

Supporting Metadata for Appendix M: 36 km and 7 km RasterStacks

**Found within BufferDistances.zip**

**Description**

The RasterStacks were made by Carolyn Flower in November 2018 and January 2019, respectively. Rasterstacks are provided after initial processing steps described in the main text methods (e.g., 2 km resolution, description of variables).

RasterStack Name	File description	Variable names + layer description
36km_Dist	RasterStack for the 36 km buffer distance	Food.Richness.Ratio, relative food plant richness Hohokam.Pop., Hohokam population estimates Contemporary.Pop., contemporary population density (people per km <sup>2</sup> ) River.Distance, distance from river (m.)
7km_Dist	RasterStack for the 7 km buffer distance	Food.Richness.Ratio, relative food plant richness Hohokam.Pop., Hohokam population estimates Contemporary.Pop., contemporary population density (people per km <sup>2</sup> ) River.Distance, distance from river (m.)
