married, and most of our neighbors came to the wedding.Since than we have been to other neighbors' (or should I say, our extended family) weddings, birthday parties, barbeques, house warming parties, Thanksgiving, Christmas, Halloween and sadly funerals.

Our neighbors welcomed us with open arms. We could not have been happier, and have paid it forward ever since. We wave to folks that drive through, we welcome new neighbors. We all know one another, and we look out for one another in this neighborhood.We liken our selves to "Mayberry." If one lives in Laveen you are very lucky and thankful.

2 We do not want ADOT to build a freeway through our neighborhood. We do not want to see some of our "family" lose their homes, or have a freeway in their front/back yards. We have grass and trees, birds, livestock, horses, frogs, dogs, cats...you name it we have it... (Wild & domestic) We do not want to lose our natural habitat, nor do we want to see any of the animals and plants (there are many of both) loose (lose) their natural habitats. Our air will be polluted (even more than it is now) our water in the well & river bottom may be destroyed, or irrigation (we have water rights that are very unique & we are grandfathered) will be no longer. Our yards will be desimated, more natural habitats will be completely destroyed. Our green grass and trees will die. We moved out here for the country atmosphere, the green grass & trees. Horses & cattle graze upon the grass. The crime rate will increase, (studies show crime always goes up in the close proximity of a freeway)as well as our noise pollution & light pollution will be horrible & unbearable.

1	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	The Laveen Village area is anticipated to have a built-out population of over 105,000 (see Final Environmental Impact Statement page 4-5). This proposed level of development places increasing demand on the road network. The City of Phoenix's General Plan for Laveen Village has designated areas along the proposed freeway for commercial development that cannot support the projected densities without implementation of the proposed freeway. Without the proposed freeway, the conversion of land from undeveloped and agricultural uses to residential, commercial, and industrial land uses would likely continue, placing a greater demand on surface streets (see Final Environmental Impact Statement page 4-14).
3	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Air Quality**	
5	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to state regulations/standards. (See text box on Final Environmental Impact Statement page 4-108.)

(Responses continue on next page)

Code	Comment Document
4 10	We as a community enjoy our peace and quiet, our skies with the visible stars, no roaring cars on a freeway, or threat of hazmat material polluting our air and water. The fear idea of a freeway blasting right by our homes and charter school is terrifying, unthinkable, unimaginable!! It wasn't in the documents of the house plat that any freeway was imagined for this area or we would not have purchased our home here.
11	
12	ADOT did an "environmental study" years ago and did not think there would be an impact on our community. Since when does ADOT conduct these studies? This is a conflict of interest!Two different LLC's are trying to buy votes/signatures for $2000.00 to the let them build this freeway, sounds like a bribe to me. We are also aware that the Canadian/Mexican truck route could be part of the trucks coming through and that is quite a concern to us, more trucks and extremely hazardous materials. The Mexican government doesn't requirethe inspections that USA trucks are required to have for safety and proper labeling of contents. The Sierra Club has done studies and can prove that their would be an impact on this community. The animals (including humans) and plants would suffer tremendously.
13	There is NO need to put (force) this freeway right through our (or anyone's) neighborhood.Putting people and animals at risk is not the right thing to do...not for any amount of money. Ruining our Village, our families, our lives is not acceptable. The planners and engineers need to consider another route, either go farther west and find ways to avoid ruining homes, or DO NOT build. When we found Laveen, we fell in love with this Village, as we drove through this beautiful area people waved to us as we passed by and dogs wagged their tails. We drove through Laveen for over a year looking at homes wishing some day we could be part of this paradise.One wonderful day we went to an open house (just for kicks) and knew we belonged. We bid on the house and since that day our dreams came true we got the house! We belong! NO on the LOOP 202 Expansion at 59th Ave/63rd AVe Alternative...And No at 71st Ave as well...NO!!!!!!! Please hear our very concerned voices! Sincerely, Carolann McQueary

Code	Issue	Response
6	**Surface Water**	Impacts resulting from the proposed action crossing the Salt River would be addressed in a Clean Water Act Section 404 permit if an action alternative were to become the Selected Alternative (see Final Environmental Impact Statement pages 4-118 through 4-120). Impact acreage would be calculated. Section 404 of the Clean Water Act establishes a program to regulate the discharge of dredged and fill material into waters of the United States, including wetlands. Activities in waters of the United States that are regulated under this program include fills for development, water resource projects (such as dams and levees), infrastructure development (such as highways and airports), and conversion of wetlands to uplands for farming and forestry. The U.S. Army Corps of Engineers administers the Section 404 program. Washes, streams, rivers, and wetlands delineated as waters of the United States, or jurisdictional waters, by the U.S. Army Corps of Engineers are regulated through use of Section 404 permits. When avoidance of waters of the United States is not practicable, minimization of impacts would be achieved, and unavoidable impacts would be mitigated to the extent reasonable and practicable. The permitting process for Section 404 requires Clean Water Act Section 401 certification. This certification is regulated by the Arizona Department of Environmental Quality for waters of the United States, except on tribal land, where it is regulated by the U.S. Environmental Protection Agency. Each future residential, commercial, and local and county transportation development resulting in impacts on jurisdictional waters is subject to Sections 401 and 404. For construction of the proposed action, the Arizona Department of Transportation and its contractors would be required to comply with Sections 401 and 404 of the Clean Water Act and to ensure that permit conditions and mitigation measures would be met during construction. The general and special conditions of the Section 404 Individual Permit would minimize impacts on waters of the United States to the extent practicable. Canals that connect to jurisdictional waters downstream are also considered jurisdictional waters. Impacts on canals would be calculated and addressed in a Section 404 permit if an action alternative were to become the Selected Alternative (see Final Environmental Impact Statement pages 4-118 through 4-120). Drainage plans would be completed to minimize impacts on drainage facilities. The impact on canals would be mitigated by pipe conveyances under the freeway.
7	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
8	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Visual Resources**	Light from the freeway would be produced from vehicle headlights and taillights and from fixed light poles at interchanges along the freeway. Nighttime users of the park and residents of Ahwatukee Foothills Village may see lines of seemingly crawling vehicles, each with lights front and back. Fixed freeway lighting would be provided for safety reasons only at interchange exit and entrance points. Freeway lighting at these locations would be designed to reduce illumination spillover onto sensitive light receptors such as residential areas (see page 3-58 of the Final Environmental Impact Statement).

Code	Comment Document
1	Ed Mears Document Created: 5/21/2013 4:11:01 PM by Web Comment Form I strongly recommend building the highway with the W101 interchange at I-10. To connect the new 202 loop to I-10 east of the Loop 101 would create additional congestion on I-10 between Loop 101 and the intersection at W71 or W59. This will be as bad as the convergence of I-10 and US60, SR43 and the I-10/I-17 interchanges. The total economic impact is not clear in the study if the W71 or W59 alternatives are selected with respect the additional freeway loading on I-10 from 101 to either interchange (how much more freeway is necessary to be built on I-10 to handle this convergence?). Also, the economic impacts to the areas along W101 are not clear regarding the total property valuation increases along the corridor. A similar correlation would be the 202 San Tan and Red Mountain areas, where property within a mile of the freeway has increased in value since highway completion. Any loss of property tax revenue from takes will be offset by adjacent property value increases. Look to Chandler and their success with both Price and San Tan freeways. PLease do this project right, build one of the W101 alternatives.

Code	Issue	Response

Subject: South Mountain Freeway
Date: Saturday, June 08, 2013 8:32:15 AM

Dear Sirs:

I live in Ahwatukee and against the South Mountain Freeway proposed on Pecos Rd for the following reasons:

1

1. South Mountain Preserve means that it will be "preserved", not cut through it when you want to. This is a
promise to the people. Do not break the promise.

2 3

2. The pollution caused by construction and traffic will have long term negative affects on the population, especially
school children near the proposed freeway.

4 5

3. Your primary purpose of the South Mountain Freeway is that it will be a by-pass for I-10 and Phoenix. Build a
by-pass freeway on Riggs Rd-Beltline Rd connecting to 51st Ave.

5

4. Do not use an obsolete proposal. Build on Riggs Rd - Beltline Rd and connect to 51st Ave.

Thank You

Steve Mefford

Code	Issue	Response
1	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Health Effects**	
4	**Purpose and Need, Truck Bypass**	
5	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.

Subject: ADOT Loop 202 South Mtn Freeway
Date: Wednesday, July 24, 2013 7:02:10 AM

(1) (2) (3)

South Mountain is the largest municipal park in America; it is not a freeway, nor should it ever be a freeway. Some things are more important than catering to long-distance commuters - - - like mountains, open land, parks, Native American history and culture, children, schools, air quality, and preserving quality of life. What's next? A freeway cutting through Camelback? Through the Grand Canyon? Both of those options would save drivers time too.

When our family moved to the East Valley in 2001, a gallon of gasoline cost 99-cents. I shudder to think how low it was in 1985 when this freeway was conceived. But that is ancient history. Now we know that it is socially and environmentally irresponsible to commute long distances on a daily basis in a privately owned vehicle. We should not be catering to those who live in the East Valley and work in the West Valley, or vice-versa.

(4) (5) (6) (7) (3)

In the 12 years I have lived in the East Valley, I can honestly say I have never witnessed traffic congestion other than morning & evening rush hours or in the case of an accident. And even during those rush hours, I have not witnessed absolute grid-lock - - - more like a slowdown that cost 7 to 10 minutes of my time at the most. Is 7 to 10 minutes of time worth the noise, traffic, visual, and air pollution ADOT intends to wreak upon South Mountain and the Ahwatukee Foothills? NOT!

(8)

We all know that the biggest slow-down in the East Valley is the Broadway curve, so why doesn't ADOT focus on fixing that problem instead of creating an expensive and destructive freeway through our most pristine land?

~ C. L. Mehling

Code	Issue	Response
1	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Cultural Resources**	
3	**Air Quality**	
4	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
5	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
7	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
8	**Purpose and Need**	In 2035, the average daily traffic on the proposed freeway is projected to range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-62). The estimated volume depends on location. The purpose and need for the South Mountain Freeway are not solely to relieve congestion on Interstate 10 (Maricopa Freeway). Facilitating mobility in the Maricopa Association of Governments region does not mean just relieving congestion on the Broadway Curve (see Final Environmental Impact Statement page 1-21). Among other criteria, the proposed freeway is to permit the entire Regional Freeway and Highway System to function as designed. Optimal function of that design includes completing all the segments of the Loop 202 system (see Final Environmental Impact Statement pages 3-35 and 3-37). With implementation of the South Mountain Freeway, many motorists would be able to get from Point A to Point B, a route that never included needing to use Interstate 10.

From: The Mehling Family
To: Projects
Subject: ADOT Loop 202 South Mtn Freeway
Date: Wednesday, July 24, 2013 7:32:41 AM
Attachments: Loop 202 sex offender freeway.png

Our family calls the ADOT's proposed freeway the "Loop 202 Sex Offender Freeway". Look at the attached registered sex offender maps from the four nearest West Valley zip codes ADOT intends to link with Ahwatukee (ATTACHMENT).

1 2 3 4

So far, everyone has talked about the noise pollution, air pollution and sight pollution of the proposed freeway, and all of those will surely be a detriment to our quality of life. But no one has talked about the crime it will bring to Ahwatukee – a community that doesn't even have a local police precinct - - only a substation.

When we first moved to the Ahwatukee Foothills 12 years ago, we mapped out all of the 'crimes of opportunity' that appeared in the "Police Blotter" in the *Ahwatukee Foothills News* publication. What we found was that the vast majority of this type of crime occurred east of 32nd Street, and heavily around 48th Street. While a few criminals did venture into the foothills area west of 32nd Street, most perpetrators recognize the need for a quick get-away, which is cumbersome in a community shaped like a cul-de-sac. But now ADOT wants to flood our community with FOUR freeway entrances/exits?!?! WHY? We don't want them!!! We don't want all the felons and sex offenders from the West Valley to have quick access in and out of our neighborhoods.

5 6

People who purchased homes in the Ahwatukee Foothills are perfectly happy living in a safe, quiet, cul-de-sac community. We are perfectly willing to drive 4 miles or more to the nearest freeway. We are perfectly satisfied with the thought that our community is not a thoroughfare between two destinations. THAT'S WHY WE LIVE HERE.

7 8 5 9 4

Sure, ADOT is going to purchase all the homes and businesses that need to be destroyed to build this ill-conceived freeway, but are they going to compensate the rest of us for our significant losses in property values and quality of life? Are they going to ensure the safety of our children and our homes? Are they going to foot the bill for the substantially larger police presence that will be required?

10 11 12

This freeway plan is antiquated, irresponsible, and unnecessary, but if you can't put the money to better use on a more relevant plan, such as mass transit, then at the very least, remove all those freeway entrances and exits from our community!

Sincerely,
Ed, Carin & Marina Mehling

1	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
4	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
5	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
6	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
8	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.

I am from the Bay Area and my husband is from San Diego. We witnessed, first hand, that additional freeways do not alleviate traffic congestion – quite the opposite. One only has to look at Los Angeles to see that freeways are NOT the answer. Transportation solutions that embrace progressive measures and frown upon long, daily commutes are most effective.

Before leaving California, we also witnessed some of these progressive measures. In San Jose, it was a Light Rail system that took people to the campuses of some of the largest Silicon Valley employers, as well as sports and concert venues. In San Diego it was the Trolley, which takes travelers to popular sightseeing destinations, downtown, and to and from the Mexican border. These were welcome and progressive improvements to the transportation system that show a good deal of forward thinking and responsibility – qualities that are severely lacking from the outdated 1985 freeway conceived by ADOT.

1 2

Here are some other ideas that are more up-to-date than ADOT's proposed freeway through our beloved community and municipal park:

3 4 5 6

- Expand the existing Phoenix bypass route (we know one exists because we do not take I-10 to get to San Diego).
- Fix the Broadway curve – it's really the ***only*** point of congestion in the East Valley.
- Install more park-and-ride lots.
- Add a rapid bus at midday for people who work half-days downtown, serve on jury duty, or just want to go downtown without getting stranded until 5PM.
- Expand the Light Rail system with a North/South route
- Expand mass transit service to the major employers like Intel, Honeywell, and the like.
- Work with some of the major employers in the valley about offering incentives to their workforce to limit the distance they commute, take mass transit and/or telecommute.
- Expand mass transit to the stadium in Glendale.

Lastly, I'd like to point out that in the Bay Area, no one drives to see a baseball game, football game, or concert - - - mass transit has been getting folks to and from these venues for over 30 years. I realize Arizona is only 100 years old, but surely, we can take a look around at what has and hasn't worked in other states and learn some valuable lessons?

~ C. L. Mehling

Code	Issue	Response
1	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
2	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Section 4(f) and Section 6(f)**	
4	**Alternatives**	There is an existing route (Interstate 8 and State Route 85) that provides a bypass of the Phoenix metropolitan area. Signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. This route continues to be available for interstate and interregional travel.
5	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
6	**Purpose and Need**	The proposed freeway is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. The *Regional Transportation Plan*, as described on pages 1-5 and 1-10 of the Final Environmental Impact Statement, addresses freeways, streets, transit, airports, bicycle and pedestrian facilities, freight, demand management, system management, and safety. The proposed freeway is only one part of the overall multimodal transportation system planned to meet the travel demand needs of the Maricopa Association of Governments region.

According to its Official Municipal Website, "[Phoenix] now ranks as one of the fastest-growing cities in the nation." The website boasts that, "Phoenix offers just about everything in the way of sports, recreation, arts, culture, dining, lodging and financial opportunities." But what wasn't mentioned?
Phoenix Sky Harbor International Airport is the fifth busiest in the world for passenger traffic, takeoffs and landings, handling more than 36 million travelers. The $600 million expansion of the Phoenix Civic Plaza is meant to position Phoenix as a top destination for 85 percent of all conventions. But what glaring inconvenience could potentially impede those rosy projections and all those travelers?
What is conspicuously missing from the 5th largest population in the U.S. that would actually enhance business, tourism, and property values while reducing the congestion on our freeways, the pollution in our air, *and* our dependence on foreign oil?
More freeways??? NO! Mass Transit!!!
Bringing freeways, air pollution and crime into our neighborhoods, butchering the largest city park in the world and paving over land held sacred by native cultures is ***not*** something to boast about! It ***won't*** legitimize Phoenix as a 'real' city, and it ***won't*** perpetuate our 3 major industries of high-tech manufacturing; tourism; and, construction. But mass transit ***is***, ***can*** and ***will***. It's the only answer that resolves ***all*** the issues and the only responsible way for ADOT to spend our tax dollars.
Sincerely,
The Mehling and Pierce Families of Ahwatukee

Ok, for those of you that don't seem to know it, the land along the 59th alignment has mostly been purchased, there is bed rock (foundation) for a bridge crossing at 59th and the river. Where the W 101 alt (River is very wide there and more sand and river rock then bed rock) and the 71 alt will have a lot of homes that it will displace, schools businesses ...the 59th alignment was the original route that was planned, go back to it, it will be the cheapest and best route....We knew 20 years ago that it was the best route. we need a south loop to both sides of I-10, it will ease congestion and make life and the traffic problems on Baseline Road better, no backups on Baseline from about 6:30 am to 8:30 am and 6:00 to 7:00 pm between 19th Ave to 67th Ave Monday through Friday....We have paid for the land, there was a reason they bought it...How about we do something right and get it built Now.....

2013

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. The growth created by this road outway the negative impact. This can only improve the neibachoods. Create more jobs. W59 +E1

To: Projects
Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 11:44:07 AM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) The charm of Arizona is the wide open vistas - not freeways. The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(3) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(4) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(5) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(6) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

(7) Sincerely,

Ms. Sybil Melody
PO Box 321
Jerome, AZ 86331-0321
(928) 639-0158

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

8	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

As a lifelong resident of the Phoenix area, I have seen the city grow to a huge metropolis. Unfortunately, the freeway system has never kept pace with the rapid growth. The 202 needs to be completed as do other freeways to meet the demand of all residents and visitors. Please hear the voices of those who drive on our roads and lets build the 202. Thank you.

George Mendez

2013

Reporte Del Impacto Ambiental
FORMULARIO DE COMENTARIOS

Gracias por participar en el proceso de recopilación de comentarios sobre el Reporte del Impacto Ambiental del proyecto de la autopista South Mountain.

ADOT alienta a todos los interesados, a presentar sus comentarios por escrito sobre cualquier aspecto del Reporte del Impacto Ambiental. ADOT considerará todos los comentarios en la preparación final de este reporte e incluirá las respuestas a todos los comentarios, conclusiones finales sobre impactos potenciales, y la recomendación final de ADOT.

Para ADOT es muy útil recibir comentarios sobre:

- Alguna alternativa en particular, cúal sería su impacto ambiental y las medidas propuestas para reducir dicho impacto.
- Cualquier información que usted sienta que está incompleta o incorrecta.
- Cómo le afectará a usted la acción propuesta.

Los comentarios deben ser recibidos o tener el sello postal con fecha límite del 24 de julio de 2013.

The population is growing in this area and traffic will get much worse. It's time to build the South Mountain Loop 202. It's time to connect all the east and west valley cities. It's also important for job creation and it will bring much needed development to the South Mountain area and Laveen

Subject: Feedback re South Mountain Freeway

(1) I have lived in Ahwatukee for 29 years and was told we'd have a freeway south of S. Mountain when my family originally moved into this area. It's about time we finally built it! With the growth in the Valley and the way traffic is congesting during rush hour, this additional freeway is absolutely necessary. While I'd prefer to "not" have the added pollution a freeway brings, Phoenix is growing and I know of few other major cities who do not have a freeway circling the City so cross-state travelers can avoid downtown areas, especially during rush hour traffic. I'll never forget missing the circle around Houston, TX and getting stuck in their downtown rush hour traffic, making my trip almost an hour longer on the way from Phoenix to San Antonio and then on to Arkansas and Alabama.

(2) (3) I have always admired those people who live in the foothills north of Pecos who work in Phoenix for being willing to drive so far to enter Phoenix downtown or uptown from the Ahwatukee Foothills area. And I'm sure part of the willingness is the isolation of our Ahwatukee/Foothills area. I have to admit that I dread the added traffic and likely added burglaries as the area becomes easier to exit with a freeway closer.

(4) (5) I've seen a lot of changes in this area since 1984. And, while I understand the hesitation of homeowners who live just north of Pecos, I do not understand why the potential of moving or living so close to a freeway was not anticipated – this freeway has been in the planning stages for 30 years or longer. It should have been built 10-20 years ago. If anyone didn't want to live near the projected freeway, they shouldn't have bought homes right off Pecos. What I have never fully understood is why the City/State allowed homes to be built in the projected freeway area – homes that now must be bought and removed.

Code	Issue	Response
1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
3	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
4	**Acquisitions and Relocations**	It is not within a City's or State's right to deny building permits to developers who meet all requirements and want to develop their land. In 1996, the Maricopa Association of Governments Regional Council approved the Red Letter Process to provide early notification of potential development (including plans, zoning, and permits) in planned freeway alignments. In addition, the Arizona Department of Transportation works closely with Cities and Counties during the environmental impact statement process to encourage developers to reserve land for future transportation improvements. In some cases, when the developer is willing, the Arizona Department of Transportation has been able to purchase a portion of the land through advanced acquisition (see Final Environmental Impact Statement pages 3-53, 4-13, and 4-48).
5	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)

Code	Comment Document

This freeway situation reminds me of the fact that when my family moved to Phoenix in 1959, we had the only area of I-10 that wasn't yet completed for coast to coast travel. It wasn't until traffic became so terribly congested that our citizens finally voted to complete our section of I-10. I hope we are not so foolish this time and do no wait until traffic during rush hour practically stands still before we finally agree to the completion of the South Mountain Freeway.

Sarah Menne,
Ahwatukee

Mark Mercer Document Created: 7/16/2013 10:50:30 PM by Web Comment Form

It has been reported that the design and construction of the South Mountain Freeway will be based on a "value engineering" approach. More specifically, the freeway will be built at or above grade. This is one of the reasons that I am opposed to the freeway. In my opinion, this will significantly exacerbate the noise that the freeway will impose on adjacent neighborhoods. In addition, the freeway traffic will be much more of an eyesore than if it were built below grade. If I am not mistaken, there are very few other sections of freeway in the valley that exist above grade when they run close to residential areas. It seems that the South Mountain Freeway planners have grossly downplayed the detrimental impact that the freeway will have on adjacent neighborhoods. I think that it would be appropriate for the freeway planners to use the same design approach for the South Mountain Freeway as they have for other recently constructed valley freeways.

Code	Issue	Response
1	**Design**	Depressing the proposed Pecos Road sections would entail installation of pump stations to drain the main line freeway. A depressed freeway would also need a drainage channel to capture the off-site flows to prevent their entering the freeway. Pump stations were not used because of the high cost of construction and maintenance needed for their operation. The preferred freeway configuration would have the E1 Alternative aboveground and the existing culverts extending to pass the drainage under the freeway. Pecos Road currently has numerous existing culvert crossings. Depressing the freeway in this area would eliminate the existing culvert crossings and potentially have adverse flooding impacts on adjacent properties. Extending the existing culverts or upsizing the culverts would maintain or improve drainage flows. This would ensure that there would be no adverse flooding impacts on adjacent properties. (See Final Environmental Impact Statement pages 3-15 and 3-18.) To reduce impacts by depressing the proposed freeway in the Eastern Section, the Arizona Department of Transportation would: · need to spend an additional $400 million for right-of-way acquisition and construction · displace an additional 300 residences · maintain additional pump stations and detention basins for the life of the freeway · observe noise-related impacts requiring mitigation (i.e., noise barriers and their associated costs and visual impacts) Because the belowground option would result in substantially greater costs and residential displacements, this option was eliminated from further study.
2	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. A depressed freeway option was evaluated in the Final Environmental Impact Statement and is described on pages 3-15 and 4-99. Although depressing the freeway would reduce noise levels, noise walls would be needed to further reduce noise to meet the Arizona Department of Transportation noise policy. Whether the freeway is built aboveground with tall walls or belowground with shorter walls, the final mitigated noise levels would be nearly the same at nearby residences. The major disadvantage of building a depressed freeway would be the increased construction cost and the possible acquisition of additional right-of-way for pump stations and retention basins.
3	**Visual Resources**	For most of the alignments of each of the action alternatives, the proposed freeway would be elevated above the natural grade of the surrounding land. This elevated profile would allow noise to carry farther, creating noise impacts at greater distances from the freeway. Depressing the profile of the freeway below grade might reduce traffic noise levels adjacent to depressed sections. However, it would be necessary to also construct at-grade noise barriers to achieve noise reduction goals at receiver locations adjacent to depressed freeway sections (see page 4-99 in the Final Environmental Impact Statement). This strategy would reduce visual impacts associated with high noise barriers on elevated freeways, but would entail ground-level noise barriers and their associated interference with views. Thus, with either approach to noise reduction, views of nearby mountains could be disrupted. The specific impacts would depend on the geometrics of the height of any noise barriers constructed, the intervening topography, and the distance of the barriers from the residences in question.

I fully support building this next section of the 202 freeway loop. We need to stay ahead of the population growth with our building infrastructure. Please do not sit idle and let our freeways become as congested as LA.

I have 2 questions:

1

2 3

1. What will be the hazardous waste policy for this section of the freeway?
2. How can you be sure that the trucks coming from Mexico and Eastern U.S. who currently use the I-10/I-8/AZ85 shortcut to bypass Phoenix, will now forget that route and all trucks will use the new section to bypass Phoenix?

Thank You

Brad Metzger

Don Meyer Document Created: 7/24/2013 5:29:30 PM by Web Comment Form

This should not be built .... as a home owner in Ahwatukee, I moved here because the air is cleaner than on north side of south mountain due to prevailing winds from southwest... This expressway will pollute the air horribly and I will sell my home and move... ALSO, $1.9 BILLION for a road that serves very little purpose ??? We have enough highways in Phoenix... Better to put those dollars into school system.... The only people who will benefit are homeowners who purposely bought homes in path of new road, knowing they will be bought by state for high dollar profit and road contractors... This is VERY sad...

"If we came across a mysterious cube in a forest, and I asked, "Is it good", you would not be able to provide an answer as one would not know it's purpose." Fredrich Nietzsche

Although I find the information related to the Highway project comprehensive, thorough and informative, I must say I stand opposed to the construction. The highway project would no doubt be a boon to the economy and in a time of a borderline depression/recession, no doubt this time among all others would be the ripest time to begin a project such as this. Although the pricetag is high, $2.5 billion (roughly $10,000 per foot of highway), it is not out of line. Recently built highways overseas and in others states cost about the same, some more, some less. The issue I take with it lies in the assertion change equals progress. Recent studies on major highway and builds overseas indicate the collosal highway designs and structures do the opposite of what one might think they do. They fracture communities, they are large god-like megolithic structures, called by the Indians 'concrete rivers' and rather than allow for a lessening of the stress involved in the daily commute, they add to the disintigration by building things rather than relationships. Recent studies of workers who while working are able to look out their window and see a natural setting versus a building indicate the worker who sees the buildings have a much higher level of stress and a much lower level of productivity. Contrary to intuitive thought, building 'things' also makes relationships harder to build. One can simply reflect on the quote, 'Men build too many walls and not enough bridges.' One might assume with the convenience of a road to get around easier, the stressors of city living might be easier to stomach, but with any creation of any thing, one must remember, other things come with it and based on what is decided, those decisions impact the lives of many others. The lessening of the uniqueness of the south side of the city would be major. Currently, Ahwatukee and maybe Paradise Valley are the only communities in the city that are quiet and removed from the hustle and bustle of the city and at night the stars can be seen sans the lights from the cityscape of Phoenix and the surrounding metropolis. This is a true treasure for those who live in these communities (myself among them), once a highway is built, one cannot build a light to shine to see the stars better, or flip a switch to darken the city lights as it were. If we are interested in convenience, how about we do something about the current lack of highway from the San Tan Valley to the big city? Or, how about we compare what could be done with this money with other types of convieniences, like totally erradicating homelessness in the city? Or, ensuring every Vet has basic needs. I bet that would cost less and do alot more to increase the convienience of those across the entire state. How about we look at the companies that skirt on corporate taxes (believed to be about $1.6 trillion dollars worth), if Arizona represents 1/50th of that amount as yet uncollected, that would pay for the highway construction by itself not to mention leave the state $700 million to do other things with. Countless other things that might be better of to be done without even so much as a cost to Joe Taxpayer in fact. These are things that the posed question, "Build or not?' cannot answer based on it's premise.

I like very much you have illustrated the potential value and cost in dollars of a project such as this so well in advance of the current time. As part realist and part optimist, I think the benefit of about 100 other types of expenditures and energies would leave the city with a more comprehensive gameplan to alleviate inconvenience and improve the quality of living. One way might be to look at ways to develop affordable real estate in downtown Phoenix, so as to attract those who might be

Robert Mickelson Document Created: 5/21/2013 2:54:44 PM by Web Comment Form

I support the construction of the South Mountain Freeway.

The decision on the South Mountain Freeway has gone on for too long - more than 25 years. I recognize that the freeway impacts different groups of people in different ways. However, any adverse impacts on nearly all of the people living on the south side of South Mountain Park could have been avoided by those very people. They knew when they chose to live there that the freeway was already planned. I also recognize that the portion of the freeway that crosses South Mountain Park impacts sacred land of some Native Americans. However, a very small portion of those lands are impacted, and it would seem that if appropriate (as discussed with the Gila River Indian Community) architectural elements that emphasize the sacred nature of the area are incorporated into the project, those impacts could be mitigated. Transit options have also been discussed. The final design of the facility should include not closing out future opportunities for developing transit in the corridor.

1 2

3

The issue of air quality is always raised by freeway development, because it fosters new development. The problem with that argument is that the Valley is destined to grow - after all the Phoenix metro area lies in the middle of the Sun Corridor. That means more travel, and this is a mobile community where people want to use their automobiles. The solution to the air quality problem lies with replacing petroleum energy with clean energy in vehicles, not allowing congestion to increase which leads to reduced air quality.

Finally, The arguments against the South Mountain Freeway are similar to those used against I-10 through Phoenix and the Piestewa Freeway. There are no complaints about those facilities today. They are seen as major positive impacts on transportation and development in the region.

In conclusion, the South Mountain Freeway is needed improve transportation in the Phoenix Metropolitan area and will positively impact many more people than it will negatively impact.

COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1 2 This proposed freeway will destroy many of the aspects of my community that I value. The drive west on Pecos Road is a pleasure right now. To turn it into a freeway is irresponsible when you compare the price tag to the ROI. The pieces of the mountain behind our home provides respite for my family. It also provides unique interactions with wildlife including coyotes that come down from the mountain. A "quick commute" is not what I value. I value the peace + serenity + quality of life that this freeway will negatively impact

Code	Issue	Response
1	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
2	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Subject: Draft EIS comments regarding the Loop 202 South Mountain Freeway
Date: Wednesday, July 24, 2013 4:52:32 PM

To Whom It May Concern:

I am a Gila River Indian Community (GRIC) member and resident of District 6, near Laveen, Arizona. I am of Akimel O'odham, Dine, and Apache descent. I am commenting on the South Mountain Freeway Loop 202 extension Draft Environmental Impact Statement (DEIS) as a member and representative of my immediate family, who have resided near the impact area since 1986. We strongly oppose the South Mountain Freeway, and wholly support the No Build alternative. This includes any on-reservation and off-reservation proposed alignment, past or present. We view the freeway as harmful to O'odham and Pee Posh culture, as well as the physical well-being of GRIC and surrounding communities. While we recognize the origins for this transportation route have been planned since the early 1980s, we feel low-build or no-build alternatives have never been seriously considered by the Maricopa Association of Governments or other agencies.

As a federal undertaking, it's clear ADOT has taken steps to analyze differing impacts and costs between proposed alignments, as noted in the DEIS—however this is not enough. We urge the ADOT and Federal Highway Administration to not build the South Mountain Freeway, thus preserving South Mountain as a whole, protect civil rights of Americans, and consider new alternatives (low-build ideas such as a parkway to 51st avenue or through South Phoenix). The cost of this freeway is too great, both in terms of monetary outlay and socio-cultural erosion. If transportation cost-benefits analysis suggests a freeway is needed in this area, then efforts should be put toward other projects such as additional freeway lanes on I-10, increased light-rail and bus routes, or even revisiting a freeway located in Hidden Valley.

Thank you for your time.

Sincerely

Wesley D. Miles

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Cultural Resources**	
3	**Section 4(f) and Section 6(f)**	
4	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.
5	**Alternatives**	In the best-case scenario, a parkway would carry approximately 105,000 vehicles per day, well below the average daily traffic on the proposed freeway, which would range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-19). As a result, the Arizona Parkway would lack sufficient capacity to meet projected travel demand. The Arizona Parkway would not adequately address the projected transportation system capacity deficiency, would not remove a sufficient amount of traffic from arterial streets, and, therefore, would not meet the project's purpose and need. For these reasons, the Arizona Parkway was eliminated from further consideration.

(Responses continue on next page)

Code	Issue	Response
6	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Purpose and Need**	The proposed freeway is part of the multimodal *Regional Transportation Plan* (see Final Environmental Impact Statement page 1-5 for more information regarding the *Regional Transportation Plan*). The determination of purpose and need for the proposed project includes an assumption that substantial improvements would be made to the Interstate 10 corridor between State Route 51 and U.S. Route 60 (see Final Environmental Impact Statement page 1-13). The Maricopa Association of Governments, in coordination with the Arizona Department of Transportation recently completed the Southeast Corridor Major Investment Study (see <azmag.gov/Projects/>) and developed multimodal concepts for addressing transportation issues in the Interstate 10 corridor. Even with these planned improvements to Interstate 10, the proposed project remains a vital component of the Regional Freeway and Highway System.

Document Created: 6/24/2013 9:59:50 AM by Web Comment Form

(1) As an Ahwatukee resident, it first must be discussed how poorly this project has been handled since the beginning. Why would you allow development in areas where a freeway was being planned? Planning/zoning by ADOT, Maricopa County and the City of Phoenix are all guilty of the dilemma we have right now.

(2) (3) (4) (5) Now that the city/county/state officials have created such a horendous situation, it is your duty to come up with the best scenario for your tax paying citizens. One of those options is to not build, but progress will win. So then you need to come up with a win-win with the Gila River Indian community and move the proposed freeway south and not try to buy homes at undervalued prices and create more losses for the hundreds of homeowners and church members. We've had enough losses on the values of our homes in the past 7-8 years. We don't need more.

(6) (7) We have not even discussed the air quality and noise that will be brought to our section of the valley. As most people who read this study, unless you do this for a living or have someone explain the whole thing to you, no one can understand any of it.

(8) To sum up the vote from this homeowner of 4 tax paying residents, FIND A SOLUTION THAT IS SOUTH OF THE PECOS PLANNED PATH. I know you think you have tried, but you obviously haven't tried hard enough. As state/county/city officials that is your duty.

Code	Issue	Response
1	**Social Conditions**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.
2	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Acquisitions and Relocations**	
4	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
5	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138-47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
6	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

As an Ahwatukee resident, it first must be discussed how poorly this project has been handled since inception in 1985. It was "in the books" since then and development has been allowed since in areas that are in the right of way to the freeway. Planning/zoning by ADOT, Maricopa County and the City of Phoenix are all guilty of the dilemma we have right now.

(1) (2) (3) (4) (5) (6) (7)

Now that the city/county/state officials have created such a toxic situation, it is your duty to come up with the best scenario to make it right. One of those options is to not build, but I live in the real world and know progress always wins. So then you need to come up with a win-win with the Gila River Indian community and move the proposed freeway south and not try to buy homes at undervalued prices and create more losses for the hundreds of homeowners and church members.

We have not even discussed the air quality and noise that will be brought to our section of the valley. As most people who read this study, unless you do this for a living or have someone explain the whole thing to you, no one can understand most of it.

(8)

To sum up the vote from this homeowner of 4 tax paying residents, FIND A SOLUTION THAT IS SOUTH OF THE PECOS PLANNED PATH. I know you think you have tried, but there is a solution that needs to be uncovered. As state/county/city officials that is your duty.

speak next, please move forward.

MR. MILLS: Thank you for your time. As someone who was born and spent his entire life in Arizona, I strongly support the South Mountain, even when it was initially voted upon in the mid '80s. I think it's a huge -- it would be a huge component in relieving traffic congestion, particularly in the central part of the Valley, greatly aid the commuter traffic from the West Valley over to the Southeast Valley.

And then also, in these pretty tough economic times, taking into account the construction industry, it'll bring immense value to the construction industry. Thank you for your time.

THE FACILITATOR: Thank you.

Debbie Zapatka.

MS. ZAPATKA: Hi, I'm Debbie Zapatka and I live in Laveen, and we've lived there for five years now with the hope of the 202 coming in, and it was kind of promised when we moved there. Our development in the area, we have empty shopping centers just sitting there, we really need economic development, and the only way for that to happen really is to get the 202 in, as well as our area has no hospital and a hospital will not come in unless the 202 gets in. And I don't even know where the closest hospital is, it's probably 99th Avenue and

LOOP 202
South Mountain
Freeway Study

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. In 2005, the EPA and AZDEQ conducted a study called the Joint Air Toxics Assesment Program when the results were released in 2006, they found elevated levels of a number of carcinogens located near where the preferred route is supposed to go. Even though ADOT was collecting data for the DEIS at this time, these results are not represented in the DEIS. ADOT needs to include the results of the Joint Air Toxics Assesment Program (JATAP) to accurately assess how the freeway will effect air quality.

Code	Issue	Response
1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Summary information about the findings of the Joint Air Toxics Assessment Project study is provided as background information in the Draft and Final Environmental Impact Statements, but the study itself is not relevant to the type of analysis done pursuant to the Federal Highway Administration's mobile source air toxics guidance, which is an emissions analysis. Monitored ambient concentrations of mobile source air toxics (the focus of the Joint Air Toxics Assessment Project) do not inform this type of analysis. While monitoring data can be useful for defining current conditions in the affected environment (to the extent that the monitoring data are current), they don't tell us anything about future conditions, or the impacts of the project itself, which is why an emissions analysis was performed. The mobile source air toxic analysis presented beginning on page 4-77 of the Final Environmental Impact Statement is an estimated inventory of mobile source air toxic emissions for the entire Study Area for 2025 and 2035. This approach was used because the inventory estimate accounts for changes in traffic and emissions on all roadways affected by a proposed project, and would, therefore, be a more reliable predictor of changes in exposure to mobile source air toxics. The mobile source air toxics emission modeling developed for the project (which factored in the U.S. Environmental Protection Agency's recent rules for the 2035 analyses) and discussed beginning on page 4-77 of the Final Environmental Impact Statement found little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions.

Code	Comment Document

5025

1 MR. MILLS: In 2005, there was a study between the
2 EPA and the Arizona Department of Environmental Quality called
3 the Joint Air Toxics Assessment Program. When the results of
4 the study were released in 2006, they found elevated levels of
5 known carcinogens, including benzine and formaldehyde and a
6 number of others. These were above the standards allowed by
7 the EPA.
8 And this study was not represented in the Draft EIS
9 and has not been mentioned or talked about by ADOT in any of
10 their studies concerning how the freeway will affect air
11 quality. And, if the Draft EIS finds that the freeway is
12 supposed to alleviate air quality overall, throughout the
13 Valley, then how do these results from this particular study
14 factor into that if they're not represented?
15 Again, how do they reason that putting a freeway
16 into an area that already has elevated levels of carcinogens,
17 as opposed to alleviate those carcinogens, especially since in
18 2006 when these results were released, ADOT was conducting the
19 study for the Draft EIS. So these should have been results
20 that were mentioned or represented in the study, yet they are
21 not.
22 And, furthermore, one of the air-monitoring sites
23 that the EPA and the Arizona Department of Environmental
24 Quality used to publish these results was at Broadway and
25 Central Avenue, located only a couple of miles away from where

With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions.

Subject: South Mountain Freeway DEIS comment
Date: Tuesday, July 23, 2013 6:18:07 PM

Hello,

I would like to submit a comment for the South Mountain Freeway DEIS. After reviewing the DEIS, there appears to be a lack of attention paid to how future development as a result of the freeway will be met with demand for water. Numerous studies exists concluding that the Colorado River, the major source of water for the region is becoming increasingly endangered as a result of sprawling development, precisely the type that the South Mountain Freeway is slated to create.

If the major water source for the region is becoming increasingly stressed, how does ADOT then reconcile future development in the area will be met with demand for this resource, considering future projections based on the most recent and reliable data?

Thank you

Code	Issue	Response
1	**Surface Water**	It is inappropriate to introduce the role—if any—of the proposed freeway in influencing water needs related to development and in increasing local population. The freeway's purpose is to respond to current and projected deficiencies in regional transportation capacity.
2	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. I live at 64th ave. & Baseline Rd. I support W59. My reasons include the facts that the land is already purchased; the displacement of homes will be minimal; the development along the path will benefit the Laveen community (rumored community college and hotel construction would be welcome along the W59 route.)

While construction would cause temporary inconvenience since we are only a few blocks, the long-term benefits outweigh this.

In conclusion, as a resident of Laveen on baseline road at 64th avenue, I support the W59 alternative.

P.S. – NO toll roads, ever, in AZ!! thx.

I love the idea of running paths and, of course, bike riding trails alongside the freeway. I just don't know if that's in the budget, but frankly I think rubberized pavement should be. So those are my statements and I thank you for your time.

THE FACILITATOR: Thank you, ma'am. Raven Barehand.

Raven Barehand.

As we're waiting for the next speaker, I'd like to remind you again, please refrain from clapping or making comments regarding any speaker's position on any of this, out of respect for their position.

If there's anyone in the auditorium that would like to speak, please make sure that you register at the front desk. Your name will appear on the screen; we will call you up in the order that you register.

Katran Mingo.

Good afternoon. You have three minutes; here's the timer. You may begin.

MS. MINGO: Okay. Thank you very much. My name is Katran Mingo; I'm a resident of Laveen. Thank you for hearing us today. It is time to build the South Mountain Freeway. Valley commuters have

Code	Comment Document

waited in traffic jams long enough. The freeway will cut traffic congestion across the metro area, reduce air pollution, and save drivers time and money. If we don't build the South Mountain Freeway, traffic in the region will get much worse over the next two decades. According to ADOT's own study, traffic on I-10 between Ahwatukee and Goodyear will grow 28 percent. Another 103,000 cars will use the Broadway curve each day. Another 38,000 cars will jam the tunnel every day. Morning and evening commute times will increase 39 percent to 82 percent. Traffic congestion on six streets will increase 46 percent. The same report indicates the project also will reduce air pollution by reducing the time vehicles will spend stuck in traffic.

The project will create 30,000 jobs during the five- to six-year construction period and result in a 2 billion investment in the Phoenix area economy. The money to build the freeway is in the budget. It was approved by voters twice, first in 1985 and again in 2004. There is no more important project to the area's commuters and workers than the South Mountain Freeway project. We must build it now. Thank you.

THE FACILITATOR: Thank you.

Comments must be received or postmarked by July 24, 2013. I SUPPORT THE CONSTRUCTION OF THE LOOP 202 - SOUTH MOUNTAIN FREEWAY. A COMPLETED MULTI-MODAL TRANSPORTATION SYSTEM IS ESSENTIAL THE FUTURE ECONOMIC GROWTH, COMMUTER SAFETY AND AIR QUALITY ISSUES OF THE PHOENIX METROPOLITAN AREA.

CURRENTLY, ROUTES THROUGH PHOENIX ARE CONGESTED AND DANGEROUS. MUCH OF THAT TRAFFIC WOULD OPT TO BYPASS PHOENIX ON THE SOUTH MOUNTAIN ALIGNMENT

THIS WOULD BENEFIT LOCAL RESIDENTS AND SAVE MONEY AND TIME FOR BUSINESS

Document Created: 7/24/2013 6:16:03 PM by Web Comment Form

I am a homeowner in the Pecos & 32nd Street area, and my house will be directly affected by the Loop 202 extension plan. Either my house will be in the right-of-way, or I'll have a sound barrier going through my back yard. My neighborhood is not the high-rent district of northern Ahwatukee. I've always done my part by paying homeowner's dues and taxes, never missing a mortgage payment, and keeping my front property landscaped and clean – to the point of indirectly coaxing my neighbors to have some pride in their properties, too. But it's been hard, in a neighborhood that has been under threat since it was built.

(1) Why did the City of Phoenix allow residential developers to use land that was slated for a freeway footprint, anyway? Chandler and Gilbert zoned their land commercial, and are benefiting from it far more, now.

(2) (3) (4) (5) I knew when I purchased my house in 2000 that there was a chance I might lose it, but I'd hoped that ADOT could work out a deal with the Gila River Indian Community to build the freeway a mile or two south (and thus protect South Mountain Park's west end), or set the proposed bypass route along the more-efficient Highway 85 and Interstate 8 route that many trucking companies already use. When I moved in, Pecos Road was a quiet two-lane road and a community nexus for runners, bikers, and horseback riders. As just a four-lane road, it is now always busy and often unsafe (we've had many fatal accidents along Pecos.)

(6) (7) (8) (9) (10) I can't imagine how crowded, noisy, and unsafe it will be as a freeway. I've seen too many health and safety studies to not be worried about the immense increase in pollution from heavy commercial vehicles, which will be the ones most likely to use this extension. As a private vehicle connection, the Loop 202 will be too far west to get East Valley residents into central Phoenix, and not far enough west to take hazardous truck traffic around the growing Southwest Valley.

(11) We could do so much more with our limited transportation funding. This extension will be outdated by the time it is finished, and it will have ruined three communities in the process.

Sincerely,

Stephen Mintz

Code	Issue	Response
1	**Neighborhoods/ Communities**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.
2	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Section 4(f) and Section 6(f)**	
4	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
5	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Noise**	
7	**Safety and Health**	The proposed South Mountain Freeway's eight-lane section is shown on Final Environmental Impact Statement page 3-58, with discussion and remarks that the freeway would be consistent with the design of other freeways in the region and would thereby improve driver expectancy and safety. The sidebar on Final Environmental Impact Statement page 3-59 discusses the safety features of auxiliary lanes (used at traffic interchanges) for facilitating acceleration and deceleration, thereby reducing potential conflicts with through-traffic and travelers merging onto or exiting from the proposed freeway.
8	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Health Effects**	

(Responses continue on next page)

10	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
11	**Alternatives**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.

Good Afternoon,

I recently attended the forum held on June 18th at the Foothills Golf club. After reviewing the video and asking many questions of staff members I have come to the conclusion that this freeway would be an environmental abomination. The particulate matter would seriously jeopardize the health of children and seniors. Smog would likely accumulate along the south mountain ridge and surrounding area which would become a health hazard to both residents and wildlife. The extremely high environmental and taxpayer cost greatly outweigh any possible benefits. I believe there are other more environmentally friendly and cost effective alternatives including a light rail extension. Arizona and Phoenix deserve better.

1 2 3 4 5

Thank you for your consideration.

Louis and Teresa Misturini

1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Health Effects**	
3	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
4	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.

Code	Comment Document
	I live near 42nd and Liberty Ln. in Ahwatukee and am a member of PARC.
1	What strikes me most about the DEIS is the lack of issues addressed, and the lack of current statistics. These omissions almost seem purposeful, to me.
	I have attended meetings on this "parkway, toll-way, freeway" issue since discussions in the late 80's/early 90's. In the beginning, ADOT argued that local (Ahwatukee) drivers needed it to get to jobs in downtown Phoenix. Surveys showed that not to be the case. Then the argument to get traffic off I-10 and the Broadway curve came.
	This (in my opinion) was when the ADOT really became partially truthful. They really wanted to get the traffic away from the pollution sensor at 43rd/Broadway. Clean up the air in metro Phoenix.
2	The ADOT has never admitted to this being a truck by-pass. But to my logic, that is the reality. There are chronic issues about air quality (PM and ozone) in the metro Phoenix area. High sulfur diesel pollution from trucks originating from Mexico won't meet CARB standards. This legislation was enacted to comply with the Clean Air Act. Data/standards were discussed when this was passed. Yet, this data is never mentioned in the DEIS. The additional air pollution has negative health impacts & is completely omitted. Particulate matter during the construction phase (blasting south mountain, & around the river bed) will be enormous. This could mean future loss of highway funds. But it will mean loss of good air quality in the Ahwatukee/Laveen areas. We have multiple schools with in yards of this project down Pecos Rd..
3 4 5 6	
7 5 8	In 2005/2006 extensive air monitoring was conducted by the EPA & ADEQ for toxic chemicals. Where are the updates??? They are only enclosing this old data. But even then, results found high levels of vehicular emissions---formaldehyde, benzene, butadiene, acetaldehyde were above standards. Adding more traffic emissions would logically only add to this health problem. Dioxin has been found to damage reproductive health, cause cancer, and worsen diabetes. Ahwatukee has no industries using or omitting toxic chemicals. Therefore we have no hazmat transportation issues or risks. But data is collected on and analyzed about hazmat on highways. This data (again) is omitted in the DEIS.
9	There are super-fund sights near the west side proposed path. The economic impact & taxpayer monies to correct or know the impact of these lands in construction are not evident in this study.
10 11	Earlier, I mentioned the traffic congestion at the Broadway curve that ADOT wants to decrease. But the design only seems like it will add or move the traffic on I-10 between 59th and 51st Ave. where it already is extreme. This effect of traffic seems like an omission.
12 13	It would seem the DEIS lacks addressing the plan to blast through South Mountain. There are or might be violations of the American Indian Religious Freedom Act.

Code	Issue	Response
1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need, Truck Bypass**	
3	**Air Quality**	
4	**Trucks**	
5	**Health Effects**	
6	**Construction**	To reduce the amount of construction dust generated, particulate control measures related to construction activities must be followed. The following mitigation measures would be followed, when applicable, in accordance with the most recently accepted version of the Arizona Department of Transportation *Standard Specifications for Road and Bridge Construction* (2008). Prior to construction and in accordance with Maricopa County Rule 310, Fugitive Dust Ordinance, the contractor shall obtain an approved dust permit from Maricopa County Air Quality Department for all phases of the proposed action. The permit describes measures to be taken to control and regulate air pollutant emissions during construction (see page 4-173 of the Final Environmental Impact Statement).
7	**Air Quality**	Summary information about the findings of the Joint Air Toxics Assessment Project study is provided as background information in the Draft and Final Environmental Impact Statements, but the study itself is not relevant to the type of analysis done pursuant to the Federal Highway Administration's mobile source air toxics guidance, which is an emissions analysis. Monitored ambient concentrations of mobile source air toxics (the focus of the Joint Air Toxics Assessment Project) do not inform this type of analysis. While monitoring data can be useful for defining current conditions in the affected environment (to the extent that the monitoring data are current), they don't tell us anything about future conditions, or the impacts of the project itself, which is why an emissions analysis was performed. The mobile source air toxic analysis presented beginning on page 4-77 of the Final Environmental Impact Statement is an estimated inventory of mobile source air toxic emissions for the entire Study Area for 2025 and 2035. This approach was used because the inventory estimate accounts for changes in traffic and emissions on all roadways affected by a proposed project, and would, therefore, be a more reliable predictor of changes in exposure to mobile source air toxics. The mobile source air toxics emission modeling developed for the project (which factored in the U.S. Environmental Protection Agency's recent rules for the 2035 analyses) and discussed beginning on page 4-77 of the Final Environmental Impact Statement found little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions.

(Response 8 continues on next page)

Code	Comment Document
14 15	I see nothing in the DEIS addressing the water wells below Pecos Road. These wells furnish water to the lakes in Ahwatukee. There is no data for alternative water sources. There is no data about moving utilities now under Pecos Rd.
16 4	ADOT studied noise levels in 2003/2004 during non-peak traffic hours. Ambient noise levels were 44-56 dBA. With the proposed elevated (above grade) sections of this freeway, it might be hared to keep noise below the 64 dBA state requirement. If this is a CANAMEX corridor, then noise could be even greater than ADOT projections on 10yr. old data.
17	What is scary is that a lot of questions won't be addressed until the design phase according to ADOT. This seems short sighted and backward. How do you manage/budget/plan with so many questions. The costs will be higher than the 20' noise abatement walls!
18	When construction is in progress access on Pecos will be limited or none. This takes us back to traffic on Chandler Rd. for years. Talk about gridlock. The fact that schools/traffic will have no access to the freeway seems counter productive to moving residents. There are no Hazmat evacuation procedures in place.
19 8	
20	Today, costs of right of way acquisition, of homes & businesses, utility relocations, & underground mining repairs are vaguely estimated at near 200 million BEFORE construction!!!!!! What a waste of taxpayer monies.
1	This can be a NO BUILD decision. I just ask that current information be the guide in this decision. And I see that lacking in the current DEIS.

Dorothy Mitchell

Code	Issue	Response
8	**Hazardous Materials**	The West Van Buren Water Quality Assurance Revolving Fund site was identified and considered during development of the Draft Environmental Impact Statement (see pages 4-153 and 4-165 of the Draft and Final Environmental Impact Statements, respectively, and the Draft Initial Site Assessment prepared for the proposed project). These sites are primarily groundwater-impact sites, and groundwater is found at a depth of over 60 feet below the footprint of the Preferred Alternative. Given the separation distance between the adversely affected medium (groundwater) and the construction zone (near-surface in these locations), the project team determined that these sites would not pose a risk to construction or to the general public once the facility were completed. This assessment has been clarified in the Final Environmental Impact Statement on page 4-165.
9	**Hazardous Materials**	The corridor analysis revealed sites that would need further assessment during the property acquisition phase of the project, if an action alternative were to become the Selected Alternative. The Arizona Department of Transportation employs a phased approach to site assessment that allows time for cleanup of any sites found to have hazardous waste issues. The project team concluded from the level of analysis conducted during the environmental impact statement process that the types of sites likely to be acquired contain common hazardous waste issues like underground storage tanks, asbestos and lead paint in buildings, and other commonly found issues (see Draft Environmental Impact Statement page 4-153). The Arizona Department of Transportation maintains a process for addressing these issues in accordance with all applicable environmental laws and regulations.
10	**Traffic**	Discussions of traffic on arterial streets considers those arterials streets in and around the entire Study Area, not just in Ahwatukee Foothills Village. The traffic projections for Chandler Boulevard (see Figure 3-12 on page 3-29 of the Final Environmental Impact Statement do show a reduction with the proposed freeway when compared with conditions without the proposed freeway. The travel time comparison shown in Figure 3-17 on page 3-34 of the Draft Environmental Impact Statement included a trip from Ahwatukee Foothills Village to Downtown Phoenix using Interstate 10, not the proposed freeway. This trip would take 5 or 6 minutes less with the proposed freeway in place when compared with conditions without the proposed freeway. The duration of level of service E or F (represents stop-and-go traffic) for the existing conditions and future conditions without the proposed freeway are shown in Figure 1-9 and 1-10 in the Draft Environmental Impact Statement. In both conditions there are more than 3 hours of congested conditions during the morning and evening commuting periods on a number of the region's freeways, especially Interstate 10.
11	**Design**	The proposed connection to Interstate 10 (Papago Freeway) at 59th Avenue would include substantial improvements (widening) along Interstate 10 to provide adequate operations on Interstate 10 in the area of the junction and to allow traffic moving to and from the South Mountain Freeway to enter and exit the Interstate 10 main line (see page 3-49 of the Final Environmental Impact Statement). The design of the proposed Interstate 10 and South Mountain Freeway system traffic interchange at 59th Avenue has received preliminary acceptance from the Federal Highway Administration, subject to completion of the National Environmental Policy Act process.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
12	**Construction**	The contractor submits a written blasting plan to the Arizona Department of Transportation prior to beginning any blasting work. The Arizona Department of Transportation Resident Engineer then ensures that the contractor has followed all requirements for a blasting permit. Prior to blasting, the areas where rock fragments may fall is mapped to ensure there will be no property damage. Residents in the area are notified of any blasting activity (see Draft Environmental Impact Statement page 4-115). Blasting is avoided if standard earthmoving equipment can be used.
13	**Cultural Resources**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment*, *Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.
14	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to state regulations/standards. (See text box on Final Environmental Impact Statement page 4-108.)

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
15	**Utilities**	If an action alternative were to become the Selected Alternative, during construction residents shall be notified at least 24 hours in advance of any temporary outages needed for utility relocations by the Arizona Department of Transportation or the utility company that owns the facility (see Draft Environmental Impact Statement page 4-162). The Arizona Department of Transportation typically coordinates and collaborates closely with the utility companies and the contractors to prevent any temporary outages.
16	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (ver. 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes, which may be elevated above the roadway, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Valley and across the country.
17	**Design**	The current level of engineering is used to determine the limits of environmental and construction impacts due to the proposed freeway. The location and profile of the freeway are evaluated to minimize potential changes to the freeway as the design level would progress. The current level of engineering is an accepted industry standard for determining impacts. (See Draft Environmental Impact Statement sidebar on page 3-40 for more discussion.)
18	**Traffic**	The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours may be needed during construction. (See Final Environmental Impact Statement page 3-27.)
19	**Traffic**	The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix (see Figure 3-8 on page 3-15 of the Final Environmental Impact Statement). The interchange was eliminated based on undesirable residential displacements and cost. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
20	**Geology**	A search of the Arizona Mineral Industry Location System database, examination of aerial photographs and topographic maps, and field investigation were completed to identify mineral resources and mines in the Study Area. These efforts identified one gold mining claim, six unknown mining claims, and several mining features in the vicinity of the South Mountains. None of these mining claims or features are located within the proposed freeway alignment.

Subject: Comments in opposition to South Mountain Freeway
Date: Wednesday, July 24, 2013 12:05:40 PM

Jul 24, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

OPPOSE!

(2) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(3) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(4) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(5) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(6) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

(7) Sincerely,

(8) Mr. Scott Mittelsteadt

Phoenix, AZ 85023-7104

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Health Effects**	
6	**Section 4(f) and Section 6(f)**	
7	**Biology, Plants, and Wildlife**

Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

MR. MOCKUS: Perfect. Thank you.

Thank you for your time and opportunity to speak. It's been 35 years since the idea of the 202 link has been put on the books, and I can't understand why all the questions and concerns regarding this roadway have not been addressed for that length of time. It makes me really wonder how other roadway and roadway improvements have been brought up and approved and built within reasonable amounts of time, and this goes on and on and on.

Actually, I'm going to speculate that most every other major roadway project has been built since the time this one has been proposed. Is this bureaucracy at its worst or is it just a slight to our community and a lack of concern for a community desperately in need of easier, safer, and more economical means of commute.

We now have construction of the 303, which I'm sure has not been on the books for 30 years, flying along and due to be completed within the next two years. This roadway, in comparison, does not begin to alleviate the congestion and travel time that this 202 extension will for the community of Laveen and surrounding communities, yet it was planned, developed, and built in less than 30 years.

Code	Issue	Response

(Comment codes begin on next page)

Code	Comment Document

As you can tell, I'm a proponent for this project, I look forward to the development and ease of travel it will bring to our community and also surrounding communities.

There are those who may oppose its construction for many reasons, some just and some not so just. And those that are just plain out there, plain nonsensical. I ask that you take a look at the need of the community as a whole and put yourself in our place to see how the benefits for an entire community outweigh the views of those with personal and monetary reason, and continue to construct construction of this very important artery, bringing life blood to our communities.

Sometimes I begin to believe that our diversity may be the reason our community has to wait 30 years for something that other communities get immediately. Please prove me wrong and proceed immediately with construction. I also ask that construction begin from the southeast and proceed to the northwest, allowing the passage from Laveen to the East Valley to open as soon as possible.

1

They had done this for the 303 from I-17 to Happy Valley Road, while the remainder is still being constructed. I also believe no road should be

1	**Construction**	Final Environmental Impact Statement page 3-59 lays out the preliminary construction sequencing if the Preferred Alternative were to become the Selected Alternative: "The proposed construction implementation plan would schedule construction of the corridor to begin at the Interstate 10 (Papago freeway) system traffic interchange and continue south to approximately Baseline Road. Additional construction would begin near the Interstate 10 (Maricopa Freeway) system traffic interchange and continue along Pecos Road, through the South Mountains, and end at approximately 51st Avenue. Finally, these two roadway lengths would be connected by constructing the remaining freeway segments between Baseline Road and 51st Avenue."

Code	Comment Document

built unless there is a sidewalk or a trail for pedestrian and bike traffic next to it, so a person should be able to travel any way you can. Now is the time to make that possible.

In closing, I ask that we build the road now. 30 years is long enough and as we all know, costs have gone up substantially and will continue to rise with each day, week, month, year, or, in this case, three decades, we wait.

When first proposed, it was with the future needs in mind. Well, the future has arrived. It is time to act. We cannot wait any longer.

Thank you very much. I appreciate you listening.

THE FACILITATOR: Thank you, Mr. Mockus.

Just one note. For those of you who are, I understand it's very difficult sometimes in working with prepared notes to keep in mind the time here. So if you would, from time to time, if you are working from notes, please take time out to double-check the time. You're doing a great job and we appreciate that. Thank you.

Sandy Bahr.

MS. BAHR: Thank you. My name is Sandy Bahr. I'm the chapter director for the Sierra Club

Subject: URGENT - South Mountain Freeway Comments
Date: Wednesday, July 24, 2013 6:53:55 PM

Dear All,

I am writing to, once again, express my opposition to and concern over the proposed South Mountain Freeway. My family and I have been residents of Ahwatukee for over 15 years. After investigating the information available these are my opinions:

1 2 3 4 5 6 7 8 9 10 11 12

* It is irrefutable that neighborhoods, including my own, schools, churches, and many businesses will be negatively impacted by air pollution, light pollution, noise pollution by both the construction and the existence of the proposed South Mountain 202 Freeway.
* A significant portion of South Mountain, sacred land, will be destroyed.
* CANAMEX Truck Bypass will introduce new, potent pollution to the valley
* This freeway is a waste of significant taxpayer dollars that could be better spent elsewhere
* Ahwatukee is filled with individuals and families that care deeply about their community. It's more than a community - it's a huge family. I have never lived in a place like it and would never want to leave. However, the proposed freeway, will now force my family to be uprooted.

My family and I are requesting a 'no build' or 'no action' alternative to the current plans.

Thank you for your time and consideration.

Kind regards,
Juan Carlos Molina

Code	Issue	Response
1	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
3	**Economics, Socioeconomics**	Businesses that would be directly and adversely affected by the Preferred Alternative, if it were the Selected Alternative, would be mitigated through relocation or site purchase at fair market value. Construction of the proposed facility would likely generate additional business and jobs in the corridor upon implementation because of the improved access it would provide.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas. The viewing distances and relative sizes of the "lights in the night" would be comparable. The open views of the desert and of the Sierra Estrella would remain unchanged.
6	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Section 4(f) and Section 6(f)**	
8	**Cultural Resources**	
9	**Purpose and Need, Lack of Support**

* * *

MR. MONTEILH: My comment is since you're doing that stretch of freeway from the present end of the 202 to the I-10, I'm wondering if ADOT is willing to put riding trails along that trail, because there is some space. There's huge horse ownership in Laveen, and people like to ride horses. So when you're creating more traffic in that area, that opens up that whole area for them to ride, walk, bike, and that's great recreation to keep citizens moving.

That's my comment.

THE COURT REPORTER: Thank you. Did you want to leave your name?

1	**Traffic**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.

May 28, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2)(3) If you build more roads, more drivers will come! Soon, the proposed new freeway would be as congested as I-10 and I-17. Instead of seeking short-term solutions, ADOT needs to plan for and invest in long-term transportation solutions, particularly mass transit. The only way to effectively reduce congestion and mobilize people is to reduce the number of vehicles utilizing our roads, not encourage more people to drive on our roadways.

(4)(5) This proposed South Mountain Freeway would have long-term negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks.
As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(6)(7) My greatest concern is that the freeway will negatively affect our environment. South Mountain Park, the largest city park in our nation, was created to protect resources and to benefit our communities. As a frequent hiker, I am concerned that blasting through a portion of the park will destroy wildlife and habitat, cut off animal movement corridors, and eliminate valuable public spaces. It would set a terrible precedent by demolishing what should remain a protected area.

(8) The freeway will only exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction will force residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center. This will not improve our quality of life.

(1) Please urge ADOT to select the No-Build Alternative.

Sincerely,

Ms. Mary Moore
1630 W Gail Dr
Chandler, AZ 85224-4045

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

I support the South Mountain freeway. I've seen a lot of economic development and an enhanced community as a result of the freeways that have been built here. I think they're beautiful the way ADOT does it and I strongly encourage acceptance of this. Thank you.

THE FACILITATOR: Thank you.

I'll try Ana Morago again.

MS. MORAGO: Hi, my name is Ana Morago, I am from Gila River Indian Community. Well, this is kind of -- I've been doing this for two years now, urging ADOT not to build the freeway at all, because we hold the South Mountain sacred to four tribes, actually: Akimel AuAuthm, Akimel O'odham, Tohono O'odham, and Ak Chin. These tribes all hold this ground sacred, and if you blast through this mountain you're going to be dealing with four tribes trying to save the mountain as well as the wildlife and the plant life that live on there.

I read the EIS last night talking -- or trying to get ideas for talking points, and one that we really need to look at is the water. Water is the source of all life. When I read it, there's hazardous materials are going to be going underground, water wells, lots of wells, surface water is going to be contaminated as well as polluted, as well as our Sonoran Desert tortoise as a newly endangered species list now, as well the Mexican

1	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Biology, Plants, and Wildlife**	
3	**Hazardous Materials**	The corridor analysis revealed sites that would need further assessment during the property acquisition phase of the project, if an action alternative were to become the Selected Alternative. The Arizona Department of Transportation employs a phased approach to site assessment that allows time for cleanup of any sites found to have hazardous waste issues. The project team concluded from the level of analysis conducted during the environmental impact statement process that the types of sites likely to be acquired contain common hazardous waste issues like underground storage tanks, asbestos and lead paint in buildings, and other commonly found issues (see Draft Environmental Impact Statement page 4-153). The Arizona Department of Transportation maintains a process for addressing these issues in accordance with all applicable environmental laws and regulations. The West Van Buren Water Quality Assurance Revolving Fund found within the proposed footprint would not be within the construction zone, which is known to contain six contaminants in the groundwater at a depth of 30 to 60 feet.
4	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to State regulations/standards. (See text box on Final Environmental Impact Statement page 4-108.) If an action alternative were to become the Selected Alternative, during project implementation a Stormwater Pollution Prevention Plan that would establish best management practices for sediment and erosion control would be completed. These best management practices would be in place and maintained for the duration of construction to ensure that erosion and pollution from sediment and other pollutants running downstream would be minimized. The proposed project would require water quality certification under Section 401 of the Clean Water Act (see Draft Environmental Impact Statement pages 4-110 through 4-112). To reduce the potential impact of contaminants such as oil, grease, soil, and trash, settling basins would be used to collect water and allow materials to settle. The basins could also serve to contain chemical spills resulting from vehicle accidents. Each basin would be designed to contain a certain rainfall runoff volume before allowing discharge If an accident were to occur, and the basins were dry at the time of the accident, the spill volume, in most cases, could be accommodated. These settling basins would require periodic cleaning (see Draft Environmental Impact Statement page 4-99).

2

spotted owl and the burrowing owl will lose their habitat on the mountain.

I keep going back to a meeting I went to when people keep saying that we don't know how to preserve our land. Well, our ground that we have in Gila River has been there for so many generations, we do not touch it, we do not mess with it, we are just people that preserve the land, that keep the land strong as it is right now.

Sorry for getting emotional, because I do this for my family; my little nephew, he's on the other side of the mountain and he's going to be the one who is going to be most affected by the pollutants that are going to be by the freeway, by the construction, by the road, by the cars, vehicles, everything, he's going to be affected and he's only three years old, five years old, and it's -- I don't know what to say, it's just crazy. Thank you. Please don't build this freeway.

6

THE FACILITATOR: Thank you.

If you'd like to speak, please go out to the registration desk, get registered, and we'll have your name up here. Thank you.

Again, if you'd like to speak, please register out front.

Cade Rowley. Did I get the name right?

MR. ROWLEY: Close enough.

5	**Surface Water**	If an action alternative were to become the Selected Alternative, during project implementation a Stormwater Pollution Prevention Plan that would establish best management practices for sediment and erosion control would be completed. These best management practices would be in place and maintained for the duration of construction to ensure that erosion and pollution from sediment and other pollutants running downstream are minimized. The proposed project would require water quality certification under Section 401 of the Clean Water Act (see Draft Environmental Impact Statement pages 4-110 through 4-112). Drainage studies have been conducted; culverts would be maintained, and new culverts would be installed to maintain flows under the freeway (see Draft Environmental Impact Statement pages 3-58 and 4-101). Surface water could be altered from runoff drainage; seeding the disturbed soils with native vegetative species would help to minimize runoff and erosion. Best management practices associated with the project Stormwater Pollution Protection Plan would also help minimize runoff. To control construction-related pollution discharges to waters of the United States as defined in the Clean Water Act, the Arizona Department of Transportation would prepare erosion and sediment control plans, details, and specifications using best management practices from the Arizona Department of Transportation Erosion and Pollution Control Manual for Highway Design and Construction and the Arizona Department of Transportation Post-Construction Best Management Practices Manual for Highway Design and Construction.
6	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

take my home. Honestly, I don't want to be around if a freeway is not built. This corridor is extraordinarily important to congestion and to the future of Ahwatukee.

Ladies and gentlemen of the committee, the two polls I want to submit to the record today, the voters have spoken three times on this issue: Once in 1985, one in 2004, and again with the poll that we submitted or will be submitting here today. We must bring this EIS to its conclusion; 12 years of study, this corridor flies in the face of the voters who voted this project in. There is no more important project to area commuters and workers in the southbound freeway project. We must build it now. Thank you very much.

THE FACILITATOR: Thank you, Mr. Martin.

I'd like to invite our next speaker, Joseph Morago.

Welcome, Mr. Morago. You have three minutes.

MR. MORAGO: For the record, it's Joseph Morago. Good afternoon, my name is Joseph Morago. I was born and raised in Arizona, I'm a Native American from Akimel AuAuthm tribe, a member of Gila River Alliance for a Clean Environment, as well as PARC. I'm here today to state my opposition for the proposed South Mountain Loop 202 freeway. After reviewing the DEIS, I was shocked to learn how little information is present in

this draft. Your data is inaccurate and outdated. The 2005 joint air-toxins-assessment program study was not included. Risk from hazardous cargo being transported on that route was not properly addressed or included. The issues of particulate matter and the air quality problems that Maricopa already faces have not been properly addressed, and the health and safety of our children, elderly, and people with weak immune systems have not been addressed.

In 2003 a health-assessment study was conducted by the University of Southern California. They were addressing the health effects of living around the freeway and what these potential health effects could be. The study proves that asthma rates will go up, risk of heart disease, cancer, and birth defects, all of this goes up.

To the residents of Laveen talking about needing a hospital and other infrastructure to ease the burden of living in the Southwest Valley, I'm here to tell you that this freeway will not solve these issues. It will still have the pollution, health will get worse, and not to mention you're polluting the environment and destroying the natural beauty of South Mountain.

6
7

Which brings me to my next concern is the cultural significance of South Mountain. Archeologists

1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	Summary information about the findings of the Joint Air Toxics Assessment Project study is provided as background information in the Draft and Final Environmental Impact Statements, but the study itself is not relevant to the type of analysis done pursuant to the Federal Highway Administration's mobile source air toxics guidance, which is an emissions analysis. Monitored ambient concentrations of mobile source air toxics (the focus of the Joint Air Toxics Assessment Project) do not inform this type of analysis. While monitoring data can be useful for defining current conditions in the affected environment (to the extent that the monitoring data are current), they don't tell us anything about future conditions, or the impacts of the project itself, which is why an emissions analysis was performed. The mobile source air toxic analysis presented beginning on page 4-77 of the Final Environmental Impact Statement is an estimated inventory of mobile source air toxic emissions for the entire Study Area for 2025 and 2035. This approach was used because the inventory estimate accounts for changes in traffic and emissions on all roadways affected by a proposed project, and would, therefore, be a more reliable predictor of changes in exposure to mobile source air toxics. The mobile source air toxics emission modeling developed for the project (which factored in the U.S. Environmental Protection Agency's recent rules for the 2035 analyses) and discussed beginning on page 4-77 of the Final Environmental Impact Statement found little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions.

in the '70s and the '80s have studied, documented, and written books about petroglyphs and other artifacts discovered on the South Mountain over the past 40 years. The Gila River Indian Community elders, cultural resources department, community members have told MAG, ADOT, and the State of Arizona of the cultural significance of this mountain and what it means to us. I consider this racial discrimination. You are discriminating against our people and what they believe in.

8

This is not the first time Maricopa County has done this. They are doing this to North Mountain Church, who has already moved because of the freeway, they did that when they expanded the airport, there's the church in the middle of -- just in the middle of the city between 16th and 24th Street because of progress. This needs to stop. This will not help the community, this will not benefit the people, not to mention what it'll do to the environment and the plants and animals and the natural habitat. I thank you for your time.

9

THE FACILITATOR: Thank you, Mr. Morago.

We'd like to welcome our next speaker, Mr. Robert Knight.

Welcome, Mr. Knight. You have three minutes.

MR. KNIGHT: Thank you. My name is Robert Nick

Code	Issue	Response
8	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.
9	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. MR. MORAGO: My name is Joseph Morago. I am a Gila River Community member living in District 3. This is a comment for the DEIS. The main thing that I want -- or I have several points that I want to touch on.

There was one thing that I wanted to touch on, is, first of all, is the environmental effects of this freeway. According to the -- the DEIS, I didn't see much talk about the JTAP study. Also, the study that was conducted by Gila River DEQ, as far as air quality and the way that this freeway will affect. I didn't see much in the way of how it will affect plants and animals and their natural habitat.

There has been reports -- The Capitol Times reported that it would affect the migration. Sierra Club has said that it would -- that 50 percent of animals don't survive if their natural migration routes are interrupted.

There is a lot of plants that are affected. And scientists at the University of Arizona are studying the death of saguaro cactus due to environmental effects, and this freeway will definitely affect that.

The second thing I want to address is the -- is the health effects of -- of this freeway. First of all, the potential effects. Asthma rates will go up. There are studies now that diabetes is related to environment. Diabetes rates will go up. Pulmonary -- Pulmonary cardiovascular diseases will go up. All these health effects, these are the potentials

Code	Comment Document

that will go up.

Current effects. We have -- Right now, Gila River has one of the highest diabetes rates in the world. Going through some of the other neighborhoods in Phoenix, the neighborhoods of color, there will also be adverse health effects to these people.

Allergies, bronchitis, asthma, all sorts of breathing effects are what will occur and the effects that are happening now. And these will only get worse with this freeway, with the pollution. And the pollution will be stuck in between the two mountains of the South Mountain and the Estrella Mountains and this corridor between the two, between the two mountain ranges, that they will -- that the effects will be devastating.

Pollution is already starting to come into Gila River. You're talking about hundreds of thousands of cars on a daily basis. You're talking about it possibly being a truck route, with trucks coming from Mexico, plus going across the country, east to west, north to south. And all of this, all of this traffic will be passing through this corridor.

And it will -- it will be -- You know, the health effects, the future health effects, are incalculable. There is nothing that really addresses these effects in this DEIS.

There is limited information on the -- You know, the University of California has already come out with studies,

4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
5	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Code	Comment Document

saying on how freeways affect people, by living within a thousand yards, a quarter mile, a half mile, a mile, and the effects that, the closer that you are to the freeway, the more effects that -- adverse health effects that you will have.

The second issue that I want to pinpoint is -- has to deal with the cultural impacts and lifestyle impacts. South Mountain is a sacred mountain to the Gila River Indian Community, among other tribes: The Tohono O'oodham tribe; the CRIT tribe, which is the Colorado River Indian Tribe; Salt River; Ak-Chin; Quechan Tribe, and they're from -- they're from Yuma.

7

All of these -- All of these tribes have acknowledged the cultural significance.

A Phoenix archeologist, a former Phoenix archeologist, wrote a book in around 1990 about the -- the petroglyphs that are in -- located in South Mountain.

Cultural Resources from the Gila River Indian Community has identified a source of cultural significant places.

Some of these petroglyphs date back to the Hohokam era, which we are direct descendants from. We have had studies that prove that that's our lineage, that these are, in fact -- that those are our ancestors.

8

So those are the -- Those are the cultural effects that -- that this freeway will impact.

Page 45

7	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Cultural Resources**	The freeway alternatives were surveyed for archaeological sites, which include petroglyphs (rock art). The archaeological survey documented several petroglyph locations. Subsequently, the freeway alternatives were redesigned to avoid the petroglyph sites. No petroglyphs would be destroyed by implementation of the proposed freeway. Because right-of-way fencing would limit access from the proposed freeway, damage to petroglyph sites would not be facilitated (see Final Environmental Impact Statement pages 4-160 and 4-187).

Code	Comment Document

9

Okay, lifestyle effects for Natives, for Native Americans. There's places that we hold sacred ceremonies. There are places where we go and collect native plants for ceremonies, such as the greasewood. We call it shegoi in our native language. And these are native plants.

Right now, it's the -- in the month of June is the harvest season for the saguaro cactus fruit.

And so that's -- These are things that are affected, not to mention the, you know, the hikes and the retreats, the stuff that we do -- that we do on South Mountain.

As far as non-Natives, non-Native Americans, South Mountain has many hiking trails. We have cyclists that ride their bikes through this area. We have joggers that run in the mountains. You know, there's -- There's a lot of people that use this.

And, although they -- Although they say that it's a small -- Although they say it's a small percentage of the mountain, you know, we have talked to non-Natives that say that they -- you know, if the freeway goes through, they will not ride their bikes in this area. They will not. That's one of the reasons that they do come out here, was that they're -- that they're able to do it.

Another thing that is -- The last thing that I want to say is the dangers and the hazards of this freeway. Not only -- Not only the health effects that I've stated before,

10

11

but -- and the environmental effects, but I'm worried about hazardous materials and chemicals that are going to be transported on this freeway.

There's -- The thing that I noticed from the video that disturbed me the most is that -- is there's very few exits on the freeway. There's sections, there's miles, where there is no exit and -- exit or entrance. There are -- Through the majority -- Through the eastern part, through the E1 Alignment, the east part, the east portion, the east portion of the freeway, there's no frontage roads. If you are on the freeway and there is an accident, there is no way to get off. There is nowhere to go. There is exits every few miles, and then they're not very close together.

According to the video, there is one on 40th Street; there is one on 42nd Street. There is a big gap between -- let me see that. There is a gap between 24th Street and 17th Avenue.

That's a very big stretch not to have any -- any way to get off of the freeway. And, if you have a hazardous-material incident on the freeway, it could possibly lead to loss of life because there is no way to evacuate that area. There is no way to evacuate the City of Phoenix. If it's closer to 51st Avenue where it cuts -- this area, where we're presently located, there's no way to evacuate this area if there is a hazardous chemical spill. If it creates a plume

11	**Design**	The locations of the planned traffic interchanges were determined in coordination with the Gila River Indian Community and City of Phoenix. The current plan balances the need to minimize impacts on the adjacent community with the need to provide acceptable access to the region's transportation system. The interchange locations for the proposed freeway are (see Figure 3-28, on Draft Environmental Impact Statement page 3-51): · Interstate 10 (Maricopa Freeway)/State Route 202L Traffic Interchange · 40th Street · 24th Street · Desert Foothills Parkway · 17th Avenue · 51st Avenue · Elliot Road · Dobbins Road · Baseline Road · Southern Avenue · Broadway Road · Lower Buckeye Road · Buckeye Road · Van Buren Street · Interstate 10 (Papago Freeway)/State Route 202L Traffic Interchange

of gas, of any kind of release, it will float forever, float wherever the winds are blowing it. They'll literally blow in the direction. And there is no way to get out of this area.

So the potential for loss of life is very -- is extremely high. It could create a disaster, not to mention the dangers that it holds to the -- to the first responders. It's going to take a while for the first responders to get to these accidents, to get to these places.

And there's not enough planning in it to -- There is really no mention of, in the DEIS, of an effective way to evacuate this area should -- especially along the E1 Alignment. There is really -- which borders Ahwatukee, which borders South Phoenix, which borders the Gila River Indian Community. There is -- There is no way to get away from anything that should potentially happen.

10

And those are the dangers, not only to the dangers of the environment afterwards, you know, just because, once a chemical is released, it will get into the plants. It will get into the ground. It could possibly potentially contaminate ground water.

12

They talk about our -- I saw on the video, about a canal system or drainage system that could go awry. This could potentially be contaminated by whatever hazardous incidents that could potentially happen with this freeway.

And because of all of these -- the health effects;

Code	Issue	Response
12	**Hazardous Materials**	The proposed freeway has been designed to have basins adjacent to the roadway for collecting and metering drainage. In the case of an accident, these basins could, in most cases, contain the spill volume and protect the groundwater. This aspect of the design is discussed on Draft Environmental Impact Statement page 4-99.

Code	Comment Document

the environmental effects; the cultural and lifestyle effects; and the dangers of having hazardous materials, as well, that would be transported on this freeway -- I am against this freeway and I feel that it should not be built.

And I will continue to fight to keep this freeway from being built, at all, not just on Gila River, but off Gila River or wherever it's located. I am totally against the Loop 202 Freeway. And I will fight to keep it from being built.

Thank you.

(The public hearing proceedings concluded at 12:01 p.m.)

of it, but nobody thought of it.

All of the east/west highways, interstate highways end in a zero, I-40, I-10, I-20, I-50, I-60. All of the north/south ones end in usually a five, but they don't have to be a five. All of the diagonals are three numbers that usually end in either a five or zero. Look at the map sometime. You'll see what I'm talking about.

Where did the idea come from?

Well, when Eisenhower was in Germany in World War II Hitler had built these highways to move troops, materials, and whatnot. Eisenhower brought this idea back to the U.S. and did the same thing. The original reason for building the interstate system was to be able -- we were still in the cold war -- was to be able to move men and material. All the design specifications for bridges were to hold up tanks, not haul a truckload of furniture, but haul up these big low boys that had tanks on the back of them so when they drove across it the bridge wouldn't fall in.

Well, there's your history lesson. Thank you.

MR. MORALES: I'll keep it short. I'm concerned about the archeological sites. South Mountain is our most sacred of all sacred mountains. Elder

1 Brother came down from God. God brung him down. Elder
2 Brother is like Jesus Christ, son of man. We're
3 monolithic tribes. We believe in one God. God brought
4 Elder Brother, his son, to show us how to live our life,
5 the four seasons of life. He was come down to South
6 Mountain. South Mountain is where he lives, Elder
7 Brother lives.
8 We have beautiful petroglyphs. I know for
9 a fact in that area where they are going to have a
10 freeway, there are archeological sites. When you go
11 hiking that mountain, there's areas where it says "No
12 Public Access," and if you go behind those no public
13 access, you'll see elaborate petroglyphs, sacred sites,
14 elaborate village life, big, beautiful. Those things
15 have been there -- you see children's hands. You can put
16 your hand where little kids were there. That could have
17 been your great, great, great, great, great, great
18 grandfather's hands, you know.
19 It would be heartbreaking to see that
20 happen, you know. That mountain is in our four-night
21 song ceremony we have. South Mountain is in that song.
22 I just want to know -- I understand we've got to have
23 advancement. I know we got to have technology. But I
24 want to know if that's going to go through, what are they
25 going to do about our sacred sites? What are they going

Code	Issue	Response
1	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The freeway alternatives were surveyed for archaeological sites, which include petroglyphs (rock art). The archaeological survey documented several petroglyph locations. Subsequently, the freeway alternatives were redesigned to avoid the petroglyph sites. No petroglyphs would be destroyed by implementation of the proposed freeway. Because right-of-way fencing would limit access from the proposed freeway, damage to petroglyph sites would not be facilitated (see Final Environmental Impact Statement pages 4-160 and 4-187).

Code	Comment Document

1 to do? I understand, if the freeway goes through, I just
2 want those sacred petroglyphs, I want them to be
3 protected.
4 I know everything south of Baseline Gila
5 River takes care of. Everything north of Baseline Salt
6 River takes care of. I want to be assured our sacred
7 sites will be protected. I would rather not have the
8 freeway go through at all, but I want to know -- I got to
9 have our sacred sites. I got to have our sacred sites.
10 Those are our ancestors. Our ancestors.
11 (Mr. Morales is speaking in a foreign
12 language.)
13 I speak our language. That's very
14 important to me.
15 That's totally -- you might as well just
16 put feces all over everything.
17 What's the word I'm looking for? What's
18 the word I'm looking for?
19 I'm just a little emotional right now.
20 Those are our links to our past. We can put our hands
21 where our great, great grandfathers did as kids. You see
22 elaborate village life, how things work, how they did
23 things.
24 That's all I want to say. I just want to
25 know what they are going to do with archeological sites.

I would rather it not go through it. When we do our songs, especially at night when we do our songs and we talk about Estrella Mountain, we talk about Red Mountain, who wants to see an ugly freeway? When we do our songs, especially at night, we talk about Estrella Mountain, we talk about Red Mountain, we talk about the Four Peaks and we're doing all-nighters singing all night praising our sacred mountains. Then we'll see a freeway going through; you know what I mean?

You wouldn't want -- It would be like taking the Vatican and building a freeway through the Vatican. That's what it's like to me and to a lot of my people.

I know a lot of people are talking about civil disobedience when the road goes up, you know. They're talking about civil disobedience. And I'll be there with them. I'm a veteran.

That's all I want to say.

UNIDENTIFIED SPEAKER: I'm in the Dusty Lane community. It doesn't matter which way the freeway goes. Our house will be bought out. So it's a good thing because of the flow of traffic. I used to actually drive cross country, big rigs, so I've always thought it would be a good idea to be able to bypass Phoenix. I used to take 51st to Riggs Road to go around, to bypass

the proposed alternative to build the freeway. Thank you.

THE FACILITATOR: Thank you.

Phillip Morales.

Use this microphone, please.

MR. MORALES: Good evening. Thank you for letting me speak. I'm kind of emotional right now, but I'm a veteran, I'm a Gila River Community member, I speak my language, I'm very related to my culture.

South Mountain is the most sacred mountain we have for the Akimel and O'odham people. And I know that's -- I'm from District 6 and I know that that freeway's going to go through our cultural sites. Elaborate petroglyphs that our great-, great-, great-, great-grandfathers kids' hands put their hands on there. You know, I could put my hand on there, I know I'm touching their hands from hundreds of years ago.

Suhu, man of the maize, you all know was -- this was the son of God, like Jesus Christ, it was son of our mountain tribes, we are all related to one God. He came down from heaven, we call him elder brother Suhu, he came and lived in South Mountain and he showed us how to live our life, the four stages of life: How to respect, how to learn your language, your first love, when you have a family do it right, then your third sage is to become

childlike again become (speaks in foreign language), become a baby like again, take care of your elders, show them -- you know, but as an elder you have a responsibility to share your knowledge and wisdom. And when you finish all that, you get to go home to heaven, you go back home to Suhu, our God, when you've done all that stuff right.

There's elaborate sacred sites; elaborate petroglyphs on South Mountain. You go hike those trails, it says no public access. Well, you go behind those chains and you'll see elaborate petroglyphs there. You know, you go oh, can you do this, can you do this. We have four ceremonial songs, it goes through our four sacred mountains, four nights to all of our sacred mountains, and we sing there and we're looking at our mountain at night, we have an all-nighter, we sing, we're praying; we got to have a freeway going through our mountain?

You know, this is our mountain, everybody's mountain, this is where we -- this is where our ancestors are. You wouldn't build a freeway through the Vatican City, would you, desecrate that? That's how we feel. I'm very emotional about this. I'm a veteran, I know what it's like to fight for this country.

And my time is up, but I just want to know what

are you going to do about our cultural sites? I know our rule has something to do with that, but I want to know is our petroglyphs, is our sacred sights going to be protected? Are they going to be moved somewhere else? That's what I want to know. Thank you very much.

THE FACILITATOR: Thank you.

An announcement, please. The last bus will be running in about five minutes at 7:30 for all destinations, orange, green, and blue, routes one, two, and three. Thank you.

Ashley Grace.

Ashley, could you please come to this microphone.

MS. GRACE: Thank you for letting me speak. I'm a recent addition to Phoenix, I moved here about a year and a half ago and I'm a military spouse. South Mountain, I think, is more important the way it is as a tourist attraction as one of, you know, Phoenix's points of pride, the largest -- the largest city park in the United States, as a place for wildlife. If you put an interstate through the middle of it, even if you conserve most of the area for wildlife, they won't be able to cross between and that creates big problems. You know, javelina and bobcats and everything else that is out there, they don't really have a very easy time crossing

My family and I moved to Laveen in 2009 and we absolutely love it and are here to stay. We cannot wait for the completion of the 202. It will make Laveen an even better place to live with more access to places like Ahwatukee and Chandler and a faster commute to the I 10. Not to mention the business growth that will come to Laveen with the freeway.

We are for it and can't wait!

1

We prefer the 101 alternate :-)

Thanks,

Olga Moralez

direct visual proximity to a freeway. Dreamy Draw, you know, where I'm at in the North Valley, the freeways are pretty much encircling. And so I believe that in that South Mountain Park is the largest municipal park in the world, and is very unique in its makeup, that that also hasn't been given enough weight in the study on this. I -- I see that the EIS was -- was somewhat involved in the ancient canal system. My grandfather worked with SRP on the original canals here in the Valley, and I believe that it wasn't my knowledge, and I haven't seen any information, that the tribe itself had done those -- the studies on all the sites that would be affected. I didn't see it in the information out here. I might be wrong about that. But I also think that -- that the impacts of that, you know, should be more -- more visible and not just be the relief of the congestion.

And my last point is, you know, the air quality part of this project, you know, the report suggests that it will decrease it, and I think it could be decreased easily in other ways than this project. Thank you.

THE FACILITATOR: Thank you.

Rueben Jenkins.

From: MOREY MORRIS
To: Projects
Subject: Loop 202 South Mtn Freeway
Date: Wednesday, July 24, 2013 5:50:00 PM

1

I am in support of building the South Mountain section of Loop 202. I have been a resident of Phoenix living in the Ahwatukee area since 1988. I have seen the buildup of homes and the increase congestion on the ONLY way out of Ahwatukee (I-10) and the untold costs in delays in freeway stop and go traffic.
We as citizens of Arizona need to look at what is best for all of the motoring public, not just those that think they will be harmed by a freeway going in on the border between Gila River and Phoenix.
People that moved into the area and bought homes and built businesses and churches along the 202 path knew well ahead that a future freeway was destined for the area. These people need to take responsibility for their actions, and not blame others for their mistakes in buying and building in the path.
I am upset that the Gila River neighbors did not see the great potential for economic growth in having the freeway go into their land. Look at what happened to Salt River on the 101.
Please understand that I am one of several thousands of people that have been quiet to the support of the freeway.
If there is any future thoughts about this area and to allow for better traffic flow, build the 202 in the South Mountain area and make it happen soon!
thanks

Morey Morris 602-680-8514-cell

Freeway Study

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

This freeway Loop 202 is soneeded in the west side of town. Thiss 202 has been on the books since 85 and has to be the most studied freeway to date. The time is Now to get this done. There is no more study Needed, it has to be built in order to take some of the heavy traffic off our surrounding roads. We have lived in the Laveen area for 40 yrs and the traffic was Nothing we cant even get out on Baseline sometimes because of traffic. Even though it is taking our home with it, the freeway is a must for our community

just completely bogus, because nobody visits that portion of the park anyway. It's very insignificant.

You know, if they want -- otherwise, how did Squaw Peak -- or actually Piestewa Freeway -- how did that get through. When you go through there, you see big ridges on either side of the freeway. So they -- you know, look, how about that? Either that, why don't we just take out that road and replace it to what it was before?

But to say a few ridges of the least-used portion of the park would be devastating, it just -- it's just, what do you say, really stupid, I would say.

And that's what I wanted to add; it's just insignificant.

MICHAEL MOSS: I live in the path of the freeway, in Laveen. And I have lived there most of my life. And the traffic over the last ten years has just doubled on the surface streets: on 16th, on Baseline Road, 51st Avenue, 67th Avenue, 91st Avenue.

So many people when the freeway I-10 plugs up, they go to the surface streets. And there's accidents and there's just major traffic. They go to the surface streets. They ditch off of I-10. If they're going to the east, they ditch off at 91st or 67th Avenue, which takes them to Baseline Road. And

Driver and Nix Court Reporters - (602) 266-6525

Code	Comment Document

then Baseline Road, they go to areas they're looking for going to the east.

Baseline Road just is horrendous, and so is 51st Avenue. They get off at 51st. 51st Avenue can go around the reservation and even connect back on I-10 again. So they use that as a bypass.

If the freeway was built, that would give them an option to go down I-10 to southbound freeway and follow that around and relieve a lot of traffic that we are experiencing off the surface streets in Laveen. It's just horrendous and getting worse every day.

Same thing to the east. People that -- experience around the Broadway Curve or around Ahwatukee, traffic is jamming up. They ditch off at Riggs Road and can go through the reservation and back around right through 51st Avenue, again, right into the community of Laveen, jamming up all the surface streets.

Or they can continue through there and hit Baseline, and they come west on Baseline. And, of course, that jams -- comes into the community of Laveen and jams all of that up also.

So from east or to west -- regardless of what direction that the traffic is going in on I-10 -- when

1

I-10 plugs up, they all hit the surface streets, and the surface streets from South Phoenix to Laveen just get jammed up. A lot of accidents are starting to happen, more serious accidents than ever before.

So I am in favor of building the freeway. I have been in the path of the freeway since '85 when it was designed, and we voted for it in '86. And we are still waiting to see whether this is going to be built or not. But I would strongly suggest that the freeway be built.

Thank you very much.

ANONYMOUS: Well, we are for it, wish it would happen. I have been following it since 1985. Nothing has happened that we can see. And I live on 51st, off of 51st Avenue. And right now the traffic is horrendous. Two miles down south of where I live, the Vee Quiva will open its new phase in July with seven restaurants and a resort, which they don't have right now. So it already -- 51st Avenue will be a freeway. And that's our concern.

We want the freeway.

ETHEL WILLIAMS: The main thing I would like to do is say that my whole family -- not my whole family, but two-thirds of us, three-fourths of us, moved to Laveen because of all the things they promised

Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 7:15:09 PM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) (3) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(4) (5) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(6) (7) The freeway would also negatively affect our environment. South Mountain Park is the largest city park in our nation! It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(8) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(7) I'm moving from Tucson to Phoenix soon, and knowing South Mountain Park is waiting for me is a big draw. Please don't destroy part of this park to create another mistake of a freeway.

(1) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Mike Mullarkey

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

Hill from ADOT.

So we'd like to get started here. When you come up here, come up to either microphone. You'll have three minutes. There's a timer down here in front of you. And please feel free to state your business.

Joe Murphy.

MR. MURPHY: Hi.

THE FACILITATOR: Come on up, Joe. Timer here is three minutes.

MR. MURPHY: Okay. My name is Joe Murphy, I've lived in the City of Phoenix for about 33 years now. My attitude about the freeway is that people who live along it will be multiversely [sic] affected according to the Don't Waste Arizona and Sierra Club studies that they've done. Should be the people most listened to, not the politicians who don't live in those areas, the politicians who don't represent the people in those areas. [Unintelligible] two city council members who are both running for that city council district are opposed to this. They're opposed to it because people who live there that are most affected healthwise don't want the freeway built there. The folks on the reservation, they voted it down twice. I think my, you know, my own opinion is

they need to be listened to rather than people who don't live in that area. I've been around long enough that I know the Sierra Club and Don't Waste Arizona, when they worked against medical waste incinerators in the Laveen and South Phoenix area. People [unintelligible] because their studies then were very important to stopping those incinerators. Now, however, some of the same people who worked to stop those incinerators seem to think this freeway is a great idea, because it saves them five minutes' driving. So that's crazy to me. It's still the health of the individuals that are more important, the children who are going to school and the people living and working in the area along where this freeway will be built. It needs to be put somewhere where it's not as dangerous healthwise for the people living there.

Thanks.

THE FACILITATOR: Thank you.

Don Steuter.

MR. STEUTER: Thank you.

Use this one?

THE FACILITATOR: Yes, please.

MR. STEUTER: My name is Don Steuter.

Thanks for this opportunity to talk to you about the

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

As a Az. resident of many years I have seen the need for streets & Fwys grow as the population has grown & land development spread over the years. Public transit as well as street & Fwy building address the need to cut travel time to & access to the places we all want or need to go.

As a resident and environmentalist & historian I would advocate incorporating the smallest ECO Foot print as possible, being careful not harm sacred sites and as little disturbance to wildlife as possible also.

I don't think a no build is the answer, so I prefer the option of displacing as few homes & businesses, etc. as you can, and the least expensive build as well. If the is money left over it should be kept for

Kelsey Myers Document Created: 7/24/2013 11:49:50 PM by Web Comment Form

I am STRONGLY AGAINST the building of this freeway.

One of the characteristics that I love most about Ahwatukee is the feeling that it is a small community hidden within a huge city. You usually see at least one person that you know when you venture out into the area. It feels like a small town with the way that everyone is connected and seems to know each other. I moved into the area in 1994 when I was just a child, and I have been lucky enough to watch it blossom into a wonderful community.

There are many aspects of this freeway that will negatively impact the surrounding area and environment of Ahwatukee. If this freeway is built, it will only perpetuate urban sprawl that is already disturbingly prevalent in Phoenix. Urban sprawl increases the amount of paved surfaces in the city and contributes to the urban heat island, which leads to hotter temperatures. This freeway will also cause increased air pollution, and health problems (such as asthma) will rise as a result of this. Additionally, this increased air pollution is extremely unhealthy for the students at the nearby elementary, middle, and high schools as well as the residents living nearby. Many diesel trucks from Tucson will also use this route in their travels and will further contribute to pollution. Noise pollution will also increase and disturb the locals.

1 2 3 4 5 6 7 8

Not many people want to live near freeways, so consequently, the value of the homes in the area will decrease and people who have the means to move away will do so. Does one see many nice communities right by freeways? No. This population that will be able to move away happens to be most of Ahwatukee, as it is a fairly affluent community. As these people move away, lower income populations will replace them, and the overall value of the area will slowly but surely decrease as the years go by. This will strongly affect the local economy in a negative way.

Another negative characteristic of this freeway is the size of it. It will cut through precious desert land, as well as the South Mountain preserve, and forever disturb the integrity and ecosystems of the land. Once the desert is destroyed, there is no going back. People travel great distances to be able to hike South Mountain and the surrounding trails, so if this is disturbed, this aspect of tourism will decline.

9 10

This freeway will not save that much time in getting around the city; if it is built, more people will utilize it and the traffic will become the same as the other freeways in Phoenix.

11

This freeway will destroy the beauty and integrity of Ahwatukee and its surrounding Sonoran desert.

I URGE YOU TO NOT BUILD THE FREEWAY.

12 13

This freeway will forever change the dynamics of the community of Ahwatukee, a place where I grew up and dearly love. The detrimental effects outweigh all other aspects of the project- it will increase air and noise pollution, disturb the unique Sonoran desert ecosystem, and bring the value of the community down (which in turn decreases the housing and tourism value of the area, ultimately affecting the economy). Ahwatukee will remain the happy

Code	Issue	Response
1	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
2	**Heat Island**	As buildings, parking lots, roads, and other infrastructure replace open land and vegetation, an urban heat island may result. The heat island effect is of a regional nature and, therefore, there is no requirement to analyze potential impacts and no possibility of determining the localized contribution at the project level to the regional heat island effect. It is likely, however, that a proposed project such as the South Mountain Freeway would be a minor contributor to the overall issue.
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Health Effects**	
5	**Air Quality**	
6	**Purpose and Need, Lack of Support**	
7	**Noise**	
8	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.

	community that everyone loves if things remain as they are. PLEASE DO NOT BUILD THE FREEWAY!

Code	Issue	Response
9	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
10	**Biology, Plants, and Wildlife**	
11	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
12	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
13	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
14	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Subject: Loop 202 South Mountain Freeway Study
Date: Wednesday, July 24, 2013 2:51:24 PM

1 2 3 4 5 6 7 8 4 9

Hello,
It seems that any alternative routes for the South Mountain freeway have been eliminated. I still think that the 85 route south of here will make an excellent alternative. The right of way already exists.If freeway access for people living near Pecos road is an issue, why not improve that road and extend it West, eventually connecting to the 85 extension that comes around to the west. This will eliminate houses, businesses and churches being bulldozed and it will be less expensive. It will also exclude large trucks, because they will be using the 85 extension. It seems the environmental impact statement does not include the humans that already live here. These people will be uprooted and the ones left will endure light, noise and exhaust pollution night and day forever. The people that live here and go to school here do so because it is beautiful and the schools are excellent. What happens when these people do not live here anymore? What will happen to the quality of the schools when property values go down in comparison to other school districts? Who will want to live here and for how long?
It seems to me that this has been dragging on too long and now someone in the last few years has made a concerted push to just get it done. The circumstances in the area have changed since the eighties, we need to change with the times. This affects more people negatively then positively and should be stopped.

Thank you.

Joseph Myers
16239 South 25th Street
Phoenix, AZ 85048

Code	Issue	Response
1	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
2	**Alternatives**	The comment proposes to extend Pecos Road to the west as a parkway or arterial street. In the best-case scenario, a parkway would carry approximately 105,000 vehicles per day, well below the average daily traffic on the proposed freeway, which would range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-19). As a result, this alternative would lack sufficient capacity to meet projected travel demand. The alternative would not adequately address the projected transportation system capacity deficiency, would not remove a sufficient amount of traffic from arterial streets, and, therefore, would not meet the project's purpose and need. For these reasons, the Arizona Parkway was eliminated from further consideration.
3	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
4	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
5	**Visual Resources**	Light from the freeway would be produced from vehicle headlights and taillights and from fixed light poles at interchanges along the freeway. Nighttime users of the park and residents of Ahwatukee Foothills Village may see lines of seemingly crawling vehicles, each with lights front and back. Fixed freeway lighting would be provided for safety reasons only at interchange exit and entrance points. Freeway lighting at these locations would be designed to reduce illumination spillover onto sensitive light receptors such as residential areas (see page 3-58 of the Final Environmental Impact Statement).
6	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

1	**Acquisitions and Relocations**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.) While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement. It is not within a City's or State's right to deny building permits to developers who meet all requirements and want to develop their land. In 1996, the Maricopa Association of Governments Regional Council approved the Red Letter Process to provide early notification of potential development (including plans, zoning, and permits) in planned freeway alignments. In addition, the Arizona Department of Transportation works closely with Cities and Counties during the environmental impact statement process to encourage developers to reserve land for future transportation improvements. In some cases, when the developer is willing, the Arizona Department of Transportation has been able to purchase a portion of the land through advanced acquisition (see Final Environmental Impact Statement pages 3-53, 4-13, and 4-48).

THE FACILITATOR: Thank you.

May I remind everyone if you'd like to come up and speak, please go out and register out front.

Scott Neely. Mr. Neely, could you come to this microphone, please.

MR. NEELY: That one? Hello, gentlemen. My name is Scott Neely, I live in the East Valley. I've been in the Valley for 15 years now; actually, on and off since '86. And first I'd like to say that having lived in several other states, I think our freeway system in the Valley is quite good and it's quite nice to travel around the town now on our freeway system, compared with 1986, '87, '88.

Understanding that quite a study has been done now and the alignments have been identified, I would like to be in support of moving the trucks personally out of the middle of town and in the middle -- off of the main freeway through the middle of town. And as I understand, there's been a consideration for widening I-10 through the middle of town from basically the Broadway curve to I-17. I would rather see this freeway built as it's been cited through the, you know, the present 202 E-1 and the 59th alignment, just so that we don't go forward with widening the I-10; I would not be in favor of that approach. Basically, that was really all I wanted to

say.

THE FACILITATOR: Thank you.

MR. NEELY: Thank you.

THE FACILITATOR: Vicky Oliver.

MS. OLIVER: Hi, my name is Vicky Oliver and I'm for the 202 project because I think it will bring employment opportunities to our area, which we definitely need, and also will help the commute for a lot of people coming in the area. And also, it's been proven that freeways cut down pollution and also traffic accidents, and it'll keep some of the traffic off of our city streets.

THE FACILITATOR: Thank you.

Jake Speck.

MR. SPECK: Good afternoon. My name is Jake Speck, I'm here in support of the 202. I think this project is a great benefit to the community for a lot of different reasons: Reducing traffic, revitalizing economy, bringing over 30,000 jobs to the community, as well as a significant investment. I think it will attract potential employers as well, which would be great for growing the economy going forward.

After looking at the EIS, I think the potential impacts are vastly outweighed by the benefits this project brings, and I believe that now is the time to go

CALLER REMARKS/QUESTIONS:

I would like to leave a message. I am in favor of this freeway to be connected to the west valley. It has been greatly needed for this past decade and I was sadly disappointed when it was put on hold a while ago, so I am all in favor of having it come through. It will allow another avenue to cut through down south towards Tucson or the Gilbert area without having to go through the middle of Phoenix with all the traffic. Thank you very much.

ADOT Loop 202 South Mountain Freeway Study
1655 W. Jackson Street
MD126F
Phoenix, AZ 85007

Attention to: study team panel

I am writing in support and vote YES to the Loop 202 South Mountain Freeway, specifically the W59 alternative.

As a Laveen resident I am forced to deal with congested traffic along on the Baseline corridor from 99th Ave to I10 . The severe lack of retail shopping, restaurants, medical facilities, and entertainment forces revenue and tax dollars to be driven outside of Phoenix as residents frequent Avondale, Tolleson, Chandler, Scottsdale, and Tempe to shop, dine, etc. This freeway and the socio-economic infrastructure it will bring to our community is desperately needed!

After researching this issue, allow me to share some of the reasons I urge you to approve this freeway expansion:

- 64.3% of likely voters in Maricopa County support construction of this freeway
- In a separate study, also commissioned by We Build Arizona, 59% of likely voters in Ahwatukee and Laveen Support this freeway as well.
- It is time to end the commuter traffic jams and congestion we experience not having easy access to the freeway and connection of the East/West Valley.
- If we don't build the South Mountain freeway, traffic in the region will get much worse over the next two decades. According to ADOT's own study:
  - Traffic on the I-10 between Ahwatukee and Goodyear will grow 28%
  - Another 103,000 cars will use Broadway Curve each day
  - Another 38,000 cars will jam the Tunnel every day
  - Morning and evening commute times will increase 39% to 82%
  - Traffic congestion on city streets will increase 46%
- The same report indicates the project will also reduce air pollution by reducing the time vehicles spend stuck in traffic
- The project will create 30,000 jobs during the five to six year construction period and result in a $2Billion investment in the Phoenix-area economy.
- The money to the build the freeway is in the budget, it was voted on and approved TWICE (1985 & 2004 respectively),we voted for the 1/2cent tax increase in 2004 to support the build.
- There is no more important project to the area's commuters and workers than the South Mountain Freeway project. Please vote to Build It NOW!

Code	Issue	Response
1		Comment noted.

Code	Comment Document

Please consider the following request when making your YES vote:

- Design and construction of community value additions such as **attractive sound barriers** and a **bike/running/pedestrian path**along the length of the freeway as well as the use of Rubberized asphalt as per the ADOT's "Quiet Pavement Pilot Program" initiated in 2002.
- We have award winning examples in Tucson, AZ which received an excellence award in 2002 by the Federal Highway Administration (FHWA) for the Diamondback bicycle/pedestrian bridge as well as it's Intelligent Transportation Systems excellence award for ITS public-private partnership.
- Other examples are the Schuylkill Expressway in Philadelphia, the Rockville Parkway in DC, and the San Antonio,TX Freeway systems ranked best among largest US urban areas.

Thank you in advance for your vote of YES to support of this freeway!

Sincerely,

Jennifer Z. Nelson

I STRONGLY disagree with the alignment of this freeway. I cannot see the citizens of the Ahwatukee Foothills benefiting in any way. I can only envision the negative impact of increased noise and air pollution. This is only being used as a way to enhance the CANAMEX Corridor while reducing drive-thru tourism for the city of Phoenix. Working out an agreement with the Tribal community would be very beneficial to all parties involved. Get back to negotiations with the tribe to push it farther south. Save our homes! Save my Church! Save South Mountain!

4190

would be fine, but it's not.

Thanks.

MR. NELSON: As a resident of the Gila Indian Community, I feel that the Loop 202 is needed. It would serve all the communities, not just the southern part, but the northern part.

As far as serving the state, I have to go back to the history of the loop of the I-10 when it was constructed in 1957 and the right-of-way was put through Gila River. In 1957 it was 11 miles. At that time there was promise of frontage roads, better interchanges. To this date there really hasn't been anything done as far as fulfilling any of those promises. So one thing that I would like to come out of the Loop 202, if it is to come into the community, is that those promises are fulfilled, not only for the Loop 202, but for the I-10 that goes through the community towards Casa Grande and into Tucson.

At this time, the landowners there are a small voice, but yet they are not as loud as the opposition in the community. One thing that the State and ADOT has to know on the federal highway is that those people that are against the Loop 202 don't speak for the whole community even though they speak loud.

One thing that's been done in the tribe is

Code	Issue	Response
1	**Traffic**	The historical improvements along Interstate 10 are not within the scope of the Preferred Alternative. At this time, a Gila River Indian Community alignment is not being considered based on the vote that occurred in February 2012. The Arizona Department of Transportation, Federal Highway Administration, and Maricopa Association of Governments continue to coordinate with the Gila River Indian Community on a variety of project issues, including traffic interchange locations, drainage, and mitigation measures.

Code	Comment Document

that the tribe looks after tribal lands before allotted land and the landowner is kind of left on his own. So I feel that step one, as far as saving South Mountain from further destruction of bringing the loop into the community, would serve our community better.

As far as economic growth in the area, it is needed, an alignment in the community. It would also serve the Ahwatukee residents of displacing people, property, and especially with the environment as far as the animals and the drainage with the water.

Overall, I feel that ADOT still has -- ADOT and the federal highway still are the ones that are going to make the decision, but I believe that their party -- the parties that are involved need to all be heard. And I would just want them to hear, not only the loudest people in the community, but the overall people. And I think they would hear that if we were to bring it to another vote because the first vote was a yes, a no, and a I don't want a freeway at all.

When we voted -- when Gila River voted "I don't want a freeway at all," that just threw it back to a no, so it really took away the yes vote and the no vote. So I'm just hoping that our community will see that and allow a second vote.

Thank you.

1 MS. NELSON: Good morning. My name's
2 Jennifer Nelson, and I am here to support the Loop
3 202. I'm a Laveen resident. We moved here to
4 Arizona seven years ago, and have lived in the South
5 Mountain/Laveen area for that entire time. From the
6 beginning of that time when we first relocated at the
7 peak of the market, it was a promise this was a
8 transitioning section of the city, this is where the
9 growth was going to be, there was going to be a
10 highway and infrastructure to support it.
11 We haven't seen that, and I've seen the
12 residents kind of go through an up and down of
13 hopefulness and hopelessness about this freeway.
14 It's been approved twice since 1984 and 2004. We
15 approved of the tax increase. We're paying for it.
16 We desperately need it. There's really isn't a more
17 important or relevant project that the Department of
18 Transportation of Arizona can do than the
19 continuation of the Loop 202 and completing this.
20 There's a lot of statistics, obviously,
21 that show the residents are in full support of this,
22 residents of both Laveen and Ahwatukee show 59
23 percent approval of this. We are in need of the
24 police increase that would also come with this.
25 We're almost at the 50,000 population max that was

1

Code	Issue	Response
1		Comment noted.

Code	Comment Document

required for the mall and the hospital, the things that we need to support us.

Currently, right now, there's just a bleeding river of revenue. All these residents are having to seek what they need elsewhere, so we're driving to Tolleson, we're driving to Avondale, and we're driving to other cities and not bringing that tax and revenue to the City of Phoenix and to our own community. And we have the population that's desirable to have it. We did some research, and according to 2010 census bureau, we have the median income, the postgraduate and high school graduate level of education to support this.

We match and exceed Paradise Valley and we almost match Ahwatukee with a variance of about 15,000 median income. So this is an area that is growing exponentially, and especially in the next couple of years. We can't afford to be any more congested than we already are. Ahwatukee is in a land-locked situation, and every time the 10 shuts down, we are their only outlet, and it causes accidents, it causes a tremendous amount of pollution, and it's just incredibly necessary.

And in addition to the economic growth and the quality of life, I'd also like to speak

Driver and Nix Court Reporters - (602) 266-6525

Code	Issue	Response

(Comment codes continue on next page)

Code	Comment Document

briefly about when the roadway is built, because I'm going to assume you're going to vote for yes, and you're going to make this happen for us, because we're in dire need of it, that we also have some sound barriers that are attractive built in along the highway, that we use the rubberized asphalt as part of the 2002 noise reduction program that ADOT has, and that we have bike and pathways, traveling pathways, other than cars along the pathway of the highway, similar to what has been done in Tucson and other cities around the country. Tucson, in fact, has won awards for the work that they've done there by ADOT.

In regards to the opposition from the tribal community, I would just like to speak as a very close neighbor of them who lives right next door to the sacred land; I see the misuse of it, I see the treatment of it, and how it is has caused a tremendous amount of crime to our community through the casinos.

THE FACILITATOR: Excuse me. You've exceeded your time. If you'd like to add additional comments, please see the court reporters in the room next door.

MS. NELSON: And let's all speak

Page 38

Code	Issue	Response
2	**Visual Resources**	The Arizona Department of Transportation Roadside Development Section is responsible for assigning a wide range of standard treatment applications and wall materials, including color, to noise barriers and other structures. Typically the community where the wall will be constructed would work closely with its City Architect or planning department to decide on a theme for the wall. Usually, this can be accomplished by using the Arizona Department of Transportation's standard applications. As an example, for State Route 101 Loop (Pima Freeway) in Scottsdale, the City of Scottsdale chose to add public art to the noise barriers. The City's intent went above and beyond the Arizona Department of Transportation's guidelines of reasonable aesthetic treatment and, therefore, the Arizona Department of Transportation did not fund the aesthetic portion of the project. The Arizona Department of Transportation and the City of Scottsdale entered into an intergovernmental agreement for the purposes of allowing Scottsdale rights to design and construct artistic embellishment on the Arizona Department of Transportation-supplied noise barrier. The Arizona Department of Transportation provided the funds for construction of the noise barriers themselves, but the City of Scottsdale provided the funds to cover the aesthetic portion of the walls. Final Environmental Impact Statement page 4-171 explains the process municipalities might take to achieve the desired aesthetic treatment for noise barriers or other structures.
3	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Design**	The proposed freeway is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. The *Regional Transportation Plan*, as described on pages 1-5 and 1-10 of the Final Environmental Impact Statement, addresses freeways, streets, transit, airports, bicycle and pedestrian facilities, freight, demand management, system management, and safety. The proposed freeway is only one part of the overall multimodal transportation system planned to meet the travel demand needs of the Maricopa Association of Governments region.

respectfully to each other.

THE FACILITATOR: Thank you.

Joseph Perez. Joseph Perez.

MR. PEREZ: I'm Joseph Perez. Thank you for allowing me the opportunity to make a comment to you about your Draft Environmental Impact Statement. I am a Gila River Indian Community member. I'm also a partner with Pangia [phonetic] and I lead a little bit over 1,200 landowners who exist in the Pecos Road Land Area that have put forward the initiative with the Gila River Indian Community for a revote to try to bring the alignment down on the reservation, which hopefully will be resolved tomorrow in a special council meeting.

I'm here today to comment on the draft EIS in the sense that the work that has been done pertaining to the Gila River Indian Community, and the cultural aspects was done through the community's cultural department. And they've worked closely and for a long time, I believe over 12 years, doing that aspect of the EIS. Unfortunately, where it stands right now, there is no other alternative for the freeway, because the only other alternative would be on the Gila River Indian Community. I believe that will have to be resolved with the people of the

2
3

sound barrier and a bike and a pedestrian path along the length of the freeway to be included in the design and construction of the freeway.

I requested the use of rubberized asphalt as per ADOT's pilot program which was initiated in 2002.

Regarding the opposition from the Gila River Tribe, I am living neighboring the tribal reservation and their arguments for the mistreatment of their sacred land is negated, to me, because of my observation of how they are currently mistreating their sacred land. It is completely unkept, there's nothing but trash, and right now a casino that has brought crime-related, armed robberies to our community.

At 51st Avenue and Baseline, we have experienced over six armed robberies within a three-month period at Chase Bank, Wells Fargo and Walgreens from casino gamblers coming down to hold up and rob in order to have money to go back to the casino.

We have drug and alcohol addiction problems that are brought to our community through the casino.

We have a tremendous amount of traffic

up Baseline and the 51st Avenue corridor that is only going to increase when the casino opens its new hotel and restaurants.

There isn't, right now, any way to support the kind of traffic that the Gila River Tribe is putting on their sacred land without the highway.

The alternative, the W59 Alternative, is not going to cause any damage to their sacred land or to South Mountain.

Currently I am thinking that we have to continue with the program of the Loop 202 Freeway because it's the best alternative. It meets the needs of everyone in the community and it's critical for the development of Laveen and to be really a turning point for Laveen right at a place where this community can either move forward and excel and succeed, or you can put us in a holding place and we are going to have nothing but problems when it comes to traffic and the expediential growth we are going to experience in the next ten years.

Comment on the Draft EIS and Preferred Alternative selection.

1 2

The EIS findings are fundamentally flawed with respect to South Mountain Preserve impacts. Any alternative that crosses the Preserve and alters this landscape is unnecessary and unacceptable to the regional communities, principally Ahwatukee Foothills and the Gila River Indian Community, both in closest proximity to the impacted areas. Additionally, the importance of the preserved areas to these and the surrounding communities are undervalued in the EIS with respect to the significance of these resources to the vitality and appeal of this area for optimal residential and commercial values. The EIS expresses transport through this area as the primary value and objective, but undervalues the loss-impact on the landscape and community which is critical to the appeal and attraction of the landscape, viewscape, and recreation, and which brings the highest quality of residential and business interests to the areas surrounding the South Mountain Preserve. It is completely unacceptable to sacrifice the unique value of this landscape to build a freeway here simply because better alternatives, which do in fact exist, are not feasible at this time. The optimal solution is to postpone the construction of the freeway on the selected preferred alignment until one of the better options can be achieved.

3

4

The Gila River Indian Community especially does not want he freeway to be built through the ridgelines of the mountains. The subject of freeway construction remains controversial in the GRI Community due to a history of poor performance on past agreements, but these difficulties can be overcome and can result in the best outcome for both the Phoenix area and Native American groups. There is every reason to believe the GRI Community will support freeway construction at some point when the right alternative is presented. The right alternative is not found in this EIS. The correct decision is not to initiate construction at this time.

Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Cultural Resources**	
3	**Alternatives**	Although the E1 Alternative (which would replace Pecos Road with the proposed freeway) is the only action alternative developed for the Eastern Section, the Arizona Department of Transportation and Federal Highway Administration sought permission to study alternatives in detail on Gila River Indian Community land, but the Gila River Indian Community decided such alternatives would not be in its best interest (see Draft Environmental Impact Statement page 3-25). Any alternative on Gila River Indian Community land must consider tribal sovereignty. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process. Therefore, the Arizona Department of Transportation, with concurrence from the Federal Highway Administration, identified the E1 Alternative as its Preferred Alternative in the Eastern Section. In reaching its determination, the Arizona Department of Transportation sought to balance its responsibilities to address regional mobility needs while being fiscally responsible and sensitive to local communities.

Subject: Loop 202 South Mountain Freeway Comments
Date: Tuesday, July 23, 2013 6:12:31 PM

Dear ADOT,

My husband and I have lived in Ahwatukee for four years; prior we lived in Tempe for over 40 years. We saw the noise and traffic take over Tempe, but it was a vital, active community that took an active part in transportation for the East Valley. When we moved, we made sure we lived on the North side of Chandler in Club West to be away from the traffic, if the freeway was ever built.

1 2 3

We became very concerned when we became of aware of hazmat traffic and the "freeway" being a truck route. If there was an accident, the only way out is Chandler Blvd and we would be in serious trouble: I am 68 and my husband is a 69 year old stroke survivor. We live in a little dell that would hold noxious fumes and gases against the mountain. This is more than a traffic reliever for East-West traffic.

4 5

At first I thought they should build the highway off of Riggs Rd; that is the route I take when I want to go to Glendale--easy drive and little traffic, as well as a time saver. But as I learned more about the mountains, the plans, the GRIC, we have come to believe the Indians are right and this should be a NO BUILD. Save money, keep the route to US8 and work with a committed, thriving, sharing, and problem-solving community. Arizona is indeed richer having a community like Ahwatukee.

My husband and I have been Arizona registered voters since 1965 and have seen a lot of changes but sometimes when a decision was made over 20 years ago because it made sense, doesn't mean it makes sense today--I am sure there have been times when you said the same.

We support the groups opposing the South Mountain Freeway, including PARC, GRIC, Leveen.
Please register our opposition.

1	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need, Truck Bypass**	
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
4	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.

Subject:

South Moutain Freeway . . . attn: EIS report. The Freeway is necessary. That is a given. People concerned about spirits ought to concern themselves also with worrying about spirits of those killed on future congested freeways. Another "given" is the Gila River Adjudication" that is giving large water allocations to Indians. The Indians have also stated that they would like to enhance eco-systems of the Gila River with their water and I would imagine that we can expect that agricultural infiltrations from farming will ALSO assist in elevating water tables of the Gila River communities (eco-systems). That means that there is going to be a restoration of other communities (species) to the Gila River. But where are they going to live, forage and sleep? Because we might assume that lands south of the Gila River will be under plow. So it's very likely that their safe habitats are going to be in the Phoenix Mountain Preserve. But there are going to be 10 lanes of traffic at 65 mph. Could it be possible to elevate the freeway wherever possible (like the Skyway in Chicago); to depress the freeway below land conditions wherever possible (with flying washes/arroyos over the freeway like what is being done with the CAP Canal); to tunnel through ridges leaving wildlife corridors over the freeway; and to build land bridges over the freeway as wildlife corridors (like what is being done over Oracle Road) . . . so that future communities of bio-diversity can commute TO THE WATER & to SAFE HAVENS IN THE MOUNTAINS? It would be nice if Maricopa County would outlaw any and all hunting in the Preserve (if they haven't done so already). This ought to satisfy the concerns of many and myself even though I'm only a single person expressing an opinion. Two givens: the river & the freeway.

1

care of. And so I know that that's in your plans. Sorry, I'm a bit nervous, but definitely we are huge proponents of the 202 going through for economic development of Laveen, as well, and to alleviate the traffic.

So thank you very much. I appreciate your time.

THE FACILITATOR: Thank you.

Chris Newhouse.

Mr. Newhouse, you also have three minutes; please begin.

MR. NEWHOUSE: My name is Chris Newhouse, and I live in Laveen as well, 85339. You know, I drive both Baseline and the 10. I work on all sides of the city, and I experience the congestion that I see both on Baseline, just from folks trying to get from one side of town to the other, as well as traveling on the 10 during the rush-hour traffic times, where you see a lot of your heavy traffic of truckers and folks that are actually heading down south and going on to Tucson.

Obviously, the 202 Loop extension could alleviate a lot of that traffic that goes on through the city trying to get down -- down towards the Tucson area. I think that this would obviously

life that is so important. It's not just important for the people in the community, but it's important for wildlife. We don't have very many roadless areas that have productivity for wildlife and as you might guess where I'm going, as a result, I support the no-build alternative. I think it's incredibly important that we keep South Mountain Park intact and I think based on what I've seen of the EIS, the justifications just don't wash.

In addition to having concern about wildlife and the impact, I happen to be asthmatic and I saw in the EIS the comments about keeping the road -- or building the new road is going to improve the quality of air, but looking at it, I don't feel that alternate was really fully explored. And the roadway is going to become congested, just based on the way it's constructed. The article in the paper this morning noted that the curve is going to be congested and the traffic is going to be backed up. So for clean air, for protecting wildlife, I think it's incredibly important to support the no-build alternative, and I thank you for the opportunity to speak.

THE FACILITATOR: Thank you.

Before we call the next person up, the last shuttle will be leaving for all destinations at 7:30; that's orange, green, and blue or one, two, and three.

1 2 We support the No Build alternative. The Mountain Preserve parks are a crown jewel of our community, and should not be disturbed. In addition to providing open space for recreation and wildlife habitat, their are many cultural sites in South Mountain Park and adjacent mountains. This area is also considered to be sacred by several of the Indian tribes and communities in our state. It would be disrespectful to put a freeway through a scared site.

3

My husband is a native of the Valley of the Sun. His Dad shared stories about going on boy scout outings in South Mountain Park. We relocated back to the Valley in 1985. Since that time, we have hiked virtual every trail in the Park. We've taken dogs, kids, neighbors, visiting friends and relatives with us on adventures in the Park. We've enjoyed many hikes for the natural beauty and cultural sites- including the many wonderful petroglyphs.

4 What a bad idea to put a freeway through South Mountain. We strongly support the No Build alternative.

Thank you for considering these comments.

Subject: Comments in opposition to South Mountain Freeway
Date: Wednesday, May 29, 2013 5:18:57 PM

May 29, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

2 3 4 I believe the South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

5 6 The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

7 The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

4 8 In summary, I believe the proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

1 Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Mary Nickerson
3481 E Finger Rock Rd
Tucson, AZ 85718-1368

6	**Biology, Plants, and Wildlife**	
7	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

(Responses continue on next page)

Code	Issue	Response
8	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.

1 If the "recommended" alignments come to fruition for this project, it will be a monument to how 20+ years of planning can still manage to identify the worst possible solution.

2 We live close to Pecos Road. If the freeway IS built there, we won't stay long and will probably retire outside of AZ (after 25 years in Ahwatukee). This area will eventually become blighted as a result of being squeezed between a truck bypass and South Mountain only a short distance away. It's a shame.

3 The residents near Pima Road in Scottsdale nearly met the same fate with the Loop-101, but at least there was a better solution achieved in that case.

Subject: ADOT extended freeway

To Whom it May Concern,

I live in Avondale, AZ. I have felt for the past decade the need for the freeway extension from Loop 202 along Pecos to ANYWHERE OUT WEST! The traffic through the center of Phoenix is a nightmare, always congested. I would like to see the extension come up 71st area because it is closer to the west valley without taking the road too far west. The 71st area actually hit midway. The 59th area is almost as bad as down town Phoenix and does nothing to give a cutoff from the west.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

As a resident of the Gila River Indian Community I feel that a loop 202 is needed and would serve all Communities in the state. Given the history of the I-10 Freeway through Gila River (built in 1957-) Many things promised by the Federal Highway Administration have not been followed through. Frontage Roads, Many interchanges, maintenance, overall Services.

At this time the alternative to bring the Loop 202 into Gila River, is in the better interest of the community to serve the Southwest Regional Further destruction, and, trespass.

Document Created: 7/24/2013 7:23:35 AM by Web Comment Form

South Mountain is a unique community treasures that must be maintained and protected. I am opposed to any alignment that cuts into (and in my mind) destroys our beautiful natural amenity. If funding sources cannot afford options that preserve South Mountain - such as a bridge or a tunnel - then we should delay the project until such funding becomes available.

I understand that development pressures place increased demand on our street systems, however it is also true that building more freeways invites increased development and traffic. The notion of induced demand has been studied and known for decades. Induced demand needs to be incorporated and accounted for in the transportation study. Additionally, as presented, alternative modes of transportation appear to have been quickly cast aside as seriously considered options due to a pre-existing bias towards a freeway. I would like to see alternative options such as rail reconsidered in greater depth and incorporated into plans for the future.

The study group needs to go back to the drawing board. We must consider a more forward thinking approach that acknowledges that cities are not developed solely on freeways. Residents no longer want to live a fully auto-dependent lifestyle and demand transportation options. For Phoenix to compete into the future and draw young, smart employees we must offer increased options that include various modes of transportation.

We must work harder and invest more wisely in transportation options that preserve rather than destroy the natural assets that make our city unique. The landscape and the mountains - including South Mountain - cannot be replaced. We must preserve and protect South Mountain. We would be irresponsible stewards of our City if we destroy South Mountain by cutting a freeway through.

Code	Issue	Response
1	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	The Final Environmental Impact Statement provides a thorough summary of the project team's analysis of the Bridge Alternatives. Please see pages 3-13 and 5-20. Options to build a bridge over the South Mountains were eliminated from further study not just because of high costs. They would not protect the South Mountains. Bridge Alternatives would have incident management and homeland security concerns, constructibility and maintenance issues, future expansion limitations, and undesirable intrusion-related impacts. Bridge Alternatives would not achieve avoidance of the South Mountains or meaningfully reduce use-related impacts under Section 4(f). Bridge Alternatives would increase visual impacts.
3	**Alternatives**	The Final Environmental Impact Statement provides a thorough summary of the project team's analysis of the Tunnel Alternatives. Please see pages 3-14, 3-16 and 3-17, and 5-18 through 5-20. Options to build a tunnel under the South Mountains were eliminated from further study not just because of high costs. They would not protect the South Mountains. Tunnel Alternatives would create safety and constructibility concerns, undesirable intrusion-related impacts, and maintenance issues. Tunnel Alternatives would not achieve avoidance of the South Mountains or meaningfully reduce use-related impacts under Section 4(f). Tunnel Alternatives would have less visual, noise level, and habitat acreage impacts than would the open-cut design of the proposed action.
4	**Alternatives**	The project team's analyses demonstrate that the proposed project is needed today. Details of this need are presented in the Final Environmental Impact Statement, beginning on page 1-13. While new projections based on the 2010 Census may show a lower anticipated population in 2035 than the previous projections showed, the need for the freeway has not changed. Waiting for available funds—that would likely never become available because tunnel or bridge alternative have accompanying environmental and other limitations that would not warrant their exceedingly high construction and maintenance costs—would not be prudent given the current and projected demand for the proposed action to relieve congestion and support regional travel mobility. The proposed action is currently funded as well as needed.
5	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
6	**Secondary and Cumulative**	The proposed freeway is a response to existing and anticipated travel demand in the metropolitan Phoenix area. It is not meant to increase travel beyond that expected to be generated from existing and anticipated population and employment growth and related land development. It is important to consider that improvements proposed for any type of transportation system (e.g., a new bus route, rail transit line, commuter rail service) would likely lead to changes in travel behavior, which, in turn, would lead to increased use of the particular system. Improvements made to a given transportation system are meant to attract new users (see Final Environmental Impact Statement pages 4-170 through 4-174). If this were not a primary goal, the improvements would be neither effective nor warranted. For the proposed action, a goal is to attract users of other segments of the Regional Freeway and Highway System and the local arterial street network, now and in the future, to the proposed action to optimize, in part, the entire regional transportation system (as outlined in the proposed action's purpose and need in Chapter 1).
7	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative). As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway.
8	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

1

My husband and I have been looking at the information and maps of this extension. Living in the West Valley, we are very much in favor of this extension. Of course we would be most in favor of the W101 alternatives which bring the road further west, but the recommended W59 alternative is better than not extending at all. The amount of traffic that could be deterred from the downtown area of Phoenix and the time saved from traveling from west to east across the Valley would be tremendous.

With the 10-year population and growth expectations, to not go forward with this much needed roadway would cause exceptional gridlock in the future.

Sandy and Kim Nordstrom

1996, and the need is very prevalent. Especially when I-10 happens to be closed, it's a zoo getting out of Ahwatukee into the Phoenix area. Other times, even going to the west side takes forever. This freeway really would help out the whole situation.

I've lived near a freeway in Tempe as I was growing up, I didn't grow an extra arm or anything like that, so freeways are okay. I don't believe that putting it on the Gila River Indian Reservation should be explored any further. The routes have been there for years; people who bought houses in the path should have done their homework. And it's a need -- it's a necessity. It's not even a need; it's a necessity in that area, and it needs to be built today. That's all I've got.

* * *

MR. NORRIS: I'm in favor of building. I've worked for the City of Phoenix for almost 20 years, retired. But I watched this project and I hope that it still will be -- should have been constructed 20 years ago. Congestion around the Broadway Curve is a major problem getting back and forth from the East Valley. This would take off major trucks and people that don't need to go through Central Phoenix. They would have an alternative to go around, get off on Pecos, and then get

Code	Issue	Response

(Comment codes begin on next page)

Code	Comment Document

1 back on the I-10 and 51st Avenue, and that would relieve
2 a lot of the truck traffic and accidents and other
3 things.
4 The other thing would be just -- that would
5 also help pollution and air quality and cars idling and
6 trucks idling. And so all of those benefits, I think,
7 would be beneficial to building the freeway on that. And
8 also HOV lanes and stuff would be included on the South
9 Mountain Loop, so that's probably the main reasons why I
10 support it.
11 * * *
12 MS. HERRING: Patrice Herring. And I
13 definitely want a yes vote on the 202 for the W-59 link
14 because I am a Laveen resident. I bought a house in
15 Laveen because I was promised that this freeway was
16 coming through. We have horrible traffic in our area.
17 We have problems with the river -- when it gets flooded,
18 getting over the river. Sometimes we're stuck where we
19 can't even cross over to the other side of the city.
20 This will reduce pollution, as well, and bring much
21 needed businesses to the Laveen area, and link us to
22 other areas of the city. We definitely need the Loop 202
23 freeway and we need the W-59 route. Thank you.
24 * * *

Code	Issue	Response
1	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.

Code	Comment Document

priorities all backwards. And we used to be against building freeways in Phoenix. Back in the 1970s, people used to protest against the I-10. The Arizona Republic came out against building more and more freeways here and said we don't want to be like another Los Angeles. And that's what we ended up building, a hellish automotive nightmare where everybody has to drive everywhere.

And I'm sure for most people here, you know, if they just want to go to the grocery store, they have to drive there. If they want to get anything, you know, want to go to dinner, they have to drive there.

I'm lucky to live in Central Phoenix. I walk pretty much everywhere and ride my bicycle. I ride my bicycle to work. That's the sort of city we need to be building, a 21st Century city where we have multimodal options.

3

It's really depressing that all these middle-aged white guys at ADOT are going to be shoving this down our throats and that by the time it's built and developed, they'll all be dead so it doesn't really matter. But I've got to live here until I'm 90, because I love Phoenix and want to see it thrive. So me and my kids, we'll have to worry about choking to death on all the pollutants in the air, but, you know, eff it, the ADOT guys will be dead. Luckily, I'll be mayor by then, so I'll make sure they

1	Carolyn Nutter Document Created: 5/21/2013 8:52:45 PM by Web Comment Form Please, lets get this project underway. This highway is much needed. Baseline Rd., a road that I travel to the East Valley, gets very crowded. It is approximately 12 miles of traveling on Baseline Rd, stop and go traffic, just to get to highway 10 or 60. Also, the only way to get across the Salt River and travel north is limited. If 91st Ave and 67th Ave are flooded, 51st Ave is the closest option. This increases the time it takes to get somewhere and also increases cost as it takes more fuel. Please, please, lets get this project underway.

Subject: Comments in opposition to South Mountain Freeway
Date: Monday, June 03, 2013 7:12:40 PM

Jun 3, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(4) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases. (5)

(6) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area. (7)

(8) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(9) IT IS EXACTLY THESE DECISIONS THAT HAVE LED TO THE 100 DEGREE MARK AT MIDNIGHT. THERE IS TOO MUCH PAVEMENT AND TOO LITTLE OPEN SPACE. THIS HAS TO STOP SOMEWHERE! THE MORE YOU DEVELOP, THE MORE DEVELOPMENT YOU ENCOURAGE. SINCE THIS IS AMERICA AND MORE SO, ARIZONA, WE WANT TO DO WHAT WE WANT WITHOUT REGARD FOR THE CONSEQUENCES WE CREATE. STOP HIGHWAY EXPANSION AND TAKE CARE OF WHAT YOU HAVE.

(1) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.
9	**Heat Island**	As buildings, parking lots, roads, and other infrastructure replace open land and vegetation, an urban heat island may result. The heat island effect is of a regional nature and, therefore, there is no requirement to analyze potential impacts and no possibility of determining the localized contribution at the project level to the regional heat island effect. It is likely, however, that a proposed project such as the South Mountain Freeway would be a minor contributor to the overall issue.

CALLER REMARKS/QUESTIONS:

Hello, this is….Miss Senior Arizona 2008. I moved here over 30 years ago. My husband and I retired in Ahwatukee in the retirement community and um we knew about South Mountain freeway the proposed, pretty much right away. And we thought, well the traffic is pretty bad now they were working on I-10 at that time right near us and the freeway was getting to be a problem. But as the years went on as the problem with the traffic grew and grew, we still thought Oh good it's going to be relieved one of these days with the South Mountain freeway bypass. So, you know, we just settled in and waited our retirement years. Our lungs are very important to us, and here it is 30 years later the freeway still has not been built. And they went ahead and built houses and a church right in the pathway and it's ridiculous, all the studies, all the studies, all more studies and it's still isn't built. The Broadway curve, all this traffic has to go right by our retirement community with all the foul air coming in. I certainly knew about the I-10 but with the proposed bypass that would mean trucks through traffic would be going around this retirement community. So I'm furious. I think it's time that we build this freeway and relieve the retirement community, all these old people that need to help in breathing. I'm 85 and I'm hoping to live another 10 or 15 years, but I kind of doubt it if I'm still breathing this air from all this traffic. I mean I've heard there were 10,000, 12,000, cars that pass our retirement community, maybe more everyday. So do something, for God sakes, get this freeway built and relieve our little retirement community of this foul air. It can be reduced a lot and the noise, everything can be reduced. Give us a break, these are our golden years. Thank you.

CALLER REMARKS/QUESTIONS:

1 I do support the South Mountain Freeway. I hope that you would just take it into consideration that we have voted for this twice and we have a huge need for this. So, please consider this and I am a long time voter and there are three of us in this family and we would all vote for this. Thank you very much

Subject: South Mountain Freeway: Access to APN: 300-05-003E

1 2 We own a property, Maricopa Assessor number 300-05-003E Which is in the vicinity of the proposed South Mountain freeway. The proposed freeway is removing all access to our parcel and all the property owners in the area. From review of the proposal, there is no provision for access to our parcel. Currently, Pecos road provided access, however with the freeway displacing Pecos Road, there is now no access.
We need a frontage road provided to allow access to our parcel and all parcels in the area.
Regards.
Kent Oertle

1	**Traffic**	The proposed freeway does not currently include frontage roads or an interchange in this location. The access locations are primarily at connections to existing roads within the region's arterial street system. During the right-of-way acquisition process, the Arizona Department of Transportation would evaluate the need to provide access to given properties on a case-by-case basis. Examples of how the Arizona Department of Transportation would adjust local streets to retain circulation are presented on pages 3-56 and 3-57 of the Final Environmental Impact Statement.
2	**Acquisitions and Relocations**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Additional information about the property acquisition process is available on the Arizona Department of Transportation's Web site, in the Right-of-Way Group Acquisition, at <azdot.gov>.

CALLER REMARKS/QUESTIONS:

1 2

I have property close to the South Mountain corridor where ADOT is planning the 202 extension around the South Mountain. My comment would be that we would like to be able to get freeway access to our property which we have 60 acres there and it's kind of in the 'saddle' there between two mountains around near 51st Avenue. Actually it would be 35th Avenue just north of Pecos and Chandler Boulevard. Chandler Boulevard. Anyway, we would like either a frontage road or an exit/entrance to the freeway in that area. There is probably about, I would guess 1,000 acres in there that will be landlocked if we don't get that kind of solution. Anyway if you could include that comment in the remarks that you are forwarding on your environmental study I would appreciate it. Thank you.

RESPONSE:

I tried calling this number on Friday, July 19 at 11:37 a.m. and it says it is not in service.

LOOP 202
South Mountain
Freeway Study

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:
- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. I fully support the concept of the Loop 202 South Mountain Freeway. After reviewing the exhibits I was surprised to see no improvements to I-10 between the Loop 101 and the alternatives W71 ad W59. Would not costs to upgrade I-10 to handle the increased traffic flows from the L101 to L 202 on I-10 be a logical expense in order to compare with W101? Operationally W101 would be superior to W71 ad W59. I am not convinced at this point that W59 is the logical alternative. I will go online to review the documents more fully. Overall, the presentation video was excellent and displays were good Study team member present handled my questions well.

Kerilei Oldoerp Document Created: 5/18/2013 11:35:10 PM by Web Comment Form

The original proposed location of the 202 loop continuing down Pecos is now obsolete. It no longer effectively by-passes the city. A new more southernly route needs to be established. The Pecos portion of the loop should no longer be developed. Additionally it is an intrusion into the existing developments of the Ahwatukee area.

Code	Issue	Response
1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives, Gila River Indian Community Alignment**	
3	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
4	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

Reporte Del Impacto Ambiental
FORMULARIO DE COMENTARIOS

Gracias por participar en el proceso de recopilación de comentarios sobre el Reporte del Impacto Ambiental del proyecto de la autopista South Mountain.

ADOT alienta a todos los interesados, a presentar sus comentarios por escrito sobre cualquier aspecto del Reporte del Impacto Ambiental. ADOT considerará todos los comentarios en la preparación final de este reporte e incluirá las respuestas a todos los comentarios, conclusiones finales sobre impactos potenciales, y la recomendación final de ADOT.

Para ADOT es muy útil recibir comentarios sobre:

- Alguna alternativa en particular, cúal sería su impacto ambiental y las medidas propuestas para reducir dicho impacto.
- Cualquier información que usted sienta que está incompleta o incorrecta.
- Cómo le afectará a usted la acción propuesta.

Los comentarios deben ser recibidos o tener el sello postal con fecha límite del 24 de julio de 2013.

1 Congestion on I-10 between I-17 & 101 is avid locked during rush hour, so it would be better if the connection is made at the 101 T.I.

THE FACILITATOR: Thank you.

MR. NEELY: Thank you.

THE FACILITATOR: Vicky Oliver.

MS. OLIVER: Hi, my name is Vicky Oliver and I'm for the 202 project because I think it will bring employment opportunities to our area, which we definitely need, and also will help the commute for a lot of people coming in the area. And also, it's been proven that freeways cut down pollution and also traffic accidents, and it'll keep some of the traffic off of our city streets.

1

THE FACILITATOR: Thank you.

Jake Speck.

MR. SPECK: Good afternoon. My name is Jake Speck, I'm here in support of the 202. I think this project is a great benefit to the community for a lot of different reasons: Reducing traffic, revitalizing economy, bringing over 30,000 jobs to the community, as well as a significant investment. I think it will attract potential employers as well, which would be great for growing the economy going forward.

After looking at the EIS, I think the potential impacts are vastly outweighed by the benefits this project brings, and I believe that now is the time to go

1

I am writing to comment on the South Mountain Freeway EIS and in support of building the proposed freeway as soon as budget allows. I live in Tempe and am a regular user of the I-10, the 202, the 101 and the 60. I can remember, many years ago, when the full opening of the 101 in N. Scottsdale had a noticeable impact in reduced congestion on I-10.

It is clear to me that the building the South Mountain represents a key opportunity to divert traffic that now uses the I-10 to an alternate route and delay the complete spiral of the I-10 into gridlock. The benefits for mobility throughout the Valley are significant.

Thank you

Kevin Olson
Tempe, Arizona

1 2 3 4 5

My fear with the proposed loop is that it'll be used as a truck bypass instead of going thru downtown. Not to mention the disruption it'll have to south mountain and the increased pollution to the surrounding areas. I've heard of other issues of water reserves and other things being impacted. Overall I'm not in favor of the proposed loop and fear that the loop will be detrimental to the environment and quality of life for the immediate habitants.

Thanks,
Stew....

Hello there. I'm writing to give my opinion on the proposed South Mountain Freeway. I believe this project should have been built a long time ago. I still believe it should be built now. I hope you guys will reconsider a connection to Loop 101 and I-10, but I can live with the 59th Ave connection to I-10. I also hope you can work out a deal with the Gila River Indian Community, if it can help them and spare the residents along the current Pecos Rd corridor. I believe the Pecos section would have been better if it was similar to the stretch of the Santan Freeway in Chandler between I-10 and Loop 101/Price Rd. If you have to start the eastern and western segments separately, or build a temporary road like Loop 303 was before its current construction, so be it. Thank you for your time.

Subject: South Mountain Freeway Public Comment

Greetings.

As a resident of Ahwatukee I am opposed to the South Mountain Freeway Alignment along Pecos in general.

(1) However, even if its inevitable, the current design is flawed. The most glaring issue is elimination of the 32nd St. access to 'Pecos'. So all DVHighSchool traffic will funnel to 24th and 40th St. All traffic out of DVHS will have to left turn onto 32nd St or drive through neighborhoods. Its bad enough as it is and especially during events. The traffic jams are terrible. We have enough stressors in life without creating unnecessary events. Even though

(2) our kids are almost done with DVHS, I believe this is plan is unacceptable to the community quality of life.

Curtis Orr
Ahwatukee resident of 16 years.

1	**Traffic**	The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix (see Figure 3-8 on page 3-15 of the Final Environmental Impact Statement). The interchange would have required the displacement of over 100 homes and would have been located near an existing high school. The City recommended that, based on these impacts, the interchange be removed from the study. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

Hello! I am a tribal member of the Gila River Indian Community, my comment is, I believe the freeway is your problem. Bulldoze the mountain down, let us conquered people left alone. How much more can you take from us ? Your attempt to murder us all, was almost successful. Now, you want what little land and pride(south mountain) what we have left, is very shameful. Your people(white) have no soul's I pray for you and your kind. Have your goon's flash money to our people but we will know that all of this construction for " prosperity" and "to lessen traffic" is absurd. Go arrest or shoot some more mexicans or black's maybe that will curb your quest for expansion.

1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives, Gila River Indian Community Alignment**	
3	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
4	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

(1) (2) (3) I understand the need for future growth to connect the East and the west valley. I get it. I don't get why we would destroy the Ahwatukee community and churches ad homes to build the highway on Pecos.

It is a quiet ad peaceful ad pristine mountain preserve.

(1) Why can't we buld the highway where there are no homes ad no ones community will be destroyed.

(4) Tak to the Gila River Indian community — PTO

Additional Comments:

5 Make it worth their while to build the road off of Maricopa instead of Pecos.

6 7 What about losing the cycling on Pecos & the quiet hiking and mountain biking through the preserve between Chandler & 27th Avenue.

2 1 Please don't throw all those folks from their homes and make Ahwatukee a throughfare!

5 3 Build the loop 202 South, just don't build it on Pecos! Go further South please. Preserve Ahwatukee!

4 Talk to Gila Indian Community. Figure it out. They have the land. Make it lygrative enough for them to consider an alternative

3 charge us more to pay them to put the highway miles south of Pecos.

Code	Issue	Response
5	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
6	**Traffic**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
7	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

1 CARL OSBORN: I'm opposed to it where it's
2 in the current location where they are showing the
3 current location because it impacts too many things in my
4 opinion. We're going to lose Pecos Road which I ride my
5 bicycle on all the time. There are so many houses and
6 things that are being destroyed to make it. People put
7 their -- I'm not one of them, but I live close enough to
8 it that I don't want the noise. I know the people that
9 are losing their houses, I can't even imagine.
10 I know I read and heard about that they
11 tried to propose doing it to the Gila River Community and
12 they opposed it. They need to find another way then.
13 I think putting it where it's at is
14 ridiculous. You're impacting so many people in the east
15 Valley.
16 Looking at the video, the west Valley
17 doesn't look like too many houses in the place where it's
18 going through right now. I don't think there are too
19 many people there that will try and oppose it.
20 But in the east Valley, it's impacting so
21 many people down here. It seems to me so much impact to
22 people's lives that live down here. I moved here and I
23 understand it was always proposed since 1985, but they
24 let people build houses down here without --
25 I mean, it's taken how long? 20 plus

1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Traffic**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
3	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
4	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Alternatives, Gila River Indian Community Alignment**	
6	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
7	**Acquisitions and Relocations**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Social Conditions**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land despite the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.

1 TANIA OSBORN: It sucks. Build it. Just
2 don't build it where you're looking to build it.
3 It's hard not to see Maricopa Road a mile
4 south and not think that is, like, the perfect way to go.
5 Why kill a community to go through there?
6 It just -- It doesn't make sense.
7 And, yes, let's talk to the Gila Indian
8 Community because the money that we're going to spend
9 destroying people's homes could be used to compensate
10 them to try to build more where there is nothing
11 established right now.
12 (The public comments conclude at this point.)

Subject: NO BUILD - Loop-202 freeway extension

The proposed 202-west extension is NOT needed or even good for us!

1 2 3

South Mountain is a beautiful place and must be preserved. The freeway extension is NOT necessary and will cause desctruction to the landscape. I watched the desert behind my home torn apart by the 202 Santan freeway in Chandler and I DO NOT want it to happen again. The desert that was destroyed used to be home to coyotes, jackrabbits, and countless other Arizona animals. When the freeway was made those coyote packs were forced out, killed, crushed by cars, and became roadkill. I never heard the howls of coyotes after that...and driving down the 202 made me horribly depressed when I saw crushed animals on the side.

The 202 has already destroyed so much land.
Don't continue to destroy SOUTH MOUNTAIN. There are plenty of other roads already.

4

NO BUILD ON THE 202 FREEWAY EXTENSION.

Just build the dang freeway already. The tribe has had their say, and didn't care about the economic advantages to their community. Too bad for them. I am tired of Phoenix traffic getting worse by the year. How much gasoline is wasted with cars sitting in gridlock day after day? How much time is wasted?

Michael Owen

To whom it may concern,
I have reviewed the Draft EIS on the proposed South Mountain Freeway.
It sounds like completion of this freeway is a good thing for the environment and I support its completion as soon as possible.
Thanks,
Hal Owens

Code	Comment Document
1 2 3 4	Alicia Pacheco Document Created: 5/21/2013 11:02:11 PM by Web Comment Form I oppose AND DO NOT want the W 101 alternative central option as a possible location to connect the 202. This freeway would be in my back yard and over my roof, literally. This community is still underdeveloped with houses still being bought and built. We are in need of more grocery stores and schools not a freeway. There are 3 schools that would be in its path and/or under it. This connection WILL bring our neighborhoods down in value, that of which are still trying to recover from this economy, but even more so create problems with re-sale. It would also create more unwanted traffic and noise. I will continue to fight and oppose this option to protect my home and its value.

Code	Issue	Response
1	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
3	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
4	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Raymond Pacheco Document Created: 5/21/2013 11:09:24 PM by Web Comment Form

1 2

The freeway option alternative is a bad option for a struggling housing market in the city of Tolleson. The freeway route would create more noise and traffic to the area. The neighborhoods are finding it difficult to recover their original home values. The area is one of Phoenix's lowest ranking cities when it comes to home values. Again this would be a serious blow and set back to regaining what was lost with the housing collapse six years ago.

1 MS. PACKER: First of all, let's see. I am
2 resentful that they're insisting that this is not a truck
3 route. I feel that there is no way trucks are going to go
4 through downtown Phoenix when they can take this route to get
5 to the other side of town.
6 I think it's a shame that they're blasting through
7 South Mountain. That's such an important asset that we have
8 here. I feel that there is so much still left up in the air
9 about the design process and so forth.
10 And I'm fearful how far this will go before they
11 say to the Indians, "Never mind, we don't want to negotiate
12 with you anymore," or, "We're not taking anything from you.
13 We're doing it our way."
14 I think it's an inexpensive freeway, in that it's
15 not going to be below grade.
16 And I am afraid of them destroying the water
17 sources for Lakewood Lake -- Lakes and the Foothills Golf
18 Course. And they don't really have a plan for replacing that
19 water.
20 So I think this whole thing is a very bad idea
21 that's been hoisted on us after too many years. I realize this
22 has been planned for 20 more -- more than 20 years, but I still
23 think that it went too far before they really started making
24 their real plans. And too much happened, in the meantime, for
25 them to come now and say, "Okay, this is where the road is

CALLER REMARKS/QUESTIONS:

1 I totally support the building of the South Mountain Freeway. I lived in south Tempe since 1984 and I think it's ridiculous that is hasn't been built and I would suggest that anyone that opposes it either from a financial interest or the to the contrary should be committed to the Arizona State Hospital. The freeway needs to be built. While I recognize that it won't be built until after I'm retired, but it's best for the economic growth of the valley for reasons of pollution, farm out concerns and traffic congestion. Thank you.

the freeway -- the city or whatever. But anyway, thank you.

* * *

MR. PALERMO: My name is Joe Palermo. I'm in favor of the Loop 202 South Mountain Freeway. I commute daily for work on the I-10 through downtown, and I believe that the Loop 202 will significantly help the flow of traffic through downtown.

Additionally, I believe that the traffic that is stuck in idling in downtown contributes significantly to the poor air quality of our metropolitan area. And I believe that traffic will inevitably increase over the coming years. And while we have this opportunity to build the 202 freeway, we should proceed forward, rather than be behind the curve and potentially find ourselves in a gridlock situation.

Additionally, I am an environmental consultant as my career. And I believe that this will help me and my family with opportunity to potentially be part of this important infrastructure project. And so additionally I'm in favor of it, not only for reasons for the city, but also for myself personally. Thank you.

* * *

MR. MARINO: Christopher Marino, and I'm for the freeway. I have lived in Ahwatukee for since

the traffic in this regional area is going to increase over the coming decades and I feel like we have an opportunity at this moment to mitigate what may be a terrible transportation nightmare in a few short decades if we don't act at this point. When I see semi-trucks standing at idle at a dead stop on the freeway and I look out and I see the haze and the air pollution in downtown, I really don't believe that this is a sensible solution to route a lot of that major transportation of goods through the region, through the area around the downtown area and out of that way where there's a lot of local traffic that needs to get to and from work.

And additionally, I just see this, again, as an inevitable, the traffic issues we're facing are going to inevitably become worse over the coming decades. At this point I really feel that ADOT has done an excellent job. I've lived here in Phoenix for 15 years and I enjoy being able to travel on the loop freeways, it's the I-10 that I struggle with. And I really think we have an excellent transportation system and we need to stay ahead of that curve, so in that way I do support it.

Last point I'd like to make, I'm an environmental consultant, I do work for metropolitan areas as well as some work for ADOT, and this potential freeway project is a great opportunity for me as a

Code	Issue	Response

businessman to be able to help assist for my company, for us to personally be involved in this important work, to support me and my family and support our region and our city with the positive outcome of this project, so thank you.

THE FACILITATOR: Thank you.

Jeff Krobot.

MR. KROBOT: Afternoon, thanks for giving me a chance to talk. Quickly, I wanted to just voice my support for building the 202. I've been in the Valley for about 20 years now and I'd agree with the last gentleman that ADOT has done a very good job with the network of freeways. In that 20 years, I spent two years not in the Valley and lived in some cities that ignored the future transportation needs of their residents, and then they were trying to build things later rather than sooner. I'd like to avoid that and just support the 202 construction now. Thanks.

THE FACILITATOR: Thank you.

Please feel free to use either microphone when you come up.

Mike Radack.

MR. RADACK: Hello. I'd like to voice my approval of the building of the highway. I moved here about nine years ago and actually moved from Denver,

Subject: South Mountain Freeway

Dear ADOT officials
Interestingly enough I keep getting e-mails from We Build Arizona, an origination made up of investors and developers who support the building of the South Mountain Freeway. I have shared my opinion with them and received no reply from them, yet they continue to ask for my support. In their latest e-mail they provided this (your) e-mail and asked that I e-mail you in support of the project, I however will share with you the statement I sent to them.

This is the statement I sent them O 5/11/ 2013, originally there was an attached copy of the e-mail they had sent me asking for support.

I found this this in my in-box this morning, I went on to their web-sight and poked around. I was a little annoyed that they are portraying themselves as some sort of non profit taking donations to fund their cause under the guise of doing a greater good. When visiting the site their is a spot for contacting your elected officials, oddly enough it does not work, I was actually hoping to find out who is connected to this group. I did however find a contact us link, at,

http://www.webuildaz.org/contact-us/

This is the statement I sent them, wonder if I will get a response...

"As a concerned citizen, and a one who is native born, and was raised right here in Phoenix Arizona, I share many of the same concerns that you mentioned in the spam e-mail that your origination sent out. I grew up here in the valley of the sun and have watched it go through it's growing pains, both good and bad. Phoenix it's self has had a history of bulldozing it's own heritage and history in the name of progress. Some of this destruction was unavoidable, but most was just greed driven by developers. I also have some Native American heritage in me, and I am aware of the ongoing plight the

(Comment codes begin on next page)

Code	Issue	Response

Code	Comment Document

native people. So I am very alarmed that your spam mail makes no mention of the freeways plan to move through native lands. This is the biggest hold up for this project, yet you do not mention it, why? Until the concerns of the native people have been addressed I support them in delaying this project."

1 2

This is how I feel about the SM project and I should hope that whatever action ADOT chooses that it will be done with respect in accordance with wishes of the native peoples and all of the responsibility expected of our appointed and elected officials.

Patrick Panetta Document Created: 7/9/2013 1:45:21 PM by Web Comment Form

As a previous member of the Ahwatukee Village Planning Committee, and alternate member of the South Mountain Citizen's Advisory Team, I know that these comments will be read but will in all likelyhood be disregarded. Nonetheless, I would like to get a couple of things on record regarding the Draft EIS.

1 First, per the MAG 2001 modeling (Figure 22, Page 39 of the 10/31/2002 draft report) the Trip Distribution projected for the facility indicates that just 7% of the traffic will enter/leave on I-10 to the west, and just 12% will do so to the south. The major justification for a full-fledged, 8-lane freeway is to relieve the congestion caused by the traffic moving through the city from one end of the urban area to the other. But these MAG numbers indicate that less than 20% of the vehicles on the SMF will be doing so. Another number in this projection is that 19% of the usage (or the same percentage as that of the anticipated through traffic), will be from Ahwatukee, the bulk of which will continue to utilize the stretch from 27th Avenue east to I-10 for the commute to downtown. That volume is already being easily accommodated by the existing four-lane Pecos Road "parkway" facility. (I would attach the graphic but no option was given to do so on this comment form).

2 Second, at the public meeting in May, a sign was displayed titled "Design Adjustments, Arizona Parkway Concept". The information on this sign is at best misleading, and at worse, patently false. The statement says that the parkway concept was "considered but eliminated from further consideration because it:
- would not help improve congestion;
- would not remove a sufficient amount of traffic from the arterial network;
- would not meet the proposed project's purpose and need."

Right next to these statements is a graphic showing that a parkway could accommodate 105,000 vehicles, while the corridor need was listed at 150,000 vehicles. So moving 105,000 vehicles along a parkway concept (70% of the projected need) would not help improve congestion, remove a significant amount of traffic from the arterial network, nor meet the proposed project's purpose of connecting the two sides of the valley and providing a downtown bypass option? Really? I think this would have been a perfectly acceptable compromise between ADOT and the local community but was summarily dismissed because it wasn't part of the original 1985 Transportation Plan.

3 I understand and support the need for an east-west connection south of town, but still believe a parkway concept, or even a hybrid solution of a parkway along the Pecos alignment to 51st Avenue, with a full freeway facility from there north to I-10 is still a viable, and preferable alternative that ADOT seriously needs to consider. It would be much cheaper for ADOT, less impactful to the Ahwatukee community, and would like eliminate the need to blast through South Mountain, as a smaller facility needs less room, and could potentially be palatable

4 enough the Gila River Indian Community to allow a small portion of it to reside on their land from 43d to 51st Avenue. And it would still be moving a significant amount of traffic around

Code	Issue	Response
1	**Traffic**	Information related to origins and destinations of motorists that would use the proposed freeway is presented in Figure 3-18 on page 3-36 of the Final Environmental Impact Statement. The definition of freeway users considers only those motorists who travel through the South Mountains; so, motorists who begin their trips in Ahwatukee Foothills Village and travel east to Interstate 10 (Maricopa Freeway) or motorists who begin in Laveen Village and travel north to Interstate 10 (Papago Freeway) are not counted in the analysis. The analysis of origins and destinations shows that 73 percent of travelers would be involved in trips beginning or ending in the Study Area or areas immediately surrounding it. Seven percent of the trips would begin, end, or begin and end outside of the Maricopa Association of Governments region; ten percent would either begin or end in Pinal County.
2	**Alternatives**	In the best-case scenario, a parkway would carry approximately 105,000 vehicles per day, well below the average daily traffic on the proposed freeway, which would range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-19). As a result, the Arizona Parkway would lack sufficient capacity to meet projected travel demand. The Arizona Parkway would not adequately address the projected transportation system capacity deficiency, would not remove a sufficient amount of traffic from arterial streets, and, therefore, would not meet the project's purpose and need. For these reasons, the Arizona Parkway was eliminated from further consideration.
3	**Alternatives**	The Gila River Indian Community has not allowed the project team to consider alignments on its land, so extending Pecos Road to 51st Avenue is not feasible. A hybrid facility is not desirable because the transition points typically result in substantial bottlenecks to the system (an example on a smaller scale is State Route 143 transitioning into 48th Street). The comparison of travel demand served by the parkway and freeway considers eight-lane facilities for both. The parkway would include four lanes in each direction while the freeway would include three general purpose lanes and one high-occupancy vehicle lane in each direction. Therefore, the general width of the facilities would be relatively the same as they pass through the South Mountains, resulting in similar impacts. The proposed freeway is part of the multimodal *Regional Transportation Plan* (see Final Environmental Impact Statement page 1-5 for more information regarding the *Regional Transportation Plan*). The determination of purpose and need for the proposed project includes an assumption that substantial improvements would be made to the Interstate 10 corridor between State Route 51 and U.S. Route 60 (see Draft Environmental Impact Statement page 1-13) and other facilities and programs in the *Regional Transportation Plan*. Even with these planned improvements, the proposed project remains a vital component of the Regional Freeway and Highway System.
4	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document
	the valley. Couple this with the Broadway Curve widening local/express project, and the expanding Intelligent Transportation Systems infrastructure, and the targeted Levels of Service for the Regional Freeway system could be easily met. The SMF is the easy, yet most costly, disruptive, and uncreative solution to the projected transportation challenges.

Subject: Loop 202 - Comments

Thank you for the opportunity to comment on the DEIS for the extension of Loop 202 along the Pecos Road alignment.

As a resident of Ahwatukee for 10 years, **I oppose** the construction of the freeway for the following reasons:

(1) (2) (3) (4) (5) (6) (7) (8) (9) (10) (11)

1. **Too expensive**. Twenty plus miles of light rail were constructed for $ 1.4 Billion. Less expensive mass transit options are available. $ 2.6 Billion plus is excessive.
2. **Destruction** of private property, existing homes, aquifers, water storage facilities and churches along Pecos road.
3. **Desecration** of South Mountain, an area culturally sensitive to the Gila River Indian Community.
4. **Loss of open space** in the public South Mountain Park area and impact to the ecosystems and wildlife habitats of the area.
5. Increased truck traffic and the accompanying **decrease in air quality** when the freeway is used as a Phoenix by-pass by long-haul truckers.
6. **Increased noise and pollution levels** when an additional 137,000 vehicles per day pass adjacent to Ahwatukee.
7. **Increased traffic** within Ahwatukee via Chandler Blvd. when now major access roads (such as 32nd St.) are eliminated.

Code	Issue	Response
1	**Design**	The cost estimates for the proposed freeway, as described on page 3-59 of the Final Environmental Impact Statement, were developed in accordance with accepted engineering practices by professional engineers. The project has been subject to multiple peer reviews of both the quantities and unit costs used in the estimate by the Arizona Department of Transportation, Federal Highway Administration, Maricopa Association of Governments, and their consultants. In each case, the estimate was found to be reasonable and accurate. The proposed project is part of the *Regional Transportation Plan* for the Maricopa County region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources.
2	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
4	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to State regulations/standards. The well replacement program as outlined by State law has been regularly implemented by the Arizona Department of Water Resources to effectively mitigate well impacts associated with its projects throughout the region. The lakes in the Foothills area are supplied by two water sources: groundwater from wells and potable water supplied by the City of Phoenix. The lakes were designed with excess capacity that allows runoff to be stored. After a storm, water can be released at overflow points or be used to irrigate the golf course. (See text box on Final Environmental Impact Statement page 4-108.)
5	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Section 4(f) and Section 6(f)**	
7	**Biology, Plants, and Wildlife**	
8	**Purpose and Need, Truck Bypass**	
9	**Noise**	
10	**Air Quality**	

(Responses continue on next page)

Code	Comment Document
12 13	8. **Loss of tax revenues** for the city of Phoenix resulting from conversion of currently assessed land to non-revenue generating parcels. Many of the negative issues identified in the DEIS are impossible to mitigate. The peace and tranquility of our Ahwatukee neighborhood is at stake if this extension is built. Dani J. Parker 1322 E. Wildwood Dr. Phoenix, AZ 85048 Sent from Windows Mail Confidentiality and Nondisclosure Notice: This email transmission and any attachments are intended for use by the person(s)/entity(ies) named above and may contain confidential/privileged information. Any unauthorized use, disclosure or distribution is strictly prohibited. If you are not the intended recipient, please contact the sender by email, and delete or destroy all copies plus attachments.

Code	Issue	Response
11	**Traffic**	The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix (see Figure 3-8 on page 3-15 of the Final Environmental Impact Statement). The interchange would have required the displacement of over 100 homes and would have been located near an existing high school. The City recommended that, based on these impacts, the interchange be removed from the study. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
12	**Economics, Socioeconomics**	Table 4-16 on page 4-56 in the Final Environmental Impact Statement displays anticipated reductions, by land use and by action alternative, for current land uses in Phoenix, Tolleson, and Avondale. Under future (at build-out—roughly 2035) land use conditions and with the proposed action implemented, no substantial changes in the taxable land base (Final Environmental Impact Statement Tables 4-21 and 4-22 on pages 4-61 and 4-62, respectively) are anticipated. Low-intensity land uses like agricultural will transition to commercial, industrial, and residential uses. The freeway and continuing growth would likely create greater tax revenue impacts because of the higher anticipated intensity of land use.
13	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

Subject: Loop 202 South Mountain Freeway

Dear Arizona Department of Transportation:

1 The extension of the South Mountain Freeway would negatively impact our city and I'm absolutely opposed to it. 2 Building more roads only leads to more congestion, which is known as induced demand. We need to find a way to reduce the dependency on cars, lessen sprawl and reduce pollution, instead of increasing all of these needless things. 3 Public transportation options and bicycle lanes can do so much more than a freeway without the heartbreaking need to sever South Mountain.

"If you plan cities for cars and traffic, you get cars and traffic. If you plan cities for people and places, you get people and places." - Fred Kent, Founder of Project for Public Spaces

Thank you for your consideration.

Sincerely,

Lisa Parks

Code	Issue	Response
1	**Secondary and Cumulative**	The proposed freeway is a response to existing and anticipated travel demand in the metropolitan Phoenix area. It is not meant to increase travel beyond that expected to be generated from existing and anticipated population and employment growth and related land development. It is important to consider that improvements proposed for any type of transportation system (e.g., a new bus route, rail transit line, commuter rail service) would likely lead to changes in travel behavior, which, in turn, would lead to increased use of the particular system. Improvements made to a given transportation system are meant to attract new users (see Final Environmental Impact Statement pages 4-170 through 4-174). If this were not a primary goal, the improvements would be neither effective nor warranted. For the proposed action, a goal is to attract users of other segments of the Regional Freeway and Highway System and the local arterial street network, now and in the future, to the proposed action to optimize, in part, the entire regional transportation system (as outlined in the proposed action's purpose and need in Chapter 1).
2	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative). As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway.
4	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Subject: Loop 202 Western Expansion

Dear Ladies and Gentlemen,

While I wholeheartedly agree that the final stage of the Loop 202 is completed, I am very concerned by the proposals that would come right up against (Or directly over) 63rd Ave.

1 Having spent time as a dispatcher, and having a brother who was a truck driver, the best routes would be one of the three W101 routes, even though they would cost more. I would certainly be willing to pay a bit higher State Taxes to help accomplish this goal. This would enable a high number of semi tractor/trailers coming from CA to bypass the downtown areas, as they head to Ahwatukee, Chandler, and beyond.

3 My main concern is along 63rd Ave, which may be affected by both the 59th Ave and 71st Ave routes. There is a very high achieving Charter School at 63rd Ave and Southern, and their entire existence is in jeopardy with either of those projected routes. Not to mention the Principal and a couple of the teachers also live very close to the school, as do a high percentage of their students. Speaking of their students, these kids continuously rank high in their AIMS scores every year. I have met many of their students who accompany their Life Sciences teacher to meetings with the Arizona Herpetological Association, where I was a board member and their teacher is a current board member. These kids are amazingly knowledgeable regarding their native wildlife, and it is because of their teacher. Mr. Burge is the kind of teacher that I wish every student could have for their STEM-based classes, not just science, but technology, engineering and mathematics. Mr. Burge is not the only "infectious" teacher creating voracious learners at Country Gardens Charter School, there are several others that are just as creative and imaginative, keeping their students actively engaged in learning every step of the way. They also have a high number of their graduates going on to college. The routes that come the closest to this school would endanger the best chance at a complete education that these students have.

Code	Issue	Response
1	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need, Truck Bypass**	
3	**Design**	The alignment of the W59 Alternative had not been changed in the area of the Country Garden Charter School. The freeway would not directly affect the school, but would run just east of the school. Design of each action alternative, while completed to an equivalent level, is still preliminary and subject to change because designs would be further refined. The Arizona Department of Transportation would work with businesses during the design phase to identify ways to minimize property impacts that allow the business to continue operations.

1 2	Rakesh Patel Document Created: 5/21/2013 2:42:11 PM by Web Comment Form ABSOLUTLEY NOT. I have lived in the Foothills for over 18 years and have seen growth (some good/ some bad) but never have i seen so much of tax payer money being spent towards a project which does need to happen. I think ADOT can find other needy projects to focus their attention on.

Code	Issue	Response
1	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.

Code	Comment Document

Jay Patel — Document Created: 7/21/2013 3:34:42 PM by Web Comment Form

(1) (2) The South Mountain Freeway proposal is out dated. It was put together in the mid eighties and the greater Phoenix area has changed significantly since that time. The proposed W59 does not make sense for today. For example, the proposal recommends the 59th avenue alignment which dumps traffic right in the middle of the city, instead of the outskirts. The W71 is a better alternative since it would tie in with Loop 101. However, to meet the growth of the Phoenix area, and address air quality issues, the EIS needs to study the I8 / SR 85 corridor as an alternative. Therefore, the EIS is incomplete since it does not consider building out the I8 / SR 85 route as a viable alternative. A freeway is needed, however, it is being proposed in the wrong place.

(3) The current W59 proposal has considerable issues which much be addressed. For example:

(4) (5) 1) The current alignment calls for the destruction of ridges within South Mountain. South Mountain is a sacred site for the Gila River community. There are archeological sites which would be affected by the proposal. Destroying the site is culturally insensitive. Moreover, the current recommendation would fragment habitats for potentially endangered species like the Tortoise.

(6) (7) 2) The proposed route has safety and security issues. For example, there will exist a tank farm close to the freeway. Also, trucks using the freeway would be carrying hazardous materials which would put the community at risk. To address this, the community would need shelters, sirens, emergency plans, evacuation training in the nearby schools, gas masks, etc. which the EIS has not studied in detail. There is also the potential of fire in South Mountain due to an increase of traffic in the area.

(8) 3) The current W59 proposal will interact with the greatest number of hazardous materials sites which must be cleaned up. This is a very risky and expensive endeavor.

(9) (3) 4) The proposed W59 alignment will not do anything to address air quality, it will just redistribute pollutants. Therefore, the I8/ SR 85 route makes better sense and needs to be part of the EIS study.

(10) (11) (12) 5) The proposed alignment has significant engineering challenges. For example, massive ridges will need to be cut in South Mountain, there is a water well in the middle of Pecos which serves the golf courses, and there are electric transmission lines which need to be addressed. All this will add significant costs to the tax payers.

(13) (14) (15) 6) For the existing residences near the proposed freeway, noise will be an issue. It is predicted that noise levels will be between 59 and 70 DBs, Mitigation needs to be provided at 64 DBs. The 20 ft sound walls will not be able to abate the noise, especially when you consider that trucks will rev their engines to climb grades and use “jake brakes” to slow down.

Code	Issue	Response
1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives, W59 Alternative Versus W101 Alternative**	
3	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
4	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Biology, Plants, and Wildlife**	
6	**Alternatives**	The alignment of the W55 Alternative was shifted west onto 59th Avenue in 2009 to take advantage of the existing right-of-way that the Arizona Department of Transportation already owned and to reduce cost and business displacements. This shifted alignment (called the W59 Alternative) would connect to Interstate 10 at an existing service traffic interchange. Among the advantages (listed on page 3-68 of the Draft Environmental Impact Statement) of this alignment shift is its preferability “from a security perspective because it would be farther from the petroleum storage facilities at 51st Avenue and Van Buren Street.”
7	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Hazardous Materials**	The corridor analysis revealed sites that would need further assessment during the property acquisition phase of the project, if an action alternative were to become the Selected Alternative. The Arizona Department of Transportation employs a phased approach to site assessment that allows time for cleanup of any sites found to have hazardous waste issues. The project team concluded from the level of analysis conducted during the environmental impact statement process that the types of sites likely to be acquired contain common hazardous waste issues like underground storage tanks, asbestos and lead paint in buildings, and other commonly found issues (see Draft Environmental Impact Statement page 4-153). The Arizona Department of Transportation maintains a process for addressing these issues in accordance with all applicable environmental laws and regulations.

16	7) The visual aspect of the study does not consider billboards. Illuminated billboards will affect visual quality both during the day and night. There is a great potential for billboards since they already exist on the Gila River community near the current Loop 202; therefore, one can expect that there will be billboards next to the W59 alignment.
17	8) The W59 proposal will destroy homes and a Church. This will affect the fabric of the community and there are no good alternatives to move the growing Church. Moving a growing Church's congregation is not a trivial task and the replacement costs must be considered.
3	In summary, the EIS has a significant deficiently in that it does not study the I8/ SR 85 as an alternative which would alleviate many of the social, cultural, economic and environmental issues posed by the proposed W59 alignment.

Code	Issue	Response
9	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
10	**Construction**	The Arizona Department of Transportation is experienced in successfully designing, engineering, and constructing steep road cuts. The road cuts would be similar—but deeper—than the deepest ones along State Route 51, north of Phoenix. Similarly deep and steep ones are near Hoover Dam on U.S. Route 93 (see Figure 5-10 on Draft Environmental Impact Statement page 5-17 for details regarding the dimensions of the proposed road cuts to the ridges of the South Mountains).
11	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to State regulations/standards. The well replacement program as outlined by State law has been regularly implemented by the Arizona Department of Water Resources to effectively mitigate well impacts associated with its projects throughout the region. The lakes in the Foothills area are supplied by two water sources: groundwater from wells and potable water supplied by the City of Phoenix. The lakes were designed with excess capacity that allows runoff to be stored. After a storm, water can be released at overflow points or be used to irrigate the golf course. (See text box on Final Environmental Impact Statement page 4-108.)
12	**Utilities**	Utilities are discussed beginning on page 4-174 of the Final Environmental Impact Statement, and a summary of major impacts is provided in Table 4-52 on page 4-175. The high-voltage power lines located just south of Pecos Road that run east–west would not be adversely affected by the proposed freeway. They would remain as-is.
13	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
14	**Noise**	Noise barriers are designed to provide a substantial reduction in noise levels along freeways, but do not and cannot eliminate noise from passing into nearby neighborhoods. Just because noise can be heard does not mean that noise barriers are ineffective. Even at the levels considered "acceptable" by the Arizona Department of Transportation Noise Abatement Policy and Federal Highway Administration regulations, noise is still readily audible and can be heard for some distance from the freeway.
15	**Noise**	The Maricopa Association of Governments regional travel demand model forecasts approximately 10 percent truck traffic on the South Mountain Freeway in 2035 (see Final Environmental Impact Statement page 3-64). This percentage is similar to current conditions on Interstate 10 between Loop 101 and Interstate 17 and on U.S. Route 60. Air quality and noise modeling for the Draft and Final Environmental Impact Statements used this forecast truck traffic (see Final Environmental Impact Statement pages 4-68 and 4-100, respectively). Noise mitigation is designed for this predicted noise level, including the noise from trucks.

Code	Issue	Response
16	**Visual Resources**	The State of Arizona (through the Arizona Department of Transportation) administers an Outdoor Advertising Program as mandated by the Federal Highway Beautification Act. Arizona's program provides regulations for the permitting, placement, and maintenance of outdoor advertising signs along Interstate highways as well as State highways within Arizona. The State statutes (Arizona Revised Statutes §§ 28-7901 through 28-7915) and the State rules (R17-3-701 and R17-3-701.01) provide that the Arizona Department of Transportation must regulate any sign that is within view of, directed at, and intended to be read from the main traveled way of a controlled highway. (A controlled highway is any highway that is part of the National Highway System along with specific State routes. The South Mountain Freeway would be both a State route and part of the National Highway System.) While the Arizona Court of Appeals did decide in November 2011 that electronic billboards violate the 1970 Arizona Highway Beautification Act, a new law was passed by the State Legislature that banned such billboards in much of the state but allowed them in most of Maricopa County and parts of Pinal, Yuma, and La Paz counties. Weeks later, the Phoenix City Council created a zoning ordinance to regulate such billboards on city streets and highways. Chapter 7, Section 705, of the Zoning Ordinance of the City of Phoenix does not permit billboards to occupy public property or to extend across a property line where such property line borders a public highway. Electronic messages are permitted only on land zoned as commercial or industrial or zoned as a nonresidential use in Residential Districts. Under current zoning, this eliminates most, if not all, of the land along the E1 Alternative. Such signs might be permissible along portions of the W59 Alternative. Such signs may not be illuminated between 11 p.m. and sunrise "when (1) located within one hundred fifty (150) feet of Single Family Residential zoned property and (2) visible from such development or property." Erection and operation of any billboards on Gila River Indian Community land would be subject to regulation by the Gila River Indian Community.
17	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)

ref: Indignation at the proposed Loop 202 South extension

To whom it may concern,

(1) With reference to the above mentioned project I would like to voice my objections and utter disgust to the proposed TRUCK BYPASS through the community we have been a part of for the last nineteen years.

(2) (3) (4) (5) (6) (7) Outside of wasting valuable tax payer dollars, the total disregard of native American heritage, tearing down houses of worship, displacing homeowners and creating nuisance in the form of noise and air pollution, ADOT has completely failed to realize that its strategic plans laid out well over two decades ago may have been relevant then but have now become an ill-conceived disaster.

(8) I was unfortunate enough to have attended the recent presentation/ public meeting ADOT held in the Phoenix Convention Center where the 'gangs' of green 'T' shirt members (pro Loopers) walked around intimidating anyone with an opinion differing from that of ADOT. I saw a lot of information on the 'proposed benefits' of this Loop extension including videos of how tranquil an 8 lane highway will be having an almost zero impact on the adjacent communities but nowhere did I see any upfront assessment of the disadvantages this will bring:

(5) (9) (3) (10) (11) (12) (13)

1. Noise pollution
2. Impact of air quality on the schools which are within 500 feet of the highway
3. Destruction of sacred Native American lands
4. Overpasses blocking open views for adjacent residents
5. Increase in crime
6. Valuation decreases in home prices
7. Loss of public space/ usage - Pecos Road is always being used by cyclists and the adjacent lands are used by the local high school for their cross country training
8. Inevitable introduction of everything we abhor (bill boards/ trash etc.)

(14) I hope ADOT has the willingness and fortitude to stop the Loop 202 expansion and realize that the impact on the community is a price not worth paying.

Rakesh & Raju Patel
(Jay Patel - son aged 12)
(Nina Patel – daughter aged 14)

Code	Issue	Response
1	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need, Lack of Support**	
3	**Cultural Resources**	
4	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
5	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Air Quality**	
7	**Purpose and Need, Old Plan or Use of Old Data**	
8	**Alternatives**	The information presented at the public hearing was a summary of the content of the Draft Environmental Impact Statement. Information related to impacts or disadvantages of building the proposed freeway is presented throughout the Draft Environmental Impact Statement.
9	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
10	**Visual Resources**	For most of the alignments of each of the action alternatives, the proposed freeway would be elevated above the natural grade of the surrounding land. This elevated profile would allow noise to carry farther, creating noise impacts at greater distances from the freeway. Depressing the profile of the freeway below grade might reduce traffic noise levels adjacent to depressed sections. However, it would be necessary to also construct at-grade noise barriers to achieve noise reduction goals at receiver locations adjacent to depressed freeway sections (see page 4-99 in the Final Environmental Impact Statement). This strategy would reduce visual impacts associated with high noise barriers on elevated freeways, but would entail ground-level noise barriers and their associated interference with views. Thus, with either approach to noise reduction, views of nearby mountains could be disrupted. The specific impacts would depend on the geometrics of the height of any noise barriers constructed, the intervening topography, and the distance of the barriers from the residences in question.
11	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
12	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
13	**Traffic**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
14	**Visual Resources**	The State of Arizona (through the Arizona Department of Transportation) administers an Outdoor Advertising Program as mandated by the Federal Highway Beautification Act. Arizona's program provides regulations for the permitting, placement, and maintenance of outdoor advertising signs along Interstate highways as well as State highways within Arizona. The State statutes (Arizona Revised Statutes §§ 28-7901 through 28-7915) and the State rules (R17-3-701 and R17-3-701.01) provide that the Arizona Department of Transportation must regulate any sign that is within view of, directed at, and intended to be read from the main traveled way of a controlled highway. (A controlled highway is any highway that is part of the National Highway System along with specific State routes. The South Mountain Freeway would be both a State route and part of the National Highway System.) While the Arizona Court of Appeals did decide in November 2011 that electronic billboards violate the 1970 Arizona Highway Beautification Act, a new law was passed by the State Legislature that banned such billboards in much of the state but allowed them in most of Maricopa County and parts of Pinal, Yuma, and La Paz counties. Weeks later, the Phoenix City Council created a zoning ordinance to regulate such billboards on city streets and highways. Chapter 7, Section 705, of the Zoning Ordinance of the City of Phoenix does not permit billboards to occupy public property or to extend across a property line where such property line borders a public highway. Electronic messages are permitted only on land zoned as commercial or industrial or zoned as a nonresidential use in Residential Districts. Under current zoning, this eliminates most, if not all, of the land along the E1 Alternative. Such signs might be permissible along portions of the W59 Alternative. Such signs may not be illuminated between 11 p.m. and sunrise "when (1) located within one hundred fifty (150) feet of Single Family Residential zoned property and (2) visible from such development or property." Erection and operation of any billboards on Gila River Indian Community land would be subject to regulation by the Gila River Indian Community.

Subject: Impact of Loop 202 Freeway on The Foothills--questions
Date: Monday, June 03, 2013 8:03:56 AM

Hello:

(1) Will Pecos road still exist? Will the freeway exist where Pecos road currently exists? Will there be a frontage road?

(2) How far north will the road and any associated features (embankments, noise barriers, foliage, frontage road, etc.) extend?

(3) Where will the freeway exits along what is currently Pecos Road be (Desert Foothills Parkway, 24th St, 32nd St, etc.)? How far apart will the exits be?

(4) I am having difficulty determining how the air quality in my neighborhood will be changing due to this project. I live just north of Frye Road and west of Desert Foothills Parkway. Please tell me how the air quality will be affected by this freeway.

(5) Has anybody proposed taking on the cost of removing the trash from the Gila River Community (paid for by the State of Arizona or Maricopa County or City of Phoenix or a combination of all 3) in exchange for their promise not to burn on their property? Would this perhaps be considered as an "equivalent" exchange for the air pollution that will be occurring due to the freeway?

(6) (7) Also, how will noise impact my home (see my address below)? I understand there can be constructive and destructive acoustic patterns, how will you ensure I don't get a "bad bounce" (constructive acoustics) from the freeway noise pollution?

Regards,
Thomas Patno

Attention Foothills Community Association Residents,

ADOT (Arizona Department of Transportation) will be holding a series of 6 community forums on the

Code	Issue	Response
1	**Design**	Pecos Road would not exist after construction of the South Mountain Freeway were completed, if an action alternative were the Selected Alternative. The alignment of the proposed freeway is just north of the existing Pecos Road alignment. There is no frontage road currently proposed in the E1 Alternative. A minimum of 10 feet is provided between the Arizona Department of Transportation right-of-way and the proposed roadway embankments and/or associated features.
2	**Design**	The traffic interchange locations for the proposed freeway along the Pecos Road section are 40th Street, 24th Street, Desert Foothills Parkway, and 17th Avenue (see Figure 3-28 on Final Environmental Impact Statement page 3-51). They are spaced between 1.5 and 2 miles apart.
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Air Quality**	The proposal in the comment is outside the scope of this project.
5	**Design**	Aerial maps showing the proposed freeway (W59 and E1 Alternatives) are accessible through the project Web site, <azdot.gov/southmountainfreeway>.
6	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Noise**	Acoustic principles of constructive and destructive interference refer to sounds of pure tone, with a single frequency and phase. Traffic noise, however, is not a pure tone and is a compilation of many frequencies and phases, so the concepts of constructive and destructive interference do not apply to traffic noise.

proposed 202 freeway that will effect The Foothills communitybeginning June 4th . These forums will provide additional opportunities for members of the public to comment on the Draft Environmental Impact Statement for the proposed South Mountain Freeway. While these forums are not formal public hearings and will not include presentations, they will allow members of the public to view the study video, talk with technical experts about the draft environmental impact statement and provide comments to a court reporter.

These forums may be your final opportunity to see the data that is being used to justify this freeway. Regardless of how you feel about this freeway, it is in your best interest to be totally informed about the pros and cons of this project and how it will affect life in The Foothills.

For more information on the draft environmental impact statement or the community forums for the South Mountain Freeway, please visitazdot.gov/SouthMountainFreeway

Please see the below information from ADOT with the dates and times of the upcoming forums.

South Mountain upcoming community forums

Six community forums provide opportunity to comment on proposed freeway

PHOENIX — A series of six community forums will be conducted by the Arizona Department of Transportation beginning June 4 to provide additional opportunities for members of the public to comment on the Draft Environmental Impact Statement for the proposed South Mountain Freeway. While these forums are not formal public hearings and will not include presentations, they will allow members of the public to view the study video, talk with technical experts about the draft environmental impact statement and provide comments to a court reporter.

Forums will be held:
-June 4, 4 p.m. to 7 p.m. at Sunridge Elementary School – Cafetorium, 6244 W. Roosevelt St. in Phoenix.
-June 18, 4 p.m. to 7 p.m. at The Foothills Golf Club – Saguaro Room, 2201 E. Clubhouse Drive in Phoenix.
-June 22, 9 a.m. to noon at the Komatke Boys and Girls Club, 5047 W. Pecos Road on the Gila River Indian Community.
-June 25, 11 a.m. to 2 p.m. at the Windmill Suites – Arizona Ballroom, 3535 W. Chandler Blvd. in Chandler.
-July 9, 4 p.m. to 7 p.m. at the Laveen Education Center – Boardroom, 5001 W. Dobbins Road in Laveen.
-July 11, 11 a.m. to 2 p.m. at the Hilton Garden Inn Phoenix/Avondale – Ballroom, 11460 W. Hilton Way in Avondale.

The project's study team will incorporate input gained from comments to produce the final environmental impact statement, which will have a 60-day public review period. A record of decision is expected in 2014.

ahead and proceed with this project. This project has been approved several times and has the overwhelming support, based on recent polls, and I think it'll be a great benefit to our community. Thank you.

THE FACILITATOR: Thank you.

Ana Morago?

Tiffany Reddy.

MS. REDDY: Good afternoon. My name is Tiffany Reddy and I just wanted to come and show my support for South Mountain freeway. The congestion for the commuters in Phoenix has long been a problem for our community and I think it would greatly help our residents in Phoenix. Also, I love the idea of bringing 30,000 jobs to our community and to our people here in Phoenix, so we're in big support. Thank you.

THE FACILITATOR: Thank you.

If you'd like to speak and have not yet registered, please go out to the front registration table.

Chris Pattock. Could I ask you to use this microphone, please.

MR. PATTOCK: Sure. Thank you. My name is Chris Pattock, I'm a Tempe resident, I work downtown, I'm a lawyer. I'm not prepared to do this, I just got a phone call last night, apparently someone knew that I was

in favor of the freeway, and I just want to put in my two cents.

I've lived in either West Chandler or South Tempe since December of 1984, and lack of a freeway has encouraged me to ride a bicycle two days a week. But I know that's probably not the best means of transportation for most people and I would -- I strongly support the freeway for all the normal reasons and I'm appalled that it hasn't been built. It wasn't built many years ago, obviously, has many environmental benefits. Congestion is appalling. As a large metropolis, I'm appalled that we haven't built this long ago. Obviously, it has great economical value and it's clear to me, I think it's clear to everybody that the people that are opposed to this are basically NIMBYs, not in my backyard. I strongly support this building, although it'll probably never benefit me, by the time it's built I'll be retired or at least close to it. I strongly encourage -- by the way, I formerly used to represent ADOT as a client when I worked for the Attorney General's Office -- to move ahead with the freeway with all deliberate speed and do whatever it takes to build it. Thank you very much.

THE FACILITATOR: Thank you.

Allen Mills.

If your name is on the list and you're going to

The Loop 202 is an integral part of the future to grow and build Maricopa County. In turn with future population growth (of out of state baby boomers) we will benefit by the Loop 202 Freeway. I recommend the 59th Ave location along with the Pecos Rd location. The freeway will cut traffic congestion across the metro area, reduce air pollution and save drivers time and money. Majority of the population recommend the future freeway.
The Loop 202 with enhance sustainability for the entire Maricopa County Community. The 202 freeway will create 30,000 jobes durning the 5 to 6 year construction period. The is no more important project to the areas commuters and workers than the South Mountain Project. We need to build the freeway now!

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

My house is very close to the proposed Fwy interchange at Pecos & Desert Foothills pkwy. I have owned it for 17 years & bought because of rural environment.

1 I believe my family's quality of life will
2 be severely effected by the proposed freeway
3 in terms of increased health risks due to emissions caused by trucks & 3x traffic going past my house. Air pollution in my area will greatly increase beyond current levels.

4 I am also concerned with noise levels. I love the quiet neighborhood.

5 Pecos road is completely unsuitable as a freeway. Please don't build it!!! ⇒

I think the freeway would be quite a benefit. It would take a lot of traffic, and I mean big traffic like trucks and travelers going east of Phoenix toward Tucson and on beyond that. I think it would alter the truck routes to the point where it would help traffic in downtown Phoenix and the overall traffic I think would be better. I hope it does get passed, but I don't want to disrupt the Indian reservations. I think it could be worked out but the thing of it is, I think some people will have to do a little bit more adjusting. But anyway, I think it's a great plan and should be in effect. Thank you very much.

To whom it may concern,

I was born and raised in Phoenix. As a kid, my mom would drive us to South Mountain to go hiking and look out over the city. Recently, I have been hiking there and have marveled at the beauty it adds to our city. I am not surprised that this place is sacred to native groups in the area. I have also worked in community relations in that area, and enjoy the peacefulness of the fields and towns. I didn't know much about the proposed Loop 202 extension until now and I am writing to register my opposition against this project for several reasons. To begin with, I believe the very idea of building another freeway out west is antithetical to the goals of providing a good future for the generations to come. Just as importantly, this project demeans the Gila River Indian Community (GRIC) by desecrating a place that is sacred to them and bringing environmental destruction. Throughout I give suggestions as to what ADOT should do so that the public can make an informed decision.

1

2

Assumption that major population growth is Maricopa County's only means of survival, vs. improving quality of life in older, already developed areas, many of which are rapidly deteriorating (in part because freeways are so heavily relied-on for supporting growth that added congestion worsens air quality, noise, creates physical barriers between communities that limit access to services/amenities). This is especially problematic, because there is no sense that "maturation" of MAG transportation infrastructure is on the horizon. Freeways are built to relieve congestion from growth that previous freeways created. This predates freeways; expansion of Phoenix's arterial street network with rapid annexation had the same effect (and spurred notions that freeway growth would solve this). The issue throughout Phoenix's history, which spread to most other MAG members, is that city/regional administration fails to seriously consider the existing built environment and its need for continual renewal as it ages. ADOT needs to justify why we shouldn't instead be spending the money set aside for this project on urban transportation renewal. Having lived in Phoenix for a long time, I know there is a further need for public transit and road improvement. Why exactly do we plan on seeing such a huge population growth outside of the urban core? What alternative growth patterns could we develop? All in all, building up vs. out is cheaper and can result in a higher quality of life for people of Phoenix.

3 4 5

6

This project gives freeways precedence as a way to create urban sprawl vs. mitigating travel time within neighborhoods by building density. The same year MAG regional transportation plan was approved, 1985, Phoenix's "Urban Village" planning system was adopted. The former thrived, while the latter today is something of a joke. The Urban Villages model's implementation of compact "village cores" that support a localized jobs-housing balance is so underutilized in some parts of Phoenix that freeways remain the only viable means of travel to employment/amenities. Further, development of Phoenix's newer "villages" is so heavily reliant on freeways that the designated "cores" of the Laveen and Estrella villages within the case study area--zoned for development since early last decade--will not exist until the Loop 202 is completed. Consistent with Phoenix's growth since the postwar era, most MAG cities blithely build out into areas that are barely accessible by automobile, aware

1	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Cultural Resources**	
3	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Noise**	
6	**Alternatives, Nonfreeway Alternatives**	
7	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Code	Comment Document

8

9

that a new freeway link will eventually save them. This is not sustainable. Taxpayers should not be funding projects based on development models that are outdated, not aligned with current needs to conserve natural and financial resources across the board. Why should people have to drive more to go to work, to get home, to go to the grocery store? This project will bring negative quality of life to people who will live in these houses that the Loop 202 will give access to. Please have the report explicitly describe the reason this extension is proposed to be built. Who is deciding on building these new population centers? Which municipalities have given permission? Do the developers receive tax breaks?

Relatedly, we the public need to know more, explicitly about how the project will socially and environmentally impact the GRIC and other groups. The Loop 202 extension is situated in an area that is effectively "landlocked" (no added growth beyond GRIC boundary->somewhat more resistant to increased congestion over time than I-10, etc), but it brings environmental harm and symbolic violence to the GRIC, who never asked for it. This is arguably a minor link of the regional transportation system, but it is as much a symbol of environmental racism as the region's older freeways, which literally cut communities in half. It unjustly values one set of landholders over another. It dismisses the GRIC's concerns as petty. I am concerned that the report does not address the displacement of GRIC homes and does not identify an evacuation route in the event of a biohazardous incident. Meanwhile, the report does not visually depict the loss of agricultural land in the Laveen and Gila areas. Culturally, ADOT needs to visually represent the prehistoric sites visually disrupted by proposed construction. After this research and visual development is undertaken, the information needs to be distributed in the community.

10

11 12 13

14

15 2

Loop 202 (along with 303) also threatens the region's resilience to climate change and worsens the urban heat island effect. It encourages the development (propagation of impervious surfaces) of much of the remaining agricultural land which, had it been introduced in the region's past, would have remained an environmental amenity for MAG cities. "Urban Villages" like Estrella and Laveen have been planned to grow around freeways, rather than coexist with agriculture. This project weakens incentivization of public transit/transit-oriented development by municipal governments because the nature of growth in the areas affected is one reliant on single-passenger auto ownership (SFR land-use). The DEIS needs to investigate the urban heat island effect in relation to this project. It also needs to model what impact this project would have on climate change, with the increase number of automobiles that would be on the road. Again, this project isn't mitigating crowding, it's simply adding a new freeway so that more people can drive to developments built far from the urban core.

16 17

1

All in all, I reject the proposed need for this type of project and also am pointing out the detrimental impacts it will have on the environment, the GRIC, and other communities.

Sincerely,
Kim Pearson

Code	Issue	Response
8	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the Responses to Frequently Submitted Public Comments beginning on page B733 of this appendix.
9	**Purpose and Need**	Data, inputs, and model results were appropriately used throughout the environmental impact statement process. The Final Environmental Impact Statement—particularly in Chapter 1, *Purpose and Need*, and Chapter 3, *Alternatives*—thoroughly explains how the process of establishing a purpose and need for the proposed action followed nationally accepted guidance and policy. Examples of how the purpose and need analyses were appropriately applied include the: · the section, *Context of the Purpose and Need in the EIS Process*, beginning on page 1-1 · the sidebar, *"A proposed action's purpose and need documentation should:"*, on page 1-1 · the sidebar, *"How are MAG data used in the DEIS?"*, on page 1-4 · the sidebar, *"What is the MAG regional demand model?"*, on page 1-5 · the sidebar, *"How will the economic downturn affect growth rates?"*, on page 1-11 · the section, *Need Based on Regional Transportation Demand and Existing and Projected Transportation System Capacity Deficiencies*, beginning on page 1-13 · the section, *Conclusions*, beginning on page 1-21 · the section, *Reconfirm the Purpose and Need for the Proposed Action*, beginning on page 3-1 · the section, *Responsiveness of the Proposed Freeway to Purpose and Need Criteria*, beginning on page 3-27 The models, methods, and assumptions used throughout the Draft Environmental Impact Statement account for reasonably foreseeable future conditions and rightfully dismiss speculative considerations.
10	**Environmental Justice/Lifestyle**	The Arizona Department of Transportation and Federal Highway Administration have engaged all population segments to ensure access to the environmental impact statement process. Assisted by this involvement, analytical results indicate the proposed action would provide net benefits to all populations in the Study Area in general by reducing traffic congestion, enhancing accessibility, and supporting local economic development plans.
11	**Alternatives**	There would be no displacement of Gila River Indian homes because the proposed action would not be built on Gila River Indian Community land.
12	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
13	**Hazardous Materials**	

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
14	**Agriculture**	Existing agriculture is depicted in Figure 4-3, on page 4-6, of the Final Environmental Impact Statement. While not an aerial photograph, it outlines the parcels that are currently under agricultural production. Table 4-4, on page 4-7, summarizes existing zoning by land use for the entire Study Area. In addition, Figure 4-4, on page 4-8, reveals how much of the existing agricultural land along the W59 Alternative is already slated for commercial and residential development. Implementation of the E1 Alternative would cause no conversion of agricultural uses on Gila River Indian Community land. Urbanization will continue with or without implementation of the proposed freeway (see Final Environmental Impact Statement pages 4-161 and 4-162).
15	**Cultural Resources**	Visual representations of prehistoric sites, such as showing their locations on maps, are not made public to protect the sites.
16	**Heat Island**	As buildings, parking lots, roads, and other infrastructure replace open land and vegetation, an urban heat island may result. The heat island effect is of a regional nature and, therefore, there is no requirement to analyze potential impacts and no possibility of determining the localized contribution at the project level to the regional heat island effect. It is likely, however, that a proposed project such as the South Mountain Freeway would be a minor contributor to the overall issue.
17	**Air Quality**	Climate change is an important national and global concern. While the earth has gone through many natural changes in climate in its history, there is general agreement that the earth's climate is currently changing at an accelerated rate and will continue to do. Human-caused greenhouse gas emissions contribute to this rapid change. Carbon dioxide makes up the largest component of these greenhouse gas emissions. Other prominent transportation-related Greenhouse gases include methane and nitrous oxide. Greenhouse gases trap heat in the earth's atmosphere. Because the atmospheric concentration of greenhouse gases continues to climb, our planet will likely continue to experience climate change-related phenomena (see Final Environmental Impact Statement pages 4-85 through 4-86). To date, no national standards have been established regarding greenhouse gases. Greenhouse gases are different than other air pollutants evaluated in federal environmental reviews because their impacts are not localized or regional due to their rapid dispersion into the global atmosphere. The affected environment for greenhouse gas emissions is the entire planet. In contrast to broad-scale actions such as those involving an entire industry sector or very large geographic areas, it is difficult to isolate and understand greenhouse gas emissions' impacts for a particular transportation project. Furthermore, presently there is no scientific methodology for attributing specific climatological changes to a particular transportation project's emissions. Under the National Environmental Policy Act, detailed environmental analysis should focus on issues that are significant and meaningful to decision making. The Federal Highway Administration has concluded, based on the nature of greenhouse gas emissions and the exceedingly small potential greenhouse gas impacts of the proposed freeway (as shown in Final Environmental Impact Statement Table 4-37 on page 4-85), that greenhouse gas emissions from the proposed freeway would not result in "reasonably foreseeable significant adverse impacts on the human environment" [40 Code of Federal Regulations § 1502.22(b)].

for the future in 10, 15, 20 years for the people that live out there? Thank you.

THE FACILITATOR: Thank you very much.

Andrew Pedro.

MR. PEDRO: Hello, I'm from the Gila River Indian Community and I'm one of our community managers, our community manager, David White for Gila River, he stated that transportation officials were to be taking cultural awareness training, and has that ever happened for people part of the 202? Anyone? And if it were, who would be taking those cultural awareness training classes; would it be construction? Would it be ADOT officials themselves? And in the DEIS it does say that if any uncovered cultural items, that construction would stop immediately. How are they supposed to know if training never happened?

And like Danelle said, it is a sacred place to us and we have been here thousands of years, you people have been here 200 years. And that thing in the EIS, except for saying that it could cause loss of cultural property and that is like -- that's a violation of our religious rights, that is a sacred place. How is ADOT able to go through there with being that it's a public park and it's a public preserve, so it's owned by the public; how are you supposed to get those right-of-ways

Page 18

Code	Issue	Response
1	**Cultural Resources**	The cultural awareness training has been attended by project team members including the Arizona Department of Transportation, Federal Highway Administration, Maricopa Association of Governments, and consultant staff. Were the project to move forward to construction, additional training would be provided for construction personnel.
2	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.
4	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

in a public park?

So yeah, we are against this freeway and there is nothing in the EIS that says that they stopped working with the community to look into the effects of the community when it's right on our border. And obviously, it's going to affect us. And yeah, like people in Laveen, they're on the other side of the mountain, they're not going to feel it as much as we do.

And especially to our culture, how we live. We're almost gone, most of our community lives in poverty and most of the people there can't even speak our native language. And it's not our fault, it's colonization's fault for pushing us out of our own land. And right here, right where you stand and where you're sitting is traditional Akimel O'odham territory, and I hope that you realize that and wonder about how it really affects us and not just the financials of it, how it affects us internally and spiritually. If we were to build through one of your churches, I'm sure you would be standing here where I am telling you that this is a bad idea, because it affects your religious rights. Well, this affects our religious rights.

If there's one corridor that separates us from the mountain itself, that's a violation of our religious rights and that -- yeah, there's supposed to be one

tunnel going under the freeway, that's unsafe and it would affect our medicinal plants that we use culturally that are going extinct and cultural animals that we use in our culture: The owl, tortoise, Sonoran Desert tortoise, Mexican spotted owl, those are all endangered species that you're willing to sacrifice other species just for progress.

Is that really how you want your kids to view the world; do you want your kids growing up in pollution, growing up with cancer, asthma, bronchitis, birth defects? We don't want that for our community. Look how bad it is already. We don't want none of that, so I just hope that you look back into that.

And with the shuttles, I mean, nobody actually got the shuttles, there wasn't that much effort put into it from ADOT themselves, the community had to invite ADOT to come to the community to give out information. They weren't giving out any information before until the community told them to. That itself is just disgusting, how she said before, and how disgusting it is to see people pushing this freeway, which they don't acknowledge us as a people, being that we've been here before anybody has been here and our ancestors go back. And what if there was other people who came into this? This doesn't affect just the Gila River Indian tribe, this affects all

7	**Air Quality**	
8	**Health Effects**	
9	**Public Involvement**	Leading up to the release of the Draft Environmental Impact Statement, the project team communicated regularly with the Gila River Indian Community's Communications and Public Affairs Office and the Community Manager's Office regarding the availability of project-related informational materials and the public outreach plan for the Draft Environmental Impact Statement. Consistent with the protocol for other project-related coordination with the Gila River Indian Community, the communication related to the Draft Environmental Impact Statement was conducted at a "government-to-government" level. The Communications and Public Affairs Office informed the Arizona Department of Transportation that all communication and distribution of informational materials on Gila River Indian Community land would be handled by the Communications and Public Affairs Office (see Chapter 6 of the Final Environmental Impact Statement and Appendix 6-5 for more information related to communications between the Arizona Department of Transportation and the Communications and Public Affairs Office regarding outreach to Gila River Indian Community members).
10	**Cultural Resources**	The Arizona Department of Transportation and the Federal Highway Administration have attended meetings as requested by Gila River Indian Community groups, including the Gila Borderlands Advisory Committee and the Elderly Concerns Group. To keep Gila River Indian Community members engaged in the process and to ensure adequate access to project activities, three newsletters have been provided to the Gila River Indian Community for distribution and articles have been provided to the *Gila River Indian News* for inclusion in the weekly tribal newspaper. The Arizona Department of Transportation has participated in the Gila River Indian Community's annual fair to answer questions regarding the proposed action. Times and locations of all public meetings (see Chapter 6, *Comments and Coordination*) relating to the project have been advertised to the Gila River Indian Community, inviting members to attend.

tribes in Southern Arizona, being Tohono O'odham, Ak Chin, Salt River Indian Community, culturally it affects them and is disgusting to see how this is still being pushed forward.

THE FACILITATOR: Thank you.

If anybody else who has not registered would like to speak at the hearing, please make sure that you register at the registration desk and then come before us.

If you need additional time, please, if you would like to make additional comments, please give your comments to the court reporter. Thank you.

Harlan Barehand.

MR. BAREHAND: Good morning, sirs. Thank you for the opportunity to come and speak with you this morning. I am Harlan Barehand, I'm registered with the Gila River Indian Community. Thank you very much for not putting it on our reservation, we appreciate that very much. I hope that it will stay off our borders and into the Ahwatukee and the Laveen area. And I think that we can benefit financially through them, but our reservation as it is is very small and we cannot afford to lose any more land as it is. And history tells us that the original Gila River boundaries is Van Buren on this side, so you're asking for Gila River land, but that's history.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

Subject: Comments in opposition to South Mountain Freeway

May 28, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(3) (4) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(1) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Ms. Susan Penner
13018 W Meeker Blvd
Sun City West, AZ 85375-3803

Comments must be received or postmarked by July 24, 2013. PHX IS GROWING, PEOPLE AND TRAFFIC. YES, THERE WILL BE A LOSS OF HOMES, BUT IT IS STILL FOR THE GOOD OF ALL OF US. THE FREEWAY WOULD BE SAFER FOR LARGE TRUCKS AS WELL AS ALL TRAFFIC. THE NEW FREEWAY WOULD BE A "GOOD THING"

ALSO LARGE TRUCKS SHOULD ONLY USE THE RIGHT TWO LANES THROUGH PHX. (THIS IS FROM A FORMER TRUCK DRIVER OF 35 YRS)

From: Rusty Crerand
To: ADOT
Subject: S. Mt. Opinion
Date: Thursday, July 11, 2013 11:44:47 AM
Attachments: image001.png

From Envoy:

7/11/2013 11:06:40 AM
As public comment on is coming to an end on the freeway extension that will cut through South Mountain Park and Preserve, I find it necessary to voice my opinion. I would like to express my concerns about the conservation and protection of South Mountain. Spectacular views can be seen of the entire valley, and I have been fortunate enough to be able to grow up hiking and biking along these beautiful trails of the Southwest.
I feel the impact study is not sufficient and doesn't take into account social implications of degrading a special place that has been protected for so long. I know the growth of the city in the next decades will require an increase of roads, but the construction of a freeway through South Mountain will send the message to our citizens that we do not care about our special desert environment.
Please, please see that a 22 year old college student that has had a strong connection with South Mountain Park and Preserve her whole life, really cares about this beautiful area. I hope it can be protected and remain for others to enjoy as much as I have.

Olivia Peralta

I am writing to state my opposition for the proposed expansion of Loop 202/ South Mountain Freeway . Ahwatukee residents would ultimately be affected by air & noise pollution, as well as devastation of local business, homes & church in the line of proposed route. The 40 years old project could be & should be adjusted due to new develops & changes , happened since 1983.

Sincerely,

Igor & Larisa Peremislov

Code	Issue	Response
1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Noise**	
3	**Economics, Socioeconomics**	Businesses that would be directly and adversely affected by the Preferred Alternative, if it were the Selected Alternative, would be mitigated through relocation or site purchase at fair market value. Construction of the proposed facility would likely generate additional business and jobs in the corridor upon implementation because of the improved access it would provide.
4	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)

I am writing to state my opposition for the proposed expansion of Loop 202/ South Mountain Freeway. I want to advocate " no built" as only the option that preserves the environment, health of Laveen & Ahwatukee resident & respects O'dham traditions.
Sencerely,
Eli Peremislov

1 ***
2 THE REPORTER: Please state your name.
3 MS. PEREZ: Rolinda Perez.
4 I think the comment I have is that it's
5 stating that the air quality is going to be perfect,
6 I mean, a lot better with the freeway. I mean, I
7 really don't think that way, because my family -- all
8 my family, they're asthmatic. And the reason why we
9 live here in this community is because there is not
10 pollution ever. The only way we ever see pollution,
11 if you see it in the -- if you're sitting down in the
12 daytime, you can actually see by South Mountain the
13 pollution that's coming from Phoenix, you know, the
14 smog, or the non-clarity on that side.
15 And then with the fire that just came,
16 like two weeks, three weeks ago we had a fire from a
17 hay fire, that smoke alone had a lot of our allergies
18 inside the clinic. So that smoke alone, my daughter,
19 it triggered her more. We had to have more
20 medication for that. And when I spoke to that lady
21 about it, she said with the freeway and more vehicles
22 coming onto the freeway, the air quality is going to
23 be even better, because it's pushing all that air
24 away. And I don't get that. I don't get that.
25 And then I told her, that's -- you're

going to have three to four lanes, or whatever it is. It's going to -- and more vehicles with diesel on there, and everything else. I see a lot of vehicles still have -- they're not up to date on their emissions tests, so they're not fixing those vehicles. And you can see that smoke coming out of their mufflers. And she said, "Well, you guys have a road down 51st in this area anyways," but there's not a lot of vehicles. It's mainly just for the community members or you see -- it would be ten times more now if we get it. And that is just my concern is that -- it's -- you know, I have asthma, and then my daughter, who is six years old, has asthma.

By the time it comes -- I mean, it's more our children. And I'm just concerned about that. Is that I don't understand how they say the air quality is going to be good. I really don't think so, because I've lived in Phoenix for a while now, and coming here to this community, it's so much better. It's so much better. My asthma, I don't take medication for it anymore. I have an emergency inhaler, but I hardly ever get it. And I'm under control here.

And I'm just concerned about that, so I just wanted to speak my mind on that.

It is extremely important to the future quality of life in the valley that the 202 through South Mountain be completed. It is imperative that we stay ahead of the traffic curve as the population in the valley continues to increase. The 202 will act as a "reliever" and divert traffic that would otherwise be forced to go through the heart of Phoenix, clogging our roadways.

This is the single most important roadway project in the valley in the last 20 years and we must do everything in our power to complete is with the utmost urgency.

I urge you to do anything you can to see this project through.

Respectfully,

Fredrick Peterson

ADOT Loop 202 South Mountain Freeway Study
1655 W Jackson Street, MD 126F
Phoenix, AZ 85007

1 2 3 4 5 6

I want to register my opposition to the proposed 8-lane freeway on the Pecos Road alignment. Tearing down houses and Mountain Park Community Church doesn't make much sense. This route was proposed in 1988 that's over 25 years ago. I hate to imagine what Ahwatukee is going to become with the increase in noise and poor air quality caused by all the trucks using the road as a Phoenix bypass. There has to be an alternative route such as Riggs Road. I would hope ADOT would stop their plan to destroy our neighborhood.

Adrienne Petraitis

1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
3	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Air Quality**	
5	**Purpose and Need, Truck Bypass**	
6	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.

From: Bruce Piper
To: Projects
Subject: 202 loop through Ahwatukee
Date: Tuesday, June 04, 2013 5:40:56 PM

1
2 3
4 5 6

Hello,
I would like to voice my strong opposition to this project. Ahwatukee residents live here because of the quiet, crime free environment. Adding this freeway would ruin our area. There is no businesses out here and therefore no reason to build the freeway. If connecting the freeways is the main objective then run the freeway parallel to 51st ave down and away from Ahwatukee. According to the national association of Realtors, living within 1 mile of a freeway off ramp increases your chances of being the victim of a crime by 50%! This means the state is increasing the risk of many of us that own half million dollar homes. Home values will plummet and that will decrease property tax revenues dramatically. If approved, I personally know many people that will sell their homes.

Thank you for reading.

Bruce Piper
HomeSmart Real Estate

1	**Purpose and Need**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
3	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
4	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
6	**Economics, Socioeconomics**	Table 4-23 on Final Environmental Impact Statement page 4-63 displays projected property tax impacts on the various affected jurisdictions from right-of-way acquisition and future land uses related to each of the action alternatives. Property tax impacts from implementing the W59 Alternative would be about twice those resulting from the E1 Alternative. The loss in annual City of Phoenix tax revenues from implementation of the E1 Alternative are discussed on page 4-64 and would, given all tax revenues for the City of Phoenix, "be nearly inconsequential."

Comments on the Proposed South Mountain Freeway

1 2

I am opposed to the proposed South Mountain Freeway for many reasons but primarily because it is not needed and will not solve the traffic problems described in the draft Environmental Impact Statement and there are better and far less expensive alternatives.

First, it is irrelevant this freeway has been proposed since 1985. It should be evaluated based on today. The proposed Paradise Parkway was also proposed in 1985 and has been eliminated for many of the same reasons the South Mountain Freeway should be eliminated.

3 4

There is no question as to the excessive traffic now and the likely traffic increases at the Broadway Curve on I-10. However, if one is to conclude the South Mountain Freeway is going to help this situation one would have to believe the Broadway Curve traffic is caused by vehicles transiting Phoenix and leaving on I-10 westbound towards Los Angeles. This is categorically false. As anyone who drives I-10 into Phoenix (or out) during rush hour knows, as soon as traffic passes SR-143 just past the Broadway Curve it thins out appreciably and is no longer heavy into downtown Phoenix.

3

The study concludes that over 50% of projected growth will be in areas "immediately served" by the proposed freeway. One of the communities cited in the study and projected for significant growth is Chandler/Gilbert. It is a monumental stretch to conclude these people will be served by the new freeway. The only time this would be the case would be if they need to go to the west valley or towards California. It is simply not true they will be significant beneficiaries of the project.

3 1

Ahwautukee, easily the most impacted of the communities "immediately served" by the freeway is projected to have only 8.5% population growth between now and 2035 or just .38 of 1% per year. Again, no one in Ahwautukee will use this freeway except to go to the west valley or California. The study provides no data on projections for either Ahwautukee or Gilbert/Chandler residents to actually use this freeway probably because the numbers would be so low.

I do believe the growth numbers for the southwest valley but that's a very small stretch of freeway miles. If ADOT honestly believes west valley residents will use the freeway to drive to work at the technology companies in Chandler they would be pursuing a strategy of encouraging extreme commutes to work which is certainly not a mainstream strategy. Southwest valley leaders have suggested the freeway will lead to a regional mall as the 82,000 residents of Ahwautukee are added to the Laveen "area." If anyone seriously thinks Ahwautukee residents are going to drive to Laveen to shop they have totally lost their minds. If it's important for Laveen residents to be able to have a freeway access to I-1- then build one that's about 5 miles long.

5

6

I am shocked the I-8/SR 85 alternative required upgrades are misstated and this alternative "does not meet the proposed access purpose." If support for this last statement is in the study I missed it but

Code	Issue	Response
1	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative). As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway.
3	**Traffic**	Information related to origins and destinations of motorists that would use the proposed freeway is presented in Figure 3-18 on page 3-36 of the Final Environmental Impact Statement. The definition of freeway users considers only those motorists who travel through the South Mountains; so, motorists who begin their trips in Ahwatukee Foothills Village and travel east to Interstate 10 (Maricopa Freeway) or motorists who begin in Laveen Village and travel north to Interstate 10 (Papago Freeway) are not counted in the analysis. The analysis of origins and destinations shows that 73 percent of travelers would be involved in trips beginning or ending in the Study Area or areas immediately surrounding it. Seven percent of the trips would begin, end, or begin and end outside of the Maricopa Association of Governments region; ten percent would either begin or end in Pinal County.
4	**Traffic**	In 2035, the average daily traffic on the proposed freeway is projected to range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-62). The estimated volume depends on location. The purpose and need for the South Mountain Freeway are not solely to relieve congestion on Interstate 10 (Maricopa Freeway). Facilitating mobility in the Maricopa Association of Governments region does not mean just relieving congestion on the Broadway Curve (see Draft Environmental Impact Statement page 1-21). Among other criteria, the proposed freeway is to permit the entire Regional Freeway and Highway System to function as designed. Optimal function of that design includes completing all the segments of the Loop 202 system (see Draft Environmental Impact Statement pages 3-35 and 3-37). With implementation of the South Mountain Freeway, many motorists would be able to get from Point A to Point B, a route that never included needing to use Interstate 10.

(Responses continue on next page)

Code	Comment Document
6	cannot understand why this alternative is not seriously considered. I-8 requires no upgrades including adding lanes. It is a poorly utilized stretch of interstate highway now. An interchange will be required between I-8 and SR 85 and between SR 85 and I-10 but little additional work on SR 85 will be required until it nears I-10 west of Phoenix. This alternative will cost a fraction of the South Mountain Freeway cost. A bigger question is why isn't this alternate route being used already? ADOT appears to be secretly promoting the South Mountain Freeway as a Phoenix bypass but fails to provide data supporting this need and, in any case, cannot explain why the existing and quite useable bypass – even without upgrades – is rarely used.
7	Many pages are devoted to working with the Gila River Indian Community but it does appear to be just words. Everyone knows ADOT has not seriously pursued putting the freeway on the reservation and doesn't appear to seriously consider GRIC objections to the project on multiple environmental grounds.
8 9	ADOT makes a poor presentation as to the need for this enormous expenditure but even this inflated price is only obtained by building a cheap project at grade obviously without considering the quality of life issues for both Ahwautukee and the GRIC.
10	Finally, I doubt this project will ever be built. There will be legal challenge after legal challenge that at a minimum will delay the project for years and add millions of dollars of cost. At the end of the day there are going to be hard questions as to why ADOT/MAG have blindly pursued such an unpopular and semi-useless project when there are many better ways to invest in our transportation infrastructure.
	Paul E. Poer 480-759-8796

Code	Issue	Response
5	**Alternatives**	According to 23 Code of Federal Regulations §771.111(f)," the action evaluated in the environmental impact statement must connect logical termini and be of sufficient length to address environmental matters on a broad scope...". The proposed action should satisfy the project need and should be considered in the context of the local area socioeconomics and topography, the future travel demand, and other infrastructure improvements in the area. A partial freeway from Interstate 10 (Papago Freeway) to Laveen Village is not feasible because it would not meet the proposed freeway's identified purpose and need.
6	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
7	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Design**	The cost estimates for the proposed freeway, as described beginning on page 3-59 of the Final Environmental Impact Statement, were developed in accordance with accepted engineering practices by professional engineers. The project has been subject to multiple peer reviews of both the quantities and unit costs used in the estimate by the Arizona Department of Transportation, Federal Highway Administration, Maricopa Association of Governments, and their consultants. In each case, the estimate was found to be reasonable and accurate. The proposed project is part of the *Regional Transportation Plan* for the Maricopa County region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
9	**Design**	Depressing the proposed Pecos Road sections would entail installation of pump stations to drain the main line freeway. A depressed freeway would also need a drainage channel to capture the off-site flows to prevent their entering the freeway. Pump stations were not used because of the high cost of construction and maintenance needed for their operation. The preferred freeway configuration would have the E1 Alternative aboveground and the existing culverts extending to pass the drainage under the freeway. Pecos Road currently has numerous existing culvert crossings. Depressing the freeway in this area would eliminate the existing culvert crossings and potentially have adverse flooding impacts on adjacent properties. Extending the existing culverts or upsizing the culverts would maintain or improve drainage flows. This would ensure that there would be no adverse flooding impacts on adjacent properties. (See Final Environmental Impact Statement pages 3-15 and 3-18.) To reduce impacts by depressing the proposed freeway in the Eastern Section, the Arizona Department of Transportation would: - need to spend an additional $400 million for right-of-way acquisition and construction - displace an additional 300 residences - maintain additional pump stations and detention basins for the life of the freeway - observe noise-related impacts requiring mitigation (i.e., noise barriers and their associated costs and visual impacts) Because the belowground option would result in substantially greater costs and residential displacements, this option was eliminated from further study.
10	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

Comments must be received or postmarked by July 24, 2013. While everyone is within their rights to speak to this project failure to complete this needed and valuable freeway harms not only the current generations but those who will depend on this freeway in the future and at this time have no say due to their age or having not been born yet.

This freeway is well planed and has in my opinion less negative impacts than the many positive impacts.

In todays political area government gets too much of a negitive reception due in large part to negativity being more promenent

We would like to voice our opposition to the proposed South Mountain Loop 202 Freeway. The demolition of many homes, a church, and beautiful park land would have an adverse effect on our wonderful community, particularly through Ahwatukee.

Please consider the 'no build' option, and put the funds toward other much-needed improvements instead.

Respectfully,

Steve and Lisa Pomraning
1580 W. Saltsage Drive

To Whom It May Concern:

1

I support the construction of the South Mountain Freeway. The freeway is sorely needed in order to alleviate traffic throughout the valley. I applaud the efforts of the team who did the environmental impact study. Their findings show that construction of the freeway is simply the best option. Also, I favor their recommended routes. I hope that the South Mountain Freeway can be built with all possible speed. Thank you.

Sincerely,

Dan Pratt

1 2

I feel if is very important that we move away from making more freeways and pay for more buses and extending the light rail. It will be much better for the environment and increase tourism to our great state. I can tell you it is always much nicer when I travel to cities with good public transportation. The light rail is a great start but it really needs to be extended into Scottsdale and north Phx / Glendale. We also need better bus routes that arrive more frequently. I'm very against this plan.

Please stop any plans to continue to build the 202. I think it's can be agreed that the last extension of the 202 has done nothing to relieve traffic on the 10, 17 or 60 and other parts of the 202. There is no need to waste money on a big freeway, you just need to extend pecos road. No need for the 202.

Thanks,

Ron Price

1	Briana Price Document Created: 5/21/2013 1:12:23 PM by Web Comment Form South Phoenix/Laveen NEEDS the Loop 202 W59 freeway!!!! As a resident of this area we have to travel east to Tempe, Ahwatukee or west to Avondale, Tolleson for shopping and movie theaters and kids programs. We deserve to have all the amenities as other communities and the proposed W59 will do that for us. It will bring in anchor retailers and a movie theater and a hospital, etc. Other routes will not do that. So Yes we need the freeway and yes we need the W59 route!!! Also, for those communting around the South Mountain having closer freeway access will shorten those commutes and make travelling around the vally easier and quicker for all of us. It will also cut down on congestion along Baseline Rd and surrounding areas as we can stay in our local community and/or get on the new freeway. Our surface streets and packed and we've had so many accidents here lately I feel partly due to the congesting and fact that people are so busy and having to travel great distances to get where they're going. Just as the west Loop 101 has done for the NW valley, the South Mountain Freeway Loop 202 W59 will do for the SW valley...it just has to be done! We need the infrastructure!

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

My home is located very near to all of the freeway options. I'm located at 78th Lane just north of Broadway Road in Phoenix.

1 After reviewing the video it appears that the preferred choice is the W59 Alternative. I am in agreement with this option.

Submitted@public hearing on 5/21/13 @ 11:15 am.

From: Mark and Lisa Prieto
To: Projects
Subject: re: South Mountain Freeway
Date: Wednesday, July 24, 2013 2:19:38 PM

Hello. This email is a response to the request for public comment in regards to the South Mountain Freeway Project.

1 2 As a 13 year resident of the Ahwatukee Foothills, the details of this project make me incredibly sad that those who are in a position of leadership in our state government are so willing to destroy such a lovely community in the interest of a project that should have been trashed decades ago. Having been here as long as I have, I also have a perspective of the information provided to this community that is different than the one that ADOT pushes in the press.

While it is true that the freeway has been 'on the books' for decades, the amount of information was nothing like what is portrayed in the press. I purchased my first home in Ahwatukee in 2000. At that time the builder was obligated to disclose the planned freeway. The public information available at the time consisted of a red line on a map that appeared to be South of Pecos Rd. There was no funding, no comprehensive plan, no info on how many lanes or where on/off ramps would be etc. When I purchased my second home, where I live now, it was previously owned. There was no disclosure of the freeway by the previous owner, so had I not already been aware of it, it would have been a big surprise to me! Which I believe is probably the case for a lot of the residents that currently reside in the area. So to those who insist on pointing out that the project 'was on the books.' I say, that doesn't mean it was common knowledge. I purchased my current home in September of the year after the Prop passed. The first comprehensive information was made available to public that following November, thanks to the Proposition that passed granting funding. A proposition that I believe only passed because the freeway was wrapped up with the funding for the light rail! That is the other misconception that ADOT insists on pushing in the press. I keep reading that the public voted for it, so it must be done. In truth, the public voted for the light rail. Every single person I know that voted for that proposition did so because they were in favor of the light rail. Most were not even aware of the inclusion of funding for the South Mountain Freeway. Which goes to show that what people really want is a functional mass transit system. Something we still don't have.

3 4 5

My husband and I both work within 15 minutes of our home. We have always worked within reasonable commuting distance from where we live. That is a responsible choice. Another excuse I keep hearing for why this freeway is a must, is that it will help people commute from the far out areas to the East Valley and back for work commute. WHY would we want to encourage that. Why live in Laveen if you want to work in Chandler. There are plenty of nice communities in the Chandler area, live there. Or work in Laveen, or South

6

Code	Issue	Response
1	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
2	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Neighborhoods/ Communities**	Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.
4	**Public Involvement**	Information related to freeway awareness is presented in the Final Environmental Impact Statement on page 4-13.
5	**Acquisitions and Relocations**	The text box "Freeway Awareness," on Final Environmental Impact Statement page 4-13, provides a thorough history of the public disclosure of the proposed South Mountain Freeway, beginning with a map made public in 1980 and one in 1984 showing more or less the current alignment. This text box also explains the legal requirements for developers and other home sellers to "inform potential buyers of conflicts with planned transportation projects like the proposed action." The Southwest Loop Highway—the South Mountain Freeway predecessor—was integral to the Regional Freeway and Highway System approved by Maricopa County voters in 1985. Although other facilities were considered a higher priority early in development of the Regional Freeway and Highway System, the South Mountain Freeway has been included in every subsequent update. The same route was approved by the State Transportation Board in 1988. In 2004, Maricopa County voters approved Proposition 400, which was designed to fund completion of the remaining segments of the Regional Freeway and Highway System, including the proposed South Mountain Freeway (Final Environmental Impact Statement page 1-21).
6	**Traffic**	Information related to origins and destinations of motorists that would use the proposed freeway is presented in Figure 3-18 on page 3-36 of the Final Environmental Impact Statement. The definition of freeway users considers only those motorists who travel through the South Mountains; so, motorists who begin their trips in Ahwatukee Foothills Village and travel east to Interstate 10 (Maricopa Freeway) or motorists who begin in Laveen Village and travel north to Interstate 10 (Papago Freeway) are not counted in the analysis. The analysis of origins and destinations shows that 73 percent of travelers would be involved in trips beginning or ending in the Study Area or areas immediately surrounding it. Seven percent of the trips would begin, end, or begin and end outside of the Maricopa Association of Governments region; ten percent would either begin or end in Pinal County.

Code	Comment Document

Phoenix.

In short I believe this freeway is a mistake. I reviewed the information from the recently released impact study. While it does a very good job of trying to put a positive spin on things, using all the benefits for Laveen, it completely ignores the negative impact to the residents of Ahwatukee. Crime rates will go up, traffic will increase on our community streets, the quality of the air in Ahwatukee will be negatively impacted, the health of the residents, especially the children will be negatively impacted. I don't think the positives listed in the study come anywhere near balancing the scales with negative impact on the people in this community.

7 8 9 10

I have tried to keep my comments on the negative effect I think it causes my community as whole. But I also want to take a quick moment to focus on my own family. I live less than a mile from Pecos Road. I have 5 children, including one with a severe heart defect for which he has undergone 3 open heart surgeries. The negative health impact this freeway could have on my family is enormous. Although the perception is that everyone in this community is rich, that is incorrect. Some of us just made necessary sacrifices in order to provide our children with a home in a good community, with good schools. We can't just move. And ADOT has not given us any definitive indication whether our home is in the destruct zone, nor have I seen any mention of compensation for those within a mile of its construction.

11 12

I voted no on the proposition that provides funding for this freeway. I am against its construction 100%. I think it is a mistake of epic proportions being made to line the pockets of a few. I think that if ADOT really wanted to, they could find a better alternative. I think that 1.9 billion would be better spent on a functional mass transit system.

13 14

Code	Issue	Response
7	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
8	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
9	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
10	**Health Effects**	
11	**Acquisitions and Relocations**	
12	**Acquisitions and Relocations**	Agencies may acquire only those properties located entirely or partly within the project right-of-way limits (see Final Environmental Impact Statement page 4-45).
13	**Alternatives, Nonfreeway Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
14	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

I live in the West Valley. Access to the southern, east side of town is cumbersome and most often congested. Unless I take surface streets, I-10 is my only option. I support the proposed 202 South Mountain Freeway! When I first moved here in 2000, this freeway was being discussed, we still don't have it. It is time.

Subject: Re: Proposed South Mountain Eastern section (Ahwatukee).
Date: Sunday, June 16, 2013 8:25:55 PM

Re: Proposed South Mountain Eastern section (Ahwatukee)

1 Why not consider a parkway with no truck traffic? They have these in the North East . They allow relief of traffic congestion with out the impact of heavy truck traffic (Environmental,Safety and increased congestion) and are aesthetically appealing. Why are 2 the needs of the Gila Indian Reservation paramount to all other parties involved. As a group they stand to gain the most from the freeway expansion; increased traffic to their Casinos, Resorts, Outlets (thus increasing overall income to the community) and access to a new freeway for their whole community. All these benefits with absolutely no compromise on their part. The Gila Indian Reservation needs the revenue to help their citizens. I attended a corporate luncheon in the past. We were asked to bring can goods to donate to the community. I find it hard to understand why a community that has citizens that are economically disadvantaged would not be more open to other alternatives. If the Freeway must be built why not have it aligned 1 mile south of Pecos road on the Gila Indian Reservation (connecting at the I-10 ,Pecos 202 interchange then south for 1 mile ,then running east to west around Ahwatukee). This would accomplish two things and be a reasonable compromise for the citizens of Ahwatukee and the Gila Indian Reservation. First it would allow the sovereign citizens of Ahwatukee to remain an intact community and avoid increased crime, drop houses, environmental impact (potential chemical spills, accidents, pollution etc.), displacing (homeowners, businesses and churches), noise pollution and a lower overall quality of life for the Residents and Families of Ahwatukee. The Gila Indian Reservation could benefit from monthly lease payments from the AZ DOT or out right purchase of the land. They would have all the previous benefits mentioned and the additional benefit of extremely valuable commercial and potential residential land to sell, lease or rent to businesses and developers for light industrial commercial development and residential etc. They would also have the opportunity to increase their own communities commercial ventures allowing the Gila Indian Reservation viable economic opportunities for all of its citizens to prosper in the future. If the freeway is to be built a parkway south of Pecos is the best alternative.
Thank you for your consideration,

3 4 5 6 7 8

Ahwatukee Resident 10 Years

Brian, Monica and Luke Putnicki

Code	Issue	Response
1	**Alternatives**	In the best-case scenario, a parkway would carry approximately 105,000 vehicles per day, well below the average daily traffic on the proposed freeway, which would range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-19). As a result, the Arizona Parkway would lack sufficient capacity to meet projected travel demand. The Arizona Parkway would not adequately address the projected transportation system capacity deficiency, would not remove a sufficient amount of traffic from arterial streets, and, therefore, would not meet the project's purpose and need. For these reasons, the Arizona Parkway was eliminated from further consideration.
2	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
4	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Air Quality**	
6	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
7	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

I am writing to oppose the South Mountain Loop 202 Freeway. I have lived in Ahwatukee for 23 years. My favorite activity is hiking at South Mountain Park. This freeway will bring crime, pollution. nosie, and the danger of a toxic waste spill from the many poorly regulated Mexican trucks that will passing nearby. It will also damage South Mountain Park with its wildlife and hikers. For what purpose ? Only to shorten trips for a few trucks. Very few people commute between the Ahwatukee area and the far west side. I work in downtown Phoenix and will never use the new freeway because of time and distance. The money could better be used for light rail or other less polluting forms of transportation. I urge you not to sacrifice beautiful Ahwatukee for the sake of convenience for a few trucks.

Wayne Pyle, a 37 year resident of the Phoenix area

9	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative). As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway.

To whom it may concern

1 It is my believe the SM 202 will improve Phoenix's image, reduce every day traffic congestion, and related air pollution, time and money wasting. It would help the economic development in Laveen and Southwest Phoenix as well, which we could all benefit from.
I support the plan strongly.

Sam Quinn

1 2 3 4 5 6 7

Hello. I am writing in opposition to the building of the South Mountain Freeway. I find the proposed construction of this highway deeply troubling due to a) its intrusion into sacred and historic sites of the native community of the area, b) its impact on natural areas, and c) the fact that it further commits our community to a car culture that will exacerbate sprawl, noise and air pollution, and climate change.

8 9

As a relatively new resident in the Phoenix area, I have been quite dismayed by the lack of widespread mass transit options. This would seem to be a wonderful opportunity to redirect the billions to be spent on yet another highway toward innovative and wide-reaching transit options that encourage residents to move away from car travel and toward more sustainable transit options. This is particular urgent as we see our area experiencing the impacts of climate change, especially in regard to rising temperatures and stress on our water supply. Continuing to promote car travel can only make these problems worse.

Fyi, I have given up my car for a bicycle, and thus am trying to do my part for a more sustainable future for our area.

David Radcliff
Director
New Community Project
Peoria

1	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Section 4(f) and Section 6(f)**	
3	**Biology, Plants, and Wildlife**	
4	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.
5	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Air Quality**	

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
7	**Air Quality**	Climate change is an important national and global concern. While the earth has gone through many natural changes in climate in its history, there is general agreement that the earth's climate is currently changing at an accelerated rate and will continue to do. Human-caused greenhouse gas emissions contribute to this rapid change. Carbon dioxide makes up the largest component of these greenhouse gas emissions. Other prominent transportation-related Greenhouse gases include methane and nitrous oxide. Greenhouse gases trap heat in the earth's atmosphere. Because the atmospheric concentration of greenhouse gases continues to climb, our planet will likely continue to experience climate change-related phenomena (see Final Environmental Impact Statement pages 4-85 through 4-86). To date, no national standards have been established regarding greenhouse gases. Greenhouse gases are different than other air pollutants evaluated in federal environmental reviews because their impacts are not localized or regional due to their rapid dispersion into the global atmosphere. The affected environment for greenhouse gas emissions is the entire planet. In contrast to broad-scale actions such as those involving an entire industry sector or very large geographic areas, it is difficult to isolate and understand greenhouse gas emissions' impacts for a particular transportation project. Furthermore, presently there is no scientific methodology for attributing specific climatological changes to a particular transportation project's emissions. Under the National Environmental Policy Act, detailed environmental analysis should focus on issues that are significant and meaningful to decision making. The Federal Highway Administration has concluded, based on the nature of greenhouse gas emissions and the exceedingly small potential greenhouse gas impacts of the proposed freeway (as shown in Final Environmental Impact Statement Table 4-37 on page 4-85), that greenhouse gas emissions from the proposed freeway would not result in "reasonably foreseeable significant adverse impacts on the human environment" [40 Code of Federal Regulations § 1502.22(b)].
8	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for transit projects nor would not constructing this facility make available additional funds for other transit projects.

Joe Ray Document Created: 5/2/2013 10:46:27 AM by Web Comment Form

We have relocated to the beautiful, peaceful, village of Ahwatukee recently, and are very saddened that a highway would be considered to skirt our schools and houses. The traffic noise is already bad coming from Pecos, so cannot imagine living there when 150,000 vehicles travel this proposed route. This not only presents a noise problem, but a crime problem as well. Ahwatukee has been somewhat protected/isolated from the surrounding areas, and we want it to stay that way. Pollution is another obvious concern that politicians will continue to deny, and lie about. If this is approved, our property values will plummet. Will you compensate us? Our house will go up for sale same day, if this disaster is approved. If it doesn't sell? It will go abandoned, like so many others. We cannot and will not live on a corridor.

1	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
5	**Acquisitions and Relocations**	Agencies may acquire only those properties located entirely or partly within the project right-of-way limits (see Final Environmental Impact Statement page 4-45).
6	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

I saw the article about the PARC meeting held in relation to the release of the DEIS. The freeway is good for the community and needs to constructed sooner rather than later. The PARC only had 50 people show up to their meeting so I think that is indicative of their lack of support.

1

Keep up the good work and break ground asap.

Subject: Questions regarding the DEIS for South Mountain Loop 202

1

In regards to the proposed South Mountain Loop 202, please identify the specific air quality study or studies that personnel at the Maricopa Association of Governments (MAG) supervised, reviewed, or had any input with. Please identify the names(s) of MAG personnel involved with testing or reviewing testing.

1	**Purpose and Need**	There are numerous reasons why a federal lead agency may select a no-build alternative. Changes in funding, agency policy redirection, agency restructuring of priorities, changes in human and/or natural environmental conditions, and public sentiment are just a few examples. As related to the proposed action, the lead agency has identified an action alternative as its preference. No factors, such as those cited above, would currently alter that preference. Certain members of the public would argue that, given some public sentiment against the project, there is sufficient reason to pursue a no-build alternative. However, as documented in the Final Environmental Impact Statement and in this appendix, substantial support from members of the public has been expressed for the Preferred Alternative.

In regards to the proposed South Mountain Loop 202, please identify the following concerning air quality testing associated with the project:
Name of firm(s) conducting testing;
Dates that tests were conducted on;
Specific locations tests were conducted at; Devices used to conduct tests; Dates devices were calibrated on, and names of personnel conducting the calibration; Names of personnel who actually performed tests; Credentials of individuals conducting testing.

1	**Air Quality**	For the purposes of the Draft Environmental Impact Statement, only limited meteorological monitoring occurred. At the request of (then) Arizona State Senator John Huppenthal, short-term monitoring of meteorological conditions at Pecos Road and 24th and 40th streets was conducted during 2006 and 2007. Results of this sampling were included in the air quality technical report for informational purposes only. All other air quality monitoring and reporting discussed in the Draft Environmental Impact Statement (see the discussion beginning on page 4-58) was completed by the Maricopa County Air Quality Department and the Arizona Department of Environmental Quality.

In regards to the proposed South Mountain Loop 202, ADOT exhorts motorists via overhead signs on freeways to Carpool, Vanpool, or telecommute during high pollution advisory days in Maricopa County, AZ. This is so because motor vehicles cause particulate matter - "dust" - to be propelled into the air. Please explain how adding the South Mountain Loop 202 freeway will not exacerbate particulate matter pollution in Maricopa County, AZ caused by motor vehicles.

Code	Issue	Response
1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Emissions from road dust and additional sources were considered in the quantitative project-level particulate matter (PM_{10}) hot-spot analysis prepared for the proposed project. The results of the analysis are summarized in the prologue to the Final Environmental Impact Statement (page xiii) and are more fully described beginning on page 4-68 of the Final Environmental Impact Statement. The carbon monoxide and particulate matter (PM_{10}) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.

Subject: Loop 202

1 2 3 4 5 6 7 8 9

I moved to the Ahwatukee area 19 years ago to get out of central Phoenix. I wanted to be next to the mountains, cleaner air and the beauty of the desert. I was born in Arizona and have only seen major distruction of neighborhoods, families and businesses all for the sake of development and growth. I was never told about this freeway or I never would have settled here, but I did and now I can not afford to move. This is the only area in most the world where you will find flora and fauna vendictive to this small area which will be destroyed by this freeway. I see no reason to build this freeway at the location chosen. There is Hwy 8 and interstate 85 further west. I have not seen any other plans only the one to destroy South Mountian Perserve. Ahwatukee is a cultisac and with the largest city park in the world! It needs to remain that way for the health and safety of its residents.

I hired a private compnay to take air pollution measures at the entry way of my home, being I have asthma I was concerned. Those measurements came out to be at industrial park levels! I installed an industrail type air cleaner on the intake system of my home. A freeway anywhere close to the Warner /Elliot Loop or Ray /Chandler loop will only make the air even more polluted, unhealthy and unsafe.
When do we as humans say enough is enough with growth and development!?
I support a "no" build on this freeway.

Rene

1	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
2	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Alternatives, E1 Alternative**	
4	**Purpose and Need, Lack of Support**	
5	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
6	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. To whom it may concern,

1

I am in complete support of building the South Mountain Freeway in Phoenix. Traffic Jams continue to be an issue in our city and this freeway will help cut out some of the congested areas in Phoenix, which will save Phoenician's money and time. After reading about a study from ADOT the traffic in this area is only expected to get much worse in the coming years.

I only see positives coming from this project - saves Phoenician's time and money, improves air quality, and creates job for thousands of poeple.

Thanks so much for your consideration, I do hope that ADOT decides to move forward with building this worthwhile project.

Tiffany Reddy

I have been waiting years for this Freeway to come about. Obviously if the voters keep voting it in they want it built. I live in the west valley and have to travel to the east valley to work every day. I have been watching this project fail in every which way and just wish a decision would be made to proceed and build it. The congestion on I-10 is ridiculous not to mention the traffic accidents that happen on that freeway every day. I would think this Freeway would have been top priority for the state of AZ for that reason alone, to stop unnecessary traffic from traveling through downtown to get to Tucson. Please hurry and proceed with the 202 S Mtn Freeway.....

I am very much in support of the 202 freeway South Mountain extension. I lease shopping centers in Phoenix, Arizona and I deal with the congestion everyday of my shopping centers basically encompass the west valley from 7th Street to Goodyear/Avondale area. The 10 freeway is always congested and always a nightmare and it's so difficult to take the 10 into Ahwatukee from the west side. This will make an immense difference in the congestion on the 10 and the travel time between the west valley and the Ahwatukee/Chandler area. Thank you very much.

As a member of the Laveen Village Planning Committee, I would like to submit my POSITIVE statement FOR the 202 South Mountain Freeway. The residents that have moved here since 1993 have all been aware that this freeway was going to happen and was voted in by the taxpayers in 1985. We understood the impact this Freeway would have on our lives and we committed to move here with that knowledge. I have watched the videos provided, looked at all the material on the site and in person, and agree that this is a project that not only the local area needs but, will help to connect the commuters from around the valley and give much needed relief from our existing freeway system.

As far as the EIS goes, I would hope that this freeway is built with the same attention to detail, wildlife, and preservation as the rest of the valley. Enhancements like rubberized asphalt, sound barriers, and esthetically pleasing on and off ramps. Keeping true to the rural and farming traditions that have always been in the Southwest Valley.

Subject: No to South Mountain Freeway Expansion
Date: Monday, May 27, 2013 8:56:23 PM

Hello,
I'm a resident of Arizona. I am emailing to state my opposition and demand that South Mountain Freeway planning be brought to an end, once and for all. While Scenario A is the closest to a desirable plan, extreme shifts in the state's focus on public transit and bike lanes must be stepped up beyond this proposal's current state. 1

ADOT's development of the Tentative Five-Year Transportation Plan due to budget restraints makes it apparent that not only is South Mountain Freeway an economic detriment, but a cultural and environmental disaster waiting to happen. 2

The participation of (insert office name) in the destruction of South Mountain is a clear indication that it does not uphold the best interests of the O'odham tribes and local communities of Awhatukee and Laveen. 3
• This mountain is held sacred by all O'odham tribes. This type of damage is irreversible and no amount of monetary compensation would ever replace this sacred natural treasure. 4
• After 30 years of this freeway's planning, an Environmental Impact Statement (EIS) has still not been presented. 3
• The freeway would impose on a critical wildlife corridor for various threatened desert animals and fragile ecosystems unique to both the Estrella and South Mountain ranges. 5
• It is well-known that Phoenix city's and surrounding areas' air quality is becoming increasingly harmful to residents. Building this freeway would further spread poor air quality in part of the Phoenix valley. 6
• Allocating funds to forms of transportation that lead to further environmental degradation will only take Arizona residents down a road to increased health risks that will eventually drive more individuals to leave the state. 7
Statewide communities oppose your further involvement in the environmental, cultural, and sacred destruction of South Mountain. 8

Thank you,
Reva

YES.....this freeway should be built....plain and simple....the reason: it will send part of the 1-10 traffic away from the Phx area, creating a lesser traffic buildup, especially around the Broadway Curve. There is plenty of land to consume. I hear that some of the land is on Indian property and considered sacred....well, build the freeway, and give them back some of the cost. Building the freeway will also create a lot of job, for an extended period of time! Plus, build a QuikTrip along the freeway, and I guarantee people will go there for gas or other items.

It's time to break ground, and get the construction people building the new South Mountain Freeway!

Brad Rex

Subject: Comments in opposition to South Mountain Freeway

Jul 15, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer.
(3) ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(4) (5) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(6) (7) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(8) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(1) Please help protect our communities, our health, and our environment by selecting the No Action

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Health Effects**

Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

Subject: Comments in opposition to South Mountain Freeway
Date: Wednesday, July 24, 2013 3:06:22 PM

Jul 24, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) (3) (4) (5) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief while at the same time permanently damaging our beautiful park and the wildlife that inhabits it. We are so blessed here in the Valley of the Sun to have this wondrous park right in the middle of our city and it would be a disgrace to ruin that for the benefit of some that need to get to where they are going a little sooner. This will not reduce traffic -- the only way to do that is get cars off the road. The negative permanent effects of this freeway plan are permanent to our park, our wildlife, our air, our community.

(3) (4) (6) Please do not damage South Mountain with this disastrous build plan

(3) (4) It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(2) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Ms. Jacki Richards
2083 E Laguna Dr

CALLER REMARKS/QUESTIONS:

1 I thought for years they ought to get that freeway in process down there. It would really impact the other freeways. Take some of the heat off from them especially in Ahwatukee. I would be a faster way to get around and I'm fully in support of that. So, thanks, bye.

Wy we need to build the 202 –

It's voter approved, better for the environment (less exhaust than cars at a standstill due to congestion), little impact to displacement of families (City/State owns 90% of the land), no impact to Gila River Indian Reservation, and minimal impact to South Mountain Park. No current access to healthcare, more taxes in mean more revenue for schools (which are already strapped for resources), 4.5MM dollars is lost tax revenue (based on BLS data) to other cities because we shop in Glendale Avondale Chandler. Current road infrastructure is not made to support the traffic as it stands (Laveen doubled in size and will continue as forecasted to double again) BASELINE AND DOBBINS ARE ALREADY CLOGGED WITH TRAFFIC. THE PAVEMENT IS ALREADY COLLAPSING DUE TO OVERUSED DUE TO TRUCKING TRAFFIC. We need this freeway!

Terry Richardson
5218 W. Gwen
Laveen, Arizona 85339

I would like see the L202 built on the preferred route for the following reasons:

1) The Avenues between 43rd and 67th avenues and the Salt River and I-10 have a very high concentration of businesses, including major trucking companies, a tank farm, and large warehouses. These businesses have heavy truck traffic day and night. To locate the new L202 away from these businesses would only add to the present gridlock.
2) I live south of the Salt River in Laveen. The 59th Avenue preferred route would add an additional bridged river crossing for the folks living west of 59th Avenue, south of the river. This would give some relief to Baseline Rd. and 51st Avenue in the morning rush hours.
3) I am not for putting the L202 on the Gila River Indian Community (GRIC). They have not approved it and it is not necessary. The Tribe would have to take another vote, which may not pass. The delay will cost us dearly. Just by waiting two years, the cost can increase 10 percent simply due to inflation, along with stunting the grown of the southwest Valley. I don't think there should be any exit or on-ramp to the L202 south of Baseline because this may encourage truckers to use 51st Avenue to get to the freeway.
4) The Laveen and GRIC residents would like to get rid of the big truck traffic using 51st Avenue. If another route is chosen it would be too far away from the truckers, forcing them to continue using 51st Avenue, which I don't want to see. If another route is chosen it would not be reasonable for local traffic to go to west in the morning to cross the River on the new L202 to catch I-10.
5) I hope that ADOT and FHWA would realize that the L202 is more than just a bypass; it is a key part of our community's infrastructure and needed to grow the southwest Valley. If done right it can quiet the neighborhoods, provide easy access for local businesses, and stimulate new and targeted growth. It should be built as soon as possible, with the idea of efficiency and getting the most for our hard-earned buck.

Terry Richardson

Code	Issue	Response
1	**Design**	As part of the proposed freeway, there are interchanges planned at Dobbins Road, Elliot Road, and 51st Avenue (see page 3-51 of the Final Environmental Impact Statement). As noted in other areas of the comment and in the Final Environmental Impact Statement on page 3-29, the proposed freeway would reduce traffic on 51st Avenue in 2035 in comparison to the No-Action Alternative.

I oppose building the South Mountain Freeway. Such a freeway will increase urban sprawl, destroy natural habitats, and eradicate open space that enhances the quality of life for those in the Phoenix metropolitan area. South Mountain Park is one of the few natural wonders in this area. It is one reason why many people enjoy visiting this area and why some people choose to move here. It adds a great deal to the quality of life in this region. To bisect South Mountain Park would be a terrible mistake that would negatively affect the quality of life and natural beauty of this area. It would also destroy natural habitats and dissect wildlife corridors. Finally, the destruction of South Mountain Park would have a negative economic impact. It is one of the few jewels of this area, it is the largest urban park in America, and it helps to give Phoenix a unique image and reputation as an outdoor mecca. South Mountain Park is too valuable to sacrifice.

Sincerely,

Dr. Karyn Riedell

create is pollution, contamination, poor air quality, and it doesn't make sense in this year of 2013.

So please take those opinions and make sure that you know that I represent Arizona and many people that can't be here today, and certainly in my community. Thank you.

THE FACILITATOR: Thank you. Haley Ritter.

MS. RITTER: Good morning, panel members. Thank you for letting us speak here today. My name is Haley Ritter. And I live off of 23rd Avenue and Camelback. There's a lot of horrible uranium mining going on up north, which is poisoning communities, leaving children waiting for kidneys and things like that. That type of waste is going to be transported on a type of freeway like this, which is also going to contaminate when those types of hazardous chemicals pass through. And we need to, like other folks have been saying, we need to look to alternatives means of sustaining our community.

This national park and this sacred mountain are very, very important to Arizona, and the livelihood of the species, the remainder of endangered species that live there, for example. The native community would be, and the folks that live in

the scheduled pathway to build this freeway are going to be horribly displaced, and there's way too many things that we need to be doing instead.

Like other people have been saying, we need to focus on the streets, the Complete Streets Program, my understanding, is a wonderful proposal. Take all those billions of dollars, put them back into the streets, enhance the city itself rather than building another freeway. We don't need more freeways, we've got plenty. We don't want this to look like L.A. It -- these are outdated ideas; they really need to be put aside for now and thrown out.

So please move forward with sustainable means, you know. We need to get bike lanes on all the streets. I've lived in Phoenix for 20 years and I've ridden a bicycle everywhere. I take the public transportation, and it's very challenging to ride a bicycle legally on the streets with cars, you know, swiping by me going 50 miles an hour.

You know, there's streets that have nine lanes of traffic, vehicle traffic, and no bike lanes without any buffers between the pedestrians and the streets. And there's a lot more people riding bicycles today to stay in shape, and to get around the city, because it's really not that difficult,

5	**Acquisitions and Relocations**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.

even with the heat. I've done it for 20 years.
So please, please don't approve this idea for the 202 Freeway. It's very unnecessary. Supply and demand are not high enough for this type of project. Thank you.
THE FACILITATOR: Thank you. Has Prem Goyal returned? Did I pronounce your name correctly?
MR. GOYAL: Yes, thanks. I won't take three minutes. A good question is I was looking at the curves, which are growth curves, they are based on 2005 data; they should be based on 2013 data. And I have the newspaper cuttings every day that you did at least expect lower demand. That directive curve leads to the expansion of the future demand of the transportation. Only way they can project the future demands is from the utility demands. It looks like we should verify those curves, as the [unintelligible] president said, trust but verify. All those curves have been verified, or they're just ten years old, which don't mean very much in today's environment.
Thanks very much. Have a good day.
THE FACILITATOR: Thank you very much.
Greta Rogers. Greta Rogers.
MS. ROGERS: Good morning. Let's turn

going to revolt or do something like that. But I don't think that's fair, you know. And I would just like to, you know, kind of let the people know, you know, what's going on, because they won't let news medias or reporters go to their meetings or anything, and nobody knows, you know, what's going on out there.

So I just thought maybe I could make a little comment that -- you know, let them know how I feel about it. So that's it. That's it. Thank you.

MS. RITTER: My name is Haley Ritter, H-a-l-e-y, Ritter, R-i-t-t-e-r, and I live in Phoenix, 85015 area, district 4.

I'm excited about the upcoming city council elections, because I think a lot of the younger people coming into leadership in this city will realize that we can't keep building freeways.

I'm against the 202 because there's a lot of pollution going through the city already. The uranium mines up north in Flagstaff and surrounding communities are very, very harmful for that community up there. And then the toxic chemicals that are being hauled through Phoenix and then through the South -- South Mountain Gila River Community if the 202 is built are going to be horrible to the environment.

There have been plenty of environmental

Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document

impact studies done already that show that it's not a good idea. It's going to cause a lot of destruction for the city.

And there's a lot of people around the world that come to Phoenix for South Mountain because it's a beautiful natural park -- national park. And it's a sacred mountain for the surrounding Native American community.

And I've -- I've ridden a bicycle around the city for 20 years now. And it's not that difficult. We don't need more vehicles, more traffic, more freeways. We need less vehicles, less freeways, less traffic.

All that money being hoarded for such a project needs to be deterred into the streets that exist already as they are. In Phoenix they're crumbling beneath us. There are no bike lanes on most of them. And the pedestrian walkways are so hot and unbearable that people can't travel that way. So we need to -- I'm in support of Mayor Stanton's proposal to put 1.5 million of that money in -- back into the streets, into the Complete Streets program suggested by the federal government for major cities like Phoenix to -- to invest all that money in local community and local businesses and people that need it rather than more freeways for huge industries that are destroying the planet.

3	**Cultural Resources**	
4	**Purpose and Need, Old Plan or Use of Old Data**	
5	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.

Code	Comment Document

So in conclusion, I guess, I just want to make sure that -- that all these comments against the freeway are realized and heard, and I want to make sure that this project does not go through to the highest bidder or whoever. It's become a private project anyway. It's all about money at this point. And I want to see the streets improved. I want to see more bike lanes. I want to see Complete Streets passed and moved forward with. And I support Mayor Stanton, in that I do not support the 202 Freeway.

Thank you very much. I appreciate your willingness to hear my comments.

If you could add something to that, one of the pro-202 speakers mentioned that we need a freeway in order to build a hospital in Laveen. And I believe the complete opposite is true. We need a hospital in Laveen before we build a freeway. We don't need a freeway to get to a hospital.

That's all.

MS. GARZA: Well, my name is Anna Garza, A-n-n-a, G-a-r-z-a. I am a living resident in ZIP Code 85239. And I'm here to share my comments.

I feel it is time to build the South Mountain Freeway. Our Valley commuters have waited long enough. In the meantime, we are -- we have traffic jams,

Subject: Loop 202 Extension Feedback
Date: Sunday, May 26, 2013 9:56:17 PM

Hello,

1 Since this project has been conceptualized for about 30 years, please give the Gila River Indian Community another year or two to get their act together and "see the light". Don't all of a sudden be rushed into a bad decision. If we have waited 30 years, we can wait two more!

If they (GRIC) accept a path at least one half mile south of Pecos Road (on vacant, unused land), everyone will benefit.

2 It is simply logical to put the highway on worthless, vacant land instead of tearing up developed Ahwatukee. Does logic and common sense matter anymore?

No matter how many facts you shove at environmental wackos, they live in their own little bubble world and simply say "no" to anything involving development. That is how brainwashed they can be. Ignore them.

Thank You,

George C. Ritz
(Concerned Ahwatukee resident)

MR. RIVERS: So the first thing I want to do is talk about where I'm from. And I'm from a village called Vahki, V-a-h-k-i. And that translates into "medicine house" or "a sacred house." And my family has been there for a long time. I don't know how long, but we know that it's several, probably, millennia as far as we understand.

I am a member of the Gila River Indian Community. But, more importantly, I am an O'oodham, which is the people that live on this land. The O'oodham have a history that dates back several thousand years. Archeologists talk about the Huhugam, or Hohokam, who we are descendants of.

And we were given this specific responsibilities, to take care of this land, and, if we were to take care of this land, this land would take care of us.

So I just wanted to mention that much about the culture.

But I want to go into today and some of the issues that we're looking at and why it's important for us to address this issue about a 202 Freeway, specifically a freeway that will impact some of our most sacred cultural areas and sites.

The United States in 2008, along with other member States of the United Nations, supported the UN Declaration on the Rights of Indigenous Peoples. And in 2010 President Obama supported, moved even further and said that he would do anything to support the rights of indigenous peoples; and that

2

being specifically that the first people, the original people of these territories, human rights have been violated, so much so that we have been placed on reservations and quarantined, to some degree.

The other -- The concern about that is, though I -- Though I understand that the United States is supporting the Declaration on the Rights of Indigenous Peoples, we still struggle to have our basic human rights needs when it comes to our culture and our tradition and our spirituality.

And those are all English terms that are not -- that are difficult to translate as Native people. But what we recognized is that all of us, even our white brothers, our non-Native people, have some sort of awareness of the spiritual connectedness to their God.

1

We, as O'oodham, believe that this area, this South Mountain area, is one of the most sacred connections to our himduc, our way of life. And, if we lose -- continue to lose that way of life, we will cease to exist.

And by that I mean that we can adapt and adopt and even go so for as to assimilate into another culture. But that's all we're doing; we're assimilating.

If we are a distinct people, a distinct people from all other people, who have a different idea of religion and cultural ties to a sacred place or a sacred land, then what is the -- an agency like the Arizona Department of Transportation,

(Comment codes begin on next page)

Code	Issue	Response
2	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.
3	**Heat Island**	As buildings, parking lots, roads, and other infrastructure replace open land and vegetation, an urban heat island may result. The heat island effect is of a regional nature and, therefore, there is no requirement to analyze potential impacts and no possibility of determining the localized contribution at the project level to the regional heat island effect. It is likely, however, that a proposed project such as the South Mountain Freeway would be a minor contributor to the overall issue.

Code	Comment Document

or the other agencies that are Federal agencies and under the umbrella of the United States Government, doing to protect those sacred sites or those very basic needs, the human rights of indigenous peoples, especially the O'oodham people, the Gila River Indian Community.

So there are a lot of -- a lot of things that we need to address here. And, specifically, I want to talk about the environmental impact. What will the environmental impact look like?

3 4

We know that Phoenix is one of the largest urban islands anywhere, urban heat islands. We know that there's -- this urban sprawl has an impact on our territory. And our territorial boundaries are being impacted by the encroachment of large development and population growth.

So we are forced to -- to live under this pollution, under this -- this environment that's taking place. And that environment is that it's not -- We are concerned about the health and the future of our children. We've seen a 60 percent increase in the asthmatic-related problems here.

5 6

We have always seen South Mountain as a buffer to the city. But now we see the encroachment, and we see the expansion of it. It's now impacting. So it, environmentally, is impacting us. Physically, it's impacting us. It's creating many more lung problems for our people.

As a population that already suffers from certain

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
4	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
5	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Health Effects**	
7	**Cultural Resources**	Indirect impacts such as damage to archaeological sites as a result of increased access as a result of the freeway are being considered in the environmental impact statement process (see proposed mitigation beginning on page 4-146 of the Draft Environmental Impact Statement).

Code	Comment Document

medical illnesses, diabetes being one of them, how do we, then, as a society, as an indigenous -- as distinct people, protect our people for -- from the future of all these other impacts, specifically the environment?

We are here to protect this environment. We are here to live distinctly in this environment, but we can't if we're being forced -- if we're being forced to adopt or to live next to another freeway. So that was the issue on the air quality.

The second is -- and for specific reasons, I can't go into the cultural sites and what they specifically mean to our people because that is our cultural protection. So the concern that I have is the access to these sites by non-Native people. For decades and millennia, we have visited these sites and prayed at these sites. We don't disrupt these sites. But we know that, with the increased population and increased visibility and awareness from non-Native communities, they will come and in and destroy and take some of these petroglyphs and these -- maybe some of these things that are there that are sacred to our community.

Lastly, I want to say that, because these Federal agencies are involved, the issue of free prior and informed consent, with indigenous peoples and populations, has not been taking its proper course by these Government agencies under the United States Federal Government. And that is a priority to

7

8 2

Code	Issue	Response
8	**Public Involvement**	Arizona Department of Transportation and Federal Highway Administration solicited input from the Gila River Indian Community and other Native American tribes and tribal members and considered fully the substantive input and comments that were received. Consultation related to cultural resources strictly followed the requirements of Section 106 of the National Historic Preservation Act. Project communication with Gila River Indian Community officials followed a protocol established for this study, from years of previous coordination recognizing the sovereign nation status of the Gila River Indian Community and with respect for the Gila River Indian Community's cultural norms. Coordination occurred one-on-one with the appropriate Gila River Indian Community officials. Representatives from the Gila River Indian Community participated for years in the South Mountain Citizens Advisory Committee. During the public comment period, Gila River Indian Community members were provided the same opportunities to attend the public hearing and participate in a public forum as all other populations.
9	**Cultural Resources**	The communication protocol established for this study, from years of previous coordination and with respect for the Gila River Indian Community's cultural norms, was conducted in a "government-to-government" nature (i.e., the Arizona Department of Transportation Project Manager would speak directly to the Gila River Indian Community Manager; the Arizona Department of Transportation Communications Director would speak directly to the Gila River Indian Community Public Involvement Officer). Coordination occurred one-on-one with the appropriate Gila River Indian Community officials.

Code	Comment Document

9

Native people, that they have to have community comments, not just government-to-government relationship comments, but people that will be directly impacted by a freeway that goes through our territory.

So, as a member of the Gila River Indian Community, I oppose this freeway because of the -- the things that I mentioned: the air quality, the environmental impact, the cultural significant sites to our people. And, lastly, our way of life will cease to exist if we continue to allow people and governments and corporations to develop and destroy our territory.

That's it.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. I AM AGAINST THE CURRENT PLAN AND ALIGNMENT AS IT STANDS TODAY. THE DELAYS HAVE RESULTED IN UNPLANNED ADDITIONAL COSTS AND ACQUISITIONS WHICH WERE NOT DETAILED AT THE TIME PROP 400 WAS APPROVED. THE DELAYS HAVE ALSO RESULTED IN DECISIONS TO NOT BUILD BELOW GRADE IN AREAS CLOSE TO RESIDENCES, AND INCLUDE OVERPASSES AND NOISE ABATEMENT WALLS. ONE OTHER MAJOR SORE SPOT IS THE DAMAGE THAT WILL OCCUR TO THE MOUNTAIN PARK AND HIKING TRAILS THAT I'VE USED EXTENSIVELY FOR THE PAST 20 YEARS. I AM ALSO ~~CEI~~ NOT CONVINCED THAT THE IMPACT STUDY HAS ACCURATELY DEPICTED THE AMOUNT OF

Code	Issue	Response
1	**Construction**	The cost estimates for the proposed freeway, as described beginning on page 3-59 of the Final Environmental Impact Statement, were developed in accordance with accepted engineering practices by professional engineers. The project has been subject to multiple peer reviews of both the quantities and unit costs used in the estimate by the Arizona Department of Transportation, Federal Highway Administration, Maricopa Association of Governments, and their consultants. In each case, the estimate was found to be reasonable and accurate. The proposed project is part of the *Regional Transportation Plan* for the Maricopa County region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources.
2	**Acquisitions and Relocations**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.
3	**Design**	Depressing the proposed Pecos Road sections would entail installation of pump stations to drain the main line freeway. A depressed freeway would also need a drainage channel to capture the off-site flows to prevent their entering the freeway. Pump stations were not used because of the high cost of construction and maintenance needed for their operation. The preferred freeway configuration would have the E1 Alternative aboveground and the existing culverts extending to pass the drainage under the freeway. Pecos Road currently has numerous existing culvert crossings. Depressing the freeway in this area would eliminate the existing culvert crossings and potentially have adverse flooding impacts on adjacent properties. Extending the existing culverts or upsizing the culverts would maintain or improve drainage flows. This would ensure that there would be no adverse flooding impacts on adjacent properties. (See Final Environmental Impact Statement pages 3-15 and 3-18.) To reduce impacts by depressing the proposed freeway in the Eastern Section, the Arizona Department of Transportation would: · need to spend an additional $400 million for right-of-way acquisition and construction · displace an additional 300 residences · maintain additional pump stations and detention basins for the life of the freeway · observe noise-related impacts requiring mitigation (i.e., noise barriers and their associated costs and visual impacts) Because the belowground option would result in substantially greater costs and residential displacements, this option was eliminated from further study.

Code	Issue	Response
4	**Design**	For most of the alignments of each of the action alternatives, the proposed freeway would be elevated above the natural grade of the surrounding land. This elevated profile would allow noise to carry farther, creating noise impacts at greater distances from the freeway. Depressing the profile of the freeway below grade might reduce traffic noise levels adjacent to depressed sections. However, it would be necessary to also construct at-grade noise barriers to achieve noise reduction goals at receiver locations adjacent to depressed freeway sections (see page 4-99 in the Final Environmental Impact Statement). This strategy would reduce visual impacts associated with high noise barriers on elevated freeways, but would entail ground-level noise barriers and their associated interference with views. Thus, with either approach to noise reduction, views of nearby mountains could be disrupted. The specific impacts would depend on the geometrics of the height of any noise barriers constructed, the intervening topography, and the distance of the barriers from the residences in question. A depressed freeway option was evaluated in the Final Environmental Impact Statement and is described on pages 3-15 and 4-99. Although depressing the freeway would reduce noise levels, noise walls would still be needed to further reduce noise to meet the Arizona Department of Transportation noise policy. Whether the freeway is built aboveground with tall walls or belowground with shorter walls, the final mitigated noise levels would be nearly the same at nearby residences.
5	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Section 4(f) and Section 6(f)**	Impacts on Phoenix South Mountain Park/Preserve have been important considerations since the freeway was first proposed in the mid-1980s. The Draft Environmental Impact Statement discusses how the proposed freeway would affect the park, beginning on page 5-14. None of the existing trails would be directly affected by the proposed freeway. The proposed freeway would introduce noise impacts to those areas of the park close to the freeway, but noise levels would rapidly diminish with increasing distance from the freeway. The trail segments near the proposed freeway are used for active recreation such as running, hiking, and biking, the noise sensitivities of which would depend on the specific activity, user, and time of day.
7	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

1 ROBERT ROACH: We were just out talking
2 about the fact that I haven't seen any evidence that they
3 have taken into account the amount of truck traffic as
4 it's going to be used as a bypass unlike any other loop
5 in the Valley. I haven't seen any evidence that they
6 have taken that additional truck traffic into account
7 when they were assessing whether to build it below grade,
8 above grade, the sound barriers, and things like that.
9 That's really the concern that I had.
10 And I guess I can -- I could see a need to
11 have some sort of a transportation outlet on that side of
12 the Valley. Just the way that they've revised the plan
13 since it was originally incepted till now, it's just very
14 different than when I moved to the Valley back in '93.
15 That's basically -- That's my concern.
16 I knew it was going to be there when I
17 moved in. You know, it was no secret.
18 The fact that it's changed so drastically
19 and the additional cost between the original inception
20 and as we have it now -- the proposition that we voted
21 for, I can't remember exactly what year, that proposition
22 didn't provide enough details about the additional costs
23 that were to be incurred because of the delay and then
24 the decisions made by the City to allow people to build
25 and then acquire and the additional costs seem to be

1	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Trucks**	The Maricopa Association of Governments regional travel demand model forecasts approximately 10 percent truck traffic on the proposed freeway in 2035 (see Final Environmental impact Statement pages 3-64 and 4-72). The forecast truck traffic is based on existing traffic studies and projected socioeconomic data. This percentage is similar to current traffic conditions on Interstate 10 between State Route 101L and Interstate 17 and on US 60. Commercial trucks would use the proposed freeway. As with all other freeways in the region, trucks would use it for the through transport of freight, for transport to and from distribution centers, and for transport to support local commerce. Nevertheless, the primary users of the proposed freeway would be automobiles. Vehicle classification counts (2007) from the Arizona Department of Transportation for Maricopa County show passenger vehicles and other nontruck vehicles make up over 90 percent of all traffic on the regional freeway system, and it is expected these percentages would not vary with the proposed freeway. Further, it is not expected that the entire 21 percent of through truck traffic (by tonnage) using Interstate 10 would divert from Interstate 10 to use the proposed freeway (see Final Environmental Impact Statement page 3-64). Trucking destinations in the Phoenix metropolitan area would still prompt trucks to enter congested areas. Choosing to travel on the proposed freeway versus Interstate 10 would not produce substantial travel time benefits. Therefore, it is expected that "true" through truck traffic (not having to stop in the metropolitan area) would continue to use the faster, designated, and posted bypass system of Interstate 8 and State Route 85.
3	**Design**	Depressing the proposed Pecos Road sections would entail installation of pump stations to drain the main line freeway. A depressed freeway would also need a drainage channel to capture the off-site flows to prevent their entering the freeway. Pump stations were not used because of the high cost of construction and maintenance needed for their operation. The preferred freeway configuration would have the E1 Alternative aboveground and the existing culverts extending to pass the drainage under the freeway. Pecos Road currently has numerous existing culvert crossings. Depressing the freeway in this area would eliminate the existing culvert crossings and potentially have adverse flooding impacts on adjacent properties. Extending the existing culverts or upsizing the culverts would maintain or improve drainage flows. This would ensure that there would be no adverse flooding impacts on adjacent properties. (See Final Environmental Impact Statement pages 3-15 and 3-18.) To reduce impacts by depressing the proposed freeway in the Eastern Section, the Arizona Department of Transportation would: · need to spend an additional $400 million for right-of-way acquisition and construction · displace an additional 300 residences · maintain additional pump stations and detention basins for the life of the freeway · observe noise-related impacts requiring mitigation (i.e., noise barriers and their associated costs and visual impacts) Because the belowground option would result in substantially greater costs and residential displacements, this option was eliminated from further study.

Although depressing the freeway would reduce noise levels, noise walls would still be needed to further reduce noise to meet the Arizona Department of Transportation noise policy. Whether the freeway is built aboveground with tall walls or belowground with shorter walls, the final mitigated noise levels would be nearly the same at nearby residences.
5	**Purpose and Need**	Information related to origins and destinations of motorists that would use the proposed freeway is presented in Figure 3-18 on page 3-36 of the Final Environmental Impact Statement. The definition of freeway users considers only those motorists who travel through the South Mountains; so, motorists who begin their trips in Ahwatukee Foothills Village and travel east to Interstate 10 (Maricopa Freeway) or motorists who begin in Laveen Village and travel north to Interstate 10 (Papago Freeway) are not counted in the analysis. The analysis of origins and destinations shows that 73 percent of travelers would be involved in trips beginning or ending in the Study Area or areas immediately surrounding it. Seven percent of the trips would begin, end, or begin and end outside of the Maricopa Association of Governments region; ten percent would either begin or end in Pinal County.
6	**Economics, Socioeconomics**	The proposed South Mountain Freeway would be funded by State, federal and local dollars. The total budget for constructing the proposed freeway is $1.9 billion, approved by the Maricopa Association of Governments Regional Council in May 2012. The approved program includes design, right-of-way, and construction of the proposed action. Funding for project-related activities is included in the current 5-year program identified in the regional Transportation Improvement Program as well as in the State Transportation Improvement Program.

7	**Acquisitions and Relocations**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.

MS. ROBB: My name is Mary Robb. In the map there because you don't have a little map that I could show you, okay, I live down in the Foothills reserve up in the mountain, you know, which is fine. I'm a little distance from the freeway where it's going to be, but there's no -- there's going to be no entry for me to go to the freeway. I have to go up -- now they're going to make me go -- take Chandler, which isn't even there now, and go up. You know, I don't know how many miles it would be. It would be a few miles and then come down 17 for me to enter the freeway.

Whereas now, I go to the end of that Chandler, just south, you know, and I just enter Pecos Road. So every time I want to go to the freeway, I've got another six miles to go for no reason. And I figured they were going to put a frontage road that would make like a -- like a straight line to our home to 17th Avenue. So, you know, we'd just bypass -- so a frontage road just bypassing the whole freeway. But, no, they're putting that Chandler thing in up higher and around and it's just crazy.

And then so that's going to make a lot more traffic on 17 too, and there's a lot of homes

1	**Design**	The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix (see Figure 3-8 on page 3-15 of the Final Environmental Impact Statement). The interchange was evaluated but ultimately eliminated because of increased residential displacements and cost. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement). There are no provisions for frontage roads connecting 17th Avenue to the residential area to the west. Reasonable access is provided from 17th Avenue and the extension of Chandler Boulevard. Traffic volume on 17th Street in 2011 was approximately 4,500 vehicles per day just north of Pecos Road (see <phoenix.gov/streets/traffic/volumemap>). With the proposed freeway in place, an additional 4,000 vehicles day would use 17th Avenue to gain access to residences west of 17th Avenue. The total daily traffic would be well below the capacity of a two-lane road (approximately 15,000 vehicles per day).
2	**Acquisitions and Relocations**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values. A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.

Code	Comment Document

over there and they're not going to like that. But if there was a frontage road down towards like running right along the freeway, at least they're saying that it would have to be an entrance and an exit, but why? Why can't it just be an entry for all the -- all those homes that are down there, and eventually they have a thing in front of that where Chandler is going to be put through over to 17. They have a big piece of land. Now, they can put those homes there now.

I mean, it's going to be all new homes there eventually. And if they don't put a frontal road there now, it's going to be even -- you know, they'll do the same darn thing. They're going to knock down a bunch of houses to put a frontage road in, and they aren't planning at all. I just don't see it.

They're going to make -- all our homes are going to be lowered in value. It's totally -- they're going to do -- what they did years ago is they let someone buy that property and they go, well, it wasn't the state's -- you know, it wasn't this, it wasn't that. Well, somebody had to okay it knowing that freeway was there. And it's going to cost $2.1 million to even get so they can even start the darn

road.

So I just don't understand why they just can't make us all happy and, you know, they could do a frontal road and do the one -- put Chandler through, but there's just no reason not to. So they're going to wait until -- I think what they're trying to do is they aren't putting a frontal road up there because whoever buys that land and develops it is going to be responsible for that road. So what, 10 years, 15 years. In the meantime, we have to do this big long route just to go to the freeway. It's just -- it's just nonsense.

Subject: Loop 202 South Mountain Freeway Draft Environmental Impact Statement -COMMENT-
Date: Wednesday, July 24, 2013 8:27:03 PM

July 24, 2013

To: ADOT

(1) My husband and I live in Foothills Reserve in the Sunrise gated community. I am requesting that Liberty Lane be continued west to Chandler as a frontage road. The only way to our community will be Chandler when it is built. The extended Chandler Boulevard going west will be bumper to bumper without the Liberty Lane extended. Also, The only other way we can access our community will be the 17th Avenue exit which also will be bumper to bumper at the exit. Have you ever driven out here during the after work/dinner hour? We could exit 17th Avenue and get the Liberty Lane extension much easier and it will alleviate all the traffic traveling home on Chandler only. If Liberty Lane is not extended 17th Avenue will be blocked to the point people won't even be able to take the exit and also cause difficulty turning onto Chandler to be able to get to our home(s). Also, The 17th Avenue exit/road will be extremely busy and loud going up the hill causing very high level noise (2) and pollution for all the homes backing up to 17th Avenue. This area too is an upscale neighborhood and it is possible that they will decrease in value because of the reasons I indicated. Will ADOT be building higher sound wall(s)on 17th Avenue heading north to Chandler Blvd? (3) (4) I don't believe the existing walls are adequate to handle the forthcoming noise.

(5) (6) If we had a choice we would rather you work with the GRIC Community or just NOT BUILD!

(7) (8) It is hard for us to believe you want to displace so many families and cause so much hardship for so many. Think about it...what if were your community?
I believe all of us in The Foothills Reserve use Pecos Road in and out of our community. Once you take our Pecos Road you are creating a true *One Way In and One Way Out* for all of us living here.

Please extend Liberty Lane as our frontage road.

Thank you!

Arnold Robb
Mary Robb

Code	Issue	Response
1	**Traffic**	The extension of the Liberty Lane to the west is not part of the proposed project. This road would likely be built in the future along with the development of the State Land Department property. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the freeway on the local street system. The City study found no adverse effects on the local street system from the proposed freeway (see Appendix 3-1 in the Final Environmental Impact Statement). The daily traffic volume on 17th Street in 2011 was approximately 4,500 vehicles per day just north of Pecos Road (see phoenix.gov/streets/traffic/volumemap). With the proposed freeway in place, an additional 4,000 vehicles day would use 17th Avenue to access residences west of 17th Avenue. The total daily traffic would be well below the capacity of a two-lane road (approximately 15,000 vehicles per day). The residents in the Foothills Reserve currently only have one way in and out of their community, Pecos Road. If the freeway is constructed, there would continue to be one way out of the community, Chandler Boulevard.
2	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
4	**Noise**	As mentioned in the sidebar on page 4-91, the Final Environmental Impact Statement is based on preliminary design and traffic information. As the design progresses to the final design phase, noise barrier locations and heights will be refined and finalized. During final design, more detailed information on the location, actual height, and distance from the property line of each noise barrier will become available. Noise barriers are designed to provide a substantial reduction in noise levels along freeways, but do not and cannot eliminate noise from passing into nearby neighborhoods. Just because noise can be heard does not mean that noise barriers are ineffective. Even at the levels considered "acceptable" by the Arizona Department of Transportation Noise Abatement Policy and Federal Highway Administration regulations, noise is still readily audible and can be heard for some distance from the freeway.
5	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
6	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
8	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91). The proposed freeway would not adversely affect north–south access because the land immediately south of Pecos Road is Gila River Indian Community land, with no existing north–south access. (See the E1 portion of Table 4-9 on Final Environmental Impact Statement page 4-27.)

To whom it may concern:

1 2 3 4 5 6 7 8

After living in this beautiful community of Ahwatukee for almost 20 years, I am compelled to write in stark opposition to this proposed UNNECESSARY freeway. We will be about 1/4 mile from the Desert Foothills Pkwy exchange and the attached 8 lane 22 miles of solid concrete. We will be subjected to air and noise pollution as well as crime with the new access in and out of the Foothills. This destruction of natural mountains and desert (not to mention our quality of life) serves no purpose for any of the families that reside in what the Indians call " The place of our dreams. " Those of us who have chosen to buy our homes and decided to spend the rest of our lives here WOULD NOT depend on this proposed freeway. The only people licking their chops would be the truckers and contractors who are looking for a more expedient way around Phoenix.

9 10 11 4 7

We have experienced the wrath of freeways in our backyard in Los Angeles - - and will never go through that again!! There are numerous detrimental effects, not to mention ones health and the impact it will have on the young children as they are trying to develop. Contrary to the hype of rising home prices, in actuality the value decreases as most people want to be able to enjoy the peace and quiet of their backyards, especially those that have a mountain preserve lot with magnificent sunsets. Who wants to sit outside amid the constant 24/7 roar of truck and automobile tires. Currently when I'm outside I hear the gentle hum of AC units and an occasional dog.

We could have lived anywhere in the valley, but chose this little community of Ahwatukee (Our Paradise) because of the tranquility and the beauty of the desert and it sickens me to think that we might be uprooted - to benefit the truckers and contractors who DO NOT live here.

A proud resident of Ahwatukee

Code	Issue	Response
1	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
2	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Air Quality**	
4	**Noise**	
5	**Section 4(f) and Section 6(f)**	
6	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
7	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
8	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Purpose and Need, Truck Bypass**	
10	**Health Effects**	
11	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). I'm a member of the Queen Creek Planning and Zoning commission as well as the Maricopa County's Citizens' Transportation Oversight Committee.
I fully support the South Mountain Freeway.
The Gila River Indian Community chose to not have alternative routs considered on their land. This is unfortunate, as they would have had more authority to dictate requirements and conditions. I feel the loop 101 portion of freeway on Native American land was beneficial to that community as well as their neighbors.

1

Recommended route: Any one of the three 101 routes would be acceptable. The Central or Easter routes would be preferred as being the more efficient. This route would preserve commercial/industrial properties, which to me are critical to a community's overall health and land use balance.

Reasons for support of this freeway:
Estimated increase in area population necessitates additional freeway resources, as well as expansion of public transportation.
Reduced congestion and pollution from stationary or slow moving vehicles would be significantly reduced.
Any loss to communities due to displaced tax revenue, I feel will be more than made up for with future business opportunities.
Reduced regional CO and particulate emissions. Reduced energy consumption.

up Baseline and the 51st Avenue corridor that is only going to increase when the casino opens its new hotel and restaurants.

There isn't, right now, any way to support the kind of traffic that the Gila River Tribe is putting on their sacred land without the highway.

The alternative, the W59 Alternative, is not going to cause any damage to their sacred land or to South Mountain.

Currently I am thinking that we have to continue with the program of the Loop 202 Freeway because it's the best alternative. It meets the needs of everyone in the community and it's critical for the development of Laveen and to be really a turning point for Laveen right at a place where this community can either move forward and excel and succeed, or you can put us in a holding place and we are going to have nothing but problems when it comes to traffic and the expediential growth we are going to experience in the next ten years.

***

MICHAEL ROBINSON: I oppose the Loop 202 through South Mountain Park near South Mountain

Park, because I feel it's an idea that has passed its usefulness.

I don't believe that building this freeway would reduce the congestion.

I do think it would encourage sprawl and encourage the waste of the natural resources that we have remaining.

I think the massive amount of money projected to be spent on this freeway could be better spent elsewhere repairing our aging infrastructure throughout the region, promoting public transit, bikes, other alternatives.

I believe it would be a waste of money.

That's all I need.

***

ADAM JOHNSON: I like the 59 Alternative. I feel that brings the community closer to downtown Phoenix.

I think bringing the community together involves bringing the economy up. You connect the cities together, to me it helps the people grow, helps the city connect.

I guess what I am trying to say is putting the 59 in, economically it will help the city

1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
4	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
5	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative). As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway.

Just emailing to express my opposition to the loop 202 extension.

It is a bandaid solution to a symptom of a larger problem that we've created.

1

There are other ways to relieve congestion on the roads. Put these funds toward expanding the light rail. Or make it easier and safer to ride bikes.

Many Phoenix residents drive because it feels like that's the only option.

What if we became known as one of the most forward thinking cities by becoming champions of new better ways to get around beyond the archaic freeway?

Thanks for reading.

We wish to voice our strong opposition to the South Mountain Freeway being built on Pecos Road.
The DEIS report mentions the improvement in emissions on cars as a reason why air quality should not be an issue. This will be a diesel TRUCK route. All of the major LTL trucking companies and warehouse are on the west side and will use this route. It will be a truck bypass creating bad air and hazmat issues for Ahwatukee.
The cost of the project is prohibitive and crime in Ahwatukee will increase.
We are affiliated with PARC and hope our financial support to them will help in their litigation of building any such highway.
It's too late to consider this project. Move it elsewhere. This community is already established and you will destroy our way of life.
Respectfully submitted,
Susan and Edward Robota

6	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

Please consider the positive impact building the 202 could have on overall air quality.

To: Projects
Subject: Loop 202 South Mountain Freeway

As a resident of Laveen for over 10 years I support the completion of the Loop 202 South Mountain Freeway.

1

I agree with the Environmental Impact Study and the effects it will have on reducing commuting times and reducing the amount of pollution emitted by vehicles in stop and go traffic. In the years I have lived in Laveen I have seen the congestion grow, particularly north along 51st Avenue and east along Baseline Rd. Prior to the widening of 51st Ave and Baseline Rd, traffic would come to a complete stand still near my community, making it nearly impossible to go anywhere during rush hour. Not only that, in the past few years, I have seen the number of car accidents along Baseline increase significantly, as more and more traffic attempts to move toward the East Valley through the busy South Central intersections.

I work in the Downtown area and am also a strong supporter of all of the recent Downtown growth. But I am also conscious of the issues faced along the I-10/US60 commutes to and from the East Valley. If we don't build the South Mountain Freeway, traffic in that region will get much worse. According to ADOT's own study, over the next two decades, traffic on I-10 through Central Phoenix will grow by 28%, another 103,000 cars will use the Broadway Curve each day and another 38,000 cars will jam the Tunnel every day. Morning and evening commute times will increase by up to 82% and traffic congestion on city streets will go up by 46%.

I understand the environmental concerns by some of the opposing parties, but it seems clear that unless the number of residents and the number of vehicles in the Valley decreases, not acting on this project results in even greater detrimental impact. I also agree that it's important to ensure the construction is as unobtrusive and environmentally-friendly as possible. In fact, most residents of Laveen that support the project also request that freeway construction must include means for pedestrian and bike traffic, including but not limited to sidewalks, bike paths and trails.

Finally, the money to build the freeway has been approved by voters twice, first in 1985 and again in 2004. The project will also create 30,000 jobs during the five to six year construction period and result in a $2 billion investment in the Phoenix-area economy. Residents of Laveen have waited long enough for this. Those of us that support our community and have stuck it out through the economic downturn and related housing crisis, are counting on the long term economic growth we believe this freeway will help bring to the area. Laveen was built with this freeway in mind. Without it, the future prosperity of Laveen and the surrounding area is in jeopardy.

Subject: Loop 202 South Mountain Freeway

1

I support the completion of the Loop 202 South Mountain Freeway. I live in Laveen and it has been frustrating not to have an alternative and fast way to get to other places. It takes about 15-25 minutes to get to the nearest freeway, sometimes even more depending on the traffic. Traffic has increase in the area. There is a lot of semi trucks through 51st Ave and there have been more car accidents along Baseline Ave. Also, I think this freeway can help bring economy growth to our area. This comunity has increase significantly and we need this freeway.

I agree with other residents of Laveen that it's important to ensure the construction is as unobtrusive and environmentally-friendly as possible and that freeway construction must include means for pedestrian and bike traffic, including but not limited to sidewalks, bike paths and trails.

Thank you for your time and consideration,

Ana Karina Rodriguez

1	**Neighborhoods/ Communities**	Measures to mitigate adverse effects of the proposed freeway are presented on beginning on page S-18 of the Final Environmental Impact Statement). There are no plans for bicycle lanes or trails along the proposed freeway alignment. However, the freeway bridge structures will be designed to allow existing and future trails and paths to pass under the freeway. Also, crossroads that connect to the freeway at traffic interchanges would be constructed with provisions for bicycle lanes and sidewalks (see design features beginning on page 3-54 of the Final Environmental Impact Statement)

lucrative for them, now there's not such an uproar about it. So I do believe that we are respecting their values and giving them a voice. But I also believe that there's a louder voice, including that with my community and residents in Laveen and everything, that absolutely this is the right choice and the right direction for growth.

1 MR. RODRIGUEZ: Yeah. Basically, I just want to state my absolute support for the 59th Avenue alternate. That's the priority one right now. I think it's probably -- Well, I know it's the best option based on the city planners of the City of Phoenix. They've expected this for a long time. It's a great benefit to Maricopa County. It's a great benefit to the Valley. And, quite honestly, a lot of people coming from the West Valley, all the way out to Buckeye, eventually, you have to cross 59th.

If it were to go any further west, then people that live on, for example, 51st, 59th, 67th, 75th, 83rd, they're not going to go back to try to catch it at the 101 if they're heading out to the East Valley. It's counterintuitive to what human nature would tell you. So they would just jump on the I-10, currently, and continue to take the regular flow, causing the same problems that we're experiencing downtown, when it comes to major traffic. So I would say 59th Avenue is, without a doubt, the best alternative.

The worst alternative is the one going through

Code	Issue	Response
1		Comment noted.

Code	Comment Document

Tolleson. Tolleson has been here since 1929. They have given to our state. That city was actually split when the I-10 came in. So, much like Margaret T. Hance and the Deck Park Tunnel, that kind of divided up the -- that broke up the downtown community, the same thing happened in Tolleson. Part of the property is on the northern side of the I-10 and part of it is on the -- on the southern side of I-10. And so it took many years, many decades, for that city to be able to grow back together; and, successfully, it has.

Unfortunately, the north part of it hasn't developed. A lot of it has to do with the disconnection between the government and property owners north of the I-10 corridor or the I-10 freeway.

So, to ask a city of that size -- that's already given so much to the greater part of the state transportation system -- to now divide itself again, with the 101 dividing it right down to 99th Avenue, would be a travesty. So not only for the reasons of Tolleson, but also for the practical reasons of why 59th Avenue would be the top-notch selection.

So, finally, I would say, going back to 59th Avenue, the economic impact of sales-tax revenue to the City of Phoenix, just the developmental impacts to the City of Phoenix; property taxes that we would pay to the local school districts, including Maricopa County Community College districts, would be top-notch. Every single exit off of the 101 on the 59th

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response

Code	Comment Document

lineup -- 59th connection would be an economic engine. And so it's designed that way. The setbacks are already set up that way. And it would be a -- It would just be a win/win for everybody at the end of the day.

And you're taking that from a person who lives in Tolleson but is employed by the City of Phoenix. So it's a win/win for me because that's how -- that's how I feed my family, with the City of Phoenix.

And the sales-tax revenue coming back to the City would be huge, especially during these -- especially during these difficult economic times. And who knows -- who knows how long it's going to last? But also because, as a long-term, long-time -- actually, life-long resident of the City of Tolleson, I would hate to see what happened to our city many, many moons ago happen again.

And so that, my friend, is what I have to say.

MR. BRENNAN: Another point that I would like to bring up regarding, sort of, a land-use concern of the Loop 202 is, in light of the recent Brookings Institution report that has been publicized in the last week regarding the shift in poverty from more urban to suburban areas around the country, while not being a total shift in the share of impoverished populations, it does illustrate the challenges that more suburban areas are -- are experiencing in trying to address those social problems.

From: Sierra Club on behalf of Sue Rodriguez
To: Projects
Subject: Comments in opposition to South Mountain Freeway
Date: Wednesday, July 24, 2013 9:06:22 AM

Jul 24, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

2 3 4 5 Enough roads. Enough encroachment on wildlife. Enough air pollution, noise pollution, people pollution. Enough already!

6 The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

2

4 7 South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

8 3 The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

9 The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

1 Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Mrs. Sue Rodriguez
7835 E Cactus Rd

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative). As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway.
3	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Air Quality**	
5	**Noise**	
6	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
7	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Section 4(f) and Section 6(f)**

Code	Issue	Response
9	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

even with the heat. I've done it for 20 years.
So please, please don't approve this idea for the 202 Freeway. It's very unnecessary. Supply and demand are not high enough for this type of project. Thank you.
THE FACILITATOR: Thank you. Has Prem Goyal returned? Did I pronounce your name correctly?
MR. GOYAL: Yes, thanks. I won't take three minutes. A good question is I was looking at the curves, which are growth curves, they are based on 2005 data; they should be based on 2013 data. And I have the newspaper cuttings every day that you did at least expect lower demand. That directive curve leads to the expansion of the future demand of the transportation. Only way they can project the future demands is from the utility demands. It looks like we should verify those curves, as the [unintelligible] president said, trust but verify. All those curves have been verified, or they're just ten years old, which don't mean very much in today's environment.
Thanks very much. Have a good day.
THE FACILITATOR: Thank you very much.
Greta Rogers. Greta Rogers.
MS. ROGERS: Good morning. Let's turn

this around.

Good morning. I'm Greta Rogers. I live in Ahwatukee, near 48th Street and Elliott, just five miles north of the proposed route. ADOT has been mucking around on this for 30 years. And they're 30 years too late to come on the 202 west of I-10 to blow up the mountain and then go north. We don't need to blow up the mountain, and it isn't because it's a sacred site to me; personally, it is not. But it is a natural benefit to all of us. And part of the South Mountain Park Preserve.

We don't need to do this to facilitate the trucking industry. And I'm talking about those that carry ICC license plates and are hauling freight and 18-wheelers. One of the things that the -- the IES [sic] report that was delivered recently within the past 30 days, the first of any that has ever been delivered. The third allegedly, that ADOT filed with the -- with NQA, and allegedly the first two were returned to them with a big red X on it. Go back to the beginning, follow instructions. They still have not done that.

There is absolutely no indication in this at all for the danger to the communities that will be affected, both on the north and the south sides of

I moved into the Lakewood Community of Ahwatukee in 1988. Back then there was talk of building this loop. I believe Pecos dead-ended at 32nd ST back then and Chandler Blvd looped into Ray Road but didn't go any further. Back then it wouldn't have cost much and it could have made sense to do this project. Back then the land should have been zoned, purchased or whatever to keep it from being developed. Of course it was not. Now it does not make any sense to continue with this project - the cost and disruptions far outweigh any possible benefit. (1) (2) (3) (4)

We now live in the Foothills Reserve community at the end of Pecos - the area you wish to destroy. The quiet secluded area where crime is fairly low due to how hard it is to leave the area. Building the Loop 202 around South Mountain now would open us to all sort of crime. (5) (6) (7)

Will building this Loop easy the congestion on I-10? I seriously doubt it - it's not like the Phoenix metropolitan area is some little hick place that people want to avoid - trucks coming down I-10 need to drop things off in the Phoenix area and pick things up.

Our vote is to not build the South Mountain 202 Loop - save the money and use it for something that will provide more benefit - like either an upper or lower level to I-10 with limited entry and exit points (3)

1	**Acquisitions and Relocations**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.
2	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.
4	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
5	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
6	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
7	**Purpose and Need**	In 2035, the average daily traffic on the proposed freeway is projected to range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-62). The estimated volume depends on location. The purpose and need for the South Mountain Freeway are not solely to relieve congestion on Interstate 10 (Maricopa Freeway). Facilitating mobility in the Maricopa Association of Governments region does not mean just relieving congestion on the Broadway Curve (see Final Environmental Impact Statement page 1-21). Among other criteria, the proposed freeway is to permit the entire Regional Freeway and Highway System to function as designed. Optimal function of that design includes completing all the segments of the State Route 202L system (see Final Environmental Impact Statement pages 3-35 and 3-37). With implementation of the South Mountain Freeway, many motorists would be able to get from Point A to Point B, a route that never included needing to use Interstate 10.

THE REPORTER: State your name, please.

MS. ROMERO: Tokcha, T-o-k-c-h-a, Romero, R-o-m-e-r-o.

I would prefer the no-build solution, but I think they're going to tear up a lot of neighborhoods no matter which way they go. I think the farthest -- farthest west they can go, in my opinion, would be better. Why? Because I've lived here for over 30 years. My husband and I built our house with one power tool, and that was our saw. The rest we did by hand for our five children. Our grandchildren call it "the fortress," when they have go to Nana and Poppa's. I can't imagine our -- we're not big numbers of population, because we're on acreage, but we're a very tight community. Taking that down 59th or 63rd will destroy our neighborhood. It will absolutely be in the backyard of the Country Gardens Charter School, which that school is -- high on their list is their natural habitat. Their Sonoran Desert Tortoises, their livestock, it's a way of life that doesn't really exist in the city anymore, and that our kids and grandkids attend and learn from. And excel, I might add.

Not only that, they go on these

Code	Issue	Response
4	**Neighborhoods/ Communities**	The Laveen Village area is anticipated to have a built-out population of over 105,000 (see Final Environmental Impact Statement page 4-5). This proposed level of development places increasing demand on the road network. The City of Phoenix's General Plan for Laveen Village has designated areas along the proposed freeway for commercial development that cannot support the projected densities without implementation of the proposed freeway. Without the proposed freeway, the conversion of land from undeveloped and agricultural uses to residential, commercial, and industrial land uses would likely continue, placing a greater demand on surface streets (see Final Environmental Impact Statement page 4-14).
5	**Environmental Justice/Lifestyle**	Low-income populations were evaluated to ensure there were not disproportionately high and adverse impacts. The Preferred Alternative would not adversely affect any census block groups with low-income populations south of the Salt River (e.g., South Mountain Village). The Arizona Department of Transportation and Federal Highway Administration have engaged all population segments to ensure access to the environmental impact statement process. Assisted by this involvement, analytical results indicate the proposed action would provide net benefits to all populations in the Study Area in general by reducing traffic congestion, enhancing accessibility, and supporting local economic development plans.

PROCEEDINGS

THE REPORTER: Can you state your name?

MASTER ROMERO: Benjamin Romero.

Dear ADOT, I oppose your idea of the South Mountain Freeway, it will take out my neighborhood and school, but it's not any other school. I've gone on -- it has these awesome trips and stuff. I just went on one recently, it was a three-week trip to Florida and Washington, D.C. Can you find another school that met our Senator Flake? They take care of us. They never give up on us, and I won't give up on them.

The school is important to me and my family. It has been here for 13 years and my house only has stood there for 30 years. We can't give up now. Sincerely, Benjamin Romero.

THE REPORTER: Thanks, Benjamin.

THE REPORTER: Can you state your name, please.

MR. ROMERO: Daniel Romero.

I oppose against it. I oppose it, you know. We've lived out there for 30 years, and there's never been, you know what I mean? We knew what we got into when we were there, and basically, it's going to affect wildlife and there's a proven fact on that, for one. My second issue is it's going to increase crime, number two.

There's already a path through there, I don't understand why, there's nothing in the river bottom, why they don't take the 99th Avenue route, the 91st Avenue route. You're going through two quarter million dollars homes or going right next to them.

My other fact is -- I'm just trying to put it together, you know -- you're putting ramps up right next to Country Gardens School. You're talking about a 3,000-foot bridge, which is over half a mile, you know, and you sit there and do construction on that, it's going to take a year, at least, and that's going to hurt the school. And I have a niece and nephew going to that school. And they exceed any

7

other school around there. And they're going to put a freeway right next to it?

My other concern is industrial. They're going to put industrial next to it? That kills residences. I oppose it. I do not want it there. There's already alternatives on I-10 to get to the same location. So that's why I oppose against it.

THE REPORTER: That's it?

MR. ROMERO: Yes, that's it.

THE REPORTER: Thank you, sir.

Code	Issue	Response
7	**Planning**	Cities' and towns' adopted land use plans were evaluated as part of the environmental impact statement process. The effect of a freeway corridor on these plans was considered (see Final Environmental Impact Statement pages 1-21, 4-18, and 4-19). The City of Phoenix's General Plan land use map shows the freeway alignment as "Future Transportation," generally matching the W59 (Preferred) Alternative alignment. The City of Phoenix's plans for both Laveen and Estrella Villages identify "cores" along the W59 Alternative, surrounded by commercial/ mixed-commercial uses for each planning area clearly intended to benefit from proximity to the proposed freeway.

MS. ROMERO: My name is Tokcha Romero. I've lived in Laveen for 30 years. My husband and I built our house there. Contractor didn't do it, we did. We raised our five children there. We have five grandchildren now that call that place their sanctuary, their home, their go to place and the happy place because they go there when they just need some extra care.

You can build a house anywhere. It takes a long time to build a home. I live on an acre and a quarter and I can walk out there in the dead of night in the dark and my feet know every inch of that property. They say that a place belongs forever to the person who loves it so much they wrench it from itself and remake it in their own image, and that's what my home is to me.

It's not a fancy house. It's a wood frame house, but it has memories that I can only begin to tell you. One of them is handprints on the south wall that my grandchildren thought would be nice to paint with mud handprints, and they faded over the years, but you can still see them. And rather than making me angry, they're now a cherished, cherished memory.

My neighborhood. We've seen each other

Code	Issue	Response

1 through everything. It's the only neighborhood that
2 many of us have lived in for longer than most people
3 are married, 30 years. We've watched births and
4 grandchildren be born and deaths and we're always
5 there for each other. I mean, literally, everybody
6 there. We're not in each other's business, but
7 everybody there. We know each other's names. Not
8 too many neighborhoods are that way anymore.
9 The school. The school will be impacted
10 if they take that 59, 62, 63, whatever it is they're
11 going to call it now. And pardon me if I don't have
12 a lot of faith that they won't keep moving it over,
13 but, you know, I'm a realist. I think they will.
14 Even if they take the 59 route, it's going to impact
15 us. I would prefer if they're going to do this,
16 follow Pecos all the way out and go up 99th. Why cut
17 up? There's already a freeway goes north. Take
18 that. But if you really have to get to the far
19 northwest valley, take it out to Pecos and all the
20 way up 99th. Then you're really over there as
21 opposed to cutting through homes.
22 The school. The impact it would have on
23 that is enormous. My granddaughter went to Laveen
24 Elementary for several years and as my kids had, but
25 it had changed over the years. A lot of newcomers

came in and things were different, and she got beat down not only mentally but physically and dropped out of in sixth grade and had to stay home for a half year.

She went to Country Gardens. They embraced her and brought out the best in her and she's now an honor student. She's in high school. She has huge plans and Country Gardens gave her what she needed. They gave her the discipline. I never have to speak to her about her homework, and she does huge amounts of homework.

Her writing. I worked at one of the public schools, and the amount of writing they do at Country Gardens is enormous. Other kids get out of high school and don't know how to write at all, but they make them write reports, history reports on all these trips they take to Washington, to St. Augustine, all these places. It's -- it is a unique school. And if they even put it at 59th, it is going to be so impacted that it will destroy what we've had. And I don't believe they'll keep it at 59th. I think it will keep its way over and eventually our neighborhood, our school will be gone.

I beg them, what looks good on paper isn't always good for people. Look at the other

Code	Issue	Response

Code	Comment Document

alternatives. Look at going all the way out to 99th where you already will hook up with the freeway. Why here? Why now? Why right there? I beg them to rethink this. I didn't build a house in Laveen. I built a home, and this will be so impacted that at the age of 63, I won't be able to find another place where my feet will know every inch of it when I walk down the street. I can walk down the street in the dark and my feet know, well, that's where the grass goes across it. You've got to lift your foot a little higher.

These people that are going to make this decision, come out and visit us in our neighborhood. Come out and talk to the neighbors in our neighborhood and see what you're going to do to us if you don't change this alignment, preferably as far west as you can take it because that would make sense. Follow Pecos all the way out and up 99th. Thank you.

Freeway Study

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:
- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. I AM TOTALLY AGAINST BUILDING THE 202 SOUTH MOUNTAIN FRWY.

1 2 1. ALONG THE PROJECT PECOS ALIGNMENT WILL SIGNIFICATLY INCREASE NOISE LEVELS. WHICH WILL IMPACT THE HEALTH OF RESIDENTS. ~~AS~~ WILD LIFE IS ALSO EFFECTED BY NOISE & EVEN WITH UNDER-
3 PASSES FOR ANIMALS TO CROSS THE FRWY IT WILL IMPACT THE WILD LIFE IN THE AREA.

4 2. AIR POLLUTION IN THE SOUTH MOUNTAIN AREA TODAY DOES NOT MEET FEDERAL STANDARDS ACCORDING TO THE AIR QUALITY STUDY IN 2005. ADDING 140,000 CARS & TRUCKS PER DAY THROUGH THIS AREA WILL ONLY MAKE AIR QUALITY EVEN WORSE.

5 NO BUILD!!!

Subject: Support for building the 202

1

Hello! I am a resident of Laveen, Arizona and an Arizona native. I am writing in support of building the 202 in the SW Valley. The Valley is growing and more and more affordable housing is found along the outskirts of metro phoenix. Traffic will only get worse and this freeway has been on the books for a long time. Also, I am hoping that a freeway will bring more commercial business to Laveen, which is not only good for our city but for residents like me that spend my money in other cities because there isn't a lot to do in Laveen.

Thank you for the opportunity to voice my support.

Megan Rose

I don't know how to put it. We were never notified that our house was no longer in the line of demolition. And so what's ADOT's recourse to those of us homeowners who all these years had thought that our I'm home was going to be purchased by ADOT because we couldn't sell them. And now all of the sudden, we're not in the alignment anymore, our house is not going to be bought by ADOT, and I'm faced with a house that's going to be worthless.

And if they had told us, given us a written statement, something that notified us, your home is not in the line of demolition anymore, you know, we would have taken action at that time. Either get out somehow, and now we've lost all of that in our home and we have to move. Now what do I do?

We've been in limbo for years, but we were reassured, just sit tight, the freeway goes through, it's no big deal because they're going to have to take our house. At least we'll be able to get out and be recouped. Now we lost everything, everything. I don't know what we're going to do. My name is Erica Slapke, 3119 East Redwood Court in Phoenix, 85048.

MR. ROSE: My name's Scott Rose, R-o-s-e,

a resident of Laveen. I'm very much in favor of the freeway. We moved out there nine years ago and waiting for the freeway to be built, and we moved out there hoping to raise our family out there with a lot of other amenities and the freeway has been holding this up. So we know that with the building of the freeway, there will be many amenities for us and the family and the whole community to use.

We live about a half mile from there, from the freeway, and it would be great access for us. And what else was I going to say? Oh, we're in favor of the 59 west alignment, but we also would be in favor of a -- potentially a parkway tying in the 101. What else? Anything else? I think that's it.

MR. HARDING: I'm Henry Harding and I live at 304 West Coolidge Street here in Phoenix, 85013. I'm not really in favor of this section of the 202. It's just -- if we promulgate more and more highways -- now, I talked to Ben over there. He said that we would save 40 million gallons or -- yeah, I think 40 million gallons of oil every year or gasoline every year.

What if we didn't do that and people start -- took the amount of money that would take to build this section of road and educated the people

UNIDENTIFIED SPEAKER: I was resident of Laveen. I was there since 2007 to 2000 -- end of 2012. I work in Chandler, and my commute was only through Baseline Road, and it was like a nightmare every day, and I pretty much couldn't stay anymore because I had to have early morning meetings, so I had to move out to Chandler. But I still have my home back in Laveen. And I'm -- it's rented right now.

So I'm very interested to see this freeway getting built, because if you stay -- if you ever go to Laveen, you'll see that area has a lot of prospects, but it's just not developing or growing because of not having a proper freeway there yet. It's just like a cul-de-sac, with only one road, Baseline, going back and forth.

So -- so I really hope and thank the ADOT team for committing the years. I know it's a long process, and I hope this process moves faster and quickly so that the freeway gets built as soon as possible.

MR. ROSS: Richard Ross, R-i-c-h-a-r-d, R-o-s-s, as in Sam, -s, as in Sam.

So I am against the building of this road for a lot of reasons. One, I don't believe -- I don't believe we have the money. Or another way of saying it is I think the money could be spent in a better way. I don't believe we need more roads built. We have an incredible

Code	Issue	Response
1	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.

Code	Comment Document

problem with heat island effect, and building of more roads is going to exacerbate that problem.

Regarding traffic and air quality, I lived in Atlanta during the building of the downtown freeway and the freeway out to the northwest -- north, northwest suburbs. The original proposition there was that the building of that expressway would last 30 to 50 years. It would relieve traffic congestion on arterial roads.

That took 11 years to build, and that entire network of roads was completely filled up in one year. It did not alleviate anything. As the road got built, traffic moved to it. I see no reason why the same issue would not happen here. If you build it, they will come. It will cause more interstate traffic and more regional traffic to go on this route. It won't alleviate arterial traffic as well.

Regarding air quality, which is linked to that, if the thought was if we alleviate stop-and-go arterial traffic, that will help air quality, my guess is we will end up with stop-and-go traffic on the proposed expansion, and it wouldn't help with air quality. As a matter of fact, more traffic will come to the area, increasing air quality issues, along with heat island effect, which combines with a one-plus-one-equals-three issue to air quality.

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
2	**Heat Island**	As buildings, parking lots, roads, and other infrastructure replace open land and vegetation, an urban heat island may result. The heat island effect is of a regional nature and, therefore, there is no requirement to analyze potential impacts and no possibility of determining the localized contribution at the project level to the regional heat island effect. It is likely, however, that a proposed project such as the South Mountain Freeway would be a minor contributor to the overall issue.
3	**Purpose and Need**	The proposed freeway is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. The *Regional Transportation Plan*, as described on pages 1-5 and 1-10 of the Final Environmental Impact Statement, addresses freeways, streets, transit, airports, bicycle and pedestrian facilities, freight, demand management, system management, and safety. The proposed freeway is only one part of the overall multimodal transportation system planned to meet the travel demand needs of the Maricopa Association of Governments region.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document

There's -- a lot stated in the project is based on future car travel miles increasing dramatically. I don't believe that car travel miles will increase as the study shows. Car travel miles elsewhere are showing a decrease. We have the light rail, causing a decrease. We have bikers, causing a decrease. Car travel miles are not going to increase at the rate that is in the projections. I think it's a bogus projection, and I think we're building a road that is solving a symptom, not a problem. The problem is too many people. What we need to do is stop having people -- we -- we have to stop the growth of people entering the system, and there will not be a need for -- for the road.

But with all those issues, the biggest issue for me personally is the park. The park is -- South Mountain Park. The park is unique. It is our crown jewel. The proposal of this road is one that, once it is done, cannot be undone ever. We need to remember that we did not inherit the land from our ancestors; we borrowed it from our children and our children's children for the next seven generations and beyond. It is our job and our responsibility to protect that land.

That's it. Thank you.

(The proceedings concluded at 8:00 p.m.)

Code	Issue	Response
5	**Traffic**	In Maricopa County, daily vehicle miles traveled levels increased by almost 2 percent between 2011 and 2012 and the 2012 daily vehicle miles traveled is approaching the prerecession peak in 2007. (*Source:* Arizona Department of Transportation Multimodal Planning Division Highway Performance Monitoring System Data for the Calendar Year 2012 and 2011). Even if the trend of vehicle miles traveled "per capita" decreasing continues, the total vehicle miles traveled in the region would still increase along with increases in total population.

Document Created: 7/18/2013 12:07:53 PM by Web Comment Form

Sirs,

I have lived in Laveen for 25 years, and during that time have been to numerous meetings to discuss the expansion of this area. During those meetings, prior to the growth west of 67th Avenue between Baseline Road and Southern Avenue, we spoke and argued and met with many people to discuss our negativity to the dense growth proposed there.

As it turned out later, we had been speaking to deaf ears, since the property west of 67th Avenue had already been purchased and proceeded on prior to all the meetings we attended, and was going to move forward REGARDLESS of our speeches, and tears. It was a done deal before we got to express our opinions.

Therefore, it is with a heavy heart that I write to you now. I am sure that this is just procedure that you must follow; your decision has probably already been made regardless of what the public says it wants.

1 My opinion is that the proposed freeway connect via the W101 Western Alternative, which would connect to an already heavy-use freeway area, and exchanges are already in place on the north side of the I-10 interstate. By using the 101 connection, you can bypass the already-congested area of 59th Avenue and I-10, and not add to the congestion there with more vehicles and trucks. It wouldn't matter if you added 100 more lanes in any direction. The bottleneck at that area will ONLY become worse, not "better".

1 Areas closer to the metropolitan Phoenix area from 99th Avenue is already a disaster area in 2013, and whenever this new freeway will be added will only cause to increase the congestion with cars and pollution. Keeping the proposed Loop 202 SM Freeway at the 101 Interchange keeps that congestion further west, where motorists who only want to continue west will not have to deal with the inner-city congestion too.

2 3 4 Also, the Laveen area, which started out at 8,500 population in 1988 when I moved here, and has blossomed into the 120,000+ population it is today, despite our efforts to "keep Laveen small", will again be bombarded with change – destroying our remaining farm fields and open space, displacing families, adding pollution, removing our irrigation system, destroying our "quiet" living conditions and adding health risks to its population.

Sadly, as mentioned earlier, it will not matter what I want, what I think, or what I feel about this W59 Alternative freeway. You want us to write and express our feelings, but your proposals are probably already established.

I say an emphatic NONONONONONONONONONONONONONONONONONO to the W59 Alternative. My vote would be for the W101 Western Alternative to bypass the my Laveen community.

Code	Issue	Response
1	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	The Laveen Village area is anticipated to have a built-out population of over 105,000 (see Final Environmental Impact Statement page 4-5). This proposed level of development places increasing demand on the road network. The City of Phoenix's General Plan for Laveen Village has designated areas along the proposed freeway for commercial development that cannot support the projected densities without implementation of the proposed freeway. Without the proposed freeway, the conversion of land from undeveloped and agricultural uses to residential, commercial, and industrial land uses would likely continue, placing a greater demand on surface streets (see Final Environmental Impact Statement page 4-14).
3	**Neighborhoods/ Communities**	In the Phoenix metropolitan area, vacant and agricultural land is already quickly being converted without the proposed freeway. Of three major land use types, residential land use was predominant in 2009 (see Table 4-2 and sidebar on Final Environmental Impact Statement page 4-3). In addition, the Study Area has over 140 developments encompassing some 11,000 acres (see Final Environmental Impact Statement page 4-7). None of the affected communities' long-range plans include agriculture as a future land use.
4	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Subject: Re: DEIS Loop 202/South Mountain Freeway Study

Sirs,

I have lived in Laveen for 25 years, and during that time have been to numerous meetings to discuss the expansion of this area. During those meetings, prior to the growth west of 67th Avenue between Baseline Road and Southern Avenue, we spoke and argued and met with many people to discuss our negativity to the dense growth proposed there.

As it turned out later, we had been speaking to deaf ears, since the property west of 67th Avenue had already been purchased and proceeded on prior to all the meetings we attended, and was going to move forward REGARDLESS of our speeches, and tears. It was a done deal before we got to express our opinions.

Therefore, it is with a heavy heart that I write to you now. I am sure that this is just procedure that you must follow; your decision has probably already been made regardless of what the public says it wants.

1 My opinion is that the proposed freeway connect via the W101 Western Alternative, which would connect to an already heavy-use freeway area, and exchanges are already in place on the north side of the I-10 interstate. By using the 101 connection, you can bypass the already-congested area of 59th Avenue and I-10, and not add to the congestion there with more vehicles and trucks. It wouldn't matter if you added 100 more lanes in any direction. The bottleneck at that area will ONLY become worse, not "better".

1 Areas closer to the metropolitan Phoenix area from 99th Avenue is already a disaster area in 2013, and whenever this new freeway will be added will only cause to increase the congestion with cars and pollution. Keeping the proposed Loop 202 SM Freeway at the 101 Interchange keeps that congestion further west, where motorists who only want to continue

2 3 4

west will not have to deal with the inner-city congestion too.

Also, the Laveen area, which started out at 8,500 population in 1988 when I moved here, and has blossomed into the 120,000+ population it is today, despite our efforts to "keep Laveen small", will again be bombarded with change – destroying our remaining farm fields and open space, displacing families, adding pollution, removing our irrigation system, destroying our "quiet" living conditions and adding health risks to its population.

Sadly, as mentioned earlier, it will not matter what I want, what I think, or what I feel about this W59 Alternative freeway. You want us to write and express our feelings, but your proposals are probably already established.

I say an emphatic NONONONONONONONONONONONONONONONONONONO to the W59 Alternative. My vote would be for the W101 Western Alternative to bypass the my Laveen community.

Sincerely,

Debra N Ross

South Mountain Study Team

1

2 3

All of the plans I seen or read about will only succeed in moving a traffic bottleneck from the Broadway Curve to 59th Avenue. Recent newspaper articles pointed out the growth in the west valley and in particular the town of Buckeye. Traffic on westbound I-10 can only be expected to increase and it won't be too many years before the bypass will have to be moved further west. Has any consideration been given building a highway from Gila Bend in a northwest direction and connecting with I-10 somewhere around Tonopah? By having such a highway travelers going west could take I-8 near Casa Grande to Gila Bend and reconnect with I-10 west of Buckeye, those traveling east would do the reverse. This could remove most of the truck and auto traffic traveling east and west on I-10 by allowing it to bypass Phoenix. The current connection between I-8 and I-10, SR85 requires drivers to back track in either direction and travelers are hesitant about taking it.

4

5

Two other advantages are presented with the new highway. Current residential homes in the proposed route would not have to be removed, saving millions of dollars. And there is discussion regarding constructing a new Interstate (I-9) from Nogales to Canada. With I-19, I-10 and I-8 already in place a highway connecting I-8 and I-10 from Gila Bend to Tonopah would be a good start.

Thanks for listening.

Clayton Ross

1	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
3	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
5	**Alternatives**	The proposed freeway is part of the multimodal *Regional Transportation Plan* (see Final Environmental Impact Statement page 1-5 for more information regarding the *Regional Transportation Plan*). The *Regional Transportation Plan* includes other freeway projects, such as State Route 30 and State Route 303L that provide additional connections to the southwestern areas of metropolitan Phoenix. All of these transportation facilities work as a system and rely on each other to provide optimum performance. Additionally, the Maricopa Association of Governments recently completed the Interstate 10/Hassayampa Valley Roadway Framework Study that evaluated transportation needs in western Maricopa County. This study proposed a system of parkways and freeways (including the Hassayampa Freeway, also designated as Interstate 11 through this area (see <bqaz.org/hasReports.asp> for more information). The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, it was eliminated from further consideration.

help the commute to work. I know a lot of times the freeway, I-10 gets closed and then the surface streets are just blocked all the time and I just really hope that we can get there. We moved to Laveen counting on that freeway coming in, knowing that it was approved, so I just really hope that you guys take that into consideration and support the freeway.

That's all I have to say. Thanks.

THE FACILITATOR: Thank you.

For those of you who may not have heard, the last bus is leaving in about three minutes for all destinations out there.

Jennifer Rouse, take your time.

MS. ROUSE: Hi, thank you. I wanted to speak on the record in favor of the 202. I live in Laveen, and have lived there for seven years. When we first moved there I lived close to 35th and [unintelligble] Road, where traffic jams pretty much with the big trucks going down the road, and things have changed, and having moved closer to 51st Avenue and Baseline, we see the semis that come through that earlier we heard people talk about how this is going to bring all of these semis coming through the neighborhood. It's already there. It's already

1

there, going well over 45 miles an hour. It's going to hit a child, I feel eventually, even though they've put in crosswalks. And whether that highway's built or not, the traffic is already there; it needs to be moved through faster.

I also, when I first moved to Laveen, we had just two children, and we were quite happy living kind of separated away from the rest of downtown Phoenix; however, things change, we had a third child. And he was born, he has special needs, and we had to have all sorts of therapists and stuff, and what we found is we need access or easier, quicker access to the East Valley. We love where we live; however, there just seems to be a really big disconnect from the rest of the Valley. We want to shop Phoenix; however, many of the stores that we want to go to, there's just one access, they're either way in the East Valley or so far west we have to drive out to Goodyear.

We feel that, especially now, a hospital, we hate to hear people say you need the highway before you get the hospital, before you get the malls; the hospital is the big thing. We have well over 40,000 people in Laveen now, and the nearest hospital is Maryvale. I had a friend that had to go

Code	Issue	Response

Code	Comment Document

there in an emergency situation, and it's not exactly the place you want to go. I guess we can't like -- we can't ask them to take us to Estrella, and I personally would love to see a hospital in our area.

Other than that. Thank you very much. Sorry.

THE FACILITATOR: Thank you. It is now 8:00 p.m. This concludes the Loop 202 South Mountain public hearing. Thanks to everyone here for participating, and your support throughout the day. Have a good evening.

(The proceedings concluded at 8:00 p.m.)

THE FACILITATOR: Thank you.

MR. ROWLEY: Good afternoon, it's good to be here with you today. My name is Cade Rowley, I've been here in the Valley for almost 15 years, and I want to show my support for the 202 freeway. This things's been studied for almost 20 years, I think that I've reviewed the draft EIS, I think the team has done a very thorough job of looking at all the issues, weighing in on the environmental consideration as a need to be taken and, you know, the freeway here's going to provide a lot of great things for the community. It's going to reduce air pollution; as you probably heard today, congestion is at a premium in this part of the Valley, it's very difficult to get from the west side of the Valley to the east side where I live and, you know, it's going to make a big impact on that.

In addition to that, we really need the jobs here in Arizona, so it has the potential to create 30,000 jobs. Our economy is struggling, now is the time to build the 202, and I want to issue my support for the build option of the 202. Thank you.

THE FACILITATOR: Thank you.

Don Clark.

MR. CLARK: Thank you. I want to just voice my appreciation for the study that has been done and voice

more highways you have, the less -- the more gas you're going to use. So it's taking a gas-tax fund and putting that money back into the same system. How can you not say that that's collusion? So there is a big problem with the Arizona Constitution, with this gas-tax law.

There is also a big problem with MAG and how they operate because they're the Association of Governments. Well, I think it's pretty clear that most people would agree that our government in this country has become extremely corrupt. I think people can, without a doubt, say that. I think special interests --

Am I speaking too loud?

UNIDENTIFIED SPEAKER: No, don't worry about it.

UNIDENTIFIED SPEAKER: A little bit.

UNIDENTIFIED SPEAKER: Good job, man.

MR. ROYER: So -- Sorry, I was speaking too loud. That was inconsiderate. No, I'm just kidding.

So most people, I think, would agree that the governments have become corrupt. So, again, the people that are dictating these decisions are the governments, the corrupted governments that don't represent the people, that represent special interests, in part because we let them; in part because there is a serious disparity in influence.

People that have the resources, the time, the money, the control, the power, are able to influence easier

Code	Issue	Response

(Comment codes begin on next page)

Code	Comment Document

than people who are stuck in a system where they have to work 60 hours a week, where they have a family and they're far removed from these meetings and they have a hard time getting to these meetings, speaking of transportation.

I just don't know what this is about. I don't -- it's pretty -- it's -- Not that I don't know. I just -- I don't get why this is trying to happen. Because, to me, if this was really needed, there wouldn't be so many people opposed to it, and truly opposed to it with all your heart and their bodies, because there is too many red flags.

So, if this was truly a need, you would have to give proven evidence. And, through what I have seen, even though I'm sure a lot of people from ADOT worked hard, which apparently there is a lot of people who work at ADOT because I -- I don't want to bring up the word "bureaucracy," but ADOT is a job creator.

I really hope you all are doing good work. But I -- You know, I just don't -- I don't see it because, if you're a Department of Transportation, you should be finding a better way to help people transport. And I don't see it helping. I see people hurting. I see people hurting at the gas pump. Every time I pump gas, it hurts me. I go in debt. And so I see a lot of people struggling.

And so gas prices, being as they are, going higher, as they can and probably will, is hurting people.

1

Code	Issue	Response
1	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
2	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative). As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway.

Code	Comment Document

"So ADOT, what does ADOT really do?" is my question. I would love them to -- You know, because I've heard answers but I haven't heard a good answer, because trying to remain neutral is cowardice in times like these. You cannot remain neutral, and especially in a position of you're a Department of Transportation. Your department is transportation. Your whole purpose is to think about transportation. So why does Arizona have one of the -- one of the worst transportation systems? We are overreliant on cars.

And I'm sorry I'm talking your ear off. I'm really sorry. You are a saint.

We have -- We are overreliant on gasoline, which is just hurting a lot of people because it's not -- it's not sustainable for them.

Imagine if we had electric cars; we didn't have to pay 60, a hundred dollars a week, on gas, or whatever people are paying.

I mean, so we're talking about investments here. And so, if ADOT was talking about investments, then I want good investments. And this is not a good investment. I mean, now we're talking business. This is -- This is not a good social investment.

Sure, this is a good investment for a private corporation that is going to -- and contractors and construction companies or whatever, and developers, developers,

Code	Issue	Response

Code	Comment Document

developers, people that keep developing things. But this is not a good investment for the majority of the people. This is not going to help more people get around. This is only going to make it easier for cars to drive, to continue to drive. It's not going to reduce -- and, you know, I don't want to -- I don't want to, like, sound like a broken record.

I'll give you a minute if you want.

COURT REPORTER: No, that's fine.

MR. ROYER: If we really wanted to help people, we would help them get around easier, at an effective way. And I don't see how individualizing commuter systems, transportation systems, reliant on a fossil fuel, reliant on something that is costly, reliant on something that is dictated by markets and profiteers who have been proven, time and time again, to do shady dealings -- Wall Street is a corrupt institution, and yet they are in the oil-speculation business.

BP, Shell, Chevron, along with getting subsidies, along with diverting real accountability because no one gets held accountable, continue to pollute this earth and us. And the people that feel it are fed up with it.

And the sad thing is most people aren't going to do nothing unless it affects them directly. Are we going to wait until we have such a bad gas shortage here, or we have such a bad water shortage here or a food shortage here, to realize that urban sprawl is not a good thing, to realize that

3

4

sustainability starts with building strong communities and not divided communities and sprawled-out communities?

Literally, this -- this freeway divides a community from a mountain. It divides a mountain from people. It surrounds this mountain with freeways. It -- It severs the connection that nature has to itself. Animals come and go.

Now you've got a freeway to pass over, Animals. Good luck with that.

Where is the animals in here? They don't have nothing to say? We -- We almost laugh at that. And yet people call themselves animal -- They care about animals, right?

"Well, I have a dog; I care about animals."

Well, what about the natural animals that have been destroyed because of all this development?

Development? What's real development? What really matters to people?

I think, to some people, what really matters is this idea of becoming rich or something, of having more power than others so that they can exert their will. To me, it's all about bullying. It's a bully culture.

And I've seen this firsthand. Pangea, this corporation, is a bully. This kind of methodology, where we're going to build; there's no other option: That's bullying.

"There's no other option. I have to beat you up for your lunch money." That's a bully.

So, to me, what it comes down to, people of ADOT, whoever is going to receive this message, is that: Do you want to stand with the bully or do you want to stand with the people who want to stand against bullying culture?

Not that we're going to go and bully the bully. But we need to stand against the bullying culture. We've got to change this culture.

So, anyways, the Sierra Club is against this. Many Gila River community members are against this. PARC -- I wish I could remember what "PARC" stands for.

Do you know what "PARC" stands for, by any chance?

Let me see. I need to get their name right because it's important.

Can I -- Can I take a moment, real quick?

COURT REPORTER: Yeah.

MR. ROYER: Okay. So here's PARC. So I stand in solidarity with PARC, which is Protecting Arizona's Resources and Children. This is this group, and they've been having meetings.

For instance, one of -- Something that I can see is six reasons why -- six, kind of, like, myths that they're -- or six problems that they have with the EIS.

5 6

One is truck traffic from Mexico and high-sulfur diesel. Truck bypass negated.

7

Another one is air -- Another one is air --

7	**Air Quality**	

Code	Comment Document

7

8

7

9

10 11

12

I don't know how you do that, by the way. It's impressive.

Another one is air toxics are already a crisis but not mentioned.

Another -- another issue with the EIS is risk from hazardous material, materials transportation, incidents, due to the SMF.

Number 4, more air-quality issues, the straw that broke the camel's back.

Number 5, traffic-congestion issues at west I-10 junction.

And Number 7, blasting South Mountain, religious and racial discrimination and civil rights violation in SMFDEIS. And that's the South Mountain Freeway Draft Environmental Impact Statement.

I think all of those are valid points.

And I think the most important thing is, when I watched the simulation, I saw that it was cutting through South Mountain. It was cutting through South Mountain. And I'm getting tired of driving around and seeing humans cut through things because, again, it's that mentality that we can't just go around. We can't be courteous to what's there.

We have to just go through. We have to plough through. And it's that mentality that I think is very dangerous.

10	**Cultural Resources**	
11	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.
12	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

And I don't think most people would be for this if they thought, not as a citizen of a state, but as a citizen to the earth. If we really cared about our environment, which we need, if we really cared about animals, which we need, then we wouldn't continue to destroy those things. It's really that simple.

It comes down to The Lorax story. It comes down to childhood stories. But this is old wisdom, Aesop's wisdom. It comes down to Shel Silverstein's, with The Giving Tree, wisdom. You cannot continue to take and take and expect to have anything left.

I think I'm good. I feel better now.

(The public hearing proceedings concluded at 8:00 p.m.)

Subject: Comments in opposition to South Mountain Freeway

Jul 15, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) This freeway extension is not needed. The DEIS is incomplete. South Mountain is sacred and should be respected and left intact.

(3) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer.
(4) ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(5) (6) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(7) (8) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(9) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Cultural Resources**	
3	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
4	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
5	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Health Effects**	
7	**Section 4(f) and Section 6(f)**	
8	**Biology, Plants, and Wildlife**

9	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

Gentlemen,

Contrary to the unsolicited e-mail I just received from a group calling themselves "We Build Arizona", urging me to support the building of the 202 through what is now Pecos Road, I urge you not to build it.

1

I live in Ahwatukee and my quality of life would be irreparably harmed by the proposed South Mountain Freeway. So much so that I am seriously considering selling my home and relocating.

Thank you for your consideration.

Raymond T. Royko, Esq.

1	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

Document Created: 5/18/2013 10:48:24 AM by Web Comment Form

I am an Arizona native and have lived in the South Mountain, Laveen Areas for 60 years. Laveen is one of the few areas left that is not overdeveloped. I have stayed in the area due to lack of noise, pollution, traffic and availability of horse property. However, the pollution, traffic and noise have increased in the last ten years due to growth. Many of the projects that were proposed such as an area being developed on Dobbins similar to the Prescott Courthouse area have not happened. Most of the original home owners in the area left in Laveen that is still County moved or stayed in the area because we wanted a rural feel to our community. I have seen many of the traditional small town activities change as Phoenix has expanded into Laveen. As well as an increase in crime. I am close to the proposed exchange and DO NOT want increased traffic, noise, pollution, or loss of land to take place. I have attended community meetings as well as filled out information at one of the barbeques. I feel that because Laveen residents are fewer than residents in some of the other communities polled our voices are not heard.

1 2 3 4 5

I attend a meeting where an Attorney spoke for one of the larger land owners in the area that supported the Route. His comments were very condescending to the residents in attendance and not appreciated.

I realize that growth is inevitable as I have already seen it occur in our community, but I would urge you to reconsider 59th Avenue as the preferred route just due to expense. If you truly respect community wellfare and opinion, I believe you need to choose another alternative.

6

Code	Issue	Response
1	**Neighborhoods/ Communities**	The Laveen Village area is anticipated to have a built-out population of over 105,000 (see Final Environmental Impact Statement page 4-5). This proposed level of development places increasing demand on the road network. The City of Phoenix's General Plan for Laveen Village has designated areas along the proposed freeway for commercial development that cannot support the projected densities without implementation of the proposed freeway. Without the proposed freeway, the conversion of land from undeveloped and agricultural uses to residential, commercial, and industrial land uses would likely continue, placing a greater demand on surface streets (see Final Environmental Impact Statement page 4-14).
2	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
3	**Traffic**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.

Aside from my personal issues I run into every day, it will create jobs. It will lead to economic development, like what we've seen with the San Tan 202. It will help the Valley as a whole,

Code	Issue	Response

Code	Comment Document

regional availability. I have friends who live on the east side of town who want to get to the West Valley or points west, and this will also help them by being able to bypass downtown Phoenix completely. That's it for me. Thanks for your time.

THE FACILITATOR: Thank you, sir.

Larry Landry. Mr. Landry, you have three minutes. Here's your timer; please begin.

MR. LANDRY: Thank you. Hey, Steve. My name is Larry Landry; I live at 2409 East Solano Drive. I'm officially retired now; however, for 28, almost 30 years, I've worked on freeway issues, including the 1985 vote where the South Mountain Freeway was voted in. Ironically, the 303 was an optional freeway at that time. Look at all the money that we spent on that. 55th Street alignment, the preferred alignment, avenue alignment, is the key one, and it's been 28 years.

I know you have difficult decisions to make on the route, but this was on the map well before any homes were built in Ahwatukee, and sometimes the greater good, our air pollution is getting worse every day in every way, and if you -- you know, better than I, I-10, I-17, the Broadway curve is a parking lot all too often. We need this reliever.

MS. RUIZ: I'm Caroline Ruiz, R-u-i-z.

THE COURT REPORTER: Spell your first name for me, please.

MS. RUIZ: It's C-a-r-o-l-i-n-e. Do you need an address?

THE COURT REPORTER: No.

MS. RUIZ: I am just here to comment that I'm -- I'm making a prostatement for the freeway and 59th Avenue. We live half a mile from the intersection of 59th Avenue and Lower Buckeye, and I believe that's where the commercial core of Estrella Village is branched. And I think the freeway would really spur that economic development, which we've lived there 13 years and currently have no meaningful retail. I think it's waiting for the freeway to come in.

I also think that we're seeing a lot of large warehouses go up in the area, and we currently don't have the road capacity to handle them. We're already doing a lot of -- there's a lot of mixing of vehicles with large semis, and we've seen a lot of accidents in the area. It's a dangerous situation.

I think the freeway would be a good way to just channel the traffic around the area, around Downtown, and also help with some of the pollution in the area to get

Subject: Please Consider NOT Building a Freeway Through Our Beautiful Community!
Date: Wednesday, July 24, 2013 10:04:25 AM
Attachments: image001.png

Hello,

1 2 3 4

My family and I have resided in the natural desert area of the Ahwatukee Foothills since moving to Arizona over 15 years ago. The community is a lovely place to raise a family. It has a low crime rate, low pollution index and is peaceful and quiet. It is a healthy place to live and work. If you build this freeway it will change all those factors and no longer be the community we know, admire and love. The freeway was planned many years ago. Things have changed. I share the same sentiment as many of my neighbors. If this freeway is attempted we will have to leave the area and likely will leave the state. Please consider your alternatives. The beautiful and sacred South Mountain will also be destroyed. Why? We are not at all in favor of this reckless plan by your organization.

5 6 7

Subject: Draft Environmental Impact Study for the South Mountain Freeway

To Whom It May Concern:

1

My husband and I have been residents for ten years in the Lakewood Community in Ahwatukee. As you are aware, the Lakewood Community was established in June 1985. The lakes are fed by a "well" or "spring". Our grave concern is the protection of these existing wells or springs to continue as the source for the two lakes in our community.

We respectfully request that ADOT protect these existing wells as they review the route for construction of South Mountain Loop 202 Freeway. We recognize the importance of the freeway to the city of Phoenix and State of Arizona. We also recognize the importance of our community lakes and their existing properties including the wells that feed and sustain the lakes in this vital Phoenix community. Any negative change to the lakes would have a devastating impact on our community, residents and their future children.

We are proud citizens of our community and will be long term residents well into our retirement in Lakewood Community.

Sincerely,
Zacc & Barbara Russell
3421 E Wildwood Dr
Phoenix, AZ 85048

1	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to State regulations/standards. (See text box on Final Environmental Impact Statement page 4-108.) The well replacement program as outlined by State law has been regularly implemented by the Arizona Department of Water Resources to effectively mitigate well impacts associated with its projects throughout the region.

Date: Wednesday, July 24, 2013 2:01:18 PM

Jul 24, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) I have carefully read ADOT's proposal for the South Mountain Freeway. I do not support its implementation. South Mountain Park deserves better. It is a precious urban resource that should be sheltered and protected. As you know it is the largest city park in the USA. As a landmark, as an urban oasis, as an unmatched urban trail system, it is known across the land.
This is precious public space.

(3) Building a new, very busy and, inevitably, very congested major roadway on its very perimeter makes no sense to me at all.

(4) The proposed freeway would cause more problems than it would solve. It might possibly provide short-term congestion relief but for how long? Many major roadways have been built and widened in the last 20 years but our roadways remain clogged. Building yet another road is not the answer. Building this particular road on the edge of a wonderful urban treasure would be a travesty to any notion of Urban Planning for the better good of all citizens.

(1) Please select the No-Build Alternative

Thank you.

Sincerely,

Jim Rutherford
5901 W Park Ave
Chandler, AZ 85226-1246

Dear ADOT,

My name is Amie Salemme and I am a 12 yearold 8th grader. I am currently attending Akimel-Al middle school. My family and I live within a mile of the planned South Mountain freeway. The pollution of the cars and trucks will affect the enviroment and health of people in the surrounding areas. The toxins released from the truck will badly effect people with Athsma. I am deeply concernd for my family, community, and enviraments health. Thank you for your time and I hope you reconsider this proposed highway.

Sincerely,
Amie Salemme

PARC Member

LOOP 202
South Mountain
Freeway Study

2013

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

I am opposed to any alignment of the Loop 202 South Mountain freeway that allows trespass onto the Mountain preserve or any excavation into the South Mountain. I don't agree with many of the NEIS assumptions finding them objectionable.
* ADOT is not following the process by their pre-decisional actions of purchasing land along the proposed alignment
* Sttng Mountain Preserve land - The Preserve has too many important archeological, spiritual, cultural and recreational sites that cannot be mitigated with other land trades. The NEIS does not address the new trails, Gila and Bursera Trails that are within the study area.
* The study uses outdated data projections. The study doesn't address and readdress the recent economic depression's impact on the data used for the statement

1	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	The Arizona Department of Transportation purchased some right-of-way along Pecos Road when it was adopted as the freeway alignment in 1988 (see Draft Environmental Impact Statement page 3-53). Should another alternative be adopted as a result of this study, the Arizona Department of Transportation would dispose of the land that has been acquired.
3	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Section 4(f) and Section 6(f)**	South Mountain's newest trails are the Bursera and Pyramid Trails (see Final Environmental Impact Statement page 5-8). The E1 Alternative is approximately 1 mile south of the Pyramid Trail and even farther from the Bursera Trail; thus, it would not affect either trail. The trails have walk-in access from Chandler Boulevard and 19th Avenue, with on-street parking. This walk-in access would be north of and adjacent to the planned extension of Chandler Boulevard and, thus, would not be directly affected. The walk-in access point and the part of the Pyramid Trial at the access point are located adjacent to a residential neighborhood and the City of Phoenix's planned Chandler Boulevard Extension. These trails are typically used for high-intensity recreational activities such as running, hiking, and biking, not noise- or viewshed-sensitive activities. All proposed action alternatives would span existing and proposed trails to avoid impacts. However, during construction (if an action alternative were selected), trails that would be spanned or would be near potential freeway construction would be closed for limited times for safety reasons. Closures would necessitate that trail users detour around construction sites to rejoin the trails farther along their length. According to Phoenix South Mountain Park/Preserve rangers, the Gila Trail—although well-defined—is not a designated trail within the park. That said, the Gila Trail would not be affected by the proposed freeway or by the Chandler Boulevard Extension. The Draft Environmental Impact Statement Appendix A394 contains information directly from the Phoenix General Plan and early coordination with the City of Phoenix Parks Department. The trails in the preserve are exceptions to this statement and were always meant as such. The trails within 1/4 mile of the proposed alternatives were treated separately, as in the case of the Maricopa County Regional Trails System. Should an alternative be selected, the Arizona Department of Transportation and Federal Highway Administration would work closely with the City of Phoenix during final design to ensure the connectivity of trails is maintained, whether they are eligible as Section 4(f) resources or not.
5	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

1

Additional Comments: * There is no place for hazardous waste incident. The loop 202 will eliminate the access/exit at 32nd Street and eliminate access as a surface street causing even less ability to move and exit the neighborhoods safely. Citizens have voted to financially support open space initiatives. South Mountain Preserve draws tourists who in turn support the local economy. The freeway alignment must not go through the preserve.

Code	Issue	Response
6	**Purpose and Need**	The worldwide recession that began in late 2007 generated a substantial downturn in growth rates for new housing and employment across the United States. Arizona particularly suffered the effects of this recession because, beginning in the early 2000s, Arizona in general and Maricopa County specifically experienced some of the fastest population, housing, and employment growth rates in the country. Because the need for the proposed freeway is predicated in part on projected growth, one might conclude the recession reduced that need. An economic downturn associated with a given recession is, however, generally considered a short-term phenomenon with respect to the longer-term planning horizon established for the proposed freeway. Socioeconomic indicators have steadily and consistently increased in the region since the early 1900s. The critical factors underlying these indicators remain unchanged. (See the sidebar on Final Environmental Impact Statement page 1-11.)
7	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Alternatives**	The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix (see Figure 3-8 on page 3-15 of the Final Environmental Impact Statement). The interchange would have required the displacement of over 100 homes and would have been located near an existing high school. The City recommended that, based on these impacts, the interchange be removed from the study. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).

INCOMING CALL DATE: 7/1/13	INCOMING CALL TIME: 2:22 PM
CALLER: ROBIN	CALLER ADDRESS:
PHONE: 623-363-9237	EMAIL:

CALLER REMARKS/QUESTIONS:

Hi I actually need to talk to someone about adding additional comments now that there's been a chance to study the DEIS. If someone could please contact Robin and a message would be fine if you just tell me what impact submitting additional comments in an organization that previously submitted comments, i.e., at the May 21st public comment forum would have on the total of comments. Or you know would it impact our original comments. Or do you take all comments into consideration? Thank you. Goodbye.

RESPONSE:

A voice mail message was left for Robin stating that all comments submitted during the Draft Environmental Impact Statement public comment will be considered and addressed in the document. She was encouraged to submit her additional comments at www.southmountainfreeway.com or on the telephone hotline at 602-712-7006.

RESPONSE DATE: JULY 3, 2013	RESPONSE TIME: 10 A.M.	HDR STAFF INITIAL: MEB

Document Created: 7/23/2013 6:07:12 PM by Web Comment Form

1 2 3 4 5 The DEIS provided for the Loop 202-South Mountain Freeway is a poor design based on outdated data. The current alignment will play havoc with the bordering Ahwatukee community's traffic with the removal of a major surface street and destroy a good portion of South Mountain with an expensive excavation of three mountain ridges. It is time to stop wasting money and not build the proposed alignment. ADOT has made some pre-decisional actions with the purchase of property before the Draft Environmental Impact Statement (DEIS) was released. I question the legality of this action and the entire DEIS when it appears ADOT has already made considerable financial investment to establish the alignment for the South Mountain Freeway rather than follow the prescribed process.

6 The elimination of Pecos Road in building the SMF would be disastrous for local arterial traffic in Ahwatukee Foothills. Not only would there be no interchange at 32nd Street, there would also be no frontage road along the freeway. So Chandler Boulevard would become inundated with traffic, much as it was before Pecos Road was connected to the I-10.

Also, the arterial streets north of Pecos, Liberty Lane and Lakewood Parkway, would become major East-West arterials in the area between Desert Foothills Parkway and 40th Street. Neither Liberty Lane nor Lakewood Parkway was designed for this. They provide access to 4 schools, including Desert Vista High School. Currently, the school bus traffic uses 32nd Street from Pecos Road to get to these schools. Without a SMF interchange at 32nd Street, this bus traffic would clog the already stressed arterials of Liberty Lane and Lakewood Parkway. High school traffic also includes a lot of student cars that would clog the arterials.

Furthermore, the elimination of the access to Pecos Road from near 27th Avenue (the road is currently called S. Chandler Boulevard) exacerbates an already difficult access problem for residents in that area. ADOT promised to pave W. Chandler Boulevard to provide residents' access to Ahwatukee Foothills further east, but this by no means provides these residents with an acceptable access to/from their homes. Pecos Road currently provides their only access out of their housing area, and it is a direct connection to I-10. With the SMF, Chandler Boulevard would provide their only access out of their housing area, and it would provide a convoluted access for resident to either the SMF or I-10. Egress in case of emergency would be extremely limited.

6 The DEIS lacks a traffic study of the effect the SMF would have on local arterial streets in Ahwatukee Foothills. A study should have been done both for traffic patterns during construction of the SMF as well as patterns that would develop after the SMF would be completed. Because the data is not current, ADOT and its consultants are missing a

7 continuing trend that young adult and teens are getting their driving licenses later and driving less. ADOT should be examining these trends when allocating funds for future projects to ensure our tax dollars are being used sensibly.

Young adults shift away from car ownership

Code	Issue	Response
1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the proposed freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
3	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Alternatives**	The Arizona Department of Transportation purchased some right-of-way along Pecos Road when it was adopted as the freeway alignment in 1988 (see Draft Environmental Impact Statement page 3-53). Should another alternative be adopted as a result of this study, the Arizona Department of Transportation would dispose of the land that has been acquired.
5	**Alternatives**	The Federal Highway Administration regulations do not allow the ownership of right-of-way to be a factor in the decision regarding the selection of an alternative.
6	**Traffic**	The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix (see Figure 3-8 on page 3-15 of the Final Environmental Impact Statement). The interchange would have required the displacement of over 100 homes and would have been located near an existing high school. The City recommended that, based on these impacts, the interchange be removed from the study. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement). The extension of Chandler Boulevard west of 19th Avenue is included in this project because reasonable access must be maintained to the neighborhoods at the west end of Pecos Road (see Figure 3-33 on page 3-57 in the Draft Environmental Impact Statement). Early in the study process a traffic interchange at approximately 27th Avenue was evaluated but ultimately eliminated because of increased residential displacements and cost. The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours may be needed during construction. (See Draft Environmental Impact Statement page 3-27.)

3	Over 3 million visitors come to South Mountain Park/Preserve annually, according to City of Phoenix statistics. Destroying any part of the mountain to align a high-capacity freeway will only have a negative impact on tourism and the many unique resources the park offers. The DEIS does not address the following issues:
8	• Further fragmentation of an endangered ecosystem – significant in that the Sonoran Desert was listed in 2011 as one of the 12 most threatened landscapes in the U.S. by the Cultural Landscape Foundation (Cultural Landscapes Foundation. 2011. http://travel.usatoday.com/destinations/dispatches/post/2011/09/cultural-landscapefoundation-most-threatened-landscapes/548464/1).
9	• Increase in types of invasive species and spread of existing invasive species, in that their distribution will be encouraged by the highway that will provide a corridor for their movement, further impacting individual native plant and animal species and habitat/ecosystem
8	• Loss of connectivity for plants and animals with Sierra Estrellas, Sonoran Desert National Monument
10	• Increase in heavy metals, particularly lead from vehicles, and cancer-causing pollutants emitted from asphalt
11	• Increase in elevated levels of particulates such as black carbon, nitrogen oxides and carbon monoxide downwind from freeway resulting in increased pulmonary and cardio health issues (Environ Health. 2007; 6: 23)
12	• With increase in pollutants, increased hazard to humans who hike and bike in South Mountain Park, particularly the west end – bicycling and walking increase exposure to air pollutants
10	• Air pollutants negatively affect many plants whether airborne or in the soil (most particles fall to ground) – loss of photosynthetic ability, reduced plant health and vigor; those plants that can exist near highways have increased susceptibility to environmental stresses when compared to plants further away from highway
9	• Construction kills plants including such iconic plants as ironwood, saguaro, Arizona Queen of the Night, elephant tree, ocotillo; those that are removed to be replanted, such as saguaro and littleleaf paloverde, historically experience a very high mortality rate
8	• Roads are highly correlated with changes in species composition and population sizes – populations of the more specialized species such as elephant tree, saguaro, Arizona escheveria, will respond negatively due to loss of habitat, including appropriate substrate and

Code	Issue	Response
7	**Traffic**	The references in the comment are primarily related to national trends for travel; however, the local conditions and setting of the Phoenix metropolitan area are not consistent with areas of high-density cities in other parts of the country. In Maricopa County, daily vehicle miles traveled levels increased by almost 2 percent between 2011 and 2012, and the 2012 daily vehicle miles traveled approached the 2007 prerecession peak in. (*Source:* the Arizona Department of Transportation's Multimodal Planning Division's Highway Performance Monitoring System Data for calendar years 2012 and 2011) Even if the recently observed national trend of per capita vehicle miles traveled decreasing continues, total vehicle miles traveled in the region would still increase along with increases in total population.
8	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Biology, Plants, and Wildlife**	Mitigation measures to prevent introduction of invasive species during construction are discussed on Draft Environmental Impact Statement pages 4-118 through 4-119 and 4-126 through 4-127. The disposition of protected native species would be determined by the Arizona Department of Transportation, in consultation with the Arizona Department of Agriculture, at least 60 calendar days prior to the start of construction. Please see Draft Environmental Impact Statement pages 4-118 and 4-126 through 4-127.
10	**Biology, Plants, and Wildlife**	Less than a mile of the proposed freeway would pass through the park. Issues such as heavy metals, pollutants from asphalt, and airborne emissions that would settle out would have inconsequential potential impacts on adjacent plant vitality and species composition.
11	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
12	**Health Effects**	

Code	Comment Document
13	associated species such as nurse plants • Increased, unmonitored use by humans in an area that had previously escaped heavy, often inappropriate use because of its greater isolation, resulting in a healthier ecosystem (especially compared to the eastern and central part of the Park) and sense of wilderness not experienced in any other City Preserve.
14	I urge ADOT to stop providing studies that do not accurately or thoroughly address the impact this freeway has on South Mountain. It's time to stop the $20 million and more in wasted taxpayer's money to study the environmental impact and design for an alignment that no longer makes sense. Respectfully, Robin Salthouse

Code	Issue	Response
13	**Section 4(f) and Section 6(f)**	The proposed freeway would be fenced off from the park, and no new access to trails or trailheads would be provided as part of the design. This area of the park would remain remote and little-used. The sense of wilderness—compromised as it currently is by the presence of the casino, of traffic on 51st Avenue, and of the currently four-lane Pecos road—would remain.
14	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

1 MS. SALVO: Okay, my concern -- Well, my concern,
2 one of them, is noise readings. In Chapter 4 of the -- of the
3 DEIS, they're using data from September of '03 to July of '04.
4 So they're using very old data, okay, on the noise readings.
5 The fact that they are planning 30-foot sound walls
6 tells me that there's a noise issue. And who wants that sound
7 wall?
8 Another item, on groundwater. In Chapter 4, again,
9 the groundwater withdrawal figures are from 1995. And nothing
10 current.
11 Another item. On replacement water, in Chapter 4,
12 they're using a 1996 lake study, which is out of date and --
13 and incorrect for today's usage. And they have been made aware
14 of that and yet continue to use that study.
15 The next one, the -- They acknowledge, in
16 Chapter 4, that diesel particulate matter will increase with
17 the trucks. Also, Chapter 4, in hazardous materials, they're
18 using a 1986 study of what is being transported. There's no
19 plan to restrict hazardous materials; no plan to respond, on
20 202, to any hazardous-material accidents. And 202 and if they
21 run the South Mountain Freeway, there are no emergency services
22 or assistance for anybody planned along there. You know, if
23 you break down, you're out there.
24 Another item: If, when they -- When they go to cut
25 through South Mountain, they do not address what they may find

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
1	**Noise**	Extant noise measurements are used only as a rough check on modeled existing ambient noise levels. The noise model does rely, in part, on the difference between modeled existing ambient noise levels and modeled No-Action and with-project noise levels. The modeled existing ambient noise levels used in the latest noise modeling analyses were not those from 2004 or earlier, ambient or otherwise. The modeled noise levels in the most recent analyses (reported in this Final Environmental Impact Statement) were derived from traffic data generated in August 2013. These analyses updated for the Final Environmental Impact Statement used the most recent Federal Highway Administration and Arizona Department of Transportation policy and traffic projections provided by the Maricopa Association of Governments (August 2013). These updated analyses begin on page 4-88 of the Final Environmental Impact Statement. No substantial differences between the analyses presented in the Draft and the Final Environmental Impact Statements resulted.
2	**Noise**	Noise walls would range in height from 8 feet to 20 feet tall in the Ahwatukee Foothills area.
3	**Groundwater**	The 1995 data were used to provide historical context. Where relevant and available, the latest data available were used. For example, the groundwater data for dissolved solids (Draft Environmental Impact Statement page 4-97) are from 2009 U.S. Geological Survey reports. Often the latest U.S. Geological data are not what would appear to be current. What is important is what the Arizona Department of Transportation would do if its actions were to cause a groundwater impact. The operative language is on Draft Environmental Impact Statement page 4-98: "Affected wells that would need to be fully replaced ... would ... comply with Arizona Revised Statutes § 45-45(c)."
4	**Groundwater**	As with the other groundwater data (previous comment), again, the data were used to provide context. These data were the latest made available from the Foothills Community Association. The project team assumed that the productive capacity of the wells has not appreciably changed since publication of those data. As with the previous comment, the operative language is what is important (text box on Final Environmental Impact Statement page 4-108): "If the well were to be acquired, the water would be replaced ..."
5	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The Draft Environmental Impact Statement makes no mention in Chapter 4 (or elsewhere) of what hazardous materials might currently be being transported, let alone any 1986 study or data.

(Responses continue on next page)

Code	Comment Document

there: if there are any mines, any shafts, any sinkholes, anything that might have happened even a hundred years ago when this was a mining area. That's not addressed at all.

And another item is the study area is very narrow, like it was a foregone conclusion that this is where they were going to do it. They didn't go far enough south to hit Highway 85 and the route that way around, that would have eliminated the whole issue of these communities around South Mountain. So they kept the -- the study area specific to where they wanted it, which I believe is against the law. They have to broaden it, so that it's much more -- much wider. And then they could have found possibly another route that they didn't want to deal with because this was easier.

It also -- They also have not adequately addressed CANAMEX, C-A-N-A-M-E-X, which is the freeway that is supposed to take the Mexican trucks through to Canada. They're going to be using this as a bypass. These trucks are not up to our standards for pollution or for safety. And we don't know anything about how they operate. So they didn't even address that. They didn't address it in the video. That's just smoke and mirrors, as far as I'm concerned.

And let me see. Hold on a second. Let me check my notes here.

Most of the -- Most of this study is dealing with very old information, very old data, very old studies. There

Code	Issue	Response
7	**Safety and Health**	Emergency assistance and first responder responsibilities would be through the Arizona Department of Public Safety and its Highway Patrol Division and through the local jurisdictions along the route. State and local special training and staffing needs, if any, would not be addressed until closer to the time of freeway construction and operation, if an action alternative were to become the Selected Alternative. The Department's Freeway Service Patrol serves the Phoenix metropolitan area by locating and assisting stranded motorists and eliminating road hazards. The Freeway Service Patrol uses specially staffed and equipped vehicles to patrol the region's freeways seven days per week, 18 hours per day.
8	**Geology**	A search of the Arizona Mineral Industry Location System database, examination of aerial photographs and topographic maps, and field investigation were completed to identify mineral resources and mines in the Study Area. These efforts identified one gold mining claim, six unknown mining claims, and several mining features in the vicinity of the South Mountains. None of these mining claims or features are located within the proposed freeway alignment.
9	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
10	**Trucks**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
11	**Purpose and Need, Old Plan or Use of Old Data**

12 9

is nothing current.

So, basically, they're not being honest with the people and the impact this is going to have, because they don't have current information. And that really bothers me.

The money they spent, the time they spent doing this, the taxpayers deserve more.

I'm not against the freeway. I'm against the freeway on Pecos Road. There are other alternatives if they had just broadened their study area.

Thank you.

three minutes are up. If you have more comments we encourage you to go next door and speak to a court reporter. Thank you.

MR. STONE: Thank you.

THE FACILITATOR: We would like to welcome our next speaker, Carol Sampson.

Welcome, Ms. Sampson. You have three minutes.

MS. SAMPSON: Thank you. Where's the time -- Oh, wait a minute, I have to get my glasses.

THE FACILITATOR: We'll restart the timer. Thank you.

MS. SAMPSON: Thank you. I received a postcard in the mail nearly two weeks ago announcing that a public hearing on May 21st was to provide an opportunity for the public to provide comments on the draft -- on the environmental impact statement on the proposed South Mountain freeway. None of my neighbors received the same postcard when I talked to them. Why were some of the public left out of the mailing? I don't know. They may not have been informed of this public hearing, but I have some comments to make.

I was one of the first home buyers 25 years ago in 1988 and moved into the Ahwatukee Foothills area. At that time I was informed from my builder that there could possibly be a future freeway put in within two years

Code	Comment Document

before 1992. It would go around South Mountain, but they didn't know when in the future it would happen, where it would be constructed, how it would be laid out, or even who would pay for it. Since then multiple builders were allowed to build and build all during the 1990s without regard or restrictions to any future freeway plans.

(2)

The building department of Phoenix, the State of Arizona, and ADOT have never given guidelines to locate, designate, or place restricted land boundaries for a future freeway on any of these builders. Now the Ahwatukee Foothills has a population of around 70,000 people, including thousands of homes, numerous schools, parks, shopping, et cetera. The lowest average home value starts at about 250,000. The Arizona environmental impact study states that there are over 733 to 1,304 homes and 30 to 41 businesses along the proposed freeway route that has to be removed before construction even starts. These homes and businesses have to be paid for. These properties will probably be purchased at taxpayer expense, which is around 75 to $130 million.

(3)

(4)

One of the two things that has not ever been investigated and that is the possibility of mines in the South Mountain area. No environmental study has ever been done to prove or disprove or rule out the possibility of past mining in the South Mountain area

Code	Issue	Response
2	**Acquisitions and Relocations**	It is not within a City's or State's right to deny building permits to developers who meet all requirements and want to develop their land. In 1996, the Maricopa Association of Governments Regional Council approved the Red Letter Process to provide early notification of potential development (including plans, zoning, and permits) in planned freeway alignments. In addition, the Arizona Department of Transportation works closely with Cities and Counties during the environmental impact statement process to encourage developers to reserve land for future transportation improvements. In some cases, when the developer is willing, the Arizona Department of Transportation has been able to purchase a portion of the land through advanced acquisition (see Final Environmental Impact Statement pages 3-53, 4-13, and 4-48).
3	**Acquisitions and Relocations**	The commenter's displacements are not correct. Table 4-12, on Draft Environmental Impact Statement page 4-39, shows that the Preferred Alternative (the W59 Alternative plus the E1 Alternative) would, potentially, displace 41 businesses, 165 single-family homes (53 along the W59 Alternative right-of-way and 112 along the E1 Alternative right-of-way), and 680 multifamily residences (all along the W59 Alternative right-of-way).
4	**Acquisitions and Relocation**	The commenter appears to suggest that estimated costs for acquisition of right-of-way would be $75 to $130 million. The project team's estimated right-of-way costs (2013 dollars) are $650 million ($425 million for the W59 Alternative and $225 million for the E1 Alternative). Please see Draft Environmental Impact Statement Figures 3-36 and 3-41 on pages 3-59 and 3-67, respectively.
5	**Geology**	A search of the Arizona Mineral Industry Location System database, examination of aerial photographs and topographic maps, and field investigation were completed to identify mineral resources and mines in the Study Area. These efforts identified one gold mining claim, six unknown mining claims, and several mining features in the vicinity of the South Mountains. None of these mining claims or features are located within the proposed freeway alignment.

6

affecting this proposed freeway.

Also, the second issue is that this is a unique freeway in that it connects the north part of I-10 to the south, which is a bypass or a wraparound that makes all interstate traffic and truckers going through the Ahwatukee area and having congestion at the end of the road, where there is already major congestion from the 202 freeway, and there's miles and miles of stop-and-go traffic on the way to Maricopa, on the way to Sun City, and to the casino at that location.

I have a much longer statement that I would like to put into the information that's being collected today. I greatly oppose this freeway.

THE FACILITATOR: Thank you, Ms. Sampson.

MS. SAMPSON: Thank you.

THE FACILITATOR: Linda Abegg. Good afternoon. Did I pronounce your name right?

MS. ABEGG: Yes, you did.

THE FACILITATOR: Ms. Abegg, you have three minutes, there's a timer right down here. Begin, please.

MS. ABEGG: I just wanted to say that I'm in support of building the 202 freeway. I live in Laveen, I have been there for about six or seven years, I think that this would benefit our community in bringing more of the amenities and things that our community is lacking

Date: June 7, 2013

Dear ADOT Planners,

(1) I received a postcard in the mail several weeks ago announcing a public hearing on May 21, 2013 to provide an opportunity for the public to provide comments on the Draft on the Environmental Impact Study on the proposed South Mountain Freeway. None of my neighbors received the same postcard when I talked to them. Why were some of the public left out of the mailing ?? They may not have been informed of this Public Hearing but I have comments to make.

I was one of the first home buyers, 25 years ago in 1988, who moved into the Ahwahtukee/Foothills area. At that time I was informed, from my builder, that there could possibly be a future freeway put in within two years before 1992. It would go around South Mountain but they didn't know when in the future it would happen, where it would be constructed, how it would be laid out or even who would pay for it.

(2) Since then, multiple builders were allowed to build and build all during the 1990's without regard or restrictions to any future freeway plans. The city building department of Phoenix, the state of Arizona and ADOT has never given guidelines to locate, designate or place restricted boundaries for a future freeway on any of these builders.

Now the Ahwatukee/Foothills has a population well over 87,000 people and includes thousands of homes, numerous schools, parks, shopping centers, recreation facilities, a Post Office and several churches all forming a prestigious cu-de-sac community. The lowest average home value starts at about $250,000.

(3) The Arizona ADOT/Governmental Draft of the Environmental Impact Study states that a total of between 733 to 1304 homes and 30 to 41 businesses along the proposed freeway route will have to be removed.

Code	Issue	Response
1	**Public Involvement**	A mailer providing notification of the release of the Draft Environmental Impact Statement and public hearing was distributed to approximately 87,000 residents and businesses as well as to individuals on the study stakeholder mailing list.
2	**Acquisitions and Relocation**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.
3	**Acquisitions and Relocation**	The commenter's displacements are not correct. Table 4-12, on Draft Environmental Impact Statement page 4-39, shows that the Preferred Alternative (the W59 Alternative plus the E1 Alternative) would, potentially, displace 41 businesses, 165 single-family homes (53 along the W59 Alternative right-of-way and 112 along the E1 Alternative right-of-way), and 680 multifamily residences (all along the W59 Alternative right-of-way).

Code	Comment Document

Before construction even starts, the removal of these homes and businesses has to be paid for first. These properties will have to be purchased at tax payer expense which is much higher that land costs were 25 years ago. Purchases of these homes and businesses all along the proposed freeway route will balloon the tax payer costs to 2.6 hundred million dollars!! The costs to just purchase the land required is enormous and outrageous.

4

There are two serious undisclosed adverse effects and information lacking in the Draft of the Environmental Impact Study that has not been included or addressed at all. The agency is required to make clear that such incomplete and unavailable information is lacking in their report and it does not.

1. The first issue deals with the amount of mining activity that went on in the South Mountain area. As elsewhere, Arizona is a huge mining state and there are years of discussions and speculations as the amount of mining activity that went on in the South Mountain area. There has not been any research or investigation into the possible mining activity in and around South Mountain.

5

NO ENVIRONMENTAL STUDY HAS EVER BEEN DONE TO PROVE, OR DISPROVE, OR RULE OUT THE POSSIBLITY OF PAST MINING IN THE SOUTH MOUNTAIN AREA AFFECTING THIS PROPOSED FREEWAY.

Are there old mines and mine openings in this area dug by individuals and/or mining companies during the "Turn of the Century" rush to find gold and other minerals? Are there underground tunnels, mine shafts and openings in the pathway of this freeway? If so, where are these undisclosed mine shafts, where are the unknown underground tunnels and other openings effecting the building of this freeway?

Are we tax payers going to be responsible for millions of unknown costs to locate, fill and seal off these un-identified mines, tunnels and mine shafts? Could there be sink holes and other liabilities due to a possible unstable underground? Are these costs going to be another hidden expense to building this freeway? These questions were not even dealt with in the Draft of the Environmental Impact Study.

2. The second issue NOT addressed by the Draft of the Environmental Impact Study deals with the I-10 Interstate traffic.

6

The Draft of the Environmental Impact Study stated that, " the South Mountain 202 freeway would be similar or the same as the other freeways in the valley such as the 101, 143, 202, 303 and the 60 freeways. The other

Code	Issue	Response
4	**Acquisitions and Relocation**	The commenter appears to suggest that estimated costs for acquisition of right-of-way would be $260 million. The project team's estimated right-of-way costs (2013 dollars) are $650 million ($425 million for the W59 Alternative and $225 million for the E1 Alternative). Please see Draft Environmental Impact Statement Figures 3-36 and 3-41 on pages 3-59 and 3-67, respectively.
5	**Geology**	A search of the Arizona Mineral Industry Location System database, examination of aerial photographs and topographic maps, and field investigation were completed to identify mineral resources and mines in the Study Area. These efforts identified one gold mining claim, six unknown mining claims, and several mining features in the vicinity of the South Mountains. None of these mining claims or features are located within the proposed freeway alignment.
6	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document

freeways are helpful in moving traffic only for the population around the valley to and from work, shopping, etc. Benefits of these valley freeways include enhanced access to and from employment opportunities and enhanced movement of goods and services for improved access to such goods and services for all population segments." The Draft concludes: therefore, no secondary impacts would occur by building the South Mountain 202 Freeway.

That conclusion is grossly WRONG, because the proposed South Mountain 202 freeway is unique in one way that other valley freeways are not. This is not an extension of the 202 freeway serving only the Phoenix valley residences. It would connect the **Interstate I-10 freeway** in two locations: one on the west side of Phoenix and the other on the south side of Phoenix. This connection would give Interstate and International drivers the access and opportunity to avoid and go around the metropolitan Phoenix area. The proposed South Mountain 202 freeway would open up a huge short cut or by-pass for all kinds of **International and Interstate I-10** freeway traffic right thru Ahwatukee/Foothills and the Gila River Reservation.

6

General driver behavior, especially by Interstate truckers, would easily find the South Mountain 202 freeway a short cut or a by-pass, indeed, a great time saver shown on their GPS maps. All **International and Interstate I-10** drivers who are not stopping to enjoy Phoenix would find this alternative route an obvious time saver.

Therefore, the impact of the South Mountain 202 freeway for the Ahwatukee/Foothills would be disproportionately extreme.

The Ahwatukee/Foothills community is built on slopping foothill elevations. The air pollution and noise levels from the added **International and Interstate 1-10** traffic would increase all over the foothills area. Both noise and air pollution would be trapped up against the approximately 2,500 foot high South Mountain range and be confined directly to the Ahwatukee/Foothills below.

7
8

Instead of air pollution being dissipated, the typical southwest winds would push and hold pollutants against the foothills and the mountain would block them from being dispersed. The Ahwatukee/Foothills would become smog city making it a less desirable place to live. This proposed freeway will drop property values due to the traffic, smog, noise, and congestion.

9

The standard cure for noise pollution is the installation of freeway concrete noise abatement walls. These walls are somewhat successful on freeways with flat land behind them. They would do no good for the Ahwatukee/Foothills community which is built stair-stepped up the foothills.

7

3

Code	Issue	Response
7	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes, which may be elevated above the roadway, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Valley and across the country.
8	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
9	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138 -47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.

Code	Comment Document

Congestion today at the I-10 interstate and the 202 connection next to the Wild Horse Casino and new Outlet Discount stores is "stop and go" and gets worse for miles, in both directions and especially for those going to Chandler, Maricopa and Sun Lakes. Local traffic would be worse, especially during rush hours and holidays and could be the length or more of Pecos Road. Adding more **International and Interstate I-10** traffic using the proposed South Mountain 202 freeway short cut or by-pass would trap even higher amounts of traffic, fumes and noise in the surrounding communities.

10

In conclusion, as a member of PARC, I find this proposed South Mountain 202 freeway extremely costly for tax payers and environmentally unsafe, and it is environmentally unjust to one area of the population, the residences of the Ahwatukee /Foothills. The Draft of the Environmental Impact Study is lacking, not legally complete and has not done a through job of answering many major questions. The proposed South Mountain 202 freeway has not been properly planned for over the last 25 years and there may be a certain amount of negligence and liability on the part of the City of Phoenix, the State of Arizona and ADOT.

11

Sincerely,

Carol Sampson

Carol Sampson

Code	Issue	Response
10	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
11	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

I am leaving a message regarding the ADOT Loop 202 South. The reason I'm calling to give my input on the possible areas for the Loop 202. For the W-59 that would be very close to our home and that would create great hardship for us because both of our daughters go to the Riverside School District and it would be very difficult for us to then have to travel alternate routes to drop them off at school. Because according to this map it appears that the freeway would be going right by our home so we would not be able to take 59th Avenue north to drop them off at school, which is on 51st in between Buckeye and Lower Buckeye Road. So this will create great hardship for our family, as well as my husband works on 59th Avenue so he would have to go southbound rather than being able to take 59th straight northbound as he does every day. So it would be very difficult to take our children to school and it would cause us great hardship because of our work schedules and because the time it would take us to take alternate routes to drop them off because we would no longer be able to leave directly from our home, take 59th northbound to Lower Buckeye and drop the girls off at school. This would create great hardship. Please call me if you have any questions. Would you please consider another route for the Loop 202. Thanks very much for your time.

Document Created: 6/27/2013 1:22:27 PM by Web Comment Form

As a resident of Ahwatukee since 1979, a member of PARC, and as a parent and grandparent, I would like to go on record as being adamantly opposed to the Loop 202 extension.

1 2 3 4 5 6 7 8 9 10 11 12

The proposed extension along the Pecos alignment will not alleviate the congestion on the I-10 into the downtown area, and will only serve as a truck bypass as part of the CANMEX route. If that occurs additional pollution from unregulated trucks and vehicles will increase the risk to health of those living nearby. This includes students attending nearby schools, families in homes, and senior citizen communities. In addition, the South Mountain and Estrella mountain ranges form a natural barrier to the north and west of the proposed route which will keep the pollution from dissipating and further endangering residents living nearby.

Aside from damaging sensitive cultural and ecological areas of Phoenix's crowning jewel, South Mountain Park, the decision to move forward based on what appears to be an incomplete EIS is troubling. If traffic is such an issue why aren't planners looking to finding more sustainable mass transit solutions, or alternative routes for traffic? The I-8 to SR 85 route for this proposed bypass is a much more cost effective solution, less invasive solution.

13

I strongly urge you to remove the Pecos Road alignment from consideration.

Thank you,
Irma Sandercock

1	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	In 2035, the average daily traffic on the proposed freeway is projected to range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-62). The estimated volume depends on location. The purpose and need for the South Mountain Freeway are not solely to relieve congestion on Interstate 10 (Maricopa Freeway). Facilitating mobility in the Maricopa Association of Governments region does not mean just relieving congestion on the Broadway Curve (see Final Environmental Impact Statement page 1-21). Among other criteria, the proposed freeway is to permit the entire Regional Freeway and Highway System to function as designed. Optimal function of that design includes completing all the segments of the State Route 202L system (see Final Environmental Impact Statement pages 3-35 and 3-37). With implementation of the South Mountain Freeway, many motorists would be able to get from Point A to Point B, a route that never included needing to use Interstate 10. According to the project team's traffic analysis, without the proposed freeway, existing roads and planned road improvements would accommodate about 76 percent of the transportation demand projected for 2035, leaving 24 percent of the anticipated demand unmet. If one assumes better-than-expected performance of nonfreeway aspects of the transportation system, 13 additional percentage points of the 24 percent deficiency would be accommodated. This means that the transportation network would still have an 11 percent capacity deficiency. The same analysis with the proposed freeway in operation in 2035 concluded that the met demand would increase to 82 percent; better-than-planned scenarios noted above, if achieved, would reduce network deficiency to 5 percent. The proposed freeway would handle about half of the capacity deficiency not captured by other modes. (See Figure 3-14 on Final Environmental Impact Statement page 3-31).
3	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Code	Issue	Response
7	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
8	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Section 4(f) and Section 6(f)**	
10	**Biology, Plants, and Wildlife**	
11	**Purpose and Need, Old Plan or Use of Old Data**	
12	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
13	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

From: Sierra Club on behalf of John Sanders
To: Projects
Subject: Opposition to the South Mountain Freeway
Date: Thursday, June 06, 2013 3:48:27 PM

Jun 6, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

Hello,

(2) I'm writing to express my opposition to the proposed South Mountain Freeway. Building additional roads does not solve the obvious problem here - far too much reliance on automobiles. They needlessly burn fossil fuels, polluting the environment and increasing health hazards. (3) They also continue to foster the USA's reliance on fossil fuels, which is certainly not beneficial. Ozone levels would only increase in the long run, because additional freeways encourage urban sprawl, thereby (4) increasing reliance on the automobile. The only way to reduce the Valley's poor air quality is to have fewer automobiles and vehicles, not encouraging their proliferation. (5) With a fraction of the funding earmarked for the freeway, real mass transit options could be offered, thereby decreasing overall pollutants.

(6) Additionally, the freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation and a symbol of pride for Valley residents. (7) What message does it send to future generations that we were willing to devastate this Park for something as ridiculous as another freeway? We should listen carefully to our neighbors to the south, the Gila Indian reservations and respect the land, not demolish it. They view this land as holy and we should carefully consider why. After doing so, why should be more respectful of it and revere it, not look to ruin it.

(8) I understand this freeway was originally part of the Valley's transportation plan decades ago. In the meantime, we have progressed in many ways as a society. Let's keep that trend going by not just blindly following a poor plan that existed 25 plus years ago. Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Mr. John Sanders

Subject: No Build for South Mountain 202

To Whom it May Concern:

I do not support the building of the South Mountain Portion of the 202.

1 2 3 -If it is built this segment will become a part of the Canada to Mexico trucking system. A more economical and efficient solution would be to convert Hwy 85 as a viable connection between I-8 to I-10.

4 -Building the segment will contribute to urban sprawl. With Phoenix being a relatively young city, it has the opportunity to look at previous cities and communities and the reality that building out freeways simply results in these systems being filled and more freeway building being required.

5 -Building this segment will decrease the air quality and

1	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Trucks**	
3	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
4	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). 6	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
7	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative). As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway.
9	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Subject: South Mountain Freeway, Loop 202

To Whom It May Concern:

1 2 3 4 5 I live near the intersection of 16th Street and Chandler Blvd. and I can hear the noise coming from Firebird Lake, soon to have a name change and expanded venues. I cannot imagine the noise that would come from a 10 lane freeway with big rig trucks running 24/7, all going 65-70 miles per hour. We in Ahwatukee sure don't want part of the CANAMEX highway running through our backyards

In my opinion, Pecos Road should be at most built out as a six (6) lane parkway, three (3) lanes each way running in each direction to the west side. There should be a provision that big rig semis cannot use this parkway, the big trucks need to stay on the interstate. 6

A parkway would be a better option as it opens up for cars and light trucks to travel from the East side of Phoenix to the West side using a shorter route saving time and mileage. This option would target the workforce that commutes from the East Valley to the West side. We don't want a shortcut for the long haul truckers to run through our backyards for the sake of saving a few miles. It's the same reason the Indians don't want those big rigs motoring across their land. Although they know in the long run they would benefit from the exposure to their casino and shopping mall. The Indians are greedy. They know the road is in their favor no matter where they put it. The Indians are dependent on the Federal Government for support and they know it is in their best interest. They also know that no matter what the outcome, they come out on top. Too bad, they are all part of the Governments free program's and they still won't cooperate for the good of all. 3 7

A parkway makes so much sense. It saves tons of money in construction costs and can be completed in a much shorter time frame. It would not impact normal traffic on Chandler Blvd. and/or Ray Road. It would also be much more environmentally friendly. Travel from West to East and East to West satisfies everyone who needs to get around South Mountain for work or shopping. Houses, churches, sacred land and other natural lands like South Mountain preserves would not be impacted. 8 9 10

Code	Issue	Response
1	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The proposed freeway would only have eight lanes (see page 3-58 of the Final Environmental Impact Statement).
2	**Noise**	The Maricopa Association of Governments regional travel demand model forecasts approximately 10 percent truck traffic on the South Mountain Freeway in 2035 (see Final Environmental Impact Statement page 3-64). This percentage is similar to current conditions on Interstate 10 between Loop 101 and Interstate 17 and on U.S. Route 60. Air quality and noise modeling for the Draft and Final Environmental Impact Statements used this forecast truck traffic (see Final Environmental Impact Statement pages 4-68 and 4-100, respectively). Noise mitigation is designed for this predicted noise level, including the noise from trucks.
3	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Trucks**	
5	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
6	**Alternatives**	In the best-case scenario, a parkway would carry approximately 105,000 vehicles per day, well below the average daily traffic on the proposed freeway, which would range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-19). As a result, the Arizona Parkway would lack sufficient capacity to meet projected travel demand. The Arizona Parkway would not adequately address the projected transportation system capacity deficiency, would not remove a sufficient amount of traffic from arterial streets, and, therefore, would not meet the project's purpose and need. For these reasons, the Arizona Parkway was eliminated from further consideration.
7	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the freeway on the local street system. The City study found no adverse effects on the local street system from the proposed freeway (see Appendix 3-1 in the Final Environmental Impact Statement).

(Responses continue on next page)

Code	Comment Document
11	The best option for big rig trucks is to make Route AZ 85 through Gila Bend to US Route 8 easier to use. That would divert hundreds of cars and trucks heading to or from Texas and California on Interstate 10 who only use our congested highways as a means to get from here to there. Everybody wins. Gila Bend wins. It would be a great place to live, similar to Casa Grande. Their economy would grow. They would be back on the map. They are close to Phoenix, San Diego, Mexico and all the other highways you would want to take to get places; Las Vegas, Nevada; Los Angeles, California and all up and down the West Coast. These are my thoughts and my opinion. Sincerely, Gary Sanuik Email: gsanuik@aol.com .

Code	Issue	Response
9	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
10	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
11	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.

To: Projects
Subject: Comments in opposition to South Mountain Freeway
Date: Tuesday, May 28, 2013 12:14:52 AM

May 28, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

2 3 Please do invest in good public transport and keep thus keep the air cleaner and prevent more deterioration of the landscape and the environment. The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

4 2 South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

3 5 The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

6 7 The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

8 Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

1 Sincerely,

Ms. Annmarie Sauer
Tennessee ave
Chloride, AZ 86431

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
5	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Section 4(f) and Section 6(f)**

From: Projects
To: ADOT
Subject: FW: Need to build the 202
Date: Monday, May 20, 2013 1:57:19 PM

From: Byron Schlomach [mailto:bschlomach@goldwaterinstitute.org]
Sent: Monday, May 20, 2013 1:57 PM
To: Projects; info@buildthe202.com
Subject: Need to build the 202

I've lived in Arizona for almost 6 years now. The whole time, I've lived in the west of Phoenix and, of necessity, must use Interstate 10 to commute every day. I've tried other routes but traffic control lights, school zones, local traffic, and trains all get in the way to significantly delay the commute more than I-10 even when I-10 is heavily congested. I have been on the highways in other areas of town. It is difficult to find anything more congested than I-10 on the west side. However, traffic would move immensely better if there were an alternative route for trucks and other traffic only passing through.

The congestion increases emissions as vehicles idle, often at a full stop, on the interstate. Very often, top speed over a 12 mile stretch of I-10 is 40 miles per hour with numerous stops and starts. This increases wear and tear on vehicles and increases the heat bubble over I-10 (I know since I ride a motorcycle).

1

The 202 Loop was designed to pull traffic from downtown and the tunnel (a poor design choice, by the way). This relief is badly needed, especially in the area of the I-17 interchange. The one problem with Loop 202 is that it is designed to intersect I10 at 55th Avenue when it should have been routed to intersect with Loop 101 on the west side. This poor design choice will cause problems on I-10 until it is widened between 99th Avenue and 55th Avenue. Nevertheless, Loop 202 should be built to provide the same sort of qualitative transportation service to the west side of Phoenix as the east valley already enjoys.

I feel the enviromental impact with air, noise and water issues would affect my quality of living. I live in Lakewood which is very close to Pecos Road and we would suffer large noise issues with a truck bypass for Phoenix. In addition I don't think water wells that feed our local lakes have even been looked into. We have a great ecosystem at these lakes and I don't want that to be affected by the build.

1 MR. SCHODT: Just that I prefer the 101 West
2 Alignment, so that they don't put a kink in our loop. That's
3 what I feel that they're doing, you know, by bringing that I --
4 onto I-10. It's already a parking lot, in the evening. And
5 they're just putting more cars on top of that. It would just
6 make it worse.
7 So when we do travel to the west side, we're
8 generally going to a sporting event in Glendale, and the
9 202/101 alignment would be much easier to get to those events
10 to the north and would probably benefit Glendale a lot more by
11 bringing more business from Gilbert, Chandler, Ahwatukee, up
12 there.
13 So that's how I feel about it. Thank you.
14 (The public hearing proceedings concluded at 2:00 p.m.)

Subject: FW: In support of extending route 202 for economic development of Laveen
Date: Wednesday, May 22, 2013 10:51:39 AM

From: William Schrepple [mailto:william.schrepple@hotmail.com]
Sent: Tuesday, May 21, 2013 1:04 PM
To: Projects
Subject: In support of extending route 202 for economic development of Laveen

1

I would like to voice my support for the extension of the 202 for economic development to the Laveen area of Phoenix. It would help to create jobs, alleviate traffic on Baseline Rd and the 10, and make services more accessible to the people of Laveen. It would need to be built correctly with sound barriers, etc in respect of nearby neighborhood housing. I wouldn't mind if there was a toll on it to help support the costs of construction and to benefit local indian tribes.

-Bill Schrepple

The South Mountain Freeway, Loop 202 Extension...
I am totally against the 202 Extension coming through Ahwatukee Foothills. I have seen the 215 Beltway go through Las Vegas and yes it does relieve traffic but it also grows and grows a desert with houses and stores and changes the face of the land forever. Ahwatukee Foothills has pollution as it is. But it also has beauty and a community feel. No no no on this extension.

1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

TO ADOT:

RE: LOOP 202 SOUTH MOUNTAIN FREEWAY STUDY.

MY THOUGHTS ON THIS ARE AS FOLLOWS:

USE W101. ATTACH THIS TO LOOP 101. WHY WOULD YOU WANT TO LOAD UP I10 FOR 5 MILES? NEW HOUSING IS STRONG IN BUCKEYE, AND MANY OF THE NEW INHABITANTS WILL USE I 10.

I WOULD THINK TWICE ABOUT USING THE INDIAN COMMUNITY LAND. LOOK AT THE MESS UP AT THE CANYON. THIS CAN HAPPEN WITH ANY TRIBE, ESPECIALLY WITH LEADERSHIP CHANGES. THEY CAN HOLD YOU HOSTAGE.

BACK TO W101- LOOK AT THE VOLUMES OF 5 MILES ON I 10- THE EASTBOUND WILL USE 101 FOR GOING NORTH & EITHER AND 202 FOR GOING SOUTH TO THE I 10, MISSING THE CENTRAL PHOENIX AREA.

THANKS FOR LISTENING TO MY CONCERNS:

Ronald Schulz

better utilization of this portion of the freeway? Every afternoon I hear about how congested the San Tan portion is, so it seems like the South Mountain freeway will just increase congestion on this roadway, or is that what ADOT considers to be better utilization, more congestion and increased travel time.

Overall, this freeway is not worth the cost. It will destroy a portion of South Mountain Park, an area that was set aside to protect natural resources and to provide public benefit. It will destroy wildlife habitat and movement corridors. It will exacerbate air quality concerns and climate change. It will endanger public health, and it will do all of this without any real added benefit to our communities, so we should not build the South Mountain freeway. Thank you.

THE FACILITATOR: Thank you.

Ana Morago?

If you'd like to speak and are not yet registered, please go out to the front desk registration.

Steve Schwab. Please feel free to use either microphone.

MR. SCHWAB: Good afternoon. My name is Steve Schwab. I've been in the Valley for 31 years and I have witnessed a lot of freeway growth here and I strongly, strongly urge you to accept the action alternative here.

I support the South Mountain freeway. I've seen a lot of economic development and an enhanced community as a result of the freeways that have been built here. I think they're beautiful the way ADOT does it and I strongly encourage acceptance of this. Thank you.

THE FACILITATOR: Thank you.

I'll try Ana Morago again.

MS. MORAGO: Hi, my name is Ana Morago, I am from Gila River Indian Community. Well, this is kind of -- I've been doing this for two years now, urging ADOT not to build the freeway at all, because we hold the South Mountain sacred to four tribes, actually: Akimel AuAuthm, Akimel O'odham, Tohono O'odham, and Ak Chin. These tribes all hold this ground sacred, and if you blast through this mountain you're going to be dealing with four tribes trying to save the mountain as well as the wildlife and the plant life that live on there.

I read the EIS last night talking -- or trying to get ideas for talking points, and one that we really need to look at is the water. Water is the source of all life. When I read it, there's hazardous materials are going to be going underground, water wells, lots of wells, surface water is going to be contaminated as well as polluted, as well as our Sonoran Desert tortoise as a newly endangered species list now, as well the Mexican

Document Created: 7/9/2013 6:05:04 PM by Web Comment Form

(1) (2) I am writing to oppose the construction of the Loop 202 extension. I believe the increased traffic and pollution in the area will be destructive to my neighbors' way of life in Laveen, the Gila River Indian Community, and surrounding areas.

(3) (4) (5) (6) Specifically, I am very concerned that the DEIS is not accurate. It does not identify the displacement of Gila River homes, does not identify an evacuation route in the event of a biohazard accident, does not depict the loss of agriculturally zoned lands in the Laveen and Gila River areas, and does not visually display prehistoric and sacred sites potentially impacted from construction.

(7) I demand that ADOT thoroughly analyze these impacts and provide visuals such as aerial photography where needed.

(8) I also urge ADOT to release a revised Environmental Impact Statement that takes into account public health concerns and related issues.

Code	Issue	Response
1	**Neighborhoods/ Communities**	The Laveen Village area is anticipated to have a built-out population of over 105,000 (see Final Environmental Impact Statement page 4-5). This proposed level of development places increasing demand on the road network. The City of Phoenix's General Plan for Laveen Village has designated areas along the proposed freeway for commercial development that cannot support the projected densities without implementation of the proposed freeway. Without the proposed freeway, the conversion of land from undeveloped and agricultural uses to residential, commercial, and industrial land uses would likely continue, placing a greater demand on surface streets (see Final Environmental Impact Statement page 4-14).
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Design**	The proposed freeway would not use any Gila River Indian Community land therefore would not displace any Gila River Indian Community homes or convert any Gila River Indian Community farmlands to a freeway.
4	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Agriculture**	The current analysis of impacts on prime and unique farmland—the land most suitable for growing food—indicates that loss of this type of farmland would be negligible. Urbanization in the Study Area is steadily moving in a westward direction. If an action alternative were selected—and by the time it were to be constructed—it is likely that more land will have already been converted from agricultural use to residential, commercial, and/or industrial uses, and that the proposed South Mountain Freeway would have even less of an impact. Urbanization will continue with or without implementation of the proposed freeway (see Final Environmental Impact Statement pages 4-161 and 4-162).
6	**Cultural Resources**	The locations of prehistoric and sacred sites are not shown on maps to protect them from vandalism.
7	**Alternatives**	Aerial photographs are used throughout the Draft and Final Environmental Impact Statements. Long, detailed, roll plots of the alternatives were available to the public at the Public Meeting in May 2013 and were extensively used.

1 MR. SHANKER: My name is Howard Shanker.
2 I live in Ahwatukee in Club West. I would like to
3 personally point out that I think the draft EIS is
4 inadequate in a number of reasons. I don't think it
5 addresses the air impacts adequately, especially with
6 schools and residences so close or the noise impacts.
7 What else?
8 I don't know that they've done an adequate
9 socioeconomic analysis, adequately interpreted the
10 impacts thereof. It seems to me that this was really a
11 foregone conclusion, that they made their mind up 20 or
12 30 years ago when the demographics were very different.
13 And to maintain this exact same location for the freeway
14 just doesn't make any sense anymore.
15 What else?
16 I think -- Did I talk about the 4F
17 analysis briefly already?
18 That's about all for now. This is all
19 sort of impromptu, but I'm glad to get this on the
20 record. I anticipate submitting a written response
21 hopefully.
22 MR. DAD: I'm in favor of the freeway
23 because of the traffic congestion that's coming into
24 Laveen. I've had this property since 1961, so it's come
25 a long ways. But the people bring traffic and we can't

Alexis Sharif Document Created: 6/3/2013 12:15:29 PM by Web Comment Form

I am a resident of Ahwatukee and want the freeway built. It is difficult to leave or enter Ahwatukee on any weekday during "rush hour". But even not at the peak of "rush hour" traffic volume has increased. Weekend traffic has not diminished either. If there is an accident on the I-10 in either direction we are held hostage with no way to leave or get back to Ahwatukee, it is a total ROAD BLOCK NIGHTMARE. If there were an emergency that required an evacuation of this area this presents a potential tragedy just waiting to happen.

1

I respect and understand where the GRIC is coming from in their wish to preserve South Mountain and their land. However, they are major contributors and will continue to be major contributors to the increased traffic, pollution and gridlock on I-10. They now have major public attractions; Casino, Resort Hotel, Rawhide, and now the Outlet Mall. They don't have a problem building commercial entities on their land and reaping the benefits of such entities and I'm sure they have plans to continue to expand. Is the GRIC's progress for the "good of the community" and what community are we talking about. The freeway would be for the good of the community.....the GRIC AND the Phoenix/Ahwatukee community.

The GRIC can not be allowed to be a part of the problem (increased traffic to the area—I-10) to reap the benefits of their commercialization of the area and not be a part of the solution. They should either allow part of their land to be used for the freeway, as they have used for their commercial endeavors. This can/will offer more opportunities for them to further build income producing enterprises along the route and contribute to access to the area in and around Ahwatukee.

BUILD THE FREEWAY! People need to travel from the west side of town and will continue to do so on I-10 what a future gridlock nightmare if nothing is done.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. _____

PLEASE Build Loop 202:

I live in Laveen near Baseline and 75th and our neighbors and I are tired of being isolated. This community is cut off from the rest of Phoenix because we have no dependable roads out. We must use one of three routes – Baseline to 91st, Baseline to 67th or Baseline to one of the more easterly avenues to get anywhere. Then, we often must backtrack to 75th Avenue to shop, see a doctor or go to a hospital. It's very scary when one has a medical emergency as we did a few years ago when a visiting relative experienced congestive heart failure. To make matters worse, whenever there are floods, 91st and 67th Avenues are flooded – often for extended periods of time - we must drive eastward down to 51st or 35th Avenue to get out of here even if we only want to go west on I-10.

I know there are people who believe that there will be more polluted air should South Mountain Freeway ever be built, but I can't begin to compute the extra miles that this family and hundreds like it have had to drive double the miles, zigzagging simply to get to I-10 and to access downtown Phoenix and other communities, to see the doctor, to go to the hospital, etc. I'm certain that our gas bills for our vehicles are twice as much than they would be for our vehicles than if there were reliable bridges at 59th, 67th and/or 75th Avenues out of here! I believe that the pollution will be less if we can lessen the number of miles we have to drive even when there is no flooding.

I also believe that there will be havoc on I-10 through central Phoenix if this 202 link isn't extended soon. There needs to be some relief to carry vehicles around Phoenix. The cars will come, but will Phoenix and Maricopa County be ready? This project should have been completed already, years ago! It won't help to stretch out this process longer. Please get the job done asap!

I am concerned that the DEIS does not identify the displacement of Gila River homes, does not identify an evacuation route in the event of a biohazardous accident, does not depict the loss of agriculturally zoned lands in the Laveen and Gila River areas, or visually display prehistoric sites potentially impacted from construction. ADOT needs to analyze these impacts and provide visuals such as aerial photography where needed.

Code	Issue	Response
1	**Alternatives**	The proposed freeway would not use any Gila River Indian Community land therefore would not displace any Gila River Indian Community homes or convert any Gila River Indian Community farmlands to a freeway.
2	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Agriculture**	Existing agriculture is depicted in Figure 4-3, on page 4-6, of the Draft Environmental Impact Statement. While not an aerial photograph, it outlines the parcels that are currently under agricultural production. Table 4-4, on page 4-7, summarizes existing zoning by land use for the entire Study Area. In addition, Figure 4-4, on page 4-8, reveals how much of the existing agricultural land along the W59 Alternative is already slated for commercial and residential development. Implementation of the E1 Alternative would cause no conversion of agricultural uses on Gila River Indian Community land. Urbanization will continue with or without implementation of the proposed freeway (see Final Environmental Impact Statement pages 4-161 and 4-162).
4	**Cultural Resources**	Maps showing locations of cultural sites are kept confidential to protect the sites.
5	**Alternatives**	Aerial photographs are used throughout the Draft and Final Environmental Impact Statements. Long, detailed, roll plots of the alternatives were available to the public at the Public Meeting in May 2013 and were extensively used.

Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Section 4(f) and Section 6(f)**	
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative). As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway.

Subject: No on Loop 202/South Mountain

Good morning,

I am writing today in hopes of ensuring that my voice is heard. I am unable to join the events in downtown Phoenix today to do this in person.

I am against the building of the South Mountain/Loop 202 along its current trajectory through Laveen at 59th Avenue. My husband and I made a choice eight years ago to build our home in Laveen after looking in different areas of the valley. We were drawn to Laveen's rural feel, the mountain vistas and the cultural opportunities for our children being so close to the Gila River Reservation. When many bailed out on their agreement to build their home in Laveen (our area of 67th Avenue/Baseline apparently had zoning issues that took many months to resolve) we waited almost 18 months to move from north Phoenix (16th Street/Loop 101) to Laveen.

1 Laveen is not and was not meant to be a metropolis. People who moved out here with limited transportation options and then demanded public transportation have turned a quiet little town in to a transient and not terribly rural community. People who moved out here and then complained that there are no sit down restaurants and not a wide variety of businesses do not seem to understand the concept that not all land must be developed. Yes, we took advantage of a beautiful area in which to build our home. However we did not expect infrastructure at the expense of the environment, native landscapes and small town feel.

I do agree that traffic congestion is an issue that needs to be addressed in the valley. It is not completely up to the state and federal government to solely address the issue. Citizens must do their part to reduce their trips in their cars that creates that congestion. Yes, it is very nice to live outside the city and have some space and be able to see the stars at night. Nevertheless the onus is also on every citizen to make sensible choices about where they live to ensure that all factors are considered. The introduction of a new high-speed roadway is not ever going to guarantee movie theaters, big box stores, and medical centers. Those things may very well come to the area if the roadway is indeed built although at what cost? Is there a guarantee that the businesses will be willing to pay what I am sure will be a premium space cost for proximity to the roadway? No. Is there a guarantee that Laveen will not become a roadway with two high schools and a grocery store? No. Is it an intelligent choice to destroy – no matter whether it's a *blast* or a small *cut* – mountains that have existed long before any of us and will be here long after? No. Do I take advantage of the I-17, knowing that blasts were done to get that roadway built? Yes, I do. However if I read the information correctly that roadway was built because there were no other roadways heading north and south. The current plan for Loop 202 does not fulfill a singular need where there are no other options.

2

Code	Issue	Response
1	**Neighborhoods/ Communities**	The Laveen Village area is anticipated to have a built-out population of over 105,000 (see Final Environmental Impact Statement page 4-5). This proposed level of development places increasing demand on the road network. The City of Phoenix's General Plan for Laveen Village has designated areas along the proposed freeway for commercial development that cannot support the projected densities without implementation of the proposed freeway. Without the proposed freeway, the conversion of land from undeveloped and agricultural uses to residential, commercial, and industrial land uses would likely continue, placing a greater demand on surface streets (see Final Environmental Impact Statement page 4-14).
2	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document
3	I would indeed support a more logical trajectory of the 202 to connect at the 101/I-10 interchange. There is minimal commercial development on the southeast corner of 99th avenue/101 therefore with some mutually agreed upon concessions from both sides – public and private sector – I believe the necessary flyovers and other roadways could be developed. If the only option will remain the 59th Avenue trajectory then I cannot support continued development of this road way. Thank you for your time. Sincerely, DeAnne M. Shaw Laveen, AZ 480-201-2867 shawsomes@gmail.com Arizona Resident since 2002 Laveen Resident since 2005 Confidentiality and Nondisclosure Notice: This email transmission and any attachments are intended for use by the person(s)/entity(ies) named above and may contain confidential/privileged information. Any unauthorized use, disclosure or distribution is strictly prohibited. If you are not the intended recipient, please contact the sender by email, and delete or destroy all copies plus attachments.

Code	Issue	Response
3	**Alternatives**	The Arizona Department of Transportation has designated the 59th Avenue connection (W59 Alternative) with Interstate 10 (Papago Freeway) as the Preferred Alternative for the proposed freeway in the Western Section of the Study Area. The W101 Alternative would connect with State Route 101L, but would also result in substantial impacts on the community of Tolleson. The South Mountain Citizen's Advisory Team recommended the W101 Alternative. The project team considered the input of all stakeholders—including regional leaders, municipalities, members of the public, and members of the South Mountain Citizen's Advisory Team—before identifying the W59 Alternative as the Preferred Alternative (see Final Environmental Impact Statement pages 3-65 and 3-68). The W59 Alternative was seen as the best option to balance fiscal responsibility, regional mobility needs, community sensitivity, and additional considerations such as consistency with long-range planning goals, economic and environmental impacts, and public and agency input.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1 I OPPOSE The SMF entirely. It is in essence a "truck By-Pass" for Trucks going/coming from/to the West Valley distribution Warehouses. The trucking industry Surely lover the SMF.

2 I SMF would destroy the integrity of the S. Mtn. Park. This Park has been a Blessing To The Valley and now the SMF will destroy and disfigure (DISFIGURE) our great park.

3 This is a disaster TO Nature & our people.
What is the environmental Impact of leasing land by the Gila Community along the south of the SMF To Truck stops, Businesses etc.
Why did the Gila Community oppose the SMF? They know the horrible impact on their land and people.

South mountain loop 202

After viewing the video on the south mountain freeway/ 202 loop. I feel it sadly depicts the highway as a moderately traveled high way without any large trucks. That in and of its self is an outright fraud and misrepresentation of what this Truck route will really be. This strip of road will be the preferred route of 18 wheelers coming and going to Mexico. Weather you identify it as the SMCAT route or not. Common sense tell you that truck drivers would rather take the route that allows them to avoid a metropolitan area. It will flood one of the better neighborhoods and communities in Phoenix with smog and diesel exhaust, increased noise from the large trucks, like Jake breaks noise and roar of the tires and large engines. It will expose our community to an increase in crime from transits to smugglers and more. Increased danger to our community from accidents with big rigs carrying hazardous materials. This route will endanger three schools and countless families with exhaust and an unsightly 16 foot so called noise reduction wall, that won't help the people that have bought houses higher in the foot hills than the wall. It is going to increase traffic through the surface roads and access roads to this high way. Which is something ADOT likes to say will be eased. It isn't even a short cut to the city. This highway is thirty years too late. It was voted in back when there was a fraction of people living here in Ahwahtukee. Now there are around 87 thousand folks living here that for the most part will be adversely affected by this waste of tax payer's money. Hundreds of homes and businesses have to be removed at the tax payers expense and this truck route will ultimately transform and dilute this wonderful community from a sought after place to live With good schools, nice environment, good property values, to a noisy, smog filled truck route. This Highway has to be stopped!!!!! No Action!

Code	Issue	Response
1	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Trucks**	
3	**Air Quality**	
4	**Noise**	
5	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
6	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Health Effects**	
8	**Noise**	Noise walls would range in height from 8 feet to 20 feet tall in the Ahwatukee Foothills area. As mentioned in the sidebar on page 4-91, the Final Environmental Impact Statement is based on preliminary design and traffic information. As the design progresses to the Final Design phase, noise barrier locations and heights will be refined and finalized. During Final Design, more detailed information on the location, actual height, and distance from the property line of each noise barrier will become available.
9	**Noise**	As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes, which may be elevated above the roadway, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Valley and across the country.
10	**Traffic**	On arterial streets with traffic interchange connections with the proposed freeway, daily traffic volumes would increase near the freeway. This statement is supported by the traffic information presented in Figure 3-37 on page 3-61 of the Final Environmental Impact Statement; for example Van Buren Street between 59th and 51st Avenues). However, the freeway would provide wide-ranging reductions in overall travel on Study Area arterial streets. As shown in Figure 3-13 on page 3-30 of the Final Environmental Impact Statement, the total volume removed from the arterial street network with the proposed freeway in place in 2035 would be 277,000 vehicles per day.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
11	**Traffic**	The statement related to reductions on arterial streets considers those arterials streets in and around the entire Study Area, not just in Ahwatukee Foothills Village. The traffic projections for Chandler Boulevard (see Figure 3-12 on page 3-29 of the Final Environmental Impact Statement do show a reduction with the proposed freeway when compared with conditions without the proposed freeway. The travel time comparison shown in Figure 3-17 on page 3-34 of the Final Environmental Impact Statement included a trip from Ahwatukee Foothills Village to Downtown Phoenix using Interstate 10, not the proposed freeway. This trip would take 5 or 6 minutes less with the proposed freeway in place when compared with conditions without the proposed freeway. The duration of level of service E or F (represents stop-and-go traffic) for the existing conditions and future conditions without the proposed freeway are shown in Figure 1-9 and 1-10 in the Final Environmental Impact Statement. In both conditions there are more than 3 hours of congested conditions during the morning and evening commuting periods on a number of the region's freeways, especially Interstate 10.
12	**Purpose and Need**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
13	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
14	**Neighborhoods/ Communities**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.

MR. SHEEHAN: Where do I start? I had a nice little thing typed up, actually.

Basically, I feel that this is a ruse, to -- that's being suggested, that it's going to be just to relieve traffic. But it's actually going to become a glorified truck route, with the traffic to Canada, highways that we're talking about, and the fact that they're going to -- that you're going to be having vehicles that are not -- not under the same emissions standards that we have.

So it's going to be emitting all kinds of -- all kinds of diesel fumes, Jake brake noise, tires, and large engines that's going to be going up and down this -- our community. This --

Am I going too fast?

COURT REPORTER: No.

MR. SHEEHAN: Okay. This whole thing is 30 years too late.

Back when it was first voted in there, by the -- by the populous here, there wasn't 85,000 people living here and all kinds of houses and people that have moved into a highly sought-after area, like Ahwatukee is. It's a really great community.

And they -- They went in here because it is the world's largest cul-de-sac and nobody wanted to -- people wanted to move in there to have the good schools, to have the

6 3 4 7 8 9 10 11 12 13

clean air, to have the relief from the city and from the highways.

And now we're going to have a glorified truck route, running up past -- past our community. It's going to bring in more crime, lots of noise, lots of emissions, not to mention the fact that the -- we're going to have to cut through a mountain and our State Park. And it's going to change all the wildlife that's living there, as well as the people that use it.

I feel that it's over, it's -- The cost for it, you know, the Proposition 400, when it was -- when it was pushed through, was -- it was kind of lumped together in the middle of a bunch of others projects. Most of the Valley that voted for it didn't even realize that they were voting for it to extend the taxes.

So that means we're just adding more and more money to it. And then having to tear down houses that the planning commission probably should have never allowed to build there, anyway, because this has always been such a long-term plan. They should have done something to stop those houses from going in there, so we didn't have millions of dollars having to be spent to take over people's property there.

So I'm -- I say: No action or look towards the 85, to put the route way far south of where the city is, anyway. I think that would be a better -- a better route to take, that

8	**Biology, Plants, and Wildlife**	
9	**Purpose and Need**	The Southwest Loop Highway—the South Mountain Freeway predecessor—was integral to the Regional Freeway and Highway System approved by Maricopa County voters in 1985. Although other facilities were considered a higher priority early in development of the Regional Freeway and Highway System, the South Mountain Freeway has been included in every subsequent update. The same route was approved by the State Transportation Board in 1988. In 2004, Maricopa County voters approved Proposition 400, which was designed to fund completion of the remaining segments of the Regional Freeway and Highway System, including the proposed South Mountain Freeway (Final Environmental Impact Statement page 1-21).
10	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
11	**Neighborhoods/ Communities**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.

they suggested in this other little handout that -- Keep using Route 85 to avoid the whole community in its entirety.

So I think that would -- I think that pretty much sums it up. Thank you.

Code	Issue	Response
13	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.

Date: Friday, May 31, 2013 11:54:35 AM

From: Kim Shirley [mailto:kim@21sthealth.com]
Sent: Friday, May 31, 2013 11:18 AM
To: Projects
Subject: ADOT Loop 202 South Mountain Draft EIS

AZDOT,

I am one hundred percent against the proposed 202 South Mountain Freeway. I moved my family here, to Ahwatukee because of its unique cul-de-sac quality. We are indeed part of Phoenix but we feel like a private suburb here in Ahwatukee. The freeway would allow passer biers access to our special neighborhoods and stores. I feel that the proposed freeway would also serve as more of a truck bypass on to the I-10. (1)

My family are also avid users of the South Mountain Trail System. I understand that the freeway will not interrupt any of the trail system but nobody wants to see cars running through from the top of a peak. It will cause noise and pollution. People come to South Mountain for peace, nature and its sheer beauty. (2) (3) (4) (5)

The alignment goes right up Pecos. On any given Saturday or Sunday morning there are hundreds of cyclists that use Pecos to ride up and down. Arizona was just ranked 10th out of 50 states for bike friendliness in 2013 by the League of American Bicyclists. With that much usage on Pecos where are we cyclists supposed to go? Ahwatukee is full of cyclists who ride on Pecos. There is no end to how the South Mountain 202 Loop would damage this very unique area. (6)

In conclusion, some things aren't worth wreaking. In my opinion the cons outweigh the pros. The proposed freeway system may help some but will take away much more that can't be given back. (7) (8)

Kimberly Shirley

1	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Section 4(f) and Section 6(f)**	
3	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
4	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Air Quality**	
6	**Traffic**	The study has considered concepts for parallel multiuse paths, however the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
7	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

Code	Comment Document
1	Jason Shumberger Document Created: 4/27/2013 5:37:35 PM by Web Comment Form As an urban planning product, it is widely known that regardless of highway addition. it will not reduce traffic in the long run; only serve to create more car travelers. If this money were spent on public transit, walking and bike infrastructure; that has been shown to provide long term traffic reduction. Think not only about the traffic, but also the livability lessons of Portland, Minneapolis, etc. vs. Los Angeles and Houston.

I disagree with your proposed bridge to close off 32nd street along with specific concerns - too dangerous life to our homes, more traffic to 40th street - more pollution because of waiting too long, crash over to homes, more pollution area from 32nd street to 40th street bad health for kids and homes. If disaster happens, we don't escape to 32nd street - more traffic on Liberty lane and school entrance from pecos road. they block us for entrance to liberty lane from school. Please don't build. I drive to 32nd street and pecos road for 2-3 mins. If proposed to close off on 32nd street this will take me delay timing about 10-15 mins.

Code	Issue	Response
1	**Traffic**	The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix (see Figure 3-8 on page 3-15 of the Final Environmental Impact Statement). The interchange would have required the displacement of over 100 homes and would have been located in close proximity to an existing high school. The City recommended that based on these impacts, the interchange be removed from the study. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Health Effects**

1 I have on the proposed bridge to close off 32nd street along with specific concerns:

--[if !supportLists]-->**1.** <!--[endif]-->**BIOHAZARDS:**

<!--[if !supportLists]-->• <!--[endif]-->Flying debris over homes, people

2 <!--[if !supportLists]-->• <!--[endif]-->Chemical spills, gas, etc

3 <!--[if !supportLists]-->• <!--[endif]-->Heavy traffic trucking – if crash or traffic – waiting times causes more pollution

4 <!--[if !supportLists]-->• <!--[endif]-->Increase air pollution to our area thru 40th street/ 32nd street Dead End

<!--[if !supportLists]-->• <!--[endif]-->Crash

5 <!--[if !supportLists]-->• <!--[endif]-->Destroy HOA private roads

<!--[if !supportLists]-->• <!--[endif]-->Destroy to the property homes by shaking, foundation, etc

6 <!--[if !supportLists]-->• <!--[endif]-->Schools – kids can't play ground outside due to health

<!--[if !supportLists]-->• <!--[endif]-->Causing great loss of life, damage, hardship to homes, kids, schools

7 <!--[if !supportLists]-->• <!--[endif]-->Threat to humans or to the environment

-

--[if !supportLists]-->**2.** <!--[endif]-->**DISASTER:** We can't escape to Desert Vista HS area - E. Liberty Lane to 32nd street/Pecos Road from E. Redwood Lane, 31st Way, 30th Place, 29th Way:

<!--[if !supportLists]-->• <!--[endif]-->Fire

8 <!--[if !supportLists]-->• <!--[endif]-->Emergency

1	**Traffic**	The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix (see Figure 3-8 on page 3-15 of the Final Environmental Impact Statement). The interchange would have required the displacement of over 100 homes and would have been located near an existing high school. The City recommended that, based on these impacts, the interchange be removed from the study. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
2	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Purpose and Need, Truck Bypass**	
4	**Air Quality**	
5	**Traffic**	The E1 Alternative would affect the existing local street network. Approaches for reconfiguring the local street network include removing streets, constructing new streets, constructing the proposed freeway over existing streets, or dead-ending existing streets. Final design of local streets would be coordinated with emergency service providers, local jurisdictions, and other appropriate agencies and would continue through final design stages. See Final Environmental Impact Statement Figure 3-33, on page 3-57.
6	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Biology, Plants, and Wildlife**	
8	**Hazardous Materials**	Emergency assistance and first responder responsibilities would be through the Arizona Department of Public Safety and its Highway Patrol Division and through the local jurisdictions along the route. State and local special training and staffing needs, if any, would not be addressed until closer to the time of freeway construction and operation, if an action alternative were to become the Selected Alternative. The Department's Freeway Service Patrol serves the Phoenix metropolitan area by locating and assisting stranded motorists and eliminating road hazards. The Freeway Service Patrol uses specially staffed and equipped vehicles to patrol the region's freeways seven days per week, 18 hours per day.

Building a freeway, highway, or any other project on a site sacred to Native peoples in Arizona would be a violation of the internationally recognized human rights of Indigenous peoples. Thus, not only is the freeway unnecessary, and not only will its construction destroy of a portion of the environment, but it runs contrary to international human rights laws to which the US has bound itself. Is this the way you want the rest of the country to view your project? Rather than build on the land, the land should be returned to the Native peoples from whom it was taken, according to UN Special Rapporteur S. James Anaya. See for example: http://unsr.jamesanaya.org/notes/special-rapporteur-publishes-report-on-the-situation-of-indigenous-peoples-in-the-united-states and: http://unsr.jamesanaya.org/country-reports/the-situation-of-indigenous-peoples-in-the-united-states-of-america. By the way, public comment sessions do NOT constitute valid consultation and accommodation, or valid free, prior and informed consent --both of which are required under international laws (by which the United States has legally bound itself) prior to commencing projects on lands still claimed by Indigenous peoples.

1	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.
2	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Code	Issue	Response
5	**Cultural Resources**	The Federal Highway Administration and Arizona Department of Transportation have consulted with all interested agencies and Native American tribes. Consulting parties for this project include Federal Highway Administration, Arizona Department of Transportation, the Arizona State Historic Preservation Office, the Arizona State Land Department, the Arizona State Museum, the U.S. Army Corps of Engineers, the Bureau of Land Management, the Bureau of Indian Affairs, the Bureau of Reclamation, the Western Area Power Administration, the Salt River Project, the Maricopa County Department of Transportation, the Flood Control District of Maricopa County, the Roosevelt Irrigation District, the City of Avondale, the City of Chandler, the City of Glendale, the City of Phoenix, and the City of Tolleson. (See Draft Environmental Impact Statement pages 2-4 through 2-7, 4-133 through 4-145, 4-147, and 5-29 through 5-30.) The Federal Highway Administration and Arizona Department of Transportation have consulted with the Advisory Council on Historic Preservation following National Historic Preservation Act Section 106 procedures. Strict adherence to Section 106 of the National Historic Preservation Act not only preceded the preparation and issuance of a Draft Environmental Impact Statement, but is ongoing and will continue in the future. The Draft and Final Environmental Impact Statements comply with Section 106 of the National Historic Preservation Act. All Native American tribes with cultural affiliation (as claimed at that time) with the Study Area were consulted about the project in 2001. All Arizona tribes were consulted in 2005. In 2001, the Federal Highway Administration and Arizona Department of Transportation initiated National Historic Preservation Act Section 106 consultations with all Native American tribes that claimed cultural affiliation to the Study Area. Consultations were initiated with the Ak-Chin Indian Community, Gila River Indian Community, the Hopi Tribe, the Salt River Pima-Maricopa Indian Community, the Tohono O'odham Nation, the Yavapai-Apache Tribe, and the Yavapai-Prescott Indian Tribe. In 2005, the Federal Highway Administration and Arizona Department of Transportation consulted with all Native American tribes in Arizona to ensure all interested Native American were included in the process and had the opportunity to communicate their concerns. These tribes were the Ak-Chin Indian Community, the Chemehuevi Tribe, the Cocopah Tribe, the Colorado River Indian Tribe, the Fort McDowell Yavapai Nation, the Fort Mojave Tribe, the Fort Yuma-Quechan Tribe, the Gila River Indian Community, the Havasupai Tribe, the Hopi Tribe, the Hualapai Tribe, the Kaibab-Paiute Tribe, the Navajo Nation, the Pascua Yaqui Tribe, the Pueblo of Zuni, the Salt River Pima-Maricopa Indian Community, the San Carlos Apache Tribe, the San Juan Southern Paiute, the Tohono O'odham Nation, the Tonto Apache Tribe, the White Mountain Apache Tribe, the Yavapai-Apache Tribe, and the Yavapai-Prescott Indian Tribe. Most of these tribes did not express an interest in the proposed project The proposed South Mountain Freeway project meets requirements of the National Environmental policy Act, Section 4(f) of the Department of Transportation Act, the National Historic Preservation Act, the Archaeological Resource Protection Act, the Religious Freedom Restoration Act, the Religious Land Use and Institutionalized Persons Act, and the United Nations Declaration on the Rights of Indigenous Peoples. The reader is referred to Chapter 2, *Gila River Indian Community Coordination*, and Table 4-48, "*Record of Section 106 Consultation*", on page 4-133, to illustrate the extensive outreach with Native American communities.

Subject: Comments in opposition to South Mountain Freeway
Date: Wednesday, July 24, 2013 11:38:11 AM

Jul 24, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to (3) effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(4) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more (5) vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(6) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a (7) freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(8) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(1) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Please do not destroy any more of what Phoenix used to be. Are you planning on paving every piece of country there is? Your slogan should be PAVE EVERY PART OF NATURE WE CAN

Sincerely,

Ms. Ann Sierra

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Health Effects**

Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

MR. SIIKI: Jiivik Siiki. Well, I'm from here. I was born and raised in the Gila River Indian community, and I'm 48 years old and I'm an enrolled member of the community. I also do a lot of the cultural work in the community. And the reason why I'm here is to oppose the freeway being placed not only on tribal land, but the desecration of this mountain, and in our language we call it Mohdahk.

And so this mountain is one of the centers of our cultural knowledge. It's -- we still use it a lot today and I'll go into that. And so one of the -- I've always worked for the community, and in one of those jobs I had was as an environmental control, or also did hazmat for the fire department. And in the documents that I read, there's no information regarding safety and how the community will be protected.

I know that the fire department has a hazmat team, and they also have limited response equipment, but primarily they depend on the Arizona Department of Emergency Management and the other mutual aid cities. So Ahwatukee or Phoenix Fire Department would have to be in coordination with the tribe's fire department on response should the freeway be placed on tribal land.

And from what I heard and talked with some of the fire department crew at the fire station, they haven't received anything. So that needs to be justified, why the tribe isn't being involved in any of the negotiation or the discussion. Meaning, community members. Not talking about a limited number of people on a committee.

So my big concern is the lack of protection of community members and our land. I used to do a lot of response on I-10 with semis, and there's a lot of hazardous material coming through and that's pretty dangerous to everyone. So that's one of the jobs I had. Another job I had was, I was a preschool teacher in District 7 which is in the community, and it's in the area of 83rd Avenue and Baseline. And during the wintertime, a lot of kids would get sick from all the smog from Phoenix that came and sat in between South Mountain and Estrella Mountain and that's tribal land. It wasn't pollution that we created, but the kids, you know, of course, asthma and all of those ailments.

And, again, in the documentation I've seen, there's nothing specifying the health hazards and the effects that it will have on the community from this freeway. That needs to be included. And

6

we can easily receive that information from the tribe through the tribal hospital and also through Indian Health Service. Some of the people in the area either come to the clinic here in District 6, or they go to Phoenix Indian Medical Center. So we don't have that information either which needs to be included.

The political part of it, the fact that nontribal people have always practiced environmental racism upon tribal people is reflected in the need to place a freeway on tribal land, and this has been happening since '40s, you know. You know, do it to the Indians. They don't have enough laws, they don't have enough interest or, you know, we can do what we want to them.

Case in point is the Chandler, the Gila River Industrial Park which is right next to the casinos. Again, as part of the fire department, I responded to explosions there and where they had a medical waste incinerator which we put a stop to. But it was placed there because of the lack of laws in the tribe preventing them from doing that, and it's easier and cheaper to do it on tribal land. It doesn't hurt nontribal people. You know, it's "Not in my backyard" kind of mentality.

Code	Comment Document

So, again, this freeway's the same thing. Nontribal people see supposedly empty land that doesn't have grass and cookie cutter homes and they think they can use it, but that's not going to happen anymore. We put a stop to the freeway on tribal land. We should be able to put a stop to desecrating the mountain which, again, is central to our culture.

Environmental racism again is a big factor. It needs to be -- we need to defend against it. The Civil Rights Act, again, we are protected under that and that's a federal law. It's not a tribal law. It's a federal law affecting everyone. And so that hasn't been included in the documentation that has been provided to anyone, and so I'd like that to be brought up.

Finally, I mentioned that I do a lot of culture work, and I'm not going to go into details as far as what I do, but South Mountain is central to what we do. Has a lot of teachings. It has its own song, it has its own prayers, it has its own connection to us, the story that we use today. Not only that, it has a -- as a runner, we do a lot of running even today from the east side of South Mountain to the west side. There's trails that we follow. And we also take our young people up there

2

Code	Issue	Response

Code	Comment Document

and show them what needs to be protected. This, again, is a big part of our culture. Especially during the winter time, we go up there a lot and teach them what it means, what the name of the mountain means, why we need to take care of it.

And so all the running that we do in that mountain strengthens us, and we can't continue that if it keeps getting disrupted, you know, our culture continues to be disrupted, and we can't have that. I think that's all I have.

Subject: Loop 202 South Mountain

There is ample evidence that the Environmental Impact Study conducted for the extension of the loop 202 is both incomplete and misleading (i.e., biased toward its support of the current build option). This freeway project is both disruptive to the ecology and economy of the Ahwatukee Foothills and damaging to the overall quality of life for more than 100,000 nearby residents. What was true 30 years ago, when the project was first proposed, is no longer valid. I strongly oppose the departments pursuit of this project when, in fact, the resources it would command could be expended in a more suitable and beneficial manner.
Michael Silver

1	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
3	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.

I appreciate the opportunity to comment on the proposed extension of Route 202. Like many other Phoenix residents, I support the road for it's ability to facilitate travel to remote parts of the Valley and for its role in easing vehicular congestion. As a resident of Ahwatukee, I am also concerned about the extension's potential impact on our community. I urge you to make every effort to preserve the architecture, quiet streets, and especially the small lakes in the region. I believe this is of great importance for both the quality of life and for our property values.

Thank you.

Harvey B. Simon
16013 S Desert Foothills Parkway

I would to tell ADOT that myself and my wife are OPPOSED to the building of the freeway if it is located on what is now Pecos Parkway. There are better options including an I-8 to I-10 connector or the Gila river alignment. The highway plan is now 25 years out of date. The city of Phoenix, unlike Chandler and Gilbert did not set aside the land and has allowed both private and public improvements on what should be city easements. The building of this freeway will increase pollution to the immediate area as well as cause a drop in property values. I urge ADOT to stop the consideration of the Pecos parkway alignment until a better alternative is found.

Thank you for your consideration

James and Carolyn Simons

Code	Issue	Response
1	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
2	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Purpose and Need, Lack of Support**	
4	**Acquisitions and Relocations**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.
5	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138 -47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.

Subject: South Mountain 202 Freeway Comment

South Mountain Study Team,

I am a Chandler resident that works at 43rd Ave. and Van Buren in Phoenix. Most times the I-10 or 101 to I-10 routes to the west side of town are too congested to consider taking. I predominantly take the beltline route across the reservation to access 51st Avenue in Laveen to and from work. I have occasionally checked into the status of this the South Mountain 202 Freeway project over the last 7 or so years. It seems to me that this project was contemplated and I thought even funded in the 80's. It is apparent that the need and desire of metro Phoenix area for this project is self evident; however, I believe the State's transportation engineers and planners have a much more sound and analytical handle on this need than my general presumption. I understand there are a multitude of competing interests and significant obstacles that have presented themselves since the project's origins, but I implore you as a concerned citizen, desperate commuter, and commentor in this public process to please diligently and expeditiously work through all issues to get this freeway built. I understand that obstacles are presented by homeowners and businesses in the Ahwatukee area that built up and settled in after this freeway was originally planned. Conversely, there are people like myself that moved to the Chandler area 7 years ago with eager anticipation that this freeway would come to fruition in a timely manner as was indicated on the ADOT website. Having experience in conducting sensitive public processes myself, I empathize with the challenges you are facing, however, this project is long overdue for shovels hitting dirt. It seems like no option makes a majority happy, in fact, your most successful outcome is likely if everyone is just a little unhappy. Simply put, my comment in this process is to build it. Build it now! I appreciate the hard work and diligence ADOT has put into this effort for years to satisfy as many competing interests as possible. Unfortunately, regardless of anyone's best efforts there will be disgruntled parties. For the benefit of the metro Phoenix area, this project must move forward as expeditiously as possible. Thank you for the opportunity to provide this comment.

which had its own issues with highways, into Laveen, where when I bought my house, this highway was one of the reasons we bought, not knowing it would take this long to even be at this point. We've since relocated from Laveen; one of the reasons is due to the issues getting to and from. We had two kids, one with special needs, and getting in and out of Laveen became very difficult up in that 51st Avenue with truck traffic, getting to the I-10, getting to Central Phoenix through the tunnel and that sort of thing, so we actually sold our home and relocated. Knowing that it's going to be built is kind of bittersweet in the fact that if we still had our house there I think it would be a huge benefit.

And I believe it's going to bring a lot of businesses and revenues to Laveen; particularly, when we left there was a Target that may have been put in and some movie theaters and such, which never came about because it was just stagnant. So I'd like to say I'd like to approve the build. Thank you.

THE FACILITATOR: Thank you.

Joel Simpson.

MR. SIMPSON: Hello, Joel Simpson here. I've been a resident of the Valley for about 14 years now and I've had the displeasure of driving the I-10 for the same amount, and the traffic, you can definitely tell where

Please do NOT put a freeway through the mountain. You can never get back what is lost. Please go listen to Big Yellow Taxi. This desert has already been destroyed. Don't destroy this sacred mountain. I wouldn't want it destroyed if it wasn't sacred. The people who work or live on the south side of the mountain knew it was there when they moved there or took the job. They should either move or change jobs if they don't want to drive around what was always there. Don't tear down the mountain and put up a 'parking lot'.

Why does Pecos Road need to be changed into a freeway/interstate? Grand Avenue works just fine as it is. If Laveen wants an interstate through their community fine. The simple solution would be to build the freeway through Laveen as planned, connecting it to Pecos road and leave Pecos Road as is. No homes will need to be torn down, no mountains need to be destroyed, no damage to the environment. Then lets just see how much the South Mountain Loop 202 is used.

1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	According to 23 Code of Federal Regulations §771.111(f)," the action evaluated in the environmental impact statement must connect logical termini and be of sufficient length to address environmental matters on a broad scope...". The proposed action should satisfy the project need and should be considered in the context of the local area socioeconomics and topography, the future travel demand, and other infrastructure improvements in the area. A partial freeway from Interstate 10 (Papago Freeway) to Laveen Village is not feasible because it would not meet the proposed freeway's identified purpose and need.
3	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
4	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. accommodate a smaller population, less car driving people who don't have the money quite frankly to drive and need mass-transit to get around. Those are the priorities now, not from 1985 when they passed this money and made it available. And that was based on the myth that every time growth happens, it's sustainable and we all should just expect it all the rest of our lives which is clearly not right. Thank you.

MS. SLAPKE: I just got a wake-up call. They never told us that when they changed the alignment from ten lanes to eight, that our house was no longer in line of demolition. We were never notified. We would have gotten out five, ten years ago when they changed that, but none of the homeowners, I know for a fact, none of us know this because I know everybody on our entire street. We weren't notified.

So here I sit and now I'm going to have a wall right behind my house when we were anticipating, okay, ADOT's going to have to buy our house. We'll sit tight. There's nothing we can do. We've lost all the value in our home, but at least we know ADOT's going to buy our home. I just found out, guess what, we're screwed. So put that into writing.

I don't know how to put it. We were never notified that our house was no longer in the line of demolition. And so what's ADOT's recourse to those of us homeowners who all these years had thought that our I'm home was going to be purchased by ADOT because we couldn't sell them. And now all of the sudden, we're not in the alignment anymore, our house is not going to be bought by ADOT, and I'm faced with a house that's going to be worthless.

And if they had told us, given us a written statement, something that notified us, your home is not in the line of demolition anymore, you know, we would have taken action at that time. Either get out somehow, and now we've lost all of that in our home and we have to move. Now what do I do?

We've been in limbo for years, but we were reassured, just sit tight, the freeway goes through, it's no big deal because they're going to have to take our house. At least we'll be able to get out and be recouped. Now we lost everything, everything. I don't know what we're going to do. My name is Erica Slapke, 3119 East Redwood Court in Phoenix, 85048.

MR. ROSE: My name's Scott Rose, R-o-s-e,

I am not able to make the public hearing but I would like to show my support of it. I live in Laveen where this freeway would provide so much for our community. I live close to 51st Ave (the main drive to the casino). There is so much traffic that speeds through our quaint community. We need this freeway to alleviate that congestion.

We need more accessibility, we need more medical facilities, we need MORE!

Please get this going. When I moved to Laveen 10 years ago, we were told it is on the way. When I was in high school in Ahwatukee, my family was told, it is coming... Why so long? Get it moving!

Thank you for your time.

Subject: South Mountain 202

Hello,

1 I am writing to express my support for the approval and funding of the South Mountain 202. The freeway is a vital part of Laveen, Ahwatukee, and the entire SW Valley going forward.

There are many reasons for my support of the freeway. The first and simplest reason is for traffic alone. I live in Laveen and work in Chandler, at the intersection of I-10 and Chandler Blvd. And though I will probably be long gone from either my home or work by the time the freeway is finished, it will save thousands of hours on commuting for thousands of people in the future.

The second reason is for development in Laveen. It's no secret that Laveen has struggled mightily since the housing crash in 2008. Laveen was promised to many as 'The next Ahwatukee' when the many housing developments started popping up in the mid-2000's.

Since the housing crash, it's been virtually untouched by development, and mostly ignored by the City of Phoenix. It has finally started to turn things around in the last year, with new businesses coming in and being very successful (Jersey Mike's, Barro's, etc). Laveen needs more businesses and more development. There are several projects already in the works and ready to go at the first word that the freeway has been approved. See this proposed development at 59th Ave and Baseline as an example (and note the hospital pad as well).

Lastly, it's an important part to the overall infrastructure of the entire Valley. It is a freeway that has been proposed and on the books since 1985. That's almost 30 years! Meanwhile we've seen the development and building of the 303 (an area not at all vital to commuters or truck routes), the 153 (which subsequently was shut down and turned into a city street), an on/off ramp for a street that doesn't exist (64th St and the 101 - which has been 'temporarily closed' for four years because there isn't actually a street there), and countless other highways and roads built that will not be as important to the city as the South Mountain 202.

It is time we stop ignoring and pushing back this freeway. The longer you wait to approve and build it, the harder and more expensive it will, and the easier it will be to come up with excuses not to do it. The time is now.

Thank you,

Todd W. Smith
Laveen Resident

I would really like to see the South Mountain Freeway (FINALLY) be built. I've lived in the valley for 16 years and it's been talked about for that long. Also, it's been approved for almost as long. I'm not sure what the delay is. We already know about all the benefits we would encounter from this. Are there disadvantages that outweigh the advantages??? Please, let's get the ball rolling on this project!

Kathleen Smith

Document Created: 5/21/2013 8:40:28 PM by Web Comment Form

I live in Laveen. I work in Tempe. That is not only my story, but the story of the majority of people that live in Laveen. We all drive 30-40 minutes minimum to get to work every day. The only way we have to get to work is via city streets that are littered with stoplights. I sit idle in traffic that is stop and go. My husband works in South Chandler. He does the same thing. I dream of a day where my husband can take the 202 freeway and be at work in a matter of minutes. I dream of a day where I won't have to sit on Baseline Rd as long, because much of the west to east traffic will be diverted to the 202.

I work with many people that live in the West Valley (Avondale, Goodyear, Glendale). They drive to Tempe via I10. Actually, anyone that lives in the West Valley and works in Central, or South Phoenix, or the East Valley, sits in traffic on the I10 every day. Or what about those that live in the East Valley/Chandler and work downtown? The are stuck in traffic on the I10 as well, only the other direction. This sitting is wasting hours of our lives every day. It is wasting vehicle emissions that are expended by idle cars, or cars that take much longer to get to their destination than necessary. All of this wastes hours of people's lives, wastes extra gas and causes more pollution. This city is not shrinking, it is growing. This traffic problem on the I10 will only get worse. Laveen is also not shrinking; it is still growing. Additional home construction is taking place in multiple areas of Laveen right now. Laveen is going to grow and there will be even more vehicles sitting on city streets, wasting idle gasoline and causing additional pollution. We need a better way to transport ourselves and goods through the south part of Phoenix. Every time there is a major accident on the I10, or the I17, traffic almost always gets diverted to south to Laveen. This causes extreme commute times and extreme amounts of traffic. Why? Because the I10 is already too congested. This affects us in Lavven, but also affects ANYONE travelling to work on the I10. We need this freeway!

With this freeway comes additional jobs. Not just the the obvious construction jobs, but the economic growth that would include the addition of future office buildings, corporate office, even a hospital. If I had the chance to have a job in Laveen, I wouldn't even need to really commute. Imagine if a lot of people in Laveen had the chance to work in Laveen. Those same cars would be cutting down on pollution even more. Our local economy cannot grow properly without the 202. I can assure you, it WILL grow. Laveen will get larger, as will all of Phoenix. We can either makes this a better, more environmentally friendly place to live, by building the 202, or we can stay with what we have and only increase the amount of cars commuting, stuck in traffic, sitting idle, and causing pollution.

1 Please, I'm beggin you, build the 202!!!!

1

While it would be more convenient for a connection around the southwest side of South Mountain for accessing work in the Capitol District of Phoenix, the negative impact of a freeway extension of the 202 would not be worth it. It seems to make little sense to put a large freeway through a residential area prized for the serenity and mountain views when I-10 exists for the very traffic that the freeway would aim to redirect. The I-10 freeway is surrounded by business and industry which relies on those trucks coming through and isn't disrupted by them coming through. On the other hand, bringing the freeway and that type of traffic through Ahwatukee would absolutely ruin the village for all the reasons that people want to be here and invest in properties here. Currently, we are planning to purchase a home in Ahwatukee where we have already become established with our family since moving here. WE came here for the peace, the mountains and the sense that it is a secret treasure of Phoenix with great schools and community. However, we have already had to hold off on choosing from homes we really like because of the threat of this freeway being right in the backyard. A wall does NOT solve the problem this will create. We are willing to continue

2

putting up with the lousy commute if it means keeping the blessings that exist in Ahwatukee undisturbed. This proposal is economically a horrible idea that will drive away the people that have come here to invest their families in this village.

Code	Issue	Response
1	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
2	**Economics, Socioeconomics**	There is no evidence that the proposed facility would cause people to leave the area. The regions' benefits would remain, and improved access to residences and businesses would make them more desirable.

Hello,

I am a resident and live off of Liberty and 15th street in Phoenix. I do not support the freeway plan as it stands, being built along Pecos Road. The impact on home values, schools, safety and quality of life would be immeasurable. No study can tell us the damage it will do. (1) (2) (3) (4)

Please consider an alternate route south on the Gila reservation or Riggs Road. Do not build on Pecos. (5) (6) (7)

Thank you,

Lisa Smith

Code	Issue	Response
1	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
2	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Hazardous Materials**	
4	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
5	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/ State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
7	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

This environmental impact draft study doesn't seem to think that it will worsen the air quality on the sensor that's on 43rd Avenue, which will be two to three miles away from this construction. So it really needs to be understood that it could -- could risk Arizona losing its federal funds. And then the City and our citizens will have to pay the bill. This could turn into one of the more expensive highways. And I think a separate study of that impact is very, very important before we go to the final phase of the environmental study.

So thank you very much for your time. I appreciate the opportunity to comment.

MR. SMITH: They've already spent a lot of money studying this thing, right? And they might as well finish the project or a lot of people's work has been wasted already.

And as far as alignments go, I think, even though the one that's more expensive, that would link up to the 101, is probably a better option in the long run, even though it looks like it might be more expensive now. I don't think I have anything else to say.

MR. STROOP: Well, I just wanted to say that I am a Laveen resident and that I am for the proposal to build the freeway in any of the capacities that I saw today. I don't really have a preference on an alternative, but I would prefer it to get built as soon as possible.

MR. ALLEN: I don't know what ADOT's plans for

that you register. Thank you.

Another reminder, if anyone wishes to speak, please make sure that you register at the front desk. Your name will appear on the screen and we will call you in the order that you registered.

Todd Smith.

Mr. Smith, you have three minutes, here's your timer. Please begin.

MR. SMITH: Thank you. I'm sure you've heard many different versions of pretty much the same speech today. I'm here in support of the 202. There are many, many reasons I believe it should be built, not the least of which is I live on 51st Avenue and Baseline, I work at I-10 and Chandler Boulevard. Just like the last gentlemen and the woman before him, I'm on Baseline for 12 miles every day; makes me want to gouge my eyeballs out. It would cut my commute time in half or probably more to do that.

Beyond just the selfish reasons of the commute, look at what happened to Gilbert with the San Tan 202. There was nothing out there. They approved the freeway, they built it up, developments everywhere. Same thing is going to happen in Laveen, and if you guys are from Laveen or have been to Laveen, we desperately need things like shopping and restaurants and hospitals. There's

Code	Issue	Response
1		Comment noted.

Code	Comment Document

already a planned shopping center with restaurants, shopping and a hospital on 59th Avenue and Baseline, literally just waiting for the approval of the 202; doesn't need to be started, doesn't need to be built, it gets approved, they start working on this development.

Other things -- excuse me. It's not often you get the opportunity to build something that will not only benefit the people that will use the 202, but the people that won't use the 202. There are thousands of commuters every day that will never use the 202, but they're using the 10 that'll get the benefit of that 202 because of less cars on that. So you're not only benefitting the people that are going to be using it, but people that won't be using it get the same benefit we're going to get.

I'm 32 years old, this freeway, just like the last gentleman spoke about, was approved when I was four year old; 1985. It was approved again in 2004. It's been approved twice, this will be the third time. Phoenix is not getting any smaller at all, we all know that it is just going to continue to grow and grow and grow. This freeway has been in the plan before the 303, like the last gentleman said, and many other projects in the city, my personal favorite of which is the interchange at Loop 101 and 64th Street in Scottsdale

Code	Issue	Response

Code	Comment Document

they built five years ago to a street that literally does not exist; it's an onramp interchange to a street that is not there and hasn't been there since they built it five years ago.

We're spending money on those projects when we could be spending money on the freeway that the Valley desperately, desperately needs. It's time to do it, and again, I'm just here to throw my support in, I think it's time to do this. Thank you.

THE FACILITATOR: Thank you, sir.

If there's anyone else in the auditorium that would like to speak, please register at the front desk. Your name will be called and be placed on the screen and we'll take you in the order in which you registered.

Also, a reminder for those of you who may be speaking and there's an opportunity that you will go beyond the three minutes, there are court reporters in the next room that will take your comments beyond the three minutes.

We're going to take a five-minute break as we change off panelists. We will return at exactly five minutes. Thank you.

(The proceeding was at recess from 6:02 p.m. to 6:07 p.m.)

THE FACILITATOR: Good evening, everybody.

1	Matthew Smith Document Created: 7/16/2013 8:48:57 PM by Web Comment Form PLEASE PLEASE PLEASE BUILD THE SOUTH MOUNTAIN FREEWAY EXTENSION. Building the South Mountain freeway is a necessary addition to the Valley of the Sun. It will make commutes between the East and West Valley very reasonable. It has the ability to positively affect the economy of Arizona. It will allow for positive growth of Arizona and the Phoenix metropolitan area. There are very few negatives about the freeway extension (South Mountain and South Mountain Park will still look beautiful and the freeway may just add to the number of visitors that traverse the park).

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. My husband and I purchased our home off Desert Foothills Parkway earlier this year. We purchased close to the mountain, in part, because of the proposed freeway. However, we chose to purchase in Ahwatukee because the air is cleaner and it is a nice, bedroom community that will allow us a peaceful place to raise our son.

It is sad to consider that a freeway that was voted on 20+ years ago — long before the significant growth of Ahwatukee — is still on the books in its original form. There are so many more people that will be affected by pollution, loss of homes, loss of community gathering areas, and a peaceful lifestyle. But more critically, we want to know why the State of Arizona refuses to consider implementing eminent domain and seizing land from the Gila River Indian Reservation, to make this freeway possible. The land is undeveloped, not farmable, and barren. We fail to understand the State's decision to destroy homes →

Draft Environmental Impact Statement
COMMENT FORM

4 Additional Comments: and negatively impact the well-being of many taxpaying citizens in order for the reservation land to remain untouched.

If ever there was a time for the State to take a true leadership role, that is now. Ultimately, the Gila River tribe would benefit — regardless of whether or not they will admit so at this time — and the citizens of Ahwatukee, greater Phoenix and travelers passing through, would all benefit as well. Rather than considering the small group of people that is the Gila River tribe, why not consider the impact on the broader community as a whole? Why must those of us in Ahwatukee be pigeonholed by a freeway that was voted on long before the community grew like it did? (And, might I add, long before many of its citizens even moved here.) If the Gila River Indians can vote on it as recently as this Spring, why not allow current Ahwatukee residents a vote on it — rather than relying on votes cast in the 1980's?

Subject: Comments in opposition to South Mountain Freeway
Date: Wednesday, July 24, 2013 11:05:43 AM

Jul 24, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

2 3 4 5 I grew up in South Phoenix and spent the majority of my life in and around the area. I can personally attest to the destructive nature of this proposed freeway project. Not only is it environmentally unsound, the path that it would take crosses directly over Native American tribal lands that hold significant meaning both spiritually and in the way of artifacts and historical sites. This project will, in no way, positively impact the traffic patterns of the South Phoenix valley. It can only cause more gridlock, pollution and destruction of our beautiful South Mountain Preserve. I am a former Soil Conservation Service employee and have worked this entire area and documented the facts that were previously stated for the USDA.

DISCONTINUE THE DESTRUCTION OF THE DESERT!

Phyllis M. Smith

3 The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

6

4 7 South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

5 8 The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Cultural Resources**	
3	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Section 4(f) and Section 6(f)**	
6	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative). As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway.
7	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Biology, Plants, and Wildlife**	

Code	Comment Document
9	The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.
1	Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you. Sincerely, Ms. Phyllis Smith 914 Paso Dr Lake Havasu City, AZ 86406-8216

Code	Issue	Response
9	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Subject: Draft Environmental Impact Study for the South Mountain Freeway

1

To Whom It May Concern:

My husband and I have been residents for ten years in the Lakewood Community in Ahwatukee. As you are aware, the Lakewood Community was established in June 1985. The lakes are fed by a "well" or "spring". Our grave concern is the protection of these existing wells or springs to continue as the source for the two lakes in our community.

We respectfully request that ADOT protect these existing wells as they review the route for construction of South Mountain Loop 202 Freeway. We recognize the importance of the freeway to the city of Phoenix and State of Arizona. We also recognize the importance of our community lakes and their existing properties including the wells that feed and sustain the lakes in this vital Phoenix community. Any negative change to the lakes would have a devastating impact on our community, residents and their future children.

We are proud citizens of our community and will be long term residents well into our retirement in Lakewood Community.

Sincerely,
Zacc & Barbara Russell
3421 E Wildwood Dr

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

I'm all for the freeway to be built.
This will relieve a lot of traffic.
We live in Laveen and there that will
bring a hospital and other great things
to our community. build, build, build, please!

MR. LIPPEY: Mario Lippey.

So my comment would be I was concerned about -- I'm for the highway. However, where I live, which is the freeway -- the Foothills reserve area, right at the very end of Pecos, that's really close to the mountain.

And right now it's very quiet unless there are parties or loud vehicles that go through there. And those small noises bounce off the highway.

And with the highway coming so close to that area, my concern is that the noise levels will increase even if they put a barrier up. It will just bounce off the mountain.

In addition, the air pollution, again, we're right up against the mountain. The winds usually come from the south to north, anecdotally. I don't have any research.

But I'm concerned about the air quality being trapped right where we're located right up against the mountain. And I didn't read everything on the air quality, but those are my two main concerns, the air quality and the noise.

MR. SOSA: My name is Jesse Sosa, and I live right in the pathway of the freeway, and I'm really, obviously, in opposition to losing my home.

And, really, I don't even know if I'm going to lose my home, because I'm not sure where, you know, ADOT plans to actually build. But I'd be right in front of it. That's for sure. And I really feel that this would impact tremendously my family, my children, the building of it.

It's -- and I don't think that eminent domain is a fair thing to do. People struggle all their lives. They buy their homes. They take their -- take care of their homes. And I really don't understand, you know, the need to build something like this.

I get that all of this here is for that purpose, to demonstrate the need, to demonstrate the amount of pollution, supposedly, that it would decrease, the amount of money saved, the decrease in congestion of traffic. I get all of that.

But when we're talking to a certain little family that actually has a home, that cares for their home, that has, again, saved money all their lives to purchase a home, not to just say, well, this is going away because of progress, if you will, it just, you know, really upsets me, so ...

And, obviously, I oppose it. And whoever it goes to, hopefully they can kind of -- and I'm not the only one. I know that.

But that's my statement.

MS. BRENNAN: Catherine Brennan.

So I'm just -- I'm for the Loop 202 because it's going to help with economic development in Laveen and help bridge the two communities of the East and West Valley.

MR. RODARTE: My name is Randall, R-a-n-d-a-l-l. Last name is Rodarte, R-o-d-a-r-t-e.

I live on 51st Avenue and Baseline, and I'm really looking forward to the preferred freeway. I believe it's the 59 and the E1. I believe that's what they're called.

Wait a minute. Let me double check here.

Yep, W59 and E1 alternative.

I'm in favor of them, and I really was looking forward to another way to get to the East Valley besides going through Baseline or Southern, because it's horrible, the traffic, you know, the backup. It just takes so long.

There's only one lane each way on Southern Road, and that's sometimes impossible to get through. And Baseline, over the last 10 years, I've seen it just really get bogged down, especially on the weekends. Takes about 40 minutes to get to Arizona Mills.

4244

multi-modal network, so we need commuter rail. I hope eventually we will have light rail coming up to Baseline and then to -- to connect with this freeway, so we do need all forms of public transportation, but we need this freeway.

Thank you.

THE FACILITATOR: Thank you.

Alexander Soto.

If you'd like to speak, please go out to the registration desk, get registered, and we'll have your name up here.

Thank you.

MR. SOTO: I'm Alex. So go?

(Speaks in foreign language) Alex Soto, (speaks in foreign language), I'm from the community cells of the Tohono O'odham Nation. I currently live here in Phoenix, Arizona, and I'm here to comment against this freeway.

Overall, this South Mountain Freeway is an attack on my civil rights as an indigenous person. And the lack of cultural consideration that is in this EIS is shocking. It is a fact that, I know there's a lot of civil rights statutes and protocol that an EIS would include towards communities of color, in particular ones that have been historically

Code	Issue	Response
1	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.
2	**Cultural**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Environmental Justice/Lifestyle**	While the Preferred Alternative would have an adverse effect on environmental justice populations, impacts would be temporary and would not create undue hardship or be disproportionately high compared with projected impacts on all populations in the Study Area. All populations would benefit from the proposed action's implementation through improved regional mobility and reduced local arterial street traffic.

Code	Comment Document

oppressed.

So this mountain is sacred to us as O'odham, and myself Tohono O'odham, you know, I may come from south of southern Arizona, but this freeway is -- this mountain is sacred to me. And all these mountains in Phoenix are sacred, so I just wanted to make that very clear that this is an attack of who I am as an indigenous person, let alone the generations to come. And overall with EIS, the lack of consideration for potential hazardous spills on this freeway is also shocking. There's really not any great detail in the EIS that pertains to what-ifs, you know, regarding hazardous waste.

And another consideration, which I actually wrote down, was also that back in 2005 the Joint Air Toxic Assessment Program Study that was done, was not considered in the EIS as well. And that's -- the report clearly shows that there's already toxic chemicals in the air in this area already, so of course, the freeways would add more to that. So I would hope that that would also be addressed in the EIS.

And the last one, on a bigger level, is the amount of semitrucks that will also be going towards the community as well. Of course, we all know, this

4	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Air Quality**	Summary information about the findings of the Joint Air Toxics Assessment Project study is provided as background information in the Draft and Final Environmental Impact Statements, but the study itself is not relevant to the type of analysis done pursuant to the Federal Highway Administration's mobile source air toxics guidance, which is an emissions analysis. Monitored ambient concentrations of mobile source air toxics (the focus of the Joint Air Toxics Assessment Project) do not inform this type of analysis. While monitoring data can be useful for defining current conditions in the affected environment (to the extent that the monitoring data are current), they don't tell us anything about future conditions, or the impacts of the project itself, which is why an emissions analysis was performed. The mobile source air toxic analysis presented beginning on page 4-77 of the Final Environmental Impact Statement is an estimated inventory of mobile source air toxic emissions for the entire Study Area for 2025 and 2035. This approach was used because the inventory estimate accounts for changes in traffic and emissions on all roadways affected by a proposed project, and would, therefore, be a more reliable predictor of changes in exposure to mobile source air toxics. The mobile source air toxics emission modeling developed for the project (which factored in the U.S. Environmental Protection Agency's recent rules for the 2035 analyses) and discussed beginning on page 4-77 of the Final Environmental Impact Statement found little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions.

is part of a bigger transportation program, the Sun Corridor, which is part of the CanaMex indirectly or directly, depending on how your website wants to entail that, but this is bringing more trade to Mexico and Canada and back and forth, and the Gila River happens to be in the middle of it.

And due to my friends, my family, my relatives that lay at rest there, that's why I'm here today to comment against this. And I would hope that ya'll would consider that compared to, you know, holding Laveen residents hostage to have a hospital or more retail shops there.

As O'odham, we were the first people of this area, and I would hope that you would consider that. And a lot of people ask, well, why don't we concede or compromise, and we've been compromising for over 520 years. So I hope that ya'll would include this in your report because you're attacking who I am as an indigenous person. And, yeah, civil rights need to be addressed, because just like any other community of color, East L.A. or, you know, South Bronx, I mean, we all know freeways are meant to be biased, we call them borders, going back to the border on my reservation, the U.S.-Mexico border, so I hope you're able to address my concerns.

So thank you.

THE FACILITATOR: Thank you.

If you'd like to speak, please register up front.

If you'd like to speak, please go to the registration desk out front.

Please feel free to use either microphone when you come up.

Thank you. Eric Cylwik.

Eric, could I ask you to use this mic over here, please.

MR. CYLWIK: Good morning. My name is Eric Cylwik. I first of all want to thank you so much to voice my opinion to you guys here that are here to listen to us today. I just wanted to say also, great job on pronouncing the name. That is correct.

So I grew up in Phoenix, kind of at the top of what is now the 51, and I remember growing up there, and my dad would have to fly out of town every single weekend, and the commute to the airport was awful. But then after the 51 was built, it made the rest of the town so much more accessible and it just made living up there a so much nicer place.

I've now moved to Tempe after graduating from ASU, and a lot of my friends are now moving away

1 MR. SOTO: My name is Alexander Soto.
2 Address 7211 West Alta Vista Road, Laveen, 85339.
3 And, yeah, I'm here today to make a comment against
4 this freeway. I'm not in favor of it. I'm in
5 opposition of it. As a Tohono O'odham, this freeway
6 will attack my civil rights because this freeway is
7 going to blast through South Mountain, and South
8 Mountain is a sacred site to all O'odham, the O'odham
9 in Gila River, the O'odham in Salt River, the O'odham
10 in Ak-Chin, and the O'odham in Mexico.
11 So my spiritual connection to this
12 mountain will be attacked if the freeway comes
13 anywhere in this area, let alone blasts through the
14 mountain which is current proposal that ADOT has,
15 will do. So my civil liberties, my freedom of
16 religion, all these things are being threatened.
17 And as a citizen of the United States, a
18 citizen of Arizona, citizen of my tribe, I feel I
19 have that right to keep my cultural practices going
20 and this freeway stops that. So that's why I'm in
21 opposition for it on a cultural level, but I'm also
22 in opposition because this freeway's overall
23 construction, it doesn't have any clear plan B for a
24 biohazardous spill if anything happens in the
25 community. So if it even was to be built, there's no

3	**Hazardous Materials**	

Code	Comment Document

alternative for people if something bad happens with hazardous waste.

So it's not in the EIS. I'd like to note that it's not in the EIS. And on that level, this is a horrible freeway. And another level, in 2006 there was a transportation plan that came out, a study that clearly noted all the environmental impacts of this freeway at that time, all the chemicals and so on. And this current draft EIS, it's not in there, and this was conducted by the State of Arizona and other environmental agencies.

(4)

So I feel, you know, that's not transparent. You know, it's not, you know, not -- it clearly shows the bias in the project, you know. And also the state, this is a $2 billion freeway. Why do we need this? There's a lot of other things $2 billion can go to.

(5)

(6)

And the last one is a vision under the U.N. -- the United Nations indigenous people's declaration of human rights and business rights. This goes against that as well. So there's a variety of statutes and policies and things that are on record that this freeway's attacking, and I just want that to be known to be clear and, yeah, no 202.

(1)

Code	Issue	Response

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

2 Freeways always come with the idea that they will relieve congestion and the truth is they create more congestion.

South Mountain Park is a very special place. Temporary relief from congestion leading to far more congestion is not a good reason to diminish this park.

3 4 South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks.

As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

5 6 The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

7 The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.
