And you're taking that from a person who lives in Tolleson but is employed by the City of Phoenix. So it's a win/win for me because that's how -- that's how I feed my family, with the City of Phoenix.

And the sales-tax revenue coming back to the City would be huge, especially during these -- especially during these difficult economic times. And who knows -- who knows how long it's going to last? But also because, as a long-term, long-time -- actually, life-long resident of the City of Tolleson, I would hate to see what happened to our city many, many moons ago happen again.

And so that, my friend, is what I have to say.

MR. BRENNAN: Another point that I would like to bring up regarding, sort of, a land-use concern of the Loop 202 is, in light of the recent Brookings Institution report that has been publicized in the last week regarding the shift in poverty from more urban to suburban areas around the country, while not being a total shift in the share of impoverished populations, it does illustrate the challenges that more suburban areas are -- are experiencing in trying to address those social problems.

1

And the issue with Laveen is that it has always been planned as a lower-density overall area, which has grown significantly in population. And as we see these populations would need, moving in to Laveen and actually Ahwatukee, as well, we are ill-prepared to handle those social needs that come with that increase in population.

And it's not just the low-income populations, but it's others that also have that kind of need. So without the freeway, we're not going to have that concentration of resources or really much opportunity to develop that concentration of resources. So, like the hospital argument where we need to bridge the populations to give ample rooftop counts to support a hospital, the same is going to be true of any other social services and -- and other amenities or public resources that -- that are there to serve based on larger concentrations of population. That's all.

MS. WINKLER: I think I am in favor of this. I think this is a good idea. I live in the central city area, and I know that a lot of people in the Ahwatukee area may be in opposition to this.

But I particularly look at this as an issue of equality, that if the rest of the city all has to have freeways that border or come into their areas, that no one single area should be exempt. I think it will complete the grid system for the freeway if -- the freeway grid system.

grow up and how I will be affected and my children's children.

And I also feel like all the health, like, complications to bring up, it's just crazy. Because I take early childhood and we talked about how freeways affect children and development and birth, and it's -- it's not good, like, at all. And I don't see how people can, like, just sit there and say they're for it without even thinking about all this stuff before and ahead of time.

And people are going to wish they didn't have this freeway. Like in, like, hundreds of years, they're going to wish we, like, stopped now and stopped, like, building stuff. And we don't have the money to build this stuff anyways, in the first place, with our economy. So, yeah, that's how I feel about this freeway.

MR. BRIGGS: Tom C. Briggs. And then -- I'm trying to think. My one suggestion would be is, try to work at removing the 32nd Street bridge and work to provide the U-Haul storage place with access through the tribal lands. No need to build a multibillion dollar bridge for that sole business's benefit. That's one.

The other comment would be within the

1

Page 25

Code	Issue	Response
1	**Design**	As noted in the comment, the bridge at 32nd Street is provided to allow existing access to a business to remain after construction of the proposed freeway. Because the business is located on Gila River Indian Community land, the Arizona Department of Transportation does not have the ability to acquire or relocate the business. Nor can the Arizona Department of Transportation construct alternative access roads on Gila River Indian Community land without the permission of the Gila River Indian Community. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.

2

constraints of all the drainage out of Ahwatukee trying to sync the -- subset the bridges as low as possible at all the major interchanges, in particular 40th Street. Every foot the bridge can go down, the better for the sound walls. So I think that's kind of most of it.

UNIDENTIFIED SPEAKER: Hello. Okay. I have another perspective now that I've been looking around at all of these advertisements and these banners and I've been seeing what's been posted, and I'm understanding a little bit more completely now. But something that had me thinking twice is the level of medication that other people take, maybe the prescriptions, maybe these people who take prescriptions and different pills can't drive because they're afraid of getting a DUI, or maybe people who have, you know, no driver's licenses or something like that. I mean, they don't have the opportunities. Sure, there's going to be a freeway there. Maybe we should think twice about maybe putting a train there instead.

You know, it would be a little bit less of a headache for other people, you know, other people who have had DUIs or mental illness or something and they're a risk to other drivers. And

Code	Issue	Response
2	**Design**	The current level of engineering is used to determine the limits of environmental and construction impacts due to the proposed freeway. The location and profile of the freeway are evaluated to minimize potential changes to the freeway as the design level would progress. The current level of engineering is an accepted industry standard for determining impacts. (See Final Environmental Impact Statement sidebar on page 3-40 for more discussion.)

I use the 202 quite frequently and go up to the 10 and around Phoenix and the South Mountain Freeway would be awesome. Also coming from a position where my family had to sell our property, our way of living, our business, to the state in the 80's in order to have the 143 go through and this was at the time devastating, but it was for the greater good and I do not think a handful of people should be holding the entire Metro Phoenix area to congestion and needless gas. Also I think it would make that neighborhood a lot less congested and people would not have to us 48th Street going north and they could get out of Awatukee relatively easily and have two choices Pecos or the I-10.

Beth Broeker

Document Created: 7/24/2013 1:16:58 PM by Web Comment Form

The Loop 202 South Mountain freeway will have a significant negative impact on air quality. Its proposed proximity to so many schools, churches, parks, and even a YMCA puts children and adults who are asthmatic at risk for severe complications due to the dust and toxins released during construction, as well as increased pollution from the anticipated traffic on the new freeway. Phoenix has enough pollution already, and the number of high pollution days is already at an unacceptable level.

In addition, Valley Fever is on the rise, and the construction increases the likelihood that residents in the affected area will contract the disease, which is incurable and can be fatal. Valley Fever is contracted when spores are released from dirt, usually during construction.

Two members of our family are asthmatic, and we live in the Lakewood neighborhood. I fear the impact this freeway will have on the health of my family, both from the pollution impact and the potential for Valley Fever. Please examine and consider the health impact of this build on residents whose homes, churches, and schools are close to the proposed build site. So many people have asthma and other pulmonary issues; building this freeway so close to a residential community will do them irreparable harm. Do not build this freeway, or build it in an area that is not close to schools, churches, and other places where children congregate.

Code	Issue	Response
1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Health Effects**	
3	**Safety and Health**	Detecting the fungus responsible for valley fever in soils is not practical at this time. However, to reduce the amount of construction dust generated that could carry the fungus, particulate control measures related to construction activities would be followed. The following mitigation measures would be followed, when applicable, in accordance with the most recently accepted version of the Arizona Department of Transportation *Standard Specifications for Road and Bridge Construction* (2008). Prior to construction and in accordance with Maricopa County Rule 310, Fugitive Dust Ordinance, the contractor shall obtain an approved dust permit from the Maricopa County Air Quality Department for all phases of the proposed action. The permit describes measures to be taken to control and regulate air pollutant emissions during construction (see page 4-173 of the Final Environmental Impact Statement).
4	**Neighborhoods/ Communities**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land despite the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.

Code	Issue	Response
1	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.

Colleen Brosnan

Document Created: 6/11/2013 12:37:43 PM by Web Comment Form

I moved to Phoenix in late 1993 and began looking for a house to buy in the area in early 1994. My realtor advised me not to look anywhere near Pecos Road (even though houses were cheaper than in Mountain Park Ranch) because a freeway was going to be built there.

Now, almost 20 years later, a church, school, and many houses have been built in that exact location--and people are protesting the freeway! Either their realtors didn't give them the information I gave or they didn't do due diligence on their own--or they chose to ignore it.

1

I commuted on I-10 for years and suffered through heavy traffic all the time. PLEASE get this freeway built! It will relieve congestion and pollution along I-10, which gets worse every year because traffic increases, not decreases, along this route!

Yes, it's too bad that some played Russian roulette with their choice of property, but that was their choice. Don't penalize the rest of us for their choices.

Subject: Support for South Mountain 202

I am writing to let you know that I support the extension of the Loop 202 South Mountain Freeway. I have no preference of whether it is built on the Gila River Indian Community property or on already purchased and required purchase of Right of Way.

I understand that if it is located off of the Community property, it may displace some existing homes and properties. I think that the net benefit to the Phoenix area will be worth the inconvenience of some existing homeowners and/or churches.

Completing the extension of the 202 around South Mountain is critical to the future of the Valley of the Sun.

1

I support the 202 extension!

Sincerely, Brad Brown - Gilbert Resident, Phoenix area native of over 50 years.

Subject: Opposition to South Mountain 202

To Whom It May Concern:

I work in downtown Phoenix, Arizona and would like to voice my opposition to the proposed construction of the South Mountain 202 along the Pecos alignment in southern Phoenix.

I am a voter and taxpayer and would ask that ADOT only develop the South Mountain 202 if an alternative alignment were obtained. Traffic patterns on the I-10 have been reasonable over the past several years; the only times when traffic has been particularly burdensome has been when ADOT closes lanes on the freeway or arterial roads are closed down. My understanding is that (in coordination with ADOT?) the City is soon to put much of the arterial system around Pointe South Mountain under construction. I wonder if the intent is to purposefully cause driver frustration in an effort to generate support for the South Mountain 202. I would caution against that approach as it will, inevitably, undermine credibility and faith in your endeavors.

1 I oppose the Pecos alignment as I know it will significantly and adversely impact the neighboring community.

Thank you for your consideration of one person/families' viewpoint.

The only alternative for the South Mountain Freeway that makes any sense is the option W 101 alternative. The purpose of the "extension" is to connect the Valley freeways and make it easier to travel throughout the "valley". (1)

The current favored connection of the loop 202 freeway makes no logical sense. You are talking about taking the loop 202 off of the I-10 freeway and expanding the lanes of the I-10 both approaching the freeway exchange and leaving the exchange. Anyone who drives the I-10 freeway going East in the morning or going West in the evening can tell you what a lane reduction means to the traffic on the freeway. The I-10 reduces, going West at 35th Avenue, which creates a huge bottleneck. Should you make the 202 interchange at 59th or 63rd Avenue it will create the same bottleneck traffic situation. I cannot believe that the planners for this freeway are blind to this situation.

If, however, the 202 connects with the 101 freeway, continuing South, there would not be that bottleneck situation, and it would connect seamlessly with the Northbound 101 freeway and would indeed better connect the North and South valley, and in addition give faster and safer transport to the Vee-Quiva casino and the I-10 southbound to Tucson.I strenuously object to the current plan for the 202 freeway extension.

As planned, the current 202 freeway plan would create more traffic problems for the Valley than it will alleviate. (2)

1	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.

Subject: South Mountain Freeway

Hello,

Connecting the 101 to the 202 will drastically improve traffic flow from the east and south valley to the north and west valley. It will also improve commerce in the southwestern area, reduce carbon monoxide gasses, and limit traffic and excessive wear and tear on the already overused urban streets in the Laveen area. In addition, after its compeltion, it will have limited to no negative impact to the South Mountain area. I am a resident of Trail Side Point (67 and Southern) and highly encourage this freeway to be built in my area. My preference is for the W101 Central or Eastern Option and for it to be built during the first phase of construction.

1

Respectfully,

Jason Browning

CALLER REMARKS/QUESTIONS:

1 I am calling in support of the South Mountain Freeway. I think that would be awesome. It would reduce a tremendous amount of traffic going through Phoenix, especially the big cross-country truck rigs. So, if that can be built, it would be incredible. Bye

1

As Phoenix continues to experience population growth, it is imperative to plan accordingly with our freeway/traffic plan. Without projects such as the 202 extension, congestion will get significantly worse for not only freeway traffic traveling through Phoenix, but for all residents living and working within Phoenix. Alleviating some of this congestion will have notable economic and quality of life impacts/improvements.

No to 202! The state and agencies responsible for our roads have failed miserably for years. The biggest example of this is the I-10 freeway, especially in the east valley. The section of I-10 between Chandler Blvd. and the I-10/I-17 split near 7th Street is a virtual parking lot every weekday morning and evening. Until we have a resolution for dealing with I-10 we shouldn't spend billions of dollars to connect more vehicles and traffic congestion to it. (1)

The committee needs to address I-10 first and if they can't take that on find another hobby that doesn't consist of wasting billions of dollars on needless freeways or light rail system (confirmed example of government wasteful spending with ROI nowhere near "expert" estimates).

At a time when our school systems continue to rank last or near the bottom in our Country I can't see spending billions on a freeway: (2)

a) nobody wants (3) (4)
b) causes more traffic delays on I-10 (5)
c) creates a virtual parking lot for east valley commuters (6)
d) ruins established communities (7)
e) harms the health of our citizens and nearby schools
f) destroy's homes, churches and business needlessly
g) doesn't address the real issues we have in this state.

No-2-202!

Code	Issue	Response
1	**Purpose and Need**	The proposed freeway is part of the multimodal *Regional Transportation Plan* (see Final Environmental Impact Statement page 1-5 for more information regarding the *Regional Transportation Plan*). The determination of purpose and need for the proposed project includes an assumption that substantial improvements would be made to the Interstate 10 corridor between State Route 51 and U.S. Route 60 (see Final Environmental Impact Statement page 1-13). The Maricopa Association of Governments, in coordination with the Arizona Department of Transportation recently completed the Southeast Corridor Major Investment Study (see <azmag.gov/Projects/>) and developed multimodal concepts for addressing transportation issues in the Interstate 10 corridor. Even with these planned improvements to Interstate 10, the proposed project remains a vital component of the Regional Freeway and Highway System.
2	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Traffic**	An assessment of conditions with and without the freeway in 2035 is presented beginning on Final Environmental Impact Statement page 3-27. The results of the assessment, supporting the need for the proposed freeway, are summarized in Final Environmental Impact Statement Table 3-9 on page 3-38.
4	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
5	**Neighborhoods/ Communities**	Generally, a freeway is perceived as incompatible with local businesses because the facility could divide service areas, resulting in limited local access and negatively affecting the market share necessary for their sustainability. While neighborhood businesses rely on a local customer base, the proposed freeway may, on the other hand, provide additional and improved access to some neighborhood businesses (see Final Environmental Impact Statement page 4-16).
6	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)

To whom it may concern,

I am aware that a hearing will be held to review the Draft EIS for Loop 202 on May 21, 2013.

1

I did not see any anticipated construction timing for this project on the ADOT website.

Is there currently any anticipated construction timing for this project that ADOT can share with the public?

Thank you.

1 2 3 4

I am writing to express my objection to the Loop 202 South Mountain Freeway Project. I understand that the idea of this new project is to relieve traffic congestion, but this is at the expense of the natural environment, Native lands, and air quality. It is my strong believe that better urban planning (e.g., better public transportation, improved pedestrian and cycling infrastructure and increased investment in central Phoenix schools) will encourage Arizonans to move closer to the city. This would improve our communitites by decreasing polution, boosting local business economy (rather than that of large chains, which dominate our suburbs) and creating a healthier, more active community.
Thank you for your consideration.
Sincerely,
Lori Buhlman, Ph.D.

Hi, I own Country Garden Charter School which is right near the proposed freeway. I'm looking at a brochure that does not have the freeway inflicting my property. But I had a constituent go down and go to your hearing and said that you have changed your route now to go down 63rd Avenue which is right down the center of my school. So I need some information on this cause this is not the documentation I have been sent in the mail. And I am opposed to anything that is going to go down 63rd Avenue and take out our school and the neighborhood around it. We have been here 14 years and we provide schooling for over 400 students. Thank you.

RESPONSE:

I left a message with Kimberly, an assistant to Mrs. Burge at Country Garden Charter School, on Friday, July 19 at 11:30 a.m. Mrs. Burge was not in the office but Kimberly stated that she would pass my message along to Mrs. Burge immediately. As of Monday, July 22, I have not heard back. If I do receive a return call, I will provide the same information to Mrs. Burge as I shared with Dustin (who works for her charter school.) It appears there are a number of folks from the Country Garden Charter School who are concerned about this project and how it may affect them.

Hi ladies,

1 Mrs. Burge from the Country Gardens Charter School called me back just now and expressed (which she's done at the meeting and in writing already) that her preference is for the off ramp at 63rd Avenue to be moved 100 feet to the east so that it does not affect a portion of her school and property. She has old trees on the property that she would hate to see removed. Just wanted to pass that along even though it sounds like it's already in the record. Thanks!

5 THE REPORTER: Go ahead.
6 MR. BURGE: I work at the school in the
7 area, Country Gardens Charter School. I'm the
8 operations director there and I foresee -- and I also
9 live in the area on 64th Drive. I foresee, you
10 know -- I see the good side of the project. I see
11 that it can benefit our business and benefit our
12 community, by providing access to East Valley
13 residents to our area and sharing our beautiful
14 little community with the rest of Phoenix. But I
15 think the cons outweigh the pros in this situation,
16 because the amount of pollution that it's going to
17 bring to the area is not good. The amount of impact
18 of construction by our school, because it's so close
19 to us, is going to have a huge impact.
20 I run the transportation department at
21 our school. It's under my operational jurisdiction.
22 And my detours I'm going to have to make my buses go
23 on for my bus routes for my children is going to
24 be -- it's going to be very extensive. I'm going to
25 have to make alterations to our bus routes. We're

Code	Comment Document

going to spend almost double the money in fuel, which right now we have four buses, we spend around $200 a week a bus in fuel with our current bus routes. And we're going to have to do basically double the amount of miles because we're going to have to backtrack and do detours and everything else. We're a charter school, we don't get funding for busing. We just get money for payroll and land. That's about it. And our land is owned privately, so we don't get a big-time budget like other public schools do.

As long as -- the first notice we'd gotten for the freeway said that it was going through 63rd Avenue all the way up until Lower Buckeye, which would have taken out my house, the school, my neighbor's homes and the rest of my community. And I just don't think that's right in today's world.

The current drawing I'm looking at here today is saying that it's going through the alfalfa field next door. If that is true and if that is correct and if that is the final draft, I do not have a problem with it. But if it is not, and it is not the final draft, then I do have a problem with it. I moved to Laveen because it's a good area. I moved to Laveen because I love the area. I grew up on a farm in Tonopah, and Laveen reminds me of home. Good

Code	Issue	Response

Code	Comment Document

people, and it's a good place to live. And I don't want that to change. And I especially don't want to be forced out of my home because of eminent domain issues.

So I would appreciate the, you know, cooperation with ADOT and everyone else. And me saying keep the 202 where it's at, where your drawing is, the draft of the drawing I'm looking at, if you're going to -- I know you're going to do it, because you have the funding for it, keep it on 59th Avenue, away from my school and away from my neighborhood. It can be beneficial, but it can also hurt everyone very badly, economically and personally.

So final statement: Pros, it can help local businesses and local residents and bring more of the Valley to us. Cons, provides a lot of pollution, construction takes a long time. And I've seen construction in the Valley put businesses out of business because no one wants to go down that road, because it's under construction. So especially parents of kids in a school where they can't get in to drop their kid off. So as long as it stays where it's at, you know, I hope this is the final draft, I really do, because then it will most likely happen.

Code	Issue	Response

Code	Comment Document

But if it's not the final draft, I can guarantee the residents of Laveen are going to make sure it doesn't happen, one way or another with courts or anything else, because we're not moving, we're here to stay. We're not being bought out.

Have a good day.

THE REPORTER: Thank you.

1 MR. BURGE: My name is Nick Burge. I am
2 the science director and coordinator for Country
3 Gardens Charter School which is a local charter
4 school in the area that may be impacted by the
5 proposed freeway. Essentially my concerns are
6 several. My concerns are the -- mainly the on-ramp
7 and off-ramp egress and ingress to the freeway coming
8 down Southern Avenue. The rest of the proposed
9 freeway in the state that it's in does not seem that
10 it will affect us that adversely. Maybe through
11 noise and some small amount of environmental impact.
12 We do have several species of animals
13 that live in a naturalized state on our campus
14 including Great Horned Owls, including Red-tailed
15 Hawks, California Kingsnakes, checkered garter
16 snakes, gopher snakes, many species that travel
17 through the corridor near our campus or on our campus
18 to the Salt River and to the Estrella -- Sierra
19 Estrella Mountains behind us and the South Mountain
20 corridor behind us as well.
21 Essentially a lot of those animals and
22 populations of wildlife will probably be affected by
23 this, but it does seem at this point that the route
24 that they've chosen, the W59 alternative is -- I
25 still will oppose it, but at the same time it seems

Code	Issue	Response

Code	Comment Document

as if it has a decent route. It's just that we do not want it any further west.

At this point, if it goes any further west, it is going to cut into the property that the school sits on, it will interfere with daily operations of our school and will not benefit us in any way, shape or form. It may also affect housing and residences in the area that have been there for many, many years, some of them since the 1970s.

So basically at this point what I'm saying is, yes, if they could find another alternative to the W59 alternative, it would be wonderful. It would be great if they could utilize the W71 alternative or even the W101 alternative. However, the main thing is that we do not want the -- the project to expand any further west.

In fact, if it could actually move maybe even just 100 feet further east to accommodate the edge of the property of our school, which again is the area we call "The Wilds" which contains many of these native animals and urban wildlife that live and utilize that area almost like a miniature preserve. If they could move that on-ramp even just 100 to 200 feet further east, it would much better accommodate what we're trying to do for our school.

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
4	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. When comparing action alternatives in the Western Section, the W71 Alternative was considered the least desirable because it would provide the least traffic operational benefits, would have high residential displacements, did not have support from the public and local or regional agencies, and would be inconsistent with local planning.

Code	Comment Document

Our school is a school that's always been top 10 percent in test scores for the state of Arizona for over eight years. We have a population of over 4 to 500 students annually. Every year we take trips to Costa Rica and Belize and many other conservation projects, not only locally. We built an 1800 square foot desert tortoise habitat that if the project moved further west would affect.

Again, there's numerous other projections there that we're expanding into as well. We have not only conservation projects, but also art and music programs and many, many other things. We just built a $350,000 barn for our horsemanship program that, again, is very close to that -- what would be the western edge of the freeway expansion, and we just really don't want it any further west than it is.

If they have to choose the W59 alternative, and that is the preferred alternative which it seems to be, no further west. It cannot go any further west. If it does, it will drastically affect a large population of students who are -- not only that, but a low -- sorry, a low-income area. Over 70 percent of our students are below the poverty level, and it would drastically, drastically affect their day-to-day education, as well as the

Code	Issue	Response

Code	Comment Document

livelihoods and employment of well over 30 to 50 people who live in our area and work on our campus as well.

Our payroll every year is over $1.5 million, and the amount of taxes that the area gets from our -- just from our income taxes alone is staggering. So if we had to relocate the school even partially, it would be disastrous and it would be quite a blow to the community.

We've been a pillar of the community there for well over 14 years, and it's something that we want to stay, we want to continue to be what we've been and continue to provide the good services that we want for the community.

We also have in the property, there are plans for a $4.7 million expansion project to include new buildings which would include a semipublic aquarium and zoological exhibits and workshops and things like that for music and an auditorium and a public pool for use by the community as well, and many other things that would drastically, drastically benefit this community.

However, if we were made to relocate, even partially, that project would be obviously unfeasible. So essentially at this point, my

Code	Issue	Response

Code	Comment Document

viewpoints on this issue are, I do have some concerns, mainly the on-ramps and off-ramps, again, the egress and ingress to the freeway off of Southern Avenue and 63rd. Southern Avenue and 63rd Avenue is my main concern.

Again, if they could move that on-ramp even just a little further east, even 100 to 200 feet, it would be very, very, very beneficial and could accommodate us very pleasantly, I think. The freeway could benefit us in the future as basically almost having an exit to us which would be nice, but again, we can't deal with the detractments that it would take from us if it were to be located further west than the current plan. Or, again, if we could have it accommodate us by moving a little tiny bit further east, even just 100 to 200 feet by the on-ramps and off-ramps for that exit, it would be fantastic.

Other than that, I have minor environmental impact concerns, again, because of the migratory wildlife in the areas and because of the owls and other animals that we have that live on residence, the urban wildlife that lives there. I would like to see more detailed environmental studies about how that may impact those types of things and

Code	Issue	Response

Code	Comment Document

5

6

3

the urban wildlife in that area between the Salt River corridor and the Sierra Estrellas and the South Mountain Regional Park as well.

The other concerns I have also are based on the video I just watched, is the very -- actually much larger than I thought previously cut that would be taken out of South Mountain Regional Park on the western side. That area is actually a home to a small, but viable population of Sonoran desert tortoises which are protected by law.

Also something that it seems nobody has addressed is the Gila Monster Heloderma suspectum is a resident of that area and is vigorously protected by law from game and fish, and through the state laws of Arizona is one of our state treasures essentially. That animal is so restricted that you can't even get close to -- too close to that animal to take a photograph. You can actually be ticketed for harassing native wildlife.

Seems like a freeway through that area is very much harassing native wildlife. They may in my opinion want to rethink how much of that they're cutting through and possibly reroute that slightly. I think it would be very beneficial to many species of wildlife, also mountain lions, bobcats, coyotes.

5	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Biology, Plants, and Wildlife**	Sonoran desert tortoises have been documented in the Eastern Section of the Study Area, and suitable habitat for this species is present within Phoenix South Mountain Park/Preserve and the foothills of the South Mountains (see Draft Environmental Impact Statement pages 4-122 and 4-123). The E1 Alternative would directly adversely affect suitable habitat as the freeway would cross Phoenix South Mountain Park/Preserve and would be expected to affect individual Sonoran desert tortoises.

Code	Comment Document

3

There was a proposal at one time to reintroduce big horn sheep to the South Mountain range that they've already done in the Estrellas and the Sonoran desert monument to the west. If this freeway were to go in, they would need to definitely think about extended wildlife corridors either under or over the freeway to accommodate populations between the Sierra Estrellas and the South Mountain range in order to prevent inbreeding and increased genetic biodiversity.

For further comment and for more information on opinions and even actually biological studies that my students and I have done on the area and its native wildlife and urban wildlife, I can be reached at 602-931-7522. Again, that's 602-931-7522. That's my cell. You can also e-mail me at animalman1981@yahoo.com.

The website for the school is also available, www.cgcsaz.com. Our school's name is Country Gardens Charter School. Again, that's www.cgcsaz.com, and there's a link there to our Facebook page. I'm the admin on the Facebook page. If you would like to reach me for further comment or opinion or other information, it's easy to do. Other than that, thank you for your time.

MS. BURGE: My name is Goldie Burge and I own the property and founded the school, Country Gardens Charter School which is located on 6313 West Southern Avenue. It's been in existence since 2000. And I also own the property with my house on it which is on the south end of the property of the school which would be also on the west side, would be facing the freeway as well.

I would prefer that the ramps coming off onto Southern, if at all possible, be shifted about 200 feet to the east so as not to impact our school entrance as much. And a little bit -- if they could move it slightly to the north on that right-of-way rather than going into our property on the south side of Southern. That would be my preference.

I want to just make sure that I would oppose any part of the freeway taking out our school, our property there and the houses that are around it. We have a viable charter school with 420 students with high test scores, and we have a very involved life science program that extends and has an outreach all the way to Costa Rica, Panama and Belize, and also we do outreach programs for other schools to come and visit our barnyard program.

And our biology teacher does outreach

1	**Design**	The alignment of the W59 Alternative had not been changed in the area of the Country Garden Charter School. The freeway would not directly affect the school, but would run just east of the school. Design of each action alternative, while completed to an equivalent level, is still preliminary and subject to change because designs would be further refined. The Arizona Department of Transportation would work with businesses during the design phase to identify ways to minimize property impacts that allow the business to continue operations.

Code	Comment Document

programs all over the state for the Arizona Herpetological Society. So he utilizes some of our animals to take to these presentations for disabled children, for educational seminars, etc. So we're a very different type of public charter school in that we're very hands-on life science focused, and we provide a totally different opportunity than the public schools in the area.

On the school property we have an extremely large amount of large about 80 to 100 foot trees that are over 5 feet in diameter that have been there back to the Pima Indians. There was a Pima Indian dig ruin site on Southern right in front of the school which SRP has now since covered back over, and some remains were also found on our property in the trees, as well as in those trees which is our "Wilds" area.

We have Great Horned Owls that breed there, as well as Red-tailed Hawks, plus some other species of animals such as the California Kingsnake, et cetera. So we would not want those habitats to be disturbed.

2

We're in the Migratory Bird Act -- we're protected under the Migratory Bird Act, and we're in what we call a migration zone. We get many other

Code	Comment Document

birds that come to the trees there, Lovebirds, parakeets in the wintertime that migrate through. So it's a pretty viable biology or biological corridor, if you will, and important to maintain that.

Our school employs over 35 people with a payroll of $1.5 million per year which is pretty significant. If the school were to have to be moved, it would impact quite a few families, both employees and 420 families of students.

And we are a 70 percent poverty level. We're a Title 1 school and we serve students not only in Laveen, but we bus students in from all over 10 to 12 districts so that these students can get a different type of school choice than they're offered in their public school district.

We provide opportunities for these low-income students that otherwise would never be offered to them, particularly our trips across country. We have two charter buses that we have outfitted with bunk beds, and we travel students every year on three-week and two-week trips in different regions of the U.S. for a very low amount of money so that they can afford to go. And we cover all 48 states in the United States on a four-year rotating basis.

Code	Issue	Response

Code	Comment Document

And then we take high school students to Costa Rica, Panama and Belize where we have life science studies in the rainforest for six to eight weeks, and in Belize for two weeks where we study the second largest Great Barrier Reef in the world and do archaeological studies on the Mayan Ruins there as well.

We also have a village we sponsor in Panama and marine biology tours that we do in Panama while we're in Costa Rica. So our students are getting these opportunities that typically only higher income or private school students would be offered, and they're offered it at a more affordable rate for them, and it's providing them the science and math opportunities for careers that they wouldn't be offered if they had not experienced these learning environments.

For example, we have students now wanting to be archaeologists. We have many students wanting to go into marine biology. We have students who are decided on many different science careers and are in college presently and doing very well. And they're all low-income kids that probably would have never pursued this had they not been on these trips. So that is a big factor for our school.

Code	Issue	Response

Code	Comment Document

And nobody in the whole state of Arizona offers any of this, and as far as we know in the United States not to this extent. For example, our trip to Costa Rica is six to eight weeks. Our kids only pay a total for everything, including airfare, $1,450. Our three-week trips, our students only pay $900 for three weeks across the United States seeing 30 venues.

For example, last year -- this last year we went to the Florida region, southern region of the U.S. and D.C. and actually met with Senator Jeff Flake. Had a meeting with him for over 30 minutes. Senator John McCain. We're very involved in the House of Representatives, and we got to see them voting in the Senate, plus all of the historical places, Williamsburg, Jamestown, et cetera. Over 30 places that they saw on a three-week trip just on that one southern region.

We have another region where we do Chicago, Mt. Rushmore and the Great Lakes region. That's next year. The year after that is our Rocky Mountain region which covers all of the state parks including Yellowstone, Bryce Canyon, Arches National Park and many other entities.

Our fourth trip is to the New England

Code	Issue	Response

Code	Comment Document

region where we tour all of New England, all the way to Maine, Statue of Liberty, New York, go over to Canada and Niagara Falls. We have many, many venues of historical significance throughout the whole New England region.

And then we have the pacific northwest where we do the whole pacific northwest coast. So basically our students traveling on these trips will cover all 48 states if they go on all the trips and be learning the whole time. They are not vacation trips.

So these are the things we offer. Besides that, our school is completely hands-on. We have a zoo lab that has over 300 species of animals where all the students get to go in and interact and work in science through living animals. We have a barnyard with all the farm animals. They interact with them and work with science on those. And all of our classrooms are hands-on with learning centers which is a very -- and it's a very accelerated learning program.

Our students are taking -- are taking more high school classes, more core classes than other high schoolers. Our tenth graders are outscoring all the schools in the region on --

Code	Issue	Response

Code	Comment Document

there's tests, especially in math, and -- and we have an extensive amount of homework that so that our students are college prepared.

We have a very high graduation rate from 80 to 100 percent, and most of our kids that are in college are in state colleges and are doing extremely well. So that's why the school needs to stay there so we can offer these opportunities to our -- especially our lower income students. Give them the opportunities that they're missing out when they're attending regular public school. That's probably it.

For example, one of our students, a young African-American student who really didn't have much ambition when he started our school in junior high was now our valedictorian a year ago, got a scholarship to ASU where he's attending, and he now -- his plans after going to Costa Rica and Belize is that he wants to be a foreign language interpreter. And he has also taught himself since then Portuguese as well as the Spanish we taught him and that he utilized in Costa Rica.

He was so excited when he was in Costa Rica to be able to speak to people and enjoyed that so much that now that is his focus. So these wonderful opportunities do make huge differences on

Code	Issue	Response

Code	Comment Document

these students' lives, so that is why we're working on maintaining this level of education for these kids.

May 28, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) (3) Although i am a former developer, we never took land that wasn't already infill or along a current road. The reason Scottsdale is so successful is we looked at long term sustainability to include open space/land, this is imperative in the attempt to preserve the beauty, environment and wildlife.The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(4) (5) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(6) (7) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(8) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(1) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Ms. Tina Burger
2200 E Dortha Ave Apt K
Flagstaff, AZ 86004-3663

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.

8	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Jun 19, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

I am a resident in the Ahwatukee area of Phoenix that would be most directly impacted by the construction of the freeway. I can't claim ignorance of the proposed project when I bought my residence in this area because I already knew the construction was in the long-term plan.
If that were the only factor involved I would not be writing this.
2 3 However there are broader issues involved that I feel compelled to address. Simply because a project has been on the drawing board is not good enough reason to bring it to fruition. Our knowledge of environmental impacts to the local ecosystems as well as to the entire world is much greater now than when it was first proposed. Our scientific knowledge of what is happening to our world is inconsistent with the ambitions of those who feel that development of such projects is the highest ideal. It is not. The health and survival of sons and daughters, and their children and children's children are of utmost importance and present a much higher value.
I do a considerable amount of hiking on the mountain and my property is also situated along the desert. I don't know what kind of research has gone into this , but it seems very clear to me that the ecosystem of South Mountain is already greatly impaired due to the city that surrounds it. My neighbors feed rabbits that the coyotes feast on, which surely must increase their numbers. I do a lot of hiking around the state of Arizona, and I have to tell you that I see far more
4 coyotes outside my residence than I ever see anywhere else. If you add to that by building a freeway that cuts off the wildlife corridor then their gene pool and ultimately their survival will become seriously impacted by negative effects of interbreeding. The coyote is just an example. There are many other species that will also be affected.

Beyond the local environment is the world-wide problem of global warming that can only be worsened by the spewing of pollution in the
air. Building more freeways is not the answer! They will encourage
even more urban sprawl and cars on the road that will just exacerbate the problem. There needs to be a greater concerted effort into building public transportation systems that will clean up the air and provide a healthy and enjoyable world for my grandchildren and yours to live in.

Sincerely,
Robert "Steve" Burkhart

Code	Issue	Response
5	**Air Quality**	Climate change is an important national and global concern. While the earth has gone through many natural changes in climate in its history, there is general agreement that the earth's climate is currently changing at an accelerated rate and will continue to do. Human-caused greenhouse gas emissions contribute to this rapid change. Carbon dioxide makes up the largest component of these greenhouse gas emissions. Other prominent transportation-related Greenhouse gases include methane and nitrous oxide. Greenhouse gases trap heat in the earth's atmosphere. Because the atmospheric concentration of greenhouse gases continues to climb, our planet will likely continue to experience climate change-related phenomena (see Final Environmental Impact Statement pages 4-85 through 4-86). To date, no national standards have been established regarding greenhouse gases. Greenhouse gases are different than other air pollutants evaluated in federal environmental reviews because their impacts are not localized or regional due to their rapid dispersion into the global atmosphere. The affected environment for greenhouse gas emissions is the entire planet. In contrast to broad-scale actions such as those involving an entire industry sector or very large geographic areas, it is difficult to isolate and understand greenhouse gas emissions' impacts for a particular transportation project. Furthermore, presently there is no scientific methodology for attributing specific climatological changes to a particular transportation project's emissions. Under the National Environmental Policy Act, detailed environmental analysis should focus on issues that are significant and meaningful to decision making. The Federal Highway Administration has concluded, based on the nature of greenhouse gas emissions and the exceedingly small potential greenhouse gas impacts of the proposed freeway (as shown in Final Environmental Impact Statement Table 4-37 on page 4-85), that greenhouse gas emissions from the proposed freeway would not result in "reasonably foreseeable significant adverse impacts on the human environment" [40 Code of Federal Regulations § 1502.22(b)].
6	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Code	Comment Document

MR. BURKHART: Robert Burkhart, and I reside at 3236 East Chandler Boulevard, No. 1042, Phoenix, Arizona 85048.

I'm an Arizona native. I was born at Good Sam Hospital and have lived in several communities, including at various times in the Valley. I know this doesn't give me any special privileges over someone who moved here, say, a year ago, but I also spent 20 years of my adult life in Alaska. I came home at least once a year to visit family and this gave me a bird's eye perspective.

You know, time-lapse photography, the kind where you set a camera up to take pictures every minute as a rose is blooming. A beautiful rose blossoms in front of your very eyes. This is so beautiful. I think you already know where I'm going with this. That's what it was like for me coming home to the Valley once a year to watch the blooming of the Valley.

Before I left, the rose was definitely in bloom with a wonderful downtown architecture including the Westwood Ho Hotel and of course the Biltmore in Scottsdale along with the general western theme of the area, but then something changed. The vine was still there, but the rose strangely faded in

Code	Issue	Response

(Comment codes begin on next page)

Code	Comment Document

the distance. A vine of freeways spread its insidious tentacles in every which direction. The city spread not like a rose of theme of fine architecture, but like a haphazard cancer with no organized plan and all its tentacles were thorns.

There were people coming from places like Chicago, Atlanta and D.C. who found that they have actually come to a place that is harder to get around in than the many places they left. There was no L, no Marta, and no Metro. Instead, they found themselves stuck on the vines in rush-hour traffic honking their horns going in the thorny road rage.

And I asked myself why? Is it because in Arizona we are still stuck in the dilution that this is the wild west and that every man needs his own horse to get around on? It's the real kind of Marlboro man who has his own horse. Yet because of that, chokes on the smoke and develops emphysema.

I live in the Ahwatukee area. You know, the one affected by the freeway. Please don't do me any favors by finding a faster way to Avondale when you will be increasing the noise and filth due to the out of control plan to make things worse than is already broken.

Hurray for putting in the Light Rail.

2

It's too little too late, and sorry it doesn't reach me, nor most other people in the Valley for that matter.

I have the lucky privilege of owning a residence on the edge of the desert where I can sit on my porch and watch the bunnies hop around while I sip my morning cup of coffee. I am blessed. There are plenty of rabbits because they are fed by neighbors who don't know any better. Most mornings that I'm actually looking, I'll see at least one coyote who I'm guessing is checking out the bunny scene, and sometimes chicken left out for them by another neighbor. Easy pickings.

3

I'm an avid hiker who sees far more bunnies and coyotes pass by my property in the city than I ever do in the wild. They're nice to look at, but there are way too many of them and it's nature out of balance. Now you're going to do something that throws this whole thing in reverse by cutting off a wildlife corridor, you'll be shutting off the coyotes' access to visiting coyotes from the Estrellas. And by doing so, you will affect their ability to interbreed. Without interbreeding, you get what? They get what? Right, they get dumb and they get diseases associated with recesssive traits.

5

Because they are dumb and sick, they will die and the mountain will become a cold hard rock without them.

So maybe you're saying to yourselves, what's a few less Mangy Coyotes and a little more emphysema when we have to grease the wheels of commerce by way of truck between L.A. and El Paso. Well, if that's the way you see it, I know there's nothing I could ever say or present any kind of scientific evidence that could possibly change your mind. But if you have any inkling of a doubt, then please examine your conscience and feel it in your heart to draw a line in the sand to do what it takes to help us all breathe a little cleaner air and save many thoroughly gorgeous coyotes. Thank you.

Subject: Say "No!" to the Proposed South Mountain Freeway

To Whom it May Concern:

I am a resident of Ahwatukee. My family and I moved from Oak Park, IL a few years ago when my husband's job transferred him to Phoenix. When we purchased our house in the Club West community and enrolled our children in the Ahwatukee public schools system, we felt like we won the lottery! Finally, we discovered a community where the public schools rivaled the schools in Oak Park (some would say they are even better) and the residents are friendly and the neighborhood is super safe. If that wasn't enough, we have one of the nation's greatest parks, South Mountain. My family and I routinely hike these trails and are never ceased to be amazed by its majestic beauty! There aren't many of these areas left in our great country!

I truly believe building a freeway through South Mountain is a terrible idea. It's terrible for the health hazards brought by the increased congestion and vehicular traffic. With the increase in traffic, we will experience an increase in crime, air pollution as well as noise pollution, especially from the substantial increase in truck traffic.

Rather than destroying South Mountain to build the freeway, why doesn't Arizona begin constructing public transportation, including commuter trains and additional buses. Why aren't I10 and the 202 expanded to accommodate commuter trains that would assist residents from Ahwatukee, Chandler, Gilbert and Mesa to reach downtown. Finding ways to minimize crime and pollution should be the focus of Arizona, not adding to the problem which is what the proposed freeway represents.

Thank you for your consideration.

Regards,

Amy Burkholder

1	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Noise**	
6	**Trucks**	The Maricopa Association of Governments regional travel demand model forecasts approximately 10 percent truck traffic on the South Mountain Freeway in 2035 (see Final Environmental Impact Statement page 3-64). This percentage is similar to current conditions on Interstate 10 between Loop 101 and Interstate 17 and on U.S. Route 60. Noise modeling for the Final Environmental Impact Statement used this forecast truck traffic, with the model accounting for greater noise generation by trucks in the future (see Final Environmental Impact Statement page 4-88). Noise mitigation is designed for this predicted noise level, including the noise from trucks. The noise analysis was updated for the Final Environmental Impact Statement using the most recent Federal Highway Administration and Arizona Department of Transportation policy and traffic projections provided by the Maricopa Association of Governments. Discussion of this updated analysis begins on page 4-88 of the Final Environmental Impact Statement. No substantial differences between the analyses presented in the Draft and the Final Environmental Impact Statements resulted.

Subject: Public Input - Proposed South Mountain Freeway
Date: Tuesday, June 11, 2013 10:06:37 PM

I believe the proposed 202 South Mountain Freeway is short-sighted and does not reflect the current traffic patterns. The freeway was envisioned in 1985, but does not reflect the population growth over the past 30 years and the anticipated growth in the near future. In particular the recent and expected population growth in Goodyear and Buckeye will cause an explosion in the population west of the White Tank Mountains. (1)

- The South Mountain Freeway as proposed will do little to relieve the traffic congestion currently on the Papago Freeway. The 59th Avenue alignment is well east of the morning congestion point for inbound traffic. The same argument can be made for evening outbound traffic. (2)
- The South Mountain Freeway would become the de-facto "truck route" for semi-trailer traffic from the ports in California to points east of Phoenix. (3)
- The "truck route" designation will be even more evident with the completion of State Route 801.
- The South Mountain Freeway will not be similar to the San Tan Freeway. Because of the high volume of semi-trailer truck traffic, the South Mountain Freeway will be much noisier and provide much higher pollution to the neighboring communities. (4) (5)

I am not proposing a "no build" scenario. I can see the value of completing the 202 Loop and providing an alternate for traffic from the Chandler and Ahwatukee areas removing some of that traffic from the I-10 Broadway Curve. My recommendation relates to timing and scope.

- Before the South Mountain Freeway is built, I viable option should be built to pull traffic off the eastbound I-10 on west of Goodyear and reconnecting to I-10 south of the Phoenix metro. (6)
- Once the alternate route is completed, the South Mountain Freeway can be sized to accommodate the normal east-west traffic. Even then, the South Mountain Freeway will be primarily a pass-thru highway and not lead to significant population growth along its route (unlike the San Tan Freeway and the Loop 303), because of the South Mountain Freeway's proximity to tribal land and the fact that Ahwatukee is nearly built out. (7)

In conclusion, I believe that construction of the South Mountain Freeway should be postponed until:

1. The significant issues of the traffic congestion to/from the Goodyear and Buckeye communities is addressed. (8)
2. An alternate route for I-10 thru-traffic (especially semi-trailer trucks) is constructed. This would go a long way toward relieving the metro traffic congestion. The current proposal only serves to manage the traffic. A thru-traffic route would actually remove traffic from the metro freeway system. (6)

1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives, W59 Alternative Versus W101 Alternative**	
3	**Trucks**	The Maricopa Association of Governments regional travel demand model forecasts approximately 10 percent truck traffic on the South Mountain Freeway in 2035 (see Final Environmental Impact Statement page 3-64). This percentage is similar to current conditions on Interstate 10 between Loop 101 and Interstate 17 and on U.S. Route 60. Noise modeling for the Final Environmental Impact Statement used this forecast truck traffic, with the model accounting for greater noise generation by trucks in the future (see Final Environmental Impact Statement page 4-88). Noise mitigation is designed for this predicted noise level, including the noise from trucks. The noise analysis was updated for the Final Environmental Impact Statement using the most recent Federal Highway Administration and Arizona Department of Transportation policy and traffic projections provided by the Maricopa Association of Governments. Discussion of this updated analysis begins on page 4-88 of the Final Environmental Impact Statement. No substantial differences between the analyses presented in the Draft and the Final Environmental Impact Statements resulted.
4	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Air Quality**	
6	**Alternatives**	There is an existing route (Interstate 8 and State Route 85) that provides a bypass of the Phoenix metropolitan area. Signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. This route continues to be available for interstate and interregional travel.
7	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Traffic**	The proposed freeway is part of the multimodal *Regional Transportation Plan* (see Final Environmental Impact Statement page 1-5 for more information regarding the *Regional Transportation Plan*). The proposed freeway would serve as an important link to planned transportation facilities in the Goodyear and Buckeye areas, namely State Route 30 and State Route 303L. This system of freeways would help to improve traffic operations along Interstate 10 in the southwest metropolitan Phoenix area.

We are strongly opposed to all of the current proposals that put the highway through Pecos Road. We disagree with the need to destroy part of South Mountain and think it should be preserved with alternative routes explored instead. We live a few blocks north of Pecos Road and are opposed to the increased traffic, noise, and pollution; loss of bike trails; unnecessary demolition of homes, church, and school; and potential increased crime rate that would result with a highway on Pecos Road. It sure seems like it would be less costly to run the highway through the open land south of Pecos where no homes, churches, or businesses would be negatively impacted.

We do believe the highway would best serve the community if it was located on GRIC land instead.

We look forward to having the GRIC route be put back on the table for further consideration.

Joe & Marie Burns

1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Section 4(f) and Section 6(f)**	
3	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
4	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Air Quality**	
6	**Design**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
7	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
8	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
9	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Subject: Loop 202 extension

Ladies and Gentlemen:

1 We are residents of Ahwatukee and most definitely do not want the Loop 202 to be built in our community. For many reasons, mainly air pollution, we would like to see this project abandoned and funds expended elsewhere i.e. on the improvement of AZ 85 between I-8 and I-10. This would provide the "truck bypass" around Phoenix that supposedly everyone wants.

2

One of the main reasons we moved to Ahwatukee over 16 years ago, was that this area didn't get the infamous Phoenix "brown cloud." South Mountain protected the Ahwatukee area. If the freeway is constructed it (by itself) will most likely give us a "brown cloud" - that isn't healthy for anyone.

3 We both feel that ADOT has an obsessive need to build this road whether it is needed or not or wanted or not.

To: Projects
Subject: Comments in opposition to South Mountain Freeway
Date: Tuesday, June 04, 2013 12:46:54 PM

Jun 4, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

2 I have fond memories of South Mountain Park in the late 40's and 50's. It is a valuable site for Phoenix folks and tourists. The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

4 5 South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

6 7 The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

8 The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

1 Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Miss Barbara Cain

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Do Not Build & ruin Ahwatukee.

1

2 3

4 5

6 7

We do not need more trucks, cars & Buses to add to our pollution. A few years ago I participated in getting neighbors opinions and out of the area I live in only 1person (a truck driver) wanted it.

Home values will drop, pollution will increase, crime will increase, business will vacate this area.

The money wasted on this ill conceived plan is outrageous. Have you ever seen a plan this big which didn't require more and more funds as the contractors want more & more $$$.

I think train rails should prevail, or I-10 improved. Taxpayers don't want this boondoggle.

Code	Issue	Response
1	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement beginning on page 4-91).
2	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
5	**Economics, Socioeconomics**	Businesses directly and adversely affected by implementation of an action alternative would be mitigated through relocation or site purchase at fair market value. The construction of the proposed facility would likely generate additional business and jobs in the corridor upon implementation because of the improved access it would provide.
6	**Acquisitions and Relocations**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Alternatives, Nonfreeway Alternatives**

Subject: Support of South Mountain Loop 202

Dear ADOT:

1

I am writing in support of the South Mountain Loop 202 initiative. The economic "Crash" of 2008 in Arizona has devastated our state. The jobs created by this project will benefit the construction industry greatly and its community. The trickle down affect from general contractors to small business will aid commerce in Arizona and put people back to work.

The environmental impact to air quality will further bring pollutants counts down by aiding in decreased automobile emissions. The long term effects of this project will translate into boosting commerce and bringing contractors and their employees back to their state to find work.

Respectfully,

Rose Ann Canizales

President
Association for Construction Career Development

4303

location and also at the same time enhances the amenities within the City of Phoenix, keeps tax dollars here, keeps people able to stay within the lesser range for seeking out employment or shopping.

And I think that's about all that I can muster at this point, so I will probably be back if that's okay.

MS. DAD: I'm in favor of the acquisition for the freeway. I think it will be a benefit for the west side of the -- of the -- of the area, for people to be able to travel from the west side to the east side, avoiding the midtown congestion. I think they have studied every stick and stone and that they can now move forward and pick the 59 route. I think that is the best one for the freeway. That's it. I'm in favor of it.

MR. CARRILLO: I've been a resident of South Phoenix, in Laveen, all my life, which is 38 years old. I mean, I'm 38 years old now. And, absolutely, there's no question, the freeway being built would be the absolute best for that community in Laveen. And I did hold back in putting in my opinion, to study more concerning the South Mountain, the Gila River. A lot of them are my friends, and I understand their -- their dissatisfaction with everything.

But I do understand that they also had a problem with the casino first coming in there, a lot of these friends of mine. And, now that the casino has become something

lucrative for them, now there's not such an uproar about it. So I do believe that we are respecting their values and giving them a voice. But I also believe that there's a louder voice, including that with my community and residents in Laveen and everything, that absolutely this is the right choice and the right direction for growth.

MR. RODRIGUEZ: Yeah. Basically, I just want to state my absolute support for the 59th Avenue alternate. That's the priority one right now. I think it's probably -- Well, I know it's the best option based on the city planners of the City of Phoenix. They've expected this for a long time. It's a great benefit to Maricopa County. It's a great benefit to the Valley. And, quite honestly, a lot of people coming from the West Valley, all the way out to Buckeye, eventually, you have to cross 59th.

If it were to go any further west, then people that live on, for example, 51st, 59th, 67th, 75th, 83rd, they're not going to go back to try to catch it at the 101 if they're heading out to the East Valley. It's counterintuitive to what human nature would tell you. So they would just jump on the I-10, currently, and continue to take the regular flow, causing the same problems that we're experiencing downtown, when it comes to major traffic. So I would say 59th Avenue is, without a doubt, the best alternative.

The worst alternative is the one going through

I am leaving this comment in support of building the Loop 202 South Mountain Freeway. I am a native of Phoenix, living in the valley for over 35 years now. This section of freeway has been planned since 1985. It was determined back then that this connection was needed, when there were a lot fewer people living in our metro area. It is badly needed now to help relieve congestion on I-10, as well as other freeways and arterial streets. As the owner of a mobile photography business, I travel all over the valley using what has become a very large and overall efficient network of freeways. I believe the South Mountain Freeway is an important link that needs to be completed to connect the West and South West valley, with the South East valley. There are very few East-West freeway options, especially when you get to Downtown Phoenix and West of I-17. I would love to see this freeway built to give everybody another option instead of having to travel through downtown Phoenix. I live very close to I-10 at Baseline Road. I believe this freeway will help to relieve some pass through traffic on Baseline that heads to and from Laveen and other areas near there. That would be a much welcomed relief to those of us who live near Baseline Road. I have heard and understand the arguments from others, especially those in the Ahwatukee community. I believe there are just as many people in Ahwatukee that support the freeway being built, if not more, as there are against it. In reality, it will affect a very small number of people and businesses in that community. Noise levels will not increase that much, if at all, for residents 1/2 a mile or more away from the freeway. Again, I live within 1/2 a mile of I-10 with no sound walls, so I know. The pollution argument is a moot point. The pollution is already there. It's not like South Mountain prevents the pollution from the rest of the valley from entering Ahwatukee. I understand some homes and businesses may be removed to make room, and others may lose property value. But it's no different than any other community that other freeways have cut through in the past. And those areas have not died, they have thrived since the freeways have come through. Areas have become major employment centers in the valley because of freeways being completed nearby. So please, do not let a very vocal minority of people sway the decision on whether to build or not. I believe for every person like me who voices their opinion in support of building the freeway, there are at least 5-10 others who silently support building it. Let's complete what was planned 28 years ago and build the South Mountain Freeway! Thank you for your time and consideration of my comments.

To whom it may concern,
I live in the South Mountain area and am a tax paying, home owning citizen. The expansion of loop 202 is a violation a terrible transportation plan that violates our few remaining parks in the Phoenix area. Furthermore it is a violation of Indigenous land rights in the area. Please consider my input in the Environmental Impact assessment.

1	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Section 4(f) and Section 6(f)**	
3	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.
4	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

(1) A legitimate concern is the amount of traffic entering the I-10 from the preferred alternate W59. It will make the bottleneck even worse than it is now at morning commute. Will another I-10 lane be added to I-10 E and W?

(2) The Baseline Rd. ~~entrance~~ route to W59 is another concern. Heading west from 51st Ave, Baseline merges into one lane. Will Baseline be expanded?

Optional

Code	Issue	Response
1	**Design**	Construction of the proposed freeway would include widening along Interstate 10 to facilitate entrance and egress of vehicles between the two freeways. Additional information related to the Interstate 10 modifications can be found in Figure 3-26 on page 3-49 and Figure 3-29 on page 3-53 of the Final Environmental Impact Statement. The design of the connection to Interstate 10 and the widening along Interstate 10 were developed in accordance with the Federal Highway Administration's Interstate System Access Informational Guide and has received an initial determination of operational and engineering acceptability from the Federal Highway Administration.
2	**Traffic**	Traffic interchanges (on- and off-ramps) would be located at Van Buren Street, Buckeye Road, Lower Buckeye Road, Broadway Road, Southern Avenue, Baseline Road, Dobbins Road, Elliot Road, 51st Avenue, 17th Avenue, Desert Foothills Parkway, 24th Street, and 40th Street. In the immediate area of the interchanges, the crossroads would be widened to their ultimate lane configuration based on the City of Phoenix General Plan. Adjacent improvements such as signals and road widening would be the responsibility of the City of Phoenix.

My husband and I live in the Sunrise subdivision in the foothills. We often walk through the desert and have seen some beautiful petroglyphs on the first of the three areas that will be destroyed if the freeway is built. The petroglyphs are just off the well worn trail and easily visible. We have not explored higher up but would not be surprised if there are not more. Do you take these ancient petroglyphs into consideration when making your decision? It seems a sad thing to destroy our history just to build roads.
My hope is that ADOT and the Indian Community will agree on the alignment a half mile south that will spare not only hundreds of homes but also those ancient petroglyphs.
Thank you for the opportunity to voice my opinion.

1	**Cultural Resources**	The freeway alternatives were surveyed for archaeological sites, which include petroglyphs (rock art). The archaeological survey documented several petroglyph locations. Subsequently, the freeway alternatives were redesigned to avoid the petroglyph sites. No petroglyphs would be destroyed by implementation of the proposed freeway. Because right-of-way fencing would limit access from the proposed freeway, damage to petroglyph sites would not be facilitated (see Final Environmental Impact Statement pages 4-151 and 4-172).

I am in full support of building the 202 South Mountain Freeway, I do not understand why anyone would oppose such a needed relief for our freeway system. Our freeways are just getting way to congested and we need more roadways to elevate that problem.

speakers with respect. Please refrain from clapping or booing or whatever you might feel to do, out of respect to the people who have an opinion and comments as they address the panel.

So as soon as we get a new name on the list, we'll call that person and we will continue. Thank you.

Patrick Castle. Mr. Castle, could you use the microphone on this side here, please. Thank you.

Mr. Castle, you have a three-minute time period; you'll notice the timer right here.

MR. CASTLE: Okay. Great.

THE FACILITATOR: Begin, please.

MR. CASTLE: Thank you very much today for the opportunity. I just want to give a bit of anecdotal observation and evidence of what a freeway can do for enriching the fabric of the community, enriching the home values, enriching the cultural values. We currently live in Laveen where we've experienced growth of the community and quality of homes and we feel it's poised to expand; however, the lack of a freeway currently we see as one of the issues that's holding that back. One of our prior homes, though, we lived in an area that's approximately Cactus and where Highway 51 currently

1

Code	Issue	Response
1		Comment noted.

Code	Comment Document

is, and we lived there over 20 years ago, prior to the completion of Highway 51. So we lived during the building of Highway 51, we experienced the opening of that, and what we saw was an enrichment of the community far beyond our expectations. It enriched the school systems, the quality of the housing, the number of businesses then that were able to step up and see the opportunity to go into that community.

And so just from, again, an anecdotal, our own personal experience, we've seen the impact of the freeway, which, you know, we thought at the time, great, we'll have better access, but we didn't really anticipate the powerful impact it had in all aspects of that area. So we're just now seeing now the planned 202 extension in Laveen where we currently live as being a very similar opportunity, that the community is poised to expand in both commercial and in cultural ways that I think will be far beyond the expectations of the folks that are even pro the extension at this point.

That's all I have. Thank you.

THE FACILITATOR: Thank you, sir.

Those of you who just entered the room, if you're planning on speaking, please make sure that you register at the registration desk out front.

Code	Issue	Response

Code	Comment Document

don't get their jobs back. We'll give them to people with sense in their heads.

Anyhow, thanks for listening. ADOT, you're depressing as always.

* * *

UNIDENTIFIED SPEAKER: The biggest thing right now, I think, is why is it that it's only one day and during the workday, like, this particular public hearing and the forum and everything like that? Because normal people work Monday through Friday, 8:00 to 5:00, so it seems like it would be better, like, on a weekend, all day Saturday and all day Sunday.

Because there's a lot of information for people to kind of comprehend, especially for the people who may be newer to the community and not familiar with the NEPA process, not familiar with the technical process, I think a bigger span of time would have been better.

* * *

MR. CASTLE: Patrick, C-a-s-t-l-e.

I just spoke in the other room, but I think that the key thing that we saw in years in living in an area

Driver and Nix Court Reporters - (602) 266-6525

Code	Issue	Response

(Comment codes begin on next page)

Code	Comment Document

that is now Highway 51 -- we lived there over 20 years ago prior to the Highway 51 expansion -- was that not only did it resolve many of the crowded freeway situations and the transportation impact, but it also enriched the quality of life way beyond our expectations.

And so we lived through the building of Highway 51. We were approximately at Cactus and the 51, where our house was. And that wasn't really a problem, the building phase. But once the freeway was done, we found that the business and cultural opportunities just really took off at that point because of access.

We now live in Laveen where we see a very similar circumstance and where the community has experienced a lot of growth in the last five, ten years. But because of a lack of a freeway, there's been reticence for many businesses to come in and really serve the community, and the commute for many of the folks is more than they would like.

So once that freeway is completed, we'll see not only expansion of businesses but also the expansion of the housing areas and the enrichment of the area, which I think is going to be way beyond the expectations of the folks that are proposing it, similar to the situation we experienced when Highway 51 was completed when that enriched the area far beyond expectations.

To Whom It May Concern,

I am writing to express my thought on the proposed loop 202 and 59th Avenue Route. My husband, family members, friends and I have voted for approval on the original route when it was first drafted and put on the ballot. Many of us bought our homes in this area with the knowledge that we would be able to access Awhatukee, Chandler and Tempe area by that route to get to work. I have always lived in the southwest valley and worked in the east valley it is a shame that they now they want to change the route. I hate to think of what it will do to our home values and what homes and busineses will have to be destroyed for the alternative routes. I know that this area is not a very affluent one, but it really irritates me that this area is always the last to get any type of expansion of transportation services.

Elizabeth Cazan Document Created: 7/21/2013 1:54:47 PM by Web Comment Form

To Whom it Concerns,

As a native of Tempe Arizona (59 years) and homeowner in the Ahwatukee Foothills (21 years) I offer my opinion and feeling on the issues and concerns regarding the proposed South Mountain Freeway. I have and will continue to be COMPLETELY OPPOSED to the freeway being installed along Pecos Road!

1 I would be in agreement to a South Mountain Freeway Loop being installed about 1/4 mile South of Pecos and parallel to Pecos, on the Gila Indian Reservation ... with some condition, and that would be that the plan is useful and agreeable with a fair vote, to the Gila Indian Tribe.

2 I have followed and engaged in the issues and meetings surrounding the need for a S.M. Loop, for the past 21 years. A more recent suggestion is to have NO FREEWAY/NO ACTION/NO BUILD on or near Pecos but rather to have a truck by-pass route improved and connected to the outer region of Highway 85 and Gila Bend.

If an agreement cannot be made for a loop on the Gila Reservation then my vote is for improving and expanding on the outer loop connection to/through highway 85 and Gila Bend.

-Respectfully,

Elizabeth F. Cazan

2	**Alternatives**	An alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 was considered (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and inter-regional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, it was eliminated from further consideration.

Subject: Say no to the Loop-202 Extension

PEOPLE OF THE GREATER PHOENIX AREA: If you are opposed to the construction of the Loop-202 freeway expansion, please take the time to submit a public comment to projects@az.gov. Here is mine:

Once again, the moral callousness of eco-apartheid is rearing its ugly head in the Valley of the Sun. The Phoenix, Arizona greater metropolitan area, with its unsustainable urban sprawl, unchecked growth, rampant destruction of finite natural resources and wildlife habitats, and the most industrially polluted zip-code in the country, was recently cited as "The World's Least Sustainable City". As is the case with every major city In the United States, most of the negative externalities that are associated with these ecological crises are disproportionately dumped on the doorsteps of oppressed and subjugated populations. The proposed Loop-202 extension is yet one more chapter in the devastatingly sad and brutally savage story of cultural eradication of the indigenous peoples of this valley, who have lived here for hundreds of years. The expansionist eco-philosophy of our American culture has a total disregard for the fact that this land is sacred to the native peoples who still live here and rightfully call this land their home. Many others have commented today about the questionable, outdated and often inaccurate information provided in the environmental impact report for this project. Thusly, I feel it is imperative to focus on the cultural, ecological and spiritual rape that this freeway would commit on the peoples of the Gila River Indian Community. It would be extremely unwise, unfair and unjust to continue the failed model of perpetual growth that we have taken in and around Phoenix. Enough is enough. The line must be drawn here, this far and no farther. The only way that we can ever even begin to heal this land and the people whose culture we have systematically destroyed is to stop now and reverse the trend. Please do not build this freeway.

1 I travel the entire Valley every week for work. Please accept this email as a strong YES to move forward with the South Mountain Freeway. If in your studies the 59th Ave. corridor was the best option than please start this process as soon as possible.
In my opinion the further we delay the project- cost rise. Land today is at a fair price, in a few years that will not be the case.
Finally - biggest impact is on the Broadway curve it is very overloaded today, this freeway will take pressure off of that area.

Hi,
I am a resident of South Phoenix, living close to South Mountain and I'm interested in receiving a draft route plan (pdf) of the proposed freeway.
I am excited about this development as it will facilitate traveling from our part of town to other areas of the valley.
Is the plan available on-line?

Thank you in advance!

Best,

Yesenia Chacon

South Mountain Draft Environmental Impact Statement Now Available

PHOENIX – The Arizona Department of Transportation and the Federal Highway

Code	Issue	Response
1	**Public Involvement**	Aerial maps and other study materials are available on the project Web site: <azdot.gov/southmountainfreeway>.

Code	Comment Document

Administration today released the Draft Environmental Impact Statement (EIS) for the proposed South Mountain Freeway. This release launches a 90-day public comment period.

The draft environmental document can be found on the project website — azdot.gov/SouthMountainFreeway — and at the following locations in the community:

- Phoenix Public Library – Ironwood Branch, 4333 E. Chandler Blvd., Phoenix
- Phoenix Public Library – Burton Barr Central Library, 1221 N. Central Ave., Phoenix
- FedEx Office Print and Ship Center, 4940 E. Ray Road, Phoenix
- Sam Garcia Western Avenue Library, 495 E. Western Ave., Avondale
- Tolleson Public Library, 9555 W. Van Buren St., Tolleson
- ADOT Environmental Planning Group, 1611 W. Jackson St., Phoenix (call 602.712.7767 for appointment)

The document covers potential impacts from building or not building a freeway, coordination with the Gila River Indian Community, purpose and need for a new freeway, alternatives studied and public outreach efforts since the study was launched in 2001.

To provide input during the 90-day public comment period, you can participate in the following ways:

- Attend a public hearing on May 21 from 10 a.m. to 8 p.m. at the Phoenix Convention Center
- Email projects@azdot.gov
- Submit comments at azdot.gov/SouthMountainFreeway
- Call 602.712.7006
- Mail comments to the South Mountain Study Team, 1655 W. Jackson St. MD 126F, Phoenix, AZ 85007

All public comments must be submitted by July 24.

The project's study team will incorporate input gained from comments to produce the final environmental impact statement, which will have a 60-day public review period. A record of decision is expected in 2014.

Construction of the South Mountain Freeway, if approved, could begin as soon as 2015. The eight-lane freeway would run from I-10 in the West Valley along 59th Avenue, cut across the southwest corner of South Mountain Park and connect with Pecos Road on the south side of Ahwatukee to connect with I-10 and the Loop 202 Santan Freeway.

Code	Issue	Response

1 2 3 4 5 6

MR. CHADDERTON: I moved to Ahwatukee in '77 and started doing real estate then. And what I was telling them is, when I used to hike South Mountain, it was quiet and serene. Now, if you hike it, you can hear the diesel noise on I-10. And my house, I live on the golf course. Now, at 4:00 in the morning, I hear diesel and noise, even though they have the abatement wall.

In 1988 I worked on the CAC, Citizens' Advisory Committee, to master-plan South Mountain Park, for 22 months. I learned a lot about it. And I'm just concerned that putting that in is going to -- I was told that, whenever you put a road in, it affects the habitat for a one-mile corridor. So that's my concern.

The other thing is South Mountain was given to the City under a patent through the BLM, the Bureau of Land Management. And I'm wondering if they would have a problem if they want to cut into South Mountain. And I don't think they've looked into that, either.

But I'm just worried about pollution and noise. I think it's going to be a big factor that's going to affect all of Ahwatukee.

I think it would be neat if Pecos continued, as is, as a two-lane blacktop with lights, to 51st. And if they found -- could do an alternate truck route for the south, so that the trucks -- you know, let the local traffic get around

Code	Issue	Response
1	**Noise**	Noise barriers are designed to provide a substantial reduction in noise levels along freeways, but do not and cannot eliminate noise from passing into nearby neighborhoods. Just because noise can be heard does not mean that noise barriers are ineffective. Even at the levels considered "acceptable" by the Arizona Department of Transportation Noise Abatement Policy and Federal Highway Administration regulations, noise is still readily audible and can be heard for some distance from the freeway.
2	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The history of the Phoenix South Mountain Park/Preserve, including information related to the conveyance of land from the Bureau of Land Management to the City of Phoenix, is presented in the Draft Environmental Impact Statement on page 5-25.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Noise**	
6	**Alternatives**	The Gila River Indian Community has not allowed the project team to consider alignments on its land, so extending Pecos Road to 51st Avenue is not feasible. In addition, in the best-case scenario, a parkway would carry approximately 105,000 vehicles per day, well below the average daily traffic on the proposed freeway, which would range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-19). As a result, the Arizona Parkway would lack sufficient capacity to meet projected travel demand. The Arizona Parkway would not adequately address the projected transportation system capacity deficiency, would not remove a sufficient amount of traffic from arterial streets, and, therefore, would not meet the project's purpose and need. For these reasons, the Arizona Parkway was eliminated from further consideration.

Code	Comment Document

but keep the trucks further south, so that we won't have to deal with so much pollution. That's my two cents.

I started the Chamber of Commerce in Ahwatukee and am the founding charter president of the Ahwatukee Chamber. And, as I said, I was on the Citizens' Advisory Committee to master-plan South Mountain Park back in '88, so I think that that makes me familiar with the area.

To: ADOT
Subject: FW: Eastern Alternative Proposed 202 Route
Date: Tuesday, May 14, 2013 9:49:16 AM

-----Original Message-----
From: Nitrogenfixx [mailto:nitrogenfixx@cox.net]
Sent: Saturday, May 04, 2013 5:59 PM
To: Projects
Subject: Eastern Alternative Proposed 202 Route

Dear Mayor Stanton and Freeway Engineers;

I am a cyclist and utilize riding my bike on Pecos Rd. a couple times weekly, and have done since 2002..... It is wonderful! Wide bike lanes, very few stop lights, and goes from 49th St. west into the new housing development to about 27th avenue..... Yea!!!!! Nice long pretty safe road.

Arizona Senior Olympics anual events have been located there for years: Cycling, Inline roller blade, and running races all utilize Pecos Road for two mornings early in March. There is ample parking off 40th St., Phoenix police keep traffic off Pecos for the races duration, and it has been a wonderful attraction for both in and out-of-state competitors....

1 Question: What will happen to the Pecos Rd. bicycle lanes? How can cyclists be safe on traffic filled frontage roads? We don't need more cyclist's deaths, and we DO need all the safe roads with bike lanes we presently have.

2 3 Question: What will happen to the beautiful new homes on the western end of Pecos which may be mere feet from a noisy freeway????

4 Question: Could the 202 Eastern leg follow Riggs Road further south, and connect with I-10 on the western edge of South Mountain???? I have ridden that route many times, and there are essentially no homes to bother, and plenty of room to build.

Thank you in advance for your attention to my concerns (and those of MANY cyclists too).

Sincerely,
Ann Chadwick,
Phoenix Metro Bicycle Club
Strada Racing Club

.

Code	Issue	Response
1	**Traffic**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
2	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
3	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement beginning on page 4-91).
4	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.

The proposed freeway should not be built. Have you thought of the impact on several schools on Liberty Lane up and down Pecos Rd. The lost lives of high school drivers using this to exit and enter the school will be on ADOT. You don't have to ramrod this idea down the throat of all who live out here. Not to mention the fact we don't have enough mountains in Phoenix and you want to destroy part of it. I never thought our own people that live in this state or county would even consider it. Think of something useful to waste 1.9 billion on. I would rather have my money and live peacefully.

Code	Issue	Response
1	**Traffic**	The study considered local travel for residents including those attending schools near the freeway. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the freeway on the local street system. The City study found no adverse effects on the local street system from the proposed freeway (see Appendix 3-1 in the Final Environmental Impact Statement). Schools will continue to be accessed using the local street system.
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement beginning on page 4-91).
3	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Purpose and Need, Lack of Support**

1	Adrien Chapman Document Created: 6/14/2013 6:01:11 PM by Web Comment Form The South Mountain Freeway is desperately needed. As a resident of Laveen, I fear without freeway access my neighborhood will not fully flourish. Easier access to other cities in the valley will bring more income to the area and better economic growth. With the growth in population projected, the freeway would help reduce commute times and decrease traffic congestion. Less cars on residential streets and reduced time on freeways would help decrease pollution in the valley as well.

MS. CHASE: I'll start out by saying I'm angry. I am angry because I came here to have something to say about this, to the State of Arizona and to the people. And now I find out, when I get here, I can't say anything.

Well, I'm just now pointing out that all I can talk to is a court reporter. I can't even talk -- And that's not what the paper said. The paper said that -- The paper said there was going to be another meeting here, for public -- for public opinion. Well, that's what I'm here for.

I'm not here to talk to a court reporter. I'm not here to talk to the State of Arizona. I'm here to talk about this issue to the people that are involved: community members; Pangaea, who wants to do this thing. What for? And to the State of Arizona.

The Government gave us this land, this reservation, for our benefit, for our use. The State of Arizona aren't Indians. Go on the other side of the boundary. Put your freeway on the other side of the boundary.

Yeah, well, you can just listen to what I've got to say here, being I can't talk to anybody.

That's wrong, doing it, because that's tyranny, that you're going to tell us what you're going to do but you don't want -- you don't want us to tell you what we think about it except to a court reporter?

I want to talk to the people. I want to be able to

get my ideas and what I think about this thing to the people. That's the whole purpose of the meeting, as to whether they're going to build the freeway or not. How are you going to build the freeway when you don't know what we think about it, except on paper?

I'm not here to talk to you.

And that's wrong. That's not Indian way. That's another thing that I'm talking about, wanting to talk about, is Indian way. We have our way, our traditions, our culture. And you people, you Americans, we call you Americans. You Americans, you don't know Indian way.

Well, I'm here to tell you what Indian way is. And Indian way is still here on the reservation. It's alive and kicking.

And Pangaea wants to build this freeway on there, and they're not even -- I called and found out, they don't even have any exit. What is it? 22 miles, that freeway is going to run? There aren't even any exits on the reservation.

And Pangaea wants to bring industry and business? How are they going to bring industry and business to the freeway when there's no exits?

The exit is going to be at 59th Avenue, off-reservation. All the State wants to do is put a road in here, for your convenience.

And the paper said that this is not going to be

2	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Alternatives**	Federal law prohibits the denial of access to any community. Thus, traffic interchanges would be located along the freeway where it borders the Gila River Indian Community (see Final Environmental Impact Statement page 3-51). Roadway connections on Gila River Indian Community land to the traffic interchanges would be the responsibility of the Gila River Indian Community, in coordination with appropriate jurisdictions.
4	**Design**	The interchange locations for the proposed freeway are (see Figure 3-28, on Draft Environmental Impact Statement page 3-51): · Interstate 10 (Maricopa Freeway)/State Route 202L Traffic Interchange · 40th Street · 24th Street · Desert Foothills Parkway · 17th Avenue · 51st Avenue · Elliot Road · Dobbins Road · Baseline Road · Southern Avenue · Broadway Road · Lower Buckeye Road · Buckeye Road · Van Buren Street · Interstate 10 (Papago Freeway)/State Route 202L Traffic Interchange

Code	Comment Document

5

harmful to the City of Phoenix. Do I care about the City of Phoenix? No.

I live here on the reservation. I am concerned about the impact of this freeway, that's going to have on our environment. We've got South Mountain here. We've got Estrellas over here on the other side. Where is that smog going to go? Right here on the reservation.

And Phoenix, the State of Arizona, wants that smog here on the reservation, not in Phoenix.

From the very beginning, when Columbus came here and discovered -- to the Bahamas and to the United States of America, what it is now, they've been trying to destroy the Indian population, the Natives. They set out to kill us.

Germany, Hitler, they had their concentration camps where they annihilated the Jewish population. The United States is no different. The only thing is they don't call them concentration camps. They call them reservations.

They put us on reservations for why? To kill us off. But I've got news for you: We're still here. We're survivors.

They took -- The Government took our land, in Docket 228. And the attorney told me, we got 25 cents an acre for that land. That was $6 million to be split with Salt River, Ak-Chin, and Gila River. That's three -- $6 million. That came to 25 cents an acre. That's what we got for it.

5	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document

And the Government argued: Because it was undeveloped land.

What do they mean, undeveloped land? The Pimas built canals all over this place. It was not undeveloped land. We had an irrigation system here that's doing well today. Those same irrigation canals that the Pimas built are being used right now. It was not undeveloped land.

We didn't have 20-foot -- or 20-story skyscrapers. But I'll tell you what: We still had a skyscraper. We had a four-story building near Coolidge, the Casa Grande ruins today. Four stories high, a massive building. There aren't even four-story buildings in Casa Grande, in Florence, or Coolidge today.

And they have the nerve to tell -- call us uncivilized? Heathens? They don't know Indian history. They don't know Indians like we know Indians.

I'm an Indian. I'm a Pima Indian. I was raised by Pimas. My first language was Pima. I was born on the reservation. I know what our history is.

I know what it is today: We're in a transition. And I don't like that transition.

This guy -- I wasn't going to say this, but I will now. This guy, what's his name? Joseph Perez. Pangaea. I said -- I was talking to some young people at the computer lab, some time ago, and I says, "Who is this guy, anyway?"

Code	Issue	Response

Code	Comment Document

And one of the young men there laughed, and he said, "I went to school with -- with Joey. He used to say, 'I'm not an Indian. I'm a Mexican.'"

And now, all of a sudden, it behooves him to become an Indian because he wants to make money? So now he's saying, "Oh, I'm a tribal member. My family this, and my family that."

What kind -- What kind of stuff is this? I mean, that's not Pima way. He wasn't raised as a Pima. He doesn't even speak Pima.

And that's what I'm saying, is now, what we've got, we're in a transition, where that we have people like me, who know Indian life, who know Indian tradition and Indian way. And we have the new generation, who don't even speak Pima and didn't even want to be associated as being an Indian. He's a Mexican.

Well, I'm glad to be a Pima because I know my heritage. I know my ancestors. I know their way of life. I know how they lived and what they did.

And I have something against those contractors that were at that last meeting, saying that they wanted -- that this meant 30,000 jobs for them and they wanted -- they wanted that freeway in there. Well, I'm sick and tired of them.

I've got news for them: I'm sick and tired of rescuing the American public, people, because we did that when the settlors came through. They had Indian scouts, Pima

Code	Issue	Response

Code	Comment Document

scouts, that went out in the desert and picked up the settlors because they were dying from lack of water, dehydration. And they rescued them, fed them, gave them water, took care of their animals.

And now these contractors are coming to the Pimas and saying, "Oh, help us. We want 30,000 jobs."

I've got news for them: They're barking up the wrong tree. Let them go to their Government.

It was the United States Government that was overseeing all this housing thing that went corrupt and bankrupt and put us into recession, put this country into recession. Hold those people responsible. Make them provide jobs for them. Don't come to the Pimas and ask the Pimas to provide jobs for them. We already did that. And I don't want to do it now.

Now all we've got is 373,000 acres. This land is for our children. It's for us to live on. The Government gave us this land for our use, for our benefit.

And those contractors and the State of Arizona, they're not Pimas. They're not Indians. Go on the other side of the freeway -- or the boundary. Go on the other side of the boundary and build your freeway over there.

They gave us 25 cents an acre for this land. Don't -- You don't need any more. We're not giving you another square inch. You go on the other side of the boundary and

Code	Issue	Response

Code	Comment Document

build your freeways.

These freeways are like snakes: a freeway here, a freeway there, a freeway here. Freeways all over the place.

We don't want any freeways on our reservation. Where is all that pollution going to go? Right here on the reservation.

Does Phoenix care? Does the State of Arizona care? Does Governor What's-Her-Name care? No.

We're survivors. And I'm here to tell you guys: Take your freeway and go on the other side of the boundary.

You've got Baseline over there. Put your freeway over there. And then don't put any exits on it for 22 miles, and see what those people, those business people, have to say about that.

A freeway with no exits? And these Pangaea people think they're going to get rich because they're going to put in a freeway with no exits and they're going to put businesses up alongside the freeway? That's disaster. That's failure because people off-reservation aren't going to come to the reservation, to their businesses, to do business, when they can go two blocks down there from their house and go to Bashas', go to Walmart, and Target, and all of those other places. They're not going to come to here.

Business is: Location, location, location.

Where is your location?

Code	Issue	Response

Code	Comment Document

And they want to put business out in the middle of the desert, by a freeway with no exits? How smart are these people at Pangaea? Who are they, anyway? We don't even know anything about Pangaea. Who is this Joey Perez? Has he done land development? How successful has -- What's his history? Where is his money coming from? Who is financing this Pangaea outfit?

They're paying -- They're paying people $50 a signature to sign those petitions. And where else is that done? Do off-reservation people get $50 when they sign a petition? They're doing it here.

And who is paying them that $50? Where is it coming from?

Joey Perez is just a front. I understand, his wife is a partner in this, too. He's just a front.

But who is behind it? Where is the money coming from? Who are the -- Where is the money?

And even those people aren't too smart if they want to put businesses out in the middle of the freeway with no traffic.

We're 22 percent unemployed here. And they expect us to go and buy from them? We're poor. We're poverty-stricken. And that's why those landowners want that freeway to go in there. They think it's going to be money for them. But it isn't.

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response

Code	Comment Document

They're promised $2,000, that they're going to get $2,000. But those landowners don't stop to think that that land is fractionated land. What -- how that turn -- How that came about is that, when the Allotment Act was passed in 18-something -- '87, I think it was. When they passed that first Allotment Act, every Indian in the Gila River got ten acres. My grandfather got ten acres. His children got ten acres.

Then, when he died, then his children got a fraction of his allotment. And then his grandchildren -- who I'm a grandchild -- now I have interest in that land. So that's what this land is. That ten acres is fractionated.

When it's leased out, all the people, the allottees that have interest in that land, just get a fraction of the $2,000. But these people think they're going to get $2,000? Huh-uh. They're only going to get a portion of that $2,000, depending on how many people are in that land.

All of the landowners are -- They're not landowners because they don't own the land. They just have interest in the land. All of those people are going to get a portion of that $2,000.

So what are they going to end up with? We have hundreds of people that have interest in these fractions, one piece of fractionated land, so that some of them only get pennies when that land is leased out. So how far is $2,000

Code	Issue	Response

Code	Comment Document

going to go?

And this is why I'm here to tell the people, to bring out these things, so that they won't be taken in. They don't -- They don't think about this. All they see -- All they hear is: We're going to get $2,000.

And where is $2,000 going to go, anyway?

One lady told me she went to a meeting. They told her she was going to get $2,000. She said, "What am I going to do with $2,000? I can't fix my car, pay my electric bill. What am I going -- What good is $2,000 going to do me?"

She said, "I left. I wasn't interested."

She was a smart one. She had it figured out. But, unfortunately, there are people that don't figure it out. They don't think.

And that's what I'm here for, is to try to tell them: Look, this is what's happening. This is what's involved. These are -- These are all the things that are involved in this freeway thing.

(Ms. Chase speaks a brief phrase in Pima) Don't like it. Don't accept it.

And -- and Joey Perez, and he wants to -- He wants to have another election on this? We already said, "No." The people already had an election.

And here, here, I found this thing here. I didn't get a copy of that. But read that.

Code	Issue	Response

Code	Comment Document

See, that's a -- This is a picture of the reservation. There's Chandler and all these other places around it. And this is what it says here. It says -- I have to get my glasses.

This says: Shouldn't community members be able to decide what is -- what is appropriate for the community?

We already did. We already decided. No, we don't want the freeway.

But, you see, there's a -- There's a Indian way and an American way. We're in conflict. And Americans don't understand Indian way. Indian way, the people have already said what they -- what they wanted. Indian way, it shouldn't even come up again. It's been decided.

So how -- And I was talking to a friend about this. And I said, "Well, you know, this isn't like a court hearing and one side loses and they ask for an appeal. We had an election, not -- not a court hearing. This shouldn't be an appeal."

And she said, "Well, if I think of it, I think that there was a Martin Luther King election, and I think they -- the voters went to the polls three times before they made Martin Luther King a holiday."

I thought -- I said, "Oh, yeah, I didn't know that. I forgot about that."

So that's a difference, right there, between Indian

Code	Issue	Response

Code	Comment Document

way and the American way. American way, you can keep petitioning and petitioning and petitioning and petitioning. It's like a crying baby. The baby cries and cries and cries until momma comes and gives it some milk and shuts it up.

So then -- And that's what -- That's what Pangaea is doing: Crying and crying and crying, petition after petition, to get their way because legally they can do it.

But Indian way, Indian way, you can't, because we already decided. We already told you: No, we don't want it. Go away. Leave us alone.

That's Indian way.

And I said -- And that's the conflict that we're in. We're in one -- we're in one -- We're in one life and in another life. We're Indian way, living Indians -- living Indian way, and trying to be living American way. They're in conflict.

And we're getting this new generation of people who don't know Indian way. And Perez doesn't even want to admit he's an Indian, saying, "I'm a Mexican."

So what have we got here?

And I'm just here to say, to the people, that we need to -- we need to -- If we're Indians and this land is our land, we need to preserve it for our children. We need to be careful about the environment. We have the Sierra Club now and all kinds of other clubs that are concerned with the

Code	Issue	Response

Code	Comment Document

environment.

I've got news for them: We had Sierra Club long before they ever came along, because Indians didn't kill just to kill. It wasn't a sport.

The Indians up north, they hunted buffalo. And they used every bit of that buffalo for their -- for their livelihood or whatever. They used the -- They used the hides for tents, for clothing, for food. They used the whole buffalo. They didn't go out there and just destroy it.

They did the same thing with other life. Deer, they didn't go out there and kill Bambi's mother and kill Bambi, too. They were concerned with wildlife.

They called the earth "Mother Earth," because Indian way, Indian language, is expressive and they saw that the earth provided grain, berries, rabbits, buffalo, deer, for their food and for whatever they needed. The earth did that. So that's why they called it "Mother Earth."

And they lived in harmony with their environment.

When those settlors came west and they saw the buffalo and the beavers, all they saw were hides and money. And that's the difference between the Europeans and the Indians.

Our lives are different. We think different. We're Indians. And -- and we live, many of us, just like our ancestor did. And we've lost so much of -- of our way of life

Code	Issue	Response

Code	Comment Document

now.

My grandfather, when I was a little girl, our little dog, Tuffy -- I still remember his name. It was a little -- kind of, a little white dog with fluffy fur. That little dog was running in circles, yipping and yapping, and just wild. And we all stood there watching him, my brothers and sisters and I.

And my grandfather was close by, and he saw that little dog. He calmly walked over to the house and got a pitchfork standing up against the building. He took that pitchfork and he killed that little dog.

And I thought: Why are you doing this? Why are you killing our dog?

And it wasn't until I went to high school and had a science class and heard about rabies, then I knew why my grandfather killed that dog.

And that was the way the whole Indians were. They -- He didn't bat an eyelash. He saw the danger, and he moved. He didn't wait an hour, 15 minutes, or the next day. He took that pitchfork and he killed that little dog for the safety of us children.

And that's part of what I know Indian way is like. And that's why that I'm here, to say that there's still some of us that are traditional. There's still some of us that know Indian way.

Code	Issue	Response

Code	Comment Document

And I won't bat an eyelash to say, "Take your freeway and put it on the other side of the boundary."

That's what it's all about. Our Indian way is different. And -- and we're in conflict. And our children are not learning Indian way.

But there's some of us here that still -- we're still traditional. We still know our ways.

And I'll tell you another story about my grandfather. My father was in the United States Army. And he came home. He was in Hawaii, and he came home. And I guess my grandfather got his check and cashed it. And my dad found out about it. I was a little girl. I was standing right there, listening to all of this.

And my dad said to my grandfather, (Ms. Chase speaks a brief phrase in Pima), "I'm going to put you in jail."

And my grandfather looked at him and said, (Ms. Chase speaks a brief phrase in Pima), "Go ahead and do it."

But he said, "These children" -- he said all of this in Pima -- "these children are your children. It's your responsibility to take care of these children. But you haven't been doing it. I've been doing it. I've been taking care of your children. And, yes, I took that check and I cashed it, for your children, to buy them food, to buy them clothes, to buy them what they need. I did it. Go ahead. Put me in

Code	Issue	Response

Code	Comment Document

jail."

My dad, because he was an Indian, raised Indian way, put his head down, turned around, and walked away.

Yeah, American way, my grandfather could have gone to prison for forgery. But Indian way, he won. And my dad walked away and didn't do that.

So that's the way Indian way is. That's what I know about Indian way. It's different from the American way. And that's what I'm here, to remind these people that want to do this: No, don't do it. Do like my grandfather did. He killed that little dog for the safety of his children. Think about your children. Don't give away this land because what are your children going to have? Nothing.

I have -- I have interest in my grandfather's land now because he didn't give it away. He was poor. He didn't have money. They were poverty-stricken. But he didn't sell his land because in those days, those old people said, "Don't sell your land. If you do, you're going to be walking down the road with a bag of clothes. You're going to have nowhere to live. You're going to have nothing. You save this land."

That's what we were told. That's how we were raised. But some of our people don't know this.

This Joey Perez, he's not Indian way. All he's -- He's American way: Greed. Give me that money. Give me that money. That's the way -- That's the way it is.

Code	Issue	Response

Code	Comment Document

6

And I'm here to say, I don't want the freeway on -- on Indian land. I like our buzzards. I like our jackrabbits.

An elderly man at an elderly-concerns meeting said, "I saw -- I saw two eagles up there on South Mountain. What's going to happen to them once that freeway goes in?"

Because Indians live with their environment. They care about the roadrunners, the quail. They learn from it.

I used to go to the old-time Farmers Association meetings and hear the stories that they told. And the stories were about the animals, and they lived with the animals. They didn't -- They only took what they needed. They didn't just kill them. They didn't destroy them.

That's why I'm saying that they were here long before Sierra Club came along, and all of these other wildlife programs and projects.

We lived that life, and I don't want to see it destroyed. I want to save it for -- for our people and for our children.

And, as it is, we have all kinds of pollution now. We get asthma. My little great-grandson has asthma. I get asthma because of our environment and the -- and the pollution of the -- of the air.

But people don't think of that.

We're dying from diabetes. 80 percent of our population on Gila River have diabetes. In 1909 they only had

Driver and Nix Court Reporters - (602) 266-6525

6	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document

one case of diabetes. Today, 80 percent of our population has diabetes.

Diabetes causes strokes, heart attacks, kidney failures, all kinds of failures in the bodies. Our legs are amputated. Our arms are amputated. And then we die.

And now they say that Alzheimer's is connected with diabetes.

So we're dying. We're becoming an extinct nation. And that's bad enough, that we -- Now they want to put a freeway through here and further pollute our air? No.

The people need -- Our people need to think about all these things and to think of what they're doing and not just be trying to grab that money because where is that money going to go, anyway? It's not going to go anywhere. You're not going to take it with you.

And you're just depriving -- These people are just depriving their children of land, of a place to live. So that -- that -- those are -- That was what I wanted to try to bring out, and these points to bring out to the people. And -- and to try, both sides.

And those -- Those contractors need to be ashamed of themselves because all they want is 30,000 jobs. They don't care about the people here.

And when those jobs and that freeway is completed and those 30,000 people are out of jobs, what are they going to

Code	Issue	Response

Code	Comment Document

do next?

It's just a temporary -- a temporary cure for their insatiable desire for TVs and, you know, those phones, all kinds of phones, and all kinds of computers and all kinds of stuff like that. It's never going to end, their desire for them, because that's the way that these Europeans are. They did it in Europe, fought over land over in Europe. From bible days, they fought over land.

But the Natives here in this country, we're different. We don't -- We didn't fight over land. We had our areas where we lived, but we didn't fight over land because they believed that land was to live on. It wasn't meant for personal ownership.

And this is one of the differences between the Indians and the Europeans. They want their name on a tract of land. And, when the West started being settled, the Government gave -- I didn't write that down, the statistics on that -- but gave a lot of land in the West, reserved for the Indians.

Then they passed -- I believe it was the Dawes Act. They passed that Act. And what that Act did was they took the land that they reserved for the Indians and sold it to the settlors for 50 cents an acre.

And so this Government has been -- they've -- Their intention, from the very beginning, was to kill all of the Natives off, get their land and their buffalo and everything

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response

Code	Comment Document

else they could get. And that's been -- That's been the intent, all this time.

And they're -- And they're still doing it. They already got all our reservation land. I mean, not our reservation land but the -- what do you call it, the -- the Native lands where the Natives lived. They already took that. That's where we got the 25 cents an acre. They already got it. But they're not satisfied with that.

Now they're coming on the reservation and wanting our reservation land.

I fought more developers coming -- wanting to come on our reservation and take our land, because they've developed all of Chandler. They're up to our border now. Now our reservation land is looking pretty good to them because contractors, their mindset is: If they see a piece of land that doesn't have asphalt on it, they're going to put asphalt on it. They're going to put buildings on it. That's the nature of the beast.

But that's not our way. We like our jackrabbits. I live on a tribal home-site lot that's about an acre big. I have rabbits. I have cardinals, doves, quail, all kinds of birds, and owls that come to -- come to my lot because I provide water for them. And birds love water; I've found that out.

And they come to -- Even dogs, stray dogs, come to

Code	Issue	Response

Code	Comment Document

my house looking for water. And -- and I have trees. And they want the safety of my -- of my lot.

And I just found out we even have rattlesnakes. We had found a little tiny rattlesnake on the porch. So even rattlesnakes are coming to my house.

But -- but Indian way, these are all -- This is part of my heritage, to live in conformity with nature. They didn't -- They didn't kill animals just to kill them.

We had a -- We had a Gila monster one time by our house, and my dad took that Gila monster and took it out in the desert. He didn't kill it. And so but that's an example of -- of how Indian -- Indian way is, how Indian people thought and how they lived.

And it's so sad for me to see that we're losing it. For what? For money? For the greed of money?

And in the old days people didn't have money. They didn't care about money. They put holes in nickels and made necklaces out of them or put them on their shirts. You know, that's what money meant to them. It was just a decoration.

And they were happy. I remember, as a little girl, that we would go to Sacaton. And the church would take their tamales and sell tamales. And they had -- They had baseball teams playing against each other. They had rodeo. And people were happy. People laughed and visited, and they were happy.

But it wasn't money that made them happy. It

Code	Issue	Response

Code	Comment Document

was -- It was being social, getting together, relatives. We're all related. And it was people getting together. And they laughed and had fun.

I remember, as a little girl, that the girls used to hold hands, and they would walk around the rodeo arena in one direction. And the boys would walk around the arena in the opposite direction. And then, when they'd come together, they'd all giggle and laugh. The girls would giggle and laugh. And -- and you used to be able to -- Girls would hold hands, and nobody thought of them as being homosexuals. Now you don't dare walk down the street holding a girl's hand.

But so those are the -- Those are the differences.

And being 75 years old, I've lived in that generation. I know what it's like to be a Pima, what it's like to be an Indian, and what it's like to live in the -- in the Indian society, where that -- where that families, they live together and work together and help each other. If somebody needed a house, they all got together and built a house for them. Somebody needed their grain to be -- to be harvested; they all came and harvested the grain. They -- They lived together. That's the way Indian life was.

Today, it's different because Americans don't live like that. They put their grandparents in the nursing home somewhere so they won't be bothered by them. Now we're doing that.

Code	Issue	Response

Code	Comment Document

So we're changing, and I don't think it's for the good.

And all we've got -- If all we've got now is -- is to fight for this freeway not to go through here, then we've got to do.

And I'll just say, to that Pangaea, Joey Perez, and all those people that are -- that are trying to put this freeway in, that there's still some of us here, some of us traditionals, that we're still here. And we're still Indians. We're still Pimas.

And -- and those people that were at that Phoenix meeting, they're a block that were opposed to the 202 Freeway. They're a block. And, if Joey Perez and his cohorts want to put that freeway in, they're going to have to go through that block.

And we're still Pimas, like the old Pimas. We're a formidable bunch. And you better look out because we're not -- we don't want it.

And -- and, as they said in the Marine Corps -- My husband was in the Marine Corps. And there was a saying. It goes: You feel froggy? Jump.

Joey Perez feels froggy? Jump.

So that -- Yeah, he's going to have to reckon with some of us traditionals.

And that's all I've got to say.

Pangaea got another petition. And so they brought it to the Council. And the enrollment or the secretary's office, they looked at these signatures, and they weren't right. And so I guess some of them were forged. They didn't really say.

But so they had a -- So the Council had a meeting on that. And Myron Scherers (phonetic) made a motion to clean up the petition, go through all the signatures and make sure they were all valid signatures. And the Council passed that motion.

But Annette Stewart, a councilwoman from District 5, didn't vote for it. And she gave her reason why. She said: They should just redo the whole petition, not just clean it up.

And -- and I'm in agreement with her on that, on account of the petition is one document. It isn't just this page and that page and all of the pages put together. It's all of the pages put together making one document. And, if any part of that document is fraudulent, then the whole document is fraudulent.

They need to retake that petition and redo it.

And I'll go one step further, to say that the people that carried those petitions and got those fraudulent signatures shouldn't be allowed to carry another petition. And in my anger I'll even say that those people should be excluded

Code	Issue	Response

Code	Comment Document

from the reservation. We have people that are excluded. What that means is that, when people are so bad, they're -- they're run off the reservation.

And that's what they should do to these people because they're confidence people. And I don't know if they're men or woman or who. But they take -- They get the confidence of the people.

These people that signed the petition are believing that everything is upright; everything is honest. And it isn't. And so they signed the petition, believing that everything is right when it isn't. And these people getting the petitions, signatures, they're -- They're confidence people.

And that -- What can be worse than to betray Indian way again is to betray people that have trusted you to do what's right. There's just no -- There's just no excuse for it.

There isn't even -- We don't even have a law, I think, about that because it's not our way. We don't have people that -- confidence men that come in here and gain the confidence of the people for their benefit and then turn around and stab them in the back. That's not Pima way. So we don't even have any laws that would cover that.

The only thing we have is exclusion. If -- if a family or a person is so bad, then exclude them from the

Code	Issue	Response

Code	Comment Document

reservation. Throw them off.

So and I think -- I would have a tendency to believe that, if we were living back in the seventeen, eighteen hundreds, they would do exactly that. I think that, if they found somebody that was so bad, and so immoral, so corrupt, I think they'd -- they'd tell them, "Leave the reservation. Get out of here."

I think that's what they -- that that would be the remedy that they would have for that. So I would -- being -- Being somebody from the old ways, that's -- that would be my opinion on that.

But, at least, what they should do is not allow these people who carry these petitions and got fraudulent signatures to go do it again. You -- When somebody robs your house, you don't open the door and say, "Come on in, do it again. You didn't -- You forgot my refrigerator."

So but okay. I guess that will be all.

Subject: Build the South Mountain Freeway

I live in Laveen and traffic coming and going from here gets worse everyday. 51st Ave is downright hazardous with big trucks and casino traffic and people using Riggs to skip the city. It's madness and neither road is built to sustain much more traffic. During rush hour it's crazy, particularly on 51st and lower buckeye near the amazon building. There's a huge need for the 202, it's been on the plans for 30 years, not having it is delaying development in Laveen and the only hold up is a handful of awhatukee residents who don't want to be close to the reservation that they bought homes right next to. I have lived in Laveen my entire life as well and I'm very nervous about the change it will bring. Progress and change however is undeniable and while I have concerns I recognize that this freeway is a necessity for the improvement of all of Phoenix for safer more convinient road ways. So lets just build it already! Please and thank you.

1	**Neighborhoods/ Communities**	The Laveen Village area is anticipated to have a built-out population of over 105,000 (see Final Environmental Impact Statement page 4-14). This proposed level of development places increasing demand on the road network. The City of Phoenix's General Plan for Laveen Village has designated areas along the proposed freeway for commercial development that cannot support the projected densities without implementation of the proposed freeway. Without the proposed freeway, the conversion of land from undeveloped and agricultural uses to residential, commercial, and industrial land uses would likely continue, placing a greater demand on surface streets (see Final Environmental Impact Statement page 4-14).

Subject: Build the 202

Hello,

I received an email from the "Build the 202 Group" that is requesting my support for this project. I DO NOT support it.

I live on 51st. Avenue in Laveen and have lived here most of my life. I am 70 years old and in fact helped my parents build the house (we finished it in 1957), which is now mine.

I repeat, I DO NOT support building the 202 though Laveen and specifically along 51st Avenue.

1 I do NOT understand why the route is NOT along the Pima Indian reservation line (the Laveen side) to about 83rd. Avenue and then North to join the I-10.

The route SHOULD NOT be through ANY residential areas.

2 IF the 202 MUST be built then it WOULD be much less expensive to purchase farm land rather than residential property.

The idea makes me think there are some individuals and maybe corporations that are SOLELY thinking of financial profit without any regard to homes and displacing families.

SO, PLEASE STOP this plan and reroute the proposed 202 alignment, like I already said, along the reservation line and then turn it North along 83rd Avenue to the I-10, THROUGH farm land ONLY!

I am NOT able to attend any meetings to discuss this project so I am relying on the Arizona DOT to hear my concerns and act accordingly and positively on my wishes.

Sincerely,

Walter Cheatham
PO Box 4
Laveen AZ 85339

My house is located at 8402 S. 51st Avenue in Laveen but there is NO mail delivery at my house.

1	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The alignment proposed in the comment is similar to the W71 Alternative. The W71 Alternative would affect over 800 single-family residences. The Preferred Alternative, W59 Alternative, is located almost entirely along farmland in Laveen Village and would affect only 46 single-family residences (see page 4-46 of the Final Environmental Impact Statement). It is not possible to route the proposed freeway entirely through farmland.
2	**Acquisitions and Relocations**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

1	Raj Christian Document Created: 5/21/2013 1:16:36 PM by Web Comment Form The proposed South Mountain Freeway will have huge impact on valley's transpotation system and environmental characteristics. It will provide a much needed alternative route to bypass Phoenix downtown reducing traffic congestion and drastically improving air quality. Traffic safety will be enhanced and crashes will be reduced by constructing this freeway. Semi-trucks and larger commercial vehicles will have an easier bypass route. It will allow I-10 commuters easier commuting especially during rush hours on Phoenix freeways including I-10 and I-17 truck route. The freeway construction is already funded through voter-approved transportation funds in the MAG regional transportation plan. The project will tremendously help state's economy by providing jobs and business opportunities to hundreds and thousands of construction workers, contractors, small businesses, manufacturers, suppliers and professionals.

Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 12:15:00 PM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. (3) ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(4) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more (5) vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(6) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, (7) movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(8) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center. Encourage condensing & reducing our population, rather than continuing expansion.

(1) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Ms. Karen Christian

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

2 The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

3 While having a light-rail line is helpful, it only scratches the surface and needs to be greatly expanded to connect to all major areas of the city north, south, east, and west to encourage people to use it, taking many more cars off the road and helping people exercise by walking. Light-rail can work extremely well as in seen in other major cities in the U.S. and around the world, and having an improved, more extensive bus system would certainly help, as well, for many areas in the farther reaches of Metro Phoenix are still poorly served by public transport. That is the key: sustainable public transport must be "easy" for commuters and contribute to improved air quality, not worsen it. The negative impacts of a freeway, the resulting traffic, and the pollution and environmental degradation that would impose are hazardous both for nature and human health and do not address the larger problem for a Metro area that has been expanded over years without a wise plan for public transport to accommodate the growth.

4 South Mountain Freeway would have incredibly negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

5 The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

HI:
Three things; Build it fast for it's overdue now; two, make it four lanes in each direction and finally, designate a " Trucker Lane " where 75 MPH
is ok and they can move the freight safely ! Thank You,

Chuck

The following was received on the ADOT ENVOY System:

Loop 202 South Mountain Freeway Darft EIS
5/26/2013 5:35:01 PM
It appears that the study is well done and comprehensive. I agree completely that this is the type of improvement we need. Just like the I-10 widening between Phoenix and Tucson, this project is well overdue. I think the 101 inter-connection would alleviate the most traffic on Interstate 10. I often travel between Avondale and Tucson. Being able to avoid all of the morning eastbound traffic that starts to slow at 83rd Avenue would be a great benefit in commute time and stress. If you bring it in at 59th Ave, commuters will still have to wait in traffic (from about 6:30 am until about 9 am) as they slowly make their way from the 101 to 59th Ave. Traffic gets crazy during these times. Same deal coming back into town from the south. You would be able to divert at Pecos, go west, but then be dumped into 59th Ave. At rush hour, I suspect intuitively that it would not be much better than what we have now, and the bottleneck at that interchange will be tough. That is a key item that I focus on; merging with heavy traffic. Peeling off at the 101 should be OK at most hours of commuting. I am surprised the study did not address merging at rush hour (it did address commute times, I realize.) I realize the study says that the 101 option is a bit more impactive to some aspects. It is still the better alternative in my mind as most of the area is open or agricultural, at least once you get past the Tolleson area or below Buckeye Rd. 59th is mostly industrial with some residential. I guess there is not a tremendous difference as some entities will be displaced. With the growth levels on the west side, this freeway is essential. If 59th Ave. vs. 101 is a deal breaker, I say go with 59th as the best alternative. I still prefer any of the 101 alignments. I think the freeway should proceed on schedule. Thanks for the chance to comment.

1 I am writing this e-mail in opposition to the proposed Loop 202 South Mountain Freeway. When is enough growth enough? When are we going to say the metro Phoenix area, Maricopa county, and yes, the state of Arizona has reached the point of of population saturation. Growth does not equal improved quality of life. Let's not pave over our heritage.

THE FACILITATOR: Thank you.

MR. ROWLEY: Good afternoon, it's good to be here with you today. My name is Cade Rowley, I've been here in the Valley for almost 15 years, and I want to show my support for the 202 freeway. This things's been studied for almost 20 years, I think that I've reviewed the draft EIS, I think the team has done a very thorough job of looking at all the issues, weighing in on the environmental consideration as a need to be taken and, you know, the freeway here's going to provide a lot of great things for the community. It's going to reduce air pollution; as you probably heard today, congestion is at a premium in this part of the Valley, it's very difficult to get from the west side of the Valley to the east side where I live and, you know, it's going to make a big impact on that.

In addition to that, we really need the jobs here in Arizona, so it has the potential to create 30,000 jobs. Our economy is struggling, now is the time to build the 202, and I want to issue my support for the build option of the 202. Thank you.

THE FACILITATOR: Thank you.

Don Clark.

MR. CLARK: Thank you. I want to just voice my appreciation for the study that has been done and voice

my support for the 202 freeway. I happen to live in Ahwatukee just off of Chandler Boulevard and I know that there's been a lot of conversations in Ahwatukee about the impact to that part of Phoenix. I think it would actually be a boon to that portion of town for several reasons. If you travel from Ahwatukee up I-10 to get to I-17 going north to Prescott, you've experienced a lot of traffic delays on I-10, particularly through the Broadway curve. I think this freeway extension will help to relieve that traffic by bringing traffic off of I-10 that comes up from Tucson and has to get to the middle of Phoenix. This way you'll have a bypass that will actually put that traffic out to the west side of town and relieve the congestion and the delays that people from Ahwatukee experience getting to the airport and in the central business district of Phoenix.

So, again, I want to support my support -- or voice my support for this freeway project. I know that a lot of the information that you see here in the draft EIS shows the real benefits of that and in particular, further, I want to voice the support and in the area of relieving traffic from my area of town. Thank you.

THE FACILITATOR: Thank you.

Randy Frank.

MR. FRANK: I'm Randy Frank, I'm representing

MS. CLARK: I'm horribly frustrated with the fact that this freeway has been delayed again. When I bought my house in 2004, I was told the freeway was coming through, that a town center was going to be built over at 59th and Elliot, the infrastructure would be coming out here. And here we are almost ten years later and nothing has happened in this community.

The closest freeway access is at least 9 miles away. There's no shopping -- limited shopping. We don't have any -- we have a Wal-Mart. If you want to buy clothes, you go to Wal-Mart.

It's very frustrating to live in this community. Our home values have not really increased because nobody wants to live here. No businesses want to come out here because of the lack of access on the freeways. And now they're saying it's going to be 2015 before they start, and I would be surprised if it happened in 2015.

So, like I said, I'm extremely frustrated with the fact that when I bought my house in 2004, I was under the impression that the freeway was going to be coming through and that this community would be a viable community instead of what it is today, which is not very good.

I was going to add on the shopping. The nearest

malls are about 12 miles away in both directions. It's at least 20 minutes of a drive one way to go shopping. There's limited restaurants and services, like just getting a good haircut, because businesses have not seen this as a place to come and develop their business.

And a large part of that, I think, points to there's no highway, so there's no perception, of, you know, ease of access. We consistently see restaurants open and they're busy -- or they're packed because they're a new choice in the neighborhood.

MR. CLARK: I think we have three restaurants down here.

MS. CLARK: And a bunch of fast-food restaurants. It's frustrating.

I was going to say something else.

MR. CLARK: Well, how the highway would benefit -- have you talked about the flooding?

MS. CLARK: Yeah, that's another point. Right now, there's only three roads that go across the river: 51st Avenue, 67th Avenue and 99th Avenue.

MR. CLARK: Well, 51st Avenue is going west.

MS. CLARK: Right. If we have major rain and flooding -- 67th Avenue and 99th Avenue flood. It takes several months for those roads to open up again, so all of the people that live south of the river have to come to

(Comment codes begin on next page)

Code	Comment Document

51st Avenue south -- or west of the river -- have to come to 51st Avenue to access Phoenix. So we have a lot of traffic on 51st Avenue.

But, yeah, the benefits of getting that freeway in here is -- this community would be so much more vibrant. There's so many people that live out here, but there's just no infrastructure.

That's it.

THE COURT REPORTER: Did you want to leave your names?

MS. CLARK: Oh, Nancy Clark.

THE COURT REPORTER: C-l-a-r-k?

MS. CLARK: Yes.

MR. CLARK: And Michael Clark.

THE COURT REPORTER: Thank you.

MS. CLARK: I just wish they would get it done already. I might be selling my house. Seriously, I think I've had it with waiting and hoping things are going to change and get better. I think I'm at the point where my house is going on the market and, unfortunately, for not as much money as I would have hoped for because nobody wants to live out here -- I shouldn't say "nobody," but it sure is limited. It's like living in the boonies.

Thank you.

THE COURT REPORTER: You're welcome.

Shonna Clifford Document Created: 7/23/2013 10:35:06 PM by Web Comment Form

I can only think of negative consequences to the Loop 202 South Mountain freeway being built on its current alignment, including, but not limited to, the following:

1 Decreased property values, my home is within 0.2 mile proximity

2 3 4 Increased noise and air pollution, especially since this will turn into a truck bypass

5 Increased crime rates

6 Increased exposure to toxic chemicals and airborne particulates, increasing disease

7 Increase in surface street traffic since there are fewer outlets

8 If a bypass route is needed, it should be further south

9 Cost is prohibitive

Code	Issue	Response
1	**Property Values**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
2	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Air Quality**	
4	**Purpose and Need, Truck Bypass**	
5	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
6	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
8	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
9	**Costs**	The project is completely funded through federal sources and a local ½-cent sales tax, as programmed in the Arizona Department of Transportation 5-year Transportation Facilities Construction Program and the Maricopa Association of Governments *Regional Transportation Plan*.

Please, please, please stop the project to build the South Mountain freeway. As an avid South Mountain hiker it would be devastating to have a highway ruin this amazing park and destroy wildlife. I am incredibly concerned about the noise and air pollution impact on Ahwatukee.

Re: Environmental Impact Statement ("EIS")
Loop 202/South Mountain Freeway

Date: June 14, 2010

The purpose of this letter is to inform you that I am a property owner in the Laveen area of Phoenix. The property I own is located at 59th Avenue and Baseline Road.

1

I am supportive of the Loop 202/South Mountain freeway, with the alignment through Laveen known generally as the 59th Avenue Alignment.

I have many reasons for my support of the Loop 202 Freeway:

- **Access to the Region.** The Laveen area needs improved access to the Metro Phoenix Region. Currently, despite the recent growth in Laveen, there is no Freeway to provide access to the employment, service and entertainment centers in Downtown Phoenix, Sky Harbor Airport, the Loop 101 Corridor (West Valley), and/or the Loop 202 Corridor in the Southeast Valley. The Loop 202/South Mountain Freeway will connect the Laveen area to the Metro Phoenix Region.

- **Congestion/Bottleneck in Downtown Phoenix.** The I-10 Freeway has become a major bottleneck at many locations: in Downtown Phoenix (at the Deck Park Tunnel), on the I-10 West out to the 101 Stack, and certainly at the Broadway Curve and Superstition Freeway Interchange. The Loop 202/South Mountain Freeway will help relieve these major bottlenecks and also support future growth.

- **Long-Range Planning.** The Loop 202/South Mountain Freeway has been on all of the transportation plans from ADOT, MAG and the City of Phoenix dating back to the 1980s (or even earlier). The Loop 202 Freeway has been approved by the voters of Maricopa County on at least two separate occasions. Many long-range planning decisions have been put in place over the years based on the ultimate construction of the Loop 202 Freeway, including zoning and other land-use decisions by the City of Phoenix and property owners to provide commercial, industrial, multifamily and other appropriate land uses directly adjacent to the Loop 202 Freeway. The Loop 202 Freeway supports this approach to long-range planning.

- **Infrastructure/Investment.** The City of Phoenix and the private property owners have continued to work to bring the needed infrastructure to the Laveen area to support and add to the $2 Billion investment in the Loop 202 Freeway. This is a model for

Code	Issue	Response
1		Comment noted.

Code	Comment Document

public/public/private partnership—again, at all levels of government and with the strong support of private property owners. The Loop 202/South Mountain Freeway will be a major stimulus to significant local government investment and private development investment.

- **Jobs.** The Loop 202/South Mountain Freeway is a fully funded $2 Billion Freeway Infrastructure project that will bring an estimated 30,000 jobs to our region. These are much-needed jobs for our community and our families.

- **Laveen Community/Services.** The Loop 202/South Mountain Freeway will allow the Laveen area to obtain the development and services that are needed to support this growing community, including retail services, healthcare services, additional educational opportunities, and certainly enhanced municipal and other government al services. The Loop 202 Freeway will bring these vital services to Laveen.

- **Air Quality.** The Loop 202/South Mountain Freeway would reduce congestion on I-10, the Broadway Curve and the Deck Park Tunnel, and keep traffic moving. This will actually improve air quality in this region. The EIS has concluded that the No-Build Alternative would not meet the State of Arizona's air quality implementation plan.

Please contact me directly at 602-264-4411 or e-mail at rcochran@kitchell.com if you have any questions regarding my property or my support for the Loop 202/South Mountain Freeway.

Thank you.

Subject: A Vision for a better future

I believe the community of Ahwatukee is better served without this proposed freeway. Thirty years ago there was nothing this side of South Mountain except big farms and ranches. What will it be like thirty years out?

1 2 3 Will Ahwatukee be encircled by eight lanes of freeway with the attendant billboards and quick stop exits featuring Subways, Dairy Queens, Chevrons and Love's truckstops? How many years will it be before the proposed South Mountain freeway suffers gridlock at rush hour? Will future generations really benefit from more vehicles idling on more miles of freeway?

4 I believe the transportation money should be invested in expanding our current light rail system, providing a network of speedy trains that whisk commuters and families around the mountain into downtown, the U-district and to entertainment and sporting venues around the Valley. This is the future of metropolitan areas.

Instead of freeway construction, the community of Ahwatukee should invest in retail spaces with shade and character so locals decide to stay here instead of driving to Scottsdale for dinner. We should encourage local small businesses as the community would grow richer and more integrated.

5 6 Slicing into South Mountain and upending sacred Native spaces is extremely shortsighted. Imagine if thirty years from now, our legacy was a decision by all involved to maximize the benefits of proximity to South Mountain Park. School kids would have the opportunity to learn about the habitat of the Sonoran Desert, our abundance of wildlife, the ancient geology of South Mountain and the Native American history on the land. Enhanced trailheads should better serve this scenic area's many hikers. These are investments in our future. I just don't see the benefits of a freeway to this community.

7 We've learned alot since the time the Valley's transportation plan was made, and every freeway we build is soon clogged and needing to be expanded. Where

Code	Issue	Response
1	**Visual Resources**	The State of Arizona (through the Arizona Department of Transportation) administers an Outdoor Advertising Program as mandated by the Federal Highway Beautification Act. Arizona's program provides regulations for the permitting, placement, and maintenance of outdoor advertising signs along Interstate highways as well as State highways within Arizona. The State statutes (Arizona Revised Statutes §§ 28-7901 through 28-7915) and the State rules (R17-3-701 and R17-3-701.01) provide that the Arizona Department of Transportation must regulate any sign that is within view of, directed at, and intended to be read from the main traveled way of a controlled highway. (A controlled highway is any highway that is part of the National Highway System along with specific State routes. The South Mountain Freeway would be both a State route and part of the National Highway System.) While the Arizona Court of Appeals did decide in November 2011 that electronic billboards violate the 1970 Arizona Highway Beautification Act, a new law was passed by the State Legislature that banned such billboards in much of the state but allowed them in most of Maricopa County and parts of Pinal, Yuma, and La Paz counties. Weeks later, the Phoenix City Council created a zoning ordinance to regulate such billboards on city streets and highways. Chapter 7, Section 705, of the Zoning Ordinance of the City of Phoenix does not permit billboards to occupy public property or to extend across a property line where such property line borders a public highway. Electronic messages are permitted only on land zoned as commercial or industrial or zoned as a nonresidential use in Residential Districts. Under current zoning, this eliminates most, if not all, of the land along the E1 Alternative. Such signs might be permissible along portions of the W59 Alternative. Such signs may not be illuminated between 11 p.m. and sunrise "when (1) located within one hundred fifty (150) feet of Single Family Residential zoned property and (2) visible from such development or property." Erection and operation of any billboards on Gila River Indian Community land would be subject to regulation by the Gila River Indian Community.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.

Subject: Proposed freeway through the west end of South MTn

ADOT,

1 2 3

I am voicing my opposition to the proposal of the freeway to the SE of South Mountain. It will disturb the pristine quiet beauty of this wonderful park that is so unique. It will not only be an eye sore but also will bring more noise to the area disturbing the wild life. I have lived in this valley for 30 years and South Mountain was the first park I have visited. I have hike all sections of this precious park and would be devastated if some sections were ruined.

4

I understand the need for better commuting routes but surely the government could spend a little more money to divert the freeway further west We need future generations to enjoy what many of us are enjoying today. Please realize that such a change to our park will be regretted by so many of residents for generations to come. Let's keep our park as it is to be enjoyed by future generations. It will recognized as a important step by people all over this country as well. Thanks,

A concerned citizen.

Maya Coffey

1	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-161 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
3	**Biology, Plants, and Wildlife**	Limited research has been conducted on the relationships of highways, traffic volume, noise, and impacts on wildlife. Some studies have alluded to noise as being harmful to wildlife populations, but most information to date has documented impacts on songbirds (Reijnen et al. 1995a, 1996) where densities next to highways were lower for 60 percent of the species, and species richness was a third lower. The "noise effect zone" adjacent to highways varied greatly by vegetative type (Reijnen et al. 1995b) as well as traffic volume (Reijnen et al. 1995a). These factors then relate to the noise impact distance on wildlife, extending 0.25 mile (1,320 feet) with 8,000 to 15,000 vehicles per day, 0.40 mile (2,112 feet) with 15,000 to 30,000 vehicles per day, and 0.75 mile (3,960 feet) with greater than 30,000 vehicles per day (Forman and Deblinger 2000; Forman et al. 1997). As such, with the projected high use of the corridor, noise impacts from traffic are anticipated to have a considerable effect on all species of wildlife, ranging from song birds to eagles to large mammals including mule deer, and may limit their use of adjacent habitats.
4	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Hi ADOT,

1 2 3 4

I am against building this freeway through my community. I like the small town atmosphere. I don't want noise, truckers disrupting this community. I don't feel you are listening to the community that you are effecting. It seems you are going to build this ancient, non-useful freeway through a mountain that we just don't need. This community will end up a commercial park and you will drive out residents. Please listen and don't build.

Sincerely,

Dan Coffey

Document Created: 7/24/2013 12:37:55 PM by Web Comment Form

My name is Tamara Coffman and I live at 1308 W Deer Creek Road, Phoenix AZ. I am in opposition to the proposed South Mountain Freeway. I purchased my home in Ahwatukee July 2011, moving from NJ to AZ. At no time did the Real Estate agent or the Home Owner's Association disclose that a major freeway was under consideration with the potential to be built so close to my house. In talking with various neighbors, they have said they were all made aware when they made the original purchase for their house 14 years prior. They have also said that they were made aware that their homes were right in the line of the proposed freeway. I attended the ADOT session on May 21 and was told alignment with my home was still under consideration. (1)

I am a member of PARC and I oppose the freeway for the following reasons:

•The current proposed alignment through Ahwatukee will create a thoroughfare for the CANAMEX truck bypass. This will bring unregulated diesel trucks from Mexico into Phoenix and trucks will use it as a bypass for downtown Phoenix. I am greatly concerned about the amount of pollution they will put into the air. I am even more concerned about the amount of hazardous materials that they are carrying. There is no way out of Ahwatukee if there is an accident. This is too dangerous. (2) (3) (4) (5)

•Blasting through 3 ridges of South Mountain is an unnecessary and irresponsible action that would permanently disfigure South Mountain, destroying the integrity of the park, the mountain, and its ecosystem. Currently, there is little pollution in our area. Once the freeway goes through, the desert life will be destroyed. I don't believe the result of the EPA study either. I think it is outdated and doesn't take into consideration the amount of schools and people living so close to the freeway. What is Phoenix going to do when they lose freeway funding because the pollution levels exceed what is acceptable. The report also recorded acceptable levels of noise proposed by an 8-lane freeway. All you need is one night listening to the coyotes howl or owls calling and you realize how the sound travels in this area. The noise will be amplified. There is no proper plan to preserve the wells and water retention ponds in the area. There are no plans for bike paths. Basically this freeways blasts 8-lanes through a beautiful community just so people can get to work 10 minutes faster. (6) (7) (8) (2) (3) (9) (10) (11)

•I also believe that this is a significant waste of taxpayers' dollars to build this freeway. I travel frequently for work and am in a different city every week. Every city has issues with morning and evening rush hour traffic. The problem isn't the roads the problem is the ability to offer options outside of cars. Building transit hubs along the freeway, along with high speed rail would be money better spent. This would then need to be continued downtown so folks can easily walk to their office buildings. To make this freeway worthwhile, people would need to backtrack and go away from downtown as far up as the Broadway Curve. That will add close to 10 miles to each person's commute – 20 miles daily – 100 miles weekly – 400 miles monthly – 5,000 miles annually. It's not so much the gas bill that would be the problem ($570/est at $3.65) but the wear and tear on a car. Phoenicians won't use this freeway. That (12) (13)

Code	Issue	Response
1	**Neighborhood**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
2	**Trucks**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Air Quality**	
4	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Hazardous Materials**	
6	**Section 4(f) and Section 6(f)**	
7	**Visual Resources**	Draft Environmental Impact Statement pages 4-157 and 4-158 state that construction of the proposed road cuts at the western end of the South Mountains would cause "severe visual impacts" and that these cuts "would be visually inconsistent with the natural setting of the surrounding area." These impacts would, however, be in a remote, seldom-used area of the Phoenix South Mountain Park/Preserve and not near any major trails. General mitigation measures to minimize these visual impacts are described on page 4-158. These measures would include the incorporation of newly exposed rock faces characteristic of the adjacent natural rock features. Contractors would respond to the faces' scale, shape, slope, and fracturing to the extent that could be practicable and feasible as identified through geotechnical testing and constructibility reviews. The Arizona Department of Transportation would require the contractor to round and blend new slopes to mimic the existing contours to highlight natural formations. The Arizona Department of Transportation would evaluate having the contractor adjust and warp slopes at intersections of cuts and natural grades to flow into each other or transition with the natural ground surfaces without noticeable breaks. A local example of such treatment would be the cuts associated with Dreamy Draw on State Route 51 in northern Phoenix.
8	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Noise**	

(Responses continue on next page)

Code	Comment Document
14	means the freeway won't be utilized as it was intended and it will be a $1B road to nowhere. The largest farce in the nation.
15	•Market value was mentioned in the report as remaining stable. There is already proof that this is an inaccurate statement. Goldman Ranch had homes purchased by ADOT when some homeowners claimed financial hardship. That option was not presented to all homeowners and those homes now make it difficult for other owners to sell at a reasonable price.
16	Business at 32nd street are unable to make decisions because there is no planned exits that lead to their business. You can see at the corner of Chandler/Desert Parkway the number of vacant tenants in the business malls that dot that intersection. There is no reason these shouldn't be booming with replacement business to support our area. The only reason is everyone is afraid of the potential impact of the freeway. If there are not appropriate exists, if this decision goes on forever….no one can move forward with decisions.
17	•ADOT, the City of Phoenix and everyone involved in this process owe the residents of Ahwatukee a no build option. Stop planning, stop wasting tax payer dollars, stop development of this road to nowhere. Put engineers minds, hearts and souls into a wide scale public transit system that is the first of its kind, that is the envy of the nation. We don't want to be known for the city that blasted into a nationally revered park, destroyed a beautiful community, let our children breathe polluted air, spent $1B on a road to nowhere and lost all freeway funding.

Code	Issue	Response
10	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to State regulations/standards. (See text box on Draft Environmental Impact Statement page 4-108.) The Arizona Department of Water Resources would undertake measures to improve surface water quality and maintain retention, detention, and stormwater facilities during construction through erosion and sediment control plans and through the municipal separate storm sewer systems program. Municipalities operating municipal separate storm sewer systems within local urbanized areas designated by the Arizona Department of Environmental Quality or U.S. Environmental Protection Agency are required to obtain individual discharge permits. This municipal separate storm sewer systems program includes monitoring activities and protection of facilities associated with the municipal separate storm sewer system operated by the Arizona Department of Transportation through its Stormwater Management Program. The program includes best management practices and monitoring outfalls. See Draft Environmental Impact Statement pages 4-95 and 4-96. If an action alternative were to become the Selected Alternative, during project implementation a Stormwater Pollution Prevention Plan that would establish best management practices for sediment and erosion control would be completed. These best management practices would be in place and maintained for the duration of construction to ensure that erosion and pollution from sediment and other pollutants running downstream would be minimized. The proposed project would require water quality certification under Section 401 of the Clean Water Act (see Draft Environmental Impact Statement pages 4-110 through 4-412).
11	**Design**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Draft Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
12	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

13	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
14	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
15	**Acquisitions and Relocations**	
16	**Design**	The interchange locations for the proposed freeway are (see Figure 3-28, on Draft Environmental Impact Statement page 3-51): · Interstate 10 (Maricopa Freeway)/State Route 202L Traffic Interchange · 40th Street · 24th Street · Desert Foothills Parkway · 17th Avenue · 51st Avenue · Elliot Road · Dobbins Road · Baseline Road · Southern Avenue · Broadway Road · Lower Buckeye Road · Buckeye Road · Van Buren Street · Interstate 10 (Papago Freeway)/State Route 202L Traffic Interchange The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix (see Figure 3-8 on page 3-15 of the Draft Environmental Impact Statement). The interchange was eliminated based on undesirable residential displacements and cost. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the proposed freeway (see Appendix 3-1 in the Final Environmental Impact Statement).

Subject: South Mountain Freeway Comments

Thank you for allowing me to comment on the South Mountain Freeway Draft EIS.

I will address my first comments to specific sections of the EIS.

1. On page 3-16 Tunneling Under the South Mountain – ADOT did not consider either a double-decker tunnel or a cut & cover tunnel, both of which are being considered for the CA SR 710 project in Pasadena. So this EIS did not adequately address additional tunnel options.
2. On page 3-47 Figure 3-25 – The Profile A cross-section does not match the picture of the overall project at the bottom of the page. Profile A shows that the freeway will be above the existing grade throughout all of Profile A, and, therefore, should be red for an elevated section. However, the overall picture shows that Profile A only has 2 small sections of elevation above the existing ground.
3. Page 3-60 – All of the Traffic Analysis is FLAWED and NEEDS to be redone. The traffic analysis is ALL based on a "hypothetical" SR30 being built by 2035. However, the EIS and MAG admits there is no funding for SR30. Therefore, ALL traffic analysis should be done based on the current funding, which means without SR30 being built. One can't include in the traffic analysis a mythical freeway, unless that mythical freeway has a fully paid for and approved funding stream, which SR30 does not. According to MAG, "Construction of SR 30 has been shifted beyond FY 2026 but remains within the FY 2031 planning horizon". However, Proposition 400 funding ends in 2025, so there is NO approved funding for SR 30. So if the SR30 is never built, then the WHOLE design for the South Mountain Freeway is FLAWED and build to the WRONG traffic requirements. This is a MAJOR flaw in the EIS! This EIS SHOULD NOT be published until the traffic analysis is redone without SR30!
4. Page 3-61 Figure 3-37 I-10 – Again the Traffic Analysis is FLAWED! Your analysis shows that on I-10 between 83rd Ave and 75th Ave:
    a. The no-build option and W59 will have essentially the same traffic. So based on this analysis, NO ONE will travel on the W59 South Mountain Freeway on to the I-10 and continue on the Loop101! This is seriously flawed! Other cities with loop roads have shown that people DO travel around the city on the loop. So many people will travel on the South Mountain Freeway around the SW corner of Phoenix and continue on the I-10 to the Loop 101. It is obvious your traffic analysis neglected this group of vehicles. Figure 3-38 shows that 65k vehicles would take the L101 to W101 South Mountain Freeway, but these 65k vehicles magically disappear when the W59 route is chosen. How did these 65k vehicles magically disappear? These 65k vehicles were overlooked in your analysis and should be added to the I-10

Code	Issue	Response
1	**Design**	A cut-and-cover tunnel would not be feasible based on the geologic (hard rock) conditions of the South Mountains. A double deck tunnel would result in similar or even higher costs and impacts as the tunnels considered in the study. In the State Route 710 project in Pasadena, California, the freeway alternatives that include tunnels cost almost $4 billion more than the freeway alternative without tunnels.
2	**Design**	The vertical profile was exaggerated ten times to make it easier to identify differences in elevation. The definition of "at-grade" in these figures is within 10 feet of the existing ground, which allows for pipes and culverts to pass beneath. Sections greater than 10 feet above ground have been noted as "elevated." Figure 3-25 was revised in the Final Environmental Impact Statement (see page 3-47 in the Final Environmental Impact Statement) to display those sections of the profile that go over the multiuse crossings as elevated. Other sections were evaluated and adjusted as necessary.
3	**Traffic**	The Federal Highway Administration and the U.S. Environmental Protection Agency approved the air quality conformity determination that includes the Maricopa Association of Governments regional travel demand model that produced the traffic projections used in the traffic analysis for the project (see Draft Environmental Impact Statement page 3-27). Although the Maricopa Association of Governments half-cent sales tax will end in 2025, the region continues to receive substantial funding for freeway construction from state and federal funding sources. State Route 30 is included in Maricopa Association of Government's adopted *Regional Transportation Plan* and would be constructed prior to 2035.
4	**Traffic**	The traffic volumes in Figure 3-37 on Draft Environmental Impact Statement page 3-61 do not provide information related to origins and destinations of vehicles. The section of Interstate 10 between 83rd Avenue and 75th Avenue for the W59 Alternative would include vehicles destined to or coming from State Route 101 Loop. These same vehicles that without the W59 Alternative would use Interstate 10 to get to State Route 101 Loop would also be on this segment of Interstate 10. That is why the total values are approximately the same. Depending on the location of the connection to Interstate 10 (Papago Freeway), different motorists would choose to use the proposed freeway or another route to complete their trip. Therefore, there is not a one-to-one comparison among alternatives. While it seems that vehicles have been removed, they have decided to use an alternative route, including arterial streets or other freeways. A similar response explains the noted differences between the W71 and W101 Alternatives.

Code	Comment Document

traffic.

b. The W71 and W101 options will have essentially the same traffic. So based on this analysis, NO ONE will travel on the W71 South Mountain Freeway on the I-10 and continue on the Loop101! This is seriously flawed! Other cities with loop roads have shown that people DO travel around the city on the loop. So many people will travel on the South Mountain Freeway around the SW corner of Phoenix and continue on the I-10 to the Loop 101. It is obvious your traffic analysis neglected this group of vehicles. Figure 3-38 shows that 65k vehicles would take the L101 to W101 South Mountain Freeway, but these 65k vehicles magically disappear when the W71 route is chosen. How did these 65k vehicles magically disappear? These 65k vehicles were overlooked in your analysis and should be added to the I-10 traffic.

c. The analysis needs to be redone WITHOUT the SR30 being built.

5. Page 3-61 Figure 3-37 Chandler Blvd

(5)

a. No analysis was done on the NEW Chandler Blvd between 17th and 29th Ave. This needs to be done and presented.

b. The 3 western options will have NO impact on the traffic on Chandler Blvd, but your FLAWED analysis says the 3 western routes will impact traffic all the way over on Chandler Blvd at 48th St. In fact, your flawed traffic analysis shows the 3 western routes will impact traffic more at 48th St & Chandler Blvd than 48th St & Baseline Rd or 51st Ave & Buckeye Rd.

(6)

6. Page 3-62 Figure 3-38 – Again the traffic analysis is FLAWED. With W59, why did the traffic DROP from 155k at Van Buren to 120K at I-10? Also, this shows that your analysis estimates that 65k vehicles will take the L101 and continue on the South Mountain Freeway (just subtract W59 from W101), but this is NOT reflected in Figure3-37 in the I-10 traffic for routes W59 and W71. Where did these 65k vehicles go in W59 and W71?

Code	Issue	Response
5	**Traffic**	Figure 3-37 was revised in the Final Environmental Impact Statement to include traffic projections for the new section of Chandler Boulevard between 17th and 29th Avenues (see page 3-61 in the Final Environmental Impact Statement). There was no difference among the three action alternatives at the noted locations. However, any of the Western Section action alternatives, combined with the E1 Alternative, would reduce traffic along Chandler Boulevard.
6	**Traffic**	The traffic dropped from 155,000 vehicles at Van Buren Street to 120,000 at Interstate 10 because it is projected that 35,000 vehicles would exit or enter the South Mountain Freeway at Van Buren Street.

Charles Conn Document Created: 5/22/2013 4:57:15 PM by Web Comment Form

1 It makes absolutely no sense why W71 or W59 would be used !! Apparently none of the people making the decision have to commute from 59th Ave. to the 101 Loop on I-10 or in the opposite direction. That commute is a weekday mess with MANY car wrecks. The W101 is the ONLY one that uses common sense.

Subject: I Support the S. Mtn. Freeway

1

Hello, my name is Victor Contreras and my address is 1425 E. Baseline Rd. Phoenix, AZ 85042. Unfortunately, I can not make it to the public comment event, but wanted to express my support for the proposed South Mountain Freeway.

I'm not a resident of Laveen but I'm affected by the lack of a freeway. I am a resident of South Phoenix and live on Baseline Rd. which is the southernmost major arterial street in the city. Many of Laveen's residents have to use Baseline Rd. because it's the most accessible street in Laveen and he only east-west street that connects to the I-10 (East or West). This has created many traffic problems along the Baseline Corridor and increased drivetime for all residents south of the Salt River.

Also, because of the lack of the South Mountain Freeway, many amenities, restaurants, and important health and educational developments have not been built. This not only affects people in Laveen but also us in South Phoenix, since many of us have to travel out of our community (or neighboring community) in order to eat at nice restaurants, watch a movie with our families or go to a hospital emergency room.

The proposed freeway would help alleviate traffic, provide more amenities, and greater access to important community institutions like a hospital and community college.

One last point, as a real estate agent who also sells homes in Laveen, I have always informed my clients about the proposed freeway alignments. Some clients decided to look elsewhere, further from proposed alignments, and some decided to buy in the area knowing that they may have to move. For me it's unconscionable, for people in Laveen or Ahwatukee to feign surprise or anger that they may have to move because of the freeway alignment. Residents in all parts of town near the proposed freeway have had every opportunity and the responsibility to do their due diligence prior to buying a home in the proposed alignments.

Thank you,

Victor Contreras

--
All the best,

Victor Jett Contreras

Subject: Comments in opposition to South Mountain Freeway
Date: Wednesday, July 24, 2013 10:05:41 AM

Jul 24, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

I LOVE hiking in South Mountain. I can recall how lovely Baseline Road was when the fragrance of orange blossoms permeated the air. it has been sad to watch the area fall prey to developers who construct ticky tacky houses and follow them up with standard issue chain stores and small malls. i understand how important it is to have a viable transport plan, but imply laying down miles of tar or macadam roads is a foolish, archaic, cheap for the moment but disastrous for the future option. We need a 21st century approach that includes mass transport (avoiding buses) -preferably trains, trolleys, light rail or some other option powered by solar and alternative energies.

2

3 The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

4

5 South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

6

7 The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terribleprecedent by demolishing what should remain a protected area.

8

9 The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives, Nonfreeway Alternatives**	
3	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
4	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
5	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Code	Issue	Response
9	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Subject: Comments in opposition to South Mountain Freeway
Date: Monday, June 03, 2013 4:11:53 PM

Jun 3, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(3) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(4) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(5) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(6) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

(7) Phoenix must maintain some of our state's amazing beauty and support our need to enjoy it in this lovely preserve. Its accessibility alone merits us keeping as a haven for future generations.

Please maintain the integrity of this natural and vital place.

Sincerely,

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. 2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.

8	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Subject: 202 extension

To whom it may concern,

1 I would like to see the 202 extension run south of South Mountain.

As someone who travels down Baseline road many times a year, I know it would relieve a lot of congestion, certainly many accidents and assuredly fatalities that occur in the road.

There are many people in SW Phoenix and Laveen that would be helped greatly in their travels to I-10E and to the southeast valley if this stretch was extended.

2 This would also relieve I-10 truck traffic from L.A. to Tucson on I-10E through town and vice versa.

It would be a great extension to our valley freeways!

Thank you for your time.

Sincerely,

Mike Cooley

RECEIVED June 7/2013

JUN 10 2013

AZ Dept of Transportation
Director's Office

Personel at A.D.O.T.

I am a concerned citizen of Ahwatukee voicing my opinion against building the South Mt. Freeway on Pecos Rd. or anywhere near Ahwatukee.

1 This is an outdated plan and needs
2 to be revised as to not be such a bad impact on our health for all who call this our home.

3 This freeway - truck by pass - needs
4 to be built further east and south.

I stand with P.A.R.C. in full opposition to South Mt. Freeway.

I am a legal citizen and taxpayer of this state. I am also a purple heart veteran and I am someone who belives our goverment should serve the citizens of our country and not there own private interests, paid for by private trucking companies and others who stand to gain financialy.

If PARC stages a protest against this freeway, I will be there along with several other hundred concerned citizens.

"Please" reconsider this bad and outdated plan for this area.

Sincerly
Floyd Corbitt

To: Projects
Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 2:44:43 PM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) (3) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

I highly recommend and strongly encourage you to choose long-term transit solutions!

(4) (5) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.
As a respiratory therapist and mother of two asthmatics I have experienced this consequence of pollution!

(6) (7) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.
Thus setting in motion a domino affect across the nation. I have read of numerous other protected areas already fighting to stay protected.

(8) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center. This would increase the water shortage problem.

(1) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.

On 7/22/13 3:32 PM, Timothy Tait wrote:
I had to go back to the team to get an answer – you posed a great question. Here's what I learned:

For the Laveen trip, travel time was modeled along 51st Avenue and I-10 (Papago Freeway) for both 2010 and 2035. For the Ahwatukee trip, travel time was modeled and calculated along I-10 (Maricopa Freeway) for both 2010 and 2035. Essentially this allows an apples to apples comparison, as opposed to comparing arterial street to freeway travel times for each segment.

In the second graphic where it talks about commute times with the freeway in 2035, are those numbers based on the estimated time it would take to drive from Laveen and Ahwatukee *on the actual South Mountain Freeway*, or on the same routes as you show in the non-freeway scenario (surface streets/the I-10), which would be faster thanks to the fact that the South Mountain Freeway would be lessening traffic on those roadways?

Hi Tim,

1

Just following up with a quick question. I had asked if there was an estimate of commute times from Laveen/Ahwatukee to downtown Phoenix with the South Mountain Freeway. I still couldn't find that info over the weekend. Do you have that info? If you could get back to me as quickly as possible, that would be great, as we are shipping the issue in the next couple days.

Thanks!

Keridwen

Subject: Draft Environmental Impact Study for the South Mountain Freeway

To Whom It May Concern:

1

My husband and I have been residents for ten years in the Lakewood Community in Ahwatukee. As you are aware, the Lakewood Community was established in June 1985. The lakes are fed by a "well" or "spring". Our grave concern is the protection of these existing wells or springs to continue as the source for the two lakes in our community.

We respectfully request that ADOT protect these existing wells as they review the route for construction of South Mountain Loop 202 Freeway. We recognize the importance of the freeway to the city of Phoenix and State of Arizona. We also recognize the importance of our community lakes and their existing properties including the wells that feed and sustain the lakes in this vital Phoenix community. Any negative change to the lakes would have a devastating impact on our community, residents and their future children.

We are proud citizens of our community and will be long term residents well into our retirement in Lakewood Community.

Sincerely,
Zacc & Barbara Russell

1	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to State regulations/standards. (See text box on Final Environmental Impact Statement page 4-108.) The well replacement program as outlined by State law has been regularly implemented by the Arizona Department of Water Resources to effectively mitigate well impacts associated with its projects throughout the region.

Subject: Comments in opposition to South Mountain Freeway
Date: Monday, June 03, 2013 7:11:58 PM

Jun 3, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) (3) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(4) (5) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(6) (7) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(8) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(1) I have commented repeatedly about this issue. I also attended the 21 May 2013 hearing at the Phoenix Convention Center and presented both oral and written testimony on the South Mountain Freeway. Your agency, ADOT, has already acknowledged that there will be a negative environmental impact on my neighborhood. I live within 300 yards of the proposed overpass at South 17th Avenue in the Ahwatukee Foothills.

Sincerely,

Mr. Mark Coryell

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

1 THE FACILITATOR: Thank you, Mr. Demerritt.
2 Mark Coryell. Is that the correct
3 pronunciation, sir?
4 MR. CORYELL: That's good enough.
5 Hello -- oh, it works. Well, I just got off the
6 bus from Ahwatukee, so I jumped in to make a comment.
7 I'm opposed to the South Mountain freeway because it's
8 going to put a freeway in my front yard and I don't think
9 it's the best alternative for the community as a whole.
10 It's going to destroy the character of my neighborhood,
11 it's going to add more traffic into my neighborhood, and
12 the total character of my -- where I live is actually
13 going to be destroyed, and I don't want to see that
14 happen. I don't know what else to say. I feel like kind
15 of, you know, David here standing up before Goliath,
16 because I know that my voice means very little to any of
17 you that are standing here today.
18 I've lived in Arizona for 20 years, I love
19 living here; I had planned to spend the rest of my life
20 here, but because of the freeway, I'm looking at
21 alternatives, including moving to Tucson, and I also have
22 a couple of teaching opportunities outside the United
23 States, looks likely where I'm going to end up someday.
24 I feel really sad that I have to come here and defend
25 everything that means so much to me. Basically, all my

Code	Issue	Response
1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Draft Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement beginning on page 4-91).
2	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).

Code	Comment Document

savings and everything I own is tied up in my house, and I realize that's going to be done and I realize I don't think a lot of people really care.

I was almost killed on Pecos Road in January of 2008 in a serious auto accident where a hit-and-run driver about 9:30 at night went straight through the intersection, totaled my car, and if it hadn't been for the grace of God, I would not be here today. My car jumped off the curb and into a ditch and it just happened to sit on a set of brush and that's why I'm here and still alive, which I'm thankful for.

There's just a lot better alternatives. It's such a beautiful community, you can bike, if you spent your time here it's probably the last place -- the last place in the city of Phoenix, and I've lived in Glendale and I've lived in Avondale, that you can ride a bike without getting killed, so that's the conclusion of my remarks.

THE FACILITATOR: Thank you.

Please refrain from applause with respect to both build and no-build discussions today. This is a hearing, and we appreciate your patience.

Those of you whose names have been registered to speak, if you would make your way up to the front, that will help speed this up a little bit. Thank you.

LOOP 202
South Mountain
Freeway Study

2013

Draft Environmental Impact Statement
COMMENT FORM

Additional Comments:

- We are destroying very heritage most
people Arizona unique. I moved here and
stayed because I love Arizona. Not
some amorphous sprawling community
that looks like Southern California
or somewhere else for that matter.
Soon Phoenix, Tucson will be damaged
- no more flower farms, agricultural
use. Soon Arizona may lose its
capacity to grow its own food and
will solely be importing everything
from out-of-state, and worse yet
overseas, particularly Mexico and
beyond.

ADOT TRACS No.: 202L MA 054 H5764 01L • Federal-aid Project No.: NH-202-D(ADY) 13-158

Code	Issue	Response
1	**Agriculture**	The current analysis of impacts on prime and unique farmland—the land most suitable for growing food—indicates that loss of this type of farmland would be negligible. Urbanization in the Study Area is steadily moving in a westward direction. If an action alternative were selected—and by the time it were to be constructed—it is likely that more land will have already been converted from agricultural use to residential, commercial, and/or industrial uses, and that the proposed South Mountain Freeway would have even less of an impact. Urbanization will continue with or without implementation of the proposed freeway (see Final Environmental Impact Statement pages 4-153 and 4-154).

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

2 – Own home directly in path of South Mountain Freeway at 55th Ave and Pecos Rd
– Will sit on 2 lane road with a stop sign replaced by interchange on 6 lane Freeway
3 – Prominently see green replaced by permanent that will be unsightly
– Last opportunity to create a permanent corridor only take place once can ride bicycles in Phoenix metro area
4 – Serves the purposes of the real estate construction industrial complex
5 – Elevated freeway will likely amplify noise in neighborhood

FOR MORE INFORMATION:
azdot.gov/SouthMountainFreeway

Code	Issue	Response
2	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
3	**Design**	The study has considered concepts for parallel multiuse paths, however the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
4	**Planning**	Cities' and towns' adopted land use plans were evaluated as part of the environmental impact statement process. The effect of a freeway corridor on these plans was considered (see Final Environmental Impact Statement pages 1-21, 4-18, and 4-19). The City of Phoenix's General Plan land use map shows the freeway alignment as "Future Transportation," generally matching the W59 (Preferred) Alternative alignment. The City of Phoenix's plans for both Laveen and Estrella Villages identify "cores" along the W59 Alternative, surrounded by commercial/ mixed-commercial uses for each planning area clearly intended to benefit from proximity to the proposed freeway.
5	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Noise modeling is used to determine the most appropriate and effective location for noise barriers. All noise-sensitive land uses are included in the noise analysis and noise abatement considerations.

Code	Comment Document
1	Richard Costa Document Created: 5/21/2013 8:53:40 PM by Web Comment Form Living in Laveen since 2004 has shown me how important this project is to the residents. Comuting daily to I-10 from Baseline Rd has always been the worst part of the commute. It is obvious County and multiple jurisdictions serving the community between Baseline Rd and I-10 with lack of capital improvement funds (or desire) contribute to the problem. This project is way overdue. One that I have been hoping for 8 years now and that is just a fraction of how long ADOT has been working on it. This project should not have followed the L303 corridor but rather preceded it. Just get it done.

May 29, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

I am the race director of Aravaipa Running, organizing over a dozen trail running events in the mountains around Phoenix, providing recreational opportunities for thousands every year. I see the positive effects of outdoor recreation on the health of Phoenix residents every day. Many of my runners are seeking an escape from the congestion and pollution of the city, and the mountain trails offer a bit of solace and fresh air in an accessible way. Most of the mountains around Phoenix are out of the way, requiring an hour drive or more. Others, like the Phoenix Mountain Preserve or Camelback Mountain are so close to the city that the air, noise, and visual pollution can't be avoided. South Mountain is unique in that it is not engulfed by the city, yet is still easily accessible to Phoenix area residents. Surrounding South Mountain with a new freeway would quickly encroach on this unique accessibility, and compromise it's appeal. This comes at a time when our cities and country face undeniable health problems and need outdoor recreation more than ever.

2 3 4

On a personal level, I moved near the base of South Mountain in January 2012 for all that it offers. I spend 1-3 hours nearly every day running and enjoying the trail system, crossing back and forth all of it's trails. The west end of the range is the true gem of the Preserve, and to disrupt it's natural beauty and secluded wilderness with a freeway would be a tragedy.

4

Building any of the proposed alternatives would do little or nothing to relieve congestion in the Phoenix area. Intelligent growth is what Phoenix needs, and part of this intelligence includes preserving our natural landscapes that will become more and more valuable to future generations as growth increases. Compromising the South Mountain Preserve to place a major freeway through a remote area will offer little benefit to drivers, and major destruction to one of Phoenix's greatest treasures. I urge you to choose the No-Build Alternative and seek other, more effective, less destructive solutions.

5 6 1

Sincerely,

Mr. Nick Coury

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Noise**	
4	**Visual Resources**	The Final Environmental Impact Statement on pages 4-158 and 4-160 states that construction of the proposed road cuts at the western end of the South Mountains would cause "severe visual impacts" and that these cuts "would be visually inconsistent with the natural setting of the surrounding area." These impacts would, however, be in a remote, seldom-used area of Phoenix South Mountain Park/Preserve and not near any major trails. General mitigation measures to minimize these visual impacts are described on page 4-161. These measures would include the incorporation of newly exposed rock faces characteristic of the adjacent natural rock features. Contractors would respond to the faces' scale, shape, slope, and fracturing to the extent that could be practicable and feasible as identified through geotechnical testing and constructibility reviews. The Arizona Department of Transportation would require the contractor to round and blend new slopes to mimic the existing contours to highlight natural formations. The Arizona Department of Transportation would evaluate having the contractor adjust and warp slopes at intersections of cuts and natural grades to flow into each other or transition with the natural ground surfaces without noticeable breaks. A local example of such treatment would be the cuts associated with Dreamy Draw on State Route 51 in northern Phoenix.
5	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
6	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Please take action to complete the South Mountain portion of Loop 202. The loud mouthed cry babies have stalled this project long enough. I live in area code 85048 and want to see this project completed. I have lived here since 1987 and most of the opposition is from new comers who have a personal axe to grind. It is time to "git er done".

Gene Cox

From: Cox, David [mailto:David.Cox@usfoods.com]
Sent: Wednesday, May 22, 2013 4:01 PM
To: Projects
Subject: 202 SM freeway

Hello, My name is David Cox,
I live in the area of the proposed 202 South Mountain Freeway and will be impacted by what ever is decided. The ultimate decision will impact me regardless what is decided, so I wanted to take this opportunity to make a comment. I have a large economic investment and interest in the decision and want to voice my opinion.

1

As I see it, the most economical and logical route which would have the least impact to home owners, businesses and the environment would be to utilize the existing Chandler/Pecos road "highway": progressing south where it currently tapers to two lanes, progressing south a half a mile or more, onto the Indian Reservation. This would minimize any impact the residences and commercial buildings along Pecos road on and off the reservation. It then could swing north approximately at 59th - 63rd avenue, missing most if not all the residences along 51st avenue: utilizing the W59 alternative to tie into I10 freeway.

This alignment would minimize impact to existing residences, businesses both on and off the reservation. It would also bypassing existing infrastructure, such as High tension power lines, gas lines and water mains, which curretly run along the border between private/public and reservation. This alignment would swing clear of the mountains and thus would not require expensive and damaging blasting into the sacred and beautiful South Mountains.
I would like to propose some of the saving be utilized to create an off ramp for the Vee Quiva Casino and also suggest a highway be created with an exit that would to tie into SR238 near Mobile. This would provide an alternative route for traffic to and from Phoenix, access to Vee Quiva and tribal lands as well as opening up traffic to Mexico. I believe the Indians may agree with this idea if proposed as a package deal with the proposed freeway and current access limitations on 51st ave.

2

There is a lingering dangerous unaddressed traffic issue coming up quickly with the opening of this New Vee Quiva in July.
Currently the only access to Vee Quiva is off 51st avenue. Already the majority of traffic on 51st avenue are going to the casino and this traffic is non-stop 24X7. One could easily determine when the New Vee Quiva Casino opens there will be an exponential increase in the volume of traffic: the new casino is much larger, has a 90 + room hotel and numerous restaurants. I have noticed considerable advertising for the New Casino on radio, TV, printed and outdoor billboards. I'm certain this campaign will continue as the casino is vying for patrons. I can easily foresee with the additional traffic which will include special events; 51st ave may become a virtual parking lot. We have already experienced this when there has been a serious accident. There is no other way out of the area other than 51st ave, with one lane each way, no turn lanes or pullouts this is putting all of us, casino patrons and residents, native American and non-natives in jeopardy. This road was not designed to handle this projected volume and I'm sure the tribe is aware of this, however nothing has been done to remedy this situation by them or DOT. I certainly hope this gets addressed before there are any deaths attributed to this situation.

Code	Issue	Response
1	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Design**	The proposed freeway includes an interchange at 51st Avenue. The interchange at 51st Avenue would be located in close proximity to the Vee Quiva Casino. The design of the turning lanes and intersections would be completed in coordination with the City of Phoenix and Gila River Indian Community and include projected casino traffic. Concerns related to current traffic conditions along 51st Avenue are within the jurisdiction of the City of Phoenix.

Code	Comment Document

We need this freeway and need it ASAP to ensure the safety of all. I want to see this casino traffic routed to an alternate road designed for the volume and get 51st ave back to being utilized as it was built, as a rural isolated road.

Thank You for reading this and considering the residents concerns.

Regards,
David and Brenda Cox

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

2 The proposed South mountain Freeway would negatively effect our environment and the lands of the Native American people who are residents there.

3 This project would set a terrible precedent by demolishing what should remain a protected area.

4 The South Mountain Park is the largest city park in our nation. This was due to the wonderful foresight of our forefathers for the benefit the Phoenix Valley. Dividing the reserve with a freeway would be devastating to wildlife, because much of their habitat would be destroyed.

5 Wildlife movement corridors would be cut off. If the South Mountain Freeway is constructed, it must include wildlife corridors to allow wildlife to continue their seasonal migrations. This would also allow people to hike or walk without restriction-- especially the Native Americans who consider South Mountain sacred.

6 Please save tax-payers money and help protect our communities, our beautiful park, our health, and our environment, by selecting the No Action Alternative.

1 Thank you.

Sincerely,

Shannon Crane

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

As a resident of Ahwatukee and the 32nd Street & Pecos area, I urge ADOT to reconsider the current alignment of the proposed Loop 202 extension.

(2) (3) (4) (5) (6) (7) (8) (9) (10) While a bypass around the great Phoenix area will be necessary, the current alignment does not adequately address that issue and runs the risk of being outdated and ineffective before it is even finished. The proposed freeway will permanently damage the Gila River Indian Community (GRIC), Ahwatukee, and Laveen areas through property and business destruction. It will harm a treasured city park and tourism destination. It will damage culturally-valuable GRIC sites, increase air pollution, increase crime access, and increase exposure to hazardous materials (through truck transport bypassing Phoenix on a proposed Canamex route). Nor is it completely necessary, since a safer route already exists which only needs to be properly developed.

ADOT and the City of Phoenix have already shown a lack of public responsibility over this proposed extension:

(11) 1. Stonewalling and judicial bullying of the GIRC's earliest proposals to situate the extension on their land. These efforts were chronicled as far back as the late 1980s, so ADOT has no business claiming the GRIC never intended to work with ADOT or MAG.

(12) 2. Inadequate oversight during the Loop 202's initial planning phases in the mid-1980s. The cities of Gilbert and Chandler looked ahead and zoned land near their freeway routes for commercial development. The City of Phoenix, courting short-term gain through developers' fees and homeowners' taxes, allowed developers to build residential communities on land already slated for freeway or near-freeway conditions.

(13) (14) (15) 3. Misinformation spread by ADOT representatives at local community meetings, about their inadequate research on environmental, health, and quality-of-life impacts on both the GRIC and the residents of Ahwatukee. Numerous recent studies have shown the high health costs of even moderate air pollution. The Ahwatukee area locked between South Mountain and the Estrella Mountains is a prime candidate for becoming smog-bound from the projected heavy traffic on the Loop 202 extension.

The financial and time cost to ADOT will undoubtedly be exacerbated by eminent domain legal challenges from the GRIC, from homeowners and

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need, Truck Bypass**	
3	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
4	**Economics, Socioeconomics**	Businesses directly and adversely affected by implementation of an action alternative would be mitigated through relocation or site purchase at fair market value. The construction of the proposed facility would likely generate additional business and jobs in the corridor upon construction because of the improved access it will provide.
5	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Cultural Resources**	
7	**Air Quality**	
8	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
9	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
10	**Trucks**	
11	**Alternatives, Gila River Indian Community**	
12	**Acquisitions and Relocations**	It is not within a City's or State's right to deny building permits to developers who meet all requirements and want to develop their land. In 1996, the Maricopa Association of Governments Regional Council approved the Red Letter Process to provide early notification of potential development (including plans, zoning, and permits) in planned freeway alignments. In addition, the Arizona Department of Transportation works closely with Cities and Counties during the environmental impact statement process to encourage developers to reserve land for future transportation improvements. In some cases, when the developer is willing, the

5	businesses, and from environmental watchdog groups seeking to protect the western end of South Mountain Park. In a time when Arizona is still facing budget shortfalls and rebuilding its economy, there are wiser public-transportation projects that would show greater benefit to Arizona citizens. I submit that, should negotiations to build the extension farther south on GRIC completely break down, the best option is No-Build on either GRIC or Ahwatukee land. Long-haul truckers already use the dangerous and undeveloped Interstate 8 / Highway 85 route to bypass the greater Phoenix area. This route should be safely developed and commercialized, to fit with projected population expansion of the far southwest Phoenix area. The current western terminus of the extension in Laveen is too far east to safely route heavy commercial traffic far enough around the city, and it is too far west to prove an effective connection between the East Valley and Central Phoenix. Sincerely, Ms. Marian Crane 3145 E Chandler Blvd Ste 110 Phoenix, AZ 85048-8702
16

Code	Issue	Response
12 (cont.)		Arizona Department of Transportation has been able to purchase a portion of the land through advanced acquisition (see Final Environmental Impact Statement pages 3-53, 4-13, and 4-48).
13	**Neighborhoods/ Communities**	While the E1 Alternative would be adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to the Arizona Department of Transportation's policy (see Final Environmental Impact Statement beginning on page 4-91).
14	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
15	**Air Quality**	The air quality impacts of the proposed action are discussed in the Final Environmental Impact Statement, beginning on page 4-68. Meteorological information was considered in the air quality analyses [*Air Quality Assessment: South Mountain Freeway (SR 202L)*, dated March 1, 2013] conducted for the proposed action. Data from Maricopa County Air Quality Department and from the Gila River Indian Community monitoring station were compared with two, 1-month studies conducted during the winter of 2006 and the spring of 2007 along Pecos Road in the Study Area. According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Reservation Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows winds and stable atmospheric conditions, the wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns will tend to have a flow from the easterly component as the air flows from the east to the lower elevations along the Gila River. During the warmer hours with improved mixing, the flows typically follow the river channel and come from the north and northwest toward the south and southeast.
16	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
17	**Alternatives**	There is an existing route (Interstate 8 and State Route 85) that provides a bypass of the Phoenix metropolitan area. Signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. This route continues to be available for interstate and interregional travel.

To Whom It May Concern:

1 **I have been living in the west valley for 20 years and drive the I-10 freeway traffic every day to work. It originally was a 15 min drive from Avondale Blvd and now it is 40-50 mins. every day from 7 – 8:30. It is unimaginable why the State cannot plan a freeway system that intersects with the current 101 going south or connect the west end to the 303 south to the South Mountain freeway that is planned. This current plan only reduces some of the traffic from downtown to east bound but will not prevent the backup/delay in traffic from 75th Ave to 51st Ave. How does the State plan on that reduction.**

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

I believe it is imperative that we build this freeway. Years ago we stalled & stalled on building freeways to our detriment. The Valley will continue to grow whether we want it to or not. I personally am not looking forward to a 40 minute drive to get to the West Side of the Valley from Chandler.

I believe that ADOT has built all of our other freeways in a responsible manner respecting property rights, the environment & the citizenry. There is no reason to believe that practice will not be continued with the building of this freeway.

I say build it, and build it now!

1

My wife and I moved to the Ahwatukee Foothills from Tempe in 1989 in part because of the proposed alignment of the the Loop 202 South Mountain Freeway along Pecos Road. We have been patiently waiting for construction to start since that time. The residents of the Phoenix metro area badly need a bypass route for traffic passing through Phoenix as well as a western ingress/egress gateway to the Ahwatukee Foothills area.

The native American/ activist's claims that the western portion of the freeway will "impact" South Mountain, supposedly sacred to the Pima is so outrageous as to be laughable. If the mountain is so sacred then where is the hue and cry to remove the transmission towers and obliterate all trace of roads, trails and other improvements from the mountain. No, the activists will only use this ploy when it suits their purposes. After all, where would they go to urban hike and bike if the mountain was closed to all their activities. And lets not forget how everyone living south of the mountain would be impacted by no cell phone service or broadcast TV reception.

Unfortunately, some homes and businesses may have to be removed do to the fact that they were built in the proposed right of way. However, all those who will be impacted should have known that where they were electing to build or purchase was in the right of way for this freeway alignment which has been on the books since before 1989.

We can continue to argue about who let builders develop in the right of way, but the fact remains that the end user, be it business or homeowner, had the responsibility to know about future freeway alignments, and to then make their purchasing decisions based on the knowledge that their property may have to be repurposed in the future. For these people to assume that you can negatively impact the greater community for the short-sighted selfishness of a few is ludicrous.

1

I say build it now! It is long overdue.

My wife and I moved to the Ahwatukee Foothills in 1989 in part due to the Loop 2002 alignment along Pecos road. As the years have passed we have waited patiently for construction to begin, but now the need is more critical than ever. The city needs a bypass route for traffic passing through the Phoenix metro area, and residents of the Ahwatukee Foothills badly need a second western ingress/egress roadway for the community.

Activist claims regarding the sacredness of South Mountain to the Native Americans is outrageous. Unfortunately, they have managed to get a few members of the tribe to support this preposterous position. If the mountain was truly sacred then why not a battle to remove all of the transmission towers, roads, trails and other improvements from the mountain. The bottom line is that the activists will only use the "sacred" claim to promote their agenda, but would not want to negatively impact their ability to hike and bike close to their homes, lose cell phone and wireless service, and broadcast TV service.

They know that the community would not support such a radical plan, but using the freeway as a scapegoat makes it seem like they have an idealist viewpoint, while at the same time hijacks the community for their own selfish ends. They want hiking, biking, cell, wireless, and TV service, but somehow see the freeway as something to be feared. Their rhetoric would have the uninformed believe that the freeway will desecrate South Mountain. Nothing could be further from the truth. Looking at the project maps clearly shows that the proposed freeway alignment will impact a small un-used corner of the the South Mountain Park/Preserve boundary and not the mountain itself. Can you say hypocrite?

Claims that residents didn't know that they were building in a freeway alignment should fall on deaf ears as well. The freeway alignment has been well documented since before 1989, and disclosure of the alignment is a requirement for sale and purchased of any residential or commercial property. For these vocal few to to hold the balance of our community hostage is wrong on every level.

Now along comes Sal DiCiccio showing his true political colors by supporting to this vocal minority rather than supporting the majority in the community that supports the freeway construction. Sal has evidently forgotten that he is an elected official here to serve the entire community that elected him to office. Sal has put his personal interests ahead of those he serves. I expected more from him, but he is now irrelevant in my mind. He continues to put forth the idea that we can build on Indian land if we just put enough pressure on the tribe. His "anywhere but Pecos" organization is all about his agenda

Code	Issue	Response

and his personal freedoms, but it comes at the expense of the tribe's wishes and freedom to choose what is best for them.

Thank you for your time,

Mike Cummins

So thank you.

THE FACILITATOR: Thank you.

If you'd like to speak, please register up front.

If you'd like to speak, please go to the registration desk out front.

Please feel free to use either microphone when you come up.

Thank you. Eric Cylwik.

Eric, could I ask you to use this mic over here, please.

MR. CYLWIK: Good morning. My name is Eric Cylwik. I first of all want to thank you so much to voice my opinion to you guys here that are here to listen to us today. I just wanted to say also, great job on pronouncing the name. That is correct.

So I grew up in Phoenix, kind of at the top of what is now the 51, and I remember growing up there, and my dad would have to fly out of town every single weekend, and the commute to the airport was awful. But then after the 51 was built, it made the rest of the town so much more accessible and it just made living up there a so much nicer place.

I've now moved to Tempe after graduating from ASU, and a lot of my friends are now moving away

Code	Issue	Response

(Comment codes begin on next page)

Code	Comment Document

from Tempe and farther away from different parts of the Valley. And as a result, I end up commuting a lot more than I originally thought I would. There's parts of the West Valley where I just can't make it out there to see friends and go over to their houses, and things like that.

And just life over there kind of isn't available for me right now. By the time I get off work and have to travel over there, there's really not much to do. But there's parts of the East Valley that are still very accessible and parts of the North Valley. So even though I live in the middle of this huge area, part of it is inaccessible just due to the amount of traffic that's in these areas that at times I would like to be traveling.

So even though we have a giant freeway that might go directly from Tempe west, it's not necessarily a viable option during the time that I would like to travel. And I think that this would reduce that. And I think ADOT has led a great study, and FHWA, and it seems like all the signs say that this would be a good thing to do, and I'm here to voice my opinion in support of that. And I trust them that they've done an excellent job.

Thank you.

To: Projects
Subject: comments from public re: South Mountain Freeway
Date: Wednesday, July 24, 2013 5:57:26 PM

To Whom It May Concern:

I have lived in the Ahwatukee Foothills about 1 mile from Pecos Road for over 22 years. As you no doubt know, this is a lovely, family oriented community. However, if the freeway is built along Pecos, I am concerned that the quality of life here will change drastically.

1 2 I still find it difficult to understand how, in good faith, city officials could issue building permits knowing that homes, churches and businesses would need to be torn down to accommodate a freeway. And, I have yet to talk with a resident here who knew that a freeway was planned when they purchased their home. Had we known, I believe many would have chosen to live elsewhere. Pollution is a major concern.

3 4 5 6 Yes, there are reasons to build another loop around the city. But removing part of an established community, cutting through a section of mountain sacred to a Native American tribe, and adding polluting exhaust from passing trucks and vehicles to do so seems irresponsible. The additional money (tax dollars) that has been, and will need to be, spent could have been avoided had the community not been built right up to the Pecos line in the first place.

7 Now that there is a community here, and the Native tribe has informed ADOT of their concerns, I would hope that reason would prevail.

Thank you for considering my plea against the building of the freeway along Pecos Road.

Most sincerely,

Judy Bond Danilovs
1532 Silverwood Dr, Shadow Rock

1	**Acquisitions and Relocations**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. It is not within a City's or State's right to deny building permits to developers who meet all requirements and want to develop their land. In 1996, the Maricopa Association of Governments Regional Council approved the Red Letter Process to provide early notification of potential development (including plans, zoning, and permits) in planned freeway alignments. In addition, the Arizona Department of Transportation works closely with Cities and Counties during the environmental impact statement process to encourage developers to reserve land for future transportation improvements. In some cases, when the developer is willing, the Arizona Department of Transportation has been able to purchase a portion of the land through advanced acquisition (see Final Environmental Impact Statement pages 3-53, 4-13, and 4-48).
2	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
3	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement beginning on page 4-91).
4	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Subject: Comments in opposition to South Mountain Freeway

Jul 17, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

Hasn't this metropolis been torn up enough?

2 The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer.
3 ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

4 5 South Mountain Freeway would have tragic negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

6 7 The freeway would also negatively affect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

8 The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

1	**Traffic**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.

LOOP 202
South Mountain
Freeway Study

2013

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1 2 We will be left with noise, pollution + and it is going to be miserable for us to live in our home so close to the wall. We would rather be bought out than have to stay with the freeway so close to us. We are against this freeway and hope for a different route so that so many homes would not be torn down.

Subject: Comments on South Mountain Freeway EIS

1. I don't believe there will be such a huge increase in Valley traffic as I don't believe that with climate change we will get such a large population increase and hopefully we will be able to use more Mass Transit to move people around the Valley. It will be too hot here and there won't be enough water. There are so many factors that could change the whole equation such as more expensive gasoline or the urgency of reducing the current rate of carbon fuel usage to reduce climate change that would render the South Mountain Freeway obsolete. (1)
2. The destruction of part of South Mountain is unjustifiable and not mitigated enough under the current plans. Also nobody mentioned the chuckwallas that are unique to South Mountain at the meetings. Or the migration of the Hawk Moth caterpillars. I'm surprised that under the deeding of the land to the City of Phoenix that such destruction would be legal. (2, 3)
3. The increased pollution between the Pecos alignment of the freeway and the mountain due to the winds that prevail in this area would ruin the air quality and building it on the reservation would not solve that problem. We have many schools in this area and the children but also the elderly would suffer greatly especially as contrary to what you say trucks would use the freeway to by-pass the city of Phoenix. (4)
The completion of the Canamex Highway on US 85 to I 8 west of Phoenix would reduce traffic in Phoenix and on I 10. That would remove a large part of the perceived need for the South Mountain Freeway and would be less costly in every way. (5)
4. There isn't enough money for an outdated project such as this in these times of reduced budgets. The State and Federal Governments need to concentrate their spending on things that benefit the people such as education and healthcare not potentially damaging or obsolete freeways. (6)
This an example of the kind of fossilized thinking that is ruining the economies of the western nations. Using a plan that was made in 1986 for building in 2013 is ludicrous! (7)
Sincerely,
Maureen Davies

1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The coloring of the male common chuckwalla is unique to the South Mountains; however, it is one of two color patterns and does not indicate a separate species or subspecies (see the Arizona Game and Fish Department's abstract for the common chuckwalla). Information related to the coloring of the common chuckwalla and the migration of hawk moth caterpillars was not mentioned in the Draft Environmental Impact Statement because it was not relevant to the study.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Meteorological information was considered in the air quality analyses [*Air Quality Assessment: South Mountain Freeway (SR 202L)*, dated March 1, 2013] conducted for the proposed action. Data from Maricopa County Air Quality Department and from the Gila River Indian Community monitoring station were compared with two, 1-month studies conducted during the winter of 2006 and the spring of 2007 along Pecos Road in the Study Area. According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Reservation Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows winds and stable atmospheric conditions, the wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns will tend to have a flow from the easterly component as the air flows from the east to the lower elevations along the Gila River. During the warmer hours with improved mixing, the flows typically follow the river channel and come from the north and northwest toward the south and southeast.
5	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Issue	Response
6	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Draft Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
7	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.

Code	Comment Document

David Davies Document Created: 7/15/2013 11:06:54 AM by Web Comment Form

1 The decision to not recess the planned highway appears to be based purely on cost and not on a detailed analysis of the environmental benefit of doing that.

2 The decisions on the west end of the proposed route look flawed at best. Some of these date back to the decisions for the 101 and 10 interchange, which now appears to be in the wrong place. The current proposal for the 202 and 10 connection to be at 59th Ave should receive much more study on the disruption this would have on the the people living near there during construction.

3 The continued assertion by ADOT that this will not be a truck route is totally unbelievable and does not give one much confidence in other statements that are made in the study. The study should include the effect of this being a truck route as well as the current version.

4 A serious incident emergency plan should be included in the study, given the very limited exit routes available from Ahwatukee.

Code	Issue	Response
1	**Design**	Depressing the proposed Pecos Road sections would entail installation of pump stations to drain the main line freeway. A depressed freeway would also need a drainage channel to capture the off-site flows to prevent their entering the freeway. Pump stations were not used because of the high cost of construction and maintenance needed for their operation. The preferred freeway configuration would have the E1 Alternative aboveground and the existing culverts extending to pass the drainage under the freeway. Pecos Road currently has numerous existing culvert crossings. Depressing the freeway in this area would eliminate the existing culvert crossings and potentially have adverse flooding impacts on adjacent properties. Extending the existing culverts or upsizing the culverts would maintain or improve drainage flows. This would ensure that there would be no adverse flooding impacts on adjacent properties. (See Final Environmental Impact Statement pages 3-15 and 3-18.) To reduce impacts by depressing the proposed freeway in the Eastern Section, the Arizona Department of Transportation would: · need to spend an additional $400 million for right-of-way acquisition and construction · displace an additional 300 residences · maintain additional pump stations and detention basins for the life of the freeway · observe noise-related impacts requiring mitigation (i.e., noise barriers and their associated costs and visual impacts) Because the belowground option would result in substantially greater costs and residential displacements, this option was eliminated from further study.
2	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Subject: Please No South Mountain Freeway
Date: Wednesday, May 29, 2013 6:48:02 PM

May 29, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) This is so important! The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(3) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(4) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(5) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(6) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

(7) Sincerely,

Mrs. Christina Davis

I am totally against this truck bypass which absolutely will NOT improve the region's air pollution as stated in the DEIS. I worked with Maricopa County's clean air laws and major employers to reduce air pollution for 7 years, and know that building freeways ALWAYS increases traffic beyond projections, ALWAYS increases attendant air pollution due to development following freeways. In this case, Ahwatukee will lose its geographic advantages by being surrounded by freeways, with increased noise and pollutants from our community being used as a truck bypass. Residents of Ahwatukee will get no benefits, only pay with health consequences of increased particulate pollution besides slicing up South Mountain Park. The DEIS assumptions are biased and contradict decades of traffic studies. I am a Phoenix native and resident of Ahwatukee since 1986 when I moved here to escape the worst air pollution in the Valley. We fought many projects downwind that would have brought air pollution to our community, and now this is another one. Do not build!! Do not slice up South Mountain Park! Do not ruin the health and peace of our community. If you desperately need a truck bypass, run it much farther away from the metro area. Maricopa County is already an non-attainment area and this freeway will ensure air pollution gets even worse.

State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.

Subject: Comments in opposition to South Mountain Freeway
Date: Wednesday, July 24, 2013 10:35:18 AM

Jul 24, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

South Mountain Park is a very important part of the metro setting. Used daily by many residents.

2 The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer.

3 ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

4 South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more

5 vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

6 The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a

7 freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

8 The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

1 Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Norman & Shirley Davis
6021 E Avenida Arriba
Tucson, AZ 85750-1869

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

1

I am a homeowner on S. Desert Foothills Pathway, and I vote "no" for the extension of 202. Please consider the drastic consequences of making Pecos Road a major thoroughfare. It will cause major pollution and noise in the SW corner of the city - an area I found to have some peace and relative quiet. Thank you.

We all want the State to make progress but their are all ways a few who want to stop progress. We Need to expand the freeway system but lets not make the same mistakes as the other freeways. Better to make them big enough so we don't have to make the roads or bridges wider in a few years.

Code	Issue	Response
1	**Design**	The proposed freeway at one point featured a ten-lane freeway cross section, with three general purpose lanes in each direction and sufficient right-of-way to add a high-occupancy vehicle lane and a general purpose lane in each direction in the median in the future (when warranted by travel demand). The Maricopa Association of Governments, in association with the Arizona Department of Transportation, later examined an eight-lane freeway cross section, with three general purpose lanes and one high-occupancy vehicle lane in each direction (see Final Environmental Impact Statement pages 3-19 and 3-20). Such a configuration would reduce the right-of-way needed for the freeway without jeopardizing its ability to meet the purpose and need criteria. Additionally, the eight-lane freeway would cost about $200 million less than the ten-lane freeway (see the Final Environmental Impact Statement, beginning on page 3-23). Because the eight-lane freeway would meet the project's purpose and need and would do so with lower costs, less right-of-way acquisition, and fewer impacts than the ten-lane freeway, it was carried forward for further study. All eight lanes would be constructed at the same time.

Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 1:44:11 PM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) (3) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(4) (5) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(6) (7) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(8) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(1) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Maricopa County and the State of Arizona does so little now to protect our environment, I don't think we need another freeway to add to our air pollution problem. Please do not build this freeway, rather consider investing more in mass transit.

Sincerely,

Okay, we'll go to the next name, Steve Trussell. Is Steve Trussell in the auditorium? Here he comes.

If there's anyone else in the auditorium that would like to speak today, please make sure that you register first so we can get your name into the list.

THE FACILITATOR: Daniel Demerritt. Did I pronounce the name correctly?

MR. DEMERRITT: Yes, you did.

I'm not going to go over all of the stuff that that gentleman went over, because he pretty much did a lot of the work for me in the beginning. I'm a Laveen resident, we have lived in the area for seven years, and we have long seen many developments that were needed by the community; specifically, hospitals, major retail developments. We have to drive 20 minutes to go anywhere to spend our money, and that money is now linking into -- you know, that tax money is now linking into neighboring municipalities. The community has needed this, you know, now more than ever, but has needed it for a long time and we are, you know, very far along and we -- you know, there's just no reason why we should not do the freeway. I don't see -- I mean, I understand the environmental impacts when it comes to the mountain, I'm sorry that there's no other, you know, real route to that, because no one is cooperating with us on, you know, other areas.

I look at the Dreamy Draw, it was the same situation, I'm sure there was a lot of contention with it then and, you know, I drive through this, you know, pretty much three and four times a week and it's beautiful. I mean, it's something that I enjoy driving through. You know, it's something that ADOT did a good job with and I believe that they can do the same with the South Mountain freeway.

I do want to point out that, you know, I do live fairly close to where the freeway is supposed to go through within, you know, half a mile, I believe that they have a lot of things that they can do to keep the sound to a minimum. I know that, you know, yeah, it will increase traffic truck-wise because it's an easy alternative, but that's something that's going to relieve the traffic that is basically causing the I-10 to back up every morning.

The other part of it or, you know, more on the sound, I mean, they have rubberized asphalt, you know, the sound wall barriers. Hopefully, you know, we can think about doing some more walkability and bikeability type situations, but I don't see that in the plan currently, but it looks like it could be easily done. Thank you for hearing my comments, and I hope they build the 202.

3	**Design**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.

Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

1	Mukesh Desai Document Created: 6/18/2013 11:55:08 PM by Web Comment Form Very useful presentation, gives citizens overview quickly. I personally support project. I live in Fishkill Reserve community and some homes in our community are going to be impacted. However,I believe, for vast majority of residents this highway will be beneficial as it will improve access. I still do not know, if proposed highway will be elevated , or only be elevated throughout or only at certain places. I still do not know, how our view of Estrella mountains and South Mountain will remain ?

Code	Issue	Response
1	**Design**	The freeway profile, or elevation, is determined by a number of engineering factors including geology, drainage, and cost, among others. Like most freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would maintain a rolling profile, being elevated above most major cross streets and dropping to near ground level between interchanges (see Figure s 3-20 to 3-25 beginning on Final Environmental Impact Statement page 3-42).

Subject: against freeway expansion in Ahwatukee
Date: Tuesday, June 04, 2013 9:37:41 PM

I've been a resident of Ahwatukee since 2001, and I originally worked here as a teacher starting in 1995. I do not know, nor have I ever known, one person who is in favor of this freeway. Everyone I know opposes it.

(1) (2) (3) (4)

We are concerned about air pollution, noise pollution, and safety. We moved here because this is a quiet and safe bedroom community. Tearing away people's homes and a local place of worship to build yet another freeway is unconscionable.

Please listen to local residents' wishes and halt this project.

(5)

If you must move forward and continue to pollute this city even more with yet another freeway, then there are miles of Indian reservation that can be built upon which will avoid the senseless destruction of taxpayers' properties.

Thank you.

Best,
Michelle DeSpain
Ahwatukee Resident -- 85048

(6)

P.S. Allergies, asthma, and respiratory issues have skyrocketed in Maricopa County in recent years. As educated citizens, we are all very much aware of the link between pollution and these health issues. Shouldn't the health and wellbeing of citizens be the #1 priority of our city?

Why I oppose the South Mountain Freeway

I grew up in Chicago, moved to Phoenix in 1974 and South Mountain Park was one of the first places I hiked. I still rave about this wonderful place to out-of-town visitors. We have the largest city park in the U.S., 11 mile trail east to west, and no matter how full the parking lot in Ahwatukee, the trails always feel like wilderness (if you don't look at the valley below). When I worked in South Phoenix, I organized and led hikes for low income South Phoenix families, showed them petroglyphs and talked of native peoples who had passed through here for thousands of years. It is awe-inspiring to consider how we remain connected to our past; it is indeed sacred and an important lesson to teach our children.

Three reasons I oppose the proposed freeway:

1 2

1. **We must respect the people who lived here first and for generations since**. Native peoples from the Gila River Indian Community voted against allowing the freeway through their lands and sacred places. When European-Americans first came to these lands, we did not respect their beliefs. We were wrong then and must not repeat these errors. If Native Americans do not want this highway, then we must not violate their wishes.

3 4 5

2. **Division and destruction of land creates pollution** – noise and carbon monoxide don't stop at the side of a highway. **Animals native to this land** - pumas, coyotes, javelinas, birds, reptiles – belong here and we have the responsibility to protect their habitats. During my lifetime, we have come a long way in learning the importance of environment and inter-connectivity. Do not break this growing respect for our environment.

3. **Home owners have the responsibility to consider transportation <u>before</u> they buy**. I have owned 5 homes during my life; I believe it is outrageous and arrogant to move into an area, then try to change its very essence for our own personal comfort. It's the attitude – "Now I'm here, so now you do what I want." What a terrible message to send our children!

6

I love this park and ask you to send our children a message of the importance of respect and protection of our heritage and natural environment by saying no to building a freeway through South Mountain Park.

Jeanne Devine, retired senior and environmental activist
3323 S. McAllister Ave
Tempe, Arizona, 85282

And the Gila River Indian Community for years has been opposed to the build and the people and the state have bent over backwards to accommodate their wishes. The proposed build of the freeway now does not encroach on their land, and because of the painstaking efforts of so many people, I would ask now that they respect our wishes and needs, so that we can build this much-needed thoroughfare so the west side of the Valley can prosper in the same way as the east side of the Valley. Thank you very much.

1 I live on 55th Ave and Southern Ave in Laveen. My concern is the increase in noise this freeway would cause for the area. Also, is Southern Ave going to be an exit for this freeway..If so, will ADOT add more traffic lights for residents that live on 55th Ave and Southern due to the increase of traffic this would cause.

Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 6:14:23 PM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(3) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(4) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(5) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(6) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

(7) Sincerely,

Mr. Ben Dibell

Subject: Freeway Extension-202

I am an owner at San Simeon Condominium in Ahwatukee and I spend half the year in that home.I choose to buy in that location because its a quiet area. My home in the city of West Sacramento California is next to HWY 5 and is 1/2 mile away and it is disgusting with the dust that ends up in my home as well as the constant swishing noise from the cars. I do not support the 202 freeway project because it will bring noise, and pollution to our neighborhood. (1) (2)

1 As a resident of Ahwatukee for over 35 yrs. I believe it's about time we start construction of the SMF All these delays have been instituted by nothing more then self interest groups. Example is of So Mtn. being being desicrated. I always thought all Indian land was sacred. Lets face it. It's all about the money. Put the freeway on the res. and you have more people going to the casino and the outlet stores, as well as the resort and golf course and other attractions. Lets be real, this freeway is long over due. Pecos Rd is owned by the state, it sure doesn't make sense to spend more money and put it on the res. As far as pollution goes thats another stalling tactic. I live off 51street, should we reroute all of I-10 so my neighborhood is smog free? of course not . When I came to Arizona I-10 was only two lanes each way. There was no complaining when it turned to 8&10 lanes. That was progress. If you didn't like it you moved. If people don't like the SMF you to can move. Now that home prices are climbing I haven't heard to much from that group of people. Use common sense an let ADOT do it's job. This is progress, weve spent enough time and money for this project.

CALLER: MAYNARD DILLIMER, ARCHITECT	CALLER ADDRESS:
PHONE: 480-948-6632	EMAIL:

CALLER REMARKS/QUESTIONS:

I support building the South Mountain Freeway. I do not believe there ought to be a toll road in any form. I am a retired Architect and (Unintelligible) planning and very knowledgeable on this type of thing. This highway is long overdue. Should be done as quickly as possible. But no toll roads involved. Thank you for asking.

1

Code	Issue	Response
1	**Alternatives**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa County region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects, including the proposed freeway. Tolls would not be involved.

Subject: South Mountain Freeway
Date: Wednesday, June 05, 2013 4:03:26 PM

1 2 I went to the first meeting that was held several years ago for the Foothills area and we were told that the freeway would be dug down 14 feet with a 10 foot sound wall. Recently I heard that the freeway was not going to be dug down 14 feet because of the water runoff from South Mountain. We feel that is totally un-acceptable. You did it for Scottsdale and I think that it should be done for the foothills area. The sound reaches my house, 804 feet from the proposed freeway and the sound from a 10 lane freeway will be much worse.

3 4 The second issue that I am concerned is with the increase cancer rates from all the particulate from all the cars and trucks exhausts being blown up against South Mountain with no-where to go. What are the expected cancer rate increases?
How will this affect all the children in the three schools that are within 800-1,000 feet from the freeway?
How will this affect the older residents with lung problems?
5 What will happen if there is an inversion layer and the exhaust gases build up? What then???

6 Lastly, I don't recall any comments on the crime rates increases for areas that are between exits and entrances doubling with pass thru criminals looking for an easy score.

I would like an answer to these questions and so far I have been unable to get any.

Code	Issue	Response
1	**Design**	A depressed freeway option was evaluated in the Final Environmental Impact Statement and is described on pages 3-15 and 4-91. Although depressing the freeway would reduce noise levels, noise walls would still be needed to further reduce noise to meet the Arizona Department of Transportation noise policy. Whether the freeway is built aboveground with tall walls or belowground with shorter walls, the final mitigated noise levels would be nearly the same at nearby residences. The major disadvantage of building a depressed freeway would be the increased construction cost and the possible acquisition of additional right-of-way for pump stations and retention basins.
2	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Health Effects**	
4	**Air Quality**	Meteorological information was considered in the air quality analyses [*Air Quality Assessment: South Mountain Freeway (SR 202L)*, dated March 1, 2013] conducted for the proposed action. Data from Maricopa County Air Quality Department and from the Gila River Indian Community monitoring station were compared with two, 1-month studies conducted during the winter of 2006 and the spring of 2007 along Pecos Road in the Study Area. According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Reservation Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, the wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns will tend to have a flow from the easterly component as the air flows from the east to the lower elevations along the Gila River. During the warmer hours with improved mixing, the flows typically follow the river channel and come from the north and northwest toward the south and southeast.
5	**Air Quality**	During the winter, temperature inversions can inhibit the dispersal of pollution (see Final Environmental Impact Statement page 4-70). In the morning, wind flows typically follow the terrain to lower elevations. As the day progresses and heating occurs, the pollution begins to disperse. Wind flow in the afternoon typically goes upward along the terrain.
6	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. WHAT DO YOUR STUDIES SHOW

1, ABOUT 150,000 CARS AND DIESAL TRUCK EXHAUST BEING TRAPPED AGAINST SOUTH MOUNTAIN? DIESEL EXHAUST HAS CANCENOGENS AND A 3-4 TIMES THE EXHAUST TRAPPED BY SOUTH MOUNTAIN COULD HAVE CATASTROPIC RESULTS OF AIR QUALITY. OLDER PEOPLE AND THOSE THAT HAVE RESPIRATORY PROBLEMS WILL BE AT RISK. I HAVE NOT SEEN ANY STUDIES IN REGARDS TO SMOG BUILD-UP AGAINST SOUTH MOUNTAIN. HAVE THEIR BEEN ANY TEMPATURE INVERSION LAYER STUDIES?

2. HOW DO YOU JUSTIFY HAVING THE EXHAUST OF 150,000 CARS AND DIESEL TRUCKS PASSING BY TWO SCHOOLS FULL OF YOUNG CHILDREN? IS THAT THE ENVIORNMENT YOU WOULD WANT FOR YOUR CHILDREN?

Code	Issue	Response
1	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The Federal Highway Administration developed the noise regulations as required by the Federal-Aid Highway Act of 1970 (Public Law 91-605, 84 Stat. 1713). The regulation, 23 Code of Federal Regulations 772 Procedures for Abatement of Highway Traffic Noise and Construction Noise, applies to highway construction projects where a State department of transportation has requested Federal funding for participation in the project. The regulations contain noise abatement criteria, which represent the upper limit of acceptable highway traffic noise for different types of land uses and human activities. The regulations do not require meeting the abatement criteria in every instance. Rather, they require highway agencies make every reasonable and feasible effort to provide noise mitigation when the criteria are approached or exceeded. Compliance with the noise regulations is a prerequisite for the granting of Federal-aid highway funds for construction or reconstruction of a highway. In 1998, the Federal Highway Administration released the Traffic Noise Model, which has been upgraded several times since its release. It was developed as a means for aiding compliance with policies and procedures under Federal Highway Administration regulations. The model is a state-of-the-art computer program used for predicting noise impacts in the vicinity of highways. It uses advances in personal computer hardware and software to improve upon the accuracy and ease of modeling highway noise, including the design of effective, cost-efficient highway noise barriers. These components are supported by a scientifically founded and experimentally calibrated acoustic computation methodology, as well as an entirely new, and more flexible data base, than the former model. The database consists of over 6000 measurements at forty sites across the country.

MR. DOBELL: My name is Harry DoBell and I live at 1664 East Glenhaven Drive which would be 804 feet from the new freeway. When I went to the very first meeting, it was about three or four years ago. I can't remember. We were told that the freeway would be dug down 14 feet with a 10 foot sound wall.

Since that time, we now have been told that it's not going to be dug down which will increase the noise and the exhaust gases coming into our neighborhood. We now have probably less than 50,000 cars a day by there, and it's going to be 150,000 with the freeway. At the current rate level of cancer for 40,000 cars, it's going to triple with 150,000 cars, and I haven't heard anyone address that issue of what can be done about it to mitigate it.

My house is approximately 18 years old and does not have soundproof windows. At this time, I can hear noise from Pecos lightly. With 150,000 diesel trucks morning, noon and night, what is going to be done about the sound mitigation? And digging it down 14 feet with a 10 foot wall would have helped, but now what is it going to be?

Also crime rates. We've been told that if you live between an entrance and an exit on an

3	**Health Effects**	
4	**Noise**	Noise barriers are designed to provide a substantial reduction in noise levels along freeways, but do not and cannot eliminate noise from passing into nearby neighborhoods. Just because noise can be heard does not mean that noise barriers are ineffective. Even at the levels considered "acceptable" by the Arizona Department of Transportation Noise Abatement Policy and Federal Highway Administration regulations, noise is still readily audible and can be heard for some distance from the freeway.

1 As a resident of the 51 st, ave. Mc dowell rd. area for the past 40 + years . It is my experience that the congestion on I -10 from 27 th. To 83 rd. avenues has reached it's max. you can not get on or off the freeway with any measure of safety. As a trucker with over 50 years of driving the roads it would be safer to hook into the 303 . as most truckers that don't need to be in the city take buckeye or cut down to I -80. The Indian nation would be happier if the truckers did not take 51st. ave. to get to Tucson. The outer loop off 303 and I-10 would benefit all the truckers, Indian nation and travlers. Our city traffic is maxed out too much now. As an added benefit the Indians would have another area to build another casino. Thank you

ADOT Loop 202 South Mountain Freeway Study
1655 W. Jackson Street
MD126F Phoenix, AZ 85007

Dear ADOT,

Your DEIS did not include concerns I and others raised as there are many deficiencies with this DEIS. I am a member of PARC and I am concerned about the many issues not sufficiently addressed or omitted in the recent DEIS. Please have these items addressed and entered into the public comment section of the process:

1 **A) More Air Quality Issues to Increase in Foothills Reserve Community's**
The Phoenix metro area has had problems for decades meeting the air quality standards for particulate matter (PM) and other criteria pollutants. (Ozone levels are too high in the East Valley and Fountain Hills, for example.) There have been several exceedances of the standards for PM set by EPA under the authorities given the agency by the Clean Air Act (CAA). The problem has been so bad over the years that currently, EPA is examining sanctions that include blocking a billion dollars in highway funds.

2 3 **B) New Health Findings from Studies in Boston, MA and Los Angeles, CA 2011 – 2013 not incorporated in DEIS**
Documented proof submitted to the EPA in studies found health risks from living within 1 mile of 6 lane highways which create fine and ultrafine particulate matter. Impact of living so close to the highway causes: child hood leukemia, asthma, autism, increase of coronary disease, cancer and lung disease. This impact to thousands of nearby school children, adults and elderly needs to be studied and put in DEIS. Past studies from 2005, 2011, 2012 and 2013 facts have not been included in DEIS as requested. Impacts to the families who will remain after the highway is built in Ahwatukee's Foothills Reserve have clearly not been addressed. In addition sound decibel studies of the SMF"s impact to our community and its wild life, including constant compounded sound echo's off the 2 nearby mountain ranges in this unique micro climate have not been addressed in the DEIS as requested. Facts on ultra-fine and fine particulates caused by the project have not been reported nor its health impacts reported with current scientific facts from those experts throughout the United States. All serious health impacts have to take a priority over shorter commutes and business development.

4 **C) Traffic Congestion Issues at West I-10 Junction**
The junction of the South Mountain Freeway on its west end with Interstate 10 may have been an idea conceived many years ago, but the traffic congestion that exists at the area between 59th and 51st Avenues on that freeway during morning and evening rush hours in 2013 is more than extreme. Yet there is no mention in the DEIS of the cumulative impacts and effects of traffic congestion at that proposed junction

5 **D) High-Sulfur Diesel and added benzene increase; Truck Bypass Negated due to added Truck Traffic from Mexico**
The modeling of air pollution impacts in the DEIS do not include the additional air pollution from truck traffic from Mexico. The DEIS briefly mentions the issue, but it claims it has no way to know what impact this would be. Patently absurd. This bypass is also now the designated route of the Canamex Highway, and it is Interstate 8 (south of Casa Grande) to State Highway 85, to Interstate 10, west of the Phoenix metro area. Further, trucks originating in Mexico will be fueled with diesel that doesn't meet the CARB diesel standards adopted by Arizona over a decade ago. In Mexico, there is no regulation about the sulfur in diesel fuel. Once this additional pollution is honestly quantified and factored in, there would be a huge net increase in air pollution from the SMF, and associated increases in asthma, heart disease, premature death, and other adverse health impacts. Truck restriction laws need to be written.

6 2 **E) Air Toxics Already a Crisis but Not Mentioned and Local Specific Data not Gathered nor Updated since 2006**
In 2005, there was an extensive air monitoring of certain toxic chemicals (air toxics) conducted by EPA and ADEQ in a joint effort named the Joint Air Toxics Assessment Program (JATAP). The monitoring sites included a site near St. Johns on the GRIC, and some in west Phoenix and South Phoenix. The JATAP monitoring results were reported in 2006, during a time the data for the DEIS was being gathered, and it found levels of certain toxic chemicals associated with vehicular emissions were above the standard of a one in a million chance of cancer in a lifetime of exposure in the west Phoenix, south Phoenix, and GRIC sites. The JATAP monitoring found in the high end of the monitoring levels, formaldehyde at 34 times this standard; benzene at 8 times this standard, 1,3 butadiene at 7.5 times this standard, acetaldehyde at 3.4 times this standard. And, remember, citizens are being subjected to all of these carcinogens, not just one. Some o chemicals are attributed to "mobile sources," or vehicular traffic burning hydrocarbons. Adding more vehicular traffic emissions by building a freeway where there had not been one would add to this toxic burden. The JATAP results are not included in the DEIS, but instead there is a strange missive about the uncertainty of the risk from these air toxics standards, which is not true. The cancer risk standards have been promulgated and published by EPA after extensive research, and are well-known. See Point B)

7 **F) Risks from Hazardous Materials Transportation Incidents Due to the SMF**
There are no industries using and emitting toxic chemicals in Ahwatukee Foothills, and no hazardous materials (hazmat) transportation issues and risks because none of these chemicals, other than gasoline and diesel, are being shipped into the area, other than incidentally adjacent on Interstate 10, which is east of the area. Since the NEPA process started, Ahwatukee Foothills residents and others have consistently raised concerns about the added risks from the transportation of hazmat on the new NEPA requires examination of cultural, social, and economic impacts, and the new hazmat traffic and risks caused by the SMF would affect all of these topic areas.

8 **G) Blasting South Mountain: Religious, Racial Discrimination of Civil Rights Violations in DEIS**
The DEIS clearly discriminates on the basis of religion and race. ADOT plans for blasting *Muhadagi Doog* (South Mountain) are ongoing civil rights violations .Throughout the DEIS, it is acknowledged that the GRIC and other native American tribes hold *Muhadagi Doog* as a sacred site. From the actual language of the DEIS: "The South Mountains are highly valued and considered sacred by some Native American communities. Building SMF will constitute a violation of the 14th Amendment to the Constitution and a violation of the American Indian Religious Freedom Act as any freeway alternative proposed in the DEIS of the South Mountain Freeway requires blasting away part of *Muhadagi Doog*. New wind patterns caused by cutting thru mountains have not been studied and will cause pollution to be trapped.

Sincerely concerned,
Mrs Nancie Donegan
9 Resident of Foothills Reserve
Also Please save our Church on Pecos. Don't tear it down. Thank

Code	Issue	Response
1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. In May 2012, the Arizona Department of Environmental Quality submitted a revised Maricopa Association of Governments 2012 Five Percent Plan for the region. On July 20, 2012, the U.S. Environmental Protection Agency made an official finding that the Maricopa Association of Governments 2012 Five Percent Plan was administratively complete. This decision ended the sanctions clocks associated with Arizona's decision to withdraw the Maricopa Association of Governments 2007 Five Percent Plan. On February 6, 2014, the U.S. Environmental Protection Agency published a notice in the *Federal Register* proposing to approve the Maricopa Association of Governments *2012 Five Percent Plan for Attainment of the PM-10 Standard* for the Maricopa County Nonattainment Area. In the same notice, the U.S. Environmental Protection Agency stated that it would concur with exceptional event (as a result of haboobs and dust storms) documentation prepared by the Arizona Department of Environmental Quality, which would give the region the 3 years of clean data needed for attainment of the particulate matter (PM_{10}) 24-hour standard. Finally on May 30, 2014, the U.S. Environmental Protection Agency approved the 2012 Five Percent Plan and found the area in attainment of the 24-hour particulate matter (PM_{10}) standard based on monitoring data for the years 2010 to 2012 (see page 4-72 of the Final Environmental Impact Statement for more information).
2	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Issue	Response
3	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Operation of the freeway would cause an increase in noise levels that would vary in intensity depending on factors such as amount of traffic, travel speeds, time of day, and day of the week. Nighttime noise levels would be less than daytime noise levels. Some species rely on hearing to avoid predators, communicate, and find food (Noise Pollution Clearinghouse 2004). As noted in the Final Environmental Impact Statement on page 4-136, an increase in traffic noise may affect the ability of some animals to hear at a level necessary for survival when near the proposed action. In addition, hearing loss resulting from vehicle noise has been shown to occur in some desert animals (Bondello and Brattstrom 1979). As discussed in the Noise Analysis Technical Report in support of the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes that may be elevated above the road, surrounding topography, and any mitigation measures such as barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Phoenix metropolitan area and across the country.
4	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Analysis of impacts in future conditions accounted for cumulative effects of the planned 2035 roadway network including the proposed freeway. 40 Code of Federal Regulations § 1508.7 defines cumulative impacts as "the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency or person undertakes such other actions." The future conditions with and without the proposed freeway are presented in Figure 3-40 on page 3-66 of the Final Environmental Impact Statement. As noted on page 1-13 of the Final Environmental Impact Statement, the 2035 transportation network includes all improvements from the Maricopa Association of Governments *Regional Transportation Plan* except for the proposed freeway in the Study Area. The traffic projections also included Maricopa Association of Governments' projected growth in population, housing, and employment in the Maricopa Association of Governments region, which can result from public or private actions.
5	**Trucks**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Issue	Response
6	**Air Quality**	Assessment of mobile source air toxics is presented in the Draft Environmental Impact Statement beginning on page 4-68 and the summary information about the findings of the Joint Air Toxics Assessment Project study is provided as background information in the Draft and Final Environmental Impact Statements, but the study itself is not relevant to the type of analysis done pursuant to the Federal Highway Administration's mobile source air toxics guidance, which is an emissions analysis. Monitored ambient concentrations of mobile source air toxics (the focus of the Joint Air Toxics Assessment Project) do not inform this type of analysis. While monitoring data can be useful for defining current conditions in the affected environment (to the extent that the monitoring data are current), they don't tell us anything about future conditions, or the impacts of the project itself, which is why an emissions analysis was performed. The mobile source air toxic analysis presented beginning on page 4-77 of the Final Environmental Impact Statement is an estimated inventory of mobile source air toxic emissions for the entire Study Area for 2025 and 2035. This approach was used because the inventory estimate accounts for changes in traffic and emissions on all roadways affected by a proposed project, and would, therefore, be a more reliable predictor of changes in exposure to mobile source air toxics. The Draft and Final Environmental Impact Statements present information and analysis about the proposed action and the enhanced conditions when compared against the No-Action Alternative and would not cause significant adverse effects. The Federal Highway Administration and Arizona Department of Transportation Draft and Final Environmental Impact Statements account for the potential effects when considering both adverse and beneficial impacts. The Draft and Final Environmental Impact Statements provide in-depth discussion of potential air quality impacts of the proposed alternatives. The carbon monoxide analysis presented on page 4-65 of the Draft Environmental Impact Statement and updated on page 4-75 of the Final Environmental Impact Statement represents projected carbon monoxide concentrations along the project corridor, including those proposed interchange locations along the South Mountain Freeway corridor. The Arizona Department of Transportation also conducted a quantitative particulate matter (PM_{10}) hot-spot analysis that is discussed on page 4-76 of the Final Environmental Impact Statement. Both of these analyses demonstrate that the health-based National Ambient Air Quality Standards for carbon monoxide and particulate matter (PM_{10}) would not be exceeded at worst-case locations along the project corridor. The emission modeling developed for the proposed action showed that for the mobile source air toxics study area, there would be little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions (see discussion beginning on page 4-77 of the Final Environmental Impact Statement). The carbon monoxide and particulate matter (PM_{10}) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.

Code	Issue	Response
7	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement. Air quality depends on several factors such as the area itself (size and topography), the prevailing weather patterns (meteorology and climate), and the pollutants released into the air. Cuts through the South Mountains would be expected to produce microclimate differences similar to those produced by a series of buildings in a large city that produce localized wind tunnel effects. The mountain cuts, however, would not affect regional air quality or cause air to be trapped.
9	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)

To whom it may concern,

As a resident in Laveen Village, I can certainly appreciate the positive impact the SR 202 will have in my immediate community. I'm already experiencing a good amount of traffic and congestion that's exists along 51st Avenue and Southern. While I welcome the new freeway and access point, I do share concerns about the noise pollution. In the nicely illustrated video, it mentions sound barriers will exist wherever applicable and I'd like to ask or request that there be an extensive evaluation to ensure similar or reduced levels of noise. Also, has there been or will there be a study with regards to light pollution stemming from this project? (1) (2)

Thank you for your initiatives and consideration to those within the community.

Alex

1	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Visual Resources**	Light from the freeway would be produced from vehicle headlights and taillights and from fixed light poles at interchanges along the freeway. Nighttime users of the park and residents of Ahwatukee Foothills Village may see lines of seemingly crawling vehicles, each with lights front and back. Fixed freeway lighting would be provided for safety reasons only at interchange exit and entrance points. Freeway lighting at these locations would be designed to reduce illumination spillover onto sensitive light receptors such as residential areas (see page 3-58 of the Final Environmental Impact Statement).

Michael Doromal

Document Created: 5/21/2013 2:20:56 PM by Web Comment Form

I am for the loop 202. My family and I moved to Laveen in 2004 and we love our community. Laveen is an underserved community with no hospitals, retail and food establishemnts to serve our community. Not having a freeway increases drive times to other parts of the valley and with all the growth projected for Laveen in the coming years, the situation will only get worse.

1

In addition, this is a shovel ready project that will add hundreds of construction jobs immediately as well as provide more jobs in the area once companies start coming to Laveen. (i.e. the hospital, retail etc).

ADOT Loop 202 South Mountain Freeway Study
1655 W. Jackson Street
MD 126F
Phoenix, AZ 85007

VIA EMAIL

To: South Mountain Study Team

(1) I am opposed to the proposed route of the South Mountain Freeway (SMF) along Pecos Road and through South Mountain Park for the reasons set forth below. Overall, the proposed route along Pecos Road will bring great harm to the adjacent neighborhoods, homes, residents, businesses, churches, and schools, as well as to South Mountain itself.

(2) (3) (4) 1. The proposed route will serve to encourage increased truck traffic through the area, which will no doubt include thousands of trucks from Mexico, which have higher sulphur emissions and are not bound by U.S. emissions regulations, resulting in huge increases in air pollution in the adjacent residential areas. The SMF will amount to little more than a by-pass of the Phoenix metropolitan area by interstate traffic along I-10 and will not significantly improve traffic conditions for the local population. Indeed, during construction local vehicular traffic will be forced off Pecos Road, for several years, and onto the only other two east-west roadways in the vicinity (Ray Road and Chandler Boulevard), resulting in traffic delays and higher levels of air and noise pollution on the surface streets in the area.

(5) (6) (7) (8) (9) 2. Unlike many other highways in the Phoenix area which the Draft Environmental Impact Study (DEIS) compares to the SMF, this new stretch of interstate highway will not facilitate movement of traffic in the Phoenix area itself, but will simply relieve some congestion in the center of the city that now results from the use of I-10 as a route to California for heavy trucks and other cross-country vehicular traffic. Unlike many portions of the other highways that transverse Phoenix and its surrounding communities the SMF will not be built below grade. For this reason alone, the air and noise pollution from the SMF will have a far greater impact on the residential areas that are located between the SMF and South Mountain Park. The air pollution will be trapped by South Mountain itself, so that it will be concentrated in the adjacent residential areas, particularly in the summer months when the winds are predominantly from the south. Furthermore, because the SMF is designed and intended to attract interstate traffic, the concentration of large trucks on the SMF will result in substantially more air and noise pollution than is the case on other highways in Phoenix.

Code	Issue	Response
1	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
2	**Trucks**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Purpose and Need, Lack of Support**	
4	**Noise**	During construction of the proposed South Mountain Freeway, traffic would be maintained along Pecos Road to the greatest extent practicable, similar to the construction process on other highways, such as Price Freeway. However, there would be necessary restrictions and periodic closures that would force east–west traffic to use alternative routes other than Pecos Road. While this detoured traffic would increase noise and air pollution along the alternative routes, this would be a short-term and temporary condition that would end when the freeway construction is completed (see Final Environmental Impact Statement page 4-90).
5	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
6	**Design**	The project team analyzed the belowground option, also called the depressed freeway option. The analysis indicated that depressing the freeway would increase the cost of construction and right-of-way acquisition, displace additional residences, create the need for additional pump stations and detention basins, and still need the installation of noise barriers. Because the belowground option would result in substantially greater costs and residential displacements, this option was eliminated from further study (see Final Environmental Impact Statement pages 3-15 and 3-18).

(Responses continue on next page)

Code	Comment Document

3. The substantial increase in truck traffic that will result from the construction of the SMF will increase the risk to residents of the area of accidents involving the release of hazardous materials. With only two major roadways available, evacuation of the residential areas adjacent to the SMF presents an extremely difficult problem that needs to be addressed and planned for. The DEIS does not even address this kind of potentially catastrophic event. (10)

4. The DEIS fails to address other possible routes for the I-10 Bypass, such as a route along property under the control of the Gila River Indian Community (GRIC), or any other alternative route. One viable alternative that has been completely ignored by the DEIS would be to re-route I-10 south of Casa Grande, west along I-8 to SR 85. SR-85 is already a highway, and could more easily be upgraded as a part of I-10 from I-8 to the point west of Goodyear where it could rejoin I-10 again. Not only would construction of this route be far less disruptive, it avoids the destruction of a large portion of South Mountain Park and would not substantially contribute to the air and noise pollution of the Phoenix metropolitan area. In failing to evaluate other possible alternatives, the DEIS does not comply with applicable law. (11) (12)

5. The proposed route along Pecos Road will result in great harm to South Mountain Park as a recreational area, not to mention disturbing and destroying plant and animal life in the vicinity. It is also noteworthy that South Mountain itself is considered sacred by the GRIC, a fact which has been widely reported but is apparently of no concern to those in charge of making decisions about the SMF. (13) (14) (15)

6. Construction of the SMF along the proposed route carries significant risks to water resources in the area. South Mountain obviously plays a significant role in water runoff, yet the DEIS does not address this issue. Once South Mountain has been dynamited to make way for the new highway, how will runoff be affected? No one knows, and the question is not resolved in the DEIS. In addition, there is a risk to unknown numbers of water wells in the area. What impact will damage to these wells have for residents, businesses, lakes, and golf courses in the area? The DEIS provides no insight. (16) (17)

The proposed alignment ignores much of the development that has occurred in the Ahwatukee area over the past 30 years, which now renders the planned route not only obsolete but potentially catastrophic for residents of the area. For all of these reasons, the DEIS should be rejected as inadequate, incomplete, and contrary to the requirements of law. (18)

Respectfully submitted,

Robert J. Dotson

Code	Issue	Response
7	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Meteorological information was considered in the air quality analyses [*Air Quality Assessment: South Mountain Freeway (SR 202L)*, dated March 1, 2013] conducted for the proposed action. Data from Maricopa County Air Quality Department and from the Gila River Indian Community monitoring station were compared with two, 1-month studies conducted during the winter of 2006 and the spring of 2007 along Pecos Road in the Study Area. According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Reservation Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows winds and stable atmospheric conditions, the wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns will tend to have a flow from the easterly component as the air flows from the east to the lower elevations along the Gila River. During the warmer hours with improved mixing, the flows typically follow the river channel and come from the north and northwest toward the south and southeast.
8	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The Maricopa Association of Governments regional travel demand model forecasts approximately 10 percent truck traffic on the South Mountain Freeway in 2035 (see Final Environmental Impact Statement page 3-64). This percentage is similar to current conditions on Interstate 10 between Loop 101 and Interstate 17 and on U.S. Route 60. Noise modeling for the Draft and Final Environmental Impact Statements used this forecast truck traffic, with the model accounting for greater noise generation by trucks in the future (see Final Environmental Impact Statement page 4-88). Noise mitigation is designed for this predicted noise level, including the noise from trucks.
9	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
10	**Hazardous Materials**	
11	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being

(Response 11 continues on next page)

Code	Comment Document

Code	Issue	Response
11 (cont.)		reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
12	**Alternatives**	In accordance with the National Environmental Policy Act, a range of reasonable action alternatives to carry forward for further analysis was determined through application of multidisciplinary criteria in a logical, step-wise progression. Alternatives were not disposed of or dismissed without a thorough evaluation using the multidisciplinary criteria outlined in the alternatives development and screening process presented in Chapter 3 of the Draft Environmental Impact Statement. The Preferred Alternative was the outcome to this process.
13	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
14	**Cultural Resources**	
15	**Biology, Plants, and Wildlife**	
16	**Surface Water**	Drainage studies have been conducted; culverts would be maintained, and new culverts would be installed to maintain flows under the freeway (see Draft Environmental Impact Statement pages 3-58 and 4-101). Surface water could be altered from runoff drainage; seeding the disturbed soils with native vegetative species would help to minimize runoff and erosion. Best management practices associated with the project Stormwater Pollution Protection Plan would also help minimize runoff. To control construction-related pollution discharges to waters of the United States as defined in the Clean Water Act, the Arizona Department of Transportation would prepare erosion and sediment control plans, details, and specifications using best management practices from the Arizona Department of Transportation Erosion and Pollution Control Manual for Highway Design and Construction and the Arizona Department of Transportation Post-Construction Best Management Practices Manual for Highway Design and Construction.
17	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to state regulations/standards. (See text box on Draft Environmental Impact Statement page 4-108.)
18	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Subject: Comment on Loop 202 South Mountain

(1) (2) Absolutely **not** on the Loop 202 South Mountain Freeway. I moved into the South Mountain community to enjoy the South Mountain Park and do not want this natural habitat ruined by vehicles, exhaust fumes, and accidents with the wildlife that live on the mountains. This is the last natural habitat in the city that you can go to get away from people and vehicles. If you take this away from us, then we will be forced to go outside of the city. This is a sanctuary away from the busy world and it's home to many wildlife that have a purpose.

(3) I'm not seeing very much concern for the wildlife that call South Mountain their home. How will this freeway benefit them? We have taken and take from the wildlife and the environment and it's time that we stop being so greedy and leave well enough alone. This decision can't be all about humans taking more away from the wildlife. All animals are individuals and they have feelings and thoughts and they suffer the pain and the joy that we do. They are entitled and they deserve an opportunity to live. We must stop kicking animals out of their habitat or killing them because we perceive them to be in our way, and learn to co-exist with them.

(4) NO on the Loop 202 South Mountain Freeway. I looked at homes on the south side of South Mountain and considered those because they were isolated from traffic. People who moved into that community did so because of the isolation. If they wanted to live by a freeway, they would have moved closer to it.

Absolutely **not** on the Loop 202 South Mountain Freeway. I moved into the South Mountain community to enjoy the South Mountain Park and do not want this natural habitat ruined by vehicles, exhaust fumes, and accidents with the wildlife that live on the mountains. This is the last natural habitat in the city that you can go to get away from people and vehicles. If you take this away from us, then we will be forced to go outside of the city. This is a sanctuary away from the busy world and it's home to many wildlife that have a purpose.

3

I'm not seeing very much concern for the wildlife that call South Mountain their home. How will this freeway benefit them? We have taken and take from the wildlife and the environment and it's time that we stop being so greedy and leave well enough alone. This decision can't be all about humans taking more away from the wildlife. All animals are individuals and they have feelings and thoughts and they suffer the pain and the joy that we do. They are entitled and they deserve an opportunity to live. We must stop kicking animals out of their habitat or killing them because we perceive them to be in our way, and learn to co-exist with them.

I've tried several times on 2 different computers to submit comments on the Loop 202 South Mountain project and cannot get my comments to go through. When I hit submit, I get a message asking for me to fill in 'country'. I have selected the United States every time and still it will not let me submit.

This is my comment and information.

From: John Dowd
To: Projects
Subject: Opposition to DEIS/SMF
Date: Wednesday, July 24, 2013 11:30:41 PM

To Whom it may concern,
I need to voice my family's strong opposition to the South Mountain Freeway. My wife and I have both grown up in and around the Ahwatukee area and Pecos Road has played a large role in our staying in this small community. We use Pecos in its current form regularly for running and biking . It is one on the reasons we are drawn to this area. A freeway will keep us from doing those things and damage the seclusion many in our community sought out in this area.

Besides our personal reasons we believe it is an ill conceived and outdated plan for the whole area. The proposed plan will create undue stress on the smaller streets and direct high volumes of traffic through school zones and residential areas (ex, Desert Vista/no 32nd street entrance)The plan is outdated and needs to be somewhere else. I don't doubt Phoenix could benefit from a bypass freeway, but not where Pecos stands. It needs to be on GRIC land or further south. It is time Phoenix put together a new plan that isn't based on drawings from 1985.

Thank You,
John and Kate Dowd
(members of PARC)

Code	Issue	Response
1	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
2	**Traffic**	The study has considered concepts for parallel multiuse paths, however the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
3	**Alternatives**	The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix (see Figure 3-8 on page 3-15 of the Draft Environmental Impact Statement). The interchange would have required the displacement of over 100 homes and would have been located near an existing high school. The City recommended that, based on these impacts, the interchange be removed from the study. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).

I have lived in the valley since 1974 and have seen a lot of highway construction over the time. I have also seen a lot of re-doing the freeway construction to make it wider, add ramps, etc. Wouldnt it make sense to go out to connect to Loop w101? Then at a later date, build an addition to 71st ave or 59th ave? You know the east bound cars, semis going towards Tucson will use it no matter where it is located, so why not get them in the direction sooner and it would be nice to have less semis in the city limits on our roads. Also people in the east, south valley needing to go to sporting events, etc in the west valley will have a easier, less congested trip. Should be a toll road so that tax payers who do not use it dont have to pay for it.

ADOT Loop 202 South Mountain Freeway Study
1655 W. Jackson Street
MD126F
Phoenix, AZ 85007

Attention to: study team panel

I am writing in support and vote YES to the Loop 202 South Mountain Freeway, specifically the W59 alternative.

As a Laveen resident I am forced to deal with congested traffic along on the Baseline corridor from 99th Ave to I10 . The severe lack of retail shopping, restaurants, medical facilities, and entertainment forces revenue and tax dollars to be driven outside of Phoenix as residents frequent Avondale, Tolleson, Chandler, Scottsdale, and Tempe to shop, dine, etc. This freeway and the socio-economic infrastructure it will bring to our community is desperately needed!

After researching this issue, allow me to share some of the reasons I urge you to approve this freeway expansion:

- 64.3% of likely voters in Maricopa County support construction of this freeway
- In a separate study, also commissioned by We Build Arizona, 59% of likely voters in Ahwatukee and Laveen Support this freeway as well.

- It is time to end the commuter traffic jams and congestion we experience not having easy access to the freeway and connection of the East/West Valley.
- If we don't build the South Mountain freeway, traffic in the region will get much worse over the next two decades. According to ADOT's own study:
- Traffic on the I-10 between Ahwatukee and Goodyear will grow 28%
- Another 103,000 cars will use Broadway Curve each day
- Another 38,000 cars will jam the Tunnel every day
- Morning and evening commute times will increase 39% to 82%
- Traffic congestion on city streets will increase 46%
- The same report indicates the project will also reduce air pollution by reducing the time vehicles spend stuck in traffic
- The project will create 30,000 jobs during the five to six year construction period and result

Code	Issue	Response

(Comment codes begin on next page)

Code	Comment Document

in a $2Billion investment in the Phoenix-area economy.

- The money to the build the freeway is in the budget, it was voted on and approved TWICE (1985 & 2004 respectively),we voted for the 1/2cent tax increase in 2004 to support the build.
- There is no more important project to the area's commuters and workers than the South Mountain Freeway project. Please vote to Build It NOW!

Please consider the following request when making your YES vote:

1 2

- Design and construction of community value additions such as attractive sound barriers and a bike/running/pedestrian pathalong the length of the freeway as well as the use of Rubberized asphalt as per the ADOT's "Quiet Pavement Pilot Program" initiated in 2002.
- We have award winning examples in Tucson, AZ which received an excellence award in 2002 by the Federal Highway Administration (FHWA) for the Diamondback bicycle/pedestrian bridge as well as it's Intelligent Transportation Systems excellence award for ITS public-private partnership.
- Other examples are the Schuylkill Expressway in Philadelphia, the Rockville Parkway in DC, and the San Antonio,TX Freeway systems ranked best among largest US urban areas.

Thank you in advance for your vote of YES to support of this freeway!

Sincerely,

Erika

1	**Design**	The study has considered concepts for parallel multiuse paths, however the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
2	**Noise**	The Arizona Department of Transportation plans to use rubberized asphalt on the proposed South Mountain Freeway. Rubberized asphalt would be used as the top level of paving; it is discussed on Final Environmental Impact Statement page 4-99 and in the sidebar on page 4-100. Studies show that rubberized asphalt, on average, reduces noise levels by about 4 A-weighted decibels, which is a noticeable reduction. The noise analysis completed for the Final Environmental Impact Statement does not include a reduction for rubberized asphalt because the Federal Highway Administration does not currently allow such a reduction. So, the actual noise levels along the freeway may be as much as 4 A-weighted decibels lower than the mitigated noise levels shown in the Final Environmental Impact Statement because of the additional reduction provided by the rubberized asphalt.

ADOT

RE: South Mountain Diesel Truck Bypass DEIS

I arrived in Phoenix in August, 1964 to attend Arizona State University. Besides living in southern California for 6 months in 1971, I have lived in Phoenix since then. In 1964, things were very different in terms of transportation corridors. The Black Canyon Freeway (I-17) was the only existing freeway. There was an underpass built under I-17 at the Durango curve to accommodate the coming extension of I-10. It should have remained there. By moving it through central Phoenix and having the loop 202 and highway 51 inter change, ADOT/MAG have created one of the worst bottlenecks in America.

As metropolitan Maricopa County grew, the first new freeway opened was I-10 from the Sky Harbor Airport area south towards Tucson. State route 60 going east through Tempe was next. At that point, ADOT created the first traffic nightmare in the making – what is commonly referred to as the Broadway curve, as if the curve in the road is what is creating the terrible rush hour congestion. It was about then that the public noticed that we could have a coming congestion problem similar to what was occurring in southern California. What was said by ADOT then was "don't worry – we will learn from their mistakes and that will not happen here". Really?

By now, anyone who drives on urban freeways understands that besides sheer volume, two biggest causes of congestion are interchanges and lane changing. A half interchange is just as bad as a full interchange. The engineering at the I-10, State 60, and the State 143, with entrances and exits at Baseline and Broadway roads is abysmal. Nothing will ever fix this mess, including building the South Mountain Truck Bypass. On the western side of this truck bypass, ADOT/MAG wants to build another half interchange halfway between the I-10/101 half interchange and the I17/I10 interchange just about 5 miles in each direction. During rush hour the congestion on the I-10 from the I17 to the 101 is terrible already. ADOT's own study group recommended that the western leg of this truck bypass should meet at the I10/101 half interchange. This simple commonsense recommendation has been ignored. Why? Perhaps because of the desire to accommodate a Phoenix city councilman's demands for a hospital and additional business development in Laveen? I do not remember anything about a hospital and business development when voting to increase sales taxes to improve transportation in Arizona.

In the mid 1980's, the citizens of Arizona were told that we need to spend more money to fix these problems – a 20 year increase in sales taxes. MAG then became involved. Years later, a second request was made for even more money to fix the transportation problems. Twice now the citizens of Arizona have voted to give ADOT/MAG BILLIONS of dollars to improve the transportation issues in Maricopa County and what do we have? A foolish proposal to spend $100 million PER MILE to build a truck bypass south of the Phoenix metro area that they say will perhaps make the congestion and pollution problems better. At least 2 BILLION DOLLARS for twenty two miles of truck bypass. There aren't words to describe this proposal.

ADOT has already spent over $20 million creating the recently released Draft EIS. This is criminal. Now they are spending untold amounts of taxpayer dollars advertising their meetings to sell this proposal to the public, providing free transportation and parking and

who knows what else, full well knowing that technically the Draft EIS can not support itself.

They say that this truck bypass will reduce air pollution in the Broadway curve area. They then say that they don't know what it will do to the pollution in the Ahwatukee foothills area since the truck bypass is not there yet. They say that they don't know about the volume of trucks burning high sulfur Mexican diesel fuel that will pass by Ahwatukee and through west central Phoenix, even though the number of trucks passing through the Nogales port of entry are counted every day. All this truck bypass will do is possibly shift the air pollution from one area to two other areas. The possibility of a hazmat disaster right next to Ahwatukee is not even considered in this DEIS. How would the thousands of residents get out in time with something like a chlorine spill? They would not be able to escape.

When ADOT built I-10 through the middle of the Gila River Nation's reservation years ago, many promises were made, but not kept. This is one reason that the GRIC does not trust working with ADOT at this point in time. The South Mountain has tremendous cultural and religious meaning to the Gila nation – it is called Muhadagi Doog. Yet ADOT/MAG sees no problem blasting away the western end of the mountain for its truck bypass. There are laws protecting the Phoenix North Mountain preserve, but I guess the Gila Nation's religious site does not matter when it comes to building a truck bypass.

This South Mountain Truck Bypass is a total disaster in the making, from the sheer financial cost to the increased pollution problems to the trampling of the Gila Nation's culture. It is nothing more than ADOT listening to the trucking industry instead of watching out for the best interests of the citizens of Phoenix and Maricopa County. It should be immediately scrapped and the money spent on a truck bypass along the I-8/State route 85 corridor well west of metro Phoenix.

4	**Trucks**	
5	**Hazardous Materials**	
6	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.

Subject: HEAT ISLAND CREATION IN PHOENIX

ADOT,

1 Much has be said about the heat island that all of the concrete and steel has created in the Phoenix Metro area in the last decade. The result is nighttime temperatures that stay in the 90 + degree range all summer. As a result, we get more dust storms than rain storms anymore. When a real monsoon rainstorm finally manages to force itself into the metro area, it is so severe that extreme damage from micro bursts occurs. Building a concrete and steel band a couple of hundred feet wide that runs 20 miles along the entire south side of our metropolitan area will be the final straw that will cause the monsoon storms to never enter our area - the rain will continue to stop just north of Casa Grande and our low temperatures will soon remain over 100 degrees overnight all summer long. How do you plan to "mitigate" for that in building your diesel truck bypass freeway?

1	**Heat Island**	As buildings, parking lots, roads, and other infrastructure replace open land and vegetation, an urban heat island may result. The heat island effect is of a regional nature and, therefore, there is no requirement to analyze potential impacts and no possibility of determining the localized contribution at the project level to the regional heat island effect. It is likely, however, that a proposed project such as the South Mountain Freeway would be a minor contributor to the overall issue.
2	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. 1 MR. DUGANZ: Regarding the Draft Environmental
2 Impact Statement, the original plan, over 30 years ago,
3 envisioned this freeway as a four-lane commuter freeway, below
4 grade, minimizing noise and air pollution. The original
5 developer, Charles Keating, donated land for this when Lakewood
6 was built.
7 ADOT changed, as recently as four years ago, to a
8 eight-lane super diesel truck bypass freeway for the trucking
9 industry, not for the residents.
10 This DEIS, that ADOT has spent over $20 million
11 for, is a fraudulent study to justify this, not analyze it,
12 analyze the impact.
13 It will be destroying over 200 homes, a church,
14 wellheads, and the lifestyle of Ahwatukee Foothills and
15 Lakewood. The proof is ADOT always planned this by offering,
16 over three years ago, before this DES was even released, to buy
17 a church and buying up homes and properties.
18 The cost of this fiasco will be over $100 million
19 per mile. And that is minimal, before ADOT has to mitigate
20 problems not even yet encountered. It's the most expensive
21 freeway ever built in America.
22 It will do nothing more than move air pollution,
23 not reduce it.
24 ADOT engineering, over the past 30 years, has been
25 awful, blowing billions of dollars of taxpayer money. Their

1	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
3	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to State regulations/standards. (See the text box on Final Environmental Impact Statement page 4-108.)
4	**Acquisitions and Relocations**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The Arizona Department of Transportation purchased some right-of-way along Pecos Road when it was adopted as the freeway alignment in 1988 (see Draft Environmental Impact Statement page 3-53). Should another alternative be adopted as a result of this study, the Arizona Department of Transportation would dispose of the land that has been acquired. Federal Highway Administration regulations do not allow the ownership of right-of-way to be a factor in the decision regarding the selection of an alternative.
5	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

eight lanes of traffic.

Also, I think economically it would be bad for Phoenix, because when you create more and more large interstates going in and out of a major city, you encourage urban sprawl, which takes a lot of money outside of the center of Phoenix and distributes it to make it wider and wider and wider urban sprawl, which Phoenix already has quite a bit. And that's all I wanted to say. Thank you.

THE FACILITATOR: Thank you.

For those of you who may not have heard, the last bus is leaving in about three minutes for all destinations out there.

Cheryl Dumpert.

Cheryl, could I ask you to use this microphone, please. Thank you.

MS. DUMPERT: Hello, my name is Cheryl Dumpert and I'm a member -- I live in Ahwatukee, I've lived there since 1990. I'm an avid hiker and I helped extend the parking at the Telegraph Pass parking lot. I'm a member of several hiking groups with thousands of members that hike South Mountain regularly.

Have you ever had a slice of pie, maybe just a sliver, but oh, it's so good, you want another and then another, and before you know it, you've eaten the whole

pie? Well, think of South Mountain like that. Just one sliver today and maybe another sliver tomorrow and before you know it, the whole park is eaten up by miles and miles of freeways. (1)

You know, you never hear of the City of New York cutting into the Central Park, do you? Not at all. As you can tell, I'm rather upset about this. Have you ever hiked South Mountain? It's quiet, you hear the coyotes, you see the cacti, and you hear the lizards -- excuse me, you see the lizards. We can't experience that on a freeway. Why don't we demand other alternates like light-rail expansion; gridlocked cities do and they do it really well. When can you take the light rail to a baseball game from South Mountain? Never. You have to drive miles to actually get on the light rail. (2)

Arizona destroys and builds. What will be left for future generations? I ask you, have you ever hiked or experienced South Mountain trails? To be a part of this decision, you must make it a point to experience the beauty, to hear the quietness. Have you been there when there's a no-drive Sunday, when there are no cars allowed on South Mountain trails? It's quiet, it's peaceful, and it's even more incredible than any other day of the week. (3)

And honestly, as a member of the Ahwatukee community, I have heard very little about this. I live

within a mile of the I-10, I read about it today in the newspaper, very last-minute notice. I think you need to give more people an opportunity to hear about this. Obviously, there's more meetings that will be held for more speaking opportunities, and I'm going to be back and I'm going to bring friends.

As far as the polling, I haven't been polled, I haven't seen signs on the hiking trails to notify my other hiking friends about these changes. South Mountain, like other people have said, it's a beautiful place and it's very passionate to us hikers, so please don't cut into it. It's not a piece of pie. Thank you.

THE FACILITATOR: Thank you.

It is now 8:00 p.m. This concludes the Loop 202 South Mountain public hearing. Thanks to everyone for your participation and your support throughout the day. Have a good evening.

4	**Public Involvement**	Given the complexity, importance, and level of public interest in the Draft Environmental Impact Statement, a key component of the public outreach process was providing detailed information to members of the public—before release of the Draft Environmental Impact Statement—about how they could participate in the Draft Environmental Impact Statement review and comment process. This campaign began 30 days prior to the Draft Environmental Impact Statement release and focused on informing the public of the upcoming Draft Environmental Impact Statement release and described opportunities for participation and input (see text beginning on page 6-23 of the Final Environmental Impact Statement). The public hearing for the Draft Environmental Impact Statement was held on May 21, 2013, at the Phoenix Convention Center from 10 a.m. to 8 p.m. The public hearing's main purposes were to present findings of the Draft Environmental Impact Statement and to obtain public testimony or comment on the Draft Environmental Impact Statement. Notification for this event was distributed in the following ways: · media alert · press releases · direct mail to approximately 87,000 residences and businesses in the Study Area · newspaper display notices in the *Ahwatukee Foothills News*, *Arizona Informant*, *Arizona Republic*, *East Valley Tribune*, *La Voz*, and *West Valley View* · Web site banner ads displayed by the *Ahwatukee Foothills News*, *Arizona Republic*, *West Valley View*, and the *East Valley Tribune* · radio advertising with 25 spots each on KESZ-FM, KMXP-FM, KNIX-FM, KGME-AM, and KFYI-AM
5	**Public Involvement**	No public vote was held as part of the Draft Environmental Impact Statement review process. Members of the public were encouraged to participate and submit their comments on the Draft Environmental Impact Statement during the 90-day comment period. The proposed Loop 202 South Mountain Freeway has been a critical part of the Maricopa Association of Governments' Regional Freeway and Highway System since it was first included in funding approved by Maricopa County voters in 1985. It was also part of the *Regional Transportation Plan* funding passed by Maricopa County voters in 2004 through Proposition 400.

you to reconsider the plan to build a freeway with so much impact on South Mountain Park.

THE FACILITATOR: Thank you.

Max Dunlap.

MASTER DUNLAP: Hello, my name is Max Dunlap and this freeway would help us because we could travel a lot faster, because probably now it would take about 30 minutes to get around the mountain. We would have a lot more things and wildlife, even though it could lose some space. It would have -- we could just move all the extra we have from the mountain, and just put it on another side and all the animals would have all the space they already did have.

And, well, it's also that we have so much traffic that a lot of extra smog goes into the air and with this freeway less smog would go into the air, which means less pollution. And a lot of more happy people that can just travel from place to place.

THE FACILITATOR: Thank you.

Julie Dunlap.

MS. DUNLAP: Thank you for listening to our concerns. I live in Laveen, and we've lived there for going on eight years. And we purchased our home

with the intention that the freeway had been approved. So we really struggle with being able to get to the places that we need to get to, particularly having a, you know, young son. We don't have the resources that we need. So we just really want to stay in Laveen. We want Phoenix and the Laveen area to stay liveable, but without the freeway, we're stuck in traffic. We can't get the hospital, the resources and things that we need without it.

So we just encourage moving forward with the plan for the freeway. Thank you.

THE FACILITATOR: Thank you.

Lindsay Bateman.

An announcement, please. The last bus will be running in about five minutes, at 7:30, for all destinations, orange, green, and blue, routes 1, 2, and 3.

MS. BATEMAN: Just talk? All right.

THE FACILITATOR: Are you Lindsay?

MS. BATEMAN: I'm Lindsay Bateman. I'm just here to support the South Mountain Freeway. I'm a resident of Laveen. And I'm just looking forward the economic development open to our area, and really relieve the congestion on the surface streets. And

Subject: South Mountain Freeway

Here are my comments regarding the freeway. I read a good portion of the draft plan, but may have missed some of the points, so if they were addressed, some of these comments may not be relevent.

- This freeway is sorely needed. As John McCain might say, "build the dang freeway."
- Cutting through some of the ridges of South Mountain may actually be a benefit. This could make the drive more scenic. I actually like the idea of driving through bluffs to get to the other side of the metro area. Freeways and highways all over the country are like this. As for it being sacred to the Indians, they could make that claim for every square mile of the country, but the fact of the matter is that they don't own that land.
- For those of us connecting to Loop 101 on the west side, I think it would be beneficial for this freeway to connect directly to Loop 101 rather than having to travel on I-10. I also think that trucks using this route as a bypass should connect to I-10 as far west as possible. To me, it makes more sense, even though it is a few additional miles of freeway. (1)
- I know there are projections of future volume, but I don't recall anything indicated that additional lanes could be added at a later date. Three lanes plus HOV in each direction will not be enough within a few years after the freeway's construction (see the Santan Freeway as an example). (2)
- Building I-11 from Casa Grande to Las Vegas could further divert truck traffic, perhaps forestalling congestion on this freeway.
- The Gila River Indians have finally indicated that no further votes will occur. Fortunately, you had already disregarded any route through their reservation. To me, everything that has occurred appears to be stall tactics.

Thank you,
Rusty Duplessis

Code	Issue	Response
1	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	The proposed freeway at one point featured a ten-lane freeway cross section, with three general purpose lanes in each direction and sufficient right-of-way to add a high-occupancy vehicle lane and a general purpose lane in each direction in the median in the future (when warranted by travel demand). The Maricopa Association of Governments, in association with the Arizona Department of Transportation, later examined an eight-lane freeway cross section, with three general purpose lanes and one high-occupancy vehicle lane in each direction (see Draft Environmental Impact Statement pages 3-19 and 3-20). Such a configuration would reduce the right-of-way needed for the freeway without jeopardizing its ability to meet the purpose and need criteria. Additionally, the eight-lane freeway would cost about $200 million less than the ten-lane freeway (see the Draft Environmental Impact Statement, beginning on page 3-23). Because the eight-lane freeway would meet the project's purpose and need and would do so with lower costs, less right-of-way acquisition, and fewer impacts than the ten-lane freeway, it was carried forward for further consideration.

Subject: Additional comment on the South Mountain Freeway

Additional comment on the South Mountain Freeway:

A response to a columnist in the East Valley Tribune:

Real estate was sold along that path for years with the signed agreement by the buyer that the property was in a transportation path. For the cost of destroying and building a freeway through that area, a truck route could be developed through Gila Bend to I10. The developing plan for rail service between Phoenix and Tucson needs additional comment. (1)
Car wrecks backup traffic daily. Alternative lanes for trucks only are not being developed. The bottom line is hold fast on signed agreements, develop cheaper cross state routes, develop rail alternatives, and tell greedy developers we have enough housing, gas distributors, mini marts, etc., south of South Mountain. Destroying beautiful areas in trade for inefficient transportation routes and leeching developments just doesn't fly. Was the melon truck driver cited? (2) (3)

Code	Issue	Response
1	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
2	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
3	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

CALLER REMARKS/QUESTIONS:

Hello, the construction on the 202 to the 67th Avenue and 63rd Avenue I'm just calling to oppose it. To let you know if this goes through I will lose my job, my house, my kids won't have food. I just really would not allow this to go through so if you get this message please call me back so I can talk to somebody. I do not want this to happen so give me a call back. Bye.

RESPONSE:

I spoke with Dustin on Friday, July 19 at 12:30 p.m. Dustin works for the Country Garden Charter School and has serious concerns about the future of the school given the proposed plans for the South Mountain Freeway. Dustin had attended one of the public meetings where the design staff reassured him that the preferred alignments do not put the Country Gardens Charter School in jeopardy. Dustin did not trust this response and requested a letter in writing from ADOT stating that Country Gardens will not be acquired and demolished for the freeway. I spoke with Reggie Ronaldo from ADOT Right-of-Way and although Reggie said he did not have the authority to approve such a letter, Reggie felt that it would not be appropriate at this time because we are not in the design phase yet. Reggie explained that current plans show that the school will not be affected, although a small portion of their land may be needed (at this time he couldn't elaborate on how much or where). I explained this to Dustin on Monday, July 22 at 12 p.m. and Dustin reiterated his frustration and that his interpretation of this response means there is no guarantee his school won't be bulldozed to the ground. I encouraged him to continue to stay engaged in the process and reminded him we still had a ways to go before any design is finalized and construction begins.

Jessica Amend
HDR/InfraConsult

1

Code	Issue	Response
1	**Acquisitions and Relocations**	The alignment of the W59 Alternative had not been changed in the area of the Country Garden Charter School. The freeway would not directly affect the school, but would run just east of the school. Design of each action alternative, while completed to an equivalent level, is still preliminary and subject to change because designs would be further refined. The Arizona Department of Transportation would work with businesses during the design phase to identify ways to minimize property impacts that allow the business to continue operations

Fanie Duvenhage Document Created: 5/8/2013 5:42:38 PM by Web Comment Form

Thanks for the opportunity to submit comments. I have one concern that are not address in the study:

1 Pecos Road is a primary path for cycling in the Phoenix area. The South Mountain Freeway's Eastern path (E1 alternative) destroys the current wide cycling lane and leaves only Chandler Rd. as an option. The cycling path on Chandler is not adequate for the current volume and I did not see any mention of this issue or a proposed replacement cycling paths or lanes in the current plan. Were any of the cycling clubs approached or consulted on this issue?

2

Code	Issue	Response
1	**Traffic**	The study has considered concepts for parallel multiuse paths, however the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
2	**Public Involvement**	This study, which began in July 2001, is expected to be completed in 2014. During the study process, community members have had and will continue to have various opportunities to ask questions, express opinions, and provide comments about the proposed action. Specific communication and outreach opportunities are presented in Chapter 6 of the Final Environmental Impact Statement. The project team has not been formally approached by any cycling clubs regarding concerns related to the loss of Pecos Road as a bicycle route.

From: Doug & Linda Dynes
To: Projects
Subject: Stop South Mountain Freeway
Date: Wednesday, July 24, 2013 2:13:40 PM

Hello,

Please use my email to help not having the South Mountain Freeway built here in Ahwatukee or the South Mountain Park areas. As residents here in Ahwatukee for 18 years, my husband and I have enjoyed the quietness and beauty of South Mountain and the area. We live in Lakewood, which would be very close to the new freeway location, and the noise and dirty particulates would create issues that we do not believe would enhance the quality of life and health that we have here. The freeway would allow for easy access for us, but it also would allow the same for burglary and other crime to come in to our area. So far, we feel safe here and the thought that a freeway could allow for crime to come into our neighborhoods just adds to our belief that this freeway should not be built here.

Please do not build the South Mountain Freeway and change the Ahwatukee community and life forever. Keep it the beautiful neighborhood that it is to raise a family here as we have.

Thank you for your time.
Sincerely,
Linda (and Doug) Dynes
16439 South 34th Way
Phoenix, Arizona 85048

Code	Issue	Response
1	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
4	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement beginning on page 4-91).

From: Sierra Club on behalf of Linda Eaton
To: Projects
Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 10:44:31 AM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(3) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(4) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(5) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(6) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you. How about repairing the existing crumbling roads instead of building new ones in Maricopa County as usual. Have you drove on the roads in Northern Arizona lately, hope no one wrecks in one of those 3 foot pot holes and sues the hell out of you. Give back the Counties their monies so we can fix our roads.

(7) Sincerely,

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Health Effects**	
6	**Section 4(f) and Section 6(f)**

Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1 It is clear that ADOT has never considered Alternatives. It is shameful the amount of money spent on this study when some very obvious Alternatives should have been considered.

For example the 2+ Billion $ being spent could buy A LOT of express busses for the entire region to go from major residential areas to major employment areas. More people are working from home, tele commuting, AND taking the express busses (Pecos rd. express station is packed!!!)

You are ADOT Transportation Not ADO Construction. This is a seriously flawed study for many other reasons as well, but lack of public transport is a epic fail.

1	Michael Ellegood Document Created: 5/13/2013 11:33:30 AM by Web Comment Form The South Mountain Freeway has been on the books for 28 years. Meanwhile the Valley has grown as has traffic and resultant congestion. Trans-continental truck traffic has grown as well. It is time to build this project! We have studied it to death, we have examined all of the alternatives, we have spent millions of taxpayer dollars examining, re-examining, considering, meeting, discussing - we need to build it! Several years ago, in my role as Maricopa County Transportation Director, I received a complaint from the St. Johns community on the GRIC concerning truck traffic through this small community on 51st Avenue. I personally went to the community to witness the issue. The concern was indeed valid. This small, quiet, native american community was the recipient of dozens of trucks, seeking a bypass around central Phoenix. In spite of a 25 mile per hour speed limit, these trucks were traveling at speeds nearing 50 mph! No residential community deserves this. The South Mountain Freeway will relieve this problem. The time is now, let's build it!

Subject: Comments on Loop 202 Sount Mountain freedway

I attended the Foothills Golf course open meeting on June 18 and I would like to submit the following comments.

I am OPPOSED to the new freeway for the following reasons.

1. Environment impact.

Pollution.
(1) Fact - with increased traffic will come increased pollution behind South Mountain impacting 75,000 people. I understand your study states you have met the federal standards. Regardless of the federal standards, pollution is pollution no matter what number you assign it. I am not comforted by some federal standard. Federal government doesn't have the best track record with much they are involved with. I don't trust your study or the federal standards you propose it meets. I lived in Denver and I know first hand what the brown cloud of pollution is and does to humans when bumped up to a mountain.

Hazard materials.
(2) Fact - trucks will hazard material be allowed to flow through that area. Along the way are schools and peoples homes. That is simply not acceptable to expose 75,000 to that type of risk.

Code	Issue	Response
1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Meteorological information was considered in the air quality analyses [*Air Quality Assessment: South Mountain Freeway (SR 202L)*, dated March 1, 2013] conducted for the proposed action. Data from Maricopa County Air Quality Department and from the Gila River Indian Community monitoring station were compared with two, 1-month studies conducted during the winter of 2006 and the spring of 2007 along Pecos Road in the Study Area. According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Reservation Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows winds and stable atmospheric conditions, the wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns will tend to have a flow from the easterly component as the air flows from the east to the lower elevations along the Gila River. During the warmer hours with improved mixing, the flows typically follow the river channel and come from the north and northwest toward the south and southeast.
2	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document
3	Noise. Fact - I now live 1 mile from I-10. I can hear I-10 from my yard. If you add another freeway, that noise just doubled because I am also 1 mile from the 40th/202 intersection. Walls will not protect me from the additional noise.
4 5	Destroy South Mountain terrain. By cutting through the mountain it destroys the land, a mountain, animals and nature. For what trade off?
6	2. Crime. Fact - 51st avenue is a crime ridden area. Fact - no one at the meeting on Tuesday could speak to the potential increased crime because no study was done. Common sense will tell you that if you open 51st avenue to Ahwatukee crime will increase. Crime will now come from the west. The new road will invite new crime and provide for an additional escape route. It will provide the criminals new homes to rob and steal from which were otherwise not easily accessed and not worth their time. That will translate into higher homeowners insurance premiums - increased risk means increase premiums. Ahwatukee is known for low crime because it is protected naturally by South Mountain and the Gila River community. Don't want it!
	3. Coyote/Illegals new route. As if we don't already have problems with coyotes/illegals passing through Phoenix. This gives them another route and another pathway for our police to monitor. Our police are already stretched thin. Why would you want to add this additional burden? Not acceptable.
7	4. Gila River Community. They got it right - no build. If they can have such a strong voice, also should Ahwatukee. Put it to vote for the Ahwatukee people just like Gila River did.
8	5. Who benefits? I question who really benefits from this road. The truth isn't fully disclosed. For truckers, it adds another route - no benefit to

Code	Issue	Response
3	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Noise barriers are designed to provide a substantial reduction in noise levels along freeways, but do not and cannot eliminate noise from passing into nearby neighborhoods. Just because noise can be heard does not mean that noise barriers are ineffective. Even at the levels considered "acceptable" by the Arizona Department of Transportation Noise Abatement Policy and Federal Highway Administration regulations, noise is still readily audible and can be heard for some distance from the freeway.
4	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Biology, Plants, and Wildlife**	
6	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
7	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. No public vote was held as part of the Draft Environmental Impact Statement review process. Members of the public were encouraged to participate and submit their comments on the Draft Environmental Impact Statement during the 90-day comment period. The proposed Loop 202 South Mountain Freeway has been a critical part of the Maricopa Association of Governments' Regional Freeway and Highway System since it was first included in funding approved by Maricopa County voters in 1985. It was also part of the *Regional Transportation Plan* funding passed by Maricopa County voters in 2004 through Proposition 400.
8	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.

Code	Comment Document
9	Ahwatukee. For developers - opens up new land options on the west side to build because now undesirable land becomes valuable due to quicker access to either side - no benefit to Ahwatukee. Time savings was 6 minutes to downtown. For the damage incurred, that is not a trade off for Ahwatukee. I am not one of 138 of those who will lose their home - there isn't enough money to compensate for that loss. That impacts peoples lives forever - no benefit to Ahwatukee.
10 1 6	6. Community feel. Ahwatukee is known for it's quite, low crime and small committee feel. That is why I bought here. A new freeway will destroy the very quality that Ahwatukee was built on. For what trade off? More pollution and crime.
11	7. Window of opportunity is closed. ADOT had years to make this happen when the number of people in Ahwatukee were a handful and before this became home to 75,000 people and schools. I understand all the laws limiting ADOT from stopping developers building. In life that is called "too bad". I had a lengthy discussion with the ADOT man at the meeting about this topic. So now because ADOT can, they want to disrupt a community because they can. I say your window of opportunity is lost, so too bad, no build in Ahwatukee.
7	8. I did my own poll. I asked this question to each of the ADOT people at the meeting I spoke with - 5 in total. I asked them if they lived in Ahwatukee. Each one said "no". I then asked if they would move their family, grandkids, parents, sisters/brothers and cousins to this area if there was a freeway built? 1 said - he couldn't answer that. 4 said - no. That says a lot.
12	Progress isn't always the right answer if you destroy land and people in the way. You can't undo the damage once done. When are we going to learn from past mistakes? Please do NOT build Loop 202 South Mountain freeway....because it is the right thing to do for Ahwatukee as a whole.

Code	Issue	Response
9	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
10	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement beginning on page 4-91).
11	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

1 2 3 4 5

The environmental impact of the proposed Loop 202 freeway goes way beyond the biological and chemical issues that will ensue, in that the entire environment of a quiet and beautiful area will be ruined. The truck traffic (which is rarely mentioned in any discussions) that will use this route will ensure that.

This route should have been, or should BE, planned much farther south in an area that will not impact the residents from whom the state and city have been glad to reap taxes.

Code	Issue	Response
1	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The Maricopa Association of Governments regional travel demand model forecasts approximately 10 percent truck traffic on the South Mountain Freeway in 2035 (see Final Environmental Impact Statement page 3-64). This percentage is similar to current conditions on Interstate 10 between Loop 101 and Interstate 17 and on U.S. Route 60. Noise modeling for the Final Environmental Impact Statement used this forecast truck traffic, with the model accounting for greater noise generation by trucks in the future (see Final Environmental Impact Statement page 4-88). Noise mitigation is designed for this predicted noise level, including the noise from trucks.
4	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-170 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
5	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.

MS. ELLIS: Christine Ellis. My address is 1520 West Glenhaven Drive, Phoenix, 85045. I'm definitely not in support of the 202 coming in through Ahwatukee. I don't see the reason that it would come in and destroy our neighborhoods. I see that we really need to work with Gila River Indian community in hopes that they can put it down on their land and find a way to make that work. Otherwise, I don't really see why we even need this. I don't think it's become really clear.

I don't feel -- I don't see why Interstate 8 isn't a viable option, why they don't use it now. I don't see the need for the damaged air quality. I have not seen anything that has made me feel like this is a great idea for Ahwatukee or the community in general, and especially the Gila River community taking down South Mountain and cultural icons that are just -- it's religious.

I don't feel that it's fair for the Gila River Indian community to give up such a spiritual part of their land, and so that's just my opinion. I do not agree to follow through with this 202 taking all these families and churches and schools. Ahwatukee is such a -- we're here for that reason. We are closed off. It's quiet, it's nice and I don't

NO WAY ADOT is shoving this freeway down our throat and we do not want it in Ahwatukee. The only benefit we get is Air Pollution, Noise Pollution, and Truck traffic. If the goverment is For the People by the People why are you not listening to the people of Ahwatukee. Or is it a greed thing only to benefit the few who will profit from the freeway.

4

South Mountain is why I live in Ahwatukee I hike there, I walk my dogs there, I ride my mountain bike there, and I spend time there to get away from the bustle of the city and you want to destroy a piece of it also. Please do not destroy my mountain. If the goal it to reroute I-10 truck traffic around Phoenix why not use I-8 to around Gila Bend then build a freeway along the AZ 85 alignment. Do Not destroy our community and Mountain with a freeway we do not want.

Ahwatukee -- southeastern portion of Ahwatukee.

That's all I have to say.

* * *

MR. ELTERS: My name is Bassam Elters, B-a-s-s-a-m E-l-t-e-r-s.

My comments are that I support the Loop 202. I've lived in Arizona for 30 years and in the Valley for nearly 10 years. The traffic congestion in the area needs a practical solution. This corridor has been a part of the regional plan for years. The voters approved it twice, and it's time to build it.

1

That's it.

* * *

MR. NOVAK: My name is Will Novak, N-o-v-a-k.

I just wanted to put in a comment that I hope they don't build anything and save the billion-and-a-half dollars and do something else with it, like build some light rail trains or plant 15 million trees or build a commuter rail, any of the number of things we need in Phoenix.

This is a city that is really -- we've got our

Subject: Loop 202- South Mountain Freeway

Hello,

1 I am very happy to see the Draft EIS completed. This freeway was a big part of my decision to move to Laveen 6 years ago and seeing the process move so slowly has been very frustrating. Many of us here are very anxious for the ease of travel and the new development that the freeway will bring. I hope the project will move as swiftly as possible from this point to it's completion. Thank you for taking my comments.

From: Sierra Club on behalf of John & Juanita Enkoji
To: Projects
Subject: Comments in opposition to South Mountain Freeway
Date: Monday, June 03, 2013 6:13:01 PM

Jun 3, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

2 3 The proposed freeway would cause more problems than it would solve. It is at best only a short term approach to a long term problem. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

4 5 South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

6 7 The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

8 The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

1 Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Mr. John & Juanita Enkoji
26804 N 79th St
Scottsdale, AZ 85266-9059

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No-Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

THE REPORTER: Please state your name.

MR. ENOS: Darius Enos.

"Traffic presents a unique public health threat due to the toxicity of its emissions and its extensive integration into our lives and communities. The stakes are high, including excess cancers and children's asthma rates occurring at epidemic proportions. This threat can no longer be ignored; it must be clearly understood and addressed." And that's a quote from Associate Professor Tim Buckley, from the Bloomberg School of Public Health at Johns Hopkins University. That quote was cited in the Sierra Club's Highway Health Hazards Report on how highways and the roads cause health problems in our communities.

The report cites several different research reports, including a Johns Hopkins study showing the association between traffic and curbside concentrations of cancer-causing pollutants; the Journal of the American Medical Association study linking soot and diesel exhaust to lung cancer, cardiopulmonary diseases, and other causes of death; a Denver study showing children living near busy roads, that they are six to eight times more likely

to develop leukemia and other forms of cancer; a Journal of The American Medical Association study finds that increasing public transportation, along with other traffic control measures, and that was during the 1996 Atlantic Olympics, which reduced acute asthma. A California South Coast Air Quality Management District did a multiple air toxic exposure study, too, the most comprehensive study of urban toxic air pollutions showing that vehicle exhaust is the source of cancer-causing air pollutants in Southern California.

The community the potential freeway would affect is the Gila River Indian Community, which was little mentioned in the Environmental Impact Statement. Whatever political lines that may have been drawn, the health effects cannot be ignored in any way. And that is something that the Environmental Impact Statement does not take into account.

2

And furthermore, the community is already susceptible to volatile health problems, including high rates of diabetes. The story is, in the 1800s our river, our namesake, was taken away from us, dammed up for the development of Phoenix and the State of Arizona, and the development of Phoenix was

put on the backs of our health for many generations, including today. What the Arizona Department of Transportation is asking for is to have another generation of health effects, which is not only for the Gila River Indian Community, but also minority communities within south and west Phoenix.

Furthermore, the potential freeway impedes on the spiritual practice of my community. It is where our creator is said to have been shown, and where a large part of our stories, songs, and dances revolve around. Furthermore, there are remains of our ancestors within the mountain and around the mountain. It is not common for non-native people to have their ancestors dug up. It is a violation of human rights and human dignity to have that happen to us, since the arrival of Europeans in this country.

3

With that in mind, the Arizona Department of Transportation continues colonial practices on the indigenous people of the area. History is being repeated, sadly.

I am a graduate of ASU, and I majored in American Indian studies, minor in global studies. With that, furthermore, within a global context, the United States is very behind in environmentally safe

and sound public transportation. If you look at Sweden or any other European country, the route of transportation is made sure to be provided to be environmentally sound. The freeway does not guarantee the safety and health of the Gila River Indian Community. And furthermore, as a citizen of Arizona, to look at the education levels in comparison to our state budget, where we have the lowest reading levels in the United States and transportation is the biggest issue.

I'm going to do everything in my power to fight this freeway and I hope you see it through my eyes. Thank you.

THE REPORTER: Thank you very much.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. Build the DAM thing NOW. We need to lessen the congestion on the I-10. There are also communities that need amenities that come with freeway development: hospitals and entertainment venues greatly needed.

Optional

Name Luz Enriquez Email

1 2 3 4 5 6

I have lived here for 30yrs and every time a freeway is built it is totally clogged with traffic within 2 yrs. Freeways fuel urban sprawl and do nothing to change the habits of people to bus, carpool, work from home-- and even make it more difficult to bike to work. Building a freeway is doing more of the same, plus forever changing South Mountain....better to put the money into a train from Phoenix to Tucson. By the way, where is that bike lane that was supposed to parallel the freeway??

Code	Issue	Response
1	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
2	**Social Conditions**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
3	**Social Conditions**	The proposed freeway is a response to existing and anticipated travel demand in the metropolitan Phoenix area. It is not meant to increase travel beyond that expected to be generated from existing and anticipated population and employment growth and related land development. It is important to consider that improvements proposed for any type of transportation system (e.g., a new bus route, rail transit line, commuter rail service) would likely lead to changes in travel behavior, which, in turn, would lead to increased use of the particular system. Improvements made to a given transportation system are meant to attract new users (see Final Environmental Impact Statement pages 4-170 through 4-174). If this were not a primary goal, the improvements would be neither effective nor warranted. For the proposed action, a goal is to attract users of other segments of the Regional Freeway and Highway System and the local arterial street network, now and in the future, to the proposed action to optimize, in part, the entire regional transportation system (as outlined in the proposed action's purpose and need in Chapter 1).
4	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Alternatives, Nonfreeway Alignments**	

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
6	**Design**	The study has considered concepts for parallel multiuse paths, however the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.

Code	Comment Document

MR. ERWIN: So, as far as the different pieces of this, I actually have been involved in listening to the discussions, and so forth, since this was going on in the central area. And it was like, kind of, a community -- a community college area. And there were 37 different groups there that were -- formed the homeowners' association that would be affected by this, that was going through different sections.

And at the end they actually did, going through, doing the voting section. And ADOT provided different information along the way, and they went and voted. The community gave a vote on this, of what their -- their assessment of a build/no build, which is kind of what was on the video. And they gave that a vote.

And I haven't seen that information published anywhere. And I was -- had been going, doing this for about a year. So I was kind of wondering why that information isn't available, why that part isn't being communicated along the way. I feel like that's a disservice to the people who've been involved in this process all along.

In fact, there was a -- the -- Doug, who does the Ahwatukee Foothills newspaper was there, as well. And he wrote different articles about it, including talking about the Great Wall of Pecos, which ADOT said was going to have to be built, the entire stretch of Pecos. So the lack of information makes

1

Code	Issue	Response
1	**Public Involvement**	Since 2002, the Arizona Department of Transportation has worked with a South Mountain Citizens Advisory Team, whose members represented various stakeholder groups in the South Mountain Freeway Study Area. The group met regularly to review environmental and technical data, to discuss the interests and concerns of their respective organizations, and to help find a consensus solution for meeting transportation needs in the Study Area. The general public was welcome to attend each of these meetings. There also have been various community meetings through the course of the environmental impact statement process. For a listing of the past South Mountain Citizens Advisory Team and community meetings, please see <azdot.gov/southmountainfreeway/meeting_notices.asp#communitypast>. Additionally, individual members of the community had an opportunity to review the Draft Environmental Impact Statement, attend a public hearing, and provide comments to be included in the Final Environmental Impact Statement.

Code	Comment Document

2

it extremely difficult for the public to give informed decision, even though we know the information is there and it had been presented.

The other piece is that, when the information was being put through, about the assessment for the traffic that would go through -- And even recently, in downtown, the guy who kind of knows everything, and has been with this the entire project, said the assessment for the traffic was based off of forecasted traffic for the entire Phoenix area. So they took all of the traffic in all of Phoenix and said: Here's what's going to happen on this loop.

And it was 92 percent residential and 8 percent commercial.

But the reality of the situation is that there is a very limited number of people that live in the south that would need to do something in the west. There is a very -- There is a very limited number of people who live in the west that would need to do something in the south that would use that thoroughfare on a regular basis.

So, again, the information -- There is misinformation that is being provided to not just the people in this community but all of the voters, at large, about what this really means from a traffic assessments -- or a traffic-modeling standpoint.

3

The fact is that anything that comes from the west

Driver and Nix Court Reporters - (602) 266-6525

Code	Issue	Response
2	**Traffic**	The Federal Highway Administration and the U.S. Environmental Protection Agency approved the air quality conformity determination that includes the Maricopa Association of Governments regional travel demand model that produced the traffic projections used in the traffic analysis for the project (see Draft Environmental Impact Statement page 3-27). Traffic projections are regularly updated by the Maricopa Association of Governments. The traffic projections in the Draft Environmental Impact Statement are from a model adopted in 2011. When the Maricopa Association of Governments adopts new socioeconomic projections and traffic projections, it will be reflected in the study documents. Key model inputs used to forecast travel demand included (see Table 3-7 on Draft Environmental Impact Statement page 3-27): · socioeconomic data based on the adopted general plans of Maricopa Association of Governments members, which includes projected growth in population, housing, and employment (including proposed commercial centers), along with economic forecasts and the existing and planned transportation infrastructure as identified by Maricopa Association of Governments members · the anticipated average number of vehicle trips within the region (including those to and from the region's households) on a daily basis (this number is tracked regularly by the Maricopa Association of Governments) · the distribution of transportation modes used by travelers in the Maricopa Association of Governments region (also tracked regularly by the Maricopa Association of Governments) · the capacity of the transportation infrastructure to accommodate regional travel · the future transportation infrastructure established using *Regional Transportation Plan*-planned projects and improvements and from known arterial street network improvements assumed to be made by the County, Cities, and private developers The Maricopa Association of Governments approved new socioeconomic projections in June 2013. The new data are presented in the Final Environmental Impact Statement (see page 1-11). Although slower growth in total vehicle miles traveled was noted, the need for the freeway did not change. The revised traffic analysis validated that the proposed project is needed today.
3	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document

and goes south and anything from the south that goes west is typically commercial traffic. If you go ask people in this -- in the community who live south, none of them on a routine basis are going to use their residential vehicles to go west. And -- and I talked to a variety of people who live in the west. And I know of two people that live in the west, out of the 25 people that I'm associated with, who would come here to the south to work. And it's just because we happen to work, you know, in the same -- in the same location.

The majority of traffic through is going to be commercial. So the -- the forecasting information does not align with the actual numbers which are going to occur. And that sort of information has -- was not presented. I don't think it was actually provided in the -- the initial voting. And it's not being provided accurately as of two weeks ago, when they said, "Well, it's going to be this breakdown of residential and this breakdown of commercial," when we all know, because we're all intelligent people here, that the majority of traffic will be trucks that, thank goodness -- because they have all said to me, "Thank goodness, I don't have to drive through downtown Phoenix anymore when I'm going from Southern California, working my way through Phoenix, to continue east for my travels."

So, again, the majority of traffic that will be coming through is residential -- sorry, is commercial and not

4

Code	Issue	Response
4	**Trucks**	The Maricopa Association of Governments regional travel demand model forecasts approximately 10 percent truck traffic on the proposed freeway in 2035 (see Final Environmental impact Statement pages 3-64 and 4-66). The forecast truck traffic is based on existing traffic studies and projected socioeconomic data. This percentage is similar to current traffic conditions on Interstate 10 between State Route 101L and Interstate 17 and on US 60. Commercial trucks would use the proposed freeway. As with all other freeways in the region, trucks would use it for the through transport of freight, for transport to and from distribution centers, and for transport to support local commerce. Nevertheless, the primary users of the proposed freeway would be automobiles. Vehicle classification counts (2007) from the Arizona Department of Transportation for Maricopa County show passenger vehicles and other nontruck vehicles make up over 90 percent of all traffic on the regional freeway system, and it is expected these percentages would not vary with the proposed freeway. Further, it is not expected that the entire 21 percent of through truck traffic (by tonnage) using Interstate 10 would divert from Interstate 10 to use the proposed freeway (see Final Environmental Impact Statement page 3-64). Trucking destinations in the Phoenix metropolitan area would still prompt trucks to enter congested areas. Choosing to travel on the proposed freeway versus Interstate 10 would not produce substantial travel time benefits. Therefore, it is expected that “true” through truck traffic (not having to stop in the metropolitan area) would continue to use the faster, designated, and posted bypass system of Interstate 8 and State Route 85.

Code	Comment Document

5

residential.

Lastly, the thing I just noticed is if that video is accurate -- So the video that was shown here, and it was stated, in the beginning of the video, that they are going to show what the traffic looks like in 2035. If that is the fact, the video shows a very limited number of cars and no commercial vehicles, which is misleading. And there's very few vehicles, in general. So, if that few number of vehicles actually is using the freeway, why do we need it?

So those are just the different -- the one observation and the other parts that I've been, you know, coming through, as well.

And those are, again, just kind of what I've come up with so far. So that's my community comments.

Again, the misinformation is staggering about it. So I don't think that people can make an informed decision -- or, sorry.

I don't think ADOT should be allowed to push the agenda through, knowing that the misinformation that is being provided to the community is based on an assessment of what they think as opposed to what the reality of the traffic flow is going to be, because, again, it just -- Just talking to different people who travel this on a regular basis.

So, again, instead of forecast the actual, you need to talk to people about what's actually -- When I would

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
5	**Traffic**	While it was the intent, the traffic depicted in the video did not replicate peak traffic conditions. The traffic data and analysis used to support the purpose and need for the project are presented in Chapter 1 of the Final Environmental Impact Statement. The data and analysis supporting the evaluation of alternatives are presented in Chapter 3 of the Final Environmental Impact Statement.

6

actually use this freeway, you see residents kind of say, "Well, I guess I might, every once in awhile."

And you see a huge smile come across people who do commercial vehicles because, again, their whole point is: Good, I don't have to go through downtown Phoenix anymore. That's perfect. I love it.

So, again, it kind of makes me wonder, you know, who -- Who and why is pushing this through? You know, is it really the residents who want it? I don't know anyone who, number one, cares enough to have a strong opinion about it, unless you're directly affected, like the residents here, or if your livelihood depends on getting through the traffic.

So if I have anything more, I'll let you know. Thank you.

7

Can I finish one more thought? I apologize for interrupting.

So, just as a final -- The reason I'm here is because I had a -- I had a strong opinion about it anyway. But, when I started explaining just the facts about this to my daughter, I had to spend 30 minutes calming her down, to -- because she was having such a meltdown about the fact that the school that she attends, the church that she goes to and actually has gotten closer to her understanding of religion and spirituality -- And she asked: Is KeeKee going to -- Is KeeKee's house going to be removed?

Code	Issue	Response
6	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.) No schools would be displaced.

Code	Comment Document

And the answer was: Yes, after we looked at this.

And she -- I had to spend 30 minutes holding on to her while she was having a meltdown. And that sort of thing really strikes home.

I appreciate your time.

Folks,

Good morning.

I have started looking through the DEIS document.

I see the current traffic volumes and the projected traffic if nothing is done in figure 1-8 Chapter 1 b.

1 Where would I find the projected reductions in traffic if the freeway is built ??

Thanks,

Bill Esson

SOUTH MOUNTAIN PUBLIC HEARING
(Public comments to reporter)
May 21, 2013
10:00 a.m.
REPORTED BY:
April Lassiter, CSR #1521

FRANK EVEN: We need the highway badly. The only question we have is, can it be sooner rather than later. I mean, seriously. No, I mean, just in time to work, my commute on Baseline is miserable. Too much stop and go. It takes anywhere from 20 to 30 minutes to travel 14 miles, whereas with the new highway, I'll be able to do that in 10 to 15 minutes and probably use less gas in the process. The end. Please start it in 2013 instead of 2014 or I'll have to move out of the area. Now, the end.

1

Code	Issue	Response
1	**Alternatives**	Upon completion of the environmental impact statement process, and if the Selected Alternative were to be an action alternative, the Arizona Department of Transportation would begin the design phase, which would be followed by the final right-of-way acquisition process. Then other early construction tasks such as utility relocations would begin. The corridor would be divided into multiple final design segments. Construction sequencing and duration could change based on several factors, including funding availability, traffic volumes, coordination with other major freeway projects, earthwork balancing, utility relocation schedules, and regional priorities.

From: Five Year Program
To: ADOT
Subject: FW: COMMENTS RE SOUTH MOUNTAIN and Roadway Extension
Date: Tuesday, May 14, 2013 10:04:25 AM

From: Dr. Gayle [mailto:simply4health@yahoo.com]
Sent: Monday, May 13, 2013 9:31 PM
To: Five Year Program
Subject: COMMENTS RE SOUTH MOUNTAIN and Roadway Extension

I am writing to oppose any construction of the South Mountain Extension as part of AZDOT's Five Year Plan.

1 As a health care provider I can think of no better way to harm the health of those living in and nearby the proposed roadway. Those who would work or travel in that are would also be at risk.

I recall in 2002 when I was involved in a similar issue in another state the US government health agencies released a document at that time supporting the health hazards of diesel fuel used by trucks. We have come no further down this road in improving the effects of this fuel on lung and heart health. The newest reports from 2013 continue to support the health risks of diesel fuel.

While I am a new resident of Arizona I chose to become involved in this issue prior to relocating. Now as a resident my view against this road is strengthened. I see and feel heat. I see and feel dust. I see and feel pollution.

2 Arizona is facing major environmental issues in addition to health problems. A temperature issue is the concern over the rising temperatures and this is reported to be directly associated with an increase in freeways and increased vehicular traffic.

Daily the accident reports are jolting.

Concrete is a heat sink. Baking in the valley sunshine leads only to higher overnight temperatures and limited cooling. These increasing temperatures are discussed on local news programs and in other media venues. Is anyone at AZDOT listening or is this just the typical bureaucratic way, "we made up our mind and we are going to do what we want and we don't care what the people think or even about the outcome in 1,3,5, or 10 years.

What if you took it upon your self to consider this from the point of view associated with the precautionary principle?

Code	Issue	Response
1	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Heat Island**	As buildings, parking lots, roads, and other infrastructure replace open land and vegetation, an urban heat island may result. The heat island effect is of a regional nature and, therefore, there is no requirement to analyze potential impacts and no possibility of determining the localized contribution at the project level to the regional heat island effect. It is likely, however, that a proposed project such as the South Mountain Freeway would be a minor contributor to the overall issue.

Code	Issue	Response
1	**Agriculture**	Congress enacted the Farmland Protection Policy Act to minimize the extent to which federal programs contribute to unnecessary and irreversible conversion of farmland to nonagricultural uses and to ensure that federal programs are administered in a manner that, to the extent practicable, is compatible with State and local governments and with private programs and policies to protect farmland. The environmental impact statement process has adhered to the stipulation set forth in this Act (see page 4-161 of the Final Environmental Impact Statement). Urbanization in the Maricopa Association of Governments region has been occurring for years and will continue to do so with or without the proposed freeway (compare Final Environmental Impact Statement Table 4-2, on page 4-3, with Table 4-4, on page 4-7; see also Final Environmental Impact Statement page 4-152). For instance, much of the land along the Preferred Alternative in the Western Section is already slated for commercial and industrial uses.
2	**Heat Island**	As buildings, parking lots, roads, and other infrastructure replace open land and vegetation, an urban heat island may result. The heat island effect is of a regional nature and, therefore, there is no requirement to analyze potential impacts and no possibility of determining the localized contribution at the project level to the regional heat island effect. It is likely, however, that a proposed project such as the South Mountain Freeway would be a minor contributor to the overall issue.
3	**Air Quality**	Climate change is an important national and global concern. While the earth has gone through many natural changes in climate in its history, there is general agreement that the earth's climate is currently changing at an accelerated rate and will continue to do. Human-caused greenhouse gas emissions contribute to this rapid change. Carbon dioxide makes up the largest component of these greenhouse gas emissions. Other prominent transportation-related Greenhouse gases include methane and nitrous oxide. Greenhouse gases trap heat in the earth's atmosphere. Because the atmospheric concentration of greenhouse gases continues to climb, our planet will likely continue to experience climate change-related phenomena (see Final Environmental Impact Statement pages 4-85 through 4-86). To date, no national standards have been established regarding greenhouse gases. Greenhouse gases are different than other air pollutants evaluated in federal environmental reviews because their impacts are not localized or regional due to their rapid dispersion into the global atmosphere. The affected environment for greenhouse gas emissions is the entire planet. In contrast to broad-scale actions such as those involving an entire industry sector or very large geographic areas, it is difficult to isolate and understand greenhouse gas emissions' impacts for a particular transportation project. Furthermore, presently there is no scientific methodology for attributing specific climatological changes to a particular transportation project's emissions. Under the National Environmental Policy Act, detailed environmental analysis should focus on issues that are significant and meaningful to decision making. The Federal Highway Administration has concluded, based on the nature of greenhouse gas emissions and the exceedingly small potential greenhouse gas impacts of the proposed freeway (as shown in Final Environmental Impact Statement Table 4-37 on page 4-85), that greenhouse gas emissions from the proposed freeway would not result in "reasonably foreseeable significant adverse impacts on the human environment" [40 Code of Federal Regulations § 1502.22(b)].

THE REPORTER: Please state your name.

MS. FACE: My name is Jennifer Face, and I am a teacher at Country Gardens Charter School, and I oppose the 202 because it will displace many of our families that attend the school, and also the construction during expansion will greatly affect our school, and just the operations of the school in general.

Even if it is on 59th Avenue, just the area of the off-ramp would -- the construction, we'd have to reroute bus routes, and also we've had that area shut down before, and there's only one way in and one way out, so it's difficult for the logistics of getting students to school.

I mean, that's pretty much it. If the off-ramp, if at all possible, can be more towards the north, as opposed to the south of Southern, because of the area that it might cut into. There's a lot of wildlife within that area of our school. Right along Southern.

So that's it.

(Proceedings concluded at 2:00 p.m.)

Code	Issue	Response
1	**Neighborhoods/ Communities**	The alignment of the W59 Alternative had not been changed in the area of the Country Garden Charter School. The freeway would not directly affect the school, but would run just east of the school. Construction activities associated with a project the size and magnitude of the proposed project would create temporary impacts on human and natural environments. Throughout the Phoenix metropolitan area, the Arizona Department of Transportation and Federal Highway Administration have demonstrated experience in the construction of major transportation projects and mitigating construction-related impacts (see page 4-164 of the Final Environmental Impact Statement).
2	**Acquisitions and Relocations**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Construction**	Design of each action alternative, while completed to an equivalent level, is still preliminary and subject to change because designs would be further refined. The Arizona Department of Transportation would work with businesses during the design phase to identify ways to minimize property impacts that allow the business to continue operations.

I **support** the proposed South Mountain Freeway on Pecos Road. I have been waiting years for it to be built and can't wait.

I think it will be so cool to drive back behind South Mountain and through a 'pass' that is proposed to be cut in near the farthest western edge. I have never been able to see the "view" there and am looking forward to it!

Thank you for allowing the input.

Subject: Loop 202 Proposed Freeway
Date: Tuesday, July 23, 2013 5:40:17 PM

To Whom it may concern,
Please do not build this freeway, as it is in fact, a truck bypass, not only for trucks on I-10 east and west, but ALSO for your proposed Canamex freeway from Mexico. If you must have a bypass AND the Canamex, go over to SR 85, which includes the areas of the far west valley for which you are "predicting" massive future growth.
Why would anyone want to take a community of mostly upper scale homes and destroy it with a freeway? We love our culdesac, and the privacy and security it has provided for over 20 years from Mountain Park Ranch to Club West. A giant sound wall blocking views of the desert to the south is not what I want to see out my back door. I also don't want to breath diesel and gasoline fumes and never open a window again. I may plan to die in my home, but I don't think my life's end needs to be sooner than the average person.
Noise and air pollution, along with hazardous materials passing by hundreds of homes and at least five schools in close proximity to the freeway ought to have been enough to stop this project long ago. The possibility of a hazardous disaster with big rig accidents, huge power lines and an underground gasoline pipeline is terrifying to those of us that live along this route.
I strongly support a "do not build it here". Build it on SR 85 from Gila Bend.
Carolyn Fiedler

Code	Issue	Response
1	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Trucks**	
3	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
4	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
5	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
6	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. As mentioned in the sidebar on page 4-91, the Final Environmental Impact Statement is based on preliminary design and traffic information. As the design progresses to the Final Design phase, confirmation of public desire for noise mitigation would occur and if desired, noise barrier locations and heights would be refined and finalized. During Final Design, more detailed information on the location, actual height, and distance from the property line of each noise barrier will become available.
7	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. To whom it may concern,
I would like to echo my wife's comments sent yesterday, and included here below.
It will be an irreversible and costly mistake to build this freeway. We know we are just the "little guys" standing against all kinds of people with "big power" to get what they want, and we are sick and tired of them.
If the GRIC does not want to allow ADOT to use their land, but they want to use the current route and make their own development plans, then why do we want to destroy their sacred mountain and still give them great access to develop the land along this route? It makes no sense. There seems to be no concern on their part for our well being, and there is a double standard of what is considered respectful.
Daniel Fiedler

To Whom it may concern,
Please do not build this freeway, as it is in fact, a truck bypass, not only for trucks on I-10 east and west, but ALSO for your proposed Canamex freeway from Mexico. If you must have a bypass AND the Canamex, go over to SR 85, which includes the areas of the far west valley for which you are "predicting" massive future growth.
Why would anyone want to take a community of mostly upper scale homes and destroy it with a freeway? We love our culdesac, and the privacy and security (crime in the area will undoubtedly increase) it
has provided for over 20 years from Mountain Park Ranch to Club West. A giant sound wall blocking views of the desert to the south is not what I want to see out my back door. I also don't want to breath diesel and gasoline fumes and never open a window again. I may plan to die in my home, but I don't think my life's end needs to be sooner than the average person.

1	**Alternatives**	Federal law prohibits the denial of access to any community. Thus, traffic interchanges would be located along the freeway where it borders the Gila River Indian Community (see Final Environmental Impact Statement page 3-51). Roadway connections on Gila River Indian Community land to the traffic interchanges would be the responsibility of the Gila River Indian Community, in coordination with appropriate jurisdictions.
2	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. From: Sierra Club on behalf of Randy Filipic
To: Projects
Subject: Comments in opposition to South Mountain Freeway
Date: Saturday, June 08, 2013 8:35:51 AM

Jun 8, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

2 The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer.

3 ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

4 South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more

5 vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

1 Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Mr. Randy Filipic
5650 S Kyrene Rd Apt 1247
Tempe, AZ 85283-1732
(480) 775-6914

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Health Effects**

much worse on the citizens who live in Ahwatukee. Thank you very much for your time.

THE FACILITATOR: Thank you, sir.

Jacob Findlay.

MR. FINDLAY: Hello, my name is Jacob Findlay. Thank you for listening to my comments. I would just encourage the committee, as it's obvious to know the not-in-my-backyard arguments, they are typical of a project like this, but they shouldn't carry weight, given that they come with every project regardless of the time, place, contacts, whatever.

This is an infill project from the City of Phoenix, and I'm exited to see it finally come to fruition. Driving out on the 303 in the middle of the desert is a little baffling when I consider that the 202 is something which we need much more desperately, it hasn't been constructed and it looks great, but there's nothing around it. And the 303 out there, it's another issue but encourages additional sprawl, that kind of thing. The 202 as an infill project that encourages more development closer to downtown, people living close to downtown living, etc.

I live in Laveen and live there because of the proximity to downtown. This freeway will enable me to get downtown more quickly, to the services, that kind of

Code	Issue	Response

(Comment codes begin on next page)

Code	Comment Document

thing, but despite the proximity, we're still about a half an hour from the nearest hospital; this freeway will bring a hospital to Laveen. So in terms of health impact, the children and families, the environmental impact statement addresses the health impacts I think pretty thoroughly and mitigates the concerns that are raised here. An overarching health impact is not -- and so it's contemplated that we will have a hospital and emergency room where we don't currently have one. It will save lives and make a big impact on the community.

1

I also encourage the Gila River Indian Community to work with the project to avoid having to blast through the South Mountain. If somebody uses South Mountain frequently for recreation it's the last thing I want to see, but given the current realities and the unwillingness of the Gila River Indian Community to work with this project, it's unavoidable.

And finally, I would encourage the project to consider including bucolic elements on the freeway, consider the context of where it's being built near the mountain, include passages for wildlife, that kind of thing for the javelina, the coyotes that live where this freeway is passing, especially close to South Mountain. Thank you for your time.

2

THE FACILITATOR: Thank you.

supposed to regulate that, and they're not doing anything to stop the council from what they're doing. So I just -- I just wanted to make that comment that I would like to see it go on the reservation. And it would save a lot of the people in Ahwatukee to go through what they have to go through. And it would also save that mountain that they wouldn't have to go through if they built it on the reservation.

So that's the comment that I have, and something that I have in my heart, and hope that in one way or the other, that it will go to the reservation. Thank you.

THE FACILITATOR: Thank you.

Sharon Finell. Finell. Which one is it?

MS. FINELL: Perfect.

THE FACILITATOR: Okay, thanks.

MS. FINELL: Hi, good morning. My name is Sharon Finell. I am a resident of Laveen. And I live just about a mile from where this proposed freeway would be. I am in support of the freeway. I am very excited. I don't have a problem with us having to cut through South Mountain. I love South Mountain as a form of recreation, and I think the pass through South Mountain will provide more recreation opportunities for people, as it will be

1

Code	Issue	Response
1		Comment noted.

Code	Comment Document

more accessible, and anticipate other trailheads and other things that could encourage our community to appreciate that more.

I also would love the opportunities that the freeway would bring to our community. Right now I have three children that aren't at working age, but at someday my kids are very excited to get a job, but jobs are very minimum right now, because we have a lack of businesses there. I do believe the freeway would bring in a lot of businesses and provide work opportunities for a lot of the youth in our community, who right now don't have that opportunity. They would have to travel. And I think it would allow us to spend our money in our own community and build our own community rather than right now we travel to a distance to find places that would fit the needs of our family.

So I am in support, and thank you very much.

THE FACILITATOR: Thank you. Luther Allen. Luther Allen. Luther Allen.

While we're waiting, just a reminder, if anyone wishes to speak at the hearing, please make sure you register at the registration desk.

At this point, we've exhausted the people

I just wanted to say that me and may others approve of the 202 coming into Laveen. I have been a resident for 4 years and have seen the rise in traffic congestion. I believe that this will more than help alleviate these concerns and bring some business to the area to help continue to drive forward movement of Laveen.

MS. FINNER: My name is Jill Finner, F-i-n-n-e-r.

I would like to voice my support of building the 202 freeway, specifically the West 59th alternative. I'm a mother of small children. I've been a leader of a moms' group of over 70 moms which represent over 70 families, and we are constantly driving almost 30 minutes to other cities to find entertainment and dining options for family get-togethers and outings and play dates.

I would also like to request an attractive sound barrier and bike/running/pedestrian paths along the length of the freeway, such as the San Antonio, Texas, freeway system.

I'm in opposition to building a new casino and hotel that our current infrastructure cannot support.

We would like to bring the Ahwatukee and Laveen communities together, and the longer we wait to build, the more the cost of construction will increase. I would like to build it.

Thank you.

1	**Visual Resources**	The Arizona Department of Transportation Roadside Development Section is responsible for assigning a wide range of standard treatment applications and wall materials, including color, to noise barriers and other structures. Typically the community where the wall will be constructed would work closely with its City Architect or planning department to decide on a theme for the wall. Usually, this can be accomplished by using the Arizona Department of Transportation standard applications. The process municipalities might take to achieve the desired aesthetic treatment of for noise barriers or other structures is explained on pages 4-158 and 4-162 of the Final Environmental Impact Statement.
2	**Design**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.

We have had frequent mulch fire breaks out along the proposed routes around Dobbins and 59th Ave. This causes Health Advisories to be issued and the property and well being of the citizens to be jeopardized. I support the South Mountain 202 project. It will personally provide me greater access to other areas of the Valley and will ensure that many of the acres not currently being maintained will be utilized for helpful and purposeful reasons.

Sincerely,

Marla Finnigan

A route south of Pecos Road must be found. It is far too late to use Pecos Rd. the City of Phoenix should have denied those building permits in the path of the future freeway. They should be held accountable for that. Also, as the song goes, "they paved paradise" applies to this freeway blasting off a corner of the beautiful South Mountain Park! That is a crime against nature, and cannot be allowed. It is far too late for the Pecos Road option to be considered. Who in their right mind would think it is ok to bulldoze homes, churches, school, and the corner of South Mountain?!! You must find another path, or go with the "no build" option.

1 2 3 4 5

It is too late to align the South Mountain Freeway along Pecos Road without much destruction and devastation. It seems that the communication between ADOT and the department within the City of Phoenix that issues building permits should have done a better job denying building the homes, churches and schools in the path of the freeway. Live and learn. Also, it is unacceptable to cut through any portion of South Mountain. We are literally "paving paradise!", just like the song says. Stop the Pecos Road plan, and work diligently with the Gila River reservation for a route to the south of Pecos.
Sincerely,
Lorie Fisher

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. I am certainly against the proposed South Mountain Freeway. It would be an environmental nightmare. Already urban sprawl has taken over much wildlife habitat. This freeway would make it even worse while contributing more carbon towards Climate Change. People with Tuberculosis used to come to Arizona to breathe easier. Now the air quality is so bad, you can see it. My niece has asthma so bad, she sleeps hooked up to a machine. My co-worker keeps going to the doctor. He does not smoke, yet he cannot breathe. In addition to gross harm on the Environment, this highway would desecrate Native American lands. If ADOT truly wanted to help people commute, they would use funds for new roads to invest in mass transit. The lite rail is a pleasure to ride, and helps the local economy. I only wish it went closer to my home + work.

1	**Secondary and Cumulative**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
2	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. 1 MS. FITZGERALD: Noel Fitzgerald. I live
2 right across the street from South Mountain and across
3 Baseline. And -- but it's not just for me that I'm
4 concerned, because I'm nowhere near where that freeway
5 would be. But I'm concerned that it will go right
6 through the park, which would seem a great shame when
7 there's land south that perhaps they can put the freeway
8 on.
9 I think about the animals and their
10 crossing; I think about people hiking in the park. Even
11 if you can't see the freeway, you're going to hear it, so
12 it's going to really ruin South Mountain Park -- maybe
13 "ruin" is too much of a word -- but it's going to cause a
14 lot of changes that are really detrimental to people's
15 peace and solitude in there, except for the mountain
16 bikers. But cars roaring past on the freeway is not --
17 doesn't belong in the park when there's so much land
18 around that they could put the freeway on.
19 Thank you. That's why I'm here to see
20 what -- I guess I had never gone to a public hearing
21 where there was so much information presented. And this
22 is really a great thing because there's both sides and
23 people need to know what it is that they're either for or
24 against, and this certainly spells it out. And whoever
25 put this on is, I suppose, whoever is planning to build

2	**Alternatives, Gila River Indian Community Alignment**	
3	**Biology, Plants, and Wildlife**	
4	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Noise impacts on Phoenix South Mountain Park/Preserve were considered; however, the type of adjacent land uses and proximity of sensitive areas within the park did not qualify for mitigation based on the Arizona Department of Transportation Noise Abatement Policy (see page 4-88 in the Final Environmental Impact Statement for more information on the policy). Although recreation uses are considered in the noise analysis as noise-sensitive land uses, another consideration is the reasonableness of providing noise mitigation for a particular land use. For recreational land uses, typical considerations include the number of people using the facility and the amount of time the facility is in use throughout the day. Many of the recreational uses in the western portion of Phoenix South Mountain Park/Preserve receive infrequent use, and noise mitigation would not be reasonable given the high cost of construction.

Code	Comment Document

the freeway -- the city or whatever. But anyway, thank you.

* * *

MR. PALERMO: My name is Joe Palermo. I'm in favor of the Loop 202 South Mountain Freeway. I commute daily for work on the I-10 through downtown, and I believe that the Loop 202 will significantly help the flow of traffic through downtown.

Additionally, I believe that the traffic that is stuck in idling in downtown contributes significantly to the poor air quality of our metropolitan area. And I believe that traffic will inevitably increase over the coming years. And while we have this opportunity to build the 202 freeway, we should proceed forward, rather than be behind the curve and potentially find ourselves in a gridlock situation.

Additionally, I am an environmental consultant as my career. And I believe that this will help me and my family with opportunity to potentially be part of this important infrastructure project. And so additionally I'm in favor of it, not only for reasons for the city, but also for myself personally. Thank you.

* * *

MR. MARINO: Christopher Marino, and I'm for the freeway. I have lived in Ahwatukee for since

Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 12:14:52 PM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

Please select no-build alternatives to the proposed freeway going through South Mt. Park. Since I moved to Phoenix nearly 10 years ago, I have been proud knowing that I live in a city that has the largest park in the nation. The consequences of building a major highway through a large part of it are many and of serious consequences for both the people and wildlife.

2 The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer.
3 ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

4 South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more
5 vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

6 The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside
7 to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

8 The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

1 Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Health Effects**	
6	**Section 4(f) and Section 6(f)**	
7	**Biology, Plants, and Wildlife**

Subject: South Mountain Freeway - Loop 202 extension

Dear AZDOT,

(1) I am writing to express my strong opposition to the Loop 202 extension. What a bad idea. I love South Mountain Park, a desert oasis (and one of the largest city parks in the U.S.)! We're going to run a freeway through it? No, no, no.

(2) Not only will it harm us, as city dwellers, who need open space (without traffic!), this extension will destroy habitat for animals, birds, and vegetation.

(3) Let's encourage people to use public transit or to car pool! Or maybe live in the city center so they don't have to have such a long commute. What a waste of energy to be running a freeway through a desert park. Just say no.

(4) (5) (6) What evidence is there that this is going to reduce traffic and congestion? I don't buy it. In fact, I think the evidence is out there that new freeways encourage more vehicle use, and we end up with even more congestion. We already have a huge air pollution problem; let's not compound it by adding a new freeway that bisects a park!

Just say no.

no ways to get to a hospital if there's a emergency. So having a freeway will bring a hospital closer to individuals. Instead of driving at least 20 minutes away, you'll have a hospital within five to ten minutes. You'll just have people with disabilities that have no way of getting to a hospital also, and this will bring a hospital for that. So for low income people, people from disability, and for minorities, it'll bring not only a hospital but good paying jobs also. That's it. Just build that damn freeway.

* * *

PAULA FLECK: Paula Fleck. I just wanted to add that I heard a woman get up and speak and mention that she believed that adding the 202 would cause emphysema. And I'm a respiratory therapist, and I can tell you that emphysema is not caused by pollution from the 202. Over 90 percent of it is caused by smoke like cigarettes or any kind of thing you would smoke. About, I'd say, five percent would be from secondhand smoke or working in a job where you're around a lot of chemicals, directly exposed and not protecting yourself with the mask, and about one percent of it is caused by alpha 1-antitrypsin. Those are rough numbers.

But I'll tell you this is from my schooling, as well as what I've seen working in a

1 hospital 40 hours a week, and this is from my own
2 experience. And it is not caused by cars driving on the
3 202. In fact, having the 202 will reduce the stop-and-go
4 traffic that you have on the surface streets and reduce
5 pollution in that way, I believe. So that's all I had to
6 add.
7 * * *
8 UNIDENTIFIED SPEAKER: I'm very much for
9 the highway for Laveen, I feel that it would bring in
10 jobs, especially for the youth and the community; and I
11 think that that will assist with some of the crime and
12 the graffiti if we had the highway, which would bring
13 more businesses.
14 The hospital, we have a lot of senior
15 citizens that live in the area, and unfortunately, the
16 nearest hospital is -- I think it's Maricopa Integrated,
17 and that is a long way when it's an emergency.
18 So that is my comment, and my reasons for
19 supporting the I-10 highway -- Loop 202 South Mountain
20 Freeway.
21 * * *
22 MR. HERNANDEZ: David Hernandez. I live in
23 the preferred route, 59th Avenue south of I-10, and they
24 need to build the freeway. Yes, I agree with it.
25 However, the route that they are taking is shortsighted.

average household income than the City of Phoenix --

THE FACILITATOR: Excuse me.

MS. KEENAN: -- Paradise Valley, and the greater national average. Thank you.

There aren't that many people here to speak; I don't know why you can't let people speak a couple more seconds.

THE FACILITATOR: Paula Fleck.

Before you begin, ma'am, keep in mind the three-minute time limit.

Also, please be respectful of all the speakers. Your comments need to be kept to yourself so we can honor the comments and opinions of each speaker, regardless of your side of the issue.

Yes, ma'am, go ahead.

MS. FLECK: Okay. I think it is time to build the South Mountain freeway. Valley commuters have waited in traffic jams long enough. The freeway will cut congestion across the metro area, reduce the air pollution, and save drivers time and money; 64.3 percent of likely voters in Maricopa County support construction of the freeway, according to the results of a new poll commissioned by We Build Arizona. Just 19.6 percent said they were opposed or likely to oppose the project.

In a separate survey also commissioned by We

Code	Comment Document

Build Arizona, 59 percent of likely voters living in Ahwatukee and Laveen support the freeway as well. If we don't built South Mountain freeway, traffic from the region will get much worse over the next two decades, according to ADOT's own study. According to the study, traffic on I-10 between Ahwatukee and Goodyear will grow 28 percent. Another 103,000 cars will use the Broadway curve each day, and then 38,000 cars will jam the tunnel each day. Morning and evening commute times will increase from 39 percent to 82 percent. Traffic congestion on city streets will increase 46 percent. The same report indicates the project also will reduce air pollution by reducing the time people spend stuck in traffic.

The project will create 30,000 jobs during the five- to six-year construction period and result in a $2 billion investment in the Phoenix area economy. The money to build the freeway is in the budget. It was approved by voters twice, first in 1985 and again in 2004. There is no more important project to the area commuters and workers than the South Mountain freeway project. We must build it now.

Also, I would like to add that when we do this project, we should include a multiuse path alongside the freeway so citizens have the choice of how they want to

1

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
1	**Design**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.

commute. Thank you.

THE FACILITATOR: Thank you.

The next speaker, could you use this microphone, please. Thank you, ma'am.

Raven Barehand.

As we're waiting for the next speaker, I'd like to remind you to refrain from clapping or making comments regarding any speaker's position on any of this out of respect for their position.

Ms. Barehand, you can use this microphone here. You have three minutes, the timer is here in front of you. You may begin.

MS. BAREHAND: Okay. Hi, my name is Raven Barehand, I live over there in Laveen and Komatke in the Hillcrest area. One thing I'd like to say is that that freeway would steal the blue from the Estrella Mountain range. It's a brilliant blue, it's a brilliant, cobalt blue or very bright blue. There's no other mountain around here that is that blue as that mountain, and on days when there is a lot of smog that comes in from Phoenix, that mountain turns gray. And so I know that it would cause more emphysema, a lot of people don't want it but the thing is it would cause a lot more sicknesses to come to that area.

I know that the people who were pushing to have

terminals that are being built on the west side of Phoenix. And most of them will come through Laveen to avoid having to go through the congestion on the freeways in Phoenix.

I obviously am pro 202. I don't believe we can stand still and pretend that the growth in Laveen hasn't happened, and that the houses haven't been built and that the houses all over the Valley haven't been built. It's time to complete our bypass system and our loop system has been approved a long time. I've been going to these hearings for 20 years. I hope this is perhaps the last opportunity I have to speak on this particular subject. It's time we built the 202, those of us that live with the traffic that's being created anyway would prefer to have it in a more orderly fashion going through our community. Thank you.

1

THE FACILITATOR: Thank you. If anyone else has not registered would like to speak at the hearing, please make sure you register at the registration desk and then come before us.

I believe we have a preregistered speaker, Jennifer Nelson; are you here? Jennifer Nelson in the auditorium? She's coming? Thank you. Jennifer Nelson, please.

Subject: 202 expansion

To whom it may concern,

1

The 202 expansion has been voted on twice and passed to be built so what is there to revote on. Many of us bought houses in regions with the belief that because it passed that it would be built and are finding that the local governments lack of follow through rather troubling. I am starting to think of moving from this state all together recently and this is part of the reason. That and your horrible schools. Please get something right soon!

Thank you,

Lisa M. Flodin

Subject: No freeway near Pecos

My family and I do NOT want the freeway built near Pecos Road or anywhere near Ahwatukee. This freeway will destroy our area!

1

We moved to Ahwatukee because the area was pristine and safe. Building this freeway will bring more traffic, pollution, and crime to our area.

2 3 4

Downtown Phoenix's air quality is horrible. The only clean air is outside of the city. Do not bring this pollution to the outskirts of town.

Ahwatukee is safe because of the limited access. It's known as the big cul de sac and we like it that way.

5

The proposed freeway will destroy our lifestyle and the lifestyle of the many animals and birds that live in our desert areas.

6

Thank you for your time,

Aimee M. Flores and family

Code	Issue	Response
1	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
2	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Air Quality**	
4	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
5	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
6	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. To: Projects
Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 10:14:37 AM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

2 It is almost impossible to regain a healthy ecology once it has been interrupted. South Mountain Park was established to preserve the unique desert ecology of the area. A freeway through there would defeat the purpose of the Park.

3 The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer.

4 ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

5 South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more

6 vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

2 The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a

7 freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

8 The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

1 Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Section 4(f) and Section 6(f)**	
3	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
4	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
5	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Health Effects**	
7	**Biology, Plants, and Wildlife**

Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

As a local real estate Agent selling and listing homes in the Ahwatukee area, I am STRONGLY opposed to building the 202 Freeway along the Pecos Rd. alignment. I can attest to the fact the the freeway being built so close to residential areas will have a negative impact on homes selling near by, not to mention the affects of pollution, road noise, etc.

.It has taken a number of years for this area to recover from the last road construction on Pecos and the everlasting reputation of the "largest cul-de-sac" in the nation. This reputation has influenced potential homeowners to choose NOT to move to Ahwatukee because it was so difficult to access when Pecos was under construction. I can't imagine having to go through that yet again!

As a member of PARC we implore you to find another option. This is not a wise way to spend the Public's tax dollar and will not improve the quality of life in our community.

1	**Acquisitions and Relocations**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values. A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Noise**	
4	**Construction**	The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours may be needed during construction. (See Final Environmental Impact Statement page 3-27.)
5	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

1	Janet Forgy Document Created: 5/21/2013 2:53:18 PM by Web Comment Form South Mountain Freeway is desperately needed and the sooner the better. I reside in the Laveen Meadows subdivision. At that time I puchased my home in November 2007, the South Mountain Freeway was being discussed and assurances were made to me of the potential of not only the Freeway but of substantial economic development in the area. As you know this has not happened and the area is isolated with very little business development. It is vital that the South Mountain Freeway be started and completed without further delay. Let's stop talking and start building!!!

though we're right next door until we and our kids and our people realize that we can make bigger strides if we apply ourselves and our children and not be afraid to stand in places where we need to stand up. That's about it.

Thank you very much.

MS. FORGY: My name is Janet Forgy. I have lived in Laveen area, the 67th Avenue and Baseline subdivision, Laveen Meadows, for about six years in November. And I can tell you we desperately need to have this 202. It's imperative. It's like we're out in the boondocks. Businesses are not developing. We have to go five miles to get to I-10, that's the shortest distance, five or 13 miles to get to an interstate.

I-10 is like a parking lot sometimes. There's no development of businesses. I mean, there's nothing. We need that desperately, and so I strongly encourage the 202 to be developed as soon as possible without any delays cause we definitely need it.

1

UNIDENTIFIED SPEAKER: One of the things I want to stress is that when I purchased my house in November of 2007 I saw the possibilities of development and I was assured that it was going to be developed. It subsequently has not. As a matter of fact I understand because of the economic situations, things had a way of

1 I approve of the loop from South Mountain to I-10. I would just like to make sure there is a time frame involved. I don't want to see anymore heavy duty equipment sitting on the side of the road not doing anything for a number of hours. I would hope we would have a contract in order to have at least two shifts during the day – possibly late at night, possibly early in the morning in order to facilitate the building of this access road and to alleviate traffic problems that we are currently experiencing in the valley. Thank you.

What are you waiting for? build that damn freeway!!! It's been in the books since early 80's when I was planning on moving to awhautukee foothils new development. We were advised on the freeway route way back then,. All these persons that claimed not to be knowledgeable on the subject are playing ignorance. You know what they say "ignorance is a bliss".

Thanks and best regards

1	Ivan Fraire Document Created: 5/21/2013 8:52:31 PM by Web Comment Form My comment comes from miles and hours spent on the urban roads stopping and going, yelling and screaming, slowing down for school zones and stopping for road construction. I strongly agree to go forth on the W59 Alternative, as a commuter who travels from 67th Ave and Baseline to 16th and Camelback, I feel that this alternative would have great impact on my commute from home but also for the commute of many other drivers that I happen follow in and out of the Laveen neighborhoods. I don't agree with this alternative only for my benefit but for the benefit of all commuters that travel into Downtown Phoenix or the East Valley. It is also my opinion that the W59 Alternative is a median point for Laveen commuters to go WEST or EAST at the I-10 TI. I also feel that the W59 Alternative will have a better economic turnaround. You have easier and faster commute to downtown activities, work opportunities in the City of Phoenix and a better way for West and East Phoenix Community to visit Laveen. The Bequiva Casino will also get a great way to get Casino goers to visit and help built the Native communities that recieve no support from neighboring cities. My opinion is also that the W101 Alternatives will have no benefit to the majority of the Laveen Community and will ultimately be a waste of Tax payer money and we all know that wasting Tax payer money needs to stop.

my support for the 202 freeway. I happen to live in Ahwatukee just off of Chandler Boulevard and I know that there's been a lot of conversations in Ahwatukee about the impact to that part of Phoenix. I think it would actually be a boon to that portion of town for several reasons. If you travel from Ahwatukee up I-10 to get to I-17 going north to Prescott, you've experienced a lot of traffic delays on I-10, particularly through the Broadway curve. I think this freeway extension will help to relieve that traffic by bringing traffic off of I-10 that comes up from Tucson and has to get to the middle of Phoenix. This way you'll have a bypass that will actually put that traffic out to the west side of town and relieve the congestion and the delays that people from Ahwatukee experience getting to the airport and in the central business district of Phoenix.

So, again, I want to support my support -- or voice my support for this freeway project. I know that a lot of the information that you see here in the draft EIS shows the real benefits of that and in particular, further, I want to voice the support and in the area of relieving traffic from my area of town. Thank you.

THE FACILITATOR: Thank you.

Randy Frank.

and we have the responsibility to protect their habitats. During my lifetime we have come a long ways in learning the importance of environment and interconnectivity, so do not break this growing respect for our environment.

And the third reason I have is that homeowners have the responsibility to consider transportation before they buy a home. I have owned five homes during my life, I know what it means to look at your home and where you're going to live, and I believe it's outrageous and arrogant to move into an area and then try to change its very essence for our personal comfort. It's the attitude of now I'm here, so you need to change things for me. It's a terrible message to send our children.

I love this park and I ask you to send our children a message of the importance of respect and protection of our heritage and natural environment by saying no to building a freeway through South Mountain Park. Thank you.

THE FACILITATOR: Thank you.

Anybody who would like to speak, please go out to the registration table, get registered, we'll be happy to hear you.

Mike Franklin. Could you come to this mic over here, please.

MR. FRANKLIN: Must be on. Okay. My name is

Mike Franklin, I live in South Tempe. South Mountain is the place I go hiking most, because it takes less gasoline for me to get there. There are parts of South Mountain that kind of take you out of the city, and there aren't too many places you can go to around here like that. It's always interesting to find new discoveries, there's lots of petroglyphs, it's unique. It won't be unique if the west end is chopped off with eight lanes of traffic, polluting the air, making it noisy, totally destroying the natural experience of being up in the mountains. To do this, to take about five percent of the traffic or whatever it is off of the interstate just doesn't seem worth it to me.

I think once you've -- the oil production gets down we're going to have to find better ways of transportation or we're going to get stuck with this expanse of asphalt there forever, at least during my life. And I vociferously disagree with that tact of moving traffic, it's kind of a 20th-century solution to a 21st-century problem. That's what I have to say.

THE FACILITATOR: Thank you.

Patricia Weeks.

MS. WEEKS: Hello. Actually, I just want to expound upon what my husband said. Can you guys hear me? Can you hear me?

Code	Issue	Response
1	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Noise impacts on Phoenix South Mountain Park/Preserve were considered; however, the type of adjacent land uses and proximity of sensitive areas within the park did not qualify for mitigation based on the Arizona Department of Transportation Noise Abatement Policy (see page 4-88 in the Final Environmental Impact Statement for more information on the policy). Although recreation uses are considered in the noise analysis as noise-sensitive land uses, another consideration is the reasonableness of providing noise mitigation for a particular land use. For recreational land uses, typical considerations include the number of people using the facility and the amount of time the facility is in use throughout the day. Many of the recreational uses in the western portion of Phoenix South Mountain Park/Preserve receive infrequent use, and noise mitigation would not be reasonable given the high cost of construction.
4	**Purpose and Need**	According to the project team's traffic analysis, without the proposed freeway, existing roads and planned road improvements would accommodate about 76 percent of the transportation demand projected for 2035, leaving 24 percent of the anticipated demand unmet. If one assumes better-than-expected performance of nonfreeway aspects of the transportation system, 13 additional percentage points of the 24 percent deficiency would be accommodated. This means that the transportation network would still have an 11 percent capacity deficiency. The same analysis with the proposed freeway in operation in 2035 concluded that the met demand would increase to 82 percent; better-than-planned scenarios noted above, if achieved, would reduce network deficiency to 5 percent. The proposed freeway would handle about half of the capacity deficiency not captured by other modes. (See Figure 3-14 on Draft Environmental Impact Statement page 3-31).
5	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document

school. I didn't need a car. I could use the bus. And people all over this country that have many advantages that we don't have here for our average middle class citizen. And this particular road will deprive us of a road and light rail where it's really needed, where it would really help.

And I appreciate this opportunity. It was difficult, in my condition, to come down here. But I'm glad I did, and I appreciate the young lady being so patient. Thank you.

Can I put this with my material?

MR. FRANKLIN: All right. Now, this is a speech that I was going to have for the room, but I just -- I have to go and run, so...

Good afternoon, Panel. My name is Ross Franklin. That's R-o-s-s, F-r-a-n-k-l-i-n. And I'm a resident of Laveen, Arizona. I appreciate you letting us all speak in front of you today. You will hear much emotional testimony today regarding the impact of building the Loop 202 western loop connector. I will stick to the facts and leave the emotion to others.

Over the past 15 years, the population of Laveen and Southwest Phoenix has doubled. The EIS projects that number to more than double again over the next 25 years. While new highways like the Eastern

Code	Issue	Response

(Comment codes begin on next page)

Code	Comment Document

Loop 202, the Loop 101, and even projects like the Loop 303 have been built and completed or are well under way on construction and nearing completion, the much-needed Loop 202 western loop connector has been mired in political and environmental tug-of-war for years. Only the Loop 202 western connector can ease the traffic nightmare that is the I-10, which is clogged with rush hour traffic and heavy trucking and shipping traffic.

The traffic is so bad that many days you can find heavy trucking and shipping traffic on Riggs Road, R-i-g-g-s, 51st Avenue, through the GRIC, the Gila River Indian Community, Laveen, the town I live in, and other surface streets in Southwest Phoenix. These surface streets were not made for such traffic. Like it or not, this population and the traffic that goes along with it is only going to increase exponentially. In 25 years, when it's too late, we'll be suffering from complete gridlock.

Many opponents of this project just don't want to see any change. They want Laveen to stay just the same as it was. That's emotional. That horse has already left the barn.

The population of the Laveen area is 40,000 and growing. It is no longer the sleepy village of less than 10,000 not so long ago. As one of the few communities left to expand in population in the Phoenix

Driver and Nix Court Reporters - (602) 266-6525

(Comment codes begin on next page)

Code	Comment Document

metro area, it is due to more than double in size in the not-too-distant future. What are we going to do then? Baseline Road and Dobbins Road are already clogged with traffic. The pavement is already collapsing due to overuse from the use of heavy trucking traffic. When traffic doubles, what are we going to do then? All the hoping and avoiding in the world will not stop the fact that this is going to happen.

I am 100 percent behind the building of the Loop 202 western connecter. But I also realize that we must not simply slap a new highway connecting Pecos Road side of the I-10 and the 59th Avenue side of the I-10. We must make sure the new Loop 202 build is a model to be followed by other highway building projects. This includes making sure that there are biking paths and hiking paths built in conjunction with the project, parallel and/or intersecting this highway project. An HOV lane or bus lane must also be considered. And of course tastefully done sound barriers must also be built to minimize the sound the vehicles on the highway will make.

I know opponents will attempt to demonize people in favor of the Loop 202 western connector using all sorts of inflammatory, accusatory, and frankly offensive language. The force by intimidation will not work.

1

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
1	**Design**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
2	**Design**	High-occupancy vehicle lanes are included in the project (see Final Environmental Impact Statement page 3-58).
3	**Visual Resources**	The Arizona Department of Transportation Roadside Development Section is responsible for assigning a wide range of standard treatment applications and wall materials, including color, to noise barriers and other structures. Typically the community where the wall will be constructed would work closely with its City Architect or planning department to decide on a theme for the wall. Usually, this can be accomplished by using the Arizona Department of Transportation's standard applications. As an example, for State Route 101 Loop (Pima Freeway) in Scottsdale, the City of Scottsdale chose to add public art to the noise barriers. The City's intent went above and beyond the Arizona Department of Transportation's guidelines of reasonable aesthetic treatment and, therefore, the Arizona Department of Transportation did not fund the aesthetic portion of the project. The Arizona Department of Transportation and the City of Scottsdale entered into an intergovernmental agreement for the purposes of allowing Scottsdale rights to design and construct artistic embellishment on the Arizona Department of Transportation-supplied noise barrier. The Arizona Department of Transportation provided the funds for construction of the noise barriers themselves, but the City of Scottsdale provided the funds to cover the aesthetic portion of the walls. Final Environmental Impact Statement page 4-162 explains the process municipalities might take to achieve the desired aesthetic treatment for noise barriers or other structures.

Code	Comment Document

We're just regular folks here in Laveen. We work hard, many of us taking our lunch hours, like I'm doing now, working our 40, 50, and 60 hours of work a week to let our individual voices be heard. We are highly educated, highly motivated, and have been promised this Loop 202 since the 1980s. This highway should not be a shock or a surprise to anyone.

We want to desperately -- we want and desperately need a hospital in our area. Currently there are none south of the Salt River in metro Phoenix. We want and desperately need another bridge crossing the Salt River on the west side of Phoenix. Currently, there are no bridge crossings over the river west of 51st Avenue. The current street level crossing of the 67th Avenue and 91st Avenue are impassable and are closed for many weeks during the monsoon season and the rainy months during the winter.

I know it may not seem important to opponents of this project, but vital tax dollars are spent elsewhere and not in Laveen and Phoenix when our commercial infrastructure is so limited that residents have to go miles from Laveen to get medical treatment, shop, eat, and spend money in general. Those vital tax dollars go to Tempe, Chandler, Mesa, Gilbert, Scottsdale, Avondale, Glendale, and Litchfield Park. We're talking

Code	Issue	Response

Code	Comment Document

about millions of tax dollars that are just going away. No big deal? Those vital tax dollars go to improving schools, improving green energy, infrastructure for streets, sidewalks, libraries, community centers, police staffing, fire department staffing, just to name a few.

I know air pollution is also a common argument for not building this new highway. Consider for a moment the no-build argument. What happens when population doubles and traffic doubles along with it? Which is projected by the EIS. When traffic is idling on clogged and gridlocked surface streets, what are we to do then?

We cannot force people to do what they do not want to do. We cannot force people to ride the bus to work, ride a bike to work, or take the light rail. We cannot pour billions of dollars -- tax dollars into projects that a tiny percentage of the population will use. Like it or not, the facts are just that.

Opponents do not want things to change, and yet in a new multi-thousand-square-foot-expansion of the Vee Quiva Casino -- that's V-e-e, Q-u-i-v-a -- complete with 1,000-space parking lot under way. What are we going to do with the added traffic to our surface streets from that project? No Phoenix transportation infrastructure was added to help alleviate the traffic that project will

Code	Issue	Response

Code	Comment Document

certainly bring.

Unemployment is still a huge problem in Laveen and South Phoenix. Construction jobs are nice, which the 202 will bring. But the highway will bring commercial and professional jobs to our area as well. Not important, you say? Many of us drive 30 minutes or more to get to our jobs. Imagine if we had quality professional and high-paying jobs just five minutes from our homes.

When Laveen first -- when we -- when my wife and I first moved to Laveen in 2005, there were great plans for the area, with the Loop 202 on the cusp of being built and a hospital, professional buildings, and even a community college all but certain. When the economy went sour and the sure thing of the Loop 202 stopped, we were left distressed.

We cannot afford to wait any longer. We are at a crossroads, literally. I want the very best for this community that is my home. I am not willing to accept average or mediocre for my family or this community. I want the very best education for the children of this community. I want quality medical care here in Laveen. I want quality job opportunities for all of us here in Laveen. I want quality infrastructure here in Laveen, and I want quality safety and service from our city. Without

Code	Issue	Response

Code	Comment Document

the build of Loop 202, we get none of that. Shame on us if we bury our heads in the sand.

MR. STONE: Tim Stone, S-t-o-n-e.

I'm a member of the South Mountain CAT Team that undertook part of the study of the Loop 202. In our April meeting we were provided with the results of the Sonoma Technology, Inc., presentation on State Route 95 near Las Vegas and its effects on two schools in that area as they were producing and building the road and then using it afterward. The study concentrated on black carbon impact on the schools. What the school -- what the study indicated was that there was significant downwind effects that would occur if the school was in close proximity to the highway, but it would mitigate as it comes further away, more remote from the highway.

This is of concern because along the Loop 202 route, Betty Fairfax High School is not all that remote from it. It's close. And there's another elementary school down near the Pecos Road. And these downwind effects would be adverse to the children there.

In their study they indicated that with proper filters, the classrooms could remain safe, but outdoor activities would be at hazard, especially as it -- if it occurred near peak traffic transit; in other words, the rush hour time for morning or afternoon, with the kids

1 As previously indicated, I consider the South Mountain Freeway implementation to be a priority. It should be built using the Pecos road scenario from the I10 S around South Mountain and utilizing the connection with the W101 alternative option.

Thank you for considering this input.

Subject: South Mountain Freeway

1 2 I am writing to oppose the proposed South Mountain Freeway. I believe this freeway is unnecessary, will result in higher density development - which will increase air pollution, and will be a poor use of public funds.

3 We should use the funding intended for this freeway to instead be sure we have adequate funding for the fastest and most advanced commuter rail line between Phoenix and Tucson.

Sincerely,

Rick Freas
1326 E. Harwell Rd.
Phoenix, AZ 85042

1	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.

1

I live in the unincorporated Dusty Lane neighborhood wedged between Laveen and the reservation. I fully support the extension of the Loop 202, South Mountain Freeway.

Even though it will spoil a bit of my view and be pretty close to my house, the area needs the freeway. It is a growing community close to downtown that is very under served. And beyond the fact that Laveen needs the services the freeway would bring, the valley as a whole needs an alternate way to get from one side to another. Too much traffic bottlenecks on the I-10 tunnel area, causing massive delays.

Laura Freer
14011 S 43rd Dr
Laveen, AZ 85339

Subject: Comments in opposition to South Mountain Freeway
Date: Monday, May 27, 2013 2:44:26 PM

May 27, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

My life depends on maintaining my asthma which I only got since the South Mountain air quality has worsened. In 2009 when I started walking for my health on south mountain next to my home for 14 years I got a brand new asthma condition in my 40's!, I almost died from this in 2009. For this and many other reasons, the proposed freeway would cause more problems than it would solve. The lower standard of gasoline allowed by the state to be used in the name of economy plus a freeway such as this will push the air quality over safe limits.

2 In addition, the freeway would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and 3 investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

4 South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more 5 vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

6 The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a 7 freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

8 The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

1 Please help protect our communities, our health, and our environment by selecting the No Action Alternative.

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.

	This freeway and all related to it will definetely kill me by worseneing my asthma. Thank you. Sincerely, Ms. Corinna Fritsch 8639 S 49th St Unit 2 Phoenix, AZ 85044 (602) 458-9660

Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1 2 3 4 5 U.S. 85 should be the preferred alternative. The negative impact caused by EI outweighs the good. EI will become a truck bypass with increased noise pollution, air pollution, and hazardous materials. Commuters on the West side do not work in Chandler or Gilbert (at least not enough to warrant such a negative impact on the Foothills-Ahwatukee community) and there are not enough commuters to warrant this bypass. This is simply a truck bypass and an expansion for the Gila Indian Community - not a benefit to the citizens of Phoenix, and not necessary. The refusal to consider U.S 85 simply because it does not complete the 202 loop is not a good enough reason. Take EI out of the mix and put U.S. 85 back in the mix. (over)

1	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
2	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Draft Environmental Impact Statement
COMMENT FORM

Additional Comments: Not enough study has been conducted regarding impact on ground water, air quality, or noise pollution. The need for this project and the negative impact it will cause has not been demonstrated. What about increased crime to the area? This project is not a solution to a problem but a veritable font of problems!

1 I am not sure the population increase anticipated by DOT and consequently, the additional impact on traffic will come to fruition. There are no jobs here. What will this increased population do to be employed? There is no manufacturing. Do everyone going to work in the Service industry. How can the service industry survive when there are ~~not~~ few middle income & high paying jobs. Intel is not large enough to take up the slack. Intel could leave tomorrow. So no population increase.

2 3 Interstate 8 and SR85 is the logical alternative to a truck by-pass. The 202 will become the truck by-pass and all of the noise & pollution will impact life for this community. Schools, school children & residents will die back

Draft Environmental Impact Statement
COMMENT FORM

Additional Comments: Have to endure all these bad effects.
Why does the DOT want to foist all these bad outcomes on this lovely community?
The draft EIS didn't cover the problem of mines in the area, didn't address the water impacts, the electrical lines as well as few others not covered.
(9 represent 3 waters in my household)
In addition the Gila River Indian Community is building large retail and entertainment facilities to increase traffic to the area. What have they done to mitigate the problems acc this traffic will bring to this area. The western alignments only benefit them not the rest of us who live in this community. I understand at one time they wanted this freeway on their land and, in fact, begged for it. Why wasn't it decided then?
Do not build the freeway here. Find a better alternative !!!

Code	Issue	Response
6	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
7	**Geology**	A search of the Arizona Mineral Industry Location System database, examination of aerial photographs and topographic maps, and field investigation were completed to identify mineral resources and mines in the Study Area. These efforts identified one gold mining claim, six unknown mining claims, and several mining features in the vicinity of the South Mountains. None of these mining claims or features are located within the proposed freeway alignment.
8	**Groundwater**	Impacts on water are addressed in the *Water Resources* Section of the Draft Environmental Impact Statement, beginning on page 4-93, including groundwater and surface waters. Water impacts are also addressed in the *Waters of the United States* Section of the Draft Environmental Impact Statement, beginning on page 4-108, which focuses on the Salt River, washes, and canals.
9	**Surface Water**	Impacts on water are addressed in the *Water Resources* Section of the Draft Environmental Impact Statement, beginning on page 4-93, including groundwater and surface waters. Water impacts are also addressed in the *Waters of the United States* Section of the Draft Environmental Impact Statement, beginning on page 4-108, which focuses on the Salt River, washes, and canals.
10	**Utilities**	Utilities are discussed beginning on page 4-162 of the Draft Environmental Impact Statement, and a summary of major impacts is provided in Table 4-53 on page 4-163. The high-voltage power lines located just south of Pecos Road that run east–west would not be adversely affected by the proposed freeway. They would remain as-is.
11	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
12	**Alternatives, No-Action (No-Build) Alternative**

5007

MS. FRITZ: Carolyn S. Fritz, 3162 East Dry Creek Road, and that's in Phoenix, 85048. What I am concerned about is that the alternative using the 885 corridor for trucks was not examined closely enough or broadly enough to -- because this -- this section on -- along Pecos Road and at 10 will become a truck bypass. That's what concerns me. The traffic, the pollution, the noise, and this is a bedlam community here. I mean, this is all residences with schools and churches, and that will impact every person who lives here, every person who goes to school here, every person who worships here at the churches.

That's my -- I think it will decimate, you know, this community. It's a beautiful community. What were they thinking? They just didn't think it through. There are other better alternatives, and the 885 is a better alternative. I really don't see a need for the -- for the extension of the 202.

Page 16

Code	Issue	Response
1	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
2	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration
3	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
5	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Noise**	
7	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
8	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. No on the South Mountain Freeway:

1 Ahwatukee-Foothills community is a quiet, bedroom community which will be adversely impacted by the construction of the freeway. Below are the negative impacts:

2 1) Reconfiguration of 202/Pecos Rd. because Pecos Rd. not constructed for 8 lanes causing traffic congestion during construction + costing millions.

3 4 2) Trucks will use as a Phoenix bypass carrying hazardous materials, increasing pollution, increasing Mexican trucks without pollution controls putting Ahwatukee residents at a health risk.

5 3) Affects nearby schools with dangerous pollution + hazards.

6 4) Provides easier access + edit for criminal activity.

7 8 5) Increased traffic on residential streets

9 6) Use of outdated (2005) data regarding population increase

10 7) Removal of Park + Ride bus lot for downtown buses which would increase traffic on I-10 + residential streets.

1	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
2	**Traffic**	The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours may be needed during construction. (See Final Environmental Impact Statement page 3-27.)
3	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

7	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
8	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
9	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
10	**Traffic**	The existing park-and-ride lot at 40th Street and Pecos Road would not be adversely affected by the proposed project. In fact, a direct access point would be provided from the westbound on-ramp to the lot for buses. The proposed freeway would provide greater opportunities for bus rapid transit (express and rapid) routes because of the planned high-occupancy vehicle lanes.

LOOP 202 South Mountain Freeway Study

2013

Draft Environmental Impact Statement
COMMENT FORM

Additional Comments:

8) Closing of water wells for Akwatukee area.
9) Lack of research on mines in the area
10) Cuts through 3 mountain ridges.
11) Decreases Akwatukee lifestyle because it would end bike riding + jogging along Pecos Rd as well as eliminates Pecos Park.
12) Unsightly raised ramps at on & off ramps.
13) Affects natural movement of wildlife.
14) Removes hundreds of homes & a dozen churches.
15) Unlikely people from the East Valley that already has malls + hospitals will travel to the West Valley for shopping + healthcare or the people from West Valley traveling to East Valley for same.
16) Cost to taxpayers to prepare Super Fund site to be safe for construction.

Solution:
ADOT should consider an alternative truck bypass.
1) Use State Road 387 at the south end of the Gila River reservation to 115th Avenue going North to connect with I-10.

2) Construct a freeway on 85 through Gila Bend for a truck bypass around Phoenix.

ADOT TRACS No.: 202L MA 054 H5764 01L • Federal-aid Project No.: NH-202-D(ADY) 13-150

ADOT U.S. Department of Transportation Federal Highway Administration

Code	Issue	Response
11	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to State regulations/standards. (See text box on Final Environmental Impact Statement page 4-108.)
12	**Geology**	A search of the Arizona Mineral Industry Location System database, examination of aerial photographs and topographic maps, and field investigation were completed to identify mineral resources and mines in the Study Area. These efforts identified one gold mining claim, six unknown mining claims, and several mining features in the vicinity of the South Mountains. None of these mining claims or features are located within the proposed freeway alignment.
13	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
14	**Design**	The study has considered concepts for parallel multiuse paths, however the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
15	**Section 4(f) and Section 6(f)**	There would be no impacts on Pecos Park (see Final Environmental Impact Statement pages 5-12 and 5-13).
16	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
17	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
18	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
19	**Traffic**	Information related to origins and destinations of motorists that would use the proposed freeway is presented in Figure 3-18 on page 3-36 of the Final Environmental Impact Statement. The definition of freeway users considers only those motorists who travel through the South Mountains; so, motorists who begin their trips in Ahwatukee Foothills Village and travel east to Interstate 10 (Maricopa Freeway) or motorists who begin in Laveen Village and travel north to Interstate 10 (Papago Freeway) are not counted in the analysis. The analysis of origins and destinations shows that 73 percent of travelers would be involved in trips beginning or ending in the Study Area or areas immediately surrounding it. Seven percent of the trips would begin, end, or begin and end outside of the Maricopa Association of Governments region; ten percent would either begin or end in Pinal County.
20	**Hazardous Materials**	The corridor analysis revealed sites that would need further assessment during the property acquisition phase of the project, if an action alternative were to become the Selected Alternative. The Arizona Department of Transportation employs a phased approach to site assessment that allows time for cleanup of any sites found to have hazardous waste issues. The project team concluded from the level of analysis conducted during the environmental impact statement process that the types of sites likely to be acquired contain common hazardous waste issues like underground storage tanks, asbestos and lead paint in buildings, and other commonly found issues (see Final Environmental Impact Statement page 4-156). The Arizona Department of Transportation maintains a process for addressing these issues in accordance with all applicable environmental laws and regulations. Both the Van Buren Tank Farm and the West Van Buren Water Quality Assurance Revolving Fund site were identified and considered during development of the Draft Environmental Impact Statement (see pages 4-97 and 4-153 and the Draft Initial Site Assessment prepared for the proposed project.) These sites are primarily groundwater-impact sites, and groundwater is found at a depth of over 60 feet below the footprint of the Preferred Alternative. Given the separation distance between the adversely affected media (groundwater) and the construction zone (near surface in these locations), the project team determined that these sites would not pose a risk to construction or to the general public once the facility were completed. This assessment has been clarified in the Final Environmental Impact Statement on page 4-165.
21	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
22	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.

LOOP 202
South Mountain
Freeway Study

2013

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. NO BUILD ON THE 202

1) The GRIC and Ahwatukee communities most affected by the Pecos alignment of the 202 are opposed to it. Those two communities would bear the brunt of the pollution, the hazardous waste and the lifestyle destruction. (1) (2) (3)

2) Communities already in existence should not be destroyed in order to build up another community (Lovers). (4)

3) ADOT should respect the Cerpoia taxpayers who would be adversely affected by this construction. Not only would the construction (CONT'D)

Optional

Name [illegible] Email

Address 3162 E. Dry Creek Rd

LOOP 202
South Mountain
Freeway Study
2013

Draft Environmental Impact Statement
COMMENT FORM

Additional Comments: of this freeway harm businesses but it would entail reconfiguration of the egress and ingress to the I-10 and 202 to accommodate 8 lanes, causing terrible traffic congestion and costing millions of dollars.

4) What would happen to Pecos Park already in existence and highly used by the community?

5) Of course, this would become a truck bypass with trucks, many of them from Mexico which lack pollution controls, polluting the air in the Ahwatukee and GRIC communities.

6) ADOT should consider an alternative truck bypass extending State Road 387 at the south end of the GRIC reservation to 115th Ave going north to connect with I-10. Another solution would be to construct a freeway on the State Road 85 alignment through Gila Bend for a truck bypass around Phoenix.

5	**Acquisitions and Relocations**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Construction of the proposed facility would likely generate additional business and jobs in the corridor upon implementation because of the improved access it would provide.
6	**Design**	The Interstate 10/State Route 202 Loop (Santan Freeway) system traffic interchange was designed to accommodate the future connection of the South Mountain Freeway. No major reconstruction would be necessary at that location. The freeway construction staging plan for the area along Pecos Road would allow for keeping east-west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours may be needed during construction. (See Final Environmental Impact Statement page 3-27.)
7	**Section 4(f) and Section 6(f)**	There would be no impacts on Pecos Park (see Final Environmental Impact Statement pages 5-12 and 5-13).
8	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Trucks**	
10	**Purpose and Need, Truck Bypass**	
11	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.

To whom it may concern,

1

I BEG you to call it something other that than another 202! Traffic reporters on the radio already can't seem to manage to call the Red Mountain and San Tan portions of the 202 by their names..."an accident on the 202 at _____" Come on! Give us a break. Many streets enter and exit both of them!

Thanks for reading.

Subject: Stop south Mountain Pecos alignment!

Comment from citizens without any responsible action on the part of ADOT, makes this a download of information to the public there is no upward communication that commands respect and reaction from ADOT this is a just a complacent reply to public disapproval of this project. ADOT will do whatever it deems necessary. These meetings are also a waste of public monies as there is no one truly listening to the public opinion. It is a waste of time as this process is flawed!!! Please don't present it as an opportunity to change the process. You have not listened to the most cost effective plan. Following Riggs Road alignment. Geometrical symmetry is the only concern, well that and the waste of public funds paying for property that has been paid for before then sold and then bought again. (investigation into who profited is called for!) Schools, parks, homes, and destruction of environment will cost more because it was purchased at more than three times the cost of using existing easements and alignments previously paid for. Riggs is the only and most economical alignment Face the truth there are not that many trucks coming from the east valley. or those would travel existing West bound traffic. Again the Pecos Roads is merely a trucking rout, use Riggs road. double decker it. Stop the Pecos alignment!!That and other alternative routes cost less than a no build option. The engineers have gone political!!!! They are wasting tax money on symetry. This is truly a waste of public funds!

M. Frost

Code	Issue	Response
1	**Public Involvement**	Public comments are a vital component in the decision-making process. Public comments have been solicited from project inception and through key milestones in the environmental impact statement process. The interests and needs of the public, along with all other social, economic, and environmental issues and impacts, must be fully analyzed and included in the Draft and Final Environmental Impact Statements. Comments made during development of the Draft Environmental Impact Statement have been used to adjust plans, explore new questions, or make changes—all within the scope of the National Environmental Policy Act. Public comments received on the Draft Environmental Impact Statement were reviewed and addressed in the Final Environmental Impact Statement. Public comments received on the Final Environmental Impact Statement will also be considered and addressed as appropriate. More information about the entire public involvement process is available in Chapter 6, *Comments and Coordination*, of the Final Environmental Impact Statement.
2	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
3	**Alternatives**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land despite the risk that the freeway would eventually be built. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
4	**Alternatives**	Information related to origins and destinations of motorists that would use the proposed freeway is presented in Figure 3-18 on page 3-36 of the Final Environmental Impact Statement. The definition of freeway users considers only those motorists who travel through the South Mountains; so, motorists who begin their trips in Ahwatukee Foothills Village and travel east to Interstate 10 (Maricopa Freeway) or motorists who begin in Laveen Village and travel north to Interstate 10 (Papago Freeway) are not counted in the analysis. The analysis of origins and destinations shows that 75 percent of travelers would be involved in trips beginning or ending in the Study Area or areas immediately surrounding it. Nine percent of the trips would begin, end, or begin and end outside of the Maricopa Association of Governments region; seven percent would either begin or end in Pinal County.
5	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Alternatives**	The double-deck option suggested in the comment would have similar benefits and impacts as the Bridge Alternatives evaluated in the Final Environmental Impact Statement (see pages 3-13 and 5-20). Options to build a bridge through or over the South Mountains were eliminated from further study because of incident management, constructibility and maintenance issues, future expansion limitations, substantially higher estimated construction costs, and undesirable intrusion-related impacts.
7	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Public comments received on the Draft Environmental Impact Statement were reviewed and addressed in the Final Environmental Impact Statement. Public comments received on the Final Environmental Impact Statement will also be considered and addressed as appropriate. More information about the entire public involvement process is available in Chapter 6, *Comments and Coordination*, of the Final Environmental Impact Statement.
2	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
3	**Alternatives**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land despite the risk that the freeway would eventually be built. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.
4	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Stop this waste of public funds. NO ONE ADOT LISTENS TO THE OBJECTIONS FROM THIS COMMUNITY! Or at least no action comes of it. THIS IS A WASTE OF PUBLIC FUNDS AND TIME. The Riggs Road alignment is the compromised solution. Alignment is paid for double decker roadway is the most economical solution, more land will not have to be purchased or destroyed, smog will be removed from over schools and homes. Stop this travesty! Stop symmetry for symmetry sake

1	**Public Involvement**	Public comments are a vital component in the decision-making process. Public comments have been solicited from project inception and through key milestones in the environmental impact statement process. The interests and needs of the public, along with all other social, economic, and environmental issues and impacts, must be fully analyzed and included in the Draft and Final Environmental Impact Statements. Comments made during development of the Draft Environmental Impact Statement have been used to adjust plans, explore new questions, or make changes—all within the scope of the National Environmental Policy Act. Public comments received on the Draft Environmental Impact Statement were reviewed and addressed in the Final Environmental Impact Statement. Public comments received on the Final Environmental Impact Statement will also be considered and addressed as appropriate. More information about the entire public involvement process is available in Chapter 6, *Comments and Coordination*, of the Final Environmental Impact Statement.
2	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
4	**Design**	A double deck freeway would cost more to construct and maintain than a freeway alternative that would be at grade.

The south mountain freeway needs to be built to improve the development of the valley. I live in the Southwest area of Phoenix and think the only way that this area can grow like the other parts of the valley is through building this freeway. Currently, there are no major shopping malls or car dealerships in the area. Building this freeway will be the only way these will come to the area and help the economy of Phoenix in the process.

Subject: 202 extension

I agree that 202 should be extended to create access to the west side, and relieve traffic thru downtown Phoenix.

I disagree that it should replace Pecos Road. Laying a freeway over Pecos road will demolish over 300 private homes, ruin South Mountain, sacred to the tribe, plus Mountain Park Community Church, home to hundreds of good Christians. The church could not be replaced within 10-20 miles (where is the vacant land that would allow a church that size to be built?). The church's spacious auditorium is also a venue for entertainers and other non-church activities, best for miles around.

A freeway that is built this close to residences, schools, and churches will infest it will noise, pollution, and displace 1,000 or more citizens who moved to Ahwatukee because they loved the location. How many years would the residents endure noise, dust, and roadblocks and detours during construction?

Who approved the construction of homes, schools, and churches along Pecos when plans were in place to build a freeway?

I vote for having discussions with the Gila Rive Indian Community. Negotiate with them and offer generous monetary compensation for their land. Offer to build an urgent care center, community center; landscape with native trees and cactus. Perhaps the road could be recessed to provide relief from noise and sight pollution.

Give some consideration for the thousands of people living and worshiping along Pecos road.

I vote for pushing negotiations with the GRIC.

Donald Fuller, Ahwatukee

1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
3	**Neighborhoods/ Communities**	Final Environmental Impact Statement page 4-40, Table 4-12, shows that, at this stage of the design process, 112 single-family homes would be displaced, not 300, and that is for all of the E1 Alternative, not just along Pecos Road.
4	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Cultural Resources**	
6	**Noise**	
7	**Air Quality**	
8	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
9	**Construction**	The Arizona Department of Transportation is evaluating construction delivery methods for the proposed freeway. One concept is to deliver it as a single design-build project. This method would accelerate the construction duration for the entire project to around 3 to 3.5 years. Another concept would be to deliver the project in a more traditional method, breaking the 22-mile corridor into nine segments (each 1 to 3 miles long) and constructing them in phases. Each segment would be under construction for 1 to 3 years, and the total construction duration for the entire corridor would be 5 to 6 years. A discussion of construction implementation is provided beginning on page 3-59 of the Final Environmental Impact Statement. Any particular area of the Preferred Alternative would not be expected to see construction activities beyond an approximate 2-year period.
10	**Construction**	It is difficult to estimate construction-related noise levels because they depend on numerous factors, such as construction phasing, staging of equipment and materials, and work schedules. As reported on page 4-90 of the Final Environmental Impact Statement, construction noise levels during certain phases could be as high as 85 A-weighted decibels for short periods. As equipment would move on to other areas, noise levels would be lower. Where feasible, noise barriers would be constructed as early as possible during construction to shield adjacent properties from construction-related noise.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
11	**Construction**	To reduce the amount of construction dust generated, particulate control measures related to construction activities must be followed. The following mitigation measures would be followed, when applicable, in accordance with the most recently accepted version of the Arizona Department of Transportation *Standard Specifications for Road and Bridge Construction* (2008). Prior to construction and in accordance with Maricopa County Rule 310, Fugitive Dust Ordinance, the contractor shall obtain an approved dust permit from Maricopa County Air Quality Department for all phases of the proposed action. The permit would describe measures to control and regulate air pollutant emissions during construction (see page 4-173 of the Final Environmental Impact Statement).
12	**Construction**	The traffic projections for Chandler Boulevard (see Figure 3-12 on page 3-29 of the Final Environmental Impact Statement) do show a reduction with the proposed freeway when compared with conditions without the proposed freeway. The freeway construction staging plan for the area along Pecos Road would allow for keeping east-west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours may be needed during construction. (See Final Environmental Impact Statement page 3-27.)
13	**Acquisitions and Relocations**	It is not within a City's or State's right to deny building permits to developers who meet all requirements and want to develop their land. In 1996, the Maricopa Association of Governments Regional Council approved the Red Letter Process to provide early notification of potential development (including plans, zoning, and permits) in planned freeway alignments. In addition, the Arizona Department of Transportation works closely with Cities and Counties during the environmental impact statement process to encourage developers to reserve land for future transportation improvements. In some cases, when the developer is willing, the Arizona Department of Transportation has been able to purchase a portion of the land through advanced acquisition (see Final Environmental Impact Statement pages 3-53, 4-13, and 4-48).
14	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

ADOT Loop 202 South Mountain Freeway Study
1655 W. Jackson Street
MD126F
Phoenix, AZ 85007

Attention to: study team panel

I am writing in support and vote YES to the Loop 202 South Mountain Freeway, specifically the W59 alternative.

As a Laveen resident I am forced to deal with congested traffic along on the Baseline corridor from 99th Ave to I10 . The severe lack of retail shopping, restaurants, medical facilities, and entertainment forces revenue and tax dollars to be driven outside of Phoenix as residents frequent Avondale, Tolleson, Chandler, Scottsdale, and Tempe to shop, dine, etc. This freeway and the socio-economic infrastructure it will bring to our community is desperately needed!

After researching this issue, allow me to share some of the reasons I urge you to approve this freeway expansion:

- 64.3% of likely voters in Maricopa County support construction of this freeway
- In a separate study, also commissioned by We Build Arizona, 59% of likely voters in Ahwatukee and Laveen Support this freeway as well.
- It is time to end the commuter traffic jams and congestion we experience not having easy access to the freeway and connection of the East/West Valley.

(Comment codes begin on next page)

Code	Issue	Response

Code	Comment Document

- If we don't build the South Mountain freeway, traffic in the region will get much worse over the next two decades. According to ADOT's own study:
- Traffic on the I-10 between Ahwatukee and Goodyear will grow 28%
- Another 103,000 cars will use Broadway Curve each day
- Another 38,000 cars will jam the Tunnel every day
- Morning and evening commute times will increase 39% to 82%
- Traffic congestion on city streets will increase 46%
- The same report indicates the project will also reduce air pollution by reducing the time vehicles spend stuck in traffic
- The project will create 30,000 jobs during the five to six year construction period and result in a $2Billion investment in the Phoenix-area economy.
- The money to the build the freeway is in the budget, it was voted on and approved TWICE (1985 & 2004 respectively),we voted for the 1/2cent tax increase in 2004 to support the build.
- There is no more important project to the area's commuters and workers than the South Mountain Freeway project. Please vote to Build It NOW!

Please consider the following request when making your YES vote:

1 - Design and construction of community value additions such as **attractive sound barriers** and a **bike/running/pedestrian path**along the length of the freeway as well as the use of Rubberized asphalt as per the ADOT's "Quiet Pavement Pilot Program" initiated in 2002.

2 - We have award winning examples in Tucson, AZ which received an excellence award in 2002 by the Federal Highway Administration (FHWA) for the Diamondback bicycle/pedestrian bridge as well as it's Intelligent Transportation Systems excellence award for ITS public-private partnership.

- Other examples are the Schuylkill Expressway in Philadelphia, the Rockville Parkway in DC, and the San Antonio,TX Freeway systems ranked best among largest US urban areas.

Thank you in advance for your vote of YES to support of this freeway!

Code	Issue	Response
1	**Visual**	The Arizona Department of Transportation Roadside Development Section is responsible for assigning a wide range of standard treatment applications and wall materials, including color, to noise barriers and other structures. Typically the community where the wall will be constructed would work closely with its City Architect or planning department to decide on a theme for the wall. Usually, this can be accomplished by using the Arizona Department of Transportation standard applications. The process municipalities might take to achieve the desired aesthetic treatment of for noise barriers or other structures is explained on page 4-162 of the Final Environmental Impact Statement.
2	**Design**	The study has considered concepts for parallel multiuse paths, however the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.

Subject: Proposed Pecos Alignment of the South 202

1 In all of the meetings, hearings, etc. that I have attended over the years to stay informed and express my opposition to the proposed South 202 truck bypass (because lets be real, it is not to aid in the commute to downtown Phoenix) my house was shown to sit in the "footprint" of homes that would be bought and destroyed by the State in the construction of the freeway. In looking at your recent "flyover" videos, however, it looks as though now the freeway will simply be in my backyard and my house will not be destroyed structurally, but financially, as it will no longer be worth a dime!

2 3 Can you please clarify for me what the exact proposed future of my home is? My property is located at 3139 E. Redwood Court (the northwest corner of Pecos & 32nd street). Due to multiple health issues as well as the potential loss of my current employment, I need to know as much information as possible regarding my relocation options and the timeframes for acquisition of my property as soon as possible.

4 Thank you for your assistance in this matter.

Beth Gagnon

1	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
3	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
4	**Acquisitions and Relocations**	**The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.** **The address noted in the comment would be located outside of the current right-of-way footprint for the proposed freeway. Aerial maps showing the proposed freeway (W59 and E1 Alternatives) are accessible at the project Web site: <azdot.gov/southmountainfreeway>.**

ADOT Loop 202 South Mountain Freeway Study
1655 W. Jackson Street
MD126F
Phoenix, AZ 85007

Dear ADOT ,

I am a member of PARC and currently working in the health care profession in Central Phoenix. I am concerned about the many issues not sufficiently addressed or omitted in the recent DEIS and would like this entered into the public comment section of the process:

Issues not raised or not fully studied in DEIS are as follow

1. *Direct impact to autism cause by highways close to kids. Recent evidence in 2013 should be added into the impact*
2. *DEIS does not have accurate and up-to-date 2013 2012 asthma and autism impacts growing in metro Phoenix nor updates to impacts of highway 51 health issues we see from folks living 1 mile for freeways. DEIS need to go back and review current health impacts of existing highways air quality an EPA air violations . Then DEIS needs to model the impact of the growth projections on worsening the air and health risks. Population growth alone will estimate a sever worsening of health risks and cause air quality to be worse than EPA standards in 43 ave 51 ave zip 85045 85048 GRIC and laveen. Major flaw in such a study since it does not estimate these issues accurately for 2014 -2016 growth in toxic air and worsen health counts and health symptoms that the doctors and hospitals see now up for 2013.*
3. *Must better study for impacts top current and future residents and school kids who's play area and day cares will be less than ¼ of a mile from traffic*
4. *Did the study add in the additional traffic due to the building of the premium outlet mall at highway 10 and 202. This substantial increase in polluting traffic needs to be in the study. Not avoided since they exit the highway.*
5. *Blasting thru south mountain will cause religious and racial discrimination and civil rights violations in SMF DEIS*
6. *Is it legal to destroy burial rights and petroglyphs and Indian artifacts in the line of demolition. If DEIS does not really go on Indian land and it does not protect their adjacent artifacts is it accurate and inclusive. DEIS should study all the true direct and indirect impacts to the highway on AIRFA passed in 1978 is not being followed.*
7. *Truck traffic from Mexico and high sulfur diesel and benzene levels will be worse than study portrays. The DEIA clearly does not model the additional air pollution for this traffic,*
8. *This highway will not improve the air quality for phoens . DEIS does not model the future impact. Our city will be in violation of Clean air Act. Also will worsen west and south phoenix air,*
9. *There is no serious discussion or consideration in the DEIS of the 2005 monitoring of toxic chemicals (present air toxins) . This 2005 study conducted by EPA and ADEQ in joint effort with JATAP showed results reported in 2006 showed emission from traffic were already (in 2006) above the standard of 1 million chance of cancer in a life time of exposure in west an south phoenix and GRIC, This need new data for 2007 2008 2009 2010 2011 2012 2013 since air and traffic are now worse. To not have DEIS study this is unethical and flawed.*
10. *Jatap monitoring already found formaldehyde at 34 times the standards,*
11. *Benzene at 8 times the standard, butadiene 1 and 3 7.5 times the standard, acetaldehyde at 3.4 times the standard, our residents are being exposed to these entire carcinogens not just one. DEIS must study the combined effects of these current carcinogenic mixed compounds on Health. And then study the new higher levels of all of the above thru 2013, Then model and project the added compounds of ultrafine and fine particulates.*
12. *DEIS does not mention hazmat transportation issues a risk of tanked from Mexico. Must redo the study for this*
13. *Ozone levels and exceeding the parts per million set by EPA and the clean air act and not considered. Postponing EPA enforcement standards must be reconsidered to do a true DEIS . Also explaining that dust storms cause all this is not accurate. Modeling of today's levels need to be updated and*
14. *Congestion and future traffic counts not molded correctly and congestion on west I 10 on ramps not designed correctly to handle traffic volumes. ADOTS past modeling results have been inaccurate and realistic . We need better and realistic quality data inputs into the study. 2012 and 2013 traffic pattern data not updated in the study. Must relook at peak traffic from April 2013 as look at current air quality EPA violations.*
15. *Sulfur and benzene test stations should be set up to get accurate 2013 air quality reading in laveen GRIC and 85045 85048 zip codes.*

Sincerely, Randy W Gallagher - Member of PARK
I Do Agree with the contents of This letter We will Need To Stop 202 Southmountain Freeway You make >

Code	Issue	Response
1	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Traffic**	The traffic projections used in the traffic analysis are from the Maricopa Association of Governments regional travel model, as certified by the Federal Highway Administration and reviewed by the U.S. Environmental Protection Agency for air quality conformity (see Draft Environmental Impact Statement page 3-27). Traffic projections are regularly updated by the Maricopa Association of Governments. The traffic projections in the Draft Environmental Impact Statement are from a model adopted in 2011. When the Maricopa Association of Governments adopts new socioeconomic projections and traffic projections, it will be reflected in the study documents. Key model inputs used to forecast travel demand included (see Table 3-7 on Draft Environmental Impact Statement page 3-27): · socioeconomic data based on the adopted general plans of Maricopa Association of Governments members, which includes projected growth in population, housing, and employment (including proposed commercial centers), along with economic forecasts and the existing and planned transportation infrastructure as identified by Maricopa Association of Governments members · the anticipated average number of vehicle trips within the region (including those to and from the region's households) on a daily basis (this number is tracked regularly by the Maricopa Association of Governments) · the distribution of transportation modes used by travelers in the Maricopa Association of Governments region (also tracked regularly by the Maricopa Association of Governments) · the capacity of the transportation infrastructure to accommodate regional travel · the future transportation infrastructure established using *Regional Transportation Plan*-planned projects and improvements and from known arterial street network improvements assumed to be made by the County, Cities, and private developers The Maricopa Association of Governments approved new socioeconomic projections in June 2013. The new data are presented in the Final Environmental Impact Statement (see page 1-11). Although slower growth in total vehicle miles traveled was noted, the need for the freeway did not change. The revised traffic analysis validated that the proposed project is needed today.

Code	Issue	Response
3	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. As discussed on page 4-147 of the Draft Environmental Impact Statement, a programmatic agreement was developed for the project to establish a process for consultation, review, and compliance with federal and State preservation laws as the effects of the project on historic properties become known. The programmatic agreement states that any data recovery on federal lands necessitated by the project must be permitted under the Archaeological Resources Protection Act in accordance with the federal land-holding agency and that, in the event any data recovery for the project should take place on tribal lands, all applicable permits would be obtained. Because the project is proposed, a programmatic agreement is in place to address data recovery on federal and tribal lands, and no excavations have yet occurred. The proposed freeway is and will continue to be in compliance with the Archaeological Resources Protection Act.
4	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.

Code	Comment Document

Code	Issue	Response
5	**Trucks**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Air Quality**	
7	**Air Quality**	Summary information about the findings of the Joint Air Toxics Assessment Project study is provided as background information in the Draft and Final Environmental Impact Statements, but the study itself is not relevant to the type of analysis done pursuant to the Federal Highway Administration's mobile source air toxics guidance, which is an emissions analysis. Monitored ambient concentrations of mobile source air toxics (the focus of the Joint Air Toxics Assessment Project) do not inform this type of analysis. While monitoring data can be useful for defining current conditions in the affected environment (to the extent that the monitoring data are current), they don't tell us anything about future conditions, or the impacts of the project itself, which is why an emissions analysis was performed. The mobile source air toxic analysis presented beginning on page 4-77 of the Final Environmental Impact Statement is an estimated inventory of mobile source air toxic emissions for the entire Study Area for 2025 and 2035. This approach was used because the inventory estimate accounts for changes in traffic and emissions on all roadways affected by a proposed project, and would, therefore, be a more reliable predictor of changes in exposure to mobile source air toxics. The Draft and Final Environmental Impact Statements present information and analysis about the proposed action and the enhanced conditions when compared against the No-Action Alternative and would not cause significant adverse effects. The Federal Highway Administration and Arizona Department of Transportation Draft and Final Environmental Impact Statements account for the potential effects when considering both adverse and beneficial impacts. The Draft and Final Environmental Impact Statements provide in-depth discussion of potential air quality impacts of the proposed alternatives. The carbon monoxide analysis presented on page 4-65 of the Draft Environmental Impact Statement and updated on page 4-75 of the Final Environmental Impact Statement represents projected carbon monoxide concentrations along the project corridor, including those proposed interchange locations along the South Mountain Freeway corridor. The Arizona Department of Transportation also conducted a quantitative particulate matter (PM_{10}) hot-spot analysis that is discussed on page 4-76 of the Final Environmental Impact Statement. Both of these analyses demonstrate that the health-based National Ambient Air Quality Standards for carbon monoxide and particulate matter (PM_{10}) would not be exceeded at worst-case locations along the project corridor. The emission modeling developed for the proposed action showed that for the mobile source air toxics study area, there would be little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions (see discussion beginning on page 4-77 of the Final Environmental Impact Statement).

(Response 7 continues on next page)

Code	Comment Document

Code	Issue	Response
7 (cont.)		The carbon monoxide and particulate matter (PM_{10}) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.
8	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Air Quality**	As noted on page 4-76 of the Final Environmental Impact Statement, since ozone is a regional pollutant, there is no requirement to analyze potential impacts and no possibility of localized violations of ozone to occur at the project level. The Maricopa Association of Governments is responsible for developing plans to reduce emissions of ozone precursors in the Maricopa area. The Preferred Alternative is included in the *Regional Transportation Plan* that has been determined by the U.S. Department of Transportation to conform to the State Implementation Plan on February 12, 2014.
10	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
11	**Alternatives, W59 Alternative Versus W101 Alternative**	
12	**Air Quality**	Data from various Maricopa County Air Quality Department monitoring sites were used in the air quality analyses. Siting, operation, and recording information from monitoring sites are the responsibility of the Maricopa County Air Quality Department. See <maricopa.gov/aq/>. The monitoring information used in the air quality analyses is discussed in greater detail in the air quality technical report prepared for the project which is available on the project Web site at <azdot.gov/southmountainfreeway>. The results of the analyses are summarized in the Final Environmental Impact Statement. According to U.S. Environmental Protection Agency guidance, new monitors are not necessary to analyze air quality impacts.
13	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
14	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Draft Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.

City, State, Zip Code: Phoenix, AZ 85007

Dear representative of A.DOT.:

I am writing to state my opposition for the proposed expansion of Loop 202/South Mountain Freeway (SMF).

1
2

This project has been under consideration since 1983, when oil and fuel prices were inexpensive. At a present time when volatility of the oil industry incurs an ever-rising cost of fuel prices to consumers, the proposed project is outdated in its purpose at a critical time when transportation decisions should address the increasing temperatures of urban cities.

3 4 5

The two currently proposed routes for the freeway are less than a mile apart. Both will have the same harmful effects on the Gila River Indian Community's (GRIC) air quality, health and traditional cultural properties. The on-reservation alignment will result in a loss of approximately 600 acres of tribal land, and the forced relocation of O'odham families.

6
7 8 9

The off-reservation alignment would gouge a 40-story high, 200-yard wide cut into South Mountain, which is sacred to all four O'odham tribes. South Mountain is also significant to the larger Phoenix area due to it being the largest city park in the United States. Laveen and Ahwatukee residents would ultimately be affected by air and noise pollution, as well as the inevitable devastation of numerous local businesses, homes and a church in the line of the proposed route.

10
11

The Sierra Club Report "The Best and Worst in Transportation Investments" listed SMF as one of the worst projects in the United States based on oil, environmental, health, economic, and land use impacts. The freeway would impose on a critical wildlife corridor for various threatened desert animals and fragile ecosystems unique to both the Estrella and South Mountain ranges.

12

I want to advocate "No Build" as the only option that preserves the environment, health of GRIC, respects O'odham traditions, and is also beneficial for Laveen and Ahwatukee residents.

Sincerely,

Sheri Gallagher -
Member of PARK

7

Also, I believe the DEIS study has not addressed the many aspects of the added pollution of a freeway as Ahwatukee is, in fact, a "bowl" and →

Code	Issue	Response
1	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Heat Island**	As buildings, parking lots, roads, and other infrastructure replace open land and vegetation, an urban heat island may result. The heat island effect is of a regional nature and, therefore, there is no requirement to analyze potential impacts and no possibility of determining the localized contribution at the project level to the regional heat island effect. It is likely, however, that a proposed project such as the South Mountain Freeway would be a minor contributor to the overall issue.
3	**Alternatives**	There is only one action alternative studied in detail in the Eastern Section of the Study Area in the Draft and Final Environmental Impact Statements. While an alignment on Gila River Indian Community land was considered, it was ultimately eliminated from detailed study (see page 3-24 of the Final Environmental Impact Statement). The Community Alignment, as depicted in Figure 3-11 on page 3-25 of the Final Environmental Impact Statement would not result in the relocation of any residences on Gila River Indian Community land.
4	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Cultural Resources**	
6	**Section 4(f) and Section 6(f)**	
7	**Air Quality**	
8	**Noise**	
9	**Acquisitions and Relocations**	
10	**Sierra Club Report**	The Arizona Department of Transportation and the Federal Highway Administration respectfully disagree with the referenced Sierra Club Report. As noted in the Final Environmental Impact Statement, when compared with the No-Action Alternative, the Preferred Alternative would result in less energy consumption (page 4-172), regional improvements to air quality (page 4-74) that would be expected to produce health benefits, and economic benefits of reducing regional traffic congestion (page 4-65), and would be consistent with local and regional long-range planning efforts (page 4-18).
11	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
12	**Alternatives, No-Action (No-Build) Alternative**	

Code	Comment Document
4	pollution would collect worse than the 101 HWY or the 202 as they are not between mountain ranges. also, the particulate matter would adversely affect the Ahwahnee residents, especially the children! I agree with the statements in this letter fully! Sheri Gallagher

of our 2,600 members, the greater Phoenix Chamber of Commerce agrees it is time to build the South Mountain Freeway. We support investments in transportation projects that will improve mobility and contribute to economic development, environmental quality and jobs. We need the jobs, and we want the investment.

It's time to relieve the congestion in the southern portion of our metropolitan region, and allow for free movement of people and commerce. As we supported it 25 years ago, we support it again today. Thank you so much for the opportunity to provide comment.

THE FACILITATOR: Thank you. Kate Gallego.

MS. GALLEGO: Hello, I'm Kate Gallego, South Mountain resident. Former chair of the Environmental Quality Commission in Phoenix, and I'm here in support of the freeway. I think it will relieve congestion and stop some of the cut-through traffic. It will bring important economic development to Laveen and job creation, creating over 30,000 jobs.

It's an important part of our transportation network. It needs to be part of a

1

1		Comment noted.

Code	Comment Document

multi-modal network, so we need commuter rail. I hope eventually we will have light rail coming up to Baseline and then to -- to connect with this freeway, so we do need all forms of public transportation, but we need this freeway.

Thank you.

THE FACILITATOR: Thank you.

Alexander Soto.

If you'd like to speak, please go out to the registration desk, get registered, and we'll have your name up here.

Thank you.

MR. SOTO: I'm Alex. So go?

(Speaks in foreign language) Alex Soto, (speaks in foreign language), I'm from the community cells of the Tohono O'odham Nation. I currently live here in Phoenix, Arizona, and I'm here to comment against this freeway.

Overall, this South Mountain Freeway is an attack on my civil rights as an indigenous person. And the lack of cultural consideration that is in this EIS is shocking. It is a fact that, I know there's a lot of civil rights statutes and protocol that an EIS would include towards communities of color, in particular ones that have been historically

1 2 3

We are residents of South Mountain since 2003. We have patiently watched the deliberations regarding the ultimate route of the 202 extension to our south. It is hard to imagine that a highway could be built so close to existing residences, schools, churches and businesses, negatively impacting the entire community, when open desert land is available immediately adjacent to the Pecos route. How is it possible that a negotiation could not solve this issue to the benefit of all parties. Is it money? Is it native american self-determination? Is it obstinacy on the part of the DOT?

We are very concerned that the entire area will be changed forever because of a needed highway. Certainly there are instances when no options exist and the communities affected simply bend to the needs of the larger community. When options are available it seems shameful to not consider those who affect the fewest.

Respectfully,

Larry Ganann

So in conclusion, I guess, I just want to make sure that -- that all these comments against the freeway are realized and heard, and I want to make sure that this project does not go through to the highest bidder or whoever. It's become a private project anyway. It's all about money at this point. And I want to see the streets improved. I want to see more bike lanes. I want to see Complete Streets passed and moved forward with. And I support Mayor Stanton, in that I do not support the 202 Freeway.

Thank you very much. I appreciate your willingness to hear my comments.

If you could add something to that, one of the pro-202 speakers mentioned that we need a freeway in order to build a hospital in Laveen. And I believe the complete opposite is true. We need a hospital in Laveen before we build a freeway. We don't need a freeway to get to a hospital.

That's all.

MS. GARZA: Well, my name is Anna Garza, A-n-n-a, G-a-r-z-a. I am a living resident in ZIP Code 85239. And I'm here to share my comments.

I feel it is time to build the South Mountain Freeway. Our Valley commuters have waited long enough. In the meantime, we are -- we have traffic jams,

1

Code	Issue	Response
1		Comment noted.

Code	Comment Document

a lot of congestion as our community grows. The freeway would help cut the congestion in an area, reduce air pollution. 64 percent of the voters voted it in, and we are still waiting.

Traffic on the I-10 between Ahwatukee and Goodyear will grow about 20 percent and will have another 10 -- 103,000 cars that will use the Broadway curve each day. Another 38,000 cars will jam the tunnel every day. Morning and evening commute times will increase by 40 percent to almost 82 percent, and traffic congestion on the city streets will increase by 46 percent unless they build the freeway.

The project will create approximately 30,000 jobs during the five to six-year period -- construction period and can -- will result in a 2 billion investment in the Phoenix area economy. The building -- the money to build the freeway is already in the budget and was approved by voters twice; first in 1985 and again in '04.

So there is no more important project to the area's commuters and workers than the South Mountain Project Freeway. So we must build it now.

MR. KUEFER: William, last name K-u-e-f, like Frank, -e-r.

Okay. I live in Laveen. And I'm very much in favor of the proposed Freeway Extension 202.

Code	Issue	Response

Code	Comment Document
1	Jezanna Garza Document Created: 7/18/2013 12:24:16 PM by Web Comment Form With the continuous expansion of the west valley a 202 extension becomes an essential part of the growth of the Phoenix area. I live in the Laveen area and often commute to different areas around town, I fully support the expansion project and urge you to look at the positive impact this will have on the community at large. The environmental factors while a primary concern for many are fully addressed through this proposal and by eliminating travel barriers and restrictions for people from every city the highly populated areas will be positively impacted as well. The population growth is not going to change as a result of this expansion and the additional convenience will only allow for increased satisfaction amongst residents.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1 I am against this freeway, both on Pecos Rd. or
2 on the Gila River Community. My reason is air quality. I know that the wind blows across my property from the south and on through towards South Mountain Park. I live one block north of E. Chandler Blvd., and I feel that the pollution from both cars and trucks will directly affect my quality of life here in the Ahwatukee Foothills.

Subject: Proposed Loop 202
Importance: High

1 As a homeowner in the Ahwatukee Foothills I am vehemently against building the loop 202 Freeway anywhere in the pristine Ahwatukee Foothills. The Environmental Impact study cannot compare the Broadway Curve to the Ahwatukee Foothills. Pollution, smog, and dust from Tractor Trailers and automobiles would be trapped within the Foothills, plus damage homes and diminish their worth. More importantly have a significant adverse effect on the Children who live and attend schools in the Foothills.

2 3 4 5

I moved to Phoenix from Los Angeles in 2002, and quickly noticed how lack of planning and apparent knee jerk reactions led to freeways being outdated immediately after they were built. Now you want to do it again……so that a few can profit from the proposed loop 202. The City of Phoenix will not profit from this build, it will only be a detractor for the City and Ahwatukee Foothills.

6

My understanding is that South Mountain is sacred ground to the Native American Communities within the proposed Loop 202. Routing traffic through or around South Mountain will also destroy the history and Culture of our Native America neighbors.

7 8

Learn from your previous mistakes 60, I-143, I-17, and the I-303 Freeway to nowhere.

Jeffrey Gearhart

Code	Issue	Response
1	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
4	**Acquisitions and Relocations**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values. A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
5	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Stacey Gentry Document Created: 5/21/2013 4:50:57 PM by Web Comment Form

As an 8 year resident of Laveen I fully support the freeway extension. This will allow us to travel to the southeast valley and west valley much quicker, as well as entice larger restaurants and businesses to move in. Laveen and surrounding areas grew tremendously during the housing boom. I moved in during this time and was very excited at the prospect of the freeway and how it could benefit the community. This will allow us to keep more of our dollars in our community. Currently we have to drive 20-30 minutes for any sort of major shopping center, including Target, or a movie theater. And primarily the only full service restaurants are an Applebees and Native New Yorker. The residents of Laveen are of all income brackets and are in need of diverse shopping/dining opportunities. I can't believe 7 years later we are still in the discussion phases.

In regards to the impacts to the environment, homes and businesses, I know the freeway will be inconvenient to some but it is necessary in this ever growing population. I'm sure the I-10, 101 and 202 freeways caused ill effects to the environment and displaced homes and businesses but they are necessary for progress in the vastness of this valley. Also the layout has been clear for more than 10 years, so the residents of Ahwatukee had plenty of fair warning. I understand the concern on the part of the Indian community, but this freeway would also be beneficial to reaching the 3 Casinos they will be along it's path. If we can avoid harming the sacred lands or South Mountain, let's use the alternative route. 1

If you have ever tried to get through the light at 51st Avenue heading West on Baseline road in the evening, you would see how much this freeway is needed. I've had to sit there for 10 minutes before as it gets really backed up. We need some relief, and opportunities for our residents.

The sooner the better in this humble optinion.

Thank you,
Stacy Gentry

be moving east to west, which would not happen if we had another reliever such as the Loop 202 around the mountain. With that, again, I strongly speak in support of the South Mountain freeway and I hope that we can get it done as soon as possible. Thank you.

THE FACILITATOR: Thank you.

Rohno Geppert.

Mr. Geppert, you have three minutes, here's the timer.

MR. GEPPERT: Hello. Thank you for allowing public comment. I appreciate the opportunity to speak. I am in favor of the alternative that connects to the west 101, any of those three alternatives just from a traffic flow perspective. The preferred alternative goes directly into where everything gridlocks at both rush hours, so I would appreciate if it could be moved as far west as possible so that trucks needing to bypass the downtown area won't be a part of the congestion so much as the ones that are currently going to bottleneck if it goes through the 51 corridor. Thank you for the time and I appreciate you taking those thoughts into consideration.

THE FACILITATOR: Thank you, sir.

Arthur Bivvins.

Mr. Bivvins, you have three minutes, here's the

Short and simple.... I am voting a "no build" on the Loop 202 South Mountain Freeway. My main concerns consist of noise/air pollution, egress for South Mountain community members in emergency situations such as a hazardous material spill/release, degredation to South Mountain Preserve and all of the flora and fauna within its boundaries. With all of the new green technology and issues with the environment, I believe the money set aside for this project would be best spent increasing public transportation (i.e. buses, trains, etc...) instead of building more roads.

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

I teach at a High School in Laveen, and commute there daily during the school year, and often in the summer. Freeways are a form of infrastructure for public transportation that no longer serve the future in the way they did in the 20th Century. ADOT's mission must look beyond simplistic "build more" support to public transport; we built freeways during a time of increasing petroleum supply that is now ending. We need to find ways to connect local communities that are lower in maintenance, lower in energy use and in emissions. Freeways no longer serve us.

2

The freeway will exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

3

The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

4

South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

5

6

The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

7

8

It is not obvious from inside an automobile, but freeways are like a

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
3	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
4	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.

(Responses continue on next page)

Code	Comment Document

wall of death for wildlife, a real barrier to movement. It is astonishing how many small animals are dead by the side of the road.

3 The freeway will exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

1 Please help protect our communities, our health, and our environment by selecting the No Action Alternative. We need to redevelop our local communities to reduce the need to travel, and to direct our resources toward maintaining existing infrastructure, rather than overbuilding for an obsolete technology. Thank you.

Sincerely,

Mr. William Gibson

Re: Mountain Preserves; [illegible]

Dear Sirs and Madames:

To all Americans the words "for purple mountains' majesties above the fruited plains" propagates visions of unspoiled, natural vistas. To the people of Phoenix these words represent what we know as home, and what we have endeavored to preserve for our future generations. Arizona is the promise of a new, unspoiled land for the many "pioneers" who continue to choose to settle here. But the fact that people are still coming, to enjoy the environment and lifestyle we hold so dear, creates pressures on land use and transportational needs. This perpetual threat to our majestic mountains was recognized years ago by concerned citizens. Thanks to the steadfast commitment of these patriots, the Phoenix Mountain Preserve system has set aside over 24,000 acres of the most visible elevations of desert terrain. The voting majority has, time and again, supported this program with bond elections for acquisition and initiatives relegating the disposition of the Preserves to the electors. [redacted] the establishment of the Preserve parklands and adoption of a Mountain Preserve section in the Phoenix City Code (Chapter 26, Section 1-5) has [redacted] removed the mountains from the threat of eminent domain for roadway purposes, [redacted] so that protection is achieved for the public good, through their own ballot determination, in a truly democratic process.

1

It should be noted that, regardless of the Phoenix City Code or [redacted] House Bill 2218 [redacted] control over highways through public parks, [redacted] are subject to federal statutes under Section 4(f) of the Department of Transportation Act (23 U.S.C.A. Sec. 138), Section 138 of the Federal Aid to Highway Act (49 U.S.C.A. Sec. 1653 (f)) and Section 102(2) of the National Environmental Policy Act (42 U.S.C.A. Sec. 4332). Likewise, the State Route in the State Highway System [redacted] is also subject to these federal statutes, being a segment of a major highway project having federal aid assistance. As stated within the landmark U.S. Court of Appeals case, cited as 446F.2d 1013, on Page 1014, No. 7-Highways, "the State as a partner in construction of the project was bound by those laws (of Congress) and could not subvert the principle of federal supremacy by a mere change in bookkeeping or by shifting funds from one project to another in an attempt to proceed with the project using its own funds."

[redacted] House Bill 2218 was intended [redacted] and enacted in a manner that will result in the control of roadways through Mountain Preserve property. The mountains have been bought and paid for by the citizens, it is they who enjoy the multitude of trails and recreational opportunities provided by these preserves; it is only fitting and proper that they decide if roadways are appropriate. Thank you for your diligent consideration and support of this popular cause.

Respectfully submitted,

#15 David C. Gironda, 1515 East Las Palmaritas, Phoenix, AZ 85020 944-9323

2

It is intended to serve as a bypass route around central Phoenix, but even with mountain cuts, will have a steep grade that will have greater cost for trucks and cars, generating more emissions to climb over mountains.

South Mountain
Freeway Study

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

See submitted one page letter, referenced in my oral presentation (David Gironda #15) and hereby submitted as an exhibit, for consideration.

1 Attachment, dated originally, Feb. 2, 1990 addressed to members of the Arizona State Legislature, as marked "Still applicable. May 20, 2013 (23yrs.)

it took me to get all the way up to the Desert Ridge area, so I know that we need this 202. We need a hospital. When I gave birth to my son, it took me 40 minutes to get to the hospital just to be able to give birth.

I mean, I understand about South Mountain, I love hiking, I'm a biker. I mean, when you do build the 202, we definitely want the bike route along it so we can have that access. We want sound-proof barriers, we want it to be pretty, we don't necessarily want to destroy South Mountain, but we also need to make some sacrifices in order to, you know, take into account all of the extra building that's going to be happening in Laveen shortly.

We can't overlook the fact that all the growth is still going to be continuing within the next ten years, and now is our opportunity to be able to handle all the extra traffic, especially with the casino that will be opening in July. Thank you.

THE FACILITATOR: Thank you.

David Gironda. Did I pronounce that properly?

MR. GIRONDA: Gironda. I do have a written statement which I can give to the court reporter.

THE FACILITATOR: Thank you, Mr. Gironda.

Prem Goyal. Did I pronounce that name correctly? Is Prem Goyal in the auditorium?

1 I would like to provide my comment against the South Mountain Freeway Project. This project is outdated and contrary to any wise transportation solution. There are several reasons why I am opposed.

2 We should be investing heavily in public transit systems which would be much more cost effective and part of an alternative to the individual car. Continuing to be oil dependent is the opposite of what we should be building towards.

3 Secondly, this project will have a negative impact on our Native peoples. Many of the affected mountains in the South Mountain Range are sacred homelands of the O'odham people. People matter.

4 Third, the project will harm the environment and animals. The freeway will cut through a critical wildlife corridor connecting South Mountain Park to the Estrella Mountains, limiting connectivity for mountain lions, coyotes, javelina, reptiles, roadrunners, and other desert animals. Ecosystems matter--why would we support destroying this one?

Please develop an alternative plan that won't have all these negative impacts.

Thank you,
Lori B. Girshick

1 MS. GLOVER: My name is Vicki Glover and
2 I'm opposed to the 202 being completed in the
3 proposed area that they have outlined. I think that
4 there are other alternatives that would go south of
5 here and not interfere with the mountain. I think
6 that ADOT and the government has been very
7 heavy-handed with the way that they have tried to
8 push this project through, telling the Native
9 Americans that if they don't go along with it and
10 work with it, they won't get an exit at their newly
11 built casino.
12 The study is too antiquated. The study
13 was done too many years ago to adequately evaluate
14 what the situation is now. They've spent millions of
15 dollars in a project that is not going to accomplish
16 what they're looking at. The facts, the data is not
17 current.

Subject: Please depress the South Mountain freeway

Dear ADOT Personnel,

I'm writing to provide you our input on the proposed 202 freeway. We are residents of the Lakewood neighborhood and our children will likely attend Lagos School which backs to Pecos Road.

1 2 3 4 5

We have concerns about air quality and noise from the freeway. Please consider building the freeway below-grade (depressed) so that these impacts can be minimized. We understand there are additional costs involved, but there will be long-term costs of the freeway (health, air quality, property values, etc) and we believe that those long-term costs far outweigh the additional construction costs of building the new freeway below-grade.

Thank you for your time and consideration.

Jennifer Gniffke
16406 S 36th Street
Phoenix, AZ 85048

1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Noise**	
3	**Noise**	A depressed freeway option was evaluated in the Final Environmental Impact Statement and is described on pages 3-15 and 4-91. Although depressing the freeway would reduce noise levels, noise walls would still be needed to further reduce noise to meet the Arizona Department of Transportation noise policy. Whether the freeway is built aboveground with tall walls or belowground with shorter walls, the final mitigated noise levels would be nearly the same at nearby residences. The major disadvantage of building a depressed freeway would be the increased construction cost and the possible acquisition of additional right-of-way for pump stations and retention basins.
4	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.

Subject: SOUTH MOUNTAIN FREEWAY SUPPORT

Good Afternoon,

I have been a Laveen resident since 2005, moving here from the east coast to start a new life. When I purchased my new home I heard and read about the new 202 highway to be built and couldn't wait for the opportunities to follow. Unfortunately, here we are more than 8 years later and still no better. I have attended many of the meetings over the years to show my support for such said freeway, always to be disappointed and told that there is a delay, it may not happen etc.

I as a Laveen resident have to drive to the East or Central valley each and every day for services that I can not get in my own neighborhood, how sad? Besides a slew of fast food eateries, gas stations and supermarkets I have no options as a tax paying resident in my own community. Baseline Road has turned into a highway due to lack of highways around us, creating more traffic, pollution and accidents.

1

It is time to build the South Mountain Freeway. We have waited long enough. The project is estimated to create 30,000 jobs during the five to six year construction period and result $2 billion investment in the Phoenix area economy. The money to build this freeway is in budget . It was approved by voters twice, first in 1995 and again 2004, please remember to include sound barriers when building.

The freeway will cut traffic congestion across the metro area, reduce air pollution, and save drivers time and money. 64.3 % of likely voters in Maricopa County support construction of the freeway according to results of a new poll commissioned by We Build Arizona. In a separate survey, also commissioned by We Build Arizona, 59 % of likely voters living in Ahwatukee and Laveen support the freeway.

If we don't buld the South Mountain Freeway, traffic in the region will get much worse over the next two decades. According to ADOT'S own study:
Traffic on I- 10 between Ahwatukee and Goodyear will grow 28%.
Another 103,000 cars will use the Broadway Curve each day.
Another 38,000 cars will jam the tunnel every day.
Morning and evening commute times will increase 39% to 82%.
Traffic congestion on city streets will increase 46%.
Building the 202 will also reduce air pollution by reducing the time vehicles spend stuck in traffic.

This is the last part of the valley that is not connected to any freeway system grid, there is no important project to the area's commuters and workers that the South Mountain Freeway

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

I ama resident of the Foothills since 1991. I am also the principal of Kyrene de los Lagos. I oppose the construction of the freeway for the following reasons: 1) destruction of the Mountain that is sacred to Native Americans 2). increased pollution to our community – the school where I am principal backs up to Pecos. If built, this would create a tremendous safety issue (breathing - possible accidents w/ hazardous materials), increased noise levels affecting instruction; 3) increased truck traffic – THIS WILL BECOME THE traffic route for trucks – Mexico to Canada. Our community will never be the same →

ANA GOMEZ DEL CASTILLO: Well, first of all, my name is Ana Gomez Del Castillo. I have been a resident here in the Ahwatukee Foothills area since 1991. And since that time I've been watching and hearing about all this proposed freeway. And while I did purchase my home knowing that this freeway was going in, I was not aware --

And when you think about 1991 I was a lot younger and probably not thinking about the implications that such a freeway would have in this community. And since then I've become a little more educated about what the impact would be, such as, first of all, I'm very concerned about what the proposal is to get rid of the mountain that is sacred for Native American people. (1) (2)

When I see the drawings, I understand that they are looking at cutting the mountain. It's still defacement of the mountain and I really think that should be considered the primary reason for not building it. The other reasons are the amount of pollution that it would be creating. (3) And while there's a lot of information that's saying that there are studies, you know, I still am not believing that those studies are as accurate as they could be.

I'm not only a resident, but I'm a principal here in the Kyrene School district. And I

happen to be the principal of the school of these playgrounds you see along Pecos. And, as it is now, whenever I'm on playground duty, the amount of dust that is kicked up just by cars traveling on Pecos, I can see the cloud as I'm heading out to the playground. I know it's affecting the kids; I know it's affecting their breathing. And, if kids have asthma, it's also affecting them as well. But then I think about that's just four lanes. I can't imagine what a 10-lane freeway would create for the children.

The other thing I worry about is how they would create a barrier for the children who are out there that wouldn't support the safety of the children while being out on the playground.

The other thing I'm concerned about also is that even though this freeway is not being viewed as a truck passage, I know that, at some point in time, this is what's going to be the truck route that connects Mexico with Canada; it's inevitable. And I really believe that right now we should be looking at other options.

And the other option would be using the -- I think it's called Highway 85 and just designating that because, when you take a look on the map that this is supposed to save people time to get to downtown, well, by

5	**Trucks**	
6	**Alternatives, Gila River Indian Community Alignment**	
7	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.

Code	Comment Document

the time they go out this way, they have to backtrack, so they are really adding more miles rather than saving miles.

I know I've given some various reasons, not only as a resident but also as an administrator. I am very much opposed to this because I really believe it's going to change what Ahwatukee really stands for. It's a small community, a cul-de-sac, and it will never be the same again.

We're ready to get started.

We have a new panel, we have Tom Deitering from Federal Highways, we have Brent Cain from ADOT, and Chaun Hill from ADOT. We'd like to get started.

When you come up, come up to either mic. You'll have three minutes, there's a timer down in front of you, and please feel free to state your business.

I'd like to call Brad Goodman.

MR. GOODMAN: Hello, thank you for listening. I'll be very brief. Whether it's deserved or not, the west side of Phoenix has far too long been considered the dregs of the entire metro area. But compared to the eastside Valley, the opportunities for well-paying jobs simply don't exist on the west side mainly because we're so landlocked and, you know, jobs like those with Intel are just hard to get to. Building this freeway will not only bring much-needed jobs in terms of construction, but will usher in a lot of needed commerce that would help provide opportunities that will most certainly reverse the stigma that we now have to endure. The rise in income and the taxes collected will also benefit everyone in the Valley.

Additionally, study after study has left no question as to the numerous benefits that would result from the building of 202.

And the Gila River Indian Community for years has been opposed to the build and the people and the state have bent over backwards to accommodate their wishes. The proposed build of the freeway now does not encroach on their land, and because of the painstaking efforts of so many people, I would ask now that they respect our wishes and needs, so that we can build this much-needed thoroughfare so the west side of the Valley can prosper in the same way as the east side of the Valley. Thank you very much.

THE FACILITATOR: Thank you.

If you'd like to speak, please go out to the registration table and get registered. Your name will appear on our list and we'll call you up. Thank you.

Jeane Devine. Could you come over to this microphone, we're going to switch you guys.

MS. DEVINE: Am I -- can you hear me? Thank you very much for having these hearings also. I wrote just from my heart like why I'm here and why I'm opposed to the South Mountain freeway. I grew up in Chicago, I moved to the Phoenix area in 1974 and South Mountain Park was one of the first places that I hiked, I'm still hiking today; I'm 71 years old. I still rave about this wonderful place of South Mountain Park to out-of-town visitors. And we have the largest city park in the

As a resident of Ahwatukee Foothills, I would like to object to the building of this freeway for the following reasons:

1) Air Pollution: We have a lot of dust pollution already from the direction of the Gila reservation which is stopped by South Mountain & hangs over the area. You are proposing to add traffic pollution to this which will make our air quality totally unacceptable!
2) Noise/Vibration Pollution: especially from trucks
3) Environment: habitats for wildlife will be altered or destroyed; South Mountain desecrated.
4) Crime: We are at the moment fortunate to have a very low crime rate; with increased accessibility the crime in the area will undoubtedly increase.
5) The need to destroy houses & a church to build the road.

PLEASE DO NOT BUILD THIS ROAD!

Jane Goodwin & Frederick James
959 E South Fork Drive,
Phoenix AZ 85048

1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
3	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Vibration is not normally assessed.
4	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Code	Issue	Response
1	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.
3	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
4	**Alternatives**	A depressed freeway option was evaluated in the Final Environmental Impact Statement and is described on pages 3-15 and 4-91. Although depressing the freeway would reduce noise levels, noise walls would still be needed to further reduce noise to meet the Arizona Department of Transportation noise policy. Whether the freeway is built aboveground with tall walls or belowground with shorter walls, the final mitigated noise levels would be nearly the same at nearby residences. The major disadvantage of building a depressed freeway would be the increased construction cost and the possible acquisition of additional right-of-way for pump stations and retention basins.

and help us to -- I feel like Laveen is somewhat at a crossroads and we can move forward to be a good community for our families. Or if it stays kind of stagnant where it is, that it's not going to be as good of a place for people with families trying to improve their community, so I support the freeway coming through. Thank you.

THE FACILITATOR: Thank you.

David Gould.

MR. GOULD: I hope this is not the walk of shame.

THE FACILITATOR: Not at all.

MR. GOULD: It's a lovely facility you have here. I'm from Maine and we don't have anything like this up there. Bear with me until I get my question.

THE FACILITATOR: Mr. Gould, before you begin, this is not a Q-and-A session, it's a --

MR. GOULD: I'm kind of hard of hearing, I apologize.

THE FACILITATOR: Yes. This is not a question-and-answer session, it's merely to gather your comments.

MR. GOULD: All right.

THE FACILITATOR: And you have three minutes and the timer is right there. Begin, please.

MR. GOULD: Okay. Well, there are a lot of

1 questions to be had from where we live over on our
2 street. I live right off 24th Street, five houses in
3 between 24th and Chandler, and we were not aware of any
4 of this going to happen when we moved out here two years
5 ago from Maine. We're very concerned, not only on the
6 impact of the traffic going back and forth there, but
7 also, I am an advocate of anything that's an endangered
8 species and I'm told that the chuckwalla is -- I hope you
9 all know what that is -- it's a desert lizard that's out
10 here that is inherent only to the Sonoran Desert and only
11 to certain parts of Phoenix, and apparently most of the
12 world. I have a couple in my backyard. My backyard
13 abuts a wall, and I think it would be a shame that -- and
14 I know that's not the primary reason I'm here, but I want
15 everyone to know about those chuckwallas and, I'm sorry,
16 that they are an endangered species and that ought to
17 count for something in the vote in the long run.
18 We're wondering -- as far as I know, that road
19 is being set up so that to ease the traffic, particularly
20 truck traffic. We think that's going to have a lot of
21 implications on all the homes nearby from the diesel
22 chemicals and the light that come off that. I don't
23 think any of that was ever planned for before when these
24 houses were originally built, so I think that's an issue
25 as well. And I'm sure with more roads and everything out

Code	Issue	Response
1	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
2	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The coloring of the male common chuckwalla is unique to the South Mountains; however, it is one of two color patterns and does not indicate a separate species or subspecies (see the Arizona Game and Fish Department's abstract for the common chuckwalla). The common chuckwalla is not an endangered species and is not a species of concern identified by the Arizona Game and Fish Department.
3	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Air Quality**

5 6 6 7 8 9

there the heat index is going to go up; it's already hotter out there than any other parts of the Valley.

Also, along with the increased congestion there will be increased air and noise pollution that is not accounted for around those homes, and just building a berm between the two perhaps is not really a fair solution to the people that have lived there so long. So we would be anxious to know if this goes through, what the plans might be to inhibit that noise and how much widening is going to be done. And that's about all I have, and I want to thank you for the time.

THE FACILITATOR: Thank you, sir.

If anyone else is in the auditorium and you'd like to speak, register at the front desk, your name will be up on the screen, and we'll call you in order. Thank you.

Erica Keenan.

Ms. Keenan, hi. You have three minutes, the timer is here in front of you. Please begin.

MS. KEENAN: All right. My name is Erica Keenan, I'm a resident of Laveen, Arizona, and I appreciate you letting us speak today. Over the past ten years the population of Laveen and Southwest Phoenix has doubled and the environmental impact projects that the number to be more than doubled in the next 25 years.

Code	Issue	Response
5	**Heat Island**	As buildings, parking lots, roads, and other infrastructure replace open land and vegetation, an urban heat island may result. The heat island effect is of a regional nature and, therefore, there is no requirement to analyze potential impacts and no possibility of determining the localized contribution at the project level to the regional heat island effect. It is likely, however, that a proposed project such as the South Mountain Freeway would be a minor contributor to the overall issue.
6	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
7	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. Noise barriers are designed to provide a substantial reduction in noise levels along freeways, but do not and cannot eliminate noise from passing into nearby neighborhoods. Just because noise can be heard does not mean that noise barriers are ineffective. Even at the levels considered "acceptable" by the Arizona Department of Transportation Noise Abatement Policy and Federal Highway Administration regulations, noise is still readily audible and can be heard for some distance from the freeway. As mentioned in the sidebar on page 4-91, the Final Environmental Impact Statement is based on preliminary design and traffic information. As the design progresses to the Final Design phase, noise barrier locations and heights would be refined and finalized. During Final Design, more detailed information on the location, actual height, and distance from the property line of each noise barrier would become available.
9	**Design**	Preliminary widths for the proposed eight-lane freeway are discussed on Final Environmental Impact Statement page 3-58; see particularly Figure 3-34, "Typical Eight-lane Freeway Section."

get it settled with the --

MR. MARTINEZ: Why didn't they have this meeting back in 2009, when they were going to make up their minds and they did? You know, instead of having it three years later. Well, guess what? We're going to have a meeting. It's already -- the decision's already been made. So don't bother coming. And that's the feelings I have it.

And I thank you for listening to my rant and rave. I had to vent.

MR. GOULD: All right. I'm willing to give my name. Doesn't matter. My name is Dave Gould, G-o-u-l-d. I live on 2422 East Mountain Vista Drive, which is off 24th Street. If you get off Chandler and go down 24th, take a left immediately, I'm the fifth house in.

So now I'm -- I have a couple of real big issues. Got a lot of issues, really.

Coming from one of the cleanest states in the union to one that does not have good air control, as we all know, pollution control, because you're in this valley, it's just going to be even worse where we are. And the noise pollution, the air pollution from the diesel trucks is just amazing that will be coming.

Now, this gentleman over here with the

engineering firm that is doing one of the studies said, oh, you won't be getting big tractor-trailer trucks coming down there, you know, the 16-wheelers or whatever hauling groceries or whatever. They're already on the turnpike -- freeway. Up in New England we have turnpikes. You pay to ride on them. We don't have too many freeways.

And I don't know that that's all really true or not. He says, you're only going to get smaller trucks that will be servicing your area, like a air-conditioning or plumbing guy.

Well, we don't know that for sure. So we're very concerned. Everyone on my street is very concerned. I'm here actually representing a lot of people.

4

There's also, I found out the other day -- I've already spoken to the panel over here -- an endangered species that's going to be involved. I don't know if everybody's aware of that or not. But it's the chuckwalla. The chuckwalla is a lizard. And it is inherent only to the Sonoran Desert, and only part of it, from what I hear, in the whole world.

So if they do stuff out where I am, they are going to affect the longevity of this species. And it is a magnificent creature. I actually -- my back yard abuts a hillside, so I have some of them there that live naturally. And I just think it would be a shame if that

is overlooked in the decision-making.

And that's all I want to say. Okay? We are definitely not in favor of it for so many reasons.

MR. WITHERS: My name is Thelbert Withers, T-h-e-l-b-e-r-t, last name Withers, W-i-t-h-e-r-s.

I'm in support of the freeway just for the simple fact that Laveen is a growing area now. We need more hospitals and more advanced things in this area and that community, not to mention that it's going to bring a lot more jobs and building the freeway and everything.

But I just want to put I'm in support of the freeway. I -- you know, let me think.

Just for entertainment purposes, you know, movies, you know, out -- evenings out, there's not really nothing too much in the Laveen area to choose from. I just think with this freeway, it will bring more of those type of -- restaurants, type of -- entertainment activities.

And like I said, more importantly, a freeway will bring a hospital, which is something that we really need in Laveen.

So I just want to put my support down for it. And if there's anything I can do to support it to get there, I'm on board with it.

So thank you. I appreciate your time.

I appreciate the thoughtful effort the study team has taken to assess the proposed alternatives. To the naked eye, just looking at the map of all of the proposals, it is not clear why you wouldn't just connect to the 101. Given the extra costs to do so and the opposition from the local communities, it appears the the W59 alternative is the best choice.

However, given that this freeway has been in the works since 1985, I am baffled as to why ADOT and/or the state or MAG didn't secure a more direct right of way for the freeway a long time ago, when many of the communities in the west valley barely existed. I'm sure there's a good reason (like the money was being spent on the I10 and I17). But still, the lack of long-term foresight at that time is resulting a route that, in my personal opinion, is less than optimal from the standpoint of providing a city bypass for traffic coming from the south.

1

Code	Issue	Response
1	**Alternatives**	While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land despite the risk that the freeway would eventually be built. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.

even with the heat. I've done it for 20 years.
So please, please don't approve this idea for the 202 Freeway. It's very unnecessary. Supply and demand are not high enough for this type of project. Thank you.
THE FACILITATOR: Thank you. Has Prem Goyal returned? Did I pronounce your name correctly?
MR. GOYAL: Yes, thanks. I won't take three minutes. A good question is I was looking at the curves, which are growth curves, they are based on 2005 data; they should be based on 2013 data. And I have the newspaper cuttings every day that you did at least expect lower demand. That directive curve leads to the expansion of the future demand of the transportation. Only way they can project the future demands is from the utility demands. It looks like we should verify those curves, as the [unintelligible] president said, trust but verify. All those curves have been verified, or they're just ten years old, which don't mean very much in today's environment.
Thanks very much. Have a good day.
THE FACILITATOR: Thank you very much.
Greta Rogers. Greta Rogers.
MS. ROGERS: Good morning. Let's turn

are you going to do about our cultural sites? I know our rule has something to do with that, but I want to know is our petroglyphs, is our sacred sights going to be protected? Are they going to be moved somewhere else? That's what I want to know. Thank you very much.

THE FACILITATOR: Thank you.

An announcement, please. The last bus will be running in about five minutes at 7:30 for all destinations, orange, green, and blue, routes one, two, and three. Thank you.

Ashley Grace.

Ashley, could you please come to this microphone.

MS. GRACE: Thank you for letting me speak. I'm a recent addition to Phoenix, I moved here about a year and a half ago and I'm a military spouse. South Mountain, I think, is more important the way it is as a tourist attraction as one of, you know, Phoenix's points of pride, the largest -- the largest city park in the United States, as a place for wildlife. If you put an interstate through the middle of it, even if you conserve most of the area for wildlife, they won't be able to cross between and that creates big problems. You know, javelina and bobcats and everything else that is out there, they don't really have a very easy time crossing

eight lanes of traffic.

Also, I think economically it would be bad for Phoenix, because when you create more and more large interstates going in and out of a major city, you encourage urban sprawl, which takes a lot of money outside of the center of Phoenix and distributes it to make it wider and wider and wider urban sprawl, which Phoenix already has quite a bit. And that's all I wanted to say. Thank you.

THE FACILITATOR: Thank you.

For those of you who may not have heard, the last bus is leaving in about three minutes for all destinations out there.

Cheryl Dumpert.

Cheryl, could I ask you to use this microphone, please. Thank you.

MS. DUMPERT: Hello, my name is Cheryl Dumpert and I'm a member -- I live in Ahwatukee, I've lived there since 1990. I'm an avid hiker and I helped extend the parking at the Telegraph Pass parking lot. I'm a member of several hiking groups with thousands of members that hike South Mountain regularly.

Have you ever had a slice of pie, maybe just a sliver, but oh, it's so good, you want another and then another, and before you know it, you've eaten the whole

Code	Issue	Response
3	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1) This is a bedroom community. The residents are not looking for economic development. We want a nice, clean, safe neighborhood in which to live and raise our families. We have access to the commercial/business by I-10 and we are just a few minutes from Chandler Fashion Square. The Gila River tribe is looking for commercial development not the residents of Ahwatukee/Foothills. (1)

2) The South Mountain Freeway will cause pollution like in Central Phoenix and the 202 by Chandler/Gilbert (2)

Loop 202 South Mountain Freeway Study

Dianna Graczyk – Comments

3

3. I have been in my house for 17 years and I bought the house knowing the traffic issues with this community. I value my quality of life and enjoy, clean fresh air, well maintained city streets, low noise and traffic. In the evenings and weekends the traffic is reduced to mainly residents only. We do not get a lot of traffic because our situation is one way in one way out. I enjoy biking, hiking, walking my dog in a safe environment with little traffic on the city streets.

4

4. The 202 Exits will bring more traffic into our bedroom community and crime rate will go up. If I wanted to live, shop, worship or play with the residents on the other side of the mountain, I would have saved hundreds of thousands of dollars and bought a house on the west side of the south mountain range. We don't care about the economic development in Laveen or where ever. We are being asked to give up our style of living for their economic development. Why would I drive there to shop when I drive less than 10 minutes and go to Chandler Fashion Square?

5

6

7

5. Not only will crime and pollution rise in this area but the additional traffic on our city surface streets will drastically increase thus causing more vehicle accidents in this area. The additional traffic on Chandler BLC will cause a danger to bicyclist, joggers, roller blades and folks walking with their children and pets. The landscapers/gardeners will face additional danger because of the volume of cars. It will be harder for them to keep the grounds pristine and get their tree trimming and general maintenance completed.

8

People come from all over the state to enjoy the serene hiking opportunities in our neighborhood. It is not unusual to see one or two cars without of state license plates at the entrance to the trails at chandler Blvd/19th Ave. Our state economy is primarily based on tourism and it would be a shame to have one last choice in hiking for tourists. Places like Squaw Peak are overburdened with

Code	Issue	Response
3	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
4	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
5	**Social Conditions**	In the case of the proposed action, the purpose of the project is not to promote economic development specifically in Laveen Village or anywhere else. The purpose is to respond to a growing need for additional transportation capacity as a result of regional growth occurring now and as projected.
6	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the proposed freeway (see Appendix 3-1).
7	**Traffic**	The traffic projections for Chandler Boulevard (see Figure 3-12 on page 3-29 of the Final Environmental Impact Statement) show a reduction with the proposed freeway when compared with conditions without the proposed freeway.
8	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document
	hikers, it is almost impossible to get a parking spot unless you arrive extremely early. 6. I fear for the safety of our children, outdoor playing/riding bikes or even in the schools which will find themselves in the range of one mile or less from the South Mountain Freeway. I believe there are no public schools in the I-10 corridor from Elliot to Chandler Blvd. 7. Most of the crime in the Ahwatukee/Foothills area is centered within a 1 mile radius of I-10, numberous Bank robberies, AMC theatre, etc. In fact 1-10 is a major artery for moving drugs/and human trafficking. We certainly do not want to expose our residential area to this type of illegal activity. 8. Why not put the Freeway down by Maricopa or Casa Grande to hook up with 51st Ave? Is the primary reason for the Freeway to get 18 wheelers around the city of Phoenix? I am sure the Gila River Indians would be concerned if the Freeway would be placed down by Maricopa or Casa Grande. Their planned economic development around 40th street would be halted. Land in Maricopa or Casa Grande should be a lot less than is in the Ahwatukee/Foothills area. Highways are ugly litter with debris, billboards and fences. I could go on forever on the reasons not to build the South Mountain Freeway anywhere near Pecos road. This battle has been going on for years and for a very good reason. It is probably safe to assume the folks putting this proposal together and conducting environment studies look at numbers and care nothing about communities. Please seriously reconsider putting this freeway elsewhere. Sincerely, Dianna Graczyk

Code	Issue	Response
9	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
10	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration. A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.

CALLER REMARKS/QUESTIONS:

I think putting the freeway in would be very beneficial. I've been in the valley since 1973 and I drove the inner city streets from Sun City area into central Phoenix for a number of years of working and when the I-10 and the 101 were completed, it made my travel to work much better and I know the traffic congestion is horrible, although my working hours, when I was working, I am now retired, but my working hours I avoided the heavy traffic, but I always remembered hearing reports on the television about the traffic tie up and the times and things and I know how much the freeway of the 101 and the 10 helped with the Phoenix Metropolitan area when they were completed. And, I think this other freeway connecting the South Mountain Freeway to the 10 would be a great deal of help because the outlining areas down there now of Maricopa and just the further South Mountain range, Laveen, all those down in there, Baseline area are now developing and before it was just farmland and as our valley develops as far as population, schools, jobs, everything, naturally we need to update and keep up with the roadways to supply the travel in an adequate manner for the population of the valley to move around. And I know how much it helped to have the freeways that are in existence now that didn't exist when I first came out here, only the I-17 existed and it's just unbelievable with the 101 and the 202 and the finishing of I-10 going through Phoenix and it was stopped at a certain point in Blithe and now that it is all complete it's really, really nice and I think, like I said, as the valley grows, the population grows the roadways have to grow. I'm not sure how that's going, the South Mountain, I haven't read up on it recently, I don't know exactly how that's going to involve the Indian reservations down there, but I am sure that it would benefit both and I know that through Scottsdale down Pima Road things were understood and there would possibly be adjustments made through the South Mountain Freeway. So it would benefit both communities; the reservation and the people that do not live on the reservation. But, we have to take into consideration people's rights and we have to think of everyone equally. So, I am very much in support of it and I don't know what else to say, but I, like I say I'm retired and I am unfortunately not able to travel outside of Sun City that much because of my health, but for many years the roadways, the last few years of working were a great deal of convenience for me and I hope that the younger generation can benefit from the newer roadways to come. Thank you very much for the opportunity to express my opinion on it. Thank you.

Subject: Opposition to Proposed Loop 202 Extension

To Members of the South Mountain Study Team:

1 2 I am writing to briefly voice my opposition to the proposed extension of the Loop 202. As a resident of Downtown Phoenix, I am keenly aware of the localized pollution collecting around South Mountain from our valley's freeways. The future of growth and economic development for the valley is to improve transit options closer to our core, rather than encouraging exurban growth through the construction of new freeway rings. We have the opportunity to avoid pouring more money into these relatively short-sighted projects, and to the extent this $2.6 billion dollar project takes money away from alternative transit options it 3 is directly harming the future economic competitiveness of the valley.

2 In summary, I oppose the Loop 202 extension as a massive misallocation of public funds that will not eliminate environmental problems, but rather encourage them through the well-understood principle of induced demand.

Thank you for your attention to this matter,

Justin Graham

1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Secondary and Cumulative**	The proposed freeway is a response to existing and anticipated travel demand in the metropolitan Phoenix area. It is not meant to increase travel beyond that expected to be generated from existing and anticipated population and employment growth and related land development. It is important to consider that improvements proposed for any type of transportation system (e.g., a new bus route, rail transit line, commuter rail service) would likely lead to changes in travel behavior, which, in turn, would lead to increased use of the particular system. Improvements made to a given transportation system are meant to attract new users (see Final Environmental Impact Statement pages 4-170 through 4-174). If this were not a primary goal, the improvements would be neither effective nor warranted. For the proposed action, a goal is to attract users of other segments of the Regional Freeway and Highway System and the local arterial street network, now and in the future, to the proposed action to optimize, in part, the entire regional transportation system (as outlined in the proposed action's purpose and need in Chapter 1).
3	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Subject: Loop 202

Hi,

1 How come I don't see or read anything about making the Loop 202 part of the Federal Interstate freeway system?? All big cities (I am assuming you classify Phoenix as a big city) have Interstate Bypass freeways. This Loop 202 could be Interstate 10 bypass, called 110 or 210. This is actual what this roadway will be used for, trucks and cars going to Californian and bypassing downtown Phoenix. Doing this makes the feds pay for most of it. Also it may

2 be better for the feds to negotiate with the Gila Indians for putting the freeway on some of their land. By the way, we don't need the entire Loop 202 to be on Gila land just the few miles that would take the homes along side Pecos.

Thanks for listening.... Ernie Granese

Code	Issue	Response
1	**Purpose and Need**	There are two general paths by which highways or future highways are designated as future Interstates. One path is the administrative path. In this case, a state (or states) asks the Federal Highway Administration to take a designation action; presents a case that the corridor to be designated is a logical addition to the Interstate system; demonstrates, where appropriate, coordination with other states and with metropolitan planning organizations; and makes a commitment to complete the route to an Interstate design level within 25 years. The other path is called the Congressional path. In this case, a future Interstate corridor is identified through statutory language primarily within the uncodified provisions of section 1105(e)(5) of the Intermodal Surface Transportation Efficiency Act, P.L. 102-240), as amended (in which the process stated in Title 23 of the Code of Federal Regulations, Part 470, generally applies). The Arizona Department of Transportation, Federal Highway Administration, and Maricopa Association of Governments are not pursuing Interstate designation for the proposed freeway. The route has been adopted into Arizona's State Highway System. The primary purpose of the proposed freeway is not to create a ""truck bypass"" for downtown Phoenix. The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic– including truck traffic—to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. Commercial trucks would use the proposed action. As with all other freeways in the Maricopa Association Of Governments region, trucks would use it for the through-transport of freight, for transport to and from distribution centers, and for transport to support local commerce. And as with travel on all other freeways in the Maricopa Association of Governments region, the primary users of the proposed action would be automobiles. Further, it is not expected that the entire 21 percent of through-traffic (by tonnage) using Interstate 10 would divert from Interstate 10 to use the proposed action (see Final Environmental Impact Statement page 3-64). The trucking industry heavily depends on the efficient and fast movement of freight and on travel time savings. Trucking destinations in the Phoenix metropolitan area (either distribution centers or for local commerce) would require trucks to enter congested areas. Choosing to travel on the proposed action versus Interstate 10 would not translate to any substantial travel time benefits. Therefore, it is expected that "true" through-truck traffic (not having to stop in the metropolitan area) would continue to use the faster, designated, and posted bypass system of Interstate 8 and State Route 85.
2	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. 1 2 I am commenting as a member of PARC. I am strongly opposed to the South Mountain Truck by-pass. I am amazed that ADOT would consider putting a truck bypass so close to a very nice quiet community. We moved to the Ahwatukee area because of South Mountain and the quiet community it creates. Secluded from the busy big city. We love having a view of the mountain, and we love the fact that the mountain provides a very quiet community for us to live in with our 3 children. My husband loves mountain biking and hiking in this quiet community. Plopping a truck by-pass, just down the street from everyone who lives here is something I am amazed that would even be considered. Please think about the citizen and children who love this area before making such a horrible decision. Please think of the 3 pollution you would be putting right next to those who just want a quiet place to live. Please think of us before you put a truck by pass that will provide no added benefit to those who live 4 in the area. The only ones benefiting are truckers just passing through and don't really care about our neighborhood.

Subject: 202 loop

1 I am against placing a freeway over Pecos Road.

2 I would suggest if the idea of an internal loop is to move residents of Phoenix around the city easier; then restrict the 202 loop to two axle vehicles only (passenger cars/trucks) and force the truck trailer combinations to use the 10 freeway.

Regards,
Jeff Grass

MR. GRASS: I'm Jeff Grass, G-r-a-s-s, Jeff Grass.
My comment would be that, if I'm understanding correctly, the idea of the Pecos Road development is for continuous use, for improving traffic flow within the City or around the City of Phoenix, which I can understand.
However, I would like to suggest, if it's primarily for the citizens of Phoenix or the eventual growth of Phoenix, to improve the transportation within that area, I would like to suggest that we handle Pecos Road like other cities have done. For example, Salt Lake City, they have put expressways that are restricted to two-axle vehicles only, so that we're not creating a thoroughfare for freight companies, from Jacksonville, Houston, trying to drive to Los Angeles or the other way; that the loop would be for improving traffic flow for the citizens that want to get to downtown Phoenix or around Phoenix easier. And it would be restricted to the cars, the trucks, anything, just only two-axle vehicles.

children with the status quo, using the exorbitant right-of-way freeway paid the landowners the highest buildout cost. The Arizona legislature has done that to us.

Nor should we ignore the many deaths, semi rollovers, and the expensive public responders to the many and frequent crash freeway accidents.

Now, what we need is safe, efficient, useful, sustainable, affordable, state-of-art regional connective transportation.

And even considering a fast train, high-speed elevated train, from Tucson to Phoenix around this Broadway Curve as a viable alternative.

MANUEL TOPETE: And I live in Laveen, 51st and Baseline. And I can't wait for this to happen. As simple as that.

My only regret is I won't live to see it. Just I wish it was already done. I think you should also hear this, aside from all this bad.

KARIN GRAY: I have been a resident of Ahwatukee for over ten years, moved here from Texas, and absolutely love South Mountain. One of the reasons I moved to that area was to have access to all 15 miles of the Nation Trail, from one end to the other on South Mountain, the biggest city park in the United States.

It would be an absolute disaster if any kind of highway goes through South Mountain. I have no problem with an expressway that goes around it in some form or fashion. I wouldn't mind if it went all the way down to 101 on the west side and connected there.

But I would be totally opposed to any plan that infringes on the South Mountain Park area. I am especially concerned with the wildlife. One of the joys of living in Ahwatukee is having havalina in the front yard, the coyote wandering through. My son rescued a Great Horned Owl chick about two years ago, and the nesting pair are still in our neighborhood.

And the kind of freeway they are talking about would disrupt the wildlife that call South Mountain their home.

Let's see, what else? I've always thought if we had the technology to build a tunnel under the English Channel -- and that was done several years ago -- we could certainly build a tunnel under a mountain. I have looked at the proposals. They include HOV lanes and talk about Homeland Security issues. I understand all that. I understand all that.

I do believe it can be done, and I also believe it could pay for itself by the people who would be willing to pay a monthly toll to use the tunnel to

2

bypass having to go on I-10 or around 48th Street.

So if I had a vote, it would be for either a tunnel or to extend the 202 all the way out to connect to the 101, bypassing the park.

That's it.

GABRIEL JASSO: Definitely need the South Mountain Extension Loop 202 built ASAP. It will help alleviate traffic within the city's freeway system, eliminate bigger trucks on our roadways down on Baseline and 51st Avenue, and bring business to the area, valued business to the South Phoenix/Laveen area, creating jobs and better opportunities for people, and would also mean less travel for us residents in South Phoenix to other parts of the Valley, which would also help improve with traffic in other areas, as well as pollution.

That's it.

(The proceedings concluded at 8:00 p.m.)

PROCEEDINGS

MR. GRAY: My name is Walter Gray, G-r-a-y, and I belong to an organization known as the West Side Town Hall Steering Committee. I'm the coordinator. That group may or probably will take an official position probably expressed in a letter to the appropriate people, ADOT or the City Council or whoever the right people are.

In my personal opinion and my personal view, just from viewing the panel and also the video, one concern I have is that the real basis of this Loop 202 South Mountain Freeway is to take the freeway to Downtown Phoenix, relieve traffic from I-10 going into Downtown Phoenix, create an alternative route into Downtown Phoenix on the West Side. I think that's the basic fallacy of the study.

1

I don't think we should continue to pour all transportation into Downtown Phoenix. You know, what will follow then is the East Valley will get crowded, Downtown Phoenix will grow, these freeways will get crowded and they'll build a light rail in the freeways and that'll go through and everything will go to Downtown Phoenix. And that creates unbalanced development because it's all Downtown Phoenix and everybody lives outside of Downtown Phoenix.

Driver and Nix Court Reporters - (602) 266-6525

Code	Comment Document

So my first reaction to this is that what they -- what I would prefer is employment centers in Ahwatukee, in Laveen. The City of Phoenix has two that are -- one is at 99th Avenue and I-10 and one is at 27th Avenue and I-10, two employment centers. They're not existing, but they're planned employment centers. Plus, you have additional employment along the Loop 101 north of I-10.

So what I've been advocating -- I advocated this in the light rail hearing in Glendale -- is that we try to shift more employment to the West Valley so that we can -- so that we can reduce the impact of traffic all going to Downtown Phoenix. So to do that, you know, to balance planning -- I mean, the idea is to keep the residential relatively close to the employment. That seems to be a major link there, employment and residential, and then everything else kind of fits into that, the business part of it, the recreation, other parts of the community involvement.

So my feeling is that they should take the -- the employment -- the two city employment centers and also have one down in Maryvale -- I mean in Laveen and one in Ahwatukee, and that would encourage people -- and they're existing and there could be additional employment centers in Chandler, and that would encourage people to travel closer to home to go to work and reduce the impact of the

Driver and Nix Court Reporters - (602) 266-6525

Code	Issue	Response

Code	Comment Document

infrastructure and having to build these very costly freeway systems and light rail systems.

And that makes for better community development. It reduces pollution. It provides the people more time, more leisure time. It provides more things that are available.

So I -- that's my feeling. That's the basic feeling. I think there should be employment centers. You know, for example, in Ahwatukee, you know, it would be more office kind of employment or government kind of employment; same thing with Laveen. The ones in Phoenix on 99th Avenue and 27th Avenue, those, I think, are more suited for manufacturing. And so there could -- you know, there doesn't have to be just one employment center in Laveen. There could be two.

But the basic complaint that I have -- also, I think it's important to be considerate of the Gila River Indian Nation, because they are -- you know, they have a different culture and they have different values. I know that I've been at hearings where they have expressed concerns about pollution, you know.

I guess one reason they rejected having the freeway on their land is you've got the South Mountain that will kind of do the same thing that it does on the Phoenix side, which is keep the pollution kind of

Driver and Nix Court Reporters - (602) 266-6525

Code	Comment Document

(2)

(3)

(4)

funneling south of South Mountain. And that would settle right over the Indian Nation, which, you know, they're just more environmentally sensitive than the normal person.

Let's see if I have anything else.

I'm also a member of the Sierra Club, and I know they're concerned about cutting through the park, the South Mountain Park. They -- I don't know if that's such a critical concern, you know, or my own personal view, because it's only 31 acres and it's at the very end of the mountain range. And so -- but that's a consideration also.

Yeah, I think what makes more sense to me is they've already eliminated the route through the 101, which is called the west of 101 or something like, that would connect with the Loop 101. To me, that might make more sense, because, you know, again, the idea is to take traffic away from Downtown Phoenix in my opinion. By having that traffic go to the 101 and up towards Glendale where you have the stadium and the arena and other potential employment -- plus, you have the 99th Avenue City of Phoenix employment center at 99th Avenue and I-10. It seems to me that that way we'd take traffic west away from Downtown Phoenix.

And I think, you know, socioeconomically, if you

2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
3	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. 4	**Alternatives, W59 Alternative Versus W101 Alternative**	

Code	Comment Document

keep putting everything into Downtown Phoenix, then, you know, Downtown Phoenix will increase in value and the rest of the Valley won't increase as well -- as evenly, you know. All the property value, the income, all of that will be concentrated in the hands of relatively few people. And if you disperse the employment and transportation, then you will spread out wealth among a greater number of people.

Well, I guess that's about it, you know, for this rendition. I'll take one of these statements, talk to people who are on the West Side Town Hall Steering Committee and see -- I think there's going to be one more public meeting that Councilman Michael Nowakowski, N-o-w-a-k-o-w-s-k-i, is planning. He's planning a meeting, so that's another opportunity to comment.

But this is the official process of the Environmental Impact Statement, so we'll probably submit a statement to ADOT as directed in this bulletin -- or this brochure.

THE REPORTER: Okay. Thank you. If you have anything you think of later, you're welcome to come back and talk to us.

MR. GRAY: I have an addendum. I'm not sure if I talked to one of the engineers, but as I mentioned, I'm a member of the Sierra Club, and one of the concerns of the

Code	Issue	Response

Code	Comment Document

5

6

Sierra Club is urban sprawl. And urban sprawl just means that the development just expands in low density to the extremes of the metropolitan area. And I think that this would encourage that rather than having more dense development that would occur if we had, you know, more balanced development with employment centers in Ahwatukee, Laveen, West Phoenix and Glendale and Chandler.

That way, we'd have a variety of housing connected with the employment, and, you know, it would not -- it would kind of increase the economic value of that area and have people staying in that area rather than moving to the extremes, although they've already done that. So that's one of the concerns of the -- of the Sierra Club, and that continues to be a concern here.

Another thing is that there's something called inversion. Inversion is when you develop your inner core, your downtown and your surrounding areas of downtown, the inner core. And that attracts largely younger families and individuals, generally people who are middle class, back into the inner core because there's a lot that appeals to them.

But what that means is that -- what that means is that the people in the low-income areas within the inner city, they don't move that way because they can't afford to live -- because the whole value of the whole downtown

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
5	**Secondary and Cumulative**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
6	**Planning**	Growth patterns and densities are largely determined by each respective jurisdiction's land use planning decisions, as identified in its General Plan and implemented through its local zoning decisions. In the Laveen Village area, the Phoenix General Plan identified an employment center along the Preferred Alternative at Dobbins Road. This center, envisioned as areas of mixed land use, is not inconsistent with the concept of smart growth, which concentrates growth in compact, walkable urban centers to avoid sprawl.

Code	Comment Document

area or the whole inner core gets so high that they can't afford to live there. So the growth just expands and eliminates some of them.

In other cities, like Seattle and Chicago, when it happened like that, nobody, to date, makes any plans for the people who get displaced, low-income people who get displaced by the spread of the inner core. So what I'm talking about here is that, you know, one of my basic concerns is the people who are the working poor or poor, because I live in Maryvale, in West Phoenix, and I've lived here 30 years. That's my concern. I mean, I've been active in the community for many years.

So to protect those people and to increase their wealth, then we should have development in their area. And that's where I talk about these employment centers that are in these areas that keep the -- keep the people -- well, it gives them jobs so that they can stay in the area and increase their income and contribute more to the economy.

So those are two things I wanted to add. Thank you.

THE REPORTER: Thank you, sir.

Code	Issue	Response

Code	Comment Document

PROCEEDINGS

THE REPORTER: State your name, please.

MR. GRAY: Walter Gray.

Well, the concern I have is that the proposed alignment along the 51st Avenue corridor will not benefit West Phoenix, because there will be more traffic into I-10 and downtown, which means they have to expand I-10 by two lanes, and that will not be as -- the additional lanes will not be -- will just be more traffic, and reduce the -- and won't -- they won't benefit the traffic movement necessary for employment centers at I-10 and 27th Avenue and I-10 and 99th Avenue. They will -- and it might make it a little bit more difficult to get to those employment centers, because you have more lanes of traffic.

I don't see any real -- in that proposal along 51st Avenue to 59th Avenue, the big interchange at 59th Avenue, I don't see how that's going to benefit West Phoenix. It seems to me that if you're going to spend $2 billion, West Phoenix and Laveen should -- should -- should benefit. West Phoenix should not be left to be a low-income community.

Whereas this infrastructure, the Loop 202, really benefits Laveen and Ahwatukee and Chandler, it has very little impact on West Phoenix.

1	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document

2

It does very little for West Phoenix. I think it might be better, although it is not a preferred route, to bring the 202 -- one, starting in the east to make the 202 a parkway from I-10 to the South Mountain divide. And that would apparently be more, from what I was told, be more acceptable to Ahwatukee and the Gila River Indian Nation. And then in Ahwatukee, convert the golf course, the abandoned golf course in Ahwatukee, to a Texaco and office center, to relocate jobs from downtown to Ahwatukee, because many people in Ahwatukee work downtown.

And then moving west, that would reduce the amount of traffic going into downtown, meaning less infrastructure for the 202 -- less infrastructure for the 202, and shorter patterns between home and work for Ahwatukee residents and Chandler residents. And then I don't have much -- I think the alignment of the 202 as a freeway would be good -- is good from the South Mountain divide to State Route 30, and State Route -- from State Route 30 or the proposed State Route 30 from there to I -- to I-10, at 59th Avenue, I don't think that would benefit West Phoenix. That would be a huge cost, and -- to build that interchange, add lanes, they may still -- you know, you're going to add two lanes. So

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
2	**Purpose and Need**	In the best-case scenario, a parkway would carry approximately 105,000 vehicles per day, well below the average daily traffic on the proposed freeway, which would range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-19). As a result, the Arizona Parkway would lack sufficient capacity to meet projected travel demand. The Arizona Parkway would not adequately address the projected transportation system capacity deficiency, would not remove a sufficient amount of traffic from arterial streets, and, therefore, would not meet the project's purpose and need. For these reasons, the Arizona Parkway was eliminated from further consideration.

Code	Comment Document

3

the thing is that my preference is to take the 202 from the South Mountain divide to the State Route 30, then take State Route 30 west, with a branch to the 101. That would not have to be quite as big, a full freeway. And that would mean not having to replace the interchange at the 101. And at the same time, the employment centers can be located in Laveen and in Tolleson, you know.

New employment centers, employment centers particularly that have manufacturing as part of their -- as part of the centers, that they have manufacturing there or green jobs. The Laveen population has a satellite community college, which will upgrade the work force in Laveen. We only have a little community college center, which we hope to expand. So we have a longer way to go to upgrade our work force. And I think bringing jobs for the west rather than just trying to take jobs out to Chandler from the west, and Laveen and Avondale, would be better. It would be better to have a branch from the 101, an employment center at 99th Avenue and I-10, and that employment center -- I prefer infrastructure that facilitates the employment centers in the west to reduce transportation in Laveen and West Phoenix, and also Tolleson. And even Avondale.

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
3	**Alternatives**	The proposed freeway is part of the multimodal *Regional Transportation Plan* (see Final Environmental Impact Statement page 1-5 for more information regarding the *Regional Transportation Plan*). The *Regional Transportation Plan* includes other freeway projects, such as State Route 30 and State Route 303 Loop that provide additional capacity and mobility in the region. All of these transportation facilities work as a system and rely on each other to provide optimum performance. Also, the *Regional Transportation Plan* included funding for improvements to 99th Avenue south of Interstate 10.

Code	Comment Document

So by -- in this way, I think they'll save some costs. They'll save some costs, and they'll -- because the way they're going now, you know, it's just going to be -- Laveen will benefit quite substantially, West Phoenix will not. West Phoenix will be left to be the low-income community. And this is consistent with what has been happening for 30, 40 years.

Whereas, the whole emphasis is on making downtown the employment center. And I think that, you know, that the City of Phoenix needs to upgrade the work force in East Phoenix also, and South Phoenix and Sunnyslope and the Canyon Corridor, which are behind, even behind West Phoenix, they're further behind West Phoenix. So the City of Phoenix needs to work with the Maricopa Community College District to -- to bring about the higher work force that can travel shorter distance to the employment center.

Also, I wanted to make a statement about the hearing process. This is -- this same kind of hearing process has been used for about 30 years, 25, 30 years. It was initiated by President Reagan through the Department of Transportation. And through all the federal agencies, to provide this type of meeting without having a large audience. And

Code	Issue	Response

Code	Comment Document

without having -- because they don't want one speaker to influence other people. But at the same time, they provide this format, overwhelming staff positions, staff-supported positions against individuals. And there's no way to hear what the different views are. So I think ADOT should and the governor, through the governor, and through the congressional delegation ask the president, which I think can be done by executive order, to change back to the old format, where you could have a large audience when there's a significant -- you know, when there's a significant project. And you can have speakers.

In this case, there's no public testimony, other than by transcription. The other people in the room don't know what I believe, and I don't know what they think. And it puts us at -- it puts any opposition to any project at a great disadvantage, and does not allow for opposition. You know, meaningful opposition. We don't know, you know, if people would -- other people believe what I believe. Only one of these hearings has been held close to West Phoenix. No hearings have been held in West Phoenix or meetings, not really hearings. None have been held in West Phoenix. One was held close

4

Page 6

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
4	**Public Involvement**	The public hearing for the Draft Environmental Impact Statement was held on May 21, 2013, at the Phoenix Convention Center from 10 a.m. to 8 p.m. The public hearing's main purposes were to present findings of the Draft Environmental Impact Statement and to obtain public testimony or comment on the Draft Environmental Impact Statement. During the day-long public hearing, participants had the opportunity to watch a video describing the study, review study information, talk to project team members, and provide verbal comments to a panel of project team members in front of an audience. The six community forums were held at geographically diverse locations: west Phoenix (Sunridge Elementary School, 6244 West Roosevelt, Phoenix); the Gila River Indian Community; Ahwatukee Foothills Village; Laveen Village; Avondale; and Chandler. Notification that community forums would be held was included in the public hearing materials, and forum dates and locations were posted online and advertised at each successive community forum. Print advertisements for the community forums were placed in the following publications from April 26 through July 3, 2013: The *Arizona Republic*, *La Voz*, *Ahwatukee Foothills News*, *Arizona Informant*, *East Valley Tribune*, and *West Valley View*. These forums provided a more informal opportunity to learn about the Draft Environmental Impact Statement. Attendees could watch the study video, view study materials, and talk to project team members. Court reporters were available to take individual verbal comments with no time limit, and written comments could also be submitted.

6

to West Phoenix, but it was south of I-10, south of the warehouse corridor. And there also needs to be -- I'm sure there must be somebody here who speaks Spanish, but if you had it, you know, in a large setting, you could provide earphones and things, and the Spanish-speaking would have an opportunity to listen to what's said and maybe express their views or support other views and express their own views.

I'm particularly disappointed that no public meeting was done in West Phoenix. And not promoted properly in West Phoenix to draw -- to draw a large crowd. I was told by the state representative that State Representative Mark Harden and City Councilman Michael Nowakowski were going to hold their own meeting on the 202, that has not been transpired. Whether that comes later or not, I don't know, but certainly something like that should have occurred during this review of the EIS, the Environmental Impact Statement.

I guess the concluding point is that this facilitates -- it facilitates long-distance travel to employment centers, rather than short work trips. It's more to do that. And I believe there should be -- greater emphasis should be on infrastructure, not only physical infrastructure, but

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
5	**Public Involvement**	At the public hearing and all six community forums, Spanish interpreters and a sign language interpreter were available to assist participants as needed. O'odham language interpreters were available at the public hearing and two of the community forums. Informational brochures were also available in Spanish.
6	**Public Involvement**	The six community forums were held at geographically diverse locations: west Phoenix (Sunridge Elementary School, 6244 West Roosevelt, Phoenix); the Gila River Indian Community; Ahwatukee Foothills Village; Laveen Village; Avondale; and Chandler. Notification that community forums would be held was included in the public hearing materials, and forum dates and locations were posted online and advertised at each successive community forum. Print advertisements for the community forums were placed in the following publications from April 26 through July 3, 2013: The *Arizona Republic*, *La Voz*, *Ahwatukee Foothills News*, *Arizona Informant*, *East Valley Tribune*, and *West Valley View*. Code	Comment Document

also, you know, educational infrastructure, other types of infrastructure, social infrastructure, to reduce the physical infrastructure costs, increase the other costs, and balance out development throughout the Valley and have shorter work-to-home trips.

So -- and that would mean that West Phoenix would have a better opportunity to -- West Phoenix would have a better opportunity to upgrade themselves, rather than remain as a lower income community.

To: Projects
Cc: cgreene22@cox.net
Subject: Comments Regarding Proposed 202 Loop
Importance: High

We are writing to state our OPPOSITION of the proposed 202 Loop for the following reasons.

1 2 Environment impact.
Air and Noise Pollution.
Increased traffic will produce result in additional pollution, impacting 75,000 people. I understand your study states you have met the federal standards. Regardless of the federal standards, pollution is pollution no matter what number you assign it. I am not comforted by some federal standard. I don't trust your study or the federal standards you propose it meets. . All one needs to do is drive on Interstate 10 into Phoenix and see the brown haze that sits over downtown. I certainly don't want that on this side of the mountain. The no-build option is the only option.

3

Traffic noise can be heard a mile from I-10. If you add another freeway, that noise will increase profoundly.

4

Dangerous trucks in a fragile area
As more cars pass through a major thoroughfare, there's a greater chance of someone throwing a cigarette butt out of a window and causing problems. Sonoran Deserts are not fire adapted. When you have people using a major thoroughfare, you're going to increase the chance of anyone throwing a cigarette butt out. It's going to increase the risk, whether it's incidental. You're also going to have species that will fill in empty spaces left by construction and those species help fuel local fires. There's a number of factors, but when combined it will have an impact, and I fear a negative impact on that ecosystem. (Source: Wendy Hodgson, research botanist and herbarium curator at the Desert Botanical Garden)

5
6

7 We are concerned, as is the Ahwatukee-based Protecting Arizona's Resources and Children (PARC), about the possibility of truckers using the South Mountain Freeway as a Canamex route, to get trucks and whatever hazardous materials they may be carrying from Mexico or Canada through the U.S. as quickly as possible. The DEIS does state in several areas that hazardous materials will be allowed on this freeway. This is UNACCEPTABLE!

8

Destruction of South Mountain terrain.

Code	Issue	Response
1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Noise**	
3	**Alternatives, No-Action (No-Build) Alternative**	
4	**Noise**	Noise barriers are designed to provide a substantial reduction in noise levels along freeways, but do not and cannot eliminate noise from passing into nearby neighborhoods. Just because noise can be heard does not mean that noise barriers are ineffective. Even at the levels considered "acceptable" by the Arizona Department of Transportation Noise Abatement Policy and Federal Highway Administration regulations, noise is still readily audible and can be heard for some distance from the freeway.
5	**Biology, Plants, and Wildlife**	Comment noted.

7	**Trucks**	
8	**Hazardous Materials**	

Code	Comment Document
9	Cutting through the mountain will destroy the land and its inhabitants. This is deplorable and would destroy a portion of the park that many hikers and residents greatly enjoy. The actual impacts of the freeway cutting through South Mountain Park, on the maps are presented like it's not a big deal but when you're talking about cutting acres off the corner of a park, that is a huge impact! It's not just the direct impact of eliminating acres of the park, but it's the fact that now you have a major freeway right next to one of the largest urban parks in the country. South Mountain Park is a focal point for many.
10	The proposed plan to cut a 220-foot cut through one ridge, a 190-foot cut to another, and a 70-foot cut is simply unacceptable as is the expected $30 million to do so.
6	Affects on Wildlife The best thing YOU could do for wildlife is to not build the freeway. You need to take a deeper look at the impact to the desert wildlife, i.e. the desert tortoises. Proposed mitigation, irrespective of whether or not the tortoises are listed right now as endangered, should be considered. There should have been more efforts to ensure that the tortoises are not harmed and that additional habitats for tortoises are protected. The plant life on South Mountain should also be considered. While the freeway may not directly destroy endangered species, it will fragment the habitat and create problems for the entire ecosystem. The Sonoran Desert is unique to our region… We're losing it. We're continually fragmenting it. We have to be careful of that. It's not an infinite resource. (Source: Wendy Hodgson, a research botanist and herbarium curator at the Desert Botanical Garden) Furthermore, even DEIS admits that noise during construction could be a problem for many species of birds and that the area is known to be a habitat for desert tortoises.
11	Who Really Benefits? Who really benefits from the freeway? The truth has not been fully disclosed. For truckers, it adds another route - no benefit to Ahwatukee. For developers – it opens up new land options on the west side to build because now undesirable land becomes valuable due to quicker access to either side - no benefit to Ahwatukee. Time savings was 6 minutes to downtown. For the damage incurred, that is not a justifiable trade-off for Ahwatukee.
2 1	Bottom Line: The Necessity for the Freeway Doesn't Exist! The necessity for the freeway doesn't exist, but an increase in noise and air pollution, and the destruction to our land and its inhabitants is quite evident. By increasing traffic; it will add to the toxins already in the area. This geographical area is going to hold this problem and not disperse it. We're going to end up with a place that's not fit to live in. I agree with the Sierra Club of Arizona; the cost is too great. Funding could be better spent repairing infrastructure that already exists and promoting different forms of transportation.
12	Progress isn't always the right answer if you destroy land and people in the way. You can't undo the damage once done. Please do NOT build Loop 202 South Mountain freeway....because it is the right thing to do for Ahwatukee as a whole. Sincerely, Cheryl and Michael Greene Ahwatukee residents since 1993
	_____ Confidentiality and Nondisclosure Notice: This email transmission and any attachments are intended for use by the person(s)/entity(ies) named above and may contain confidential/privileged information. 9	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
10	**Visual Resources**	Draft Environmental Impact Statement pages 4-157 and 4-158 state that construction of the proposed road cuts at the western end of the South Mountains would cause "severe visual impacts" and that these cuts "would be visually inconsistent with the natural setting of the surrounding area." These impacts would, however, be in a remote, seldom-used area of the Phoenix South Mountain Park/Preserve and not near any major trails. General mitigation measures to minimize these visual impacts are described on page 4-158. These measures would include the incorporation of newly exposed rock faces characteristic of the adjacent natural rock features. Contractors would respond to the faces' scale, shape, slope, and fracturing to the extent that could be practicable and feasible as identified through geotechnical testing and constructibility reviews. The Arizona Department of Transportation would require the contractor to round and blend new slopes to mimic the existing contours to highlight natural formations. The Arizona Department of Transportation would evaluate having the contractor adjust and warp slopes at intersections of cuts and natural grades to flow into each other or transition with the natural ground surfaces without noticeable breaks. A local example of such treatment would be the cuts associated with Dreamy Draw on State Route 51 in northern Phoenix.
11	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

1 2 3

Our city and state needs to prioritize public transportation, not build another freeway through a protected area. More highways are not the solution - light rail, commuter trains, bicycle infrastructure, and other transit options should be our focus. Please select the No Action Alternative. Thank you!

Sincerely,

William Greene

To: ADOT
Subject: FW: Loop 202 completion
Date: Monday, May 20, 2013 1:06:40 PM

From: twohoo@aol.com [mailto:twohoo@aol.com]
Sent: Monday, May 20, 2013 12:56 PM
To: Projects
Subject: Loop 202 completion

To Whom it May Concern,

I am a registered voter over the age of 18 and current resident of Laveen Village/Phoenix South Mountain. I am in favor of the Loop 202 being completed in our district. Not only will this completion make it easier to access the rest of the Phoenix Metro area but it will bring immense value to our neighborhoods. It will bring a much needed modern hospital to our area. This freeway will also bring us shopping choices that we are currently having to travel at least 10 miles (and 20 miles on average) in any direction to access.

Completing the Loop 202 will increase our home values. Being one of the hardest hit areas in the Valley during the housing crisis many of us have seen our home values plummet. Many of us are still underwater in our mortgages. Because we love our neighborhood and want to see it become the jewel we know it can be we have stood our ground and fought to keep good people in their homes. We have excellent schools in our area including Eagle College Prep Elementary School, Vista del Sur Elementary School, and Legacy Traditional School. All of these schools are rated among the top in our state.

Completing the Loop 202 will not only increase our home values but it will increase our property tax dollars which can then be spent to improve our local public schools, police, and fire departments. Our tax dollars will go to improving our roads and increasing pedestrian safety. Currently many of our roads have no sidewalks forcing pedestrians to walk along streets with high speed limits. Baseline Road, for example, has an average speed limit of 45 mph. I will not allow my children to walk to school even though we live less than a mile away because they would have to cross Baseline. Bus service would increase in our area reducing the need to drive everywhere thus improving Phoenix's air quality.

I have personally watched several good families move from our area because the logistics of accessing anything a family would need is a nightmare. The nearest quality dance studios and gymnastics are no less than 20 miles away in any direction. The nearest movie theater is downtown. The nearest mall is 20 miles in any direction. The nearest hospitals are in crime infested areas of the city. I am afraid to take my children to any of these facilities. Often we find ourselves using one of two aging urgent care facilities in our neighborhood. We have no craft stores in our area to patronize when our kids need to do school projects (there are so many school projects). We have no clothing choices other than Walmart. We currently have only two grocery stores to choose from- Safeway and Fry's. We have three fuel stations- Safeway, QT, and Circle K. We have a Walmart that is overrun with disgruntled and angry employees making it a nightmare to shop. We have very few sit down family restaurants and way too many fast food franchises. Bringing the Loop 202 thorugh our district will not only ease our frustration in meeting the basic needs of family life it will increase sales tax dollars as well.

Please complete the Loop 202 as quickly as possible. It will greatly improve our quality of life here in Laveen/South Mountain. It will bring in much needed health and shopping opprotunities. It will increase the population in our Village giving us a stronger voting presence. It will increase tax dollars being collected by the city and state. Our residents have been waiting patiently for over 15 years for this project to be completed. The city has already set aside the money for improvements. Please give our area access to the rest of the city.

Thank you,
Jessica Grevorovic
7301 S 31st Dr

GERALD GRIEMAN: My first objection is that there is not adequate planning for when they will close the freeway for either repairs or for DPS for a crash. I've lived in the Valley long enough to know that freeways are closed regularly. And this area is not suited for a major freeway because there are not alternate routes.

(1)

The only road is Chandler Boulevard which -- in this area. It's a four-lane road; it goes down to a two-lane road. If they close the freeway, it's going to be a disaster back here. It will be not only inconvenient, but it will be difficult for emergency vehicles if they are -- say your house catches fire or there's some other emergency.

(2)

Chandler Boulevard will be just a basket case because all of the freeway traffic will be funneled onto it. And when you funnel a freeway onto a two-lane street, it doesn't fit. And there's no plan for a frontage road. There's no plan for additional streets back here, so that just will not work. Along those same lines, Pecos is one of our few city streets in this area we have as you go east. You also have Ray Road at the curve.

I lived here before Pecos was connected to

Page 17

Code	Issue	Response
1	**Traffic**	Hazardous Materials Commodity Flow Studies and other information are used by emergency response planners (such as the Arizona State Emergency Response Commission statewide and the Maricopa County Local Emergency Planning Commission for Maricopa County) as one of the elements considered when developing Emergency Response Plans. If the plan were amended, it would be made available to the Arizona Department of Transportation.
2	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the proposed freeway (see Appendix 3-1 of the Final Environmental Impact Statement).

Code	Comment Document

I-10 and the highway department rated every intersection in that area as an F because the congestion was so appalling with everyone trying to use two roads. When they added Pecos, it was -- it relieved and it allowed us to have an adequate number of city streets back here.

If they take away Pecos as a city street, we're back to two roads or one road and that, again, is not enough to handle even the normal traffic in Ahwatukee. We need Pecos as a city street.

They would never think of building a freeway -- I asked at one of the meetings years ago, "Well, why don't you build a freeway on Camelback or Indian School Road?"

They said, "Well, those are streets."

I said, "Well, here Pecos is a street for us." This is how we get around. We need this street. And if you take it away from us, it will destroy our ability to get around within our city. So that's -- that's the first comment.

The second comment is regarding trucks. They insist that this is not a truck bypass and, yet, anyone who can look at a map and read the map knows that it will be used as a truck bypass because it connects to I-10 in two places. It will be a nice, lightly used road for all of the trucks to scoot around Phoenix and

4

continue to Los Angeles.

If they are serious about it not being a truck route, I would ask that, if it is built, that they ban trucks. I've seen that done on highways in other cities and in an area where it was supposedly only for residential traffic.

If it's for residential traffic, put your money where your mouth is and ban trucks. If you're driving on interstate 35E in St. Paul, Minnesota, for example, you come to the place where it branches off and it will say, "No trucks on this road. If you're a truck use this road," and they can easily do that here, too, if they are serious this is not a truck road. If they don't do that, I don't believe them.

And those are the two larger issues. But I also want to add a personal issue. I moved here, bought my house in 1999 and, at that time, I came here for health reasons. And I chose Ahwatukee specifically because it was isolated. There was little traffic. There was mainly desert landscaping. I have allergy problems, severe allergy problems that affect my breathing.

I came here because this was the area in the Valley that best suited my health needs. At that time, I looked at everything the highway department had

Code	Issue	Response
4	**Trucks**	Arizona highways, as are most highways across the United States, are open to all kinds of traffic, so long as the cargo being carried is in accordance with U.S. Department of Transportation regulations for the specific type of cargo. The Arizona Department of Transportation has a few locations in the state with hazardous cargo restrictions, but these restrictions are based on emergency response issues or roadway design limitations specific to that location. For example, the Interstate 10 Deck Park Tunnel has certain hazardous cargo transport restrictions because of the limited ability for emergency responders to address a hazardous materials incident in the tunnel. The South Mountain Freeway, if implemented, is expected to operate under the same rules as other similar facilities in the state; use by heavy trucks would be expected to be permissible (see text box on page 4-157 of the Final Environmental Impact Statement).

Code	Comment Document

5

7

8

put out. At that time, they said there is no funding for 202, the South Mountain Freeway and it is not on our plan -- it's not in our plans that it will ever be built.

If it is built, they had it on the map as a purple road, a purple dotted line. Purple meant possible toll road. They said it will not be built as a regular road. So when they say that it's been on the map since the '80, that's not true. In the '90s they took it off the map and said only a possible toll road. And I thought well, they are not going to build a toll road in Arizona. People won't put up with that. I said, "I'm safe."

So I bought my home. I moved in. And it's been wonderful. My health has never been better than living back here. I live literally two blocks from where the proposed freeway will be.

First of all, there would be a year of construction with tremendous dust and everything. I'd have to virtually move for that year. At the end of that, there would be all the dirt from all the trucks unless they would ban them, which I doubt they will because I don't believe them that it's not a truck bypass. In effect, I'm going to be forced to try to sell my home and move and I'm -- at my age, I don't want to do that.

Page 20

Code	Issue	Response
5	**Purpose and Need**	The Southwest Loop Highway—the South Mountain Freeway predecessor—was integral to the Regional Freeway and Highway System approved by Maricopa County voters in 1985. Although other facilities were considered a higher priority early in development of the Regional Freeway and Highway System, the South Mountain Freeway has been included in every subsequent update. The same route was approved by the State Transportation Board in 1988. In 2004, Maricopa County voters approved Proposition 400, which was designed to fund completion of the remaining segments of the Regional Freeway and Highway System, including the proposed South Mountain Freeway (Final Environmental Impact Statement page 1-21).
6	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
7	**Air Quality**	To reduce the amount of construction dust generated, particulate control measures related to construction activities must be followed. The following mitigation measures would be followed, when applicable, in accordance with the most recently accepted version of the Arizona Department of Transportation *Standard Specifications for Road and Bridge Construction* (2008). Prior to construction and in accordance with Maricopa County Rule 310, Fugitive Dust Ordinance, the contractor shall obtain an approved dust permit from Maricopa County Air Quality Department for all phases of the proposed action. The permit describes measures to be taken to control and regulate air pollutant emissions during construction (see page 4-173 of the Final Environmental Impact Statement).
8	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document

I love this area. It's a beautiful area, and to destroy it at this point I just find reprehensible.

And there are a lot of other people back here who have health issues also, reasons for having come back here.

And I really encourage them to keep their promise that they were not going to put -- and that's what it was, they said, when I asked them -- and I did pursue it. And I'm asking them to keep their promise that they will not build a regular freeway through here.

I think that's it.

Thank you.

I just want to add I think it is absolutely appalling that they are thinking of cutting through South Mountain Park for this freeway. South Mountain park has been considered to be one of the treasures of Phoenix. They have bragged about it for years, about how the people who settled in this area had the foresight and the wisdom to set aside these huge mountain preserves. South Mountain Park is a treasure for the entire Valley.

I realize that it's just a small part that they are going to slice through, but it will impinge on it nonetheless and I'm so offended by that.

And I only need to look -- I spent enough time in Phoenix over the years that I know what North Mountain Park used to be. I know what Dreamy Draw was like before they punched the Squaw Peak freeway through. They said it wasn't going to ruin the park. It did. It took an idyllic part of the city and turned it into a noise box raceway and I dread that happening to our South Mountain.

Phoenix calls it one of its points of pride even, they are so thrilled with it. And now ADOT is threatening to cut through it and damage it in a way that it will never be able to repair.

Re: Loop 202 Report

1 I support building the South Mountain Freeway. In 1991 my husband and I bought a home near where the freeway will be, based on the expectation that this wonderful loop around Phoenix would be completed in a few years. We are confident, even after waiting now for 20 years, that if we ever sell, our property value as well as our lives will be enhanced by the freeway. Please build Loop 202 around South Mountain.

Thank you for your consideration.

Sincerely,

Mary Griffith

I encourage building the South Mountain Freeway along the Pecos route. In 1992 my wife and I purchased a home near that route with the expectation that the road would be built as planned. We still look forward to using the road and sharing it with other Phoenix area traffic.

Please build the road soon; we've had way too many meetings.

Sincerely,

Jim Griffith

South Mountain Study Team
Arizona Department of Transportation
1655 West Jackson Street
MD 126F
Phoenix, Arizona 85007 May 24, 2013

Dear Study Team:

1 These comments address the preliminary right-of-way(ROW)/engineering for the eastern section of the South Mountain Freeway in the area of the Main Ridge South.

I own parcel 300-05-004D. The preliminary ROW footprint shows the freeway cutting through the south-southwest portion of this parcel.

There is no consideration in the draft environmental impact statement (DEIS) for access to 300-05-004D and the parcels to the west and north if the proposed alternative is built, even though the proposed alternative would have a drastic impact on reasonable access.

While the DEIS does concern itself with access issues in developed areas, it does not address access to this undeveloped area of residentially zoned property in the City of Phoenix.

The impact of the proposed action on access to the Main Ridge South area needs to be addressed because of the major access impact the proposed action has and because the proposed freeway corridor has frozen development in this area since the early 1980's—which is why this is the only undeveloped

Code	Comment Document

portion of the Ahwauteukee Foothills. The current lack of development should not preclude ADOT solutions for access to this area as ADOT's multi-decade plan for the freeway is the cause for the lack of development.

ADOT has an affirmative duty to not impede reasonable access to parcels due to its actions. According to ARS 32-2185.02. A: "No subdivided land may be sold without provision for permanent access to the land over terrain which may be traversed by conventional motor vehicle unless such provision is waived by the commissioner." Unless ADOT assists in creating a solution for the access challenges created by the proposed freeway ROW taking it will be difficult, if not impossible, to provide vehicular access to the approximately 250 privately owned acres located in the City of Phoenix.

The proposed action freeway ROW takes the 25' deeded right-of-way to 300-05-004D that is meant to be the parcel's access as an extension of Shaughessey road.

In addition, the only effective potential road access to parcels to the west and north of 300-05-004D is through the freeway ROW ADOT proposes to take from 300-05-004D. Effected parcel access includes access to 300-04-014B, 300-04-016,300-05-003B, 300-04-013E and 300-04-015X. (Parcel 300-05-006B is almost all taken by the proposed freeway ROW).

There are also 15 additional parcels to the north of those mentioned above that would be impacted by potential lack of access because of the freeway ROW. These include: 300-04-013G and 300-04-011D, 015D, 015K, 015J, 011A, 015F, 015W, 015R, 015T, 015Q, 015L, 015V, 015Z and 015Y.

Code	Issue	Response

Code	Comment Document

It should be noted that the previous owner of the adjacent parcels to the south, west and north of 300-05-004D was Woodside Homes. Woodside Homes had a preliminary plat for a subdivision comprised of these parcels. The plat had access to these parcels through the ROW ADOT proposes for the freeway through the Main Ridge South.

The access to 300-05-004D and the other parcels to the west and north is highly problematic if ADOT takes the proposed freeway ROW. Access from the north and north -west of the freeway ROW for the affected parcels would be difficult because of the steepness of the terrain.

Access to this area from the South Phoenix/Laveen area is precluded because of South Mountain Park.

The location of the ADOT ROW through the Main Ridge South makes sense because of the planned route, the intent to avoid as much of South Mountain Park/South Mountain as possible and the fact the South Mountains slope downwards in this area. However these factors also make this location the only logical solution for right-of-way to access all the private parcels in this area.

The EIS should address this ROW issue before a Record of Decision is issued as potential solutions have environmental, fiscal, and cultural impacts that should be analyzed. (e.g. there are Native American artifacts in this area) and the area impacted is significant.

The purpose of the National Environmental Policy Act (NEPA) is to promote informed decision-making by agencies by making "detailed information concerning significant environmental impacts" available to both agency leaders and the public.

Code	Issue	Response

Code	Comment Document

The South Mountain Freeway ROW issue in the Main Ridge South area will need to be addressed if the proposed action is implemented. Examining the impact of the access issues caused by the proposed action in the EIS is the type of issue NEPA envisions be explored before the EIS is finalized.

Good Morning Randy:

The copy isn't as clear as I'd like, but its best we can get. Can't see the APN, but the parcel lines are visible. You can compare this with sheet 8 in the online aerial mapping.

Please bear in mind this is for visual reference only and not representative of final right of way requirements which could change significantly depending on the outcome of the EIS. We need to see if a build option is decided on, and if so, get into the final design stage for this construction segment.

Nice meeting you yesterday as well. Contact me anytime.

Reggie,

It was nice meeting you at the hearing today; I do appreciate your helpfulness. I did find the freeway map in the "library" section of the website.

You mentioned that you could send me a copy of a portion of the assessor's map overlayed on the South Mountain Freeway right-of-way map. This would be very helpful. The parcel in which I have a interest is:

300-05-004D.

I am also going to follow your suggestion and comment on the EIS. Since my comments pertain to the ROW in this area, I will e-mail a copy of the comments to you for your information.

Hello Randy:

Yes the long weekend was good, but too short as always. Hope yours was good as well.

The link below will take you to Arizona Revised Statutes Title 28 which deals with Dept of Transportation. If you scroll down 2/3 way or so to 28.7092, that general 'area' (article 6) has to do with land acquisition and related for highways.

http://www.azleg.state.az.us/ArizonaRevisedStatutes.asp?Title=28

Until we know if a build alternative is decided upon and if so, then get into final design for this segment, right of way requirements and impacts to your property are subject to change. The appraisal would address any 'damages' or other issues during development of this construction segment.

Reggie,

Hope you had an enjoyable Memorial Day. For your information, I have attached a copy of the comments I mailed to the EIS study team concerning right-of-way in the Main Ridge South area.

1 Could you please forward to me, or tell me where I could find, the rules/regulations/guidelines/laws that govern ADOT when they take property for a freeway? I am concerned that the potential taking will eliminate the right-of-way for the property I own and wish to know how ADOT approaches such a situation.

Thanks,

05/29/13

As a concerned citizen and 18 year Ahwatukee resident, I am absolutely opposed to the construction of the South Mountain Freeway, especially considering there is a blatant, obvious alternative - SR 85 from I-10 to Gila Bend! This redirects truck traffic from Phoenix and sends it through Gila Bend - a HUGE shot in the arm for their economic development and a giant cost savings to the construction of the freeway. It also eliminates the need to displace families and businesses or to destroy national park/sacred land.

5

Just because this freeway has been on the books for 20+ years does not make it a necessity through Ahwatukee. Put aside your political aspirations and agendas and do the right thing. Save all of us taxpayers a lot of money and heartache and use the route already in existence - SR85!!!

Thank you,

Ralph "*Don't Make A Move Without Me*" Guariglio

Oh, by the way, please think of me whenever the subject of **Real Estate comes up!**

Code	Issue	Response
1	**Alternatives**	An alternative that would run along Interstate 10 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 was considered (see text on page 3-9 of the Draft Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and inter-regional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, it was eliminated from further consideration.
2	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
3	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Cultural Resources**	
5	**Purpose and Need, Old Plan or Use of Old Data**

1	Barbara Guignard Document Created: 5/20/2013 7:10:22 PM by Web Comment Form Please build the South Mountain Freeway. We have been waiting for years for this project to be done. I saw this proposed freeway on the maps when I moved to Ahwatukee in 1987. I do, however, prefer the alignment with the I-10/101 intersection. This would truly provide a circle around the Phoenix Metro area. Bringing the freeway into the I-10 at 55th Avenue seems to be a ridiculous location considering the current traffic issues in that area on a daily basis.

CALLER REMARKS/QUESTIONS:

I am calling to support the new freeway. We have such a terrible time every time we have to go down once a week toward Ahwatukee. This would be a wonderful thing besides the fact that in this day and age we need as many job programs as possible and improve our infrastructure. As opposed to letting it disintegrate like so many other cities do. Thank you.

I strongly encourage ADOT to focus only public/mass transit infrastructure development, not on freeways. Transit-oriented development is a big win-win for the public. Center-city residents should not subsidize freeways for far-flung sprawl areas. We should not sanction projects that result in 1) significant increases in pollution (which has significant health risks) and 2) significant loss of open spaces. Let's build some transportation infrastructure, but let's do it right - build transit systems, not auto-centric freeways; serve people & the environment, not sprawl. Thank you!

Code	Issue	Response
1	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Health Effects**	
4	**Section 4(f) and Section 6(f)**	
5	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1 I strongly encourage ADOT to focus on only PUBLIC/MASS transit infrastructure development, not on freeways.

2 • Transit-oriented development is a big win-win for the public!
• center-city residents should NOT subsidize freeways for far-flung sprawl areas!

3 • We should not sanction projects that result in: ① significant increases in pollution, and ② significant loss of open spaces

4 Let's do our infrastructure right — build transit systems, not auto-centric systems serve people and the environment, not sprawl!

Thank you!

The public hearing on May 21 was very well-organized & informative.

Based on the answers I received from my questions and information I gathered I feel the preferred alternative (W-59) is the best choice available for the Loop 202 Freeway.

1 This route will provide opportunity for much needed improvements in health care and business access for the Laveen area.

Document Created: 5/18/2013 12:59:00 AM by Web Comment Form

Dear ADOT,

Please reference the attached document. (I sent e-mail with attachments to 'projects@azdot.gov')

1 2 My name is Christopher Hadden and a 20 year resident of Ahwatukee. I know this highway plan has been in the works for many years and question if the plans set forth 10+ years ago are going to meet the growing and future needs of the valley to include the Gila River Indian Community, Queen Creek, Sun Lakes and Maricopa communities for future development. The attached document has several alternatives outlined in it that I feel would better serve the above mentioned communities and not just be limited to or impact Ahwatukee.

3 Some of the alternatives proposed would potentially reduce the number of homes and/or business from having to be demolished however would require building a tunnel through South Mountain. From the looks for the existing proposals in the Loop 202 South Mountain Freeway study, there appears to be a tunnel or two already proposed cutting through the western edge of South Mountain Park on the existing proposals.

In the Proposal 1, I am suggesting moving this to approximately 23rd Avenue. The tunnel would be approximately 3.0 – 3.5 miles long and go completely under South Mountain Park which I believe would reduce the impact to the park. I have proposed connecting the freeway to I17, but to be honest, once the tunnel exits South Mountain at 23rd Avenue, there are many possible connections to I10 or I17 that could be proposed. These proposal were largely based on the existing study.

In Proposal 2, I reworked the routing to be much cleaner connecting both the 101 and I17 to the South Mountain Loop 202 via a tunnel through South Mountain approximately located at 23rd Avenue. This proposal gives an option to connect directly to Pecos with minimizing any impact to houses, business and schools. It also allows a connection to or continuation to Riggs Road which then will tie in Maricopa, Sun City and Queen Creak communities connecting back to the 101 at Price Road. I believe this proposal would be the best taking into account future growth; however since it crosses the Gila River Indian Community that

Code	Issue	Response
1	**Alternatives**	The alternatives development and screening process included alternatives similar to those proposed by the commenter (see Figure 3-5 on page 3-7 of the Final Environmental Impact Statement). The Riggs Road and Queen Creek Alternatives are similar to the Riggs Road Alternative considered in the Draft Environmental Impact Statement. The Riggs Road Alternative would not complete the loop system, thereby causing substantial out of direction travel for motorists. Additionally, the alternatives would be partially located within Gila River Indian Community land, and the Gila River Indian Community has not given permission to study alternatives on its land. Any alternative on Gila River Indian Community land must consider tribal sovereignty. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process. Information related to the evaluation and reasons for eliminating the alternative from further study are provided on page 3-9 of the Final Environmental Impact Statement. The alternatives that include a tunnel through South Mountain would result in similar benefits and impacts as the Central Avenue Extension Tunnel. The reasons for eliminating the proposed 23rd Avenue Tunnel would be similar to those provided for the Central Avenue Extension Tunnel on page 3-12 of the Final Environmental Impact Statement.
2	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Alternatives**	The text boxes on pages 3-16 and 3-17 of the Draft Environmental Impact Statement discuss the additional factors that weighed as strong negatives for tunnel options: impacts, engineering factors, maintenance costs and issues, security, constructibility, and construction costs.

Code	Comment Document

would need to be addressed.

4

I may not fully understand or have an appreciation for the limits on where the highway can be built on the Gila River Indian Community. However, the most recent news has shown support for the freeway from the Indian community. And, we have seen many highways constructed through Indian communities that have made positive impacts to those areas to include and not limited to the Loop 101 and Beeline Highway 87.

Let me know if there are any questions about these alternatives or if these options have been previously ruled out. I would be open to meeting and discussing this proposals further.

Best Regards,

Christopher Hadden

1	I am a civil engineer and have lived in the Phoenix area since 1996. As I recall the South Mountain bypass was a hot topic of discussion even then. I find it very difficult to understand why it is not already a reality. Every day that passes is a lost opportunity to improve the air quality and thereby improve the health of our children. Few of us realize what it actually costs us to sit in traffic tie-ups, burning extra fuel and fraying nerves. In the mid 90's, my wife was selling new homes in Ahwatukee and she was instructed to advise every potential buyer of this pending freeway. My hope is that this will become a fact sooner than later. Jim Hallman 480-369-4879

Subject: Ahwatukee resident input 202 loop

Thank you for the opportunity to comment on the 202 loop through the South Mountain corridor.

1 If this project is truly intended as a route to bypass Phoenix, the current proposals do not even make common sense.

2 An obvious route and one which would not require cutting through sacred lands or residents' living rooms, would be (from I-10) south on 85 to Interstate 8. Why hasn't that route been discussed publicly?

Thank you,
Amy

1	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	The study considered an alternative that would run along Interstate 8 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 8 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and interregional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, was eliminated from further consideration.

I think the south mountain freeway needs to be completed. Right now its unsafe because people drive at high speeds down pecos. Also we need to clear out some of the traffic on I10 durring rush house and offer a bypass around the downtown area. My husband travels to Harquahala and back for work and right now fighting the traffic makes his commute hellacious. Having the bypass would greatly improve our commutes for a number of reasons.

I am in favor of the project and also believe that the direct alignment with the Loop 101 is the only one that make sense. We have many clients in the west valley who are also in favor of the freeway and the Loop 101 alignment. This freeway will ease congestion and actually reduce pollution in our Valley.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1

PLEASE CONSIDER BUILDING THE SO. MTN FREEWAY AS IT IS VITAL IN REDUCING CONGESTION ON THE CURRENT FREEWAY SYSTEM.

would be feasible. And that's what I've got.
MR. HAMILTON: I just did a comment via the computer, but I thought of something else.
COURT REPORTER: Okay. What is it?
MR. HAMILTON: You mean, specifically, my comment?
COURT REPORTER: Yes.
MR. HAMILTON: I would like ADOT to keep the preferred route, the purple route, in the west end. That's the only -- That's the only thing I forgot to add to my original comment.
MR. BRENNAN: Okay. So I already spoke inside, regarding some of the impacts specifically with traffic.
Oh, you have to do every stutter and "Oh," don't you? I'm sorry.
Traffic, particularly with existing traffic conditions with the trucks, the warehousing and shipping business located to the north of Laveen, currently using 51st Avenue going south, as well as spilling over frequently onto our surface streets like Baseline Road, as well as whenever traffic incidents slow traffic on the I-10, which pushes traffic onto our surface streets, and I think that that creates a negative impact on both the Laveen community as well as the rest of the South Mountain/South Phoenix area, which is where I presently live, and have previously lived in Laveen and remain fairly active in that part of the South Phoenix

Subject: Support for the South Mountain Freeway

I would hate to have my silence result in the defeat of the South Mountain Freeway by a vocal minority. The South Mountain Freeway is essential to the future of road transportation in Arizona. The South Mountain Freeway has been in the planning stages for far too long and it is time to proceed with its construction. Those in opposition to the freeway for the most part knew of its future construction when they purchased their current properties.

The South Mountain Freeway will assist in relieving the congestion on Interstate 10 through Phoenix. Traffic from Tucson through Phoenix to Los Angeles should almost exclusively utilize the South Mountain Freeway. In addition, those of us who travel from the Southeast Valley to the west side of Phoenix will have a route that will not resemble a parking lot for part of the day.

I travel from Chandler to Luke AFB on a regular basis and each trip westbound adds another vehicle to the congestion on I10 northbound from Loop 202 through the Broadway Curve and I10 westbound from the tunnel to Loop 101. Congestion on the return trip usually starts just east of the tunnel on I10, slacks off from the I10/Loop 202 split to the I10/I17 join then is usually stop and go traffic until south of Ray Road on I10. I have tried to use the current road system around South Mountain to the South, however, the speed limits and few residential areas make this inefficient.

1 2

Build the South Mountain Freeway now. Connect it directly to Loop 101 on the west side of town so as to not add to the congestion on I10 west of I17. Start construction on the Pecos Road portion of the freeway and if the Gila Indian Community provides and alternate path then divert the freeway south from the portion already under construction.

Those in opposition to the South Mountain Freeway are truly a vocal minority concerned with protecting their own interests at the expense of the majority of the citizens of the Phoenix area.

Thank You,
Michael D. Hampshire
1040 E. Hawken Way
Chandler, Arizona 85286

made on a final bill? We've been in limbo with our home because at one point we were in the right-of-way and now we're not which is okay, but we're just trying to plan obviously for the future and any improvements we'd like to make on the home and all that. Obviously we won't do that if we were remaining in the right-of-way and they want to take it.

So, you know, I think that's all we have to say. We're just more interested in how they would design the wall with those property owners that it would be right up against, so.

MR. HANCOCK: My name is Jordan Hancock. I'm a student over here at Chandler-Gilbert. I first learned of the freeway through a friend. She's from the Akimel O'odham tribe, Gila River. She's from the reservation, the Pima reservation, where ADOT was -- there was three options, from my understanding, of the freeway, and they first tried to push it onto their land.

And I became aware of some of the abuses that they were doing, especially from the contractor Pangea, that they were going to pay to build the freeway on the Gila land. So that's when I first became aware of this and became opposed to the

Code	Comment Document

1 freeway. So I thought that was very dishonest of
2 what they were doing.
3 Two, I started to talk to Pat Clark and I
4 really don't want this freeway. I think it is going
5 to lead to be a trucker bypass. So, it's very close
6 to the I-10. If you look at sort of what the can of
7 mix was and then some of the justifications I was
8 hearing from the Perez guy from Pangea, he was the
9 leader of the development company, and he was just
10 lamenting and being completely open with the fact
11 that this is going to be the can of mix freeway, or
12 this is going to provide for the corridors as if it
13 was a good thing.
14 The threat of trucker emissions is not
15 addressed in the EIS. It's a severe threat. There's
16 documentation after documentation of being within 500
17 meters of a freeway, what it does to the carcinogens,
18 causes cancer. There's four elementary schools that
19 I know within 500 meters of the proposed freeway on
20 the Pecos on that option. There's several housing
21 developments that I know of and these are not
22 addressed.
23 It's blatant, I think a human rights
24 violation. I don't appreciate the fact that ADOT,
25 they bus their contractors in here and allow them to

5	**Health Effects**	
6	**Public Involvement**	Target busing of special interest groups was not included in the public involvement plan or activities, nor provided by the project. Free shuttles were provided in specific locations to accommodate populations that might not have had access to other transportation to attend the public hearing downtown. The rules for the hearing included: "Displays, signs, or banners are not allowed in the Convention Center."

Code	Comment Document

have T-shirts. They don't know any of the talking points for one, yet when we try to pass out information, the Sierra Club, they won't let us do it. I know they already spent $24 million of paid tax payer money to do it, so I see their reasons.

Two, there's two city ordinances that have been passed. One in '97 by a popular vote and one in 2003 that I know of that basically say you can't sell any land or do anything to the wildlife preserve, which is the South Mountain, the mountain preserve, without voter consent.

I know that there's some -- they can get around this from what I read -- ADOT cam, but it's in violation of the spirit of the law, it's not fair and I definitely hope we get a lawsuit to try and do this. So I think it's illegal actually what they're doing. It's in violation of two voter referendums.

This is the largest city park in the country, a very popular and historic mountain preserve. I'm not quite sure what is so hard about the word "preserve" for ADOT to understand. You can't preserve something if you build a freeway through it. It's a big part of our history, and not to mention the cultural importance of four Native American tribes, especially the Akimel O'odham. It's

9

their origin myth. It's from their origin. This mountain's very important for them and they're just sort of building a freeway right through it. It's a civil rights violation.

And the -- the effects of the Gila River tribe are not even mentioned in the EIS. That's very disturbing since they're so close to it. Cities can't transfer preserved land for freeways without a vote. This was 1990 House Bill 22118. I don't see how they're going to get around that.

And currently since 1997, our city has led the country in carbon emissions -- excuse me, not carbon emissions, but carcinogens, pollutions being put in the air since '97. So just as a whole since 1997. And we used to be a haven for, you know, asthma patients. And this is -- what it's become now, we're just below the limits of the EPA currently.

And if this becomes what I think it is, a trucker bypass station in the middle of the city, it's going to increase pollution and we're going to go over that limit, and we're in great threat of losing funding from the Federal Government. So that's losses of billions of dollars, not to mention the 2 billion they say it is going to cost to build

Code	Issue	Response
9	**Tribal Involvement**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project, would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment, Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.
10	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. 11

the freeway when it was originally 4 billion. So this is a bare bones freeway.

They've taken away -- I don't know how they're going to be able to afford wildlife passes and things like that. It's a very bare bones freeway. $2 billion for 22 miles. And these are just a few, but that's about it.

MR. MYERS: David Myers, M-y-e-r-s. I'm opposed to the South Mountain corridor, and I would say that we're basically just stealing land from the natives once again. And a good example of this would be, what if we wanted to put a freeway through Camelback Mountain, let's say, or say a north Phoenix or north Scottsdale? If we want to just run a freeway right through one of the upscale neighborhoods, how would they feel about that?

And, I mean, I understand that it's on the edge of Ahwatukee and parts of those are a little more upscale, let's say, but nothing compared to say like Scottsdale, and I honestly don't think that they would like it very much. And as a former auto mechanic, I can say that a truck route would increase air pollution substantially. I am now a sustainability student, and I oppose everything going on with the South Mountain corridor.

		Response to letter received after the comment deadline can be found on page B3838.
1	**Environmental Impact Statement Process**	The Arizona Department of Transportation is the sponsor of a proposed action, the construction and operation of the South Mountain Freeway in Maricopa County, Arizona. The Federal Highway Administration, the federal lead agency for the proposed action, in cooperation with the U.S. Army Corps of Engineers, the U.S. Bureau of Indian Affairs, and the Western Area Power Administration, prepared the Draft Environmental Impact Statement in accordance with: · the National Environmental Policy Act of 1969 [Title 42 United States Code § 4332(2)(c)] · Section 4(f) of the U.S. Department of Transportation Act of 1966 (Title 49 United States Code § 303, as amended) · Section 404 of the Clean Water Act of 1977 (Title 33 United States Code § 1251) The other groups noted in the comment, business leaders, Gila River Indian Community, and Maricopa Association of Governments have been involved in the study process (as described in Chapter 1, 2, and 6 of the Draft Environmental Impact Statement); however, the ultimate decision related to the identification of the Selected Alternative will be made by the Arizona Department of Transportation in coordination with the Federal Highway Administration.

Code	Comment Document

considers the needs of "business leaders" and representatives of "The Indian Nation" in addition to the majors of the cities within Maricopa County. Neither of the two former entities, irrespective of state legislature and executive actions, are competent to make decisions that affect private land owners in these United States of America. In fact, these are unconstitutional forms of representative government.

(2) Under what authority and pursuant to what facts are members of the Indian Nation to be included in the decision making process for the Pecos Road Alignment, an alignment which is NOT on the lands of The Indian Nation? Surely it's not the single forged hieroglyph found in the proposed right of way on South Mountain or the vista onto the lands not on the Indian Nation lands. This artifact of Arizona government has not yet been challenged. But it will be.

2. Historical Context

(3) The South Mountain Freeway may have been originally included in the proposed 232-mile Maricopa Association of Governments (MAG) Regional Freeway System (now called the Regional Freeway and Highway System) as planned in 1985. However, it was never indicated as an easement or even a possibility on any plat anywhere near my house. What was indicated was an easement 500 feet from my house for the extension of Pecos Road.

Since 1985, the city of Phoenix has issued building permits in what is now to be considered the "right of way" for the proposed freeway. In my case, less than one year before the notorious homeowner notification in October of 2005. If the "general location" of the proposed freeway was so well known, why were these building permits issued? Isn't this a glaring case of wasting taxpayer money? If the Pecos Road alignment was so precisely defined and a decision had already been made, why did the first public notification signage appear on the 28th of May 2013 at the South 24th Street and Pecos intersection?

3. Purpose and Need

(4) The DEIS purports that traffic in general will continue to increase at exponential rates in Maricopa county. This is identified as the primary reason for the need for the South Mountain Freeway. All biological systems that experience geometric growth will stabilize or collapse at some point in time. This is a concept of real science. Why is this concept not a factor in the DEIS? It is omitted altogether. In a day and age when telecommuting is increasing at geometric rates, this is inexcusable.

Furthermore, the DEIS cites a fictitious need for residents of the Central West Valley to commute to the Chandler/Gilbert/Queen Creek area and vice versa. Surely we are all in agreement that there is no such "need" between the residents of Chandler and Ahwatukee Foothills and the residents of Tolleson; the demographics just don't comport. Why isn't there any study mentioned of how many cars travel from Chandler/Ahwatukee Foothills to the Central West Valley now? License plate recognition software and hardware is readily available and can access registrations nearly instantaneously. That's because such travel doesn't exist. Isn't ADOT's insistence of the former merely a case of "if you build it, they will come"? How are general valley traffic volume statements and projections

Code	Issue	Response
2	**Alternatives**	As noted on page 2-8 and 3-5 of the Draft Environmental Impact Statement, the Gila River Indian Community held a coordinated referendum in February 2012 to favor or oppose construction of the South Mountain Freeway on Gila River Indian Community land or to support a no-build option. The highest number of votes were received by the no-build option, therefore, the on-Gila River Indian Community land alignment was eliminated from further study. The referendum results did not affect the alternatives development and screening process related to the E1 (Pecos Road) Alternative. Laws, such as the National Historic Preservation Act, American Indian Religious Freedom Act, Section 4(f) of the U.S. Department of Transportation Act, provide protection for cultural resources even if they are located off of Native American land. More information related to how these laws affected project determinations and design are presented on page 4-128 and in Chapter 5 of the Draft Environmental Impact Statement.
3	**Acquisitions and Relocations**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.) It is not within a City's or State's right to deny building permits to developers who meet all requirements and want to develop their land. In 1996, the Maricopa Association of Governments Regional Council approved the Red Letter Process to provide early notification of potential development (including plans, zoning, and permits) in planned freeway alignments. In addition, the Arizona Department of Transportation works closely with Cities and Counties during the environmental impact statement process to encourage developers to reserve land for future transportation improvements. In some cases, when the developer is willing, the Arizona Department of Transportation has been able to purchase a portion of the land through advanced acquisition (see Final Environmental Impact Statement pages 3-53, 4-13, and 4-48).
4	**Purpose and Need**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. An analysis of the origins and destinations of projected freeway users is presented in Figure 3-18, on page 3-36 of the Final Environmental Impact Statement. Freeway users are defined as those motorists who pass through the bend of the freeway (around the South Mountains). So, this does not count motorists in Laveen Village who go to Interstate 10 (Papago Freeway) and motorists in Ahwatukee Foothills Village who go to Interstate 10 (Maricopa Freeway). The results of the origin-destination analysis show that 73 percent of the traffic going around the South Mountains has origins or destinations in the area within or around the Study Area and supports the conclusion that the proposed action would serve east -west mobility consistent with commuting movements.

Code	Comment Document

even relevant here?

5 1

Inherently, there is no local need now. After all, Chandler and Ahwatukee Foothills are more than 95% developed. Everything south of Pecos Road and east of its current terminus is Indian Nation lands. ADOT, Phoenix, and MAG (if it is legal entity) cannot make decisions about private lands in Arizona based on the needs of the Indian Nation. Isn't that the exclusive purview of the Department of Interior for these United States of America?

6

So where could increased traffic come from? The better question is where will increased traffic come from? It will come from the CANAMEX Highway. When Congress adopted NAFTA, this highway became a requirement of the United States Government – not Arizona. But where is the segment between Pecos Road and Las Vegas? It doesn't exist! Which is why the federal government is paying for a significant portion of the local freeway. Why is the CANAMEX traffic load not considered in the DEIS? How is CANAMEX a responsibility of the Arizona or Maricopa or Phoenix taxpayer?

7

To cast the need for the South Mountain Freeway in terms of relieving the congestion on the I-10 freeway between Pecos Road and the 143 irrespective of the CANAMEX Highway overlooks two fundamental issues. First, from Pecos Road to the 143, fourteen lanes of traffic are crammed into seven. Worse, carpool travelers going to PHX from the I-60 must cross six lanes within the most crammed quarter mile to get to the airport. Wouldn't an elevated HOV cross-over be much more efficient? Isn't this the real problem?

4. Gila River Indian Community Coordination

1 2

The Federal Highway Administration may not have the right to survey the lands of The Indian Nation, but the federal government does have the right to condemn lands of the Indian Nation under eminent domain. That's exactly why the USDOT has stepped back in this case. Just as the Bureau of Indian Affairs is chartered to address the transportation needs of the Indian Nation, the states and their subordinate organizations are NOT! More specifically, MAG's "coordination" is not/should not be decision-making. Fire Departments, ambulance companies, and hospitals all coordinate with each other, but neither makes decisions for any other. How can ADOT confuse such fundamental concepts?

8

Significantly, the proposed South Mountain Freeway alignment is not within any portion of the tribal lands of the Gila River Indian Community. Why is that community involved in the decision-making process affecting the properties of Phoenix landowners? More importantly, why is ADOT proposing off ramps and street stubs that serve the property and business developments of The Indian Nation? Who in The Indian Nation's allotted landowners stand to profit from Casino developments and billboard placements? Does the greed of these Indian Nation profiteers outweigh the rights to residents of those not within the Indian Nation? Apparently, they also outweigh the desires of the rest of their tribal members.

9

Finally, how can a tribal representative for tribe of a few hundred have the same voting or veto power as the mayor of Phoenix? Don't we have a concept of one person one vote in

Code	Issue	Response
5	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Trucks**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. The proposed freeway would not be part of the CANAMEX Corridor. The CANAMEX Corridor is to follow Interstate 10 from Tucson to Interstate 8 near Casa Grande, Interstate 8 west to State Route 85 near Gila Bend, State Route 85 north to Interstate 10 northwest of Buckeye, Interstate 10 west to Wickenburg Road, Wickenburg Road to Vulture Mine Road west of Wickenburg, and then connect with the planned US 93/US 60 Wickenburg Bypass. Additionally, the proposed freeway would not offer shorter travel times. The CANAMEX Corridor's proposed routing avoids any congestion associated with the Phoenix metropolitan area (see Draft Environmental Impact Statement page 3-64). Recent studies completed by the Maricopa Association of Governments, including the Interstate 10/Hassayampa Valley Roadway Framework Study and the Interstates 8 and 10/Hidden Valley Transportation Framework Study, have further defined the long-range planning for the CANAMEX Corridor in Arizona.
7	**Traffic**	While the improvement proposed by the commenter could help eliminate some weaving issues in that area, the cost to build such a cross-over would likely not be in line with the limited number of vehicles demanding that movement. The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing motorists an alternative route to already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County.
8	**Alternatives**	Federal law prohibits the denial of access to any community. Thus, traffic interchanges would be located along the freeway where it borders the Gila River Indian Community (see Draft Environmental Impact Statement page 3-51). Roadway connections on Gila River Indian Community land to the traffic interchanges would be the responsibility of the Gila River Indian Community, in coordination with appropriate jurisdictions.
9	**Purpose and Need**	An explanation of the Maricopa Association of Governments is on Draft Environmental Impact Statement page 1-4. That discussion lays out its membership, history, and legal role. The Maricopa Association of Governments is the federally designated metropolitan planning organization for regional planning in the Maricopa County region. Its current membership includes three tribes along with 25 incorporated towns and cities.

Code	Comment Document

these United States of America? ADOT needs to revisit the standards against which administrative agency action is tested against. After all Kelo v. New London only added another standard; it didn't replace the other tests (arbitrary & capricious, illegal, prohibited actions).

5. Alternatives

10

Proclaiming a fictitious need inherently corrupts any further analysis of the viable alternatives. This is a fundamental concept of real science and the scientific method. Unfortunately, this concept is, modernly, largely lost on administrative agencies that rely on repeating unfounded dogma until most people believe it.

11 6

Thus, if one is to proceed with the notion that there is a real current need for commuter travel from the Central West Valley to the Chandler/Gilbert/Queen Creek area and vice versa, certainly an extension of Pecos Road would suffice. After all, it's a four lane divided road with very few traffic control signals. Why is the lack of achieving a "projected traffic" flow of dubious origins for a freeway whose true nature and purpose are not addressed even relevant here? That's because the flow is a yardstick for CANAMEX Highway purposes.

12 5

And, if the real need is to comport with the lane and flow requirements of CANAMEX, both a real freeway is required and multiple alternatives come to mind. The logical question that follows is why did ADOT not consider an alternative from Casa Grande (or close by on the I-8) to Tolleson? Such an alternative would not cause any of the social or environmental consequences identified below, nor traverse tribal lands. It would, however, lie almost exclusively on federal lands. Is this a conflict of interest for USDOT? Why was this alternative not studied by ADOT or identified in Figure 3-5 of the DEIS?

The Casa Grande to Tolleson alignment can be detailed to exclude all residential property condemnation. Further, it would truly be a truck bypass, avoiding all residential contact except for possibly, but not necessarily, one eighth of a mile. How does such an alignment differ from any "studied" alignment for interstate traffic purposes? Why was that not discussed in the DEIS?

The Casa Grande to Tolleson alignment can also be designed to include two or more lanes that interchange with the I-10 or I-8at the southern end and the 303 and the I-10 at the northern end without significantly disrupting traffic. This is required by the CANAMEX Highway specifications. The Pecos Road alignment would require massive reconstruction to achieve such. Why was this not discussed in the DEIS?

13 1

Furthermore, why did USDOT not study condemning lands of the Indian Nation for the Riggs Road Alternative? If this is a CANAMEX segment, USDOT certainly should be at the forefront of the alignment studies and condemning decisions; not ADOT, not MAG, not anyone else.

Vertical alignment is much more complex than the short shrift given to it in the "Alternatives" section of the DEIS. The complexities of this are discussed in the relevant sections below.

Code	Issue	Response
10	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
11	**Alternatives**	Extending Pecos Road as an Arizona Parkway or other facility was considered (see page 3-19 of the Draft Environmental Impact Statement). In the best-case scenario, a parkway would carry approximately 105,000 vehicles per day, well below the average daily traffic on the proposed freeway, which would range from 117,000 to 190,000 vehicles per day (see Final Environmental Impact Statement page 3-19). As a result, the Arizona Parkway would lack sufficient capacity to meet projected travel demand. The Arizona Parkway would not adequately address the projected transportation system capacity deficiency, would not remove a sufficient amount of traffic from arterial streets, and, therefore, would not meet the project's purpose and need. For these reasons, the Arizona Parkway was eliminated from further consideration.
12	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the Phoenix metropolitan area by increasing capacity and providing alternatives to allow traffic to avoid already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of the Phoenix metropolitan area. Routes south of the Gila River Indian Community, such as that noted in the comment and the State Route 85/ Interstate 8 Alternative were evaluated for the proposed project. The reasons these alternatives were eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
13	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.

Code	Comment Document

6. No-Action Alternative

14 7

As noted above, there is no articulable, scientifically supportable need for this freeway, absent CANAMEX. The "No-Action Alternative" and/or the Casa Grande to Tolleson alignment (for CANMEX traffic) are the only two supportable alternatives. Further, the I-60 to 143 overpass is notably a significant I-10 current traffic mitigation option which is likely to yield the most results for non-CANAMEX traffic. Why was this not discussed in the DEIS as a viable traffic mitigation option?

a. Displacements, Relocations, and Economic Impact

15

What's a home worth? That's the overriding issue ADOT has not addressed. It's the elephant in the room. I purchased my new home in 2004 in the Mountain Reserve after reviewing 128 model houses in all states of completion. I moved in in August 2005. I paid $355,000.00 for it and spent another $40,000.00 in front yard and window coverings required by the association. I spent much more on cabinetry. I had leveraged the economy of a tract builder with the freedom to request a multitude of customizations. My house is truly unique.

I had put $140,000 down as a down payment. I have no back yard. Most people who bought near around the time I did don't (check Google Earth). Why? Because ADOT announced that my house probably will be mowed down for the Loop 202 Freeway, seven weeks after I moved in. That was before the housing bubble collapsed and values collapsed even further.

The last house that sold on my street (with a back yard and a pool) sold for $173,000 (check Zillow.com). Wow, I might as well have flushed $100,000.00 down the toilet eight (8) years ago and I'd still be more than $60,000.00 ahead of the game. I may even have had a back yard down through those years. How much is a back yard worth? …for 8 years? I think that most people will agree that it's worth a lot.

Also, I have lived in a community where transient rentals were the norm for eight (8) years. Monthly rentals predominated. There was absolutely no sense of community. Indeed the HOA had no forum of board members for years. Nobody cared. The ADOT owned houses were a blight upon the neighborhood for many years. What's that worth? Is there any mention of this in the DIES? Much, much damage has already been foisted upon Mountain Preserve homeowners.

16

I moved to my neighborhood because of the views and the low levels of traffic, noise pollution, light pollution, air pollution, and lack of access by the criminal elements of the various crime riddled areas of the west valley. Can ADOT even find comparable relocation sites? Why is the latter not addressed in the DEIS?

So, again, what is a house worth? Is it the current standard of the "reasonable market value"? Or is it something else? I suggest it is the value of buying comparable property, building the same house thereon, and putting my family up in a resort during the time of its construction. And further, that property has to have similar characteristics with regard noise, views, light and air pollution, property taxes, and access by criminal elements.

Code	Issue	Response
14	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
15	**Acquisitions and Relocations**	
16	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.

Code	Comment Document
	Why not? Can anyone articulate why not? In the end, how much is all of this worth to a tax-paying resident of Phoenix? One that's been paying taxes for eight years and commuting to a remote location where he's never been able to even enjoy a back yard? The DEIS does not address this, not even remotely. Why? Because it's painful and expensive maybe? And, ADOT may not want to admit to the true cost of such land acquisition and replacement home building. b. Noise The DEIS addresses noise pollution. Unfortunately it uses the average hourly noise level as its only metric and does not incorporate any temporal variations. While it does acknowledge that it barely achieves federal maximum mandates, it does not even address the more pertinent parameters of the characteristics of noise and timing of thereof. Internationally, noise classification has advanced well beyond the crude "average pressure level" used in the DEIS.
17	
	Irrespective of the international classifications, the DEIS statement does identify that the Pecos Road alignment will barely achieve federal maximum noise levels in most cases, even if abatement walls are used. Why is that not a major problem? Further, these maximum classifications are based on abstract generalizations of laterally displaced noise level estimates. Why is there no mention of the directed and "channeling noise" of the converging freeways segments on Parcel D of the Mountain Preserve? Mountain reserve residents would be subject to air brake and incline ascending noises of both domestic and CANAMEX trucks, the volume of which are not incorporated into ADOT's simple projections. Lower frequencies travel farther. Period. What if the actual noise levels exceed the federal maximum noise levels? What then?
18	
17	
	And, more basically, ADOT submits factually incorrect current ambient noise levels for comparison. Noise levels not within the narrow arrival and departure times of commuters and not within the high heat air conditioning months (October through May) are much lower than indicated for neighborhood. Typically, they are in the decibel ranges from the 30's to low 40's on my back porch at my house, and even lower during the night. Why has ADOT not provided the true, evening, no-AC, ambient noise levels?
17	
	Noise can come in all forms. ADOT would have one believe that the sounds of birds at my bird feeder and sounds of my neighbor's children playing are equivalent to the recurrent, revolving, and mechanical sounds of lumbering trucks and motorcycles. It's embarrassing to even have to address this. The rest of the world has moved on. The quintessential question is why does ADOT rely on outdated and erroneous methods and metrics? Most likely because they're convenient obfuscating tactics. There are much more relevant international standards and measurements that are available.
17	
	ADOT itself pontificates that "it is recognized that transportation noise is perhaps the most pervasive and difficult source to avoid in society today". This is exactly what we currently don't have at the western end of Pecos Road. This was a major consideration when I bought my house. How is the maximum tolerable noise level relevant here? How about a combination of maximum noise pollution, air pollution, light pollution, disaster risk, and transient crime? Who would want to live in such an environment?

Code	Issue	Response
17	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. As discussed on Final Environmental Impact Statement page 4-88, the Final Environmental Impact Statement is required to comply with the Federal Highway Administration regulations, which specify the noise metric of A-scaled decibels. Noise analyses for Federal Highway Administration transportation projects are to use the hourly equivalent sound level (Leq), which is a logarithmic energy average over a 1-hour period. While other noise metrics are used in some other countries for other types of noise, they have not been accepted in the United States for various reasons, and the Leq metric remains the most common metric for discussing and evaluating highway- and transportation-related noise. As the Federal Highway Administration points out in Title 23 of the Code of Federal Regulations, Part 772, the Federal Highway Administration and Arizona Department of Transportation Noise Abatement Criteria are not to be considered maximum acceptable noise levels or design noise levels, but are the level at which noise abatement is considered. Regarding the no-air conditioning evening, noise levels, as mentioned on page 4-80 of the Draft Environmental Impact Statement, ambient noise measurements were conducted according to Federal Highway Administration guidelines in Measurement of Highway-Related Noise. The goal is to obtain representative ambient noise levels from the Study Area, not necessarily the absolute lowest sound levels that could occur in the area. The procedures and metrics used in the noise analysis are consistent with those used throughout the country and in much of the world for highway-related noise. Regarding anticipated noise from large trucks, the Maricopa Association of Governments' regional travel demand model forecasts approximately 10 percent truck traffic on the South Mountain Freeway in 2035 (see Final Environmental Impact Statement page 3-64). This forecast truck traffic is based on existing traffic studies and projected socioeconomic data. This percentage is similar to current conditions on Interstate 10 between State Route 101 Loop and Interstate 17 and on U.S. Route 60. Noise modeling for the Final Environmental Impact Statement used this forecast truck traffic, with the model accounting for greater noise generation by trucks in future noise levels. Noise mitigation is designed for this predicted noise level, including the noise from trucks.

Code	Comment Document

17

Finally, the question of time of day when noise is absent is avoided entirely. Why? So a noise at midnight is equal to a noise during the day. How is that possible? Is it rational? Whether CANAMEX or a general truck bypass is the main ingredient of the traffic on the proposed freeway, it is likely that the louder, lower frequency noise generated by large trucks will dominate. And, that this noise will continue 24x7 and carry further at night. How does that compare to the crude measurement and prediction that ADOT proffers? It doesn't. And, why has ADOT not addressed the conflict between wildlife corridor bridges and sound barriers? (More on that topic below.) All this appears to absent in the DEIS.

c. Water Resources & Floodplains

The DEIS identifies the flood plain relevant to the Pecos Road alignment. Unfortunately, its roaming generalizations do not address several pertinent aspects of drainage. The South Mountain Park and adjacent southern alluvial flood plains drain to the south. It is this author's experience that, during summer deluges the entire area from South Dessert Foothills Parkway to Chandler floods and drains through and across Pecos Road.

This drainage can cause the entire area from Chandler to South 17th Avenue to flood and drain through the multiplicity of drainage culverts *and over Pecos Road itself*. The current "alignment" proposes that the Loop 202 will be elevated along its passage by my house. AND, that the alignment will be 22 feet above the current grade. Wow, kind of like Hoover Dam in your back yard. More on that later.

19

20

With only one drainage culvert in the segment, what is the strategy to channel/buffer drainage waters? Further, and more significant, what are the consequences of erosion damage on the tribal lands of The Indian Nation? Why has the DEIS not even addressed this? It is a sure consequence of law that damages of The Indian Nation will be adjudicated by the Indian Council (see recent decisions by the federal courts), employing a different set of laws (they remind us of that with signage every 50 feet along Pecos Road), and dictated to Arizona taxpayers. What is the potential cost of that? I don't see anything that addresses this in the DEIS.

d. Biological Resources

21

The South Mountain Park is the largest municipal park in the world. It is the place where local citizens can enjoy *nature*. It hosts a plurality of *natural* inhabitants, from the Chuckwalla lizard to numerous bird species. It is a natural ecosystem that interacts with the desert flatlands and the adjacent Estrella Mountains on a genetic and predator-prey basis.

22

If anyone can believe all species in an isolated park can proliferate for more than a few years though a couple of tunnels (4 that I see) and one bridge traversing a 300 or 500 foot right of way, please present the scientific evidence. While the importance of wildlife corridors, such as those in the Ahwatukee Foothills area, has been scientifically established, drainage culverts and bridge corridors have not.

Quite the contrary, for many species they present a gauntlet to navigate while

Code	Issue	Response
18	**Noise**	As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes, which may be elevated above the roadway, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Phoenix metropolitan area and across the country.
19	**Design**	Drainage studies have been conducted; culverts would be maintained, and new culverts would be installed to maintain flows under the freeway (see Draft Environmental Impact Statement pages 3-58 and 4-101). The drainage design along Pecos Road Surface water could be altered from runoff drainage; seeding the disturbed soils with native vegetative species would help to minimize runoff and erosion. Best management practices associated with the project Stormwater Pollution Prevention Plan would also help minimize runoff.

Code	Comment Document

opportunistic predators, such as foxes and coyotes, cash in on the parade of traversers. Furthermore, position, size, food sources, and cover are key factors in determining which species will attempt to employ the use of such underpasses. Progressive proposals have been made to create vast corridor overpasses over the I-10 to Tucson. Is ADOT regressing in its thinking? Does it have better data?

The species least likely to traverse a tunnel or bridge corridor would be Road Runners, the Giant Sonoran Desert Toad, Desert Tortoises, Gila Monsters, horned lizards, Chuckwallas, rabbits, squirrels, skinks, low flying birds such as the Gila Woodpecker, the Road Runner, and Gambels Quail. And even if they do, the restricted opportunities to traverse will sharply decrease their genetic diversity and survival chances in the SMPP's ecosystem.

Most of these species are not likely to cross at the proposed Rio Salado Oeste project area either, as they do not inhabit marshes. All of these species have appeared in my back yard. Most of these species are an intimate part of the *nature* evident in the park today. Many of these species migrate daily or seasonally from the mountains to the flatlands. All communicate genetically with the greater Sonoran Desert inhabitants. Bottom line is this: Coyotes and Javelinas are the most likely species to use the tunnel and bridge corridors. Is there any shortage of those? Why has the natural biodiversity, genetic isolation, unbalanced predation, and ecosystem health of the SMPP's fauna not been addressed in the DEIS?

22

Further still, should ADOT decide that a bridge corridor is necessary somewhere in the vicinity of the Pecos Road terminus, what is the strategy for a sound barrier there? I've never seen such a barrier on a bridge outside of central Europe. Bridge corridor, vertical alignment, sound barrier, and ecosystem health are all related. Most significantly, the DEIS avoids altogether the question of what is the goal of the mitigation efforts are. Is to save endangered species? Or is it to maintain the health of the SMPP's ecosystem and natural state?

Let's also not forget that any corridor's effectiveness can be completely thwarted by commercial developments on the Lands of the Indian Nation. Quite frankly, evidence has shown that they just don't care. They'll build a casino where ever they please and recent court challenges have borne out yet again that no agreement with municipalities or the State of Arizona has any affect. Why is that fact completely ignored in the DEIS?

e. Hazardous Materials

15

The current alignment would have the CANAMEX or otherwise highway truckers pass a few yards from my house if it's not torn down altogether. But, then again, ADOT hasn't decided on the true right of way width yet. So we don't know. Why is that? Irrespective of this indecisiveness, the specter of a mishap on the Loop 202 resulting in an errant vehicle carrying hazardous materials rolling down the 22 foot embankment into a residential neighborhood is scary.

23

Why is there no discussion of this vertical alignment issue, especially with CANMEX truckers in mind. The DEIS only discusses general concepts? Isn't the transport of hazardous and harmful materials a key element to the freeway's alignment? How is the above scenario different than the Deck Park Tunnel? Has Homeland Security been

Code	Issue	Response

Code	Comment Document

advised of this?

ADOT instead chose to concentrate this section of the DEIS on the potential to disturb existing Haz-mat sites. How about what the proposed alignment (both horizontal and verticel) creates as far as Haz-mat circumstances and situations? Why hasn't that been considered?

f. Visual Resources

24 As mentioned above, the current vertical alignment places the Loop 202 at 22 feet above grade near the terminus of Pecos Road. With another 20 feet of sound barrier on top of that, the remaining front line of homes will be greeted by the view of Hoover Dam to the south. The barrier will be nearly twice as high as the adjacent roof gables. While some folks are worried about their sacred views of mountains not on their lands, taxpayers near the right of way will be greeted by an atrocious industrial strength view. What's the value of that? And why is there no mention of this specter in the DEIS?

g. Light Pollution

The DEIS avoids altogether any discussion of light pollution. Though discussed at various public meetings, ADOT summarily responds with generalizations about mitigation measures. Light pollution is, however, a complex issue poorly understood by administrative agencies such as ADOT. Light pollution is a matter of water vapor, particulate air pollution, and the location and direction of light sources.

Merely lowering light standards is laughable. Even thirty foot standards would emit light 52 feet above grade near Parcel D of the Mountain Preserve. Furthermore, vehicle lights traveling in both directions approaching Parcel D of the Mountain Preserve will illuminate the area from higher elevations based on the proposed vertical alignment. Vehicles also emit the very particulates and water vapor notorious for scattering and reflecting light. Particulate emissions from Mexican trucks (CANMEX) will be even higher than domestic commercial diesel trucks.

25 6 26 Even more important, what will stop the business interests on the adjacent tribal lands from erecting illuminated billboards and jumbotrons? One need only look at the Santa Freeway between I-10 and the Loop 202. Does ADOT think a contract with the Indian Nation not to build such will be upheld in federal court? Recent decisions indicate they won't. And the Indian Nation only cares about revenue, nothing else.

3 I purchased a home in Parcel D of the Mountain Preserve because I can see the Milky Way on many evenings. That is not possible even the Lakewood area of Ahwatukee Foothills. How much is that worth and who gets to decide that?

h. Air Pollution

27 As noted above, air pollution is a function of the level of traffic, the type of traffic, even the time of such traffic and the direction of the prevailing winds. There is absolutely no mention of what the pollution levels will be during cool evenings when the truckers dominate and the air is heavy, moving only slowly in the direction of the prevailing winds

Code	Issue	Response
20	**Drainage**	Flood protection levels are dictated by the design class of the highway. In the case of the proposed South Mountain Freeway, it is designated as a Class I. Therefore, flood protection levels would be designed to the 50-year (storm) level. However, as a standard Arizona Department of Transportation practice, the floodwaters developing upstream of the culvert entrance would be reviewed at the 100-year level to ensure "headwaters" do not adversely affect existing properties. (See Draft Environmental Impact Statement page 4-102.) All bridges on major waterways such as the Salt River are designed to maintain minimum water surface elevations at the 100-year level for flood levels and built to structurally withstand the superflood, a flood expected only once in 500 years.
21	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
22	**Biology, Plants, and Wildlife**	
23	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
24	**Visual Resources**	For most of the alignments of each of the action alternatives, the proposed freeway would be elevated above the natural grade of the surrounding land. This elevated profile would allow noise to carry farther, creating noise impacts at greater distances from the freeway. Depressing the profile of the freeway below grade might reduce traffic noise levels adjacent to depressed sections. However, it would be necessary to also construct at-grade noise barriers to achieve noise reduction goals at receiver locations adjacent to depressed freeway sections (see page 4-91 in the Final Environmental Impact Statement). This strategy would reduce visual impacts associated with high noise barriers on elevated freeways, but would entail ground-level noise barriers and their associated interference with views. Thus, with either approach to noise reduction, views of nearby mountains could be disrupted. The specific impacts would depend on sightlines that would be determined by the height of any noise barriers constructed, the intervening topography, and the distance of the barriers from the residences in question.
25	**Visual Resources**	Light from the freeway would be produced from vehicle headlights and taillights and from fixed light poles at interchanges along the freeway. Nighttime users of the park and residents of Ahwatukee Foothills Village may see lines of seemingly crawling vehicles, each with lights front and back. Fixed freeway lighting would be provided for safety reasons only at interchange exit and entrance points. Freeway lighting at these locations would be designed to reduce illumination spillover onto sensitive light receptors such as residential areas (see page 3-58 of the Final Environmental Impact Statement).

(Responses continue on next page)

Code	Comment Document
28	in parallel with the proposed Pecos Road alignment. Why is this worst case evening scenario not even addressed in the DEIS? i. Temporary Construction Impacts and other Issues Finally, the DEIS statement only obliquely addresses temporary construction impacts. Where is the estimated commute time to get from South Mountain Preserve to the San Tan Freeway? There is no mention of the air quality and local health impact of soil stabilization techniques (lime and potassium chloride), diesel fumes, blasting noise from the mountain gorge, and temporary water drainage measures. Why? How much is living next to a construction site worth? Why does the DEIS summarily avoid the cost impact of implementing all of the mitigation measures on the over cast of the freeway? Could it be because the freeway would never be built if these cost estimated were actually included? Confidentiality and Nondisclosure Notice: This email transmission and any attachments are intended for use by the person(s)/entity(ies) named above and may contain confidential/privileged information. Any unauthorized use, disclosure or distribution is strictly prohibited. If you are not the intended recipient, please contact the sender by email, and delete or destroy all copies plus attachments.

Code	Issue	Response
26	**Visual Resources**	The State of Arizona (through the Arizona Department of Transportation) administers an Outdoor Advertising Program as mandated by the Federal Highway Beautification Act. Arizona's program provides regulations for the permitting, placement, and maintenance of outdoor advertising signs along Interstate highways as well as State highways within Arizona. The State statutes (Arizona Revised Statutes §§ 28-7901 through 28-7915) and the State rules (R17-3-701 and R17-3-701.01) provide that the Arizona Department of Transportation must regulate any sign that is within view of, directed at, and intended to be read from the main traveled way of a controlled highway. (A controlled highway is any highway that is part of the National Highway System along with specific State routes. The South Mountain Freeway would be both a State route and part of the National Highway System.) While the Arizona Court of Appeals did decide in November 2011 that electronic billboards violate the 1970 Arizona Highway Beautification Act, a new law was passed by the State Legislature that banned such billboards in much of the state but allowed them in most of Maricopa County and parts of Pinal, Yuma, and La Paz counties. Weeks later, the Phoenix City Council created a zoning ordinance to regulate such billboards on city streets and highways. Chapter 7, Section 705, of the Zoning Ordinance of the City of Phoenix does not permit billboards to occupy public property or to extend across a property line where such property line borders a public highway. Electronic messages are permitted only on land zoned as commercial or industrial or zoned as a nonresidential use in Residential Districts. Under current zoning, this eliminates most, if not all, of the land along the E1 Alternative. Such signs might be permissible along portions of the W59 Alternative. Such signs may not be illuminated between 11 p.m. and sunrise "when (1) located within one hundred fifty (150) feet of Single Family Residential zoned property and (2) visible from such development or property." Erection and operation of any billboards on Gila River Indian Community land would be subject to regulation by the Gila River Indian Community.
27	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.

(Responses continue on next page)

Code	Issue	Response
28	**Construction**	Temporary construction impacts are described in the Draft Environmental Impact Statement beginning on page 4-161. The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours might be needed during construction. In general, travel times along Pecos Road would remain unchanged during construction. Individual mitigation measures for environmental elements such as blasting and water quality can be found in the respective sections of the Draft Environmental Impact Statement (for example, mitigation related to blasting is in the section *Topography, Geology, and Soils*, beginning on page 4-113.) The mitigation measures proposed in the Draft Environmental Impact Statement are included in the total cost of the proposed freeway, as provided on page 3-59 of the Draft Environmental Impact Statement.

Subject: NO BUILD!!!! LOOP 202

Dear AZDOT,

We are writing in regards to the issue of 202 extension from Ahwatukee to Laveen. Let us begin by saying that we do not support this freeway. NO BUILD of the 202.

Here are many of the reasons we disapprove of the 202 extension on Ahwatukee land.

1

1. COMMUNICATION - We are a resident of Ahwatukee since 1999. We can honestly say that it wasn't until about 5 years ago when we first heard of this 202 freeway. We are disappointed in the lack of communication to home buyers, home builders. How many years did you keep quiet with NO mention of this within the news or information given to the residents to follow up on this issue? That is completely unacceptable as a resident of Maricopa and Arizona.

2

3

4

2. DRAGGING FEET – We are also disappointed in the long time extension of this project. ADOT presented this, and it was voted yes back in 1988. We are now 2013. This is a completely unacceptable time line to get a project completed. 1988 to present time has had Ahwatukee grow in people, homes, schools, and businesses. It is a completely different life here now. It is completely different demographics, people, life. This vote should be completely NULL and VOID. We suggest you vote again and see if it would pass with todays people living here. Relying on this 1988 vote today is like taking a vote of people in say NYC to approve a freeway here in PHX. It is ridiculous and absurd.

Code	Issue	Response
1	**Public Involvement**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
2	**Purpose and Need**	The Southwest Loop Highway—the South Mountain Freeway predecessor—was integral to the Regional Freeway and Highway System approved by Maricopa County voters in 1985. Although other facilities were considered a higher priority early in development of the Regional Freeway and Highway System, the South Mountain Freeway has been included in every subsequent update. The same route was approved by the State Transportation Board in 1988. In 2004, Maricopa County voters approved Proposition 400, which was designed to fund completion of the remaining segments of the Regional Freeway and Highway System, including the proposed South Mountain Freeway (Final Environmental Impact Statement page 1-21).
3	**Purpose and Need**	It is not within a City's or State's right to deny building permits to developers who meet all requirements and want to develop their land. In 1996, the Maricopa Association of Governments Regional Council approved the Red Letter Process to provide early notification of potential development (including plans, zoning, and permits) in planned freeway alignments. In addition, the Arizona Department of Transportation works closely with Cities and Counties during the environmental impact statement process to encourage developers to reserve land for future transportation improvements. In some cases, when the developer is willing, the Arizona Department of Transportation has been able to purchase a portion of the land through advanced acquisition (see Final Environmental Impact Statement pages 3-53, 4-13, and 4-48).
4	**Public Involvement**	No public vote was held as part of the Draft Environmental Impact Statement review process. Members of the public were encouraged to participate and submit their comments on the Draft Environmental Impact Statement during the 90-day comment period.

Code	Comment Document
5	3. AIR – We live one mile from Pecos/202. I have a daughter that have cardio-thoracic disease. She had open heart surgery when she was 9 days old. She continues to deal with heart and lung issues. If you build, we would bet that it would take years for you to start and complete this project. Your history supports this. So, for an unnumbered of years, during the destruction and then construction, the land will be turned over and disrupted.
6	We would place a bet on the increase number of lung related problems in the residents, including and not limited to asthma and valley fever. Especially with those that have underlying conditions and this could result in hospitalization, and possibly death, especially
7	for residents like our 12 year old daughter! Can you imagine the law suits and class action suits you will possibly incur from residents? We are not ones to sue, but we are only speculating from a realist point of view. The air quality I am referring to is only from the construction process, not from the traffic of living by a freeway. That is a whole other topic....
8	4. AIR – TRAFFIC. There will be an increase in pollution and various other road mishaps that will lead to terrible air quality in Ahwatukee. And with many schools within less than a mile from the highway, you are affecting children and their long term health! Your studies are actually unsupported and cannot be relayed into this project.
9	5. CRIME – We cannot begin to tell you the fear of increased crime for me, my family and friends here in Ahwatukee with a major freeway so close to our homes. We KNOW that more crime happens within freeways because of the access to it for getaways, and bringing more people to the area. It scares me. We also wonder how many illegals will be using this road to get from Mexico to other areas in Arizona and beyond. We are not speculating, you know this is a very valid concern.
10	6. SOUTH MOUNTAIN – Please save South Mountain Preserve. It should not even be considered to change the landscape of a state park and sacred land. A freeway is not worth the destruction of our landscape.
	These are just a few issues that come to mind right now. I know there are many other reasons too, stemming from our quality of life and values of homes both decreasing.
	Here is what we want ADOT to do:
4	1. Re vote! We demand a re-vote by the people in Laveen and Ahwatukee directly affected by this freeway. We think a vote today is the only valid decision. The previous vote of this build should be VOID. That is too many years to sit on it, and now think you can act on it. Things have changed. It is not apples to apples. You must cut your losses and move on with new ideas.
11	2. If the road must happen, Other Routes ONLY be on the list. Ahwatukee destruction of

Code	Issue	Response
5	**Construction**	The Arizona Department of Transportation is evaluating construction delivery methods for the proposed freeway. One concept is to deliver it as a single design-build project. This method would expedite the construction duration for the entire project to around 3 to 3.5 years. Another concept would be to deliver the project in a more traditional method breaking the 22-mile corridor into nine segments (each 1 to 3 miles long) and constructing them in phases. Each segment would be under construction for 1 to 3 years and the total construction duration for the entire corridor would be 5 to 6 years. A discussion of construction implementation is provided beginning on page 3-59 of the Final Environmental Impact Statement. Any particular area of the Preferred Alternative would not be expected to see construction activities beyond an approximate 2-year period. Potential construction-related air quality impacts and mitigation are described in the Final Environmental Impact Statement, beginning on page 4-164.
6	**Construction**	Detecting the fungus responsible for valley fever in soils is not practical at this time. However, to reduce the amount of construction dust generated that could carry the fungus, particulate control measures related to construction activities would be followed. The following mitigation measures would be followed, when applicable, in accordance with the most recently accepted version of the Arizona Department of Transportation *Standard Specifications for Road and Bridge Construction* (2008). Prior to construction and in accordance with Maricopa County Rule 310, Fugitive Dust Ordinance, the contractor shall obtain an approved dust permit from the Maricopa County Air Quality Department for all phases of the proposed action. The permit describes measures to be taken to control and regulate air pollutant emissions during construction (see page 4-173 of the Final Environmental Impact Statement).
7	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Air Quality**	
9	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
10	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
11	**Alternatives, E1 Alternative**	

Code	Comment Document
3 12	homes, a church, etc. should be eliminated from the discussion! We demand that ADOT work harder and we demand you all come to agreement with Gila River for a route through the land just south of us. We are sure there is an agreement that can be made. We think negotiations should continue. Perhaps you need to get some fresh people to the negotiation tables...with fresh perspectives, ideas, and faces. We are surprised it has come to this in this point of time. You must believe there are better ways, please take the time to FIND them and act on them. This is not for the good of the majority affected by this freeway. You must step back and move in a different direction. Re-vote and re-negotiations with Gila River! Thank you for your time. Sincerely, Scott and Tammy Hansen tammyhansen@cox.net Residents of Ahwatukee, 28th and Chandler Blvd. area., since 1999.

South Mountain
Freeway Study

2013

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1 2 3 4

(1) I live approx 1.5 miles north of proposed alignment (Pecos Rd). Freeway will degrade air quality, increase noise level, and increase traffic in an approx 1 mile wide corridor north of Pecos. Will see increase in crime.

5

(2) Recommend finalizing of EIS be delayed for 5 yrs to allow GRIC more opportunity to consider the freeway. Economics will move GRIC to develop commercial along south border of City of Phoenix, hence opportunity for freeway.

6

(3) The EIS needs to look @ an alignment south of GRIC

Optional

1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Noise**	
3	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
4	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
5	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.

From: Sierra Club on behalf of David Harbster
To: Projects
Subject: Requesting a delay for further study and input of the S.Mtn. Freeway proposal
Date: Wednesday, July 24, 2013 7:18:42 PM

Jul 24, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) (3) I am deeply concerned the proposed South Mountain Freeway will contribute to the serious problems we are having with our air quality and further exacerbate the ever-increasing nighttime temperatures we are enduring. Just recently, in our neighborhood, an all-time temperature reached 97.8 degrees F at 9:37 pm.

Further, the current Urban Heat Island Effect we have will likely increase its perimeter due to the effects of usage of the proposed freeway, and the likely making of large-surface-area parking lots. It is a given, commerce will follow the highway. No doubt, a freeway and more parking lots and buildings would increase ambient air temperatures. How could it not?

(4) Another concern we may be creating problems from the freeway we don't have the means to correct over time as matters mentioned above could, and likely will, become worse. Having seen the innumerable environmental problems that have significantly impacted the health of the public since freeways came to our region, such problems will increase geometrically with even more freeway surface and the externalities that result from it.

(5) (6) South Mountain Park is already an recreational desert ecosytem that has been negatively impacted by overuse. I laud the park rangers for their efforts and the quality of the desert park has declined. As a user of the park for many, many years--arriving in Phoenix in 1948 as a baby--I have seen much erosion of the trails and the despoiling of plants and the harming and killing of native wildlife. Now possibly adding a major freeway nearby, further disrupting the park with pollutants that afternoon winds will bring to the surrounding communities. Moreover, it is ineviable there will be even more light pollution, noise, and increase its nighttime temperatures.

(7) (8) (3) My hope is this proposal will be delayed to further study the likely problems we may not be able to correct in the future. Moreover, I am requesting more public input for alternative means to resolve what could be a major crisis from the synergy of current environmental problems with new ones we can't even imagine at this point.

(2) (4) At some point what are the limits of such freeway use and its effects? What can we look forward to in a positive way what the proposed freeway will provide. Will the air be cleaner to breathe? Will our health

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Heat Island**	As buildings, parking lots, roads, and other infrastructure replace open land and vegetation, an urban heat island may result. The heat island effect is of a regional nature and, therefore, there is no requirement to analyze potential impacts and no possibility of determining the localized contribution at the project level to the regional heat island effect. It is likely, however, that a proposed project such as the South Mountain Freeway would be a minor contributor to the overall issue.
4	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Section 4(f) and Section 6(f)**	
6	**Biology, Plants, and Wildlife**	
7	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
8	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

To: Projects
Subject: South Mountain 202 Loop

I am writing to articulate my concerns about the South Mountain 202 Loop project. I am sensitive to the fact that decisions of this size and nature must consider myriad constituents. However, I do not think nearly enough has been done to detail the attempts, if they exist, to minimize the effect of the freeway on the affected community.

As a community member, I am concerned with the increased air pollution, noise pollution, visual pollution, and traffic that this will represent. While there is some mention of air pollution in the draft EIS, there is little to no mention of the other items. Some of my questions:

- Are there plans in place to mitigate the noise and visual pollution? (1, 2, 3, 4)
- Where is traffic to Foothills Reserve going to be routed? (2)
- How is traffic going to be routed during construction? (5, 6)

I could actually see myself (and many of my neighbors) supporting the project if we had easy access and acceptable answers to these questions. We have not seen any of this to date. In a situation like this, the details matter, significantly. Without them, I simply cannot support the project.

Finally, I do have some concern about the effect on South Mountain Park. My understanding is that the far west area of the park will be "shaved" to make this project happen. This as well seems fairly short-sighted and not well planned out or communicated. I was surprised when moving to Phoenix how conscious people seemed to be of open space and preservation of it. These seems like a step in the wrong direction. (7)

In short, until these questions are satisfactorily answered, I will be opposing the project and will be doing whatever I can to limit its progress.

Clint Harder

Code	Issue	Response
1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Noise**	
3	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
4	**Traffic**	In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).
5	**Visual Resources**	Final Environmental Impact Statement page 4-161 of the mitigation section for visual impacts lists four measures that could be taken to mitigate the visual impacts of overpasses: · placing landscape treatment on the periphery of right-of-way areas at overpass locations as well as at other areas adjacent to residential development · using earth colors for overpasses, retaining and screen walls, and noise barriers · using bridges and overpass structural systems that help unify a visually complex landscape · minimizing structural sizes and/or recessing the face of structural members from the edge of the roadway to reduce real or apparent breadth of structures Additionally, Final Environmental Impact Statement page 4-162 has nearly a full page discussing how structures are aesthetically treated and how the public could be directly involved in developing aesthetic treatments.
6	**Traffic**	The extension of Chandler Boulevard west of 19th Avenue is included in this project because reasonable access must be maintained to the neighborhoods at the west end of Pecos Road (see Figure 3-33 on page 3-57 in the Final Environmental Impact Statement). Early in the study process, a travel interchange at approximately 27th Avenue was evaluated but ultimately eliminated because of increased residential displacements and cost. The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours may be needed during construction. (See Final Environmental Impact Statement page 3-27.)

speed rail to --

THE FACILITATOR: Thank you, Ms. Barker, I'm sorry, your three minutes have run.

MS. BARKER: -- killing the citizens, just to satisfy old ADOT.

THE FACILITATOR: I'd like to welcome our next speaker, Travis Hardin.

Welcome, Mr. Hardin, you have three minutes.

MR. HARDIN: Thank you. To the committee that sits here today, I'm definitely in favor of this Loop 202 transition. I believe this is going to do two major things: One thing that's focused on is the congestion coming from the Southwest Valley, as well as the West Valley. I think you free up a lot of travel time, travel space for those community members that are in the Laveen area, Tolleson, Avondale. I think you're going to clear up with this project, with the proposed being a yes, I think you're going to clear up more room for retail. I think this brings a lot of retail opportunity for the Southwest Valley, and then you also -- you open up areas for the East Valley to meet with the West Valley. I'm not a native of Arizona, but you often hear about people in the West Valley saying they don't know much

1

about the East Valley, and people in the East Valley saying they don't know much about the West Valley. And I think what you're doing is bringing one community together from east to west and allowing those people to come together as one, which is what Arizona is all about. In order to be one Arizona, we have to connect east to west and stop living as if we're East Coast to West Coast in our own community here in Arizona.

I'm in favor of this project. It will lessen the congestion in the West Valley, and also will speed up some of the downtown traffic into downtown Phoenix and away from downtown Phoenix, during the rush hours, in the a.m. and the p.m. hours. Thank you.

THE FACILITATOR: Thank you, Mr. Hardin.

Good afternoon, everyone, we have seated a new panel for the 4:00 p.m. to 6:00 p.m. slot, Matthew Burdick from ADOT, Al Hansen from the Federal Highway Administration, and Steve Beasley from ADOT.

Those of you in the room, if you are planning to speak, please make sure that you register at the registration desk just right outside the door. Your name will appear on the screen and we will call you at that point. Also be advised to treat all the

Subject: Comments in opposition to South Mountain Freeway
Date: Tuesday, May 28, 2013 2:45:03 AM

May 28, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) (3) The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(4) (5) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(6) (7) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(8) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center. How is it that we have roads and bridges in poor repair and yet you can come up with the money to build this monstrosity?

(1) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Ms. Audra Harding
6825 W Drexel Rd
Tucson, AZ 85757-9561

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Issue	Response
8	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

Jun 18, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

2 Objection to the South Mountain Cut
I am against the proposed building of the extension that would cut through or near to some of the most beautiful and natural habitat of The Valley of the Sun. People still use that area as a backdrop for Commercial Photography because of its uniqueness. A highway through it would be like a wart on the nose of a beautiful model.
I attended the meeting in downtown Phoenix at the Convention Center. While there one of the transportation staff members who said that within 10 years the dollars spent on Highways (70%) and Public Transportation (30%) would reverse from their current expenditure. This means that in a relatively few years there will be a major shift away from highways. In the interim period the expectation is to spend billions of dollars for highway miles that will be obsolescent when completed. It would be a far better investment to put those dollars into that which will be worth more in the future. I would do that and so would anyone who hopes to profit from their effort.
An investor would be far better off investing in something that promises to have a higher yield at the end. That is what I expect when my money is invested and this project is proposing to spend gobs of my money on something that you and I both understand to be an unsound investment. You know the tide is turning and yet the ship keeps going on. Wouldn't it make more financial sense to invest in the future instead of the past?

3 An investment in Public Transportation would yield more than the same investment in highways. To take an example, look at our light rail system in Phoenix. The ridership is twice that of what had been projected and it has since the beginning. Why is that? It is because the people of the city innately understand it to be a better method of transportation than the local government thought it was. People vote with their dollars and actions. Sure there were the chiding resisters of change, but they are silent now about light rail. The actions or votes of the Native Americans on the reservation spoke loudly that they do not want this thing on their land. Why would they want it even near their land if they already voted not to have it on their land? They wouldn't. The ship of bureaucracy turns very slowly and often runs aground.
There are 11 cities in the United States that have subway systems, one has three systems and another has two. Cities much smaller than Phoenix have Subways. Most are on the East Coast. Two are in the Mid West and two on the West Coast. They all started with light rail systems, but, because of infill they could no longer afford to take

3	**Purpose and Need, Lack of Support**	

Code	Comment Document

land from people so they had to go underground or above ground. Seven, or half of all the American Subways, were finished after 1955, which is to say they are recent additions. Three were built before 1900 and not much before either. A subway system in Phoenix could use old railroad land as well as anywhere underground. In the Boston System (MBTA) you can take the subway from Providence, Rhode Island to Portsmouth, New Hampshire. Outside of the city it is surface running. Imagine that you could take a subway train from Sun City to Tucson. It would be much safer than driving the same way on I-10. Speeds could be very high, 150MPH or more. It could be like the Bullet Train in Japan (200+MPH). It would be way cheaper to build than continually widening the highways with the potential of massive highway deaths at the speeds people drive, to Tucson especially.

4
5

The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including Public Transportation. The only way to effectively reduce highway congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them which another highway would do. How does Japan have half the population of the Unite States in the space of Illinois and still get them to work and home without highways? They do it by rail.

6
7

South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

8
9

The freeway would also negatively affect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

10

The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers at a time when we should be conserving fuel and making smarter and more efficient choices. Its construction would continue ADOT's trend of unwittingly forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from their jobs. When I came to Phoenix 15 years ago I had a job. So the logical thing to do was to live close to where the work was to minimize cost. For those 15 years I have been able to walk or ride a bicycle to work. The amount of saving for us has been so much annually that we could afford trips to Europe and other places every year and stay for three weeks. My job is not senior executive or even junior executive, but the value in savings and exercise allows me to be healthier, thinner, wealthier and more traveled than my contemporaries. At a time when the dollar's value is falling, gas prices are soaring and incomes are tightening our purpose should be to make wise choices for those who depend on us as civil servants to make their transition to the future easier as well as fiscally and physically more healthful.

Code	Issue	Response
4	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.

a resident of Laveen. I'm very much in favor of the freeway. We moved out there nine years ago and waiting for the freeway to be built, and we moved out there hoping to raise our family out there with a lot of other amenities and the freeway has been holding this up. So we know that with the building of the freeway, there will be many amenities for us and the family and the whole community to use.

We live about a half mile from there, from the freeway, and it would be great access for us. And what else was I going to say? Oh, we're in favor of the 59 west alignment, but we also would be in favor of a -- potentially a parkway tying in the 101. What else? Anything else? I think that's it.

MR. HARDING: I'm Henry Harding and I live at 304 West Coolidge Street here in Phoenix, 85013. I'm not really in favor of this section of the 202. It's just -- if we promulgate more and more highways -- now, I talked to Ben over there. He said that we would save 40 million gallons or -- yeah, I think 40 million gallons of oil every year or gasoline every year.

What if we didn't do that and people start -- took the amount of money that would take to build this section of road and educated the people

Code	Issue	Response

that if they didn't drive, if they do what I do, live, walk to work, ride their bicycle to work, they would save so much more time and money. The example I always use is I can either commute to work or I can take a trip to Europe every year. And it would be -- well, if I -- if I took an airplane there, I probably would be using about the same amount of gas either way. But I'll tell you what, going to Europe is a lot more fun.

And it's not nearly as healthy to drive. I rode my bicycle here today, as you see. And so to get around, you go shopping, that's what I do. I use my bicycle for most of it. I go grocery shopping. I pick up a good-size grocery sack and I can put one in my backpack and I can carry that.

Also, that highway goes through a very lovely valley. For many years that -- the San Juan Valley in South Mountain Park, that area, the west end of it was used as an area for photographers to do whatever kind of photography, automobile, motorcycles, models, any kind of photography. It's a lovely place to photograph. And I've hiked in that region a lot. I hate to see another highway, another stinking highway in a place that really is lovely.

Watching the sunrise come up during

Code	Comment Document

winter go right up the Gila Valley or down the Gila Valley in my case. It's absolutely gorgeous. I don't like listening to the cars that are there now. Having eight lanes of cars, that's just heinous.

Yeah, I -- I'm a member of the Sierra Club also, but then again, I'm also a member of the National Rifle Association. I am a conservative, but I -- because of my personal history, I've been educated in such a way to look at things a much more global feel. And so when I look at the expansion of ridership on highways, I realize that what we're doing is we're taking it away from someplace else that we could be doing that could probably be a lot more effective. Rapid transit, trains. I look at other cities.

I'm originally from one of the large eastern cities and there they have rapid transit that is just spectacular. I'm originally from Boston. And I know a friend of mine, she takes the train to go to work in Boston and it's very easy. She gets on the train. She can work on the train while she's commuting there and get a little bit of work done while she's going to and from. And then when she gets there, she's at work so she doesn't devote a great deal of her personal time to getting from one

place to another. If you're driving a car, you better be watching the road.

And so, Lord knows we have an awful lot of diversions while we're driving now, cell phones and texting and digital billboards to interfere with it. Are we going to have to live with that too out there? I don't want to see that out there. I'm not really against the highways that exist, but I think that putting the money that we would put into that into educating the people, that they could do a better thing with their lives than sitting behind the wheel of a car. Just a silly thing. I just -- I don't see that. I couldn't see that for myself, and fortunately I don't have to because when I first came here, I knew where I was going to work and I said I'm going to be living right there too. I told the Realtor that I'm going to be within four miles of my work, and that's the way it's been ever since I've been here for 15 years.

When I was in California, I was stationed at Travis Air Force Base and I used to commute by bicycle there eight and a half miles. It was a lovely ride because it was out across the fields and you see the cows and you see the hills and all that going to work. It was wonderful.

Code	Issue	Response

If we did that sort of thing, we would be able to cut down the amount of cardiovascular disease that we have, we would reduce Alzheimer's. All these terrible diseases. We would do away with all of that. We could eliminate a lot of these diseases, or decrease them certainly. Guess I can't think of anything else.

MS. KEENAN: Erika Keenan, E-r-i-k-a K-e-e-n-a-n, Laveen, Arizona. I took time off from work today to come down to speak, and I said my three minutes, and I was cut off at my three-minute mark. I understand why rules are in place, but the panel had been sitting there for at least 20 minutes with no one to speak, and I was the only one next in line to speak, so I'm not sure why they couldn't have given me the courtesy of letting me finish what I had to say, especially since we're taking our personal time to come down and say this and there was nobody else around. Thank you.

UNIDENTIFIED SPEAKER: We live on Pecos Road on the street right there, and it's right next to, you know, where the highway would be or -- and on the other side of that would be the Indian reservation where they're struggling to come to a decision. And I've lived there for about nine years,

Subject: Comments in opposition to South Mountain Freeway
Date: Wednesday, July 24, 2013 6:39:37 PM

Jul 24, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) In talking with one of the transportation personnel at the meeting downtown he said that in the next ten years the expenses of transportation are greatly going to change from 70% to roads and 30% for mass transit to 30% for roads and 70% for Mass Transit. If this is the case we would be throwing my money into something that is going to be obsolete before it is finished. It would be far wiser to put that money now into mass transit.
I come from one of those big back eastern cities Boston. Look at the problems they are still having with gridlock after spending billions of taxpayers dollars to undo what the great minds of the 60's thought was going to be a the wave of the future having a big highway run through the middle of the most congested part of the city. All the while the rapid transit was getting the job done of moving hundreds of thousands to millions of people every day to and from work and home. Their mass transit is just one example of how necessary mass transit is to any city with a mind to grow and become a major player in the world market of cities. Phoenix is bigger than Boston. Every major city in the world has a mass transit system. Look at Europe as another example, Japan, Russia. In Japan you cannot drive effectively anywhere. They have cars, but if you want to go somewhere you take the train or you fly. Often you have to take a ferry because of the landscape.
(3) The proposed freeway solves little and damages a lot. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer. ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

(4) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(5) (6) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be

(7) (8)

Code	Issue	Response
1	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
4	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
5	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Health Effects**	
7	**Section 4(f) and Section 6(f)**	
8	**Biology, Plants, and Wildlife**	

Code	Comment Document

destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

9 The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

1 Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Mr. Henry Harding
304 W Coolidge St
Phoenix, AZ 85013-2713
(602) 279-6250

Code	Issue	Response
9	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

I live on Dusty lane is this still in the proposed path? will Dusty lane still be effected no matter what? When will you be considering buying out? We are in favor of the proposed freeway.
Thank you
Pamela Hare

1

I am a bike rider and live in Ahwatukee because of the isolation from the extreme traffic of Phoenix. We do not need this freeway. I commute (car) everyday to downtown Phoenix and I don't see a problem. Freway traffic is fine except for the number of trucks that have been causing many accidents of late. The extension will become a eye sore for our community as it will become a truck bypass contributing to more traffic and noise. I don't think that was the original intent of the Freeway. It needs to be built somewhere else if it is to be a truck bypass. Maybe through south side of Estrellas or something similar.

1	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
3	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Noise**	
5	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.

Code	Comment Document
1	Angela Harris Document Created: 7/5/2013 5:41:53 PM by Web Comment Form Clearly this proposed South Mountain Loop severely impacts a sovereign group of people who depend on this Muhadag Do'ag or Southern Mountain Range for their very survival. Without this sacred place intact, they lose their cultural identity and very existence. This proposed plan would therefore be a pre-empted attempt at ethnic cleansing. White people in America have already done so much to cripple and kill Native people who inhabited this land before we occupied it. How can you argue that this proposed project would not impact cultural resources in a total and unacceptable way? These are people's LIVELIHOODS on the line. They have had to endure enough already. The impacts are unacceptable because they would cause cultural obliteration.

Subject: Loop 202 South Mountain Freeway Study

LOOP 202 SOUTH MOUNTAIN FREEWAY STUDY

Reasons for a "***NO BUILD OPTION"*** of the Loop 202 South Mountain Freeway are as follows:

1
2

- The highway will become the CANAMEX Highway from Mexico to Canada which will allow the transport of hazmat materials through our community. Chemicals such as sulfuric acid, gasoline, and especially chlorine gas would be disastrous. Evacuation would be extremely difficult and would have a health and death impact. In order to mitigate this catastrophe shelters would have to be built in the community. An accident on the highway is all that is needed for the release of these toxic chemicals. Let alone that the tax payers would be responsible for the cleanup.

3 4

- The highway is all about moving trucks through the valley from Mexico. They use high sulfur diesel fuel which is not allowed to be sold in this country.

5 6

- The highway will create dangerous air pollution due to transportation exhaust which is known to cause cancer. The Ahwatukee Foothills is at present one of the least polluted communities in the valley.

7

- ADOT spent $43,000,000 buying property along only one route (59th Ave.) since 1988, and not any other route. This shows bias toward their opinion of the proposed route. The study and legal process should have been concluded before the purchase of property. They violated this legal obligation.

8

- Use of 2005 data in the study is not valid any longer. They did not use the most current, updated and scientific data that is required by law. What about

Code	Issue	Response
1	**Purpose and Need**	The proposed freeway would not be part of the CANAMEX Corridor. The locally-preferred CANAMEX Corridor is to follow Interstate 10 from Tucson to Interstate 8 near Casa Grande, Interstate 10 west to State Route 85 near Gila Bend, State Route 85 north to Interstate 10 northwest of Buckeye, Interstate 10 west to Wickenburg Road, Wickenburg Road to Vulture Mine Road west of Wickenburg, and then connect with the planned US 93/US 60 Wickenburg Bypass. Additionally, the proposed freeway would not offer shorter travel times. The CANAMEX Corridor's proposed routing avoids any congestion associated with the Phoenix metropolitan area (see Final Environmental Impact Statement page 3-64). Recent studies completed by the Maricopa Association of Governments, including the Interstate 10/Hassayampa Valley Roadway Framework Study and the Interstates 8 and 10/Hidden Valley Transportation Framework Study, have further defined the long-range planning for the CANAMEX Corridor in Arizona.
2	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Purpose and Need, Truck Bypass**	
4	**Trucks**	
5	**Air Quality**	
6	**Health Effects**	
7	**Alternatives**	Federal Highway Administration regulations do not allow the ownership of right-of-way to be a factor in the decision regarding the selection of an alternative.
8	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

omission of fact.

- "Due Process" was not afforded to the community by way of asking questions and getting answers. The technical substantiated information of the Environmental Impact Study was not provided at the libraries as promised.
- Property devaluation is expected to be about 30%. This is an upscale community and the devaluation in property would significantly affect the state real estate revenues. The character of the neighborhood would change.
- It would disrupt schools, churches, personal property and the lifestyle of the Foothills residents. Some schools and churches that the community attend are now in jeopardy of being destroyed. The children who attend the remaining schools, churches and the YMCA would suffer an environmental impact because of the close proximity to the highway.
- The constant noise of the traffic would go against the reason citizens purchased property in the Foothills in the first place.
- Crime is a real concern for those living here in this peaceful, quiet community and the appeal would be destroyed. More police presence would be required putting a burden on the state

Jeanne Hart

Confidentiality and Nondisclosure Notice: This email transmission and any attachments are intended for use by the person(s)/entity(ies) named above and may contain confidential/privileged information. Code	Issue	Response
9	**Public Involvement**	During the day-long public hearing and public forums, participants had the opportunity to watch a video describing the study, review study information, talk to project team members, and provide comments. Project team members were stationed throughout the meeting rooms to answer questions and offer assistance. The Draft Environmental Impact Statement was available at libraries throughout the Study Area. The technical reports were available upon request from the Arizona Department of Transportation.
10	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
11	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
12	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
13	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
14	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. (Comments made by public members to the court reporter as follows:)

MR. HARTLEY: My name is Chad Hartley, Gilbert, Arizona. I travel the Santan on 202 daily towards 32nd Street and I-10.

I believe the Broadway Curve to be dangerous due to high congestion that it sees in the morning and the afternoon.

To alleviate that with the new 202 would be -- I support the construction to alleviate the congestion and the -- I believe it would help alleviate the -- I don't know how to say -- the dangerous Broadway Curve.

Thank you so much for your time.

LAWRENCE ALLEN: Lawrence Allen. Basically this South Mountain Freeway has been in place since early 1980s. You know, this map dates back to, what, 1986. So we might as well go back to 1980. So these are plans. So they had to, you know, think about this for a few years to actually put it on paper.

So this ain't something that cropped up yesterday, as the Ahwatukee residents are probably thinking. Now, it's unfortunate that the developers who built Ahwatukee where those residents live that

Code	Issue	Response

Code	Comment Document

McDowell, which in an emergency would be really far.

Let's see, we have heard that other people would move in like a movie theater and shops and restaurant owners, as well as the hospital if the 202 went in. The only way for our rooftops -- right now we're at 40 rooftops, we need 50 for those people to start coming in. If the 202 was built, Ahwatukee would then be counted as a rooftop because they're so close, they're within our mile range. That would make a huge difference to our area economically.

I'd also love to see if the 202 gets built, the sound barriers to be built nicely and maybe represent Laveen in some way. I'm an artist and I would love to even donate my time to create artwork that would go onto the sound barriers and to have possibly hiking trails or some kind of bike trails that follow the 202, because we have that South Mountain so beautiful right there and just to keep more trails and parks. Thank you for your time.

THE FACILITATOR: Thank you.

Chad Hartley.

MR. HARTLEY: First I want to say thank you for the opportunity to be able to voice opinions, we appreciate that.

Second, I'm a daily commuter of the Broadway

Code	Issue	Response

(Comment codes begin on next page)

Code	Comment Document

curve. At times it's -- well, every morning and every afternoon it's nearly a parking lot. I would very much appreciate -- well, I believe it's also a bit of a hazard, there's been several accidents on the 10 recently that have shut down the 10. Having other means to commute around that would definitely be beneficial.

And also, the economic impacts that come along with a new freeway, property values go up and the person before me just mentioned the social and economic impact for Laveen would be enormous, so I support the construction of the 202. Thank you again for your time.

THE FACILITATOR: Thank you.

Tiffany Sprague.

MS. SPRAGUE: It's so quiet in here, it's a little intimidating to walk up to.

Good afternoon, my name is Tiffany Sprague and I'm a resident of Phoenix, and I'm very strongly opposed to the South Mountain freeway. I urge ADOT to select the no-action to this project. ADOT must begin looking towards real solutions for our transportation needs and this freeway is not it. This is more than evident by our increasingly congested roads and freeways. Widening routes and building new ones only provide short-term relief. More vehicles will soon fill these uncongested areas.

I am against the extension of the 202 Freeway through South Mountain. As an Ahwatukee citizen, I love the view, and love hiking the mountain trails. This will end once a freeway is cut into it. I have friends who will be displaced and surely will not be able to find homes in the area once their land is taken. Also, all of the Kyrene schools on Liberty Lane will be right next to the freeway ramps. This cannot be safe for children or conducive to students' educations.

I also feel that instead of lessening traffic, it will promote more. Long distance trucks will have a new favorite route from Mexico/El Paso/wherever.. The cons far outweigh the pros in this case. Please don't let this project continue!

Code	Issue	Response
1	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
2	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Acquisitions and Relocations**	
4	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
5	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
6	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
8	**Trucks**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Subject: South mountain freeway 202
Date: Tuesday, July 23, 2013 9:50:49 PM

1 I'm concerned the DEIS of the South Mountain Freeway does not take into account the increased amount of truck traffic coming from Mexico and travelling through south mountain area. The current truck bypass of Phoenix (I-8 to state 85 to I-10) was built to carry this traffic and pollution away from Phoenix. If the 202 extension is built, it will be 50 miles shorter for trucks to use the new freeway, thus increasing truck traffic. The DEIS does not address this increased pollution caused by these trucks fueled with diesel that has no regulation requirements in Mexico. Also, hazardous material truck traffic using the nearly barren state 85 is preferable to it flowing along a densely populate area like Ahwatukee.

2 3

4 5 I'm also concerned about the path that it takes cutting through South Mountain, which has sacred status among the Native Americans living in the area. We really should avoid taking more of their sacred ground for our a bleak freeway.

6 I would ask why do we mostly build roads to solve our transportation issues? Wouldn't that money be better spent developing some sort of mass transit system along the freeways currently built? We already have air pollution issues, I would think we need to address that more than making it worse with more roads.

7 I oppose building the freeway because of the above items. I would hope the AZDOT reconsiders the plan and decides to not build the freeway.

4295

I even made a comment, over there with the reservation people, is that the reservation needs to continue their -- their -- their four-lane road that goes past their casino there, the Vee Quiva or whatever it is, and take it down to Pecos Road, for now, because this is going to take years and years to build, and make it a toll road. That way, you know, a person can pay $2 to shortcut, to get from 51st Avenue to Pecos and get into Tempe for $2, versus having to go all the way through their town, which is 35 miles an hour, go all the way down to the -- go all the way down to the road that goes to Maricopa, and then come back into town that way, which would save a lot of gas and time.

The reservation would make a lot of money and -- and drive right past their casino, for a refreshment break. I don't know.

It's -- it's -- I think there's a lot of money that needs to be spent on this, and it needs to be spent wisely, not -- not just -- The cheapest route is not the best route, you know?

And in fifty years from now, it -- it'll remain the same. Gas will be a lot more expensive, and we'll have the same problems. And people are not going to want to spend money and gas, sitting in a car waiting for traffic, because we did it wrong now. So that's all.

MR. HAYES: Robert Hayes. I have my little notes,

Driver and Nix Court Reporters - (602) 266-6525

Code	Issue	Response

(Comment codes begin on next page)

Code	Comment Document

but it's not very professional. So do you want me to just speak?

COURT REPORTER: Yeah, that would be fine.

MR. HAYES: Okay. So my concern is that the 202 highway construction plan will become a Camex truck lane freeway, with truck -- truck traffic from Mexico to Canada. And, even though they're supposed to be on Highway 8, they will certainly use this truck route. And the toxins from that truck traffic, on top of the good of a commuter highway, is going to create a more toxic environment than is addressed in the Environmental Impact Study. No counts of Mexico truck traffic is being considered here, but this will be the truck route.

This will negatively impact our families and our community, not only demolishing roads and highways that currently exist -- like Pecos, which is a commuter route for most of us -- it will destroy our homes and tear down homes and build walls and that kind of thing.

Increased noise; increased lights, 24/7; and, most importantly, increased toxins, specifically benzine. So benzine is already above the EPA level on the Indian community and in the foothills. But it's not studied because there's no EPA sensor there. So, when you look at this study, it doesn't address the levels of toxicity currently in Ahwatukee Foothills and in the Indian community because it's not required to be part of the study.

7 8 9 10 7 10 2

Dust particulate levels have gotten worse in the last year and a half. And certainly building a highway and having truck traffic and the construction phase will cause the dust particulates to be even worse and, kind of, get trapped by the mountains. That's a concern.

And all of this level of toxins and dust will flow into the backyard of these residents who live in Ahwatukee. We've got an elderly retiree population. We have children. And people are not really thinking through being within a half a mile or even 50 feet of a highway, how bad that's going to affect people's health.

And environmental studies that don't study a projection of these particulates -- benzine, dust, and asthma effects on children -- is flawed, period.

And then the counterargument is: Well, highways are built all across America. Don't worry. Be happy.

Talk to the medical professionals in Phoenix. Children have more and more asthma. And they're learning ability, the disability in learning, is being affected by the particulates that they're breathing in. So we're in a very toxic, toxic environment. And a highway is going to make this considerably worse.

Unregulated trucks from Mexico, that have no emission standards, is a huge concern for me. If we can ban the truck traffic from Mexico, so be it.

Code	Issue	Response
8	**Construction**	To reduce the amount of construction dust generated, particulate control measures related to construction activities must be followed. The following mitigation measures would be followed, when applicable, in accordance with the most recently accepted version of the Arizona Department of Transportation *Standard Specifications for Road and Bridge Construction* (2008). Prior to construction and in accordance with Maricopa County Rule 310, Fugitive Dust Ordinance, the contractor shall obtain an approved dust permit from Maricopa County Air Quality Department for all phases of the proposed action. The permit would describe measures to control and regulate air pollutant emissions during construction (see page 4-173 of the Final Environmental Impact Statement).
9	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
10	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Everybody knows this is a truck transport. They've built depots in Laveen. There's going to be truck stops built. I'm listening to people today talk about commercial development to build truck stops south of the freeway on leased land. We have politicians who own 75 acres of leased land rights, that will develop the property the minute this is approved. That's a conflict of interest, okay? And not really knowing the final design phase yet -- and I know that's premature -- does impact the environment.

A couple of other concerns: Building new retaining walls or obstruction walls is going to affect the view of our desert community. Blasting and the destruction of three ridges of South Mountain and taking out two to four million cubic feet of rock, dirt, and dust is unheard of in Phoenix. No highway has ever done that. So the plea is to get away from blasting through the ridges of the mountains.

And, again, I just want to stress: This will become the new truck route for Camex America. This is an American truck route that does transportation of chemicals, tanker trucks full of chemicals going back and forth. Most cities in America have pushed that truck traffic out 20 to 30 miles away from the city, not two miles, three miles north of downtown, one or two miles from where residents live.

So, if there is a spill, there will be no recovering from the disaster, especially benzine. If a

Driver and Nix Court Reporters - (602) 266-6525
www.drivernix.com

Code	Issue	Response
11	**Visual Resources**	For most of the alignments of each of the action alternatives, the proposed freeway would be elevated above the natural grade of the surrounding land. This elevated profile would allow noise to carry farther, creating noise impacts at greater distances from the freeway. Depressing the profile of the freeway below grade might reduce traffic noise levels adjacent to depressed sections. However, it would be necessary to also construct at-grade noise barriers to achieve noise reduction goals at receiver locations adjacent to depressed freeway sections (see page 4-91 in the Final Environmental Impact Statement). This strategy would reduce visual impacts associated with high noise barriers on elevated freeways, but would entail ground-level noise barriers and their associated interference with views. Thus, with either approach to noise reduction, views of nearby mountains could be disrupted. The specific impacts would depend on sightlines that would be determined by the height of any noise barriers constructed, the intervening topography, and the distance of the barriers from the residences in question.
12	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
13	**Hazardous Materials**	

Code	Comment Document

benzine-truck-spill accident happens, this is going to drift into this major residential area, and there will be a crisis. There will be no question about it.

The other concern I have is increased-volume traffic. Okay? It's rumored to be more traffic than the 101. The Environmental Impact Study needs to take counts from last month's current foot traffic, car traffic, and project more accurately the true traffic volume for residential cars and trucks. And I think they've done a fair job at estimating that, but they're not realistic in their projections.

Also, ADOT and MAG, the history of them project -- projecting and estimating is very poor. They're not accurate on their estimates. Go back 20 years; they've misestimated pretty much everything that they've tried to attempt to -- to estimate.

I do applaud them for trying to do that, but let's not disguise this for what it really is. This is not a commuter route to get to downtown.

So the other thing, just for the environmental side, is destroying park lands. That should be a common good, a thing that we should not sacrifice. There are petroglyphs in these areas of South Mountain. I don't know how and why people can't see that, when all the local residents know where they are.

Destruction of wildlife. Destruction of endangered

14	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
15	**Purpose and Need**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic—including truck traffic—to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County.
16	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

7

cactus, which we're supposedly not supposed to touch. The subdivision wells will be impacted, and drainage. Subdivision wells, retention wells, and wells for community water park -- water lakes and features, and impact to draining.

The other issue we have is local traffic. In my subdivision, it will be impacted because we have no exit, no on ramp. So, right now, we drive down Pecos to get out of our subcommunity because we're -- we're landlocked.

The biggest concern is health issues for kids and elderly due to the increased toxins: dust particulates that this project will cause during the construction phase, as well as afterwards.

And someone needs to really look at growth, 2015 to 2020, for the traffic impact and the environmental impact of this highway. It's nice that they used old statistics. But, if you project the City of Phoenix growing, even at a rate of 5 percent per year in population, which is conservative, this highway will have that growth on top of its current projections. And this is all, kind of, understated in the Draft Environmental Impact Study.

So, again, we're strongly opposed to it because, if we lose the federal matching funds -- because our air quality is in violation last year; and currently, in 2013, we're in violation of air quality standards -- the EPA says it will pull the $1 billion federal matching highway funds.

Code	Issue	Response
18	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to State regulations/standards. (See text box on Final Environmental Impact Statement page 4-108.) Drainage studies have been conducted; culverts would be maintained, and new culverts would be installed to maintain flows under the freeway (see Final Environmental Impact Statement pages 3-58 and 4-101). Surface water could be altered from runoff drainage; seeding the disturbed soils with native vegetative species would help to minimize runoff and erosion. Best management practices associated with the project Stormwater Pollution Prevention Plan would also help minimize runoff.
19	**Surface Water**	Flood protection levels are dictated by the design class of the highway. In the case of the proposed South Mountain Freeway, it is designated as a Class I. Therefore, flood protection levels would be designed to the 50-year (storm) level. However, as a standard Arizona Department of Transportation practice, the floodwaters developing upstream of the culvert entrance would be reviewed at the 100-year level to ensure "headwaters" do not adversely affect existing properties. (See Final Environmental Impact Statement page 4-102.) All bridges on major waterways such as the Salt River are designed to maintain minimum water surface elevations at the 100-year level for flood levels and built to structurally withstand the superflood, a flood expected only once in 500 years.
20	**Traffic**	The E1 Alternative would affect the existing local street network. Approaches for reconfiguring the local street network include removing streets, constructing new streets, constructing the proposed freeway over existing streets, or dead-ending existing streets. Final design of local streets would be coordinated with emergency service providers, local jurisdictions, and other appropriate agencies and would continue through final design stages. See Final Environmental Impact Statement Figure 3-33, on page 3-57. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement).

Code	Comment Document

This environmental impact draft study doesn't seem to think that it will worsen the air quality on the sensor that's on 43rd Avenue, which will be two to three miles away from this construction. So it really needs to be understood that it could -- could risk Arizona losing its federal funds. And then the City and our citizens will have to pay the bill. This could turn into one of the more expensive highways. And I think a separate study of that impact is very, very important before we go to the final phase of the environmental study.

So thank you very much for your time. I appreciate the opportunity to comment.

MR. SMITH: They've already spent a lot of money studying this thing, right? And they might as well finish the project or a lot of people's work has been wasted already.

And as far as alignments go, I think, even though the one that's more expensive, that would link up to the 101, is probably a better option in the long run, even though it looks like it might be more expensive now. I don't think I have anything else to say.

MR. STROOP: Well, I just wanted to say that I am a Laveen resident and that I am for the proposal to build the freeway in any of the capacities that I saw today. I don't really have a preference on an alternative, but I would prefer it to get built as soon as possible.

MR. ALLEN: I don't know what ADOT's plans for

CALLER REMARKS/QUESTIONS:

1 I would like to leave a message on the freeway. I am definitely for it. This area, I have lived here all my life, has neglected to get the freeways done that they need to get done. It would make a very big difference, especially for the people coming from the West Valley. I have worked for years for a company where a lot of people came from that area and they had a terrible time getting to work every morning. Thanks. Goodbye.

Please build this freeway south of Ahwatukee. I have lived here since 1978 and have been waiting for the AZ politicians and AZ ADOT Directors to set aside their greed and manipulations and just build this freeway. As a longtime resident of Ahwatukee I can testify that everyone in this area has known about this freeway plan when they purchased their properties. If the freeways are ok for the rest of Maricopa Co. environmentally, then it is ok for South Mountain also.
Just build it already!!!

THE FACILITATOR: Thank you, Mr. Tracy.
MR. TRACY: -- the middle of Scottsdale, which should be -- our population area should be the arena. Thank you.
THE FACILITATOR: Thank you. If you have additional feedback, we really encourage you to go next door and speak with a court reporter.
Thank you, Mr. Tracy.
MR. TRACY: Thank you.
THE FACILITATOR: Our next speaker is Stan Hemry.
MR. HEMRY: Hello.
THE FACILITATOR: Welcome, Mr. Hemry. You have three minutes.
MR. HEMRY: All right. Thank you. On this Environmental Impact Statement, I didn't see an inclusion of it about the ecosystem that's in that area and the watersheds coming from both the western range of the South Mountains, and off the Estrella Mountains, and I'd like to see more of that. I want to know what systems will be impacted when a, you know, like a carbon emitting bisection of that area takes place. And there's no animal studies done as to the migration patterns of the animals.
So I think this study is probably

2	**Surface Water**	Flood protection levels are dictated by the design class of the highway. In the case of the proposed South Mountain Freeway, it is designated as a Class I. Therefore, flood protection levels would be designed to the 50-year (storm) level. However, as a standard Arizona Department of Transportation practice, the floodwaters developing upstream of the culvert entrance would be reviewed at the 100-year level to ensure "headwaters" do not adversely affect existing properties. (See Draft Environmental Impact Statement page 4-102.) All bridges on major waterways such as the Salt River are designed to maintain minimum water surface elevations at the 100-year level for flood levels and built to structurally withstand the superflood, a flood expected only once in 500 years.

Code	Comment Document

incomplete, at best, and should be rejected by the community at large. It's clearly flawed and didn't cover all the right areas, and maybe they'll release other portions of it that we might have learned of later, but at least what they've currently released of it, it seems like these are [unintelligible].

Also, separate the hospital from the highway. Those people there deserve a hospital. Whether they have a highway or not should be a separate issue, but to connect the two together is like extortion. And I think the community deserves more than that. I feel like they live there, and there's 40,000 people that live there, they deserve a hospital. They shouldn't have to drive a long distance. They shouldn't have to have a highway in order to get one. I think that's the wrong approach to building communities. I think it's encouraging sprawl, and it's causing more destruction of our environment by taking away the desert, when we should be in filling and closing the highway, where population is decreasing in this area, right, it went from fifth to sixth place in the United States, Phoenix is now the sixth largest city in the United States. We don't need more highways. We need them closing, because we don't have the population to

Code	Issue	Response
3	**Neighborhoods/ Communities**	The analysis used to determine the possible purpose and need for the proposed action followed Federal Highway Administration guidance (see Draft Environmental Impact Statement Chapter 1). While the W59 Alternative 62nd Avenue Option was advanced for further study to avoid adverse impacts on historic properties and a planned hospital near Dobbins Road (see Draft Environmental Impact Statement, page 3-25, Figure 3-11), the planned hospital facility is not specifically cited as a factor in the proposed freeway's purpose and need.
4	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

support it.

And then we should be rebuilding inner city, more around mass transit with no CO emissions, none, CO2 emissions, none. I mean, that should be our goal, right, 400 parts per million, we have already reached. So we should be lowering that. This highway thing is it such a mirage thing, that the voters of the County actually passed in 1985, when it had no specifics about the 202 in that passage of that. It was general funding for highways. Also, the five-year plan doesn't have anything to do with mass transit. Which, again, it doesn't impact the environment, but eventually it impacts everyone's health; it impacts everything around it. And I feel like the people in that area and the different parts of the city that live here don't need another CO2 emission. We need something that's a little bit more environmentally friendly and life-supporting and affirming, to keep the ecosystems intact and encouraging them to grow and, like, flourish; I think the people that live in that area are very, very, very lucky. It is a beautiful part of the city. It's probably as nice as Paradise Valley because of the scenery and the lack of connection to the highway. You know, that's a

1 MR. HEMRY: My name is Stan, S-t-a-n, and
2 my last name is Hemry, H-e-m-r-y, and my zip code is
3 85004. Okay. The myth of growth in the area that
4 we're trying to get for growth is completely false.
5 We have no projections for what we're currently going
6 through in economics. If they had projections for
7 this, we would be closing highways right now, not
8 opening more of them. The communities don't need
9 extra traffic if there's less people living in them.
10 We need to change our policies that are
11 not dictated by 1985 resolutions of whatever was
12 passed here in the state. They did not specifically
13 address the 202 in that 1985 passage money. It just
14 says generally highway funds for the county which is
15 fine, but meanwhile, we do not need to spend those
16 monies on this 202 project based on need for growth
17 or wanting more growth. Those things are fallacies.
18 And with the mention of the EIS report
19 and this person telling me that in that report it
20 talks about animal migration and then mitigating the
21 disturbance made by the highway by mitigating the
22 animals around it, I'm sorry, but that's still a
23 disturbance of the ecosystem. Mitigating for animals
24 does not fix the ecosystem's destruction. I don't
25 know if I made that clear, and so I had some more to

2	**Purpose and Need**	The Southwest Loop Highway—the South Mountain Freeway predecessor—was integral to the Regional Freeway and Highway System approved by Maricopa County voters in 1985. Although other facilities were considered a higher priority early in development of the Regional Freeway and Highway System, the South Mountain Freeway has been included in every subsequent update. The same route was approved by the State Transportation Board in 1988. In 2004, Maricopa County voters approved Proposition 400, which was designed to fund completion of the remaining segments of the Regional Freeway and Highway System, including the proposed South Mountain Freeway (Final Environmental Impact Statement page 1-21).

Code	Comment Document

say on that subject because ecosystems are like intertwined little systems. And if one portion of it breaks down, like if some of the insects stop flying or some of the plants stop growing or some of the animals stop migrating, then it changes that ecosystem which to me appears to be pristine and surrounded by mountains on two sides, western edge of South Mountain and the eastern range of the Estrella Mountains that have no bisection at this point coming through. There's no connection to I-10 directly from that area. It is a beautiful part of town. The people that live there should be so lucky to not have another sprawling, you know, hospital-filled freeway coming through.

And I cannot emphasize enough separating the hospital from the highway. Those people deserve good medical care available in their community regardless of whether a highway is built, but I definitely want to stress that growth is the wrong approach. They did not put projections down for what we're currently going through economically. So if they had been more accurate in their projections, maybe we could look to those as a reason to follow policies. But if they're inaccurate, which clearly they have been, then we need to readjust our plans to

accommodate a smaller population, less car driving people who don't have the money quite frankly to drive and need mass-transit to get around. Those are the priorities now, not from 1985 when they passed this money and made it available. And that was based on the myth that every time growth happens, it's sustainable and we all should just expect it all the rest of our lives which is clearly not right. Thank you.

MS. SLAPKE: I just got a wake-up call. They never told us that when they changed the alignment from ten lanes to eight, that our house was no longer in line of demolition. We were never notified. We would have gotten out five, ten years ago when they changed that, but none of the homeowners, I know for a fact, none of us know this because I know everybody on our entire street. We weren't notified.

So here I sit and now I'm going to have a wall right behind my house when we were anticipating, okay, ADOT's going to have to buy our house. We'll sit tight. There's nothing we can do. We've lost all the value in our home, but at least we know ADOT's going to buy our home. I just found out, guess what, we're screwed. So put that into writing.

From: Sierra Club on behalf of sue hennelly
To: Projects
Subject: Comments in opposition to South Mountain Freeway
Date: Wednesday, July 24, 2013 11:06:35 AM

Jul 24, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

2 The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief.

3 South Mountain Freeway would have incredible negative impacts on our communities. Air quality in the region would worsen over time. Who wants to live in that?

4 5 South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. A freeway through a portion of this park, will inevitably destroy wildlife and habitat. Wildlife corridors will be cut off, valuable public spaces will be lost, and more. I do NOT promote setting this precedent.

1 Please protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Mrs. sue hennelly
2264 E Desert Cove Ave
Phoenix, AZ 85028-2409

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.

Subject: Opposition to Proposed South Mountain Freeway and Deficiencies of the Draft Environmental Impact Statement

Dear ADOT:

I am a member of Protecting Arizona's Resources and Children (PARC) and I am writing to express my opposition to the proposed Loop 202 South (South Mountain Freeway, SMF), specifically along the proposed Pecos Road alignment. I have lived in Ahwatukee for nearly 10 years with my wife. We now have two small children (one of whom suffers from environmental and food allergies - we are also concerned she may have asthma and are have been working with her pediatrician and allergist to clarify the extent of her conditions).

Based on a strong desire to keep my family and community healthy and safe, the robust data now available in the medical literature documenting the health-related hazards associated with traffic air pollution from freeways in close proximity to population centers, decades of delays and poor planning of the proposed freeway's path, and the fact that there are simply better alternatives, I strongly oppose the SMF and any plans related to its Pecos Road alignment.

In addition, I have reviewed the recently released Draft Environmental Impact Statement (DEIS) on the SMF and have noted many serious deficiencies including, but not limited to the following:

1

1) Truck Traffic from Mexico and High-Sulfur Diesel - Truck Bypass Negated

2

The modeling of air pollution impacts in the DEIS do not include the additional air pollution from truck traffic from Mexico. The DEIS briefly mentions the issue, but it claims it has no way to know what impact this have. Patently absurd.

3

We should remember why the idea of a truck bypass came up in the first place, all those years ago. It is because there have been chronic issues about air quality in the Phoenix metro area, so bad and for so long that public policy makers suggested as one of the strategies to reduce particulate matter from truck exhaust in urban Maricopa County was to designate a bypass for truck traffic around the urban area. This bypass is also now the designated route of the Canamex Highway, and it is Interstate 8 (south of Casa Grande) to State Highway 85, to Interstate 10, west of the Phoenix metro area. If the South Mountain Freeway is built, the bypass route, which has few amenities, would be a substantially longer route, about 55-60 miles longer than the route using the SMF. There is no law that would force trucks

Code	Issue	Response
1	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Trucks**	
3	**Air Quality**	

Code	Comment Document
2	to use the longer route, so it is entirely likely all these trucks would come through Phoenix, negating the whole bypass strategy and negating a public policy decision. By completing the South Mountain Freeway, this would all be negated, but the reversal of this public policy decision is never mentioned in the DEIS. Further, trucks originating in Mexico will be fueled with diesel that doesn't meet the CARB diesel standards adopted by Arizona over a decade ago. In Mexico, there is no regulation about the sulfur in diesel fuel. In Arizona, the law was changed to allow only diesel fuel to be sold that has had 98% of the sulfur removed. This was another part of the strategy to bring Maricopa County into compliance with the particulate matter standards required by the Clean Air Act (CAA).There was extensive modeling of the effect of adopting the CARB diesel standards and a discussion of this at the Arizona legislature, where it passed, so the data is in government hands. Also, we know exactly the number of trucks arriving from Mexico and their destinations in the US, so this is data that is available for the DEIS. And again, the reversal of this public policy decision is never mentioned in the DEIS.
3	
4	
	Once this additional pollution is honestly quantified and factored in, there would be a huge net increase in air pollution from the SMF, and associated increases in asthma, chronic obstructive pulmonary disease, heart disease, stroke, premature death, and other adverse health impacts. 2) Air Toxics Already a Crisis but Not Mentioned
5	In 2005, there was extensive air monitoring of certain toxic chemicals (air toxics) conducted by EPA and ADEQ in a joint effort named the Joint Air Toxics Assessment Program (JATAP). The monitoring sites included a site near St. Johns on the GRIC, and some in west Phoenix and south Phoenix. The JATAP monitoring results were reported in 2006, during a time the data for the DEIS was being gathered, and it found levels of certain toxic chemicals associated with vehicular emissions were above the standard of a one in a million chance of cancer in a lifetime of exposure in the west Phoenix, south Phoenix, and GRIC sites. The JATAP monitoring found in the high end of the monitoring levels, formaldehyde at 34 times this standard; benzene at 8 times this standard, 1,3 butadiene at 7.5 times this standard, acetaldehyde at 3.4 times this standard. And, remember, citizens are being subjected to all of these carcinogens, not just one. Some of these chemicals are attributed to "mobile sources," or vehicular traffic burning hydrocarbons. Obviously, adding more vehicular traffic emissions by building a freeway where there had not been one would add to this toxic burden. The JATAP results are not included in the DEIS, but instead there is a strange missive about the uncertainty of the risk from these air toxics standards, which is simply not true. The cancer risk standards have been promulgated and published by EPA after extensive research and study, and they are well-known. 3) Risks from Hazardous Materials Transportation Incidents Due to the SMF
6	There are no industries using and emitting toxic chemicals in Ahwatukee Foothills, and no hazardous materials (hazmat) transportation issues and risks because none of these chemicals, other than gasoline and diesel, are being shipped into the area, other than incidentally adjacent on Interstate 10, which is east of the area. Since the NEPA process started, Ahwatukee Foothills residents and others have consistently raised concerns about the added risks from the transportation of hazmat on the new SMF, and in doing so they have consistently voiced concerns regarding the additional problems with hazmat response in the affected area. Ahwatukee Foothills has its own unique layout and design, sometimes characterized as a large cul-de-sac, and in the event of a hazmat incident requiring shelter in place, or especially involving evacuation, there would be particular problems and risks. Due to the proximity of schools, parks, and other public facilities, there would have to be extensive planning and drills for shelter in place and evacuation, an assessment of the types and amounts of hazmat traffic and the chemicals involved, and much more. NEPA requires examination of cultural, social, and economic impacts, and the new hazmat traffic and risks caused by the SMF would affect all of these topic areas.
7	The data about the types and amounts of hazmat on the highways is collected and analyzed periodically by the Arizona State Emergency Response Commission using federal funds, in something called a Commodity Flow Study, which also includes hazmat moved by rail. So an agency of the state

Code	Issue	Response
4	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Air Quality**	Assessment of mobile source air toxics is presented in the Draft and Final Environmental Impact Statements beginning on pages 4-68 and 4-77, respectively, and the summary information about the findings of the Joint Air Toxics Assessment Project study is provided as background information in the Draft and Final Environmental Impact Statements, but the study itself is not relevant to the type of analysis done pursuant to the Federal Highway Administration's mobile source air toxics guidance, which is an emissions analysis. Monitored ambient concentrations of mobile source air toxics (the focus of the Joint Air Toxics Assessment Project) do not inform this type of analysis. While monitoring data can be useful for defining current conditions in the affected environment (to the extent that the monitoring data are current), they don't tell us anything about future conditions, or the impacts of the project itself, which is why an emissions analysis was performed. The mobile source air toxic analysis presented beginning on page 4-77 of the Final Environmental Impact Statement is an estimated inventory of mobile source air toxic emissions for the entire Study Area for 2025 and 2035. This approach was used because the inventory estimate accounts for changes in traffic and emissions on all roadways affected by a proposed project, and would, therefore, be a more reliable predictor of changes in exposure to mobile source air toxics. The Draft and Final Environmental Impact Statements present information and analysis about the proposed action and the enhanced conditions when compared against the No-Action Alternative and would not cause significant adverse effects. The Federal Highway Administration and Arizona Department of Transportation Draft and Final Environmental Impact Statements account for the potential effects when considering both adverse and beneficial impacts. The Draft and Final Environmental Impact Statements provide in-depth discussion of potential air quality impacts of the proposed alternatives. The carbon monoxide analysis presented on page 4-65 of the Draft Environmental Impact Statement and updated on page 4-75 of the Final Environmental Impact Statement represents projected carbon monoxide concentrations along the project corridor, including those proposed interchange locations along the South Mountain Freeway corridor. The Arizona Department of Transportation also conducted a quantitative particulate matter (PM_{10}) hot-spot analysis that is discussed on page 4-76 of the Final Environmental Impact Statement. Both of these analyses demonstrate that the health-based National Ambient Air Quality Standards for carbon monoxide and particulate matter (PM_{10}) would not be exceeded at worst-case locations along the project corridor. The emission modeling developed for the proposed action showed that for the mobile source air toxics study area, there would be little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions (see discussion beginning on page 4-77 of the Final Environmental Impact Statement).

(Response 5 continues on next page)

Code	Comment Document
6	government has this information. In a real DEIS, the analysis of this data is common. But there is nothing in the DEIS that even mentions the hazmat transportation and associated risks! This raises many issues, from the $20 million spent on this deficient study, to the scoping for the DEIS that was designed to restrict citizen input rather than allowing and encouraging it, to the blatant ignoring of actual, well documented statements of these concerns by citizens.
8	Hazardous Materials has been mostly limited in the DEIS to a discussion of hazardous materials that might be encountered in the soils during construction. Yet, despite this alleged concern, the fact that the proposed path of the freeway crosses contaminated property near Interstate 10 near 55th Avenue is neither mentioned nor examined, much less the financial liability the taxpayers might be assuming by purchasing the contaminated property. That would certainly be an economic impact.
3	4) More Air Quality Issues: The Straw That Broke the Camel's Back The portion of Maricopa County that is characterized as the Phoenix metro area has had problems for decades meeting the air quality standards for particulate matter (PM) and other criteria pollutants. Ozone levels are too high in the East Valley and Fountain Hills, for example. There have been several exceedances of the standards for PM set by EPA under the authorities given the agency by the Clean Air Act (CAA). The problem has been so bad over the years that every possible delay and postponement allowed under the CAA to come up with a plan to meet regulatory levels of particulate matter have now been exhausted. So, currently, EPA is examining sanctions that include blocking a billion dollars in highway funds. The Arizona Department of Environmental Quality has tried to explain away the several exceedances of the PM standards in the last year or so by blaming it on dust storms and weather-related problems. However, independent experts who have reviewed the data don't believe it was all related to weather.
9	Almost every one of these PM exceedances have been detected at the air quality monitor at 43rd Avenue and Broadway Road. The placement of a freeway about a mile to a mile and a half upwind from a monitor that has had all these high levels seems foolish and short sighted. And of course, the impacts and risks of this are not examined in the DEIS. Nor does the DEIS examine the dust that would be kicked up during the construction phase, when thousands of tons of dirt would be moved around upwind of the monitor. The proposed path of the South Mountain Freeway would take it over the Salt River bed. To construct the bridges would involve extensive earthmoving. Also, blasting South Mountain would also release enormous amounts of dust (PM), and the natural wind currents and prevailing wind patterns would push this PM toward the air monitor at 43rd Avenue.
3	The South Mountain Freeway could therefore be the most expensive freeway ever built. Not only the construction costs, and the $20 million already spent on the bogus DEIS. To top it off, there would be the loss of the billion dollars in highway funds. This is a gift that keeps on giving, or taking, as there would be subsequent billions lost through the years due to PM exceedances.
10	5) Traffic Congestion Issues at West I-10 Junction The junction of the South Mountain Freeway on its west end with Interstate 10 may have been an idea conceived many years ago, but the traffic congestion that exists at the area between 59th and 51st Avenues on that freeway during morning and evening rush hours is already more than extreme. Yet there is no mention in the DEIS of the cumulative impacts and effects of traffic congestion at that proposed junction. A long line of vehicles sitting with engines idling while waiting to get on Interstate 10 at the junction with the SMF would also likely impact the aforementioned air monitor at 43rd Avenue and Broadway. There is much talk about the problems at the Broadway Curve, which is near the confluence of Highway 60, the 143, and Interstate 10. Let us be reminded that the Maricopa Association of Governments (MAG) and ADOT caused this problem through their shortsightedness and design problems. They planned these traffic nightmares. So now these same agencies, failed agencies, want to do this South Mountain Freeway. Will we be talking about the new junction in west Phoenix in the same way? ADOT already completely ignored the recommendations of the original SMCAT, the group ADOT formed to skirt the proper NEPA scoping, in choosing the proposed alignment. The SMCAT, after months of

Code	Issue	Response
5 (cont.)		The carbon monoxide and particulate matter (PM_{10}) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.
6	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Hazardous Materials**	The Arizona State Emergency Response Commission maintains the Hazardous Materials Commodity Flow Studies that are used by emergency response planners (such as the Arizona State Emergency Response Commission statewide and the Maricopa County Local Emergency Planning Commission for Maricopa County) as one of the elements considered when developing Emergency Response Plans. Whenever a new road is introduced to an area, the jurisdiction with responsibility for maintaining that area's Emergency Response Plan amends the plan to include the new facility. Once the plan is amended, it is made available to the Arizona Department of Transportation.
8	**Hazardous Materials**	Both the Van Buren Tank Farm and the West Van Buren Water Quality Assurance Revolving Fund site were identified and considered during development of the Draft Environmental Impact Statement (see pages 4-97 and 4-153 and the Draft Initial Site Assessment prepared for the proposed project.) These sites are primarily groundwater-impact sites, and groundwater is found at a depth of over 60 feet below the footprint of the Preferred Alternative. Given the separation distance between the adversely affected media (groundwater) and the construction zone (near surface in these locations), the project team determined that these sites would not pose a risk to construction or to the general public once the facility were completed. This assessment has been clarified in the Final Environmental Impact Statement on page 4-165.
9	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.

(Responses continue on next page)

Code	Comment Document
10	study, had recommended that the SMF connect to the 101 on the west. So ADOT ignored even the recommendations of its own group and planned the SMF to connect with the I-10 at the currently proposed alignment. This leaves a large question: If ADOT did that at that time long ago, what is to stop it from completely ignoring the current SMCAT should SMCAT vote for a "NO BUILD" option?
11	6) Blasting South Mountain: Religious and Racial Discrimination and Civil Rights Violations in SMF DEIS The DEIS clearly discriminates on the basis of religion and race, and the ongoing ADOT plans for blasting Muhadagi Doog (South Mountain) are ongoing civil rights violations. Throughout the DEIS, it is acknowledged that the GRIC and other native American tribes hold Muhadagi Doog as a sacred site. From the actual language of the DEIS: "The South Mountains are highly valued and considered sacred by some Native American communities. The Community, which includes the Akimel O'odham (River Pima) and Pee Posh (Maricopa) tribes, and other Native American entities—including the Colorado River Indian Tribes and three O'odham groups: the Salt River Pima-Maricopa Indian Community, the Ak-Chin Community, and the Tohono O'odham Nation—consider the South Mountains to play a role in their cultures, identities, histories, and oral traditions." There is plenty of correspondence in the DEIS and its Appendices in which the GRIC repeatedly asserts and reminds ADOT of this, but to no avail. ADOT plans to blast Muhadagi Doog.
12	This is a direct violation of the civil rights of the "Native American entities." In a 1979 consultation on the issue, the United States commission on civil rights defined religious discrimination in relation to the civil rights guaranteed by the Fourteenth Amendment to the United States Constitution. [Section 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the State wherein they reside. No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States; nor shall any State deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws.] As for racial discrimination, the equal protection clause was originally added to deal with the lack of equal protection provided by law to all in the course of administering justice in the states that had Black codes. The United States commission on civil rights noted, "Whereas religious civil liberties, such as the right to hold or not to hold a religious belief, are essential for Freedom of Religion (in the United States secured by the First Amendment), religious discrimination occurs when someone is denied "the equal protection of the laws, equality of status under the law, equal treatment in the administration of justice, and equality of opportunity and access to employment, education, housing, public services and facilities, and public accommodation because of their exercise of their right to religious freedom." Also, the American Indian Religious Freedom Act (commonly abbreviated to AIRFA) is a US federal law and a joint resolution of Congress that was passed in 1978. It was created to protect and preserve the traditional religious rights and cultural practices of American Indians, Eskimos, Aleuts and Native Hawaiians. These rights include, but are not limited to, access of sacred sites, repatriation of sacred objects held in museums, freedom to worship through ceremonial and traditional rites, including within prisons, and use and possession of objects considered sacred. The Act required policies of all governmental agencies to eliminate interference with the free exercise of Native religion, based on the First Amendment, and to accommodate access to and use of religious sites to the extent that the use is practicable and is not inconsistent with an agency's essential functions. It also acknowledged the prior violation of that right.
13	Clearly, the No Build Alternative is the only viable option that does not constitute a violation of the 14th Amendment to the Constitution and a violation of the American Indian Religious Freedom Act as any freeway alternative proposed in the DEIS of the South Mountain Freeway requires blasting away part of Muhadagi Doog. Thank you,

10	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
11	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
12	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment*, *Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.
13	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Subject: South Mountain Freeway comment

First off, allow me to congratulate the team for providing very informative emails, website, and options; most commendable indeed :)

1 The comment I have about the South Mountain Freeway project concerns the Western Section alternatives. I was surprised to see that the W59 Alternative is the recommended one. Whenever I travel eastbound on the I-10 during rush hour, the congestion usually starts back around L-101. Also, what makes it worst, is at 79th avenue, one of the lanes is lost, thus exacerbating the bottleneck upstream.

How was it determined that the volume of the traffic going through Phoenix would actually be continuing past Chandler? Thus, the W59 Alternative would alleviate the congestion. If this was not considered, I'd think that the
W101 Alternative would be preferably to prevent the congestion from forming in the first place. Thus, directing post-Chandler traffic away from Phoenix Metro.

Sincerely,
xHh.

We need it yesterday. I applaud you. It's been a long effort. I've been involved with it historically, even wrote a newspaper article once on the 55th Avenue alignment, and my colleague, who is much smarter, better looking and more [unintelligible] Jim Kretin [phonetic], does say hello, he had a family issue that came up, so he's not here. So I'm the pinch hitter, I'm not as good as the first team, but I'm trying to get to the plate and do the job.

I thank you for your time. You've had a long day, so I will stop well under my limit, thank you.

THE FACILITATOR: Thank you, sir.

David Hernandez.

You've got three minutes.

MR. HERNANDEZ: Yes, sir, howdy. Three minutes. I've lived over here on 59th Avenue and Roosevelt for about 31 years, and I've got three minutes. Off over at the Indian reservation, over there in Ahwatukee, they got more consideration than 59th Avenue. But 59th Avenue, I guess traditionally is Mexican-American. It's a Mexican-American area, and so what, we'll bulldoze that area over, we'll give them more pollution, we'll reduce the quality of

life for them. There's a school nearby. There's all kinds of studies where all this emission affects kids as well as older adults.

I am for the freeway, but it could be moved further west, but I see that these businesses are going to benefit. These businesses right there on 59th Avenue, right off the 10, and but there's no consideration for the neighborhood that's there. It's not a big neighborhood, and I believe that if there was a majority blacks or a majority whites, there would be more consideration for that neighborhood.

Now, if you're going to be building that area there, which is preferred, I wish you guys would just buy my property so I could go move somewhere else, but like I say, I've lived there 31 years. My house is paid off, I don't want to get into another mortgage, but now what's going to happen to my property values? You know, what, go buy another house somewhere else and start all over? You know, this -- like that guy was saying before, this was started years ago. ADOT and all the powers that be, all the bureaucrats drug their feet, they just drag their feet. Well, back then, when they were going to build it, well, it's going to cost this much money

Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Alternatives, W59 Alternative Versus W101 Alternative**	
4	**Environmental Justice/Lifestyle**	While the Preferred Alternative would have an adverse effect on environmental justice populations, impacts would be temporary and would not create undue hardship or be disproportionately high compared with projected impacts on all populations in the Study Area. All populations would benefit from the proposed action's implementation through improved regional mobility and reduced local arterial street traffic.
5	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.

Code	Comment Document

and there's not much profit to be made. But now, hey, there's more profit to be made, hey, we're all right, you know, but the homeowners, the taxpayers, even us Mexican-Americans, you know, that live there, who looks out for us? Nobody. Nobody.

Thank you.

THE FACILITATOR: Thank you, sir.

If there is anyone else in the auditorium that would like to speak, please make sure that you register at the front desk. Your name will be called and placed on the screen; you'll be called in the order in which you register.

Also, a reminder for those of you who may be speaking and there's an opportunity that you're going to go beyond the three minutes, there are court reporters in the next room that would be happy to take your extended message beyond the three minutes.

We're going to take a five-minute break as we change out panelists and we will return in exactly five minutes, thank you.

(Recessed from 6:00 p.m. until 6:04 p.m.)

THE FACILITATOR: Good evening, everybody. We're ready to get started again. We have a new panel today. We have Tom Deitering, from Federal Highways, we have Brent Cain from ADOT, and Chaun

hospital 40 hours a week, and this is from my own experience. And it is not caused by cars driving on the 202. In fact, having the 202 will reduce the stop-and-go traffic that you have on the surface streets and reduce pollution in that way, I believe. So that's all I had to add.

* * *

UNIDENTIFIED SPEAKER: I'm very much for the highway for Laveen, I feel that it would bring in jobs, especially for the youth and the community; and I think that that will assist with some of the crime and the graffiti if we had the highway, which would bring more businesses.

The hospital, we have a lot of senior citizens that live in the area, and unfortunately, the nearest hospital is -- I think it's Maricopa Integrated, and that is a long way when it's an emergency.

So that is my comment, and my reasons for supporting the I-10 highway -- Loop 202 South Mountain Freeway.

* * *

MR. HERNANDEZ: David Hernandez. I live in the preferred route, 59th Avenue south of I-10, and they need to build the freeway. Yes, I agree with it. However, the route that they are taking is shortsighted.

Code	Issue	Response

1 It benefits the immediate businesses right off of I-10,
2 and it is detrimental to that neighborhood that's there.
3 It's a small neighborhood. That neighborhood would be
4 devastated by the pollution that the vehicles that
5 already I-10 brings in. And then adding another route
6 going south is going to double the pollution.
7 There's a school. There's a school
8 nearby -- it would affect the kids also. The quality of
9 life would be reduced. The majority of the people that
10 live there are Mexican Americans. And so I feel that
11 they're just going to run or bulldoze their ideas in this
12 freeway over all these properties that are there. But
13 the winners will be the businesses, because they're going
14 to be taking them out and instead of residents that are
15 there.
16 Potentially, I would prefer that they buy
17 me out so I can go move somewhere else. I don't look to
18 go buy somewhere else. My house is paid for and I don't
19 want to get into another mortgage. I see the maps that
20 I've seen that 59th Avenue would be just like an access
21 road, just a southbound lane that would impede fire and
22 police coming into the neighborhood.
23 Ahwatukee and the Indian reservation have
24 gotten more say where to place the freeway, however, over
25 here this preferred boundary has not gotten the

6

attention.

I've talked to some of the homeowners in the area that live nearby me, and they never received this mail that stated that they were going to have an ADOT meeting today.

If I got it, why didn't they get it? Or did they just pepper the area with this mailing about announcing this meeting? That's not right. So, like I say, I agree, they should make the freeway, but it should be further west. And if they are, which I believe they will, build it down 59th Avenue, I wish they'd buy the homes on the west side of 59th Avenue and build a bigger buffer with the existing houses that are there, because it's going to ruin the area, as far as I'm concerned. That's it.

* * *

UNIDENTIFIED SPEAKER: I just feel that there's a reason that this has not been built. It was first proposed about 25 years ago and there's a reason why it wasn't built; that's because it's a bad idea.

This is one of the few good things about this area is South Mountain, one reason why people come to this area because of the natural beauty of the South Mountains. So it's going to be an economic loss. It's also just truly beautiful, and we don't have a lot of

1

Hello,
We bought in Laveen 9 years ago with the promise that we would soon have a freeway. My brother, parents and in-laws also moved to Laveen with the same hope of a freeway. We need the Loop 202 at W59 to be approved and built. All of my neighbors and friends also feel the same way. Please help our city and build the freeway that was promised to all of us tax paying citizens. We will soon be out growing our current freeway system.
Thank you,
Patrice Herring

Subject: Laveen Corridor Freeway

Hello~ I want to voice my opinion in support of the freeway for the Laveen and adjacent community. I think the city has to recognize that Laveen is one of the fastest growing areas and has a critical lack of the support infrastructure necessary for a robust community. I know there is opposition from people or groups that are near or on the proposed route, but if these people located in this area with the knowledge that this project was a possibility, I have little sympathy for them. There are just as many or more who located to the area with the belief that the freeway was going to happen. My family is part of that group. I have learned that vital business' such as a regional hospital will not be built here because of this issue being a big factor. A hospital is vital to the health and safety of the Laveen and surrounding community and it should way more heavily in the decision to build this freeway. Personally, I am disappointed in the non-value added business that seems to have no problem locating in Laveen. Smoke shops, marijuana dispensaries, many redundant fast food chains are examples of these which are little value added for a diverse area of a solid, moderate income, family based community. The city has neglected us with the lack of vital bridge construction over the Salt River, inadequate roadways, and no major police force. Please don't take away the opportunity to have quality transportation that connects us to the rest of the Metro area. There are many active registered voters like myself that voted to have this project advanced and seen through completion in my neighborhood. In talking with residents in Avondale and Tolleson, I have not heard one person or group that doesn't support this freeway. This project will also bring much needed and **value added** business and industry to make this a premier area to raise families. Thank you for your support!

Thanks &
Regards,
Derek Herring

beautiful thing. And I wouldn't want to change it.
THE FACILITATOR: We'd like to remind you, that there is -- we discourage applause.
MR. HEMRY: I don't. Sorry.
THE FACILITATOR: Our next speaker is Patrice Herring.
Again, we welcome Patrice Herring.
We welcome Patrice Herring. No need to run. Welcome, Ms. Herring. You have three minutes.
MS. HERRING: Hi, thank you so much for being here today and allowing us to speak. I am a native of Phoenix, Arizona, and a resident of Laveen. I have been a resident of Laveen, my husband and I bought a house nine years ago. And my brother had already bought a house in Laveen, him and his family. And then also my mother-in-law bought a house in Laveen. And my parents ended up moving and buying a house in Laveen. So there's quite a few of us who live in Laveen. And one of the reasons we moved to that area is because we were told that there was going to be a freeway coming through and lots of commercial businesses and things for our community.
My husband does live in Chandler, might I add. Right now there's not a whole lot of things for us in Laveen, which we definitely need. I live at

the cross streets of 57th Avenue and Baseline, which is at the Bougainvillea -- well, now it's the Cotton Fields Golf Course, and many times, almost every day when I come out onto Baseline, at 57th Avenue, the traffic is just terrible. I have to sit there probably for 5 to 10 minutes just to get out. And sometimes it's very dangerous. There's so many cars whizzing by.

And we definitely need this freeway, the fact that it will cut down on pollution alone is a huge plus. The fact that it will bring much businesses to our area that are greatly needed. Laveen, I heard, is the fastest-growing city right now. As far as our median income, it's very high. I saw some of the statistics showing we're close to 60,000 a year, which is very similar to Ahwatukee. We definitely need this freeway. We need the freeway for the traffic. We need the freeway to keep our citizens happy and there.

Right now I go to Tempe to have tennis lessons and to do many things, and I definitely would prefer to keep my tax dollars in Phoenix. So I would definitely like to say please, please, please put in the freeway at the W-59, which would run along the 59th Avenue and Baseline area. It would help to link

us up to all of the Valley, and also help us to stay and keep our dollars in Phoenix as well.

Thank you so much. And appreciate your time.

THE FACILITATOR: Thank you, Ms. Herring.

Our next speaker is Ethel Williams.

Welcome, Ms. Williams, you have three minutes.

MS. WILLIAMS: Thank you. Thank you for hearing me, and thank you for being here. Thank you for addressing our problems that we're having in the Laveen community. I know that these improvements will help the whole community and the surrounding communities.

Mainly, I moved to Laveen after my daughter, who just spoke, and my son, and her mother-in-law moved to Laveen, because everything looked promising, and we thought it would be a very good move to help improve some of the things that are going on in our surrounding areas in the City of Phoenix area.

But I think that this will bring a lot of help to us, as far as accidents are concerned, because, like she said, the traffic problems are horrendous during the rush hours. And for my

Code	Issue	Response

Code	Comment Document

4314

back on the I-10 and 51st Avenue, and that would relieve a lot of the truck traffic and accidents and other things.

The other thing would be just -- that would also help pollution and air quality and cars idling and trucks idling. And so all of those benefits, I think, would be beneficial to building the freeway on that. And also HOV lanes and stuff would be included on the South Mountain Loop, so that's probably the main reasons why I support it.

* * *

MS. HERRING: Patrice Herring. And I definitely want a yes vote on the 202 for the W-59 link because I am a Laveen resident. I bought a house in Laveen because I was promised that this freeway was coming through. We have horrible traffic in our area. We have problems with the river -- when it gets flooded, getting over the river. Sometimes we're stuck where we can't even cross over to the other side of the city. This will reduce pollution, as well, and bring much needed businesses to the Laveen area, and link us to other areas of the city. We definitely need the Loop 202 freeway and we need the W-59 route. Thank you.

* * *

UNIDENTIFIED SPEAKER: I really want you to

1 Hi, I'm a resident of Laveen and I definitely want the freeway to come through the west 59th route. I look forward to the freeway being built as it was voter approved. And also I would like for it to be, as far as having sound barriers and be built where it has things that can prevent pollution and that it has a very good quality when it's being built especially coming through Laveen. I do look forward to the freeway, I hope that there can be a rush on this. We've been waiting for this for going on 10 years now. We've been residents in Laveen taxpayers and we're ready for our money to be spent on what we had put the money towards. And also look forward to police being put in the Laveen area as well to help with the traffic and things that are going to be coming through here. So on that note I look forward to it. I hope it's built very soon with quality and thank you so much. Bye bye.

Code	Issue	Response
1	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
2	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Subject: 202 Extension

I want to share my thoughts with you. I am newer to the Phoenix-area having moved here from Cleveland in 2004. In 2007 I had the opportunity to buy a home. I knew I wanted new to newer construction and one of the few places I could afford to do so, at that time, was Laveen.

While I carefully decided where in Laveen I wanted to build, I partly based my decision on where the new 202 extension would/could potentially cross Baseline. Unfortunately, I did not do enough research on the entire backstory on this section of the 202. Had I done my due diligence, I would have more carefully considered the fact that this battle has been going on for years.

And how unfortunate this is. Where would Laveen be today, if the builders, developers and buyers, considered the same. Laveen would have remained the sleepy farming community it was and would not have progressed into the 21st century. Where would the employers like Fry's, Walmart, Lowe's, and Safeway be today? They would NOT be in Laveen!

1

While I can appreciate the detractors position, I can also appreciate my own situation and families like mine. I want to have more flexibility in my life. I want to be able to shop in Ahwatukee, Chandler, and more, and not be limited to the Baseline corridor, Tolleson, Avondale, and Tempe. I want to be able to go to my favorite stores in less than 17 miles (one-way). I want the detractors to be more flexible, and to realize the 202 extension is a good thing for us all. Good for commerce, good for lifestyle, and good for the region.

Please consider ALL positions.

Warmly,

Cynthia Hersh

I understand on May 21 ADOT will be holding a public hearing about the proposed South Mountain Freeway project in metro Phoenix. I will be unable to attend the hearing, but I want to let you know my feelings about the freeway. I think the project is way overdue and that ADOT should begin construction immediately. I drive to/from Ahwatukee to downtown Phoenix every weekday for work and the traffic congestion during rush hour is terrible. I cringe at the waste of time and money I and each driver experience every day. And, that does not take into account the pollution spewed from vehicles because of the extra time they are on the road. The voters have approved the project twice. It is high time ADOT stops this waste of time and money begins the project that the majority of people want.

Respectfully submitted,

Karen Hickok

Build that South Mountain Freeway. It will make jobs and it will make traffic congestion less and since we are all going to run out of water pretty soon and the universe is still expanding, it doesn't make any difference anyway. So go ahead and do it. You might as well have fun while you still have the Glen Canyon Dam producing some electricity until it silts up and enough fossil fuel left to think you can actually accomplish something. Go ahead, bring more people to the Valley to suck the 2,000-year-old ground water out of the ground. Bring the CAP in. You know, you already got more allocated out of the Colorado River than it'll ever produce and we are in a drought and we are in global warming. Go ahead, keep building, see if I care. I can tolerate that. I am just going to move. I'll have to move. We will all have to move. Give it back to the Native Americans who want to eat jojoba and banana yucca. Build that freeway. Go ahead spend all the money. Who cares? Okay, have fun people. Just like fleas on a dog. The world will shake us off like old fleas and it will heal again. Okay. Have a nice day. Bye.

Subject: NO to 202 Freeway Expansion

1 2 3 4 5 6 7 8

As a resident of beautiful Ahwatukee for the last 16 years, I am praying that the development of the 202 Loop does not go through. This expansion will destroy the beautiful tranquil neighborhoods of Ahwatukee and expose this community to crime, smog and noise pollution. Then we have the numerous homes and church that will be destroyed to make way for this unwanted freeway! All of this destruction so semis and massive traffic can pass through to the west side. The thought of the many homeowners who will be displaced as their homes are destroyed is an absolute nightmare. There is no way the state will pay these homeowners the money that their homes are worth! It will be such a loss for so many people.

Yes, I have to travel a bit further to get around to the west side, but it's worth it to save our community.

NO to the 202 Loop!!!!!

Code	Issue	Response
1	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
3	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Noise**	
6	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
7	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Acquisitions and Relocations**

Phoenix, AZ 85009
July 19, 2013

ADOT
Loop 202 South Mountain Freeway Study
1655 West Jackson Street, MD 126F
Phoenix, AZ 85007

Dear Reviewers:

1 The stated purpose of this freeway is to relieve Interstate 10 congestion in Phoenix. The EIR must include alternatives.

2 3 The only freeway that will relieve this congestion in Phoenix must be built south of the Sierra Estrella mountains. This alternative is not included in the EIR, making it defective.

4 The most needed freeway in Phoenix is the Paradise. This was voted on by an initiative of the people. The vote was for the Squaw Peak and the Paradise freeways. See the picture on the front page of the Arizona Republic the day of the vote.

5 The South Mountain Freeway on the other hand was a referral to the voters that was part of a huge package. The voters were told that this freeway was included in the package but would probably never be built. Because the other projects were needed, we approved the measure.

If the freeway is built, we will have been lied to again.

Yours truly,

John Hinz

John Hinz

Code	Issue	Response
1	**Alternatives**	The Final Environmental Impact Statement contains a chapter (Chapter 3, *Alternatives*) that provides a discussion of the alternatives generation, screening, and selection process.
2	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
3	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
4	**Alternatives**	The Paradise Parkway was included in the original Proposition 300 packages of road improvements (see Figure 1-2 on Final Environmental Impact Statement page 1-6). However, it was dropped from the plan and was not included in the projects proposed in Proposition 400 (the *Regional Transportation Plan*). The South Mountain Freeway was part of both Proposition 300 and 400 proposals.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
5	**Purpose and Need**	The Draft Environmental Impact Statement does not claim that the South Mountain Freeway has ever been subject to a public vote. The Draft Environmental Impact Statement states that the South Mountain Freeway has been included in regional transportation plans since 1985 and, on two occasions, Maricopa County voters have approved a half-cent sales tax to fund the projects in the regional transportation plan. The Southwest Loop Highway—the South Mountain Freeway predecessor—was integral to the Regional Freeway and Highway System approved by Maricopa County voters in 1985. Although other facilities were considered a higher priority early in development of the Regional Freeway and Highway System, the South Mountain Freeway has been included in every subsequent update. The same route was approved by the State Transportation Board in 1988. In 2004, Maricopa County voters approved Proposition 400, which was designed to fund completion of the remaining segments of the Regional Freeway and Highway System, including the proposed South Mountain Freeway (Final Environmental Impact Statement page 1-21).

I support the building of the freeway; it is significantly over due. Phoenix is one of the very few medium-large cities that does not have any way for through traffic to avoid traversing the city center. I'm sure there are a few others, but I can't recall any. It is absurd that a city & metropolitan area this size does not have a "belt way" of some sort circling the city. We have about 3/4 of one with the rest of the 202 and 101 freeways - the circle needs to be completed.

Not only will this reduce the congestion around the Broadway curve and reduce the potential for serious incidents in the Deck Park Tunnel, but along with getting through traffic around the city it will help those of us in the Ahwatukee area get to the west side with lower fuel costs and less pollution. I have found it ridiculous that we can go to 31st Avenue on Chandler Blvd, but can't get around the mountain, so any trips downtown necessitate a 10 mile trip east before going north and west - what a waste of fuel, time and creation of unnecessary pollution.

Thank you,
William Hipple

Subject: W59 alternative

I believe the the **W59 altenative** (1st choice) would be the best option, considering it would give the best position for the flow of traffic West of the I17 and East of the 101, south I10 or east valley.

1

The W101 alternative (2nd choice) would also make sense due to the natural flow south on the 101 and prevent buildup Eastbond I10 to make the connection.

I do not like any of the other alternatives.

Subject: Loop 202 - DO NOT BUILD

(1) (2) After attending the Ahwatukee open forum I am even more opposed to the building of the freeway. It is destructive, expensive, unhealthy and a poor use of funds. There is highway 85 and/or Riggs Road that can and should be expanded and developed to address the truckers and divert traffic around rather than through.

(3) (4) (5) (6) (7) There are homes, schools and beautiful South Mountain that will be destroyed because of this. Not enough due diligence has been put into exploring the other roads to use. This area has been allowed to expand, grow and develop for many years. It is irresponsible and careless to destroy what has been allowed to be built and develop while there are alternatives. This route should go around the valley instead of through it.

(8) (9) (10) (11) Unbelievable and unthinkable how folks would consider destroying South Mountain for this project. What does that say about our consideration of the environment and the beautiful natural structures. I am concerned and fearful of the impact the Mexican trucks and other trucks passing through will have - pollution, accidents, spills, etc., - so close to homes, schools and families.

(1) This is a poor use of tax payers funds and irresponsible on ADOT's part. Spend the money wisely by improving the already existing Highway 85 if something has to be built.

I say DO NOT BUILD!

Code	Issue	Response
1	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
2	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
3	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
4	**Alternatives**	The Final Environmental Impact Statement contains a chapter (Chapter 3, *Alternatives*) that provides a discussion of the alternatives generation, screening, and selection process.

5	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
6	**Acquisitions and Relocations**	It is not within a City's or State's right to deny building permits to developers who meet all requirements and want to develop their land. In 1996, the Maricopa Association of Governments Regional Council approved the Red Letter Process to provide early notification of potential development (including plans, zoning, and permits) in planned freeway alignments. In addition, the Arizona Department of Transportation works closely with Cities and Counties during the environmental impact statement process to encourage developers to reserve land for future transportation improvements. In some cases, when the developer is willing, the Arizona Department of Transportation has been able to purchase a portion of the land through advanced acquisition (see Final Environmental Impact Statement pages 3-53, 4-13, and 4-48).
7	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. 1 2 3 4 5 6

The more I learn about this the more disappointed I am. Why isn't the Highway 85 / Riggs Road route not being used for this? I vote no build and modify the existing infrastructure to handle the tuck traffic rather than destroy the mountain and create a hazardous and dangerous situation for the community.

Regards,
Michelle

1 2 If the South Mountain Freeway were built, it would cost taxpayers billions of dollars while only temporarily relieving traffic congestion on the I-10. One day both freeways will be congested again, and then we would be right back where we started, only with more congested freeway lane-miles creating more air pollution than today.

3 4 Implementing a variable express toll on the I-10 during peak travel periods would cost almost nothing to implement and would permanently eliminate traffic congestion on the I-10 without overcharging[1] anyone. This would save Arizona taxpayers billions of dollars compared to building the South Mountain Freeway, and even billions more when the South Mountain Freeway would inevitably need to be widened. Further, the toll revenue would reduce or eliminate the I-10's maintenance cost burden on taxpayers.

United States Transportation Secretary Ray LaHood has indicated a willingness[2] to allow the states to toll federal interstates as long as the revenue stays in the same freeway.

With its vastly lower cost to taxpayers and reduced environmental impacts compared to the other alternatives, why isn't a variable express toll being considered?

[1] Variable express tolls are set only just high enough (but no higher) to eliminate traffic congestion, and are reduced during quieter periods to encourage people to travel outside of rush hour.

Code	Issue	Response
1	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Alternatives**	The determination of purpose and need for the proposed project includes an assumption that substantial improvements would be made to the Interstate 10 corridor between State Route 51 and U.S. Route 60 (see Final Environmental Impact Statement page 1-13). One of the concepts that have been studied by the Maricopa Association of Governments and Arizona Department of Transportation is to implement managed lanes in the Interstate 10 corridor (see Southeast Corridor Major Investment Study, at <azmag.gov/Projects/>). Even with these planned improvements to Interstate 10, the proposed project remains a vital component of the Regional Freeway and Highway System.
4	**Alternatives**	The proposed freeway at one point featured a ten-lane freeway cross section, with three general purpose lanes in each direction and sufficient right-of-way to add a high-occupancy vehicle lane and a general purpose lane in each direction in the median in the future (when warranted by travel demand). The Maricopa Association of Governments, in association with the Arizona Department of Transportation, later examined an eight-lane freeway cross section, with three general purpose lanes and one high-occupancy vehicle lane in each direction (see Final Environmental Impact Statement pages 3-19 and 3-20). Such a configuration would reduce the right-of-way needed for the freeway without jeopardizing its ability to meet the purpose and need criteria. Additionally, the eight-lane freeway would cost about $200 million less than the ten-lane freeway (see the Final Environmental Impact Statement, beginning on page 3-23). Because the eight-lane freeway would meet the project's purpose and need and would do so with lower costs, less right-of-way acquisition, and fewer impacts than the ten-lane freeway, it was carried forward for further consideration.

1 2

My concerns include inviromental impact, crime and pollution. The Ahwatukee region will suffer when this freeway is installed, and I am concerned. What will ADOT and the City of Phoenix do to keep crime out, and create a clean environment?
Thanks
Connor Hogan

Code	Issue	Response
1	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Subject: Comments in opposition to South Mountain Freeway

Jul 17, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

1 I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

2 3 Every big city needs places where its citizens can go to get away from freeways and the bustle of city life. South Mountain Park is one of the best places to do that. It also contains petroglyphs, and is an historic site. The proposed freeway would end all that.

4 5 The proposed freeway would cause more problems than it would solve. In addition, it would only provide short-term congestion relief. As is evident by our numerous clogged roads and freeways, many of which have recently been built or widened, building more roads is not the answer.
ADOT needs to instead focus on planning for and investing in long-term transportation solutions, including mass transit. The only way to effectively reduce congestion and mobilize people is by reducing the number of vehicles utilizing our roads, not by encouraging more to use them.

6 7 South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

3 8 9 The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction

Code	Issue	Response
1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Cultural Resources**	
3	**Section 4(f) and Section 6(f)**	
4	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
5	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
6	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Issue	Response
9	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

Subject: South Mountain Freeway

1 It is amazing that ADOT continues to state that the South Mountain freeway was voted in…it wasn't. It was part of a package that had some excellent projects within it, and some outright terrible ideas. The project of this size should have stood on its own merits, and should have been a stand-alone proposition. A project that bears this level of cost (1,900,000,000) and has the environmental impact that this project has deserves that treatment. Instead, it was bunched together with other projects. This is an old technique used by ALL governments to pass items that would fail if voted on by themselves. It is clear that members of ADOT are not objective in this project…I can only guess as to how many brown envelopes have been passed under the table on this one!!!

1	**Purpose and Need**	The Draft Environmental Impact Statement does not claim that the South Mountain Freeway has ever been subject to a public vote. The Draft Environmental Impact Statement states that the South Mountain Freeway has been included in regional transportation plans since 1985 and, on two occasions, Maricopa County voters have approved a half-cent sales tax to fund the projects in the regional transportation plan.

THE REPORTER: State your name.

MS. HOHMAN: Sharolyn, S-h-a-r-o-l-y-n, Hohman, H-o-h-m-a-n.

Primarily, my comment is that I think that it is absolutely criminal the time it's taken to come to a decision. The money that has been spent. I can't even find anybody who remembers when the first Citizens Advisory Team was put together. I served on it. And I think that all of the delays have cost so much money. I just heard an estimate of $25 million. We could build a couple miles of freeway with that money.

But it's done, and we need to move forward. I think we have done due diligence. We have been fair. We have been thorough. And to continue to play a cat and mouse game with various stakeholders is just not moral or ethical any longer.

THE REPORTER: Is that it?

MS. HOHMAN: That's pretty much my statement. If anybody has any questions, I would be delighted to fill in the holes. I know they wanted you to be specific, but that's about as specific as I can be. I've lived -- moved to Arizona in -- to the Valley in 1960, so that was when Black Canyon was

1	**Public Involvement**	The Draft Environmental Impact Statement as a single PDF was over 500 megabytes in size. To better facilitate downloading from the public, it was divided into sections. The online public hearing included access to an interactive PDF that included hyperlinks for page references and was completely searchable. Compact discs of the Draft Environmental Impact Statement were available at no charge at the public hearing and community forums or by request at the Arizona Department of Transportation.

Subject: South Mountain Freeway
Date: Tuesday, July 23, 2013 6:14:26 PM

I would like to express my concern over the proposed loop 202 South Mountain Freeway. I do not want this freeway built in Ahwatukee or on the Pecos Road alignment. I express my desire for a no build option. I believe this is a waste of taxpayer funds and that this freeway is not needed for the expansion of Phoenix. (1)

Money should be spent on alternative ideas like light rail or other non-polluting alternatives. (2)

Thank you for your time and consideration.

Kevyn Holloway
Ahwatukee Resident
85048

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

(1) I AM IN FAVOR AND STRONGLY SUPPORT THE NO ACTION/NO BUILD OPTION FOR THE PROTECTION OF SOUTH MOUNTAIN PARK AND AIR QUALITY IN PHOENIX.

(2) THE PROJECT DESCRIPTION DOES NOT CONTAIN ANY COMPELLING REASON TO PROVIDE THIS FREEWAY.

(3) IT DOES LIST REASONS TO NOT BUILD - SUCH AS A DESTRUCTIVE INCURSION THROUGH SOUTH MOUNTAIN PARK WHICH IS A UNIQUE, VALUABLE AND IMPORTANT ASSET TO THE CITIZENS OF PHOENIX AND MARICOPA COUNTY. NO OTHER CITY IN THIS COUNTRY HAS SUCH A LARGE NATURAL DESERT MOUNTAIN PARK. IT WOULD BE A CRIME TO BEGIN A PROCESS WITH SUCH NEGATIVE

(4) AFFECTS ON THE PLANT LIFE, WILD LIFE, →

5	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
7	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Issue	Response
8	**Public Involvement**	This study, which began in July 2001, is expected to be completed in 2014. During the study process, community members have had and will continue to have various opportunities to ask questions, express opinions, and provide comments about the proposed action. To facilitate public input to the environmental impact statement process, a variety of communication tools were used at major project milestones, including: · A 2-day agency scoping meeting was held with 95 agency representatives at the beginning of the environmental impact statement process. · Communication with local, regional, State, and federal agencies continued throughout the process with monthly coordination meetings. · Both the Arizona Department of Transportation and Federal Highway Administration have sought and encouraged the Gila River Indian Community to allow study of alternatives on its land for the Eastern Section. The Gila River Indian Community has not granted permission to study an alternative in detail within Gila River Indian Community boundaries. Therefore, the Arizona Department of Transportation and Federal Highway Administration have determined that an alternative alignment on Gila River Indian Community land is not feasible. · During the environmental impact statement process, over 200 presentations were made to community groups, homeowners' associations, chambers of commerce, village planning committees, trade associations, and other interested parties. · Eleven formal public meetings were held. Fifteen days prior to each meeting, display advertising was placed in The *Arizona Republic*, the *Ahwatukee Foothills News*, the *Gila River Indian News*, the *Tribune*, *La Voz*, and the *West Valley View*. Total distribution was approximately 260,000 newspapers per formal meeting. · One meeting notice flier and four newsletters were distributed throughout the Study Area in the following quantities (per distribution per meeting): 28,500 door hangers, 5,000 inserts in the *Gila River Indian News*, and 28,000 inserts in the *Ahwatukee Foothills News*. In addition, newsletters and fliers were sent to over 4,500 individuals on the project mailing list. · The November 2008 project newsletter was mailed to 78,700 businesses and residences in the Study Area and to 3,300 individuals on the project mailing list. · The February 2010 project newsletter was mailed to 62,400 businesses and residences in the Study Area and to 3,600 individuals on the project mailing list. A project Web site was developed to provide the public with project information and obtain feedback. Approximately half of comments received were submitted electronically through the Web site's online survey or e-mail. Over 5,000 comments have been received by the project team. Since 2002, the Arizona Department of Transportation has worked with a South Mountain Citizens Advisory Team, representing various stakeholder groups in the South Mountain Freeway Study Area. The group met regularly to review environmental and technical data, discuss the interests and concerns of their respective organizations, and to help find a consensus solution for this proposed project. The general public was welcome to attend each one of these meetings. There also have been various community meetings through the course of this study. For a listing of the past South Mountain Citizens Advisory Team and community meetings, visit <azdot.gov/southmountainfreeway/meeting_notices.asp#communitypast>. Additionally, individual members of the community had an opportunity to review the Draft Environmental Impact Statement, attend a public hearing, and provide comments to be included in the Final Environmental Impact Statement.

SUE HOLMES: I lived several blocks from a 10-lane freeway in California, and when I became a single parent, I specifically moved to the Ahwatukee Foothills because I had friends who had researched it. There was great schools, great little community— quiet, safe, peaceful. So I am very much against the 202 going in here.

(1)

I also work for the Kyrene School district and I don't think it's the best thing for the children. This is going to be built very near schools in the Kyrene School district. In fact, one -- I think one will butt right up to the playground area, very close, like even Desert Foothills -- Desert Vista High School, which is in the Tempe school district.

(2)

I know that often I read e-mails about the poor air quality here. This is just going to make it worse. The noise pollution, not to mention the sacredness of South Mountain, cutting into that.

(3) (4) (5) (6)

I'm not Indian. I don't live on the reservation, but I respect the sacredness of that mountain.

And like Jim Jochim said in his video, he compared it to being pregnant, "Either you're pregnant or you're not." They need to keep that mountain sacred. If they chip into it at all, I think that's taking away from

it. But I just don't think -- Ahwatukee Foothills will never be the same. It will just devastate this area and I probably will move.

Another thing is I heard that it might affect the lakes here. I bought property on Lake San Simeon and I heard last month that, if they put in the 202, it can affect the water wells here. I mean, if they indeed dry up the lakes, the beauty, this area will never be the same.

That's basically it. I'm very much against it. I just hope it doesn't go through.

7

Code	Issue	Response
7	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to State regulations/standards. (See the text box on Final Environmental Impact Statement page 4-108.) The well replacement program as outlined by State law has been regularly implemented by the Arizona Department of Transportation to effectively mitigate well impacts associated with its projects throughout the region.

1 I say NO BUILD! I lived several blocks away from a highway in California + at night laying in bed every night had to listen to all the cars, trucks, etc. making noise pollution. I moved to the Foothills here to

2 raise two children because I loved the peace + quiet great community + great Kyrene Schools.

I work for the Kyrene School District + on a daily basis am on the playground supervising kids. It makes

3 me sick to think of the 202 being built so close to so many of our schools here!

4 Not to mention cutting into the Sacred Mountain! Mowing down 100 homes + a beautiful church?? No way!

5 This highway would be a DISASTER! It would ruin the beautiful Foothills Forever + I honestly would probably move as ~~the~~ this would affect my well being negatively

Date: Wednesday, June 12, 2013 8:24:17 PM

Hi, I am writing this email to show my strong support of the planned 202 South mountain free way. I live in the Awatukee/ foothill area, by the planned 202 free way. I think the planned free way will greatly reduce the congestion on the I-10 free way and offer another route for the I-10 through traffic.

1

Also please try to make the freeway to be 0.5-1 mile south of the current Pecos road. It will reduce the negative effects of the freeway on the current community on noise, pollution, etc, while getting the benefits of the free way.

2 3

thanks, - hong

1 I don't agree with the propose 59 connection. The best option is the 101 concepts. It would minimize traffic on I10 going to sporting venues in Glendale and get west bound traffic further out of the Phoenix area. It would cost more money, but when has government been afraid of that? From a personal perspective the fact that there is no ramp at 32nd Street will 2 increase our commuting drive time.Regardless, this freeway needs to be built. Thank you

Code	Issue	Response
1	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Traffic**	The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix (see Figure 3-8 on page 3-15 of the Final Environmental Impact Statement). The interchange would have displaced more than 100 homes and would have been located near an existing high school. The storage facility is located on Gila River Indian Community land and would not be displaced. Reasonable access to the facility would remain available from 32nd Street, Chandler Boulevard, and other east–west local streets. A grade-separated bridge would be constructed for the freeway to go over 32nd Street.

Blair Houghton Document Created: 7/24/2013 6:58:34 PM by Web Comment Form

The findings of the DEIS are in parts conflicting, in parts purely specious, and have apparently been guided to reach the single goal of making the project as expensive as possible (and thus as lucrative as possible for the builders of the freeway) while avoiding meaningfully engaging the GRIC. As the GRIC has voted for a "no-build" option, it is clear they do not see a net benefit in building the freeway, and have eschewed interest in attempting to benefit from it. The residents on the other side of the boundary have also expressed little indication of benefit from it. It's clear that nobody served locally by this road will obtain any benefit from it. When the road was putatively approved, it was envisioned to have been completed almost two decades ago, at far less cost, with far less impact. The project has since grown vastly in scope and direct deleterious impact to residents. Further, the voters' choice at the time was to take the entire regional system or leave it, giving them no chance to make a detailed choice as to any particular segment, only to "approve" them all or lose those that were clearly necessary. It's reasonable to expect that some of the segments would have fallen below the line of approval if they were given a chance to place the line at will. And given that this is the last, most expensive, least utilitarian segment in the system, it is logical that this would be the segment farthest below that line. I do not believe that the people currently approve of this part of the project, despite what was voted on a long time ago. The money would be far better spent elsewhere, not least because more will have to be spent to fix what this project will break, if that is even possible.

2	**Purpose and Need, Old Plan or Use of Old Data**	
3	**Purpose and Need**	The Southwest Loop Highway—the South Mountain Freeway predecessor—was integral to the Regional Freeway and Highway System approved by Maricopa County voters in 1985. Although other facilities were considered a higher priority early in development of the Regional Freeway and Highway System, the South Mountain Freeway has been included in every subsequent update. The same route was approved by the State Transportation Board in 1988. In 2004, Maricopa County voters approved Proposition 400, which was designed to fund completion of the remaining segments of the Regional Freeway and Highway System, including the proposed South Mountain Freeway (Final Environmental Impact Statement page 1-21).

THE FACILITATOR: Thank you. Liz Hourican. Is that the correct pronunciation?

MS. HOURICAN: Great job.

THE FACILITATOR: Thanks.

MS. HOURICAN: Thank you very much. So my name Liz, and I'm a resident of Phoenix, Arizona. And I think this is a huge waste of $2 billion plus. I think that it will decrease air quality, take money away from -- you know, the opportunity cost is so high here. We need bike lanes. We need expanded public transportation, enhanced bus routes, and perhaps, you know, preservation of the freeways, but we do not need one more freeway here.

And then, of course, protecting our beloved South Mountain, the largest municipal park in the country. And we don't want a hole destroying our beautiful South Mountain that brings many, many tourists and visitors and adds to the quality of life here.

So please do not think about the stale, old ideas that might have made sense 20, 35 years ago, but the economy's different. We need to value Arizona as a tourist destination, and certainly preserve the reservation that will be destroyed, and their land, their quality of air. All this will

2	**Air Quality**	
3	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
4	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

create is pollution, contamination, poor air quality, and it doesn't make sense in this year of 2013.

So please take those opinions and make sure that you know that I represent Arizona and many people that can't be here today, and certainly in my community. Thank you.

THE FACILITATOR: Thank you. Haley Ritter.

MS. RITTER: Good morning, panel members. Thank you for letting us speak here today. My name is Haley Ritter. And I live off of 23rd Avenue and Camelback. There's a lot of horrible uranium mining going on up north, which is poisoning communities, leaving children waiting for kidneys and things like that. That type of waste is going to be transported on a type of freeway like this, which is also going to contaminate when those types of hazardous chemicals pass through. And we need to, like other folks have been saying, we need to look to alternatives means of sustaining our community.

This national park and this sacred mountain are very, very important to Arizona, and the livelihood of the species, the remainder of endangered species that live there, for example. The native community would be, and the folks that live in

1 MS. HOURICAN: So my name is Liz
2 Hourican, H-o-u-r-i-c-a-n. I'm a resident of
3 Phoenix, Arizona and I've -- this 30-year-old stale
4 idea of a new freeway is so out of date and I oppose
5 it. I oppose it regarding the opportunity costs
6 associated with the possible two plus billion dollars
7 and what we could apply that to, you know, Light Rail
8 extensions, commuter rails statewide, better
9 preservation of the native American roads that need
10 and don't get much attention compared to Phoenix
11 1,500 miles of endless freeways.
12 So, you know, we as people here, we don't
13 want this old out-of-date plan because of
14 contamination, pollution, congestion, and it will be
15 a zap on our resources and we don't deserve that. We
16 don't deserve that. This would only be for trucking
17 and big corporations.
18 And then, of course, the very all
19 important issue in Arizona that people overlook is,
20 it would desecrate the South Mountain and it would
21 desecrate the Native American land that is a
22 reservation, and it's just a small patch of land that
23 we've designated people to live on. And, you know,
24 it's so beautiful down there, and South Mountain
25 being our largest municipal park in the country.

2	**Alternatives, Nonfreeway Alternatives**	
3	**Air Quality**	
4	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.

It's a national treasure to Arizona that, you know, regarding outdoor activity, that we all should treat as a natural treasure and something that we should all protect.

So there are many, many reasons to not build this out-of-date freeway. And then, of course, if we look at the people that are the business leaders that are backing that and pushing it down our face, they all represent developers that have been pursuing business interests near the freeway, and they want their own frontage road or freeway exit, et cetera. So we see that and we oppose it and we will resist this in the fullest extent that we can regarding civil -- or resistance here in Arizona.

The people are fed up. We don't benefit from this. So there are many reasons and I hope that that will get in the record, that business only interests do not serve the greater Phoenix, the beautiful Sonoran Desert that is just impeccable.

Here we live in the northern part of the Sonoran Desert, and it is so important to protect it and preserve it for our children, our children's children, and really start living with the land. And, you know, the native American folks here, they're the original environmentalists. They know

how to protect their land, so I will stand on the side of protecting in any way that we can.

I'm with codepink.org. It's a national group. Okay. No build is the only option to conclude.

MR. VASQUEZ: My name is Roy Vasquez. I've been a resident of the Phoenix metropolitan area since 1978. I've experienced the massive infrastructure improvement of the highways during that period of time up until today and really see a need for -- for this project to go forward. More currently, I'm a resident of Laveen and will really feel the impact of this project to my family life and to the community that I live in.

One of the things that I'm in favor of is what it will do for the arterial roads improvement, the projected business improvement environment, also a much needed hospital project. That impacted me because several years ago, I had an appendix attack and I had to go way to Avondale to get that taken care of. So it will be more of a -- that was a personal view point.

I think the routing from Pecos west through the South Mountain area is important. It will give a nice viewpoint for travelers. It will

Dear Sir/Madam,

It is my believe the SM 202 will improve Phoenix's image, reduce every day traffic congestion, and related air pollution, time and money wasting. It would help the economic development in Laveen and Southwest Phoenix as well, which we could all benefit from.

1

I strong support the South Mountain Freeway project. It should be built ASAP.

Yours truly,
Wendy Huang

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1 I supporte to build 202 south mountain freeway.

Subject: South Mountain Freeway - Thumbs Up

Hi,

I am very excited about the South Mountain Freeway project for the greater Phoenix area. I moved to Phoenix almost 6 years ago and the first person that I met told me how great the 101 freeway was and that many people were opposed to it but now that it is built, everybody loves it. It did exactly what it was supposed to do and everyone is reaping the benefits. I believe the South Mountain Freeway will do exactly the same thing. Some groups may be opposed to it but I believe the vast majority of people want this built. It will make the Phoenix metropolitan area a better place to live. I've talked to about 10 people who know about the project and they all pretty much say the same things such as when will it get built, why is it delayed, it will do so much for the area.

1 This project has my full support and vote. This is the type of project that I want my tax dollars to fund. Please put this project high on the priority list.

Sincerely,

George Hubert

I am in total support in getting this new freeway completed as it will really help relieve traffic in many parts of the Valley. Look at a map and you can quickly see the one hole we have in our otherwise excellent freeway system.

I don't see the argument as to how this new freeway would increase pollution. Building this will not increase the number of cars out there in the Valley or miles driven. It will just change where they are. Instead of stop and go traffic they are now stuck in they will be able to run more efficiently on the new freeway without stopping. It is amazing how a few NIMBYs (Not In My Back Yard) can hold the entire region hostage.

make -- relieve all the traffic congestion that goes through Interstate 10 through downtown. Having experienced that traffic jam, this will really be an improvement. Thank you very much.

MRS. HUGHES: Ray and Karen Hughes. Well, we were just curious because of the wall is probably going to be in our -- I mean, right -- we're going to be right up against the wall, so we were just curious how high it would be and, you know, is it going to take the place of our -- our property wall that's in the back or what the -- you know, how loud is it going to be with it being right there, you know.

MR. HUGHES: So right now, we see that the alignment is -- they have the right-of-way line is literally on our back property wall. And so we were talking to the noise folks down here, and they explained to us what they -- the study that they've run and that it can be anywhere from 6 to 20 feet tall. And we're just curious when those designs will be finalized and how tall the wall will be and then also how close it would be to a property wall. That's all.

And then the other thing that we're very interested in knowing is when will the decision be

Code	Issue	Response
1	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. As mentioned in the sidebar on page 4-91 of the Final Environmental Impact Statement, the Draft Environmental Impact Statement is based on preliminary design and traffic information. As the design would progress to the Final Design phase, if an action alternative were to become the Selected Alternative, noise barrier locations and heights would be refined and finalized. During Final Design, more detailed information on the location, actual height, and distance from the property line of each noise barrier would become available. Noise walls would mostly be located at the edge of the freeway lanes, not at the property line.

2

made on a final bill? We've been in limbo with our home because at one point we were in the right-of-way and now we're not which is okay, but we're just trying to plan obviously for the future and any improvements we'd like to make on the home and all that. Obviously we won't do that if we were remaining in the right-of-way and they want to take it.

So, you know, I think that's all we have to say. We're just more interested in how they would design the wall with those property owners that it would be right up against, so.

MR. HANCOCK: My name is Jordan Hancock. I'm a student over here at Chandler-Gilbert. I first learned of the freeway through a friend. She's from the Akimel O'odham tribe, Gila River. She's from the reservation, the Pima reservation, where ADOT was -- there was three options, from my understanding, of the freeway, and they first tried to push it onto their land.

And I became aware of some of the abuses that they were doing, especially from the contractor Pangea, that they were going to pay to build the freeway on the Gila land. So that's when I first became aware of this and became opposed to the

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. I support construction of the 3rd Freeway ONLY if it can be located South of Pecos on the Gila Indian Land or even further south to facilitate a truck bypass. I do not support construction along Pecos Rd in any manner. The impact on the air quality and quality of life in general are my main objections. In addition as an avid cyclist I am concerned over the loss of Pecos Rd which is a main bicycle path in this community. There is no identified alternative to Pecos Rd for cyclists.

Code	Issue	Response
1	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
3	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
4	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Air Quality**	
6	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
7	**Design**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.

1 cities. My concern with the way that it's being
2 built is that we lose east access and west access,
3 because currently there's going to be no side roads
4 or no interchange at 32nd Street. That will
5 effectively put us out of business, because people
6 that are towing fifth wheels, boats, driving big RVs
7 aren't going to want to make the extra additional
8 three miles to go around Chandler Boulevard and up
9 32nd Street.
10 Is there any thoughts that you guys have
11 put into what to do with 32nd Street to make that
12 more accessible to the east and the west for us?
13 THE FACILITATOR: Sir, this isn't a Q&A.
14 MR. HUISH: Oh, I'm sorry.
15 THE FACILITATOR: That's okay, you're
16 welcome to provide your comments. This just isn't a
17 Q&A-type environment.
18 MR. HUISH: Oh, I apologize. Okay, well,
19 that was my concern. Again, we've been there for 4,
20 4 1/2 years. We do a good business. We serve
21 Ahwatukee, Gilbert, Tempe, Chandler, and we have to
22 access from three points, and we'd like to have some
23 type of access so we can continue to do business.
24 Thanks.
25 THE FACILITATOR: Thank you, sir.

Code	Issue	Response
1	**Traffic**	The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix (see Figure 3-8 on page 3-15 of the Final Environmental Impact Statement). The interchange would have displaced more than 100 homes and would have been located near an existing high school. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement). There are no provisions for frontage roads connecting 32nd Street to 40th or 24th Streets in the project again because of right-of-way constraints. Access to 32nd Street would remain available from Chandler Boulevard and other east–west local streets.
2	**Acquisitions and Relocations**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

P R O C E E D I N G S

MR. HUISH: I'm Dale Huish, H-u-i-s-h, and I'm the owner of Pecos Storage, which is located on the south side of 32nd Street and Pecos.

My concern is currently we have three directions of access, which is east and west, both on Pecos, and then north on 32nd. The current -- I should say with South Mountain currently, if the freeway goes through, we would lose our east and west access. We would only be accessed by 32nd Street, where currently we have access from the east and west, severely impacting our customers' ability to get in and out with RVs, with fifth wheels, with both. It would create a three- to four-mile extra drive than they currently have. (1)

Right now, approximately half of our customers access us through 32nd Street and the other half come from Pecos Road. It would probably put us out of business if we were not able to come to a resolution, either be relocated, bought out, getting access somehow off of the freeway. (2)

That's it.

Document Created: 7/24/2013 9:54:23 AM by Web Comment Form

I oppose the South Mountain Freeway Loop 202 extension for the following reasons.

(1) (2) (3) •Increased traffic and congestion: Benefits of new highway construction are typically short lived.
New freeways encourage additional vehicle use, and the new "uncongested" areas are soon just as congested as other roads in the area. This congestion further exacerbates air quality issues, resulting in more pollution spread out over a larger area.
Additionally, these new roadways promote suburban sprawl. The new access to areas previously undeveloped results in new housing, shopping, and business centers, and people must drive longer distances to reach their homes, schools, or work, creating more traffic and congestion. Sprawl also affects our standard of living by making car ownership mandatory. Without efficient transportation options, it becomes critical to own a car in order to participate in our society. Funding highway projects disproportionately with other transportation options severely limits our choices.

(4) (5) (6) •Diminishing air quality and increased potential for health problems and environmental degradation: More vehicles travelling more miles equal more pollution. This is a problem for public health as well as environmental health. The Phoenix area already suffers significantly from poor air quality, much of it related to vehicles. Pollution from vehicles also contributes significantly to climate change.

•Increased dependence on fossil fuels and energy waste: An increase in the daily vehicle miles
traveled further increases our dependence on foreign fuel sources and puts even more strain on the natural resources of our own country.

(3) •Burden on the local tax base: Construction and maintenance of highways and the development
associated with them increases our tax burden. When a new residential or commercial development is built outside of an existing community, roads, sewer systems, and water lines have to be built to service the urban sprawl. In most cases, neither the developers nor the new residents pay their full, fair share – it is the rest of the community that makes up the difference. In most urban areas, the middle class and poor bear a disproportionate share of this burden. Additionally, most new, sprawling development costs more to build and service than the taxes or fees it generates.

(7) •Destruction of habitat and dissection of wildlife corridors: Roads have been identified as a major threat to the persistence of many wildlife populations. They result in increased mortality, habitat loss and degradation, reduced access to vital resources, and division of populations. The proposed South Mountain Freeway will not only destroy habitat and result in direct mortality of some wildlife, but it will also bisect an important corridor that allows movement between South Mountain Parkland the Sierra Estrellas Mountains, as well as to other areas.

•Inefficient use of valuable land: Smart growth ideas are based on the ability to use land efficiently and for the greater good of the surrounding communities. It enables us to preserve open space and habitat while also making it easier for residents to live and work, thus

Code	Issue	Response
1	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Secondary and Cumulative**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
4	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Air Quality**	Not all vehicle miles travelled are equal in terms of air pollution. Driving in congested traffic, at slow speeds, is suboptimal in terms of fuel efficiency and tailpipe emissions. Also, due to fleet turnover (older vehicles being replaced by newer ones meeting tighter U.S. Environmental Protection Agency emissions standards), emissions can decrease in the future even if traffic increases (for an example of this, see the projection of mobile source air toxics emissions in the Final Environmental Impact Statement on page 4-77). This is how the proposed action is expected to lower regional air pollution levels (see response #2).

(Responses continue on next page)

Code	Comment Document
	enhancing quality of life. The amount of valuable space used up by the construction of freeways further hinders the ability of smart growth plans to be implemented and maintained successfully. Alternatives to the Proposed Freeway Include: •Increase funding for clean public transportation options such as fuel-efficient buses and rail projects. 8 •Encourage Transit-Oriented Development to integrate public transit, land use (residential,commercial, industrial, open-space), and the environment. •Encourage innovative, incentive-based programs that encourage walking, biking, carpooling, or the use of public transportation. 9 •Authorize zoning decisions that encourage mixed-use development.

Code	Issue	Response
6	**Air Quality**	Climate change is an important national and global concern. While the earth has gone through many natural changes in climate in its history, there is general agreement that the earth's climate is currently changing at an accelerated rate and will continue to do. Human-caused greenhouse gas emissions contribute to this rapid change. Carbon dioxide makes up the largest component of these greenhouse gas emissions. Other prominent transportation-related Greenhouse gases include methane and nitrous oxide. Greenhouse gases trap heat in the earth's atmosphere. Because the atmospheric concentration of greenhouse gases continues to climb, our planet will likely continue to experience climate change-related phenomena (see Final Environmental Impact Statement pages 4-85 through 4-86). To date, no national standards have been established regarding greenhouse gases. Greenhouse gases are different than other air pollutants evaluated in federal environmental reviews because their impacts are not localized or regional due to their rapid dispersion into the global atmosphere. The affected environment for greenhouse gas emissions is the entire planet. In contrast to broad-scale actions such as those involving an entire industry sector or very large geographic areas, it is difficult to isolate and understand greenhouse gas emissions' impacts for a particular transportation project. Furthermore, presently there is no scientific methodology for attributing specific climatological changes to a particular transportation project's emissions. Under the National Environmental Policy Act, detailed environmental analysis should focus on issues that are significant and meaningful to decision making. The Federal Highway Administration has concluded, based on the nature of greenhouse gas emissions and the exceedingly small potential greenhouse gas impacts of the proposed freeway (as shown in Final Environmental Impact Statement Table 4-37 on page 4-85), that greenhouse gas emissions from the proposed freeway would not result in "reasonably foreseeable significant adverse impacts on the human environment" [40 Code of Federal Regulations § 1502.22(b)].
7	**Biology, Plants, and Wildlife**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.

9	**Planning**	Growth patterns and densities are largely determined by each respective jurisdiction's land use planning decisions, as identified in its General Plan and implemented through its local zoning decisions. In the Laveen Village area, the Phoenix General Plan identified an employment center along the Preferred Alternative at Dobbins Road. This center, envisioned as areas of mixed land use, is not inconsistent with the concept of smart growth, which concentrates growth in compact, walkable urban centers to avoid sprawl.

Steven Humbert Document Created: 6/19/2013 4:42:55 PM by Web Comment Form

1 I, respectfully, would like to submit that in the vicinity of the north west alignment of the Loop 202 South Mountain Freeway exist several establishments that engage in transportation of oversize loads. Access ramps to the Loop 202 South Mountain Freeway, particularly at Lower Buckeye, would likely be destined to serve in the future as a significant and major gateway for access to the statewide freeway system. Oversize loads including bridge girders with overall load lengths of 150 to 200 feet are not uncommon. I would request that consideration be given to the appurtenances and configurations of these ramps and the approaches to these ramps including medians, islands, lighting, signage, signals, turning radius, utilities, lane run outs, etc. to facilitate and accommodate the freeway access and transport of oversize loads. Thank you.

Code	Issue	Response
1	**Design**	The design vehicle used to design the intersections and ramps would be in compliance with standards and reflect anticipated turning movements of the larger vehicles.

1	Mozette Humphreys Document Created: 6/16/2013 10:11:11 PM by Web Comment Form I think that this is a great plan. I actually purchased the home that I'm currently living in because of the proposed South Mountain 202 extension. I have been very disappointed that the process has taken so long. I am anxious to have a more user-friendly connection to the rest of the Greater Phoenix area.

Subject: comment on proposed South Mountain Freeway

To Whom It May Concern:

1

Please, please, please approve a "No Build" option for this leg of the 202 freeway!!! We have been homeowners in the Ahwatukee Foothills for 13 years and thoroughly enjoy it just as it is!

2 3 4 5 6 7 8 9 10

This proposed freeway, no matter if built on Pecos or Gila River land, would DEVESTATE our community!!! The pollution will sit against South Mountain and choke us, the traffic noise will be deafening to our tranquil environment and the destruction of our church and hundreds of homes is unthinkable!!! This freeway will simply turn our community into a filthy truck bypass running from Mexico to Canada, which could easily be constructed further south with Hwy 8 thru unused desert! This freeway is also tremendously UNNECESSARY! We rarely travel to the NW valley, except for an occasional football game, and when we do, I10 works just fine! It will not even save any commuting time for our downtown workers, because it comes out on the far end of the metro area.

11 12

ADOT and MAG – PLEASE update your antique 30-year road plan with one of today's needs and growth (i.e. light rail), instead of hanging on to something that makes NO SENSE any longer! Would you still be using a computer from 30 years ago… or even a car from 30 years ago – NO!!!

Thank you for allowing my input,

Bobbi K. Hunt

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
4	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
6	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Trucks**	
8	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
9	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
10	**Purpose and Need**	An analysis of the origins and destinations of projected freeway users is presented in Figure 3-18, on page 3-36 of the Final Environmental Impact Statement. Freeway users are defined as those motorists who pass through the bend of the freeway (around the South Mountains). So, this does not count motorists in Laveen Village who go to Interstate 10 (Papago Freeway) and motorists in Ahwatukee Foothills Village who go to Interstate 10 (Maricopa Freeway). The results of the origin-destination analysis show that 73 percent of the traffic going around the South Mountains has origins or destinations in the area within or around the Study Area and supports the conclusion that the proposed action would serve east–west mobility consistent with commuting movements.
11	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
12	**Alternatives, Nonfreeway Alternatives**

THE FACILITATOR: Thank you, sir. Stephanie Hurd. As soon as we finish with Stephanie, we're going to change the panel out and take a ten-minute break.

So Stephanie, if you are ready.

MS. HURD: Can I request that -- I'm here with somebody, she's behind me, she's just going to talk, keep it faster, so can you break after her? Just because we've got to leave. It will be so fast. Do you want me to --

THE FACILITATOR: All right. She can come up to this microphone and get ready to speak.

MS. HURD: All right. Can I go?

THE FACILITATOR: The panel is fine with that.

MS. HURD: Okay. Thank you.

THE FACILITATOR: Yes.

MS. HURD: I can go ahead?

THE FACILITATOR: Go ahead.

MS. HURD: Okay. Well, I obviously support South Mountain Freeway, but because it will cut traffic congestion, reduce air pollution, and save drivers time and money. The South Mountain Freeway is the responsible thing to do, because the City has grown and will continue to grow and get much

worse. I don't want to move because the traffic is unbearable, and I don't have stores, restaurants, hospitals, et cetera. They're waiting for this freeway. I like where I live. I live in Laveen, and I love the rural part of it. I love South Mountain, but it's just unbearable. And I already know people that are failing because of it, and we have worked so hard to make it be a nice, good city that I don't want to see it go downhill.

I would also like to request that the freeway be pleasing to the eye, decorate it. I was on the east side of the airport the other day; it had like cute little purple swirls; it had a little, I don't know, Hopi Indian decorated things; it just made it look so much nicer, and I think especially in that area that would be great. The last eleven years I've lived all around South Mountain, Ahwatukee, South Phoenix, and Laveen. I have always been for the freeway, no matter where I've lived, just because I understand it's the right thing to do with the city growing so much. And we all love and appreciate South Mountain. Please make it happen, thank you.

THE FACILITATOR: Thanks.

We're going to take a ten-minute break to change out the panel. When the ten-minute period is

Code	Issue	Response
2	**Visual Resources**	The Arizona Department of Transportation Roadside Development Section is responsible for assigning a wide range of standard treatment applications and wall materials, including color, to noise barriers and other structures. Typically the community where the wall will be constructed would work closely with its City Architect or planning department to decide on a theme for the wall. Usually, this can be accomplished by using the Arizona Department of Transportation's standard applications. As an example, for State Route 101 Loop (Pima Freeway) in Scottsdale, the City of Scottsdale chose to add public art to the noise barriers. The City's intent went above and beyond the Arizona Department of Transportation's guidelines of reasonable aesthetic treatment and, therefore, the Arizona Department of Transportation did not fund the aesthetic portion of the project. The Arizona Department of Transportation and the City of Scottsdale entered into an intergovernmental agreement for the purposes of allowing Scottsdale rights to design and construct artistic embellishment on the Arizona Department of Transportation-supplied noise barrier. The Arizona Department of Transportation provided the funds for construction of the noise barriers themselves, but the City of Scottsdale provided the funds to cover the aesthetic portion of the walls. Final Environmental Impact Statement page 4-171 explains the process municipalities might take to achieve the desired aesthetic treatment for noise barriers or other structures.

(1) (2) (3) (4) (5) As a life long Ahwatukee native, I STRONGLY OPPOSE the building of the proposed expansion along the Loop 202 South Mountain Freeway. This solution does not seem logical as it would destroy numerous homes within the area and community churches, it will highly impact schools that lie along Pecos Rd and within the immediate surrounding community of Lakewood, it will increase pollution in the area impacting our children's health and the health of the general community and it will destroy pristine habitat for local wildlife. This will without a doubt dampen the beauty of the community of Ahwatukee and will decrease home values for those communities that lie along the freeway. Cheaper is not necessarily smarter.

(6) Building upon our current public transportation systems such as the Light Rail and bus systems seems like a more logical route to go. In the long run, if the city of Phoenix wants to grow and continue to make room for our growing community, it needs to look to other big cities such as Chicago and New York for guidance an build better public transportation systems. This will help the populations in bordering cities travel to and from their homes on the East and West sides of the valley to central Phoenix, Scottsdale and Glendale areas. If we really want to lower the amount of pollution we have in Phoenix, we need more incentive to decrease the amount of vehicles on the road. Building more freeways only encourages people to continue to use their own vehicle and deters them from utilizing more environmentally friendly options such as using our public bus system, light rail system, and car pooling.

(7) Please help keep Ahwatukee a beautiful, vibrant and healthy place to live and raise a family in the "big city." Ahwatukee is truly a unique place to grow up and holds a very special place in my heart, as well as in the hears of thousands of other families here.

3	**Health Effects**	
4	**Biology, Plants, and Wildlife**	
5	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138 -47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
6	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. 7	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

Code	Comment Document

adding trucks and a longer length of I-10 that will congest the traffic even more, so the faster you can get them off I-10, the better off we will all be.

Other than that, I hope that they build it quickly, you know, cause this would not take forever to build.

Okay. Thank you very much.

MR. HUSTON: I just want to say that I am in favor of the project and after I've reviewed all the boards and the entire process, it seems to make sense what they've narrowed it down to. I think, based on cost alone, it seems like 59th is the best alternative. If cost weren't a factor, I think some of the ones that go further to the west would also be nice to help tie into the west valley. It seems like a long time coming.

It seems like a great project. I think it would be good for, not only our freeway system, but putting people back to work. Overall I just think it would be a really good thing for the community.

That's it.

MR. BAREHAND: My name is Harlan Barehand. I'm from the Gila River Indian Community. I'd like to thank ADOT for finally listening to us and not putting it on the Reservation. I just got through seeing a video next door; it was beautiful. I think it works out fine.

Re: Loop 202

The idea of putting an inter-state and international truck route short-cut through Ahwatukee is an extremely costly mistake. Not only is it the cost of the hundreds of homes & businesses that will be destroyed. The cost also air and noise pollution, an inevitable increase in crime, and definitely the quality life in Ahwatukee. It will no longer be the delightful community we enjoy living in now.

I agree that trucks need to bypass Central Phoenix, but an alternative is obvious. Trucks should have been routed

5	**Noise**	
6	**Neighborhoods/ Communities**	While the City of Phoenix Police Department reported in 2005 that it did not have any statistics specific to crime adjacent to freeways, the Police Department did note that, based on its experience, there does not appear to be a correlation between crime rates and freeways. See Final Environmental Impact Statement sidebar on page 4-21.
7	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

Code	Issue	Response
8	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. An alternative that would run along Interstate 10 in Casa Grande to State Route 85 from Gila Bend to Interstate 10 was considered (see text on page 3-9 of the Final Environmental Impact Statement). State Route 85 is currently being reconstructed as a four-lane, divided highway with limited-access control, and Interstate 10 is a four-lane, divided Interstate freeway with full access control. Existing signs at each terminus designate the route as a truck bypass of the metropolitan Phoenix area. This route would continue to be available for interstate and inter-regional travel, but it would not meet the proposed action purpose and need as part of a regional transportation network and, therefore, it was eliminated from further consideration.
9	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Code	Comment Document

Will the public vote on the proposed freeway?

NO

"No public vote will be held as part of the Draft for the Environmental Impact Statement review process."

On page 9 in the pamphlet: Public Participant Guide by ADOT it states, "The proposed Loop 202 South Mountain Freeway was first included in funding approved by Maricopa County voters in 1985. It was also part of the funding passed by Maricopa County voters in 2004 through Proposition 400 for implementation of the Regional Transportation Plan."

Really, we in the Ahwatukee/Foothills were not notified that was slipped into this Plan, unnoticed.

Since then, multiple builders were allowed to build and build for the last 25 years without regard or restrictions to any future freeway plans. The building department of Phoenix, the State of Arizona and ADOT never gave guidelines to locate, designate or place restricted land boundaries for a future freeway on any builders or home buyers.

Today in 2013, the costs of right-of-way acquisition of 733 to 1304 homes and 41 businesses, utility relocations and underground mining repairs are estimated to be 1.3 to 2 hundred million, before construction starts. It's outrageously costly for tax payers.

I urge taxpayers to write protest letters to ADOT before the July 24th deadline.

Annita Yhe
2713 E. Colorado Rock Dr

Code	Issue	Response
1	**Public Involvement**	No public vote was held as part of the Draft Environmental Impact Statement review process. Members of the public were encouraged to participate and submit their comments on the Draft Environmental Impact Statement during the 90-day comment period. The proposed Loop 202 South Mountain Freeway has been a critical part of the Maricopa Association of Governments' Regional Freeway and Highway System since it was first included in funding approved by Maricopa County voters in 1985. It was also part of the *Regional Transportation Plan* funding passed by Maricopa County voters in 2004 through Proposition 400
2	**Social Conditions**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.) While the City has some ability to control development through its zoning ordinances, the City does not have the authority to stop private land from being developed. The Arizona Department of Transportation was able to acquire large tracts of land along the Pecos Road alignment in the 1980s, but funding shortfalls kept the Arizona Department of Transportation from acquiring all of the needed land. Developers were aware of the potential freeway and made the decision to develop the land based on the risk that the freeway would eventually be built. Citizens were also aware of the potential and chose to buy homes near the freeway despite the same risk. Information related to freeway awareness and the responsibilities of the City of Phoenix, developers, and the Arizona Department of Transportation related to disclosure of the planning for the freeway is presented on page 4-13 of the Final Environmental Impact Statement.
3	**Acquisitions and Relocations**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

more trains and things like that. Oh, and no more building near our home, please. We want to respect the Indian reservation. We want to work in cooperation with them. Thank you.

UNIDENTIFIED SPEAKER: So we live on Pecos and from what I see on the map over there, there's going to be a new bridge that's being built and I don't want it to ruin my home. There's not going to be any type of privacy. People can look right down into my home. I mean, sure there will be a wall, but you can still see over it. It's going to cause more accidents. What if accidents come over the wall into our home area and destroy it, and that's something I don't like. Please, please stop building it. Thank you.

MS. INNIS: Hi, I'm Lillian Innis and I lived in the Gila River community for quite some time, and I've also lived in Ahwatukee for a couple of years and I've been going to school in Ahwatukee since I was in kindergarten, and I do not like this freeway or I do not -- I feel like what some people say that, like, the freeway is going to do, I feel like it won't meet up to their expectations. And a lot of them think money first instead of with, like, actual thoughts of future generations and me when I

grow up and how I will be affected and my children's children.

And I also feel like all the health, like, complications to bring up, it's just crazy. Because I take early childhood and we talked about how freeways affect children and development and birth, and it's -- it's not good, like, at all. And I don't see how people can, like, just sit there and say they're for it without even thinking about all this stuff before and ahead of time.

And people are going to wish they didn't have this freeway. Like in, like, hundreds of years, they're going to wish we, like, stopped now and stopped, like, building stuff. And we don't have the money to build this stuff anyways, in the first place, with our economy. So, yeah, that's how I feel about this freeway.

MR. BRIGGS: Tom C. Briggs. And then -- I'm trying to think. My one suggestion would be is, try to work at removing the 32nd Street bridge and work to provide the U-Haul storage place with access through the tribal lands. No need to build a multibillion dollar bridge for that sole business's benefit. That's one.

The other comment would be within the

LOOP 202
South Mountain
Freeway Study

2013

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. DEAR ADOT:

WE ATTENDED THE PUBLIC COMMENT OPEN HOUSE IN CHANDLER, AZ RECENTLY CONCERNING THE BUILDING OF THE SOUTH MOUNTAIN FREEWAY. (1) WE ARE TOTALLY OPPOSED TO THE BUILDING OF THIS FREEWAY. (2) THIS WILL BE NOTHING MORE THAN A TRUCK BY-PASS AROUND SOUTH MOUNTAIN, TO BENEFIT THE MEXICO - U.S. - CANADA CONNECTION.

THE ADOT ALWAYS SEEM TO TOUT THE BENEFITS THAT MIGHT ACCRUE, BUT YOU NEVER SEEM TO MENTION THE COSTS INVOLVED, NOT JUST FINANCIAL COSTS, BUT THE HUMAN COSTS; (3) DESTRUCTION OF PARTS OF SOUTH MOUNTAIN, THE LOSS OF HOMES, BUSINESSES, (4) (5) SCHOOLS, PLACES OF WORSHIP, ENVIRONMENTAL DEGRADATION OF THE AREA, SUCH AS TOXIC SALTS AND OTHER POTENTIALLY CATASTROPHIC (6) DAMAGE.

THERE IS ALREADY A BY-PASS AVAILABLE FROM (7) HIGHWAY 85, UPGRADED TO INTERSTATE STATUS, (COVER)

MS. FINNER: My name is Jill Finner, F-i-n-n-e-r.

I would like to voice my support of building the 202 freeway, specifically the West 59th alternative. I'm a mother of small children. I've been a leader of a moms' group of over 70 moms which represent over 70 families, and we are constantly driving almost 30 minutes to other cities to find entertainment and dining options for family get-togethers and outings and play dates.

I would also like to request an attractive sound barrier and bike/running/pedestrian paths along the length of the freeway, such as the San Antonio, Texas, freeway system.

I'm in opposition to building a new casino and hotel that our current infrastructure cannot support.

We would like to bring the Ahwatukee and Laveen communities together, and the longer we wait to build, the more the cost of construction will increase. I would like to build it.

Thank you.

1 L-y-n-w-o-o-d I-s-l-a-u-b.
2 My prime concern is that the impact study does
3 not take into account the congestion that's going to be
4 created on Chandler Boulevard. Pecos Road currently
5 carries a significant amount of traffic that goes out to
6 the eastern end of South Ahwatukee -- or the western end
7 of South Ahwatukee. All traffic is now going to be
8 funneled onto Chandler Boulevard. They're even building
9 an extension of Chandler Boulevard out to 27th Avenue.
10 All those residents will now, because they won't have the
11 access to Pecos Road, be coming down and funneling onto
12 Chandler Boulevard.
13 The residents between 40th Street and 24th Street
14 are all going to lose their access point because
15 32nd Street won't have an on-ramp or off-ramp. There
16 won't be any perimeter roads on this freeway as there are
17 on most other freeways in the Valley, so the residents
18 will all funnel onto Chandler Boulevard and traffic will
19 become gridlock. There's no alternative. The way
20 Ahwatukee is built, Chandler and Ray loop up in the
21 24th Street area, but from that point on, it's Chandler
22 Boulevard all the way out to 27th Avenue, and that's a
23 concern.
24 I think it's going to become a significant issue
25 for the residents in the southwestern portion of

Page 4

Code	Issue	Response
1	**Traffic**	The extension of Chandler Boulevard west of 19th Avenue is included in this project because reasonable access must be maintained to the neighborhoods at the west end of Pecos Road (see Figure 3-33 on page 3-57 in the Final Environmental Impact Statement). Early in the study process a traffic interchange at approximately 27th Avenue was evaluated but ultimately eliminated because of increased residential displacements and cost. Traffic that currently uses Pecos Road will be able to use the freeway once it is constructed. The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours may be needed during construction. (See Final Environmental Impact Statement page 3-27.)
2	**Traffic**	The determination to not include an interchange at 32nd Street was made in coordination with the City of Phoenix (see Figure 3-8 on page 3-15 of the Final Environmental Impact Statement). Construction of the interchange would have resulted in the displacement of over 100 homes and the interchange would have been located near an existing high school. Access to 32nd Street is to remain available from Chandler Boulevard and other east–west local streets. In 2006, the City of Phoenix conducted a traffic circulation study to evaluate the impacts of the proposed freeway on the local street system, including the shift of access to Foothills Reserve and Calabrea from Pecos Road to Chandler Boulevard. The City study found no adverse effects on the local street system from the freeway (see Appendix 3-1 in the Final Environmental Impact Statement). The traffic projections for Chandler Boulevard (see Figure 3-12, on page 3-29 of the Final Environmental Impact Statement) show a reduction with the proposed freeway when compared with conditions without the proposed freeway.

Ahwatukee -- southeastern portion of Ahwatukee.
That's all I have to say.

* * *

MR. ELTERS: My name is Bassam Elters, B-a-s-s-a-m E-l-t-e-r-s.
My comments are that I support the Loop 202. I've lived in Arizona for 30 years and in the Valley for nearly 10 years. The traffic congestion in the area needs a practical solution. This corridor has been a part of the regional plan for years. The voters approved it twice, and it's time to build it.
That's it.

* * *

MR. NOVAK: My name is Will Novak, N-o-v-a-k.
I just wanted to put in a comment that I hope they don't build anything and save the billion-and-a-half dollars and do something else with it, like build some light rail trains or plant 15 million trees or build a commuter rail, any of the number of things we need in Phoenix.
This is a city that is really -- we've got our

1	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. 3 4

cultural impacts, coupled with the inevitable health hazards, extend past Komatke, and ultimately, affect not only the Gila River Indian Community, but all four O'odham tribes, the Akimel O'odham, the Tohono O'odham, the Ak-chin tribe, and the Salt River tribe. We all hold South Mountain sacred as it is central to our reservation's story.

3

My people, my family, my relatives, my fellow tribal members, our health is at stake, and our cultural rights are in jeopardy. This freeway project has divided the community with money and false promises as the main culprits. My concerns also extend to the surrounding communities. I resided in Ahwatukee for years. My children have attended school in the Kyrene School District since kindergarten. The negative business externalities will affect us all, and as you can see, I am strongly opposed to this freeway. Not only as an O'odham woman, not only as a mother, but as a citizen of this community. We need to be better stewards of this land, making wiser decisions with our future generations in mind.

3

Arizona, in particular Phoenix, is cited as one of the most unsustainable cities in America. To continue to build and expand exponentially, without

4	**Health Effects**	
5	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.

THE REPORTER: Please state your name.

MS. JACKSON: My name is Renee Jackson, and I'm a member of the Akimel O'odham tribe in Central and Southern Arizona. I reside in the Va ki Village, District 5. And there are several reasons why I oppose the freeway. In addition to cultural preservation and land preservation, there are several discrepancies in the DEIS that I became aware of.

One of the most concerning omissions is the lack of information about the trucks coming in from Mexico. I understand that Mexican regulations are different from those of the U.S., and those have not really been talked about in the EIS. And I think it's a huge, huge error to leave that information out. I know that another reason -- I know that the DEIS, or at least concerning the air pollution only extends to about one-fourth of a mile from the freeway itself. But as we all know, pollution does not sit, especially air pollution, does not sit and stay in this corridor of one-fourth mile from the freeway.

And there is a huge concern about the village of Komatke, located in the west side of Gila River. There is almost a bowl that is created. The

Code	Comment Document

valley between South Mountain, Moadahk, and -- South Mountain, Moadahk, to the Komadk, which is also known as the Estrella Mountain range, creates a bowl effect and all that pollution sits between -- in that valley.

Now, there's -- Komatke is one of the biggest villages that we have here in the Gila River. There's many children, schools, churches, Boys & Girls Center, and many, many residential homes. Now, there are already health concerns in our community, and the added pollution that this freeway would create is just adding to that problem. And I understand the argument that it's because the metropolis of Phoenix is growing, that we need to have this infrastructure in place now. I believe that money and effort could be put into the public transportation systems, extended light rail, light pass, et cetera.

What a lot of people fail to understand is we live in a desert. We have limited resources, and we have to think smarter about how we build. Another freeway is not going to alleviate the air pollution, as they state, it's merely going to -- it's merely going to move that pollution to our community.

The other concern is that the lack of

3	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Alternatives**	Federal regulations stipulate that an environmental impact statement shall "rigorously explore and objectively evaluate all reasonable alternatives" (40 Code of Federal Regulations § 1502.14; see Final Environmental Impact Statement page 3-1). All alternatives were screened using a multidisciplinary set of criteria. Nonfreeway alternatives were considered (see Final Environmental Impact Statement pages 3-3 through 3-6). Among other things, the study took into account improving existing freeways, improving or expanding other travel modes, strategies to reduce travel demand, and various roadway configurations. This study examined not only the potential impacts from improvements, but also the consequences of building nothing, the No Action Alternative. As proposed by the Maricopa Association of Governments, the South Mountain Freeway would be part of the Regional Freeway and Highway System. Other transportation improvements such as mass transit and local roads are specified in the *Regional Transportation Plan* and were considered during the evaluation of this proposed new freeway. As noted in the Final Environmental Impact Statement (see page 3-60), the proposed freeway would provide opportunities to enhance operation of future mass transit improvements.
5	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

information and the lack of participation that ADOT and MAG have given to the Gila River Indian Community, outside of this public forum. There has been little participation in getting information to the people of the community. I believe that everyone in the community has not had enough information about this freeway, and the fact that that lack of participation from the State to our community and the fact that this time to comment is very short is going to give it a skewed interpretation of how Gila River feels.

7

There was not -- there's not enough outreach to the community. There's not enough availability for the community to give their concerns other than these forums. I believe that this forum itself, today, is another way to silence the people of Gila River. There should have been greater emphasis of having community members be able to speak about how they feel about the freeway. Not just about the environmental, the health hazards, but more about culture and the significance of the mountains to us.

The Gila River Indian Community passed a resolution in 2007 declaring that Moadahk, the South Mountain, is cultural property of our tribe. We find

Code	Issue	Response
7	**Public Involvement**	Communication and coordination with the Gila River Indian Community is described in Chapter 2 of the Final Environmental Impact Statement. A summary of the outreach related to the Draft Environmental Impact Statement is presented beginning on page 6-23 of the Final Environmental Impact Statement. Additional details of this outreach is provided in the following and in Appendices 6-4 and 6-5. After publication of the Draft Environmental Impact Statement, members of the Gila River Indian Community were provided opportunities participate in the environmental impact statement process. The Draft Environmental Impact Statement was published and released to the public for a 90-day comment and review period beginning April 26, 2013, and concluding July 24, 2013 (twice the 45-day comment period required by regulation). In developing this plan, the team also considered specific characteristics of the communities within the Study Area, in conjunction with knowledge gained from previous study-related public involvement efforts. Based on these factors, the following special outreach considerations were integrated into the plan: · Use advertising and graphics to reach illiterate or environmental justice populations · Use bilingual outreach materials, available upon request · Use Hispanic media outlets · Integrate elected officials, intergovernmental liaisons, and special interest groups into the process · Hold the public hearing along transit lines for those who are transit-dependent The Draft Environmental Impact Statement public outreach strategy included four main components: 1) an awareness campaign; 2) the public hearing; 3) an online public hearing; and 4) community forums. Briefings were provided for the Gila River Indian Community, Community Manager (David White). The Draft Environmental Impact Statement was made available online at <azdot.gov/southmountainfreeway>. Electronic versions of the Draft Environmental Impact Statement were distributed to 119 staff from public agencies on April 26, 2013 (including multiple Gila River Indian Community departments). Hardcopies were also made available for viewing at five locations. Prior to the public hearing, a mailer providing notification of the release of the Draft Environmental Impact Statement and the upcoming public hearing was distributed to approximately 87,000 residents and business within the Study Area, as well as to individuals on the project stakeholder mailing list. The mailer also included an overview of the study and Preferred Alternative and information regarding the shuttle buses to the public hearing, including pick-up and drop-off times. Detailed information regarding the public hearing and the various methods to provide comment on the Draft Environmental Impact Statement were also included. The public hearing was the only location that provided a formal 3-minute public comment opportunity. To optimize the opportunity for public participation and, in particular, participation from identified Title VI populations, the Arizona Department of Transportation offered free shuttle bus service to and from the public hearing, located at the Phoenix Convention Center. Service was provided at three times during the day at two locations on the Gila River Indian Community (Komatke Boys and Girls Club and the Gila River Indian Community Tribal

8

that mountain sacred and it is equivalent to a church to us. Any disturbance to our church is still a disturbance, whether as much as ADOT wants to believe that they are trying not to displace wildlife or cut into the mountain more than they have to, it is still a disturbance to the mountain, and to our spiritual well-being as O'odham people.

I believe that -- I know that this freeway system is important not only to ADOT and the people of Phoenix, but it is barely -- it is merely just another project for them in their transportation system. Whereas this, protecting the mountain, is vital to our well-being as O'odham people. There are various stories that come with the mountain that we've been taught, and that we are relearning. And, in fact, this fight for this mountain has reignited that passion for protecting that mountain, but also for sharing those stories as well.

9

There are many plants and animals that we as O'odham people still hold sacred to -- that live there in that mountain range. There are medicinal plants that are available, there's "shegoi," there's also other foods that we eat from the cactus, the "hashem," these -- these plants are already being affected by the pollution that's on the mountain

7 (cont.)		Governance Center in Sacaton). Parking vouchers and transit passes were provided at the public hearing for participants. The online public hearing webpage went live at 10 a.m. on May 21, 2013, at <azdot.gov/southmountainfreeway> and linked to <smfonlinehearing.com>. All of the materials that were presented at the public hearing, including the study video, display banners, aerial maps, an interactive electronic version of the Draft Environmental Impact Statement, and an online comment form were available through the online public hearing. The online public hearing also contained a welcome video explaining the format of the online public hearing, an overview of the purpose of the online public hearing, and information about how to provide comments. The online public hearing attracted 1,864 visitors (approximately 1,600 visited during the comment period) from across the United States. As an additional participation opportunity, especially for those who may not have been able to attend the public hearing, six community forums were held in strategic locations throughout metropolitan Phoenix, attracting nearly 700 attendees. These forums provided an informal opportunity to learn more about the study and the Draft Environmental Impact Statement.
8	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Biology, Plants, and Wildlife**

today. It's hard to find anyplace to find a clean area to harvest these medicines that have not been tainted with chemicals or air pollution. We have to preserve those plants, not just as O'odham people, but as people all of us collectively who live in these deserts, these plants and animals are vital to us.

Anybody who has a concern about conservation of nature should know that this freeway system, this mere project to the outside community is going to be devastating for us all. This is not just an O'odham thing. This is an everybody thing. We're going to -- we're going to feel the effects of this freeway system in our health and in our own well-being.

This desert cannot support this many people, and I know as we try and try and support and accommodate for everybody, this society is eventually going to collapse. It has been seen before, historically, and it is going to happen again. This place does not have the resources to house this many people. Our aquifers, our groundwater is being depleted. Our plants are being polluted. Our sacred mountains are now being destroyed.

That's what I have to say.

10	**Groundwater**	The Study Area is located within two Active Management Areas that are regulated by the State of Arizona. The Arizona Department of Water Resources administers groundwater use. Water level decline in one subbasin can be offset by recharging water in another subbasin of the Active Management Area. The Arizona Department of Water Resources regulates drilling, installation, and abandonment of groundwater wells. (See Final Environmental Impact Statement page 4-104) If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to State regulations/standards. (See the text box on Final Environmental Impact Statement page 4-108.)

Subject: Comments on South Mountain Freeway - Loop202
Date: Wednesday, July 24, 2013 1:26:20 PM

To whom it may concern,
I wish to offer comments in regards to the proposed construction of the South Mountain Freeway, Loop 202. I believe that construction of the freeway along the proposed alignments (including stated Alternatives) will have a significantly negative impact on the area and it should not be built along these alignments. The Project team has not addressed another Alternate alignment which would lower the cost of land procurement and construction as well as a lower impact to the tax paying public. It is clear that a road with the quantity of lanes as proposed is primarily intended to be a Truck Bypass route thus unloading the I-10 route through central Phoenix. With this in mind, I would like to propose that the AZDOT perform an evaluation to move the alignment away from Phoenix and to align via I-8 to Gila bend and then expand AZ 85 through Buckeye. This provides the following benefits:

- Lower land procurement cost – due to the population density
- Lower construction cost – existing roads exist vs. creating new roads and blasting rock from South Mountain
- Prevents the destruction of a Native American Culture which with the current alignment calls for carving through South Mountain which is Sacred to Gila River Indian Community
- Elimination of pollution over major residential areas (Laveen, Ahwatukee, Estrella Village, GRIC)
- Additionally, the current proposal does nothing to eliminate traffic congestion, it simply shifts the problem to the west side where the vehicles will come onto the I-10. In 1985, this may have been a good idea but with expansion of the city, this will just load up the freeway at the new alignment. By moving out to Buckeye, the problem is eliminated.

3
4
5

I hope you accept these comments and will consider the alternate alignment to enable the Phoenix Metro area to continue to grow without impacting the current residents

Thank you,

Greg Jackson, Arizona Tax Paying Citizen and Homeowner

1	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
3	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
4	**Purpose and Need, Old Plan or Use of Old Data**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Alternatives, W59 Alternative Versus W101 Alternative**

Please build the South Mountain Freeway as soon as possible, I commute from Laveen to Tempe and something needs to be done to relieve congestion in the central core of Phoenix. The tunnel will become gridlock and the Broadway curve a complete joke.
Thanks,
Jim Jacobson

CALLER REMARKS/QUESTIONS:

1 I strongly support the South Mountain Freeway Loop which takes through the South area Pecos and goes all the way to the interstate. This will relieve the maximum amount of congestion we see on 10 East going to Tucson and also Ahwatukee area, Chandler and anything that connects to the freeway. Particularly the morning traffic and evening traffic is something impossible sometimes and backup for miles and miles. We strongly recommend support of the South Mountain Freeway. I am a resident of Phoenix.

Hello. I want to voice my concern over the proposed South Mountain Freeway. As a nearly 20 year resident of Ahwatukee I am very concerned about the impact upon the homes, schools and people of the area. I am concerned for the decreased air quality and increased noise from truck traffic that would divert onto the new freeway. I respectfully ask the commission to relook at alternatives that have been eliminated that would be more friendly to South Mountain park and utilize existing roads from Maricopa connecting to 10 on the West side. Thank you for allowing me to voice my strong resistence to the current proposal.

Code	Issue	Response
1	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
2	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Noise**	
4	**Noise**	The Maricopa Association of Governments regional travel demand model forecasts approximately 10 percent truck traffic on the South Mountain Freeway in 2035 (see Final Environmental Impact Statement page 3-64). This percentage is similar to current conditions on Interstate 10 between Loop 101 and Interstate 17 and on U.S. Route 60. Noise modeling for the Final Environmental Impact Statement used this forecast truck traffic, with the model accounting for greater noise generation by trucks in the future (see Final Environmental Impact Statement page 4-91). Noise mitigation is designed for this predicted noise level, including the noise from trucks.
5	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County.
6	**Alternatives, Gila River Indian Community Alignment**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
7	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/ State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.

To whom it may concern:
As a Phoenix Maricopa County Tax payer who has voted twice in the long history of the South Mountain Freeway loop 202 project I am pledging my support and demanding this project be started! The Phoenix area is clearly in need of this project for future success of the Valleys economy as has been detailed in multiple studies. I am looking forward to connecting the under served area of laveen and the southwestern corner of our great city to the whole. The funds have been voted the EIS is clear and the demand is there LETS BUILD. As for the Gila River Community: PLEASE RESPECT THEM AND NOT BUILD ENTRY EXITS TO THEIR LAND. They claim their land is sacred and we must allow it to stay that way.Federal Land Federal Dollars Lets Build on and only connect to Federal Land.
The Future must be built for and Not building would be a grave mistake for The areas future.
THE TAX PAYERS HAVE SPOKEN VOTED AND VOTED AGAIN. EXECUTE! THE TIME IS NOW PHOENIX MUST GROW!

1	**Alternatives**	Federal law prohibits the denial of access to any community. Thus, traffic interchanges would be located along the freeway where it borders the Gila River Indian Community (see Final Environmental Impact Statement page 3-51). Roadway connections on Gila River Indian Community land to the traffic interchanges would be the responsibility of the Gila River Indian Community, in coordination with appropriate jurisdictions.

Subject: South Mountain Freeway Comments

The South Mountain Freeway could forever be known as Arizona's biggest environmental blunder.

I've lived in the South Tempe/Ahwatukee area since 1976. I know this area better than most. I want to make it clear that my current home does not sit in the path of the proposed freeway. Following are some of my observations on this proposed freeway and the area I currently call home.

Many including ADOT state that this freeway alignment has been on ADOTs maps as early as 1985, and adopted as a specific alignment in 1988 well before houses were built and therefore that affords ADOT some kind of claim of "freeway domain." Well, as we all know, 28 years is an eternity in Phoenix area metropolitan growth and times do change.

When that route was chosen, the only "road" anywhere in the area was a dirt access road for SRP maintenance on the hi tension power lines that run next to what is now Pecos Road. The thought at that time was that there was no development (Chandler Blvd., Ray Road and Warner Road didn't exist) for miles in the area and that this land was at the very edge of Phoenix since it abutted Gila River Indian Reservation land. Also since the hi tension power lines were already here, developers wouldn't be building residential homes in the immediate area. There used to be a garbage dump at Ray Road and 48th Street. My how times have changed in just 28 years.

1

2

ADOT's assumption that construction of this Freeway will somehow lesson downtown traffic is also unqualified. One fact about Phoenix area freeway construction is that within a few month's of a new freeway's opening, it reaches capacity. Look at the 101, 51, I-10 Broadway Curve expansion, 60 and on and on. If people are looking for ways to relieve freeway rush hour traffic, drive on surface streets. On March 30, 2006, Bob Hazlett (MAG Senior Engineer) in a presentation to the South Mountain Citizens Advisory Team showed simulations that proved that the South Mountain Freeway would not reduce traffic in the Broadway Curve area by any appreciable amount. ADOT data released in 2006 indicated that the 55th Avenue alignment would lead to more congestion and longer commutes on Interstate 10. The only way to effectively relieve freeway rush hour traffic is to get vehicles off the freeway, not by building more and more freeways which increases the vehicle count across the grid.

I feel it's important to note that the population of Ahwatukee Foothills has lived with some of the worst traffic and city planning for the past 28 years of any city in the metropolitan area. We all hate traffic and have wanted solutions for years but were constantly ignored by local governments. Ahwatukee Foothills with a population close

1	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
2	**Purpose and Need**	Figure 3-12, on Final Environmental Impact Statement page 3-29, shows a 6 percent reduction in modeled 2035 average daily traffic volume in the Broadway curve with the proposed freeway implemented when compared with the No-Action Alternative. It also shows no difference in modeled traffic volumes in 2035 for the with- and without-freeway traffic volumes for Interstate 10 immediately west of 59th Avenue. Farther west, there would be a slight reduction in volumes on Interstate 10 with the proposed freeway implemented.
3	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
4	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
5	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)

	to 100,000 people just recently obtained a permanent police station. They used to work out of trailers. A fire station was also added recently which was a much needed facility. This community does not share common boundaries with any other city. We are split off by South Mountain, the Gila River Indian reservation and I-10. That our public service needs have been ignored for decades is no surprise. Happily that is changing now that the area has become a political financial powerhouse. Real estate in Ahwatukee Foothills is some of the highest priced in the East Valley, the school system has become second to none, a vast majority of it's residents carry college degrees and it's close proximity to Phoenix, Sky Harbor Airport, ASU, Tempe and the East Valley make it a very desirable place to live. All this has been built by the hard work and tenacity of it's residents.
3	I encourage officials to come out and walk, ride a bike or jog along Pecos Road and imagine that area turned into an 8 to 10 lane (depending on costs) interstate freeway. I'd be happy to give anyone a tour. The effect of a freeway will destroy a whole community and environment, forever. People who have spent years in the area know that to be true. Ahwatukee Foothills is set between a vast flat plain (in excess of 50 miles) on the South and South Mountain Park with an elevation of 2,690 feet that encompasses over 13,000 acres on the North. This diverse topography creates a micro climate for the Ahwatukee Foothills area. This is truly a unique environment not reproduced anywhere else in the metro area. It is protected from Phoenix, Glendale, Tempe, etc., smog and dust because of South Mountain. Pecos Road comes within six-tenths of a mile of South Mountain Park. The winter inversions of vehicle exhaust pollutants you see are extremely reduced in Ahwatukee Foothills because of South Mountain. The downside is that when dust storms come from the South or East Valley, Ahwatukee Foothills really gets hit hard. The dirt and dust has no where to go except down, on homes. South Mountain and the Estrellas block any escape. The effect of diesel and auto vehicle pollutants from a freeway will forever change the environment and air quality of Ahwatukee Foothills and South Mountain Park. Pecos Road becomes invisible during summer dust storms. Is ADOT going to shut down a freeway during dust storms to prevent the major accidents that will happen during these "dust outs?"
4	
5	
	Some important points that need to be answered and to consider about this Freeway and the reports done thus far:
	1. Ahwatukee Foothills is built out. Only one small parcel (620 acres or significantly less depending on how it's split) remains for developers. And that might not even attract developers because it would abut the freeway.
6	2. Pecos Road contains a "major" church, grade school, post office, and thousands of people living directly in the path of the proposed freeway. These people and businesses will have to be moved and compensated and will be severely impacted if they stay.
	3. Within 3 blocks of Pecos Road is one of the two area high schools with a population of over 3000 students, another church and thousands of people. A proposed new high school sits within 1 block of the Pecos freeway route.

Code	Issue	Response
7	**Purpose and Need**	The proposed freeway at one point featured a ten-lane freeway cross section, with three general purpose lanes in each direction and sufficient right-of-way to add a high-occupancy vehicle lane and a general purpose lane in each direction in the median in the future (when warranted by travel demand). The Maricopa Association of Governments, in association with the Arizona Department of Transportation, later examined an eight-lane freeway cross section, with three general purpose lanes and one high-occupancy vehicle lane in each direction (see Final Environmental Impact Statement pages 3-19 and 3-20). Such a configuration would reduce the right-of-way needed for the freeway without jeopardizing its ability to meet the purpose and need criteria. Additionally, the eight-lane freeway would cost about $200 million less than the ten-lane freeway (see the Final Environmental Impact Statement, beginning on page 3-23). Because the eight-lane freeway would meet the project's purpose and need and would do so with lower costs, less right-of-way acquisition, and fewer impacts than the ten-lane freeway, it was carried forward for further consideration
8	**Utilities**	The City water line in the area of the South Mountains would be located away from the proposed freeway. It would not need to be relocated. There are City water and sewer lines and other private utilities under Pecos Road. As necessary, these utilities would be relocated to avoid impacts from the proposed freeway (see pages 4-165 and 4-166 in the Draft Environmental Impact Statement for more information about utilities). The cost of these relocations is included in the overall project cost (see page 3-59 of the Final Environmental Impact Statement for more information related to costs).
9	**Utilities**	The major gas lines that run along Pecos Road are operated by El Paso Natural Gas and Kinder Morgan (El Paso Natural Gas Company, L.L.C., is owned by Kinder Morgan, Inc.). Both lines are located south of Pecos Road on Gila River Indian Community land and would not be affected by the project. In the area around 51st Avenue, these lines turn north and cross under the alignment of the proposed freeway. In these areas, the lines would be protected in place. The operation of these lines would not be affected by the proposed freeway.

Code	Comment Document
7	4. If ADOT builds a freeway along Pecos Road, since it abuts the Gila Indian Reservation and homeowners on each side, there is no room for future expansion. Zip, Zilch, Nada. Unless taxpayers want to buy off more homeowners and Gila River Indian Landowners. So when this Freeway becomes grid locked, it remains grid locked because future freeway expansion is impossible.
	5. Since there is no land available, that means there will be no industrial development along the freeway thru Ahwatukee Foothills for the State of Arizona or it's municipalities. Zip, Zilch, Nada. This leaves the Gila River Indian Community with a potential financial juggernaut of retail, industrial and hospitality development along the proposed freeway on their land. This will add even more traffic to the community. Since ADOT states no studies can be done on this land, they have no clue as to what kind of developmental impact the Gila River Community has in store for our community. No one does.
8	6. In 2003 a $60 million water line to Ahwatukee Foothills was bored thru South Mountain and runs under Pecos Road. That supplies water to a community of 100,000 people. It would have to be relocated if a freeway is built on Pecos Road. A safe conservative estimate to redo that project – $100 million? That doesn't include the cost of relocating the communities utilities which also run under Pecos Road.
9	7. The valley's fuel supply lines run along Pecos Road. You know, those lines coming from Tucson that caused gas prices to soar to way over $4.00 a gallon for the first time in our states history. I would say it's a safe bet that this line will be shut down many times during construction.
10 11 12	8. Pecos Road lies at the lowest elevation in the area. Sound abatement walls will be totally uneffective if this freeway is built above ground thru Ahwatukee. You can stand a half a mile away from Pecos Road and hear one car driving along it because of this difference in elevation. Sound travels very well in the area's dry air an elevation. For this reason this proposed freeway needs to be built below ground with sound "deflector walls" that channel the freeway noise south. Rubberized asphalt won't do it. Will ADOT provide for residential sound testing for neighborhoods that lie in excess of 800 feet of the proposed freeway's path after this proposed freeway is built? Sound and air pollution from this project will have a dramatic downward effect on real estate prices and quality of life.
13 14 15 5	9. Since a major proportion of the valley's "Big Box" retailers have regional supply warehouses in the area where this freeway will connect with I-10 on the west, it will become a mecca for big rig diesel truck traffic skirting the metro Phoenix area and well as much of the International truck traffic between Mexico, Canada and the U.S. It would be safe to say that over 50% of the traffic on the Pecos Road Freeway would be diesel burning, one of the major vehicle air pollutants. There is no way to limit the types of vehicles driven or monitor them.
16 17	10. The majority of people who live in the Ahwatukee Foothills and vicinity do not commute daily to the West side. That thought is wrong and uninformed and if the freeway is built, they will not use it because of the dangers of the high speed truck traffic.
	11. Currently Pecos Road is used by a vast majority of people for recreation. Jogging, biking, rollerblading and walking. These people will be forced onto Chandler Blvd. and

Code	Issue	Response
10	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes that may be elevated above the road, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Phoenix metropolitan area and across the country. The Federal Highway Administration developed the noise regulations as required by the Federal-Aid Highway Act of 1970 (Public Law 91-605, 84 Stat. 1713). The regulation, 23 Code of Federal Regulations 772 Procedures for Abatement of Highway Traffic Noise and Construction Noise, applies to highway construction projects where a State department of transportation has requested Federal funding for participation in the project. The regulations contain noise abatement criteria, which represent the upper limit of acceptable highway traffic noise for different types of land uses and human activities. The regulations do not require meeting the abatement criteria in every instance. Rather, they require highway agencies make every reasonable and feasible effort to provide noise mitigation when the criteria are approached or exceeded. Compliance with the noise regulations is a prerequisite for the granting of Federal-aid highway funds for construction or reconstruction of a highway. In 1998, the Federal Highway Administration released the Traffic Noise Model, which has been upgraded several times since its release. It was developed as a means for aiding compliance with policies and procedures under Federal Highway Administration regulations. The model is a state-of-the-art computer program used for predicting noise impacts in the vicinity of highways. It uses advances in personal computer hardware and software to improve upon the accuracy and ease of modeling highway noise, including the design of effective, cost-efficient highway noise barriers. These components are supported by a scientifically founded and experimentally calibrated acoustic computation methodology, as well as an entirely new, and more flexible data base, than the former model. The database consists of over 6000 measurements at forty sites across the country.
11	**Alternatives**	The project team analyzed the belowground option, also called the depressed freeway option. The analysis indicated that depressing the freeway would increase the cost of construction and right-of-way acquisition, displace additional residences, create the need for additional pump stations and detention basins, and still need the installation of noise barriers. Because the belowground option would result in substantially greater costs and residential displacements, this option was eliminated from further study (see Final Environmental Impact Statement pages 3-15 and 3-18).

Code	Comment Document
	Ray Roads both of which have vastly inferior bike lanes. This will result in more traffic, slower speeds and unfortunately, more accidents and deaths. Most of these roads can't be widened and those that can would incur extreme costs.
18	12. If this freeway is built along Pecos Road, the population of Ahwatukee Foothills better get prepared for the worst traffic they've ever seen in the area for the projected 7 to 10 year construction time. Pecos Road would basically be unusable due to all the closures and construction during this time. That forces everyone onto the only three ways out of the area, Chandler, Ray and Warner roads. Now add the thousands of construction workers and equipment used the build this massive project to the daily commute and it will be one big mess. Also don't forget that ADOT loves to schedule other major projects (resurfacing surface streets) during these "big builds."
19	13. ADOT plans to put part of this freeway thru South Mountain Park because they have no other option and Federal law allows them that right. I can't even express in words how wrong this is. Taking even one foot of a park for a freeway is just plain wrong. After all why is it even a park then. We have the best engineers in the world and ADOT can't find a solution that doesn't take park land. I find that fact disgusting and a total insult to engineering intelligence and I would be honored to research and lead the charge for a solution considering our ADOT "engineers" have no clue for an option to save the park. I would think a ten lane twin tube tunnel would be easy to bore thru South Mountain as has been done in the Alps, DC Metro, and the Euro-Tunnel. Contractors such as Bechtel Brown and Root, Morrison-Knudson, etc., could do the job with two Robbins Moles. This could help limit desert destruction to only entry and exit portals. Nine years ago a 20-foot diameter single tube water tunnel was completed, running north to south and more than a mile long and the environmental damage was minimal. Even though core drilling will have to take place along the proposed route, the referenced water tunnel has exposed the structural geology already. This project done correctly, would present the least amount of damage to the environment. But again is ADOT willing to cost this out and present it to the public? A park such as South Mountain Park – all of it – should remain just that – forever.
20	
21	14. Will ADOT pay for yearly independent water and soil analysis to look for leaching of oil, gas, diesel fuel and chemicals into the freeway area near the community that will eventually leach into the water supply? What about the area's well re-location which is impossible. Is ADOT willing to pay the community for water costs forever on wells that are capped in the area. Has this cost been added to the budget?
22 23	15. What is the possible future cleanup cost to Arizona taxpayers if the Superfund site near 55th Avenue is breached and leaks into ground water since the Federal government will no longer be responsible for any costs of cleanup if a freeway is built in the area? Similar sites cleanup costs have ranged from $650 million to $2.25 Billion. Has this cost also been added to the budget?
24	16. Desert Foothills Parkway and 24th Street need to be made off limits to 18 wheeler truck traffic at all times because of the nature of the narrow size and design of these streets. These roads cannot handle big rig traffic with their required extra turning radius. Medians and expensive landscaping will be destroyed. Fines for using these roads should be posted and enforced.
25	17. In the event of an emergency when the proposed freeway is shut down, the Desert Foothills Parkway and 24th Street exits have to made unavailable for diverting traffic off the freeway. These roads cannot handle the capacity with their winding, hilly terrain and narrow lanes. ADOT would create a massive gridlock in that area from which no one would be able to move in or out, including emergency vehicles. This scenario is unacceptable and avoidable if these roads are made off limits during a freeway shutdown. Has ADOT done any studies on the effect of a closure of the freeway and

Code	Issue	Response
12	**Property Values**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
13	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
14	**Trucks**	
15	**Trucks**	The Maricopa Association of Governments regional travel demand model forecasts approximately 10 percent truck traffic on the South Mountain Freeway in 2035 (see Final Environmental Impact Statement page 3-64). This percentage is similar to current conditions on Interstate 10 between Loop 101 and Interstate 17 and on U.S. Route 60.
16	**Purpose and Need**	An analysis of the origins and destinations of projected freeway users is presented in Figure 3-18, on page 3-36 of the Final Environmental Impact Statement. Freeway users are defined as those motorists who pass through the bend of the freeway (around the South Mountains). So, this does not count motorists in Laveen Village who go to Interstate 10 (Papago Freeway) and motorists in Ahwatukee Foothills Village who go to Interstate 10 (Maricopa Freeway). The results of the origin-destination analysis show that 73 percent of the traffic going around the South Mountains has origins or destinations in the area within or around the Study Area and supports the conclusion that the proposed action would serve east–west mobility consistent with commuting movements.
17	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
18	**Traffic**	The freeway construction staging plan for the area along Pecos Road would allow for keeping east–west travel open during construction. One side of the freeway would be constructed while traffic remained on Pecos Road. When complete, traffic would be shifted from Pecos Road to the new freeway. At that time, the other side of the freeway would be built. Therefore, traffic would be able to continue to operate as it currently does during construction. However, temporary detours may be needed during construction. (See Final Environmental Impact Statement page 3-27.)
19	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

(Responses continue on next page)

Code	Comment Document

it's effects on the traffic in the impacted Ahwatukee area? I can't find one. I suggest that ADOT shuts down Pecos Road for one work day during the week to gauge the effect on traffic in the community. And no advance warning to the public, after all freeway shutdowns aren't planned, but pre-planning helps saves lives. It will be grid lock during rush hour.

(26) (18) 18. This proposed 8-10 lane freeway will take 7-9 years to construct. During that time it will throw in excess of 6000 construction workers daily on our streets coming and going. There will be a continual dirt cloud over Ahwatukee until the freeway is completed. Pecos Road will continually be shut down and basically be unusable which means Chandler Boulevard and Ray Road will be the only way in and out for 7-9 years. How are people in this area going to get out? It will be unlivable during construction for the residents south of Chandler Boulevard between 35 Avenue and 40th Street. Will there be a fund to help children and elderly adults who develop major respiratory ailments from the construction's brown cloud? Will residents and businesses be compensated for extra water costs for dirt cleanup during construction? What about blasting apart South Mountain with 3 twenty story high and 200 yard wide cuts and the unknown noise effects on the community?

(27) (28)

(29) 19. Wildlife and native vegetation armageddon.

20. Projected total budget costs for this freeway are currently at the $2-3 Billion range that ADOT throws around. People "in the know" of building this freeway, not only have mentioned that it will be the most costly stretch of freeway ever built in the metro area but also peg the final costs in the $4-5 Billion range at today's costs. Arizona's current STATE budget is $8.9 Billion. This 22 mile piece of freeway will cost more than half of the total budget for the State of Arizona. I have serious problems spending that amount of money on a freeway with huge environmental implications during these recession laden times.

(3) 21. There will always be people who oppose freeways but when a freeway is going to have such a huge negative impact on a community, the land and a designated major metropolitan area Park, alternatives need to be found. Is it right to totally destroy a community for "The Common Good?" People chose to live in the Ahwatukee Foothills area because of what is has become: a huge secluded bedroom community with a great family environment and wonderful Arizona vistas protected from the big city just on the other side of South Mountain. A freeway enclosing and destroying this unique community is just plain wrong when there are so many unknown and potentially devastating obstacles in the way that will change the current environment forever.

(30) Hopefully all my issues will be discussed and answered. The Pecos Road alignment is not a viable solution for this freeway. Land south of Pecos Road on the Gila Indian Reservation is the most environmentally and economically sound decision to build a freeway of this size on. We seriously need to work towards doing the right thing for current and future generations.

Sincerely,
Kevin Janke

Confidentiality and Nondisclosure Notice: This email transmission and any attachments are intended for use by the person(s)/entity(ies) named above and may contain confidential/privileged information. Code	Issue	Response
20	**Alternatives**	Information related to the evaluation of a tunnel option is presented in the Final Environmental Impact Statement, beginning on page 3-16. The commenter's tunnel concept would be similar in nature to the tunnels evaluated in the Draft Environmental Impact Statement A cut and cover tunnel would not be feasible based on the geologic (hard rock) conditions of the South Mountains. A double-decker tunnel would result in similar or even higher costs and impacts as the tunnels considered for the study. In the State Route 710 project in Pasadena, California, the freeway alternatives that include tunnels cost almost $4 billion more than the freeway alternative without tunnels. The City of Phoenix water line has a 4-foot diameter. The tunnel bore was only approximately a 6-foot diameter. Geotechnical data from the City of Phoenix project was used in evaluating the potential for tunnel alternatives through the South Mountains.
21	**Groundwater**	If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to state regulations/standards. (See text box on Final Environmental Impact Statement page 4-108.)
22	**Hazardous Materials**	Both the Van Buren Tank Farm and the West Van Buren Water Quality Assurance Revolving Fund site were identified and considered during development of the Final Environmental Impact Statement (see pages 4-105 and 4-165 and the Draft Initial Site Assessment prepared for the proposed project.) These sites are primarily groundwater-impact sites, and groundwater is found at a depth of over 60 feet below the footprint of the Preferred Alternative. Given the separation distance between the adversely affected media (groundwater) and the construction zone (near surface in these locations), the project team determined that these sites would not pose a risk to construction or to the general public once the facility were completed. This assessment has been clarified in the Final Environmental Impact Statement on page 4-165.
23	**Hazardous Materials**	The corridor analysis revealed sites that would need further assessment during the property acquisition phase of the project, if an action alternative were to become the Selected Alternative. The Arizona Department of Transportation employs a phased approach to site assessment that allows time for cleanup of any sites found to have hazardous waste issues. The project team concluded from the level of analysis conducted during the environmental impact statement process that the types of sites likely to be acquired contain common hazardous waste issues like underground storage tanks, asbestos and lead paint in buildings, and other commonly found issues (see Final Environmental Impact Statement page 4-157). The Arizona Department of Transportation maintains a process for addressing these issues in accordance with all applicable environmental laws and regulations.
24	**Design**	Desert Foothills Parkway and 24th Street have standard 12-foot-wide travel lanes, and the vertical and horizontal geometry make them passable by most vehicle types. These roads are operated and maintained by the City of Phoenix . The City of Phoenix would have the authority to restrict truck traffic, if desired.
25	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
26	**Construction**	The Arizona Department of Transportation is evaluating construction delivery methods for the proposed freeway. One concept is to deliver it as a single design-build project. This method would expedite the construction duration for the entire project to around 3 to 3.5 years. Another concept would be to deliver the project in a more traditional method breaking the 22-mile corridor into nine segments (each 1 to 3 miles long) and constructing them in phases. Each segment would be under construction for 1 to 3 years; the total construction duration for the entire corridor would be 5 to 6 years. A discussion of construction implementation is provided beginning on page 3-59 of the Final Environmental Impact Statement. Any particular area of the Preferred Alternative would not be expected to see construction activities beyond an approximate 2-year period. To reduce the amount of construction dust generated, particulate control measures related to construction activities must be followed. The following mitigation measures would be followed, when applicable, in accordance with the most recently accepted version of the Arizona Department of Transportation *Standard Specifications for Road and Bridge Construction* (2008). Prior to construction and in accordance with Maricopa County Rule 310, Fugitive Dust Ordinance, the contractor shall obtain an approved dust permit from Maricopa County Air Quality Department for all phases of the proposed action. The permit describes measures to be taken to control and regulate air pollutant emissions during construction (see page 4-173 of the Final Environmental Impact Statement).
27	**Construction**	The contractor would submit a written blasting plan to the Arizona Department of Transportation prior to beginning any blasting work. The Arizona Department of Transportation Resident Engineer then ensures that the contractor has followed all requirements for a blasting permit. Prior to blasting, the areas where rock fragments may fall is mapped to ensure there will be no property damage. Residents in the area are notified of any blasting activity (see Final Environmental Impact Statement page 4-123). Blasting is avoided if standard earthmoving equipment can be used.
28	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

1

It's been noted in many closed circles within our very private "so-called" transportation board that the State of Arizona DOES NOT have the money necessary to maintain the existing highway system and to also make new highway improvements. Recently (06-2013) that clearly became evident when the State Transportation Board approved a project that wasn't even on the 5 year plan of state projects to be approved. A $66 million dollar project was approved while two critical projects were shelved because of lack of money. The two projects that were terminated (the widening of AZ 260 near Lion Springs and the widening of US 93 near Wikieup) are two of the five DEADLIEST rural highways in Arizona. Federal crash data states that 28 people have died on these two roadways between 2004 and 2011.

It appears that the citizens that make up the State Transportation Board have other issues at stake rather than people lives.

Since it is well stated and documented by the boards action above that the State of Arizona at this time does not have the funds necessary to maintain our highway system and protect the safety of its residents, I strongly support the termination of the PROPOSED South Mountain Freeway at this time. The needs of current state roadways far exceed the needs of a FUTURE 21 mile freeway segment. I suggest that the $2-5 billion dollars in collected tax revenue that is currently available for it's construction be used to maintain and upgrade these and many other needed critical projects for the next 7-10 years. We must look at ourselves, not as counties but as a state, something that the State Transportation Board & ADOT frequently forget.

It will be interesting to see if this letter is censured/deleted by ADOT from the Final EIS.

Sincerely,
Kevin Janke

Code	Issue	Response
1	**Purpose and Need**	The proposed project is part of the *Regional Transportation Plan* for the Maricopa Association of Governments region. In 2004, the voters of Maricopa County approved the *Regional Transportation Plan* and the extension of a half-cent sales tax to fund its projects. The funding for the right-of-way acquisition and construction of the proposed project would come from a combination of federal (National Highway Performance Program) and County (half-cent sales tax, also known as Regional Area Road Funds) sources. Use of these funds for construction of the proposed freeway would not affect available funds for statewide projects nor would not constructing this facility make available additional funds for other statewide projects.

As a homeowner in the Foothills Reserves in Ahwatukee AZ, I choose a NO BUILD for the 202 South Mountain Freeway! Our peace, tranquility, love of nature here will be ruined by building this Freeway. My greatest concern is the pollution/toxins that will be emitted....my family members have asthma and all the schools in the area would GREATLY be affected by this Freeway!!

John Janssen Document Created: 7/24/2013 10:32:11 PM by Web Comment Form

To whom it may concern,

1 2 3 4

I would like to voice my opposition to the building of the loop 202 at all and especially on the pecos alignment. Many houses will be demolished and many more less desirable due to the freeway right out their windows. There at least 2 schools that would be very close to the freeway that would be exposed to toxins from the passing traffic.

5 6 7 8

The south side of South Mountain is beautiful, quiet, and peaceful. I would suspect that he polution from the passing vehicles would be trapped and be even more toxic. Hundreds of people ride their bikes through this area everyday. These routes would be eliminated to a large extent with this freeway. We should be promoting alternate travel instead of making it hard to use.

9 10

The current alignment will try and squeeze 8 lanes in an area with little or no room. It will not be built below grade because of cost. The san tan freeway is below grade along with many others haviing 50-100ft of isolation with the below grade and high walls. The people close to the alignment will have an ugly wall and lots of noise. Everything about this project is on the cheap and disregarding people's quality of life.

11

Do not build or move it further south.

Code	Issue	Response
1	**Alternatives, E1 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
3	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
4	**Health Effects**	
5	**Visual Resources**	Because Pecos Road is already a four-lane arterial street and is in approximately the same location as the proposed E1 Alternative, viewers would not be seeing any phenomena they do not already see (see Final Environmental Impact Statement page 4-169). The proposed freeway would have eight lanes of traffic and carry more vehicles, but what park users and residents would see would not be substantively different from what they already see along Pecos Road. Page 4-169 in the Final Environmental Impact Statement lists measures that should help to avoid, reduce, or mitigate aesthetic impacts. Larger saguaro cacti, mature trees, and large shrubs that would likely survive the transplanting and sitting-in period would help in visually sensitive or critical roadway areas.
6	**Air Quality**	According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.

(Responses continue on next page)

Code	Comment Document

Code	Issue	Response
7	**Traffic**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
8	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
9	**Design**	The project team analyzed the belowground option, also called the depressed freeway option. The analysis indicated that depressing the freeway would increase the cost of construction and right-of-way acquisition, displace additional residences, create the need for additional pump stations and detention basins, and still need the installation of noise barriers. Because the belowground option would result in substantially greater costs and residential displacements, this option was eliminated from further study (see Final Environmental Impact Statement pages 3-15 and 3-18).
10	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
11	**Alternatives, No-Action (No-Build) Alternative**

bypass having to go on I-10 or around 48th Street.

So if I had a vote, it would be for either a tunnel or to extend the 202 all the way out to connect to the 101, bypassing the park.

That's it.

GABRIEL JASSO: Definitely need the South Mountain Extension Loop 202 built ASAP. It will help alleviate traffic within the city's freeway system, eliminate bigger trucks on our roadways down on Baseline and 51st Avenue, and bring business to the area, valued business to the South Phoenix/Laveen area, creating jobs and better opportunities for people, and would also mean less travel for us residents in South Phoenix to other parts of the Valley, which would also help improve with traffic in other areas, as well as pollution.

That's it.

(The proceedings concluded at 8:00 p.m.)

Subject: South Mountain Freeway Public comment- Pro Highway

To: projects@azdot.gov

Hello my name is Ludmila Jegier and I reside in Laveen at 5212 W. Shumway Farm Rd.

Traffic Congestion Reduction:

1 I'd like to voice my comment to pursue construction of the Highway by way of extending Pecos through Ahwatukee Foothills and provide a transportation path between the South East Valley and the 10.

I recently moved from Chandler to reside in Laveen and have experienced the 1 hour commutes to Chandler due to back up traffic jams along Baseline Rd and the only alternate path down Riggs through the Gila Indian Reservation.

The community is in desperate need of development and transportation to reduce the traffic congestion experienced due to lack of freeway connections.

Economic Growth/Job Opportunities/Mobility:

Lack of adequate highway development is also holding the community back economically in areas of employment, business, growth and mobility.

Environmental Rebuttals:

I understand the GILA River Indian Community feels otherwise however the study demonstrates minimal environmental impacts with the reservation being preserved.

Residents of Laveen have no intention of negatively impacting our Sacred neighbors, taking land, harming nature's wildlife.

We simply would like a way to get to work which reduces our stress level, commute time, time spent away from our families while trapped in traffic.

1		Comment noted.

Code	Comment Document

Highway Benefits to Gila River:

By not having the Highway extended thousands of individuals daily take the 51st Ave Riggs/Beltline road to work or their destinations which runs through the Gila River Reservation.

The 2 lane highway promotes high speed passing, tail gating, accidents, casualties along the road by additional traffic that would be reduced if an alternate route existed.

Countless crosses mark the road memorializing those individuals who have fallen victim to the speeding and accidents along the path.

Creating the 202 extension would allow for a more peaceful experience along Riggs rd for the Gila community and a reduction in accidents from those rushing to make it to their destination.

Promoting Community Success:

Roads have been an American success story in mobility, industry, growth!

Why deny the residents of Laveen the opportunities that this highway can bring?

Ludmila Jegier

MR. JENKINS: Yes, my name is Rueben Jenkins, and I appreciate the opportunity that you're giving me to make my comments. I'm a member of the Gila River Indian Reservation Community. I'm one of the landowners that, you know, is part of that reservation. And I, myself, would like to see the reservation -- the 202 go on the reservation, as a landowner. But the tribal council is working against us. They're not doing what the landowner wants. Every time we go before the council or something, they won't hear us. They won't listen to us.

And when they put this to a vote to the tribe, the head opinion there called a no vote, no-build. A lot of people didn't understand that. They thought it was going to, you know, be to build the freeway, but I knew from the start that one way on the other that they were going to build that freeway. And we have voted to put a petition in to have another vote, but the tribe is holding us up to the council. They're holding it back, and I'm afraid that they're not going to let us vote until they make a decision about this 202.

So -- and even the reservation under the BIA, and the BIA is not even getting in there to help us, which they're supposed to, the government is

1

supposed to regulate that, and they're not doing anything to stop the council from what they're doing. So I just -- I just wanted to make that comment that I would like to see it go on the reservation. And it would save a lot of the people in Ahwatukee to go through what they have to go through. And it would also save that mountain that they wouldn't have to go through if they built it on the reservation.

So that's the comment that I have, and something that I have in my heart, and hope that in one way or the other, that it will go to the reservation. Thank you.

THE FACILITATOR: Thank you.

Sharon Finell. Finell. Which one is it?

MS. FINELL: Perfect.

THE FACILITATOR: Okay, thanks.

MS. FINELL: Hi, good morning. My name is Sharon Finell. I am a resident of Laveen. And I live just about a mile from where this proposed freeway would be. I am in support of the freeway. I am very excited. I don't have a problem with us having to cut through South Mountain. I love South Mountain as a form of recreation, and I think the pass through South Mountain will provide more recreation opportunities for people, as it will be

1 MR. JENKINS: My name is Reuben D. Jenkins,
2 spelled R-e-u-b-e-n, D, and J-e-n-k-i-n-s.
3 I'm a member of the Gila River Indian
4 Reservation Community, so I have an interest in this
5 freeway that's going to be built. I myself would like to
6 see it built on the Indian land because -- one -- one of
7 the big reasons is that I'm one of the landowners that is
8 going to be -- you know, that owns land that's going to be
9 along the freeway there along the 202. But unfortunately,
10 the Tribe is working against us. They're not working for
11 the landowners, the Tribal Consult. The meetings we go to
12 to try to talk to them about it, they won't listen to us.
13 They won't make decisions that will benefit us.
14 But the main thing about this that -- the
15 whole thing that when it started, when the Tribe voted on
16 it for the first time, they had an option there that said
17 no build. And that confused a lot of people. And that no
18 build, for one -- but I myself knew from the start that
19 there was no such thing as no build. I knew from the
20 start that one way or the other, that 202 was going to be
21 built. But this thing went through, so the people voted
22 it down.
23 But since then, the landowners, which you
24 have a corporation out there that's working to -- you
25 know, that things go on a reservation, have put in a

Code	Comment Document

petition, and they all signed it. And they've got enough, you know, to get it through. And they took it to the council. And then the council, you know, looked at it, and they said, oh, there's things wrong with it. They're holding it up. They say, we've got to investigate, see if the signatures are legal and all that. And they're just holding it up. Every way they can, they're working against us. They're not working with the landowners as they should be as council members.

And also, the thing that I'm concerned about is all those reservations are under the BIA, the Bureau of Indian Affairs, and they should be, you know, looking into this, that they're not helping the landowners. The BIA hasn't done nothing. They haven't got into it or anything that -- you know, to see if things are going right, you know. But that's my main concern.

But the main concern is that they're trying to hold up the thing that we can be able to vote again. And I know if it goes to a vote, that the landowners will, you know, have it to go on -- on the reservation. But they're fighting against us. I don't know why.

When we go to the meetings, the council meetings, they have the police there watching over us, 'cause they're afraid that the decisions that they make are going to be against us, and they're afraid that we're

Code	Issue	Response

Code	Comment Document

going to revolt or do something like that. But I don't think that's fair, you know. And I would just like to, you know, kind of let the people know, you know, what's going on, because they won't let news medias or reporters go to their meetings or anything, and nobody knows, you know, what's going on out there.

So I just thought maybe I could make a little comment that -- you know, let them know how I feel about it. So that's it. That's it. Thank you.

MS. RITTER: My name is Haley Ritter, H-a-l-e-y, Ritter, R-i-t-t-e-r, and I live in Phoenix, 85015 area, district 4.

I'm excited about the upcoming city council elections, because I think a lot of the younger people coming into leadership in this city will realize that we can't keep building freeways.

I'm against the 202 because there's a lot of pollution going through the city already. The uranium mines up north in Flagstaff and surrounding communities are very, very harmful for that community up there. And then the toxic chemicals that are being hauled through Phoenix and then through the South -- South Mountain Gila River Community if the 202 is built are going to be horrible to the environment.

There have been plenty of environmental

From: Edward Jensen
To: Projects
Subject: Opposition to South Mountain Freeway
Date: Wednesday, July 24, 2013 12:16:29 PM

To whom it may concern:

Please let this email voice, in the strongest possible terms, my absolute opposition to the design and construction of the Loop 202 South Mountain Freeway in Phoenix.

1 Study after study has come to the conclusion that Americans have reached "peak car," which is to say that we are not only purchasing fewer automobiles but we are driving them less.[1] Americans -- and Arizonans -- are demanding for expanded public transportation options in our cities and communities and investing money in a 20th century freeway project instead of 21st century public transportation infrastructure flies in the face of economic sense.

2 ADOT's move to study passenger intercity rail between Phoenix and Tucson is a project that makes much more sense and is indicative of the projects that a statewide department of *transportation* should be focusing on, not just freeways and highways.

I urge the Arizona Department of Transportation to join with countless neighborhood groups and reject building this portion of the Loop 202 South Mountain Freeway.

Sincerely,
Edward Jensen

1	**Purpose and Need**	The study used state-of-the-practice, scientific community methods and similarly accepted methods, including the use of a standard input-output economic model and of assumptions based on traffic data and projections. The analysis is not required to project ranges, and the results are reasonably foreseeable based on what data are provided from the U.S. Environmental Protection Agency-approved Maricopa Association of Governments model as well as local plans. Further, methods, assumptions, and data were developed early in the environmental impact statement process and peer reviewed by the Federal Highway Administration, the Arizona Department of Transportation, and other federal, State, and local agencies. Peer reviewers concluded that the methods, assumptions, and data are appropriate. Potential factors that could influence changes in the analysis and study findings are listed on page 4-1 of the Final Environmental Impact Statement.
2	**Alternatives, Nonfreeway Alternatives**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. This email came in through the ADOT ENVOY System.

5/16/2013 3:24:19 PM

I could not be more opposed to the South Mountain freeway proposal along Pecos Road. To take out Pecos Road and possibly homes, schools, and businesses along Pecos road would do great harm to the community of South Ahwatukee. Home values of some really nice neighborhoods would go down drastically and the air quality in Ahwatukee would get worse. If ADOT is determined to build a freeway south of South Mountain, ADOT needs to take it further south into the Gila River Reservation and not destroy my neighborhood. I am sure the Reservation leadership will demand a high price to build on their land and if ADOT can not afford it, they should abandon the idea of building the Sounth Mountain freeway entirely. Code	Issue	Response
1	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
2	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
3	**Economics and Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values (Transportation Research Record: Journal of the Transportation Research Board, No. 2174, Transportation Research Board of the National Academies, Washington, D.C., 2010, pp. 138–47; "Impact of Highways on Property Values: Case Study of the Superstition Freeway Corridor"). A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area
4	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. ADOT Loop 202 South Mountain Freeway Study
1655 W. Jackson Street
MD126F
Phoenix, AZ 85007

Dear ADOT ,

I am a member of PARC and feel many issues not addressed or omitted in the recent DEIS. I would like the following issues entered into the public comment section:

Issues in DEIS

1. *Ozone levels today are exceeding the standard parts per million set by EPA and the clean air act and not considered to get worse in this study. Postponing EPA enforcement standards must be reconsidered to do a true DEIS . Also explaining that dust storms cause all this is not accurate. Modeling of today's air levels needs to be updated and relooked at accurately.*
2. *Study must calculate and consider increased truck traffic from Mexico where trucks do not meet the CARB diesel standards adopted by AZ. Ignoring and assuming they won't take this faster route is seriously flawed part of DEIS study*
3. *Also the DEIS needs to study the commercial development planned on the highway route. As of 5/21 several plans and public information on development are public including local business owners intended use of land leases on GRIC and truck stops and truck depots already planned. Also swift transportation truck routes and use of this highway have not been studied since there are no laws to restrict truck traffic on this freeway. Must require that camex trucks use highway 8 bypasses only but no enforcement nor acknowledgment in the study reviews the new camex traffic or other illegal truck traffic will now drive on this faster new highway. .*
4. *Direct impact to autism cause by highways built close to kids. Recent evidence already exists in 2013/2012 should be added into the impact and not avoided. DEIS does not have accurate and up-to-date 2013 2012 asthma and autism impacts growing in metro Phoenix nor updates to impacts of highway 51 health issues we see from folks living 1 mile for freeways.*
5. *DEIS need to go back and review current health impacts of existing highways air quality an EPA air violations. Then DEIS needs to model the impact of the growth projections on worsening the air and health risks.*
6. *Population growth alone will estimate a severe worsening of health risks and cause air quality to be worse than EPA standards in 43 ave 51 ave zip 85045 85048 GRIC and laveen. Major flaw in such a study since it does not estimate these issues accurately for 2014 -2016 growth in toxic air and worsen health counts and health symptoms that the doctors and hospitals see now up for 2008 20010 etc..*
7. *Must better study for impacts to current and future residents and school kids whose play area and day cares will be less than ¼ of a mile from traffic*
8. *Did the study add in the additional traffic due to the building of the premium outlet mall at highway 10 and 202. This substantial increase in polluting traffic needs to be in the study. Not avoided since they exit the highway.*
9. *Blasting thru south mountain will cause religious and racial discrimination and civil rights violations in SMF DEIS Is it legal to destroy burial rights and petroglyphs and Indian artifacts in the line of demolition. If DEIS does not really go on Indian land and it does not protect their adjacent artifacts is it accurate and inclusive. DEIS should study all the true direct and indirect impacts to the highway after its built.AIRFA passed in 1978 is not being followed nor respected.*
10. *Truck traffic from Mexico and high sulfur diesel and benzene levels will be worse than study portrays. The DEIA clearly does not model the additional air pollution for this traffic,*
11. *This highway will not improve the air quality for phoenix . DEIS does not model the future impact accurately. Our city will be in violation of Clean air Act. Also will worsen west and south phoenix air.*
12. *There is no serious discussion or consideration in the DEIS of the 2005 monitoring of toxic chemicals (present*

Code	Issue	Response
1	**Air Quality**	As noted on page 4-76 of the Final Environmental Impact Statement, since ozone is a regional pollutant, there is no requirement to analyze potential impacts and no possibility of localized violations of ozone to occur at the project level. The Maricopa Association of Governments is responsible for developing plans to reduce emissions of ozone precursors in the Maricopa area. The Preferred Alternative is included in the *Regional Transportation Plan* that has been determined by the U.S. Department of Transportation to conform to the State Implementation Plan on February 12, 2014.
2	**Trucks**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Traffic**	The Federal Highway Administration and the U.S. Environmental Protection Agency approved the air quality conformity determination that includes the Maricopa Association of Governments regional travel demand model that produced the traffic projections used in the traffic analysis for the project (see Draft Environmental Impact Statement page 3-27). Traffic projections are regularly updated by the Maricopa Association of Governments. The traffic projections in the Draft Environmental Impact Statement are from a model adopted in 2011. When the Maricopa Association of Governments adopts new socioeconomic projections and traffic projections, it will be reflected in the study documents. Key model inputs used to forecast travel demand included (see Table 3-7 on Draft Environmental Impact Statement page 3-27): · socioeconomic data based on the adopted general plans of Maricopa Association of Governments members, which includes projected growth in population, housing, and employment (including proposed commercial centers), along with economic forecasts and the existing and planned transportation infrastructure as identified by Maricopa Association of Governments members · the anticipated average number of vehicle trips within the region (including those to and from the region's households) on a daily basis (this number is tracked regularly by the Maricopa Association of Governments) · the distribution of transportation modes used by travelers in the Maricopa Association of Governments region (also tracked regularly by the Maricopa Association of Governments · the capacity of the transportation infrastructure to accommodate regional travel · the future transportation infrastructure established using *Regional Transportation Plan*-planned projects and improvements and from known arterial street network improvements assumed to be made by the County, Cities, and private developers The Maricopa Association of Governments approved new socioeconomic projections in June 2013. The new data are presented in the Final Environmental Impact Statement (see page 1-11). Although slower growth in total vehicle miles traveled was noted, the need for the freeway did not change. The revised traffic analysis validated that the proposed project is needed today.
4	**Health Effects**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. As discussed on page 4-147 of the Draft Environmental Impact Statement, a programmatic agreement was developed for the project to establish a process for

(Response 5 continues on next page)

Code	Comment Document

air toxins) . This 2005 study conducted by EPA and ADEQ in joint effort with JATAP showed results reported in 2006 showed emission from traffic were already (in 2006) above the standard of 1 million chance of cancer in a life time of exposure in west an south phoenix and GRIC, This need new data for 2007 2008 2009 2010 2011 2012 2013 since air and traffic are now worse. To not have DEIS study this is unethical and flawed.

8 4

13. *Jatap monitoring already found formaldehyde at 34 times the standards,*
14. *Benzene at 8 times the standard, butadiene 1 and 3 7.5 times the standard, acetaldehyde at 3.4 times the standard, our residents are being exposed to these entire carcinogens not just one. DEIS must study the combined effects of these current carcinogenic mixed compounds on Health. And then study the new higher levels of all of the above thru 2013, Then model and project the added compound and impacts caused by the study which will make all the toxin levels higher*
15. *Health risks of JATAP have been studied and need to be updated and cancer risks have been extensively published by the EPA and are well known carcinogens hurting health. The DEIS states it's uncertain of the risk proving the DEIS study is a cover-up and inaccurate denial of the facts.*

9 2 10

16. *DEIS does not mention hazmat transportation issues a risk of tanked from Mexico. Must redo the study for this*
17. *The sharp curve designed in the highway south of 85045 zip code should be reviewed for the addition risk for truck and car crashed since it's a steep banked curve, It is fully known that the pitch slope and angles of this curve will contribute to a truck safety issue and will increase the risks of track accidents and hazardous material spills. This extra detail is all missing from DEIS which is designed to protect and inform the public about impacts. A study of why the flaws in the DEIS need to be independently looked at as well and the influence the trucking industry is having and adot on rushing to poor judgment in this study. Independent review must be done to answer why the above points we omitted or played down and Environmental impacts since prior and current facts differ from the DEIS.*

11 3

18. *Congestion and future traffic counts not molded correctly and congestion on west I 10 on ramps not designed correctly to handle traffic volumes. ADOTS past modeling results have been inaccurate and realistic . We need better and realistic quality data inputs into the study. 2012 and 2013 traffic pattern data not updated in the study. Must relook at peak traffic from April 2013 as look at current air quality EPA violations.*

12

19. *Sulfur and benzene test stations should be set up to get accurate 2013 air quality reading in laveen GRIC and Ahwatukee and Chandler who are directly going to be impacted by this as well.*

13

20. *If you do major cut thru and removal of 3 to 5 ridges of South Mountain I assume the wind tunnel and wind patterns will be dramatically different and in the future will cause the wind , dust and pollution flows to be different. May cause more sulfur diesel and benzene to flow into the air and be trapped in zip codes 85045 85048 and on GRIC. The study does not seriously look at this impact with quality findings. I also am not certain that the studied the air quality and violations of EPA standards 2013 and may have exceeded EPA. Detail the EPA sensor air violations thru May 2013 so we all publically know what levels and issues we have before the freeway.*

12

8 14

21. *Dust particulate impact should be study at today's levels the construction levels and post construction levels since the natural wind tunnel with be changed due to cut thru mountain ridges and opening up air toxin portal.. What levels above EPA standard were exceeded in 2013 at the 43 ave EPA test monitor site.*
22. *It has been very difficult to breathe the air in 2013 in awhatukee and south leaven due to increase pollution and benzene and certainly worse than 2012 levels and worse thaqn what was identified inthe DEIS.*

12

23. *Updated data and study still needed and more air sampling must be done and study to wind pattern changes due to cutting thru mountains*

15

I would prefer the freeway be aligned w/ Riggs Road and have Pecos extended as a boulavard to the other end.

Sincerely concerned,

James Jewell

Code	Issue	Response
5 (cont.)		consultation, review, and compliance with federal and State preservation laws as the effects of the project on historic properties become known. The programmatic agreement states that any data recovery on federal lands necessitated by the project must be permitted under the Archaeological Resources Protection Act in accordance with the federal land-holding agency and that, in the event any data recovery for the project should take place on tribal lands, all applicable permits would be obtained. Because the project is proposed, a programmatic agreement is in place to address data recovery on federal and tribal lands, and no excavations have yet occurred. The proposed freeway is and will continue to be in compliance with the Archaeological Resources Protection Act.
6	**Environmental Justice/Lifestyle**	The Draft Environmental Impact Statement describes a decade-long consultation and coordination effort led by the Arizona Department of Transportation and the Federal Highway Administration with the Gila River Indian Community and other Native American tribes. As a result of the consultation, the cultural importance of the South Mountains is acknowledged in the Draft Environmental Impact Statement in several locations, notably page 5-26. The proposed project would accommodate and preserve (to the fullest extent possible from the available alternatives) access to the South Mountains for religious practices. Section 106 of the National Historic Preservation Act requires a government-to-government relationship between the Federal Government and Indian tribes as described beginning on page 4-140 of the Final Environmental Impact Statement. Section 106 requires federal agencies take into account the effects of their undertakings on historic properties and requires consultation with tribal authorities. Consultation has occurred with Gila River Indian Community government officials, the Tribal Historic Preservation Officer, the Cultural Resource Management Program, other tribes, and the State Historic Preservation Office and has led to concurrence from the Gila River Indian Community Tribal Historic Preservation Office and the State Historic Preservation Office on National Register of Historic Places eligibility recommendations (including traditional cultural properties like the South Mountains), project effects, and proposed mitigation and measures to minimize harm. This consultation has been ongoing and will continue until any commitments in a record of decision are completed. The section entitled *Title VI and Environmental Justice*, beginning on page 4-29 in the Draft Environmental Impact Statement, presents acceptable methods, data, and assumptions to assess the potential for disproportionately high and adverse effects from the proposed action on environmental justice populations and disparate impacts to populations protected under Title VI. Based on the content of the section, no such effects would result from the action alternatives. In light of comments received on the Draft Environmental Impact Statement, the above-referenced conclusions were confirmed in the preparation of the Final Environmental Impact Statement. To provide further clarity, the discussions of environmental justice and Title VI were separated and additional text explaining the relationship of environmental justice and Title VI to various environmental elements was added throughout Chapter 4, *Affected Environment*, *Environmental Consequences, and Mitigation*, as exemplified by the inserted text on page 4-29 of the Final Environmental Impact Statement.
7	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
8	**Air Quality**	Summary information about the findings of the Joint Air Toxics Assessment Project study is provided as background information in the Draft and Final Environmental Impact Statements, but the study itself is not relevant to the type of analysis done pursuant to the Federal Highway Administration's mobile source air toxics guidance, which is an emissions analysis. Monitored ambient concentrations of mobile source air toxics (the focus of the Joint Air Toxics Assessment Project) do not inform this type

(Response 8 continues on next page)

Code	Comment Document

Code	Issue	Response
8 (cont.)		of analysis. While monitoring data can be useful for defining current conditions in the affected environment (to the extent that the monitoring data are current), they don't tell us anything about future conditions, or the impacts of the project itself, which is why an emissions analysis was performed. The mobile source air toxic analysis presented beginning on page 4-77 of the Final Environmental Impact Statement is an estimated inventory of mobile source air toxic emissions for the entire Study Area for 2025 and 2035. This approach was used because the inventory estimate accounts for changes in traffic and emissions on all roadways affected by a proposed project, and would, therefore, be a more reliable predictor of changes in exposure to mobile source air toxics. The Draft and Final Environmental Impact Statements present information and analysis about the proposed action and the enhanced conditions when compared against the No-Action Alternative and would not cause significant adverse effects. The Federal Highway Administration and Arizona Department of Transportation Draft and Final Environmental Impact Statements account for the potential effects when considering both adverse and beneficial impacts. The Draft and Final Environmental Impact Statements provide in-depth discussion of potential air quality impacts of the proposed alternatives. The carbon monoxide analysis presented on page 4-65 of the Draft Environmental Impact Statement and updated on page 4-75 of the Final Environmental Impact Statement represents projected carbon monoxide concentrations along the project corridor, including those proposed interchange locations along the South Mountain Freeway corridor. The Arizona Department of Transportation also conducted a quantitative particulate matter (PM_{10}) hot-spot analysis that is discussed on page 4-76 of the Final Environmental Impact Statement. Both of these analyses demonstrate that the health-based National Ambient Air Quality Standards for carbon monoxide and particulate matter (PM_{10}) would not be exceeded at worst-case locations along the project corridor. The emission modeling developed for the proposed action showed that for the mobile source air toxics study area, there would be little difference in total annual emissions of mobile source air toxics emissions between the Preferred and No-Action Alternatives (less than a 1 percent difference) in 2025 and 2035. With the Preferred Alternative in 2035, modeled mobile source air toxics emissions would decrease by 57 percent to more than 90 percent, depending on the pollutant, despite a 47 percent increase in vehicle miles traveled in the Study Area compared with 2012 conditions (see discussion beginning on page 4-77 of the Final Environmental Impact Statement). The carbon monoxide and particulate matter (PM_{10}) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.
9	**Hazardous Materials**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
10	**Design**	All elements of the proposed freeway design are in accordance with the Arizona Department of Transportation's *Roadway Design Guidelines* and the American Association of State Highway and Transportation Officials' *A Policy on Geometric Design of Highways and Streets*. Hazardous materials commodity flow studies and other information are used by emergency response planners (such as the Arizona State Emergency Response Commission statewide and the Maricopa County Local Emergency Planning Commission for Maricopa County) as some of the elements considered when developing emergency response plans. If the plan were amended, it would be made available to the Arizona Department of Transportation.

Code	Comment Document

Code	Issue	Response
11	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
12	**Air Quality**	Data from various Maricopa County Air Quality Department monitoring sites were used in the air quality analyses. Siting, operation, and recording information from monitoring sites are the responsibility of the Maricopa County Air Quality Department. See <maricopa.gov/aq/>. The monitoring information used in the air quality analyses is discussed in greater detail in the air quality technical report prepared for the project, which is available on the project Web site at <azdot.gov/southmountainfreeway>. The results of the analyses are summarized in the Final Environmental Impact Statement. According to Environmental Protection Agency guidance, new monitors are not necessary to analyze air quality impacts.
13	**Air Quality**	Air quality depends on several factors such as the area itself (size and topography), the prevailing weather patterns (meteorology and climate) and the pollutants released into the air. Cuts through the South Mountains would be expected to produce microclimate differences similar to those produced by a series of buildings in a large city that produce localized wind tunnel effects. The mountain cuts, however, would not affect regional air quality.
14	**Air Quality**	Emissions from road dust and additional sources were considered in the quantitative project-level particulate matter (PM_{10}) hot-spot analysis prepared for the proposed project. The results of the analysis are summarized in the prologue to the Final Environmental Impact Statement (page xiii) and are more fully described beginning on page 4-68 of the Final Environmental Impact Statement. The carbon monoxide and particulate matter (PM_{10}) analyses demonstrated that the proposed freeway would not contribute to any new localized violations, increase the frequency or severity of any existing violation, or delay timely attainment of the National Ambient Air Quality Standards or any required interim emissions reductions or other milestones.
15	**Alternatives**	A Riggs Road Alternative was considered. It would replace 51st Avenue south of its connection to Interstate 10 (Papago Freeway) for approximately 21 miles. It would then replace approximately 4 miles of Beltline Road in an easterly direction. At the Riggs Road/State Route 347 intersection, the alternative would replace approximately 3 miles of Riggs Road before connecting to Interstate 10 (Maricopa Freeway) (see Final Environmental Impact Statement page 3-9). While the Riggs Road Alternative would serve regional mobility needs, particularly of those living in the Maricopa area, meeting this travel demand would not address specific planning goals for an integrated regional transportation network. The *Regional Transportation Plan* identifies the proposed South Mountain Freeway as a critical link in the Regional Freeway and Highway System. The Riggs Road Alternative would not complete the Phoenix metropolitan area's loop system as part of State Route 202L, thereby causing substantial out-of-direction travel for motorists. Therefore, the Riggs Road Alternative would not meet the project's purpose and need criteria and was eliminated from further study. In addition, nearly two-thirds of any alternative using Riggs Road would be on Gila River Indian Community land. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.

I've seen this map but am interested in more detail on the route.
Like where are interchanges, What properties will be affected.
The rumor around here is that the Desert Foothils "Post office" and Glenhaven will all be torn down.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

Subject: re-route the 202

To whom it may concern,
WE've built too many freeways which have only contributed to our unsustainable urban sprawl. I oppose construction of the 202 and especially the option that is currently under discussion. You should NOT use the route requiring chopping off our sacred South Mountain. It's my understanding that the current option is to cut a large 200' high cut into the mountain. That should not be done. IF you insist on building this massive river of cars at least re-route it so that you don't have to cut into South Mountain.
Thank you,
Dana Johnson

Code	Issue	Response
1	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
2	**Alternatives**	The project team examined all reasonable alternatives to avoid the park, but did not identify any feasible and prudent alternatives to avoid impacts on the park. The portion of the park that would be used for the proposed freeway would be 31.3 acres, or approximately 0.2 percent of the park's approximately 16,600 acres (see Final Environmental Impact Statement pages S-39 and 5-31). The Arizona Department of Transportation continues to work closely with park stakeholders to minimize impacts and address various concerns; several measures to minimize harm to Phoenix South Mountain Park/Preserve are under development (see Final Environmental Impact Statement, starting on page 5-23).
3	**Cultural Resources**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

4292

Park, because I feel it's an idea that has passed its usefulness.

I don't believe that building this freeway would reduce the congestion.

I do think it would encourage sprawl and encourage the waste of the natural resources that we have remaining.

I think the massive amount of money projected to be spent on this freeway could be better spent elsewhere repairing our aging infrastructure throughout the region, promoting public transit, bikes, other alternatives.

I believe it would be a waste of money.

That's all I need.

***

ADAM JOHNSON: I like the 59 Alternative. I feel that brings the community closer to downtown Phoenix.

I think bringing the community together involves bringing the economy up. You connect the cities together, to me it helps the people grow, helps the city connect.

I guess what I am trying to say is putting the 59 in, economically it will help the city

1

Code	Issue	Response
1		Comment noted.

Code	Comment Document

better because you already have connections.

The 59 gives the Laveen community a way to get to the main freeway so they can go to downtown Phoenix or to the west regardless of where they live in Phoenix. So 59 is more involved for the living community to connect to downtown and the rest of the city.

On top of that, to me it feels like there is no freeway connecting Laveen into any of the city. So I think this might allow us to connect to the city a lot better, to let us bring our ideas to the city, commute back and forth.

I guess that's all I have.

***

PATRICIA WEEKS: Our concerns are once they close off 32nd Street off of Pecos and 32nd Street, the road that goes from Frye off of 32nd Street into the Lakewood subdivision and out through --

LARRY WEEKS: -- will be used to bypass Chandler Boulevard getting to 40th Street to get to the freeway on the 202 and the Briarwood exit.

PATRICIA WEEKS: That's one of the concerns.

LARRY WEEKS: The other concern is there is

Subject: Comments on DEIS for the SMF

To whom it may concern;

I am a snowbird who, with my wife, has spent about six months of the year at our condo at 1024 E. Frye Rd. Unit #1047, Phoenix, AZ 85048 since 2002. Our primary residence is at 9280 Sunderland Way in West Chester, OH, 45069 - just north of Cincinnati about 20 miles. I have been following periodic articles in the AZ Republic and other sources of information on this topic since then. Most recently I read a very informative email issued by PARC. I certainly agree with all of the points they make in their thoughtful analysis.

With regard to my comments on this matter I will focus on one technical topic which doesn't appear to be discussed in great length but which I
strongly believe is a cornerstone issue regarding the ADOT advocacy of the SMF. Specifically, I question the veracity of the modeling studies mentioned extensively by ADOT in support of the SMF. My background as a retired GE engineer includes a B.S. in Metallurgical Engineering from the South Dakota School of Mines & Technology in Rapid City, SD, in 1964, and a M.of Engr. in Materials Engineering from Rensselaer Polytechnic Institute in Troy, NY, in 1974. My 35 years of employment with GE involved Naval Nuclear, Industrial Gas Turbine and Aircraft Gas Turbine industries. I had many assignments in the areas of materials application and advanced material & process development, as a technical engineer, as a functional manager and as a program manager.

Almost all of the projects that I worked on, ranging from several week long quick studies to the last NASA program that I managed at GE Aviation (which lasted eight years and for which my NASA budget averaged close to $1 million/month for a total of $96million) used many types of analytical models. Although modeling was not my technical specialty, I had many PhD's with extensive experience in modeling working for me directly and also
as hired consultants to do very complex analyses. As a manager, I was responsible to assure

(Comment codes begin on next page)

Code	Issue	Response

Code	Comment Document

that the basic objectives of our modeling effort made technical sense, that the work was done diligently and the results reported accurately. On large government contracts not doing so risked cancellation of the project at best and potential civil or criminal penalties at worst. So there was always a strong motivation to get it right.

Three fundamental precepts of any modeling task are 1) establish appropriate boundary conditions, 2) test the results of the modeling against the initial boundary conditions to make sure they are consistent with one another, and 3) verify the results of the model with actual physical data.

1 2 At the current time I am personally unaware of whether or not the modeling results touted in the DEIS for the SMF have met any of these absolutely essential criteria. Therefore I suspect that any arguments made in favor of the proposed truck bypass through Ahwatukee based on modeling would likely be erroneous and fall into the category of GIGO (Garbage In, Garbage Out).

Respectfully,

Andy Johnson

1	**Purpose and Need**	The Federal Highway Administration and the U.S. Environmental Protection Agency approved the air quality conformity determination that includes the Maricopa Association of Governments regional travel demand model that produced the traffic projections used in the traffic analysis for the project (see Final Environmental Impact Statement page 3-27). The model projects demand for multiple modes of travel, including automobile, bus, and light rail. Key model inputs used to forecast travel demand in the Study Area included socioeconomic data (based on land use plans and population and economic forecasts), the anticipated average number of vehicle trips within the region on a daily basis, the distribution of transportation modes used by travelers in the region, the capacity of the transportation infrastructure to accommodate regional travel, and the future transportation infrastructure. The project team used the most recent and reliable data available. The Final Environmental Impact Statement (Chapter 1, *Purpose and Need*, and Chapter 3, *Alternatives*) provides more detail on the data inputs to the modeling effort and discussions of the assumptions used.
2	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.

Subject: NO to Southmountain Freeway
Importance: High

Please do not waste any more of tax payers money to build this freeway. I totally agree with the Gila River tribal members who do want to see more development happening in their beautiful desert. Another freeway only brings more pollution to this pristine landscape impacting all life. (1)

Phoenix and ADOT need to impose vertical development and stop this unruly urban sprawl. As it is there is not enough water to sustain this rampant growth. Please think and plan 50 years ahead. San Diego put limits on development a while back perhaps the Valley needs to do the same. (2)

NO to Southmountain Freeway. (3)

Thank you.

Elsa Johnson

1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	Unplanned growth is often termed "urban sprawl." Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed freeway would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions' land use plans for at least the last 25 years.
3	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. project will create 38,000 jobs during the five- to six-year construction period that will result in a $2 billion investment in the Phoenix area economy.

The money to build the freeway is in the budget, and again, this has been approved by voters twice, first in 1985 and again in 2004. I approve the 202, and I would like to see it built. Thank you for your time.

THE FACILITATOR: Thank you, sir. Garell Jordan. Did I get that name proper?

MS. JORDAN: Garell.

THE FACILITATOR: Ma'am, you have three minutes. Here's the timer; please begin.

MS. JORDAN: My name is Garell Jordan; I am a proud resident of Laveen for the last two years. We moved to Laveen, I live at 64th Avenue and Southern, so very close to the 59th Avenue alignment. We knew when we moved there that there was a freeway planned. And we moved there because we wanted more acreage; we wanted land for our animals; we have six dogs, three horses, and a bunch of chickens. But we also knew that we wanted to live in close proximity to downtown Phoenix, where I work, two blocks from here. And we knew that we wanted some of the amenities of living in the city that, you know,

Code	Issue	Response

(Comment codes begin on next page)

Code	Comment Document

frankly, if I really wanted to live on a farm, I would have to move a lot further out.

So that wasn't the goal. The goal was to live in a mixed-use community, a diverse community. A lot of people have mentioned, you know, Laveen has an average per capita income equivalent to Paradise Valley and Ahwatukee, but they also have a higher than average rate of poverty, so we are a very diverse community; we are socially diverse, economically diverse, and I like that.

You know, that's what I moved there for, but I moved there expecting a freeway. And the freeway's been promised for years and years. So we assumed that eventually it would be there. And so I urge you to complete the freeway; however, living in -- on a county island just outside of Phoenix's limits, we are also very concerned about some of the truck traffic that we will see. We live off of Southern Avenue. And there's a lot of industry in the area, so we would ask that in building the freeway, that there be consideration about the concerns of nearby residents related to the burden of increased traffic from commercial vehicles, access of the freeway ramps, and that there be adequate sound barriers and other things.

Subject: No Freeway through Ahwatukee

(1) (2) (3) (4) (5) (6) (7)

I just heard with dismay that the push to extend the Loop 202 through Ahwatukee is once again under way. My husband and I have lived here for 13 years and we and our neighbors throughout Phoenix strongly oppose this very ill-conceived project. Urban sprawl has already taken too much of a toll on the city of Phoenix and South Mountain Park is an irreplaceable recreation and wildlife area; it provides a critical balance for the over-development that already occurred. This very unnecessary freeway would be an environmental disaster, bringing pollution and noise to our community, negatively impacting it in every way. The justifications that have been trotted out for building this freeway don't begin to measure up to the facts. Let the people vote on this issue which has such far-reaching consequences. We need to know who exactly will benefit. Whoever it is, it won't be the residents of Ahwatukee and our community at large. Please do not build this freeway.
Sincerely,
Lori Kaiping

I have lived in the Ahwatukee Foothills area since December 1991 when we moved here from NJ when my daughter was barely 3 months old. We lived for many years in the Ahwatukee Custom Estates but moved to the Foothills in 2006. We live in an infill gated street behind the Foothills Golf Club. I take Pecos Road daily. I lookout out see the Reservation land empty for miles and miles. I look at the area as a huge waste! Growing up in NJ one of the great things they created which is a toll road is the Garden State Parkway...NO TRUCKS ALLOWED. The NJ Turnpike, another important highway but interstate is also a toll road but does not disrupt residential areas! I cannot imagine the need for either type of road running through Ahwatukee! We are a relatively small community quite self contained. Having a huge highway running through here would completely change the context of our community! The noise, polllution, necessary demolition of homes, church and who knows what is tragic!!! I implore the planning execs to try to negotiate with the private landowners of the Gila reservation that may be appropriate for a roadway otherwise I beg the Transportation Planners to abandon this proposal as unnessary and extremely detrimental to this community!!!

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013. I AND OUR FAMILY ARE IN FAVOR OF THIS PROJECT. OUR BIGGEST CONCERN IS THE IMPACT THE FREEWAY WOULD HAVE ECONOMICALLY AND ENVIRONMENTALLY ON GROUND WATER, AIR POLLUTION AND WILD LIFE.

1	**Groundwater**	Groundwater impacts are addressed in the *Water Resources* Section of the Final Environmental Impact Statement, beginning on page 4-101. If a well were adversely affected by construction activities, the well might need to be abandoned or the well owner would be compensated by drilling a new well according to State regulations/standards. Mitigation measures would be put in place to reduce impacts on groundwater (See Final Environmental Impact Statement pages 4-106 and 4-107 and the text box on page 4-108.) The well replacement program as outlined by State law has been regularly implemented by the Arizona Department of Transportation to effectively mitigate well impacts associated with its projects throughout the region.

1	Praveen Kareddy Document Created: 5/21/2013 2:53:24 PM by Web Comment Form Please build the south mountain 202 look as soon as possible, we have been living in this area since 2006 and we have been waiting for this loop so that it would make us to commute easily to my work located in chandler. I take base line and then I-10 to go to work, base line to I-10 itself takes about 30-45min in the peak hours and if there is any construction or something else going on base line then it takes much much longer. we believe this 202 loop is required for Laveen residents so that Laveen growth will be much faster and it is very good for Laveen growth. Thanks

Subject: south mountain freeway

To whom it may concern,

It's frustrating to read a lot of the media accounts surrounding the South Mountain Freeway because they are so hyper-focused on the opinions of a small segment of people in Ahwatukee who are against the freeway for selfish reasons.

1

Speaking as a Laveen resident who purchased a home along 67th avenue in between Southern and Baseline in 2008, there is absolutely no question that we need the freeway built.

I think it's ridiculous when people in Ahwatukee say there is no need for the freeway. It's so self-absorbed. Tell that to the thousands of people who spend at least twice as much time driving to I-10 in rush hour as in non rush hour (a 5.5 mile drive that often takes 15 minutes for me). Tell that to the people who work in the Southeast Valley and have to drive 25 minutes down baseline for 12-15 miles just to get to I-10.

I have friends in Ahwatukee. It takes 45 minutes to visit them when it would take less than half that time with a freeway because I have to go entirely around South Mountain. I know people who live in Glendale and Avondale and work in Chandler. Tell it to them.

This doesn't even mention what the lack of a freeway has done to the community in Laveen. We have no hospital within a 15 minute drive, no movie theater with a 15 minute drive, no Target within a 15 minute drive, no Costco. Our dining and retail options are enormously limited. And this doesn't just impact Laveen, but the South Mountain district and Estrella.

There are way more people impacted by not having a freeway than the limited number of people directly impacted who live within a quarter mile of Pecos Road. For 95% of people in Ahwatukee, live won't even change as a result of the freeway. Life will change for 100 percent of people in the area I live.

Laveen is only going to continue to grow and develop, of course, and so will the areas west, Avondale,

Goodyear, Buckeye. Not only is the South Mountain Freeway long overdue, but the I-10 reliever freeway (State Route 30) will need to be built to handle all of the increased I-10 traffic that is certain to come in the next decade or two.

If anything, I would say that the segment of L-202 from I-10 to at least Southern road should be expedited once all of the right of way is acquired once the freeway has been approved. It's going to make a monumental difference for many thousands of people.

Thank you,

Chris Karpman

1 2	Bruce Kasmer Document Created: 5/27/2013 7:27:19 AM by Web Comment Form I have always thought of this freeway primarily as a bypass used by cross country travellers to get through the Phoenix metro area as quickly as possible with minimal impact on local residents. As such I would think that one of the more western alignments would be more appropriate than the W59 selected with the added benefit of more closely aligning with the 101. In addition I wonder if any other alignments farther west than W101 were ever considered.

Code	Issue	Response
1	**Alternatives, W59 Alternative Versus W101 Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	The corridor screening process (beginning on Final Environmental Impact Statement page 3-6) recounts the development and screening process of corridors that were west of State Route 101 Loop. Initial corridors near Avondale Boulevard, at the western edge of the Study Area, are shown in Figure 3-5, on page 3-7. Figure 3-6, on age 3-10, shows the T09 Alternative (located just east of 107th Avenue), which was eliminated at the second stage of corridor development and screening. Table 3-3, on page 3-11, summarizes the reasons it was eliminated from further study.

Document Created: 7/15/2013 1:10:13 PM by Web Comment Form

When watching the simulation video at one of the public meetings, it did not appear that there were many cars on the road. Someone from ADOT at the meeting mentioned that the numbers of cars was calculated based on projected rates. However, was an analysis done using 2010 census numbers and is Arizona continuing to see the rapid growth it once did? Do we really need this highway expansion? We should use this funding to expand the light rail and improve other modes of transportation. Sometimes the no build alternative may be the best one to choose.

Do not destroy any part of South Mountain. Leave Pecos as a 2 lane road and continue that AROUND the mountain. It is the perfect compromise. The alternate route would be there, just now a highway. Less environmental impact. No homes or businesses lost. Minimal truck traffic.

Code	Issue	Response
1	**Section 4(f) and Section 6(f)**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Alternatives**	The concept of keeping the facility an arterial street is similar to the Arizona Parkway concept evaluated for the proposed project. The reasons that alternative was eliminated from further study are presented on page 3-19 of the Final Environmental Impact Statement. Any alternative alignment that goes around the South Mountains would partially be located on Gila River Indian Community land. Permission to study such alternatives has not been granted by the Gila River Indian Community government (see Figure S-11 on page S-39 of the Final Environmental Impact Statement). Any alternative on Gila River Indian Community land must consider tribal sovereignty. Tribal sovereignty is based in the inherent authority of Native American tribes to govern themselves. While this notion of sovereignty is manifested in many areas, generally Native American land is held in trust by the United States. Native American communities have the authority to regulate land uses and activities on their lands. States have very limited authority over activities within tribal land (see page 2-1 of the Final Environmental Impact Statement). From a practical standpoint, this means that the Arizona Department of Transportation and Federal Highway Administration do not have the authority to survey tribal land, make land use (including transportation) determinations directly affecting tribal land, or condemn tribal land for public benefit through an eminent domain process.
3	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)

We are totally opposed to the extension of the Loop 202 freeway through Ahwatukee. (1)

The plans for this freeway might have been a viable option when it was first drafted, however, since then our community has grown and does not accommodate this option any longer. (2)

Our homes, schools, local traffic & air pollution will all be affected. There is no upside to this option any longer. (3) (4) (5)

Please add us to the DO NOT COMPLETE THE SOUTH MOUNTAIN FREEWAY AS PROPOSED list. (6)

If we did that sort of thing, we would be able to cut down the amount of cardiovascular disease that we have, we would reduce Alzheimer's. All these terrible diseases. We would do away with all of that. We could eliminate a lot of these diseases, or decrease them certainly. Guess I can't think of anything else.

MS. KEENAN: Erika Keenan, E-r-i-k-a K-e-e-n-a-n, Laveen, Arizona. I took time off from work today to come down to speak, and I said my three minutes, and I was cut off at my three-minute mark. I understand why rules are in place, but the panel had been sitting there for at least 20 minutes with no one to speak, and I was the only one next in line to speak, so I'm not sure why they couldn't have given me the courtesy of letting me finish what I had to say, especially since we're taking our personal time to come down and say this and there was nobody else around. Thank you.

UNIDENTIFIED SPEAKER: We live on Pecos Road on the street right there, and it's right next to, you know, where the highway would be or -- and on the other side of that would be the Indian reservation where they're struggling to come to a decision. And I've lived there for about nine years,

Code	Issue	Response
1	**Public Involvement**	The public hearing provided members of the community an opportunity to make comments (with a 3-minute limit) in front of a project panel. The time limit was put in place to accommodate the large crowds expected throughout the day. Court reporters were also available to take individual verbal comments; those comments were not subject to the 3-minute limit. Comments could also be submitted on comment cards, through e-mail, a telephone hotline, or the online hearing.

Code	Comment Document

there the heat index is going to go up; it's already hotter out there than any other parts of the Valley.

Also, along with the increased congestion there will be increased air and noise pollution that is not accounted for around those homes, and just building a berm between the two perhaps is not really a fair solution to the people that have lived there so long. So we would be anxious to know if this goes through, what the plans might be to inhibit that noise and how much widening is going to be done. And that's about all I have, and I want to thank you for the time.

THE FACILITATOR: Thank you, sir.

If anyone else is in the auditorium and you'd like to speak, register at the front desk, your name will be up on the screen, and we'll call you in order. Thank you.

Erica Keenan.

Ms. Keenan, hi. You have three minutes, the timer is here in front of you. Please begin.

MS. KEENAN: All right. My name is Erica Keenan, I'm a resident of Laveen, Arizona, and I appreciate you letting us speak today. Over the past ten years the population of Laveen and Southwest Phoenix has doubled and the environmental impact projects that the number to be more than doubled in the next 25 years.

(Comment codes begin on later page)

Code	Comment Document

Only the Loop 202 connector can ease the traffic nightmare that is currently the I-10, which is clogged with rush-hour traffic, heavy trucking, and shipping traffic.

As a matter of fact, the traffic is so bad that on many days you can find heavy trucking and shipping traffic coming over 51st Avenue to Riggs Road through the GRIC and Laveen through the surface streets. These surface streets were not made for such traffic. Baseline Road and Dobbins Road are already clogged and the pavement is collapsing due to overuse and heavy trucking traffic. When the population doubles and traffic doubles, which is what is projected, what are we going to do without an alternative like the 202? Opponents don't want to see things change, and yet a new multi-thousand-square-foot expansion of the Vee Quiva Casino, complete with 1,000 spaces for parking, is underway. What are we going to do about the added traffic that will be added to the one and only road to and from the casino, which is 51st Avenue?

Unemployment is still a huge problem in Laveen and the South Phoenix area. Construction jobs are nice, and building the road will bring many needed area labor jobs, but the highway can also bring in commercial and professional jobs to our area.

1

I'm 100 percent behind building the Loop 202 connector, but I also realize we must not simply slap in a new highway. We must also make sure the new Loop 202 build is a model to be followed by other highway building projects. This includes making sure there are bike and pedestrian paths along the side of the highway so citizens have a choice on what means they want to commute. Some examples of these freeways and parkways are the Schuylkill Expressway in Philadelphia and the Rock Creek Parkway and W&OD Trails in Falls Church, Virginia.

2

A nice-looking sound barrier is also needed. We are located at the base of South Mountain Park, the largest municipal park in the country and recently touted by National Geographic magazine as the top five hiking destinations in the country. Laveen is also home to Aguila Golf Course, a top-rated Golf Digest municipal course and PGA qualifying course. As such, building the 202 we hope will add access for tourists, and we want it to look nice.

THE FACILITATOR: Excuse me. You've exceeded your three minutes.

MS. KEENAN: I conclude with a plea, don't continue to think of this area as the barrio or the ghetto of Phoenix. This area earns a higher national

Code	Issue	Response
1	**Design**	Recreational or equestrian trails are not included in the proposed project. The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
2	**Visual Resources**	The Arizona Department of Transportation Roadside Development Section is responsible for assigning a wide range of standard treatment applications and wall materials, including color, to noise barriers and other structures. Typically the community where the wall will be constructed would work closely with its City Architect or planning department to decide on a theme for the wall. Usually, this can be accomplished by using the Arizona Department of Transportation's standard applications. As an example, for State Route 101 Loop (Pima Freeway) in Scottsdale, the City of Scottsdale chose to add public art to the noise barriers. The City's intent went above and beyond the Arizona Department of Transportation's guidelines of reasonable aesthetic treatment and, therefore, the Arizona Department of Transportation did not fund the aesthetic portion of the project. The Arizona Department of Transportation and the City of Scottsdale entered into an intergovernmental agreement for the purposes of allowing Scottsdale rights to design and construct artistic embellishment on the Arizona Department of Transportation-supplied noise barrier. The Arizona Department of Transportation provided the funds for construction of the noise barriers themselves, but the City of Scottsdale provided the funds to cover the aesthetic portion of the walls. Final Environmental Impact Statement page 4-171 explains the process municipalities might take to achieve the desired aesthetic treatment for noise barriers or other structures.

average household income than the City of Phoenix --

THE FACILITATOR: Excuse me.

MS. KEENAN: -- Paradise Valley, and the greater national average. Thank you.

There aren't that many people here to speak; I don't know why you can't let people speak a couple more seconds.

THE FACILITATOR: Paula Fleck.

Before you begin, ma'am, keep in mind the three-minute time limit.

Also, please be respectful of all the speakers. Your comments need to be kept to yourself so we can honor the comments and opinions of each speaker, regardless of your side of the issue.

Yes, ma'am, go ahead.

MS. FLECK: Okay. I think it is time to build the South Mountain freeway. Valley commuters have waited in traffic jams long enough. The freeway will cut congestion across the metro area, reduce the air pollution, and save drivers time and money; 64.3 percent of likely voters in Maricopa County support construction of the freeway, according to the results of a new poll commissioned by We Build Arizona. Just 19.6 percent said they were opposed or likely to oppose the project.

In a separate survey also commissioned by We

Im in support of building the 202 100%! I believe not only will the extension help reduce traffic on other major freeways but will reduce accidents as well. Thank you for listening.

1	Larry Keifenheim Document Created: 5/21/2013 3:06:42 PM by Web Comment Form I strongly favor the building of the South Mountain Freeway. It would improve traffic flow at the I-10 tunnel in downtown. Afternoon traffic flow traveling west is stop and go coming out of the tunnel and reversed during the morning rush hours. There are many accidents etc. around the tunnel which also slows travel. Presently there is no other west freeway travel out of downtown Phoenix. The west valley is expected to add many more businesses and residents in the coming years and will need traffic improvements to handle the growth. The Laveen, Estrella and South Mountain villages of Phoenix are greatly underserved regarding medical care, higher education, commerical, retail and job creation opportunities. The freeway will make it more attractive for developers to invest in this area of the metro. More investment means more tax dollars for the entire region. The South Mountain Freeway provides a chance for the southwest section of the metro to prosper as other sections of the metro have done with the addition or improvements of freeways 10, 17, 101, east 202, 51 and the widening of 60 in the east valley. Thank you.

Build 'er boys !! In my 74 years of residency in Arizona, I have seen every type of destruction of land and monuments destroyed in the interest of progress. Metro Phoenix is now running a train system, might as well get some of that I-10 traffic diverted around and tear up some more land. But for cryin' out loud, don't be drilling for oil on federal lands, more oil, more freeways. The 202 connection between I-10 is also essential to the economy of the casinos on the reservation. Afterall, the federal money for medical assistance to the tribe is not enough....with all the money from casinos, they (American Indian Tribes) could have the best contingent of medical facilities and hospitals across the country, more than the V A or the the missions along the trail in California. As far as casinos, let 'em build the one in Glendale, who cares? The 202 loop would give faster access to University of Phoenix and Jobing stadiums. They need the money too. While I'm at it, isn't ironic that spur off San Tan Freeway to Ellsworth road is about to finish? That will give cause to a new terminal on the east side of what was once affectionally known as "Willie Patch" or Williams Field giving way to defense cuts and now Gateway Airport. Yay for Queen Creek, once a great lettuce and potato and agricultural community, now, just another big box on the route. I wonder how much longer Luke AFB will survive cuts? I won't be around to see it but then the continuation to Florence Junction from Ellsworth. In the 50s hunted Willow Springs ranch north of Tucson and East of Oracle Junction. Last time I was in Tucson, drove north on the old "miracle mile" and passed right by Oracle with realizing it. Yep, build 'em boys, make room for some more silicone plants, cookie cutter housing developments and casinos. The biggest challenge is that the cage is the same size but the mice keep multiplying.

Respectfully
Herb Kelley

Subject: Comments in opposition to South Mountain Freeway

May 28, 2013

Arizona Department of Transportation South Mountain Study Team
1655 W Jackson St, MD 126F
Phoenix, AZ 85007

Dear South Mountain Study Team,

(1) I am writing to express my opposition to the proposed South Mountain Freeway and to urge ADOT to select the No-Build Alternative.

(2) (3) South Mountain Freeway would have incredible negative impacts on our communities. Despite what the DEIS claims, air quality in the region would worsen over time, increasing public health risks. As more vehicles fill the "uncongested" areas this freeway would temporarily provide, more pollution will be spewed into the air, exacerbating asthma, cancer, and other diseases.

(4) (5) The freeway would also negatively effect our environment. South Mountain Park is the largest city park in our nation. It was set aside to protect resources and to benefit our communities. By blasting a freeway through a portion of this park, wildlife and habitat will be destroyed, movement corridors will be cut off, valuable public spaces will be lost, and more. This would set a terrible precedent by demolishing what should remain a protected area.

(6) The freeway will also exacerbate urban sprawl and further burden Arizona's taxpayers. Its construction would continue ADOT's trend of forcing residents to remain vehicle-dependent while paying for infrastructure so that others can live farther and farther from a city center.

(1) Please help protect our communities, our health, and our environment by selecting the No Action Alternative. Thank you.

Sincerely,

Lisa Kelly
8342 E Weldon Ave
Scottsdale, AZ 85251-5934

1	**Alternatives, No-Action (No-Build) Alternative**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Air Quality**	
3	**Health Effects**	
4	**Section 4(f) and Section 6(f)**	
5	**Biology, Plants, and Wildlife**	
6	**Neighborhoods/ Communities**	Unplanned growth is often termed “urban sprawl.” Generally, this term is used in the context of rapid and uncontrolled urban growth onto previously undeveloped land—usually on the outskirts of an existing urban area. Projects like the proposed freeway are often identified as contributors to urban sprawl. Freeway projects are often cited as making land at the urban fringe more accessible and, therefore, more attractive for development. However, examination of data comparing population and land use between 1975 and 2000 suggests major transportation projects like the proposed freeway do not induce growth in the region (see Final Environmental Impact Statement pages 4-170 through 4-174). The proposed action would be implemented in a historically quickly urbanizing area (most noticeably in the Western Section of the Study Area, although the nationwide recession which began in 2007 slowed growth). In the Eastern Section of the Study Area, the proposed freeway would abut public parkland, Native American land, and a near-fully developed area—therefore, any contribution to accelerated or induced growth would be constrained. The proposed freeway would be built in an area planned for urban growth as established in local jurisdictions’ land use plans for at least the last 25 years.

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

1 Our family is very much against the building of this freeway. After looking at the maps and the movie the freeway is not what our community needs. The waste from tearing out homes and churches is horrendous!

2 We live in a wonderful community and I would appreciate it if the State would encourage community growth and unity but not destroy into it and destroying it. It is truly amazing how people (ADOT) make decisions that have a severe impact on our community when they don't have to live here. Please do not

3 push into this and please wait for the tribe to come around with an alternative route. I don't think ADOT have a clue as to how

4 severe this will be.

I am a resident of Ahwatukee Foothills and I do NOT want the Loop 202 going in on Pecos Road. I cannot imagine the noise, pollution and traffic nightmares that this will bring to have trucks passing through at all hours. My family has lived and worked here for over 20 years and this will greatly reduce the reasons why this is a desirable area to live. Do not ruin my community!

Code	Issue	Response

The EIS did not address in detail the option of 'no build'. No build, if not better, can be an equally viable option as 'build' if comprehensive study of 'no build' option is performed. The study did not take into account in detail the demand management strategies and neither was integrated approach for demand management through multi-modalism, active system management and capacity improvements at exisiting bottlenecks demostrated in the EIS for No build option. ADOT should look into the 'No Build' option comprehensively before proposing and implementing any of 'build' options which are all detrimental to society and environment.

MS. KIMMICK: Debbie, Kimmick, K-i-m-m-i-c-k.

I live on 59th Avenue and Broadway, and I'm concerned about the alternate route or the proposed route. It's going to knock off my access heading north because that's turning into an access road, and I'm concerned that it's cutting my neighborhood in half.

So my concerns with it being there would be the noise, the air pollution, the extra congestion. I feel that it would be better if they went and connected it to the 101 instead of the 59th route.

I'm going to keep it that simple.

* * *

MR. KIMMICK: My name is Galen, G-a-l-e-n, Kimmick, K-i-m-m-i-c-k, and I live at 59th Avenue and Wood.

I have several concerns about this project and the noise it's going to create, the air pollution that I believe it's going to create in my neighborhood that I don't have now. I believe there's a better alternative by

1	**Traffic**	The W59 Alternative would affect the existing local street network. Approaches for reconfiguring the local street network include removing streets, constructing new streets, constructing the proposed freeway over existing streets, or dead-ending existing streets. Final design of local streets would be coordinated with emergency service providers, local jurisdictions, and other appropriate agencies and would continue through final design stages. See Final Environmental Impact Statement Figure 3-32, on page 3-56. The neighborhood north of Broadway Road near the proposed freeway would continue to have access to adjacent streets such as 59th Avenue and Broadway Road. The access roads adjacent to the freeway would provide a north-south connection between Broadway and Lower Buckeye roads. They would not provide access to the adjacent neighborhoods.
2	**Social Conditions**	Prospective home buyers of neighborhoods built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)

moving it out to the 101 and making it a true bypass. I think that would be a much better alternative.

During the construction phase, it's going to limit our ability to go see our daughter because of where she lives on 59th Avenue, and we're going to be essentially cut off from her. And once it's completed, it's going to take longer to get into Phoenix and the main areas we go to. So I don't see any benefit to me at all.

Even if I was to use the freeway, I can't get on it readily. I will have to drive a mile and a half to be able to access the freeway because of where the on-ramps and off-ramps are located. So I would encourage them to seek other alternatives than the 59th Avenue idea.

Thank you -- oh, can I add something?

Furthermore, I'm concerned with the location of my house to where the proposed freeway is, that in the final draft of where the freeway is going to go, I am going to be severely more impacted, you know, more than I am right now because I can become one of the ones displaced. Since the map has -- they say it's a pretty good guide but not the final guide, and if it changes by one degree, I'm out of a house.

Thank you.

Subject: South Mountain Freeway

1 Every time this discussion comes up, it seems to be addressed as a foregone conclusion that the freeway will be built where Pecos Road now runs. What seems to be missing from the conversations is the quality of life and what drew people to that area of the Valley in the first place.

2 Why are you so many willing to destroy up 326 additional homes and build a freeway so close to those that remain? Why is progress the answer that is given as to why this freeway is needed? Then stop building in that area. There's no reason to cover every inch of the desert with a house or commercial property just because we can.

3 Have any of you ridden a bicycle down Pecos Road? Have you seen the 'other traffic' that occupies that road on any given morning, especially weekends? This is the quality of life I am talking about. This is one of the best bike routes and one of just a few bicycle routes that remains that provides any type of safe, uninterrupted distance for riding. There are also runners, those on roller-blades, countless cycling groups. Did you know that people from the Wounded Warrior Project often use Pecos Road to help its new riders become accustomed to using a horizontal bicycle because of the wide shoulder lanes, long stretches of road and low traffic volume on weekend mornings?

4 The mountains are beautiful; there's sometimes wildlife; you can see an entire sunrise or sunset and it's even quiet at times. While I'm at it, would you please add a port-o-john at the 40th Street and Pecos Park 'N Ride?

Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).
3	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.)
4	**Traffic**	The study has considered concepts for parallel multiuse paths; however, the main line of the proposed freeway would not have a bicycle route as part of the design. The design of the traffic interchanges includes provisions for pedestrian and bicycle movement in accordance with current design guidelines and regulations. While not currently included, enhancements such as pedestrian bridges or multiuse paths may be added during the final design phase through coordination with the City of Phoenix (see page 3-60 of the Final Environmental Impact Statement). The cost and maintenance of these enhancements would be the responsibility of the City of Phoenix.
5	**Park-and-Ride Lot**	The park-and-ride lot is operated and maintained by the City of Phoenix. The request is outside the scope of this project.

Subject: URGENT - South Mountain Freeway Comments
Date: Wednesday, July 24, 2013 4:35:25 PM
Importance: High

Dear All,

I am writing to, once again, express my opposition to and concern over the proposed South Mountain Freeway. My family and I have been residents of Ahwatukee for over 13 years, living in the Mountain Park Ranch Community. After investigating the information available these are my opinions:

1 2 3 4 5 6 7 8 9 10

- It is irrefutable that neighborhoods, including my own, schools, churches, and many businesses will be negatively impacted by air pollution, light pollution, noise pollution by both the construction and the existence of the proposed South Mountain 202 Freeway.
- A significant portion of South Mountain, sacred land, will be destroyed.
- CANAMEX Truck Bypass will introduce new, potent pollution to the valley.
- This freeway is a waste of significant taxpayer dollars that could be better spent elsewhere.
- Ahwatukee is filled with individuals and families that care deeply about their community. It's more than a community – it's a huge family. I have never lived in a place like it and would never want to leave. However, the proposed freeway, will now force my family to be uprooted.

My family and I are requesting a 'no build' or 'no action' alternative to the current plans.

Thank you for your time and consideration.

Regards,

Maura Kirby

1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Visual Resources**	Light from the freeway would be produced from vehicle headlights and taillights and from fixed light poles at interchanges along the freeway. Nighttime users of the park and residents of Ahwatukee Foothills Village may see lines of seemingly crawling vehicles, each with lights front and back. Fixed freeway lighting would be provided for safety reasons only at interchange exit and entrance points. Freeway lighting at these locations would be designed to reduce illumination spillover onto sensitive light receptors such as residential areas (see page 3-58 of the Final Environmental Impact Statement).
3	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. As a member of PARC, I am a resident of Ahwatukee for 20 yrs, and live 5 houses north of Pecos Road. I am writing to express my opposition of the DEIS/SMF. Kyrene de los Lagos and the Mountain Park Church are mainstays of our community and will cease to exist. Not to mention the noise of construction and the diesel fumes clouding our skies. The sereneness of South Mountain will be destroyed. The DIES that you presented on April 26, 2013 is flawed because it doesn't take into account the pollutants that Mexican trucks will provide for our skies. Being from Mexico, these trucks do not have to abide by USA emissions standards. These trucks will be able to carry HAZMAT items, and the risk of spilling them and polluting our playgrounds, where our children play, is digusting. Please do not build the SMF.

Jeff Klein

1	**Neighborhoods/ Communities**	Prospective home buyers and members of the church built after the freeway was conceived, according to State law, should have been informed of the proposed facility. (Sellers are obligated by Arizona common law to disclose all known material facts about a property to the buyer.) The proposed freeway would not result in the displacement of any schools along Pecos Road.
2	**Noise**	It is difficult to estimate construction-related noise levels because they depend on numerous factors, such as construction phasing, staging of equipment and materials, and work schedules. As reported on page 4-98 of the Final Environmental Impact Statement, construction noise levels during certain phases could be as high as 85 A-weighted decibels for short periods. As equipment would move on to other areas, noise levels would be lower. Where feasible, noise barriers would be constructed as early as possible during construction to shield adjacent properties from construction-related noise.

1

I am in favor of the W59 alternative. I believe this freeway is needed desperately for Phoenix and the surrounding towns.
I work in west Phoenix and commute to East Valley. The commute times in the late afternoon are way too long and the existing freeway too crowded and dangerous.
This freeway would also better connect west Phoenix with Tucson and the Wild Horse pass area.

Subject: South Mountain Freeway proposal
Date: Tuesday, June 18, 2013 11:52:23 PM

1 2 3

I attended one of the community forums on the freeway today (in Ahwatukee) and did see the displays discussing reduced traffic congestion and reduced time for people in Ahwatukee to get downtown.
I did write down several concerns we have, as residents of Ahwatukee have, regarding the negative impact this freeway would have for this area. The negative impact included increased air pollution and noise pollution. Air pollution will be an obvious result. Rubberized asphalt and walls around the freeway were suggested as a way to reduce the noise pollution, however, as most homes in this area are elevated above the level of the freeway, the walls would do little to prevent noises from reaching those homes.

4 5 6

I also listed concerns asking who would benefit from placement of the freeway in this area and aside from the chance someone in the East Valley works on the west side of the valley or vice versa, only trucks passing through from East to West appear to be beneficiaries.
The displays which suggested reduced transit time from Ahwatukee to downtown would actually be false as instead of reducing time, the travel time would be increased during the hours when people travel to and from work; early morning and evening. Those going on this route from the East Valley, may reduce congestion on the East side, however, as they enter the I10 traveling to and from downtown, they would actually increase congestion significantly on a freeway where congestion is already. It would not make sense for anyone to travel to the downtown area using this route during key travel times to travel as they would end up attempting to enter a crowded freeway at 59th ave or farther west in an effort to back track in the eastward direction to downtown and would almost certainly be significantly delayed.

7

Please consider stopping this proposal before creating a negative impact for the residents of Awhatukee and also results in increased traffic congestion.

Thank you.

Chris Kline

1	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
2	**Noise**	
3	**Noise**	As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes that may be elevated above the road, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Phoenix metropolitan area and across the country.
4	**Purpose and Need**	An analysis of the origins and destinations of projected freeway users is presented in Figure 3-18, on page 3-36 of the Final Environmental Impact Statement. Freeway users are defined as those motorists who pass through the bend of the freeway (around the South Mountains). So, this does not count motorists in Laveen Village who go to Interstate 10 (Papago Freeway) and motorists in Ahwatukee Foothills Village who go to Interstate 10 (Maricopa Freeway). The results of the origin-destination analysis show that 73 percent of the traffic going around the South Mountains has origins or destinations in the area within or around the Study Area and supports the conclusion that the proposed action would serve east–west mobility consistent with commuting movements.
5	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
6	**Trucks**	
7	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.

Larry Kline Document Created: 6/19/2013 12:30:47 PM by Web Comment Form

1 2 3

The proposed South Mountain Freeway is being built on a flawed premise. It will not be an aid to reduced congestion for east valley residents commuting to the west valley. How many east valley residents commute to work in the west valley?...according to ADOT - very few. I can see a very small number of west valley residents desiring a short cut to the east valley. At a meeting 6/18 in Ahwatukee, the proponents of the S.M. Freeway stated that the proposed freeway would aid east valley residents access to downtown. This thought is flawed in that the South Mountain Freeway will deposit commuters to 59th Ave. with an ensuing eastbound commute to downtown...adding mileage and time and pollution to downtown destinations so this argument fails logic and will add to the traffic the inadequate I-10 section west of Phoenix must handle .

4 5 6 7 8

Another poster indicates that the proposed freeway would aid as a trucking bypass. This is a valid argument...but at what cost? There already exists a bypass - I8 to state route 85 bypasses downtown Phoenix for trucking traffic headed west out of Phoenix. The 2 billion dollar plus cost for the proposed freeway extension and disruption and destruction of the quality of life to the residents of Ahwatukee do not justify this "boondoggle". For the residents of Ahwatukee, the proposed 16 foot noise-mitigation walls will only benefit those who would live across the street from the freeway. The land slopes upward to the north, so those residents that live north would receive the noise and pollution from the increased traffic of the proposed freeway. This pollution would be pushed north and remain in Ahwatukee with the prevailing southwesterly winds trapping pollutants against South Mountain. The

9

87,000 residents of Ahwatukee would experience more pollution, decreased property values, increased noise for an unnecessary, very expensive freeway that will not solve the problems that it is alleged to solve. This freeway is ill-conceived and a very poor utilization of precious

10

public resources. ADOT is negligent in not researching alternatives to this freeway extension.

1	**Purpose and Need**	Although the region's freeways are now congested during the peak travel period, conditions in 2035 without the proposed freeway would be substantially worse with more congested areas and congested conditions for longer periods of time (see Final Environmental Impact Statement pages 1-21 and 1-22). Congestion relief resulting from the proposed freeway would provide localized reductions of delays on arterial streets and at interchanges. Reduced travel times would result in lower exposure to elevated concentrations of mobile source air toxics occurring in traffic. Other benefits of the proposed freeway in comparison to the No-Action Alternative are presented in Table 3-9 on page 3-38 of the Final Environmental Impact Statement.
2	**Purpose and Need, Lack of Support**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
3	**Purpose and Need**	An analysis of the origins and destinations of projected freeway users is presented in Figure 3-18, on page 3-36 of the Final Environmental Impact Statement. Freeway users are defined as those motorists who pass through the bend of the freeway (around the South Mountains). So, this does not count motorists in Laveen Village who go to Interstate 10 (Papago Freeway) and motorists in Ahwatukee Foothills Village who go to Interstate 10 (Maricopa Freeway). The results of the origin-destination analysis show that 73 percent of the traffic going around the South Mountains has origins or destinations in the area within or around the Study Area and supports the conclusion that the proposed action would serve east–west mobility consistent with commuting movements.
4	**Purpose and Need, Truck Bypass**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix.
5	**Alternatives**	The proposed freeway is part of a transportation system developed to improve mobility in the region by increasing capacity and providing alternatives to allow traffic to bypass already congested routes (see Final Environmental Impact Statement pages 1-21, 1-22, 3-1, and 3-3). Like other "loop" freeways in the Phoenix metropolitan area, the proposed South Mountain Freeway would be a commuter corridor, helping to move local traffic between the eastern and western portions of Maricopa County. The State Route 85/Interstate 8 Alternative was evaluated for the proposed project. The reasons this alternative was eliminated from further study are presented on page 3-9 of the Final Environmental Impact Statement.
6	**Neighborhoods/ Communities**	While the E1 Alternative is adjacent to the largely residential areas of Ahwatukee Foothills Village (to the north), a freeway has been planned in this location for many years (see Final Environmental Impact Statement pages 4-17 and 4-21). Where existing residential uses are adjacent to the proposed freeway, noise mitigation would be implemented according to Arizona Department of Transportation policy (see Final Environmental Impact Statement page 4-91).

Code	Issue	Response
7	**Noise**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. As discussed in the Noise Analysis Technical Report prepared for the Final Environmental Impact Statement, the proposed South Mountain Freeway was modeled in the latest version of the Traffic Noise Model (version 2.5). This is a three-dimensional model that factors in elements of the proposed freeway using x, y, and z coordinates. The model did account for the elevations of the freeway, nearby homes that may be elevated above the road, and any recommended barriers between the homes and freeway. This is the same procedure and same model used for other freeway projects in the Phoenix metropolitan area and across the country.
8	**Air Quality**	The Arizona Department of Transportation and Federal Highway Administration identified several issues and concerns that were frequently noted by commenters. Responses to these issues can be found in the *Responses to Frequently Submitted Public Comments* beginning on page B733 of this appendix. According to the Arizona Department of Transportation, 2013, *Air Quality Assessment South Mountain Freeway 202L Draft Report*, review of wind data from the Gila River Indian Community monitoring site at St. Johns suggests that during the morning hours and associated with mountain-drainage air flows and stable atmospheric conditions, wind flows are from the southeast and follow the Gila River channel to the north. Locations to the east of St. Johns tend to flow from the east to the lower elevations along the Gila River. During the warmer hours' improved mixing, flows typically follow the river channel and come from the north and northwest. Likewise, during a 1-month-long meteorological monitoring period (November 20, 2006, through December 21, 2006) at Pecos Road and 40th Street and a second 1-month-long monitoring period at Pecos Road and 24th and 40th streets (April 19, 2007, through May 21, 2007), winds during the morning hours typically were from the northeast. During the warmer hours, and with improved mixing, winds typically were from the west.
9	**Economics, Socioeconomics**	A review of the literature reveals few detailed and comprehensive analyses of the relationship between the transportation infrastructure and residential property values. A recent study by the California Department of Transportation concluded that freeway facilities did not substantially affect sales prices in residential areas adjacent to the facility. The study concluded that it is the visibility of the freeway that may influence selling price and not distance or noise. As a result, the researchers generally concluded that the more the visibility of a new freeway is reduced, the less it would determine the sales price of homes sold in the area.
10	**Alternatives**	The Final Environmental Impact Statement devotes Chapter 3, *Alternatives*, to an in-depth discussion of the extensive alternatives generation, screening, and selection process.

LOOP 202
South Mountain
Freeway Study

Draft Environmental Impact Statement
COMMENT FORM

Thank you for participating in the South Mountain Freeway Draft Environmental Impact Statement public comment process.

ADOT encourages all interested parties to submit written comments on any aspect of the Draft EIS. ADOT will consider all comments in preparing the Final EIS, which will include responses to all comments, final conclusions on potential impacts, and ADOT's final recommendation.

When submitting comments, please be as specific as possible and substantiate your concerns and recommendations.

It is helpful to ADOT to receive comments on:

- A particular alternative, environmental impact assessment, and/or draft mitigation.
- Any information you feel is incomplete or incorrect.
- How the proposed action would affect you.

Comments must be received or postmarked by July 24, 2013.

As a resident of Ahwatukee, I am very concerned about the impact the proposed freeway will have on this area. Residents of Ahwatukee have chosen this area for the lack of pollution, lack of noise and beautiful scenery. As we bought our home over 20 years ago - no disclosure of this freeway was given to us. This will definately increase pollution: more traffic, more noise and much more pollution. The studies shown here are incapable the effect of pollution if everyone had environmentally adapted cars. Which is not the case. Trucks from Mexico alone will contribute large amounts of pollutants in the air. The winds + mountains will hold this pollution in our area. Noise pollution: as this area is built in levels - rising above the side of the freeway, noise will be carried above surrounded asphalt and walls + sound rebound from the mountains.

Our home value will decrease: we will have to pursue reimbursement for this loss.
